PŘÍLOHY

Tab. I

Synoptická tabulka s mírou fidelity (phi x 100) druhů ke skupinám snímků z různých typů lesa - Phi koeficient C (33.333)

- phi koeficient je standardizovaný na velikost skupiny odpovídající 33,333 procentům datového souboru
- žlutě jsou zvýrazněny druhy, u nichž koeficient phi přesahuje hodnotu 40
- zeleně jsou zvýrazněny druhy, u nichž koeficient phi přesahuje hodnotu 60

číslo skupiny		**1**	**2**	**3**
typ lesa		světlé doubravy na úpatích	kyselé doubravy na svazích	stinné dubohabřiny na úpatích
počet snímků ve skupině		17	14	9
	vegetační patro			
Fragaria moschata	6	**59.0**	---	---
Mycelis muralis	6	**54.5**	---	---
Knautia drymeia	6	**51.6**	---	---
Lysimachia nummularia	6	**51.6**	---	---
Frangula alnus	7	**51.2**	---	---
Scrophularia nodosa	6	**51.2**	---	---

Melittis melissophyllum	6	36.2	9.6	---

Tab. II

Synoptická tabulka s relativní frekvencí výskytu druhů v rámci skupin

- druhy jsou uspořádány v pořadí dle fidelity ke skupinám (viz tabulku I)
- šedě jsou zvýrazněny druhy, jejichž relativní frekvence výskytu v dané skupině přesahuje 40 %
- červeně jsou zvýrazněny druhy, jejichž relativní frekvence výskytu v dané skupině přesahuje 60 %

číslo skupiny		**1**	**2**	**3**
typ lesa		světlé doubravy na úpatích	kyselé doubravy na svazích	stinné dubohabřiny na úpatích
