Protocol of practical training - Endodontics II.

Date:	
UCO:	
Name and surname:	
Simulated part	

1. Draw an opening access and entrances to the root canals of teeth 14, 16, 46, 11 including a description.

- 2. Prepare an access cavity to the teeth, shape root canals with K-files and H-files. Shaped and irrigated root canals obturate by lateral condensation technique except the lower molar (46)
- 3. Shape the root canals in the lower molar using rotary instruments.
- 4. Work on clear endo block.

Key words: techniques and methods of treatment of the root system, lateral condensation, the central cone technique, trepanation, access opening, irrigation protocol, irrigation solutions, sealer, apical constriction, determination the working length, ISO standard.

Scoring:

	First upper molar	First upper premolar	First lower molar	Incisor	Endoblock
Openig access - drawing		-			
Opening access - preparation					
Root canals shaping					
Obturation of root canals					
Root canal shaping using rotary an resiproc. instruments and obturation					
Clear endo block- shaping and filling					*
Total score					

Protocol of practical training - Endodontics II.
