Advaned Planning and Scheduling

J.Skorkovský, KPH

Critical manufacturing problems

- Machine breakdown –lack of capacity
- Components (from BOM) are not available in time
- Sudden changes in orders and priorities
- Late deliveries due to manufacturing delays
- Missed sales due to exceeding capacities
- Lost orders due to excessive WIP (Work in Progress)
- High cost of delays due to long setup times
- Difficult planning based on forecast (fluctuation of demand)
- Overtime due to bad utilization of resources
- Changeover operations are to often and too laborious

Planning scenario

Very simple production

- 4 machines: C1, C2 and W1, W2 (C=Cutting, W=Welding)
- C1 can be used for cutting P1 or P2 and not vice versa (C2 can cut only P2)
- W1 and W2 can be used for both lines (fully alternate resources)
- Raw material (items P1..P10)
- 1 product P11(P1..P10) using 2 lines (routings)
- Workers
- 6 operations :
 - Cutting
 - Welding
 - Lacquering (2 colours one colours for P7-> P9 and P8->P10)
 - Labels
 - Final assembly
 - Packaging

Bill of material

Shop floor situation

Shop floor situation after (3 orders)

Shop floor situation- problems

Shop floor situation APS rescheduling

Work order (P2->P4) moved to C1, some of 3 orders moved from W1 to free W2 (see green remark) Lacquering setup changed to color P8 firstly due to bottleneck,

one WO (P3,P5->P7) moved to W2 to decrease impact of bottleneck,

re-schedule workers for Labeling in order to cover lack of capacity of labeling P10.
