

Operation Management (OM) Introduction

Ing.J.Skorkovský, CSc,
Department of Corporate Economy
FACULTY OF ECONOMICS AND ADMINISTRATION
Masaryk University Brno
Czech Republic

Coordinates (will be part of OM Intro as well)

- **Lecturer** : Ing.Jaromír Skorkovský, CSc.
 - Department of Corporate Economy (5th floor)
 - miki@econ.muni.cz
 - +420 731113517
- **Study material** : will be updated regularly after every lesson (is.muni.cz)
- So far there is a lot of material there but mind you that nearly every part will be slightly or more heavily modified this year. So the correct material will have at the end of its name specification ...2019 mmdd e.g. 20190916 if not specified otherwise in advance
- **Attendance** : seminar and lectures are obligatory – see subject specification (is.muni.cz) – first vital condition to be admitted to exam)
- **Excuses** : if serious reason emerges- **only written form is accepted**
- **Seminar work** : will be assigned after some theory will be presented. Accepted seminar work is the second condition to be admitted to an exam. Assign time: 4.11.2019 and 6.11.2019
- **Tuition plan** : at the **end** of this slide show
- Name of the tuition plan file : Tuition plan for both groups AOMA and AOPR_20180808
- Locations: AOPR: P312 (308) and VT206, AOMA: VT206 if not specified otherwise

What is going on ?

Use of Operations Management (OM) in external environment
(main target)

General knowledge of OM methods acquired at university and long-standing experience

$$= \frac{\sum_{x_1} f_1(x_1) f_2(x_2, x_1)}{\sum_{x_1} f_1(x_1) \sum_{x_2} f_2(x_2, x_1)}$$

Knowledge of methods and experience from research and literature - **teachers**

Knowledge of methods and experience from outside world - **consultants, managers, ...**

Extent of knowledge

Extent of knowledge

Synergy and put OM into practice

OM all around us

OM is the management of all processes used to design, supply, produce, and deliver valuable goods and services to customers

IN

Processing-transformation

Out

TQM = Total Quality Management

ERP: Logistics, Transportation

MRP, JIT, APS, Lean Manufacturing, Little's law

ERP: Marketing, Selling, Invoicing, Payment,....

Selected OM methods, which will be kicked around as time will move on

- Theory of Constraints -(AOMA-AOPR)
- Balanced Scorecard -(AOMA-AOPR)
- Project Management methods (Critical Chain) -(AOMA-AOPR)
- Material Requirement Planning (MRP) and Just-in-Time principles -(AOMA only basics-AOPR more in detail)
- Advanced Planning and Scheduling (APS) (AOPR only basics)
- Six Sigma – quality management -(AOMA-AOPR)
- Boston, SWOT and Magic Quadrant Matrices -(AOMA-AOPR)
- Little's Law (relations between WIP, Throughput and Cycle time) -(AOPR)
- Linear programming – optimization -(AOPR)
- Yield Management -(AOPR)
- Kepner-Tregoe (support of decision making) -(AOMA-AOPR)
- Decision trees -(AOPR)

Some tools which have to be used

- **ERP**-Enterprise Resource Planning (MS Dynamics NAV 2018w1)
 - Basic installation, handling and setup
 - Inventory – Items – Transports –Availability of components (items)
 - Purchase –dealing with Suppliers (**SCM**)
 - Selling – dealing with Customers
 - Payment – bank operations
 - Accounting basics
 - **CRM**- **C**ustomer **R**elationship **M**anagement
 - Manufacturing – Planning and Shop Floor Control
 - Cost management

SCM=Supply Chain Management

Serves as the magnifying glass to processes...

