ERP

The main objective of **Enterprise Resource Planning**, or ERP, is to integrate all departments and functions across a company into a single system by using a common database, the value of which is to be able to have only one correct set of data.

ISLAND SYSTEMS

For example, records about inventory levels may be found in one database, while customer information may be found in its own separate database. Furthermore, these databases may be "island systems" (operating independently from each other and having no integration with other databases).

Architecture 2-tier (2-vrstvy)

Architecture 3-tier (3-vrstvy)

The second tier is the multithreaded middle tier. This is the service tier that is based on **Web services**.
