

Softwarové normy

Normotvorná činnost

Norma

Otevřená dohoda o vlastnostech výrobků,
nebo procesů s cílem zaručení určitých
vlastností výrobků či procesů

Cílem je kompatibilita a interoperabilita

Příklady

Norma – tvar jazyka

Vlastnosti protokolu

Proces zajišťující kvalitu

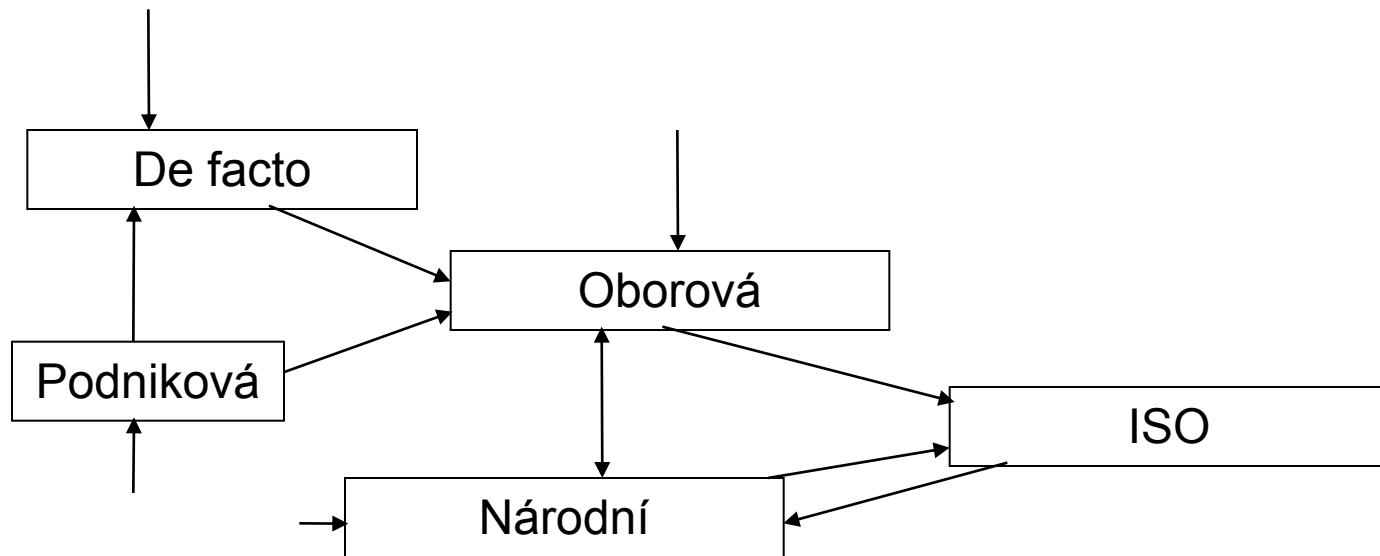

Dodržování norem není apriorní povinnost

V soukromém sektoru je
dodržování norem věcí dohody
Norma se stane povinnou, jestliže
se stane zákonem

Druhy norem

- Proprietální – stanovena podnikem (př. zprvu C#)
- De Facto – obecně se dodržuje, neexistuje oficiální definice
- Oborová – definována nějakým oborovým orgánem, dnes obvykle IEEE
- Národní – přijatá (definována) národním úřadem (DIN, ANSI, ČN, BS..)
- Mezinárodní – přijatá ISO.

Evoluce norem

Po pěti letech se norma považuje za zastaralou a měla by se aktualizovat nebo znovu potvrdit

Nevýhody norem

- Zastaralost
- Nedotaženost (definována příliš brzy)
- Rozsáhlost, příliš norem na každou drobnost
- Časté změny
- Skrytě podporuje výrobky těch, co jsou u toho
- V informatice může ztěžovat spolupráci s uživateli

Instituce

- **INMZ Úřad pro technickou normalizaci, metrologii a státní zkušebnictví**
- Informační centrum
- Biskupský dvůr 5
110 02 Praha 1
Tel.: 221 802 120
otevřeno: Po - Pá 9:00 – 16:00

ISO 20000, IT service management

-
-
- [Home](#) [ISO 20000](#) [The Contents](#) [The Benefits](#) [ISO 20000 Download](#) [ISO 20000 & ITIL Contact Page](#)
- **What Is ISO 20000?**
 - ISO 20000 is the international standard for IT Service management.
 - The standard actually comprises two parts: ISO/IEC 20000-1 and ISO/IEC 20000-2. ISO 20000-1 is the 'Specification for Service Management', and it is this which is certifiable against. ISO 20000-2 is the 'Code of practice for Service Management', and describes best practices, and the requirements of Part 1.
- **What Was BS15000?**
 - ISO 20000 is in fact based upon an original pair of documents, BS15000-1/2, which were published by BSI in 2002 and 2003 respectively. An earlier version of BS15000-1 was first published in 2000. Even this, however, was not the earliest iteration. As far back as the 1980's a BSI group called the 'Service Management Group' was at work defining ITSM processes.
 - An example of this work is provided by the following diagram, which illustrates the state of play in 1998:

ISO 20000, IT service management

-
- **The Standard Evolves**
- By the time the new release of BS15000 was published in 2002, the framework had been harmonized with other international standards, to embrace the familiar PDCA (Plan-Do-Check-Act). This approach is illustrated below:
-
- The scene was thus set for ISO 20000, which was published at the end of 2005.
-
- **ISO 20000 Resources**ISO 20000 Central is designed to provide a range of information to support the standard. In addition, a number of support resources have been identified. These, as well as several sources of the standards themselves, can be viewed via the selections on the right hand side.