Controlling processes in Supply Chain Management (SCM)

		Supply	Production	Orders	
Planning levels	Strategic	← Operation Strategies and Innovations , R&D →			Demand Planning
	Tactical	Forecasts, Blank Orders	Long term planning	Marketing	
	Operational	Logistic operations	Routing control, TQM	Packaging , Transportation	
	Operational	MRP, Replenishment	MRP_II ; JIT, Capacities	Cash flow	

Used abbreviations : **R&D** –Research and Development; **TQM**-Total Quality Management; **JIT**- Just –In-Time; **MRP_II**-Manufacturing and Resource Planning

Used abbreviations (slide number 3) : **ERP** - Enterprise Resource Planning ; **APS** – Advanced Planning and Scheduling , **MRP**-Material Requirement Planning

Deming cycle (based on periodicity)

Plan: Define the problem to be addressed, collect relevant data, and ascertain the **problem's root cause** (e.g. by use of TOC=Theory of Constraint)

Do: Develop and implement a solution; decide upon a measurement to gauge (assess) its effectiveness.

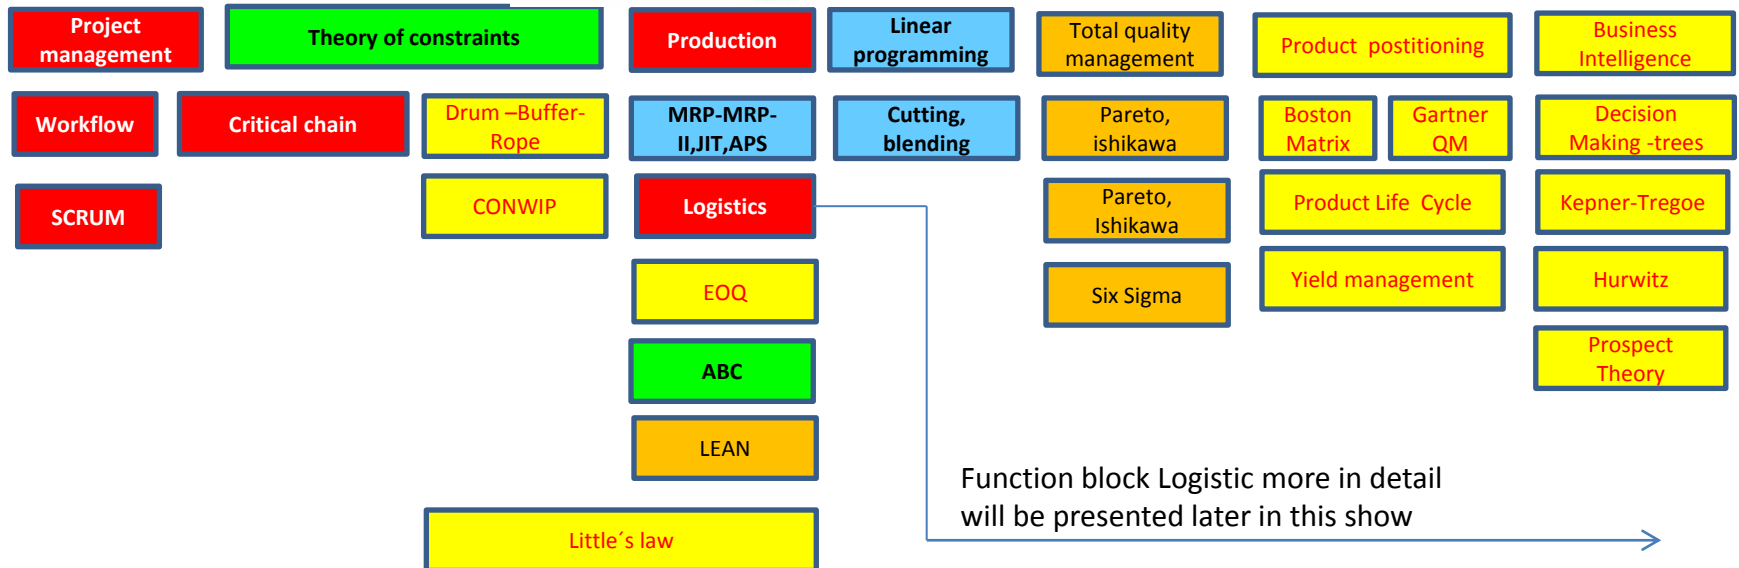

Check: Confirm the results through **before-and-after** data comparison.

Act: Document the results, inform others about process changes, and make recommendations for the problem to be addressed in the next **PDCA** cycle.

