Křížové reference (odkazy)

The diagram illustrates the process of creating a cross-reference entry from an item card. It consists of three windows:

- M1 Mouka - Item Card**: The main window showing item details like No., Description, and various quantity fields. A red circle highlights the "Item" button in the bottom toolbar.
- Replenishment Tab**: A detailed view of the Replenishment tab within the Item Card. The "Replenishment" tab is highlighted with a red box. It shows settings for Purchase, including Vendor No. 50000 and Vendor Item No. M1_DOD_5000.
- M1 Mouka - Item Cross Reference Entries**: A separate window showing a list of cross-reference entries. One entry is displayed: Cross-Reference Type is Vendor, Type No. is 60000, Cross-Reference No. is M1-DOD_2008, Variant Code is KG, Unit of Measure is KG, Description is Mouka na pečení rohlíků, and Discontinue Bar Code is empty.

A red arrow points from the "Item" button in the Item Card toolbar down to the Cross Reference Entries window, indicating the flow of data.

Skladová jednotka (ENG description)

You use the Stockkeeping Unit table to record information about your stockkeeping units.

Stockkeeping units do not replace item cards, but they are related to them. Stockkeeping units allow you to differentiate information about an item for a specific location (such as a warehouse or distribution centre) or a specific variant (such as different shelf numbers and different replenishment information), for the same item.

It is important to note that the information on the Stockkeeping Unit card has priority over the Item card.

A diagram illustrating the process of reserving items. It starts with a green box labeled "Prodejní objednávka." (Sales Order) which points down to a red bar. This red bar points down to a table titled "Rezervační položky" (Reservation Items). The table has columns: Description, Quantity, Location Code, Unit of Measure Code, Qty. to Ship, Reserved Quantity, Qty. to Invoice, and Requested Delivery Date. A row shows "250MB Disks/2pack" with quantities 250, BLUE, PCS, 250, and 250. The "Reserved Quantity" cell (row 2, column 7) is highlighted with a red border and contains the value "250". A red arrow points from this cell down to the "Rezervační položky" table.

ATP-CTP

- **Available-to-Promise** (Lze slíbit)
- **Capable-to-Promise** (Možné slíbit)
- **ATP** – based on the inventory reservation system – performing the availability check
(calculation of the date of delivery)
- **CTP** – based on WHAT IF scenarios. Earliest date in which an item will be available

If no items that can be available, no inbound orders- purchase, transfer , return, production – it calculates Earliest Date, creates Order lines, and reserves the inventory.

Maybe integrated to the production scheduling, transfer and purchase

ATP - CTP

- Navision calculates earliest **PDD** taking into account inventory availability without customer's requirements
- Navision verifies, if by hand entered RDD is realistic taking into account inventory availability (backward calculation)

ATP – CTP – Order Promising Setup

This field contains the period of time that the program must **wait** before it is allowed to issue a new purchase order, production order or transfer order. **The period starts with the current date.**

The time units of measure that you can use are days, workdays, weeks, months, quarters or years.

Warranty Date Formula and Expiration Date

Warranty Date Formula and Expiration Date

Warranty Date Formula and Expiration Date

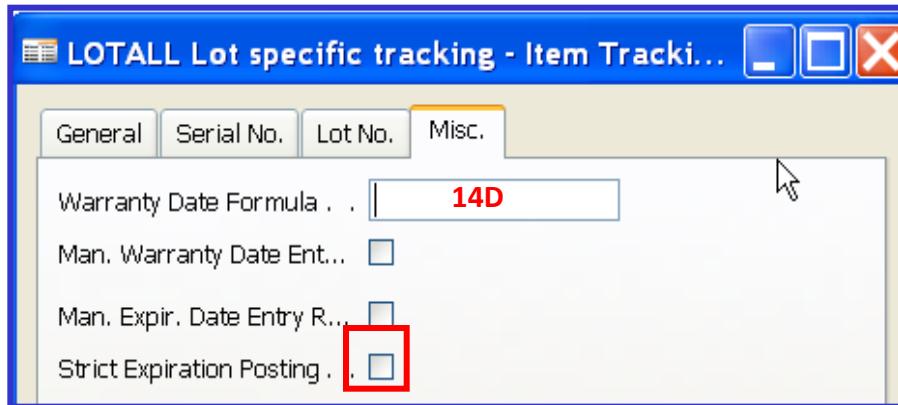

In the Warranty Date Formula field you can enter a formula that calculates the warranty date on the item tracking line. E.g.=14 D

If the Man. Warranty Date Entry Required field contains a check mark, the formula will be ignored and you will have to manually enter a date on the item tracking line.

If this field is blank, no warranty date will be referenced or required for the item tracking entries.

