The subject/matter of the practical training of 6th-year in Family medicine

The goal of the practical lessons in geriatrics is to acquaint students with different areas of treatment and prevention in geriatrics. Student shall acquire and implement theoretical knowledge in care of registered elderly patients. Student shall summarise her/his knowledge in diagnostics, therapy and prevention of most frequent diseases in aged, according to particular physiological systems. By the end of the course students should be able to perform comprehensive geriatric assessment. They should be able to assess physical findings and distinguish them from pathological ones. Students shall know standard diagnostic procedures and tests for individual clinical conditions of the seniors and shall be able to apply them in practice. Students shall also be able to indicate and substantiate basic laboratory and examination methods for specific disease groups. Students will learn about work organization in geriatric or long term care department. Students will gain practical experience how to work with medical records and other relevant documentation. In the end of the course students shall be able to set up the diagnosis and to treat different diseases and conditions of older patients.

Syllabus:

- Individual practical training.
- Examination of aged patient with acute clinical condition.
- Examination of seniors, comprehensive geriatric assessment.
- Special laboratory and diagnostic methods in different types/groups of illness in older age.
- Differential diagnosis, including pharmacotherapy.