Another angle of view

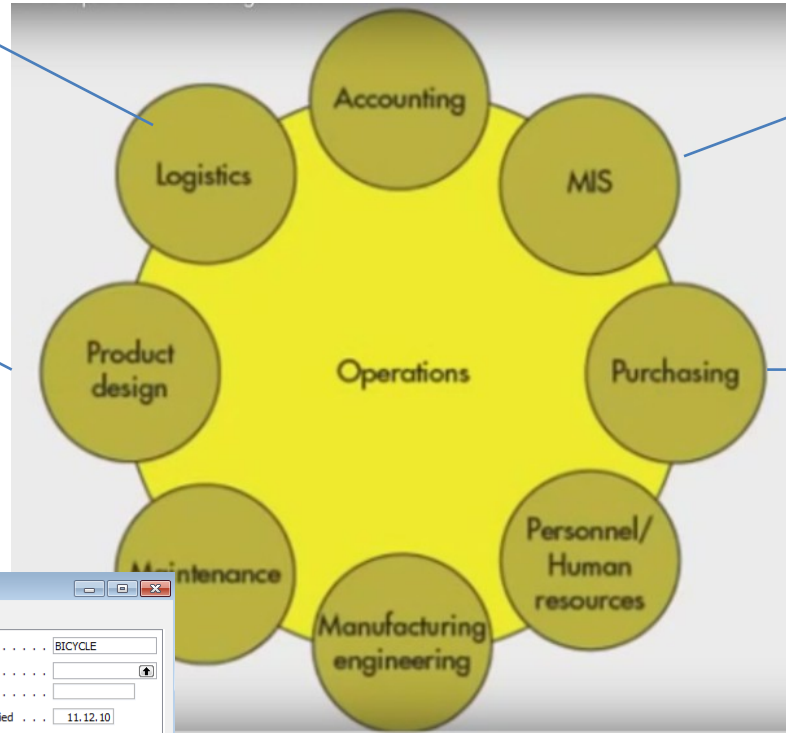

This will be modified in following **South African** project show (use of **Balanced Score Card**)