Warranty Date Formula and Expiration Date

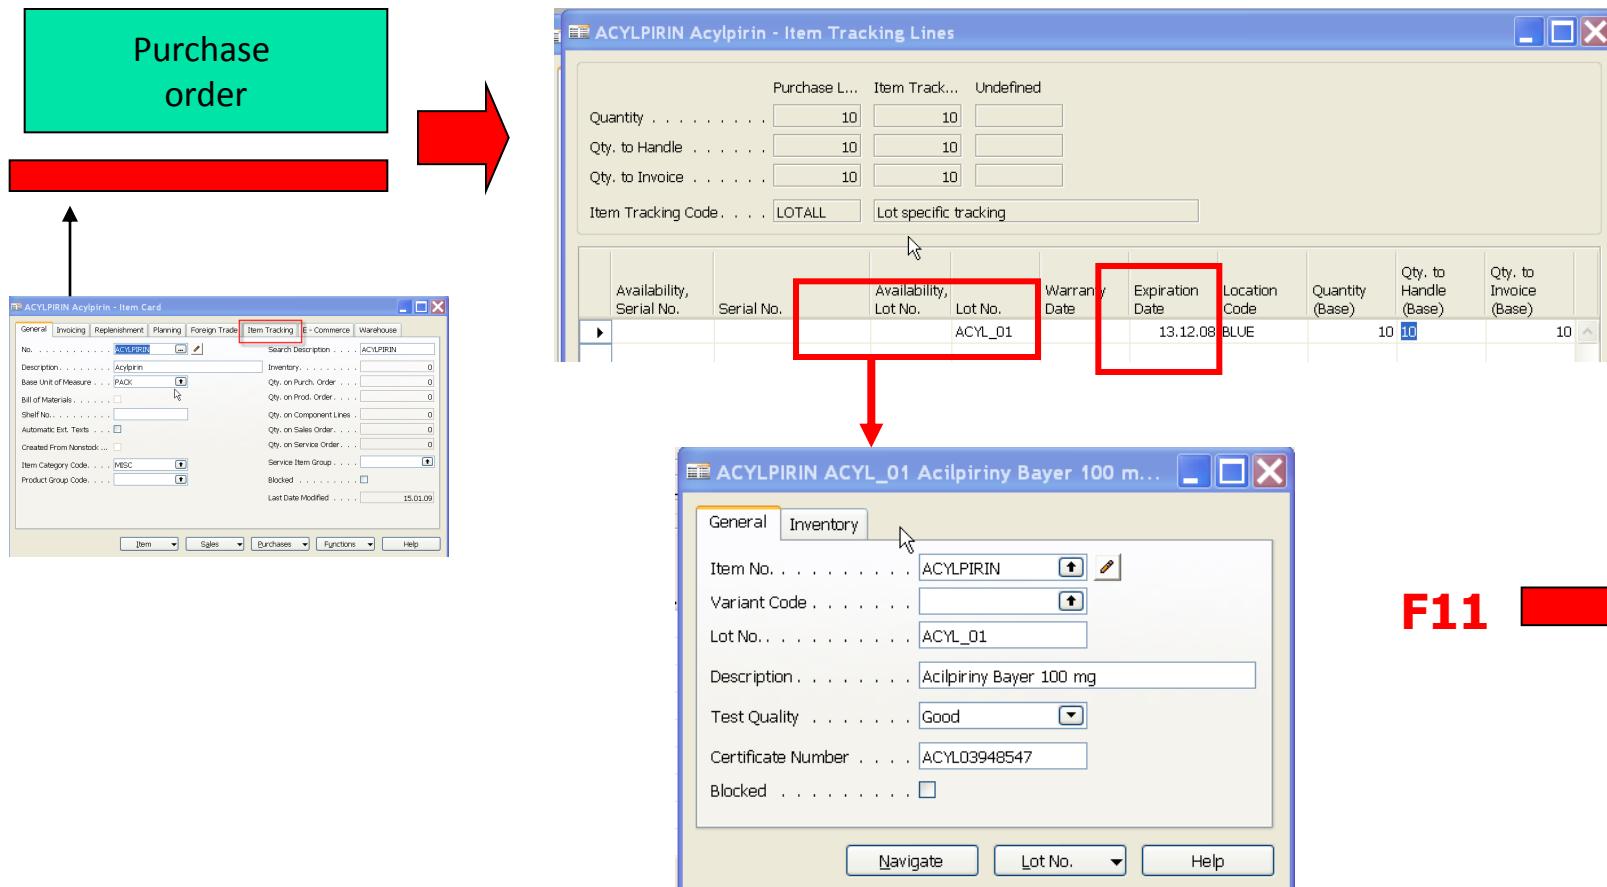

A check mark in this field indicates that an expiration date assigned to the item tracking number as it entered inventory must be respected when it exits inventory.

This field is mostly used together with the Man. Expir. Date Entry Reqd. field, which gives a system message if you forget to define the expiration date upon entering inventory.

If you do not checkmark that field, the strict posting principle will use work date as expiration date on the inbound item tracking line in question.

Warranty Date Formula and Expiration Date