Operations

See next slide

Manufacturing

Function block Logistic-simplified

Will be part of our course regarding ERP system MS Dynamics NAV

Procedures-simplified

} Color agenda used later

Processing

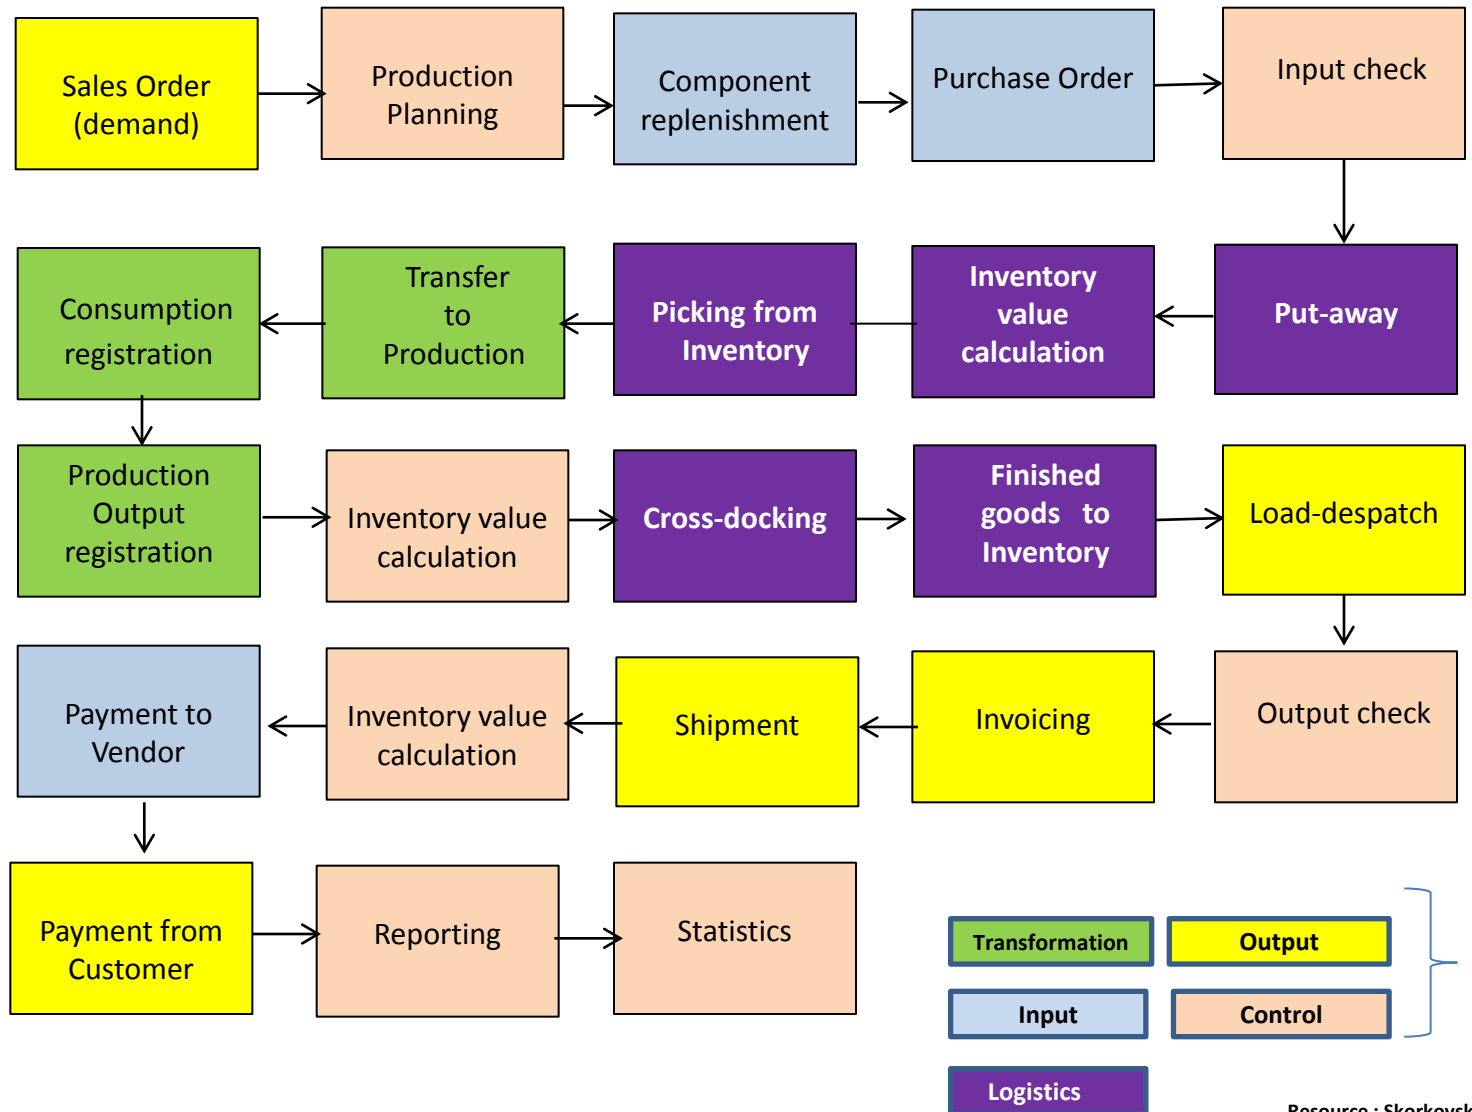

(not organised set of processes, will be presented also as a introduction to project management PWP presentation later)

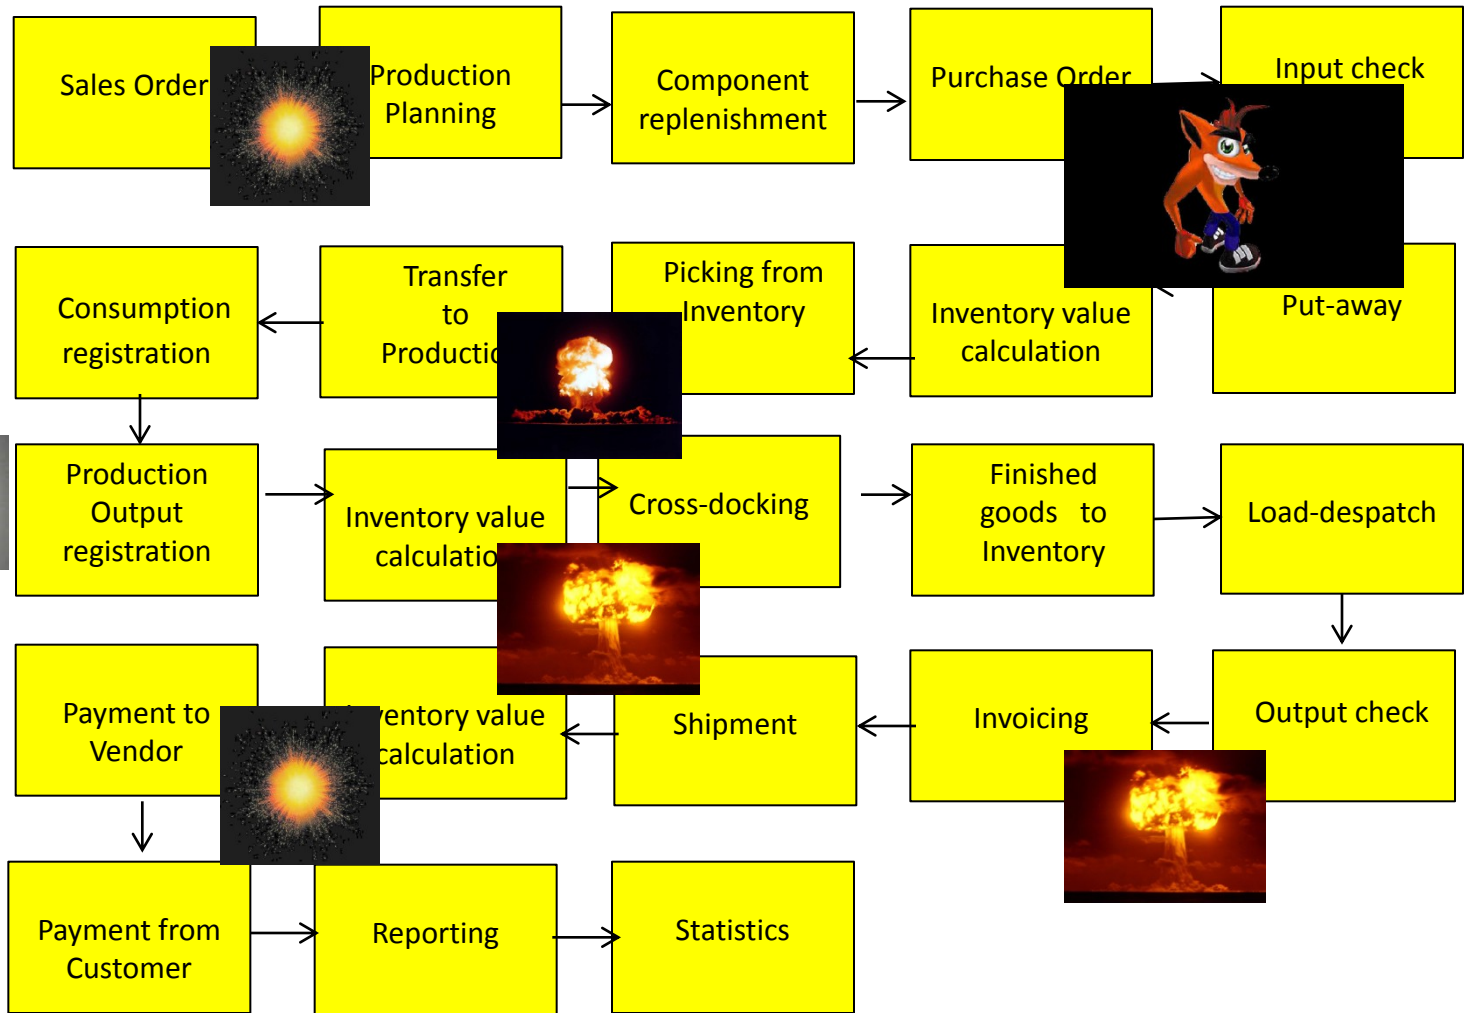

Process flow ?

Load-despatch	Purchase Order	Reporting	Statistics
Consumption registration	Production Output registration	Inventory value calculation	Output check (Quality control)
Delivery	Production Planning	Sales Order	Component replenishment
Transfer to Production	Put-away	Cross-docking	Input check
Finished goods to Inventory	Picking from Inventory	Invoicing	Payment

Your main task (to organize processes based on business logic)

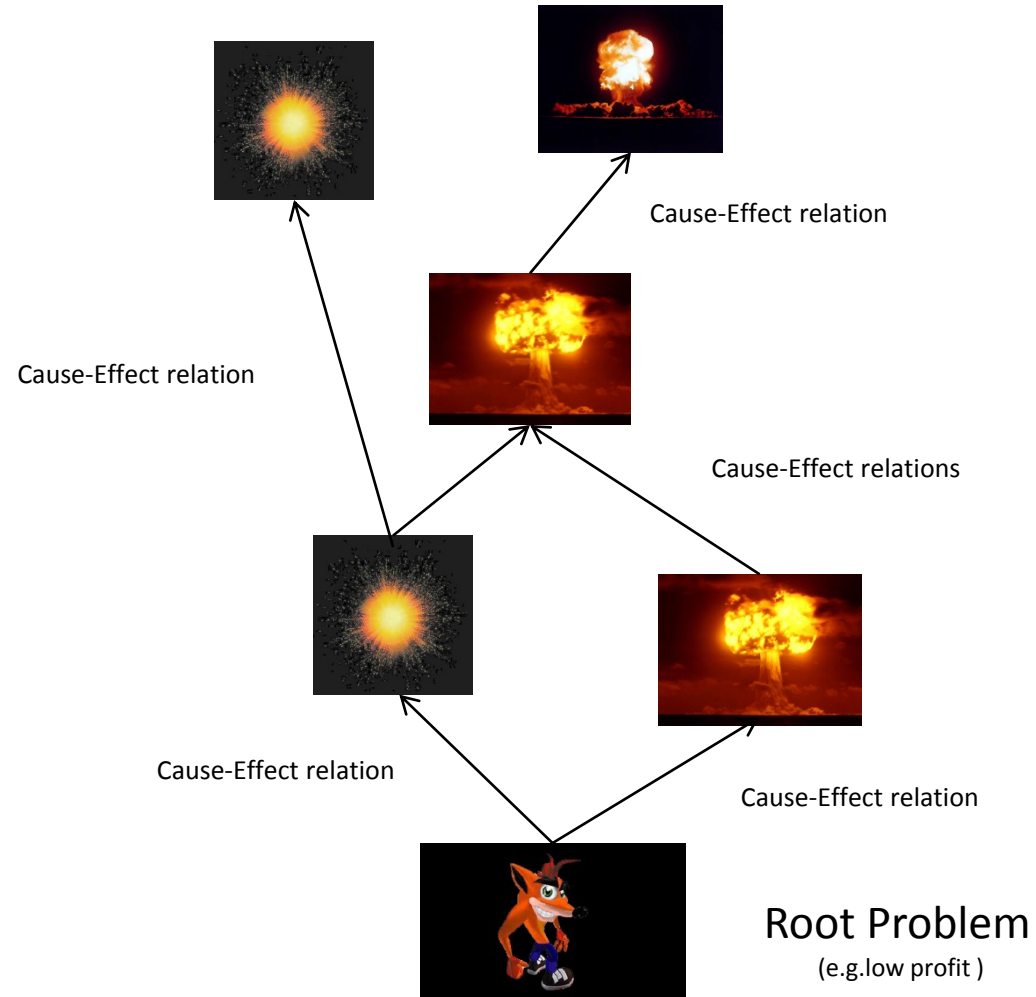

Your main task (possible problems, bottlenecks, undesirable effects..)

Application of TOC ->thinking tools->Current Reality Tree – first stage

Your main task

(Search - **HOW** ??? Measure impacts - **HOW** ??? and Destroy - **HOW** ???)

Basic problem I. (one of many)

Moore's law is the observation that the number of transistors in a dense integrated circuits doubles approximately every two years – so -> capacity of memory is going up –applications temporarily solve this constraint

Big data and analysis problem

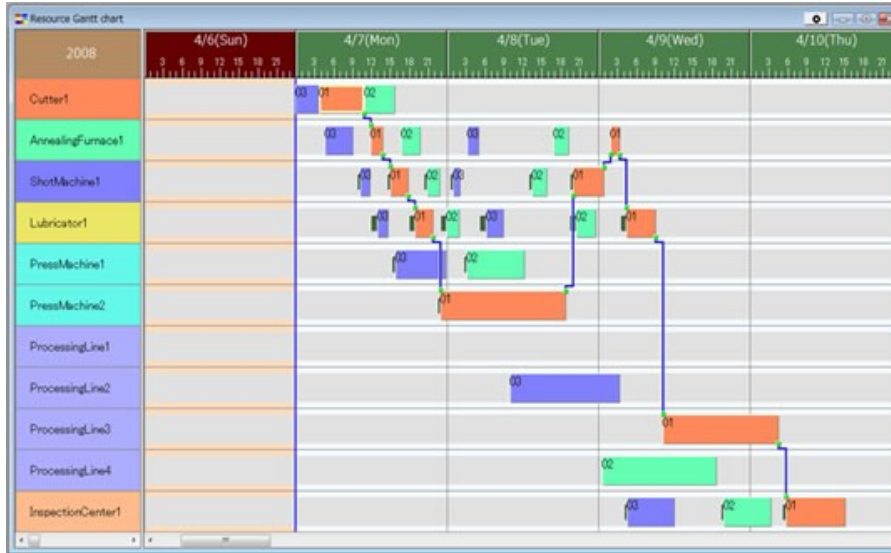

In test and measurement applications, engineers and scientists can collect vast amounts of data every second of every day.

- For **every second** that the Large Hadron Collider at CERN runs an experiment, the instrument can generate 40 terabytes of data.
- For **every 30 minutes** that a Boeing jet engine runs, the system creates 10 terabytes of operations information.
- For a single journey across the Atlantic Ocean, a four-engine jumbo jet can create 640 terabytes of data.
- Multiply that by the more than 25,000 flights flown each day, and you get an understanding of the enormous amount of data that exists (Rogers, 2011). **That's "Big Data."**

* Basic problem II. (we need reliable data)

To solve it we should use finite capacity scheduling (APS)- will be presented later

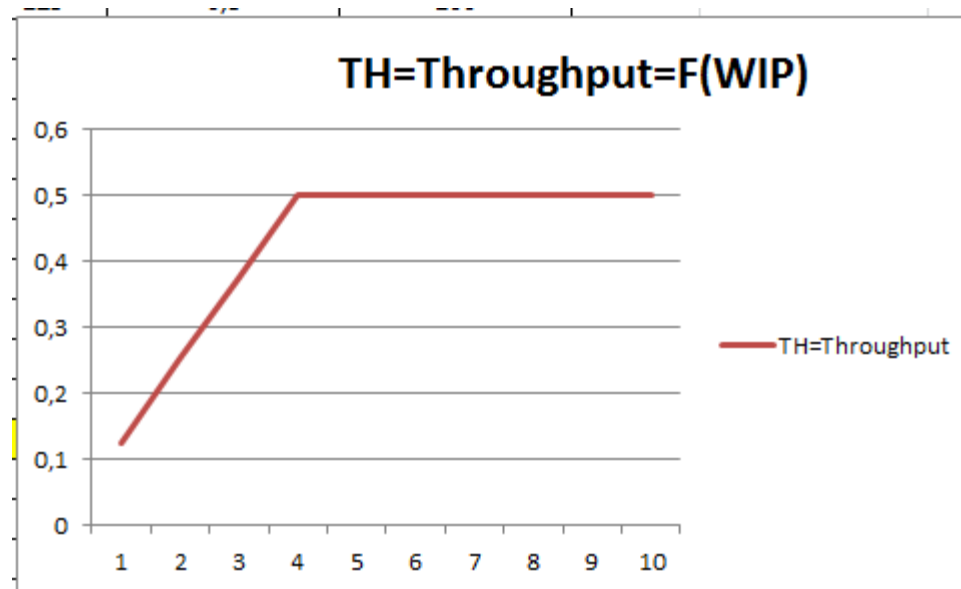

$$T1+T2=X$$

$$Opt=Min(X)$$

Basic problem III.

Will be explained in Little's law presentation (AOPR) : **WIP**= **W**ork **I**n **P**rogress

Basic problem IV.

Black

White

White

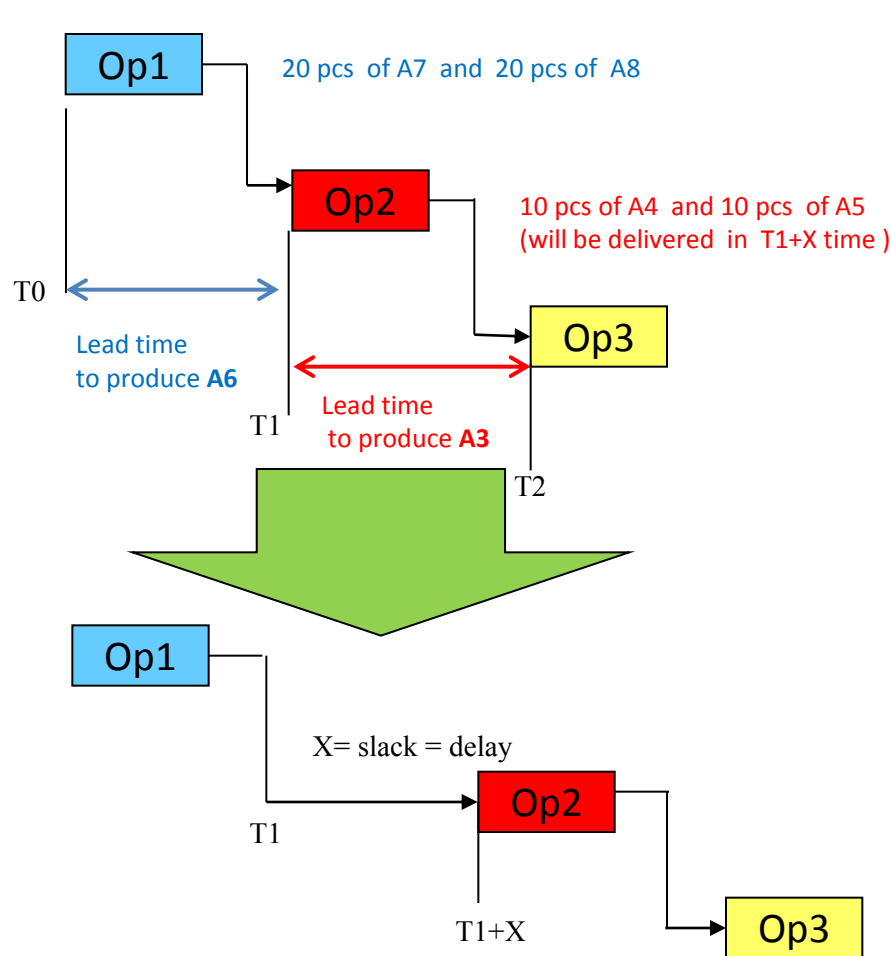

Black

(Black ->White, Setup time=60 minut)

(White->Black, Setup time = 20 minut)

Basic problem V-I. (availability of components)

Bill Of Material=BOM (tree structure)

For sake of simplicity we did not mention components A1 and A2 and possible delays having cause in delivery times of bad quality !!!
 Same with capacities of machines allocated to OP1-OP2-OP3 (sudden breakdowns)

Basic problem V-II. (availability of components)

Prod. Order Routing

Type to filter (F3) Prod. Order No. Filter: Firm Planned • 101005 • 10000 • 10

Operati... No.	Type	No.	Description	Starting Date-Time	Ending Date-Time	Setup Time	Run Time	Material Fixed Date
10	Work Center	100	Wheel assembly	18. 8. 2014 14:41	22. 8. 2014 8:31	110	12	23. 8. 2014 0:00