 - *Systems and software engineering – Requirements for testers and reviewers of user documentation,*
- ISO/IEC 26514:2008
 - **Systems and software engineering -- Requirements for designers and developers of user documentation**
- ISO/IEC 15910:1999, modernizuje se
 - **Software user documentation process (1999)**
- ISO/IEC 18019:2003
 - Guidelines for the design and preparation of user documentation for application software.
- ISO/IEC TR 9294:2005
 - Guidelines for the management of software documentation.
-

Dokumentace

- ISO/IEC 15289:2006
 - Systems and Software Engineering — Content of systems and software life cycle process information products (Documentation).

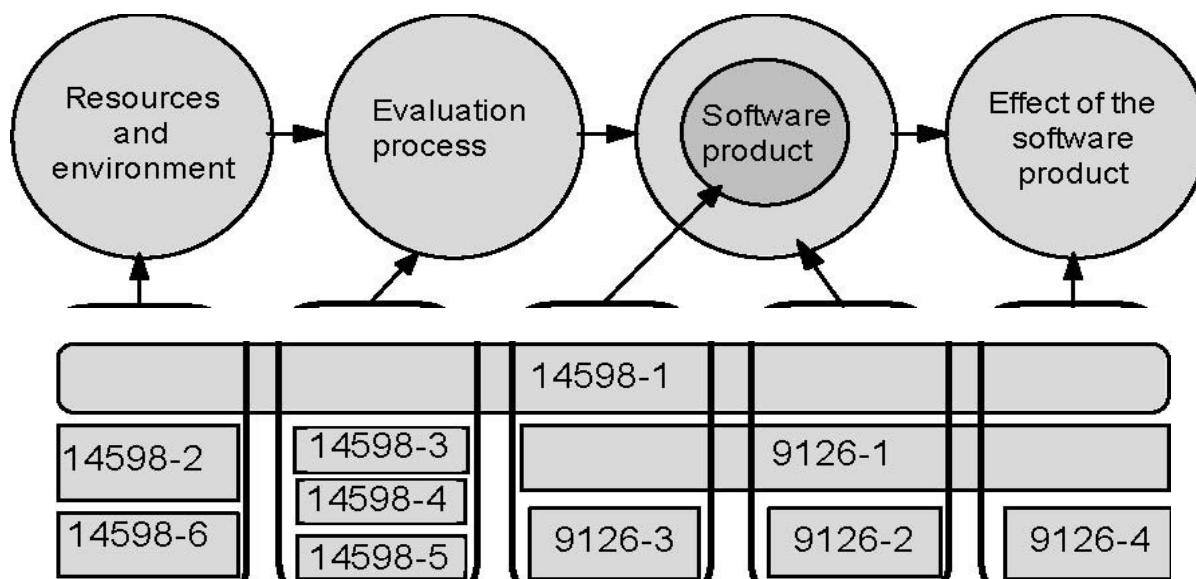

Připravované normy

- ISO 250xx
 - Sada norem ke kvalitě softwaru, náhrada ISO 9126, ne vše je hotovo a přijato

Hodnocení SW

- ISO/IEC 14598: Software Engineering - Product evaluation – (
- Part 1: General overview, Part 2: Planning and management, Part 3: Process for developers, Part 4:
- Process for acquirers, Part 5: Process for evaluators, Part 6: Evaluation module).

Normy pro kvalitu

Nedávno schvánené, někdy i ještě nepřijaté normy

- ISO 27000 will contain the **fundamentals and vocabulary**, in other words careful definitions for the specialist terms used throughout the ISO 27000-series standards.
- The scope is “to specify the fundamental principles, concepts and vocabulary for the ISO/IEC 27000 (information security management system) series of documents.”
- Information security, like most technical subjects, is evolving a complex web of terminology. Few authors take the trouble to define precisely what they mean, but this is unacceptable in the standards arena as it leads to confusion and devalues formal assessment and certification.
- ISO 27000 will presumably be similar to other vocabulary and definitions standards but will hopefully become a generally-accepted reference for information security terms amongst the information security profession. It will probably absorb guidelines such as **ISO/IEC Guide 2:1996 “Standardization and related activities – General vocabulary”** and **ISO/IEC Guide 73:2002 “Risk management – Vocabulary – Guidelines for use in standards”**.
- We will of course pass on more information on ISO 27000 here as soon as we receive it ...

International Standards for Software & Systems Documentation

Ralph E. Robinson
R² Innovations

Benefits of WG 2 Standards, documentation

WG 2 standards

- Can be used for all forms of product documentation...not just software products
- Can be used in part or in whole
- Contain recommendations (guidelines) and not requirements
- Contain the consensus of best practices and guidelines developed by the direct participation and contributions of professional technical communicators from around the world
- Maintained by revisions or “re-confirmations”

Current WG 2 Standards

- **ISO/IEC 9127:1988** - User documentation and cover information for consumer software packages
- **ISO/IEC TR 9294:2005** - Guidelines for the management of software documentation
- **ISO/IEC 15910:1999** - Software user documentation process (reconfirmed 2004)
 - Adapted from AS/NZS 4258:1994

Current WG 2 Standards

- **ISO/IEC 18019:2004** - Guidelines for the design and preparation of user documentation for application software
 - Developed from BS 7649:1993 and BS 7830:1996 (withdrawn 2005)
- **ISO/IEC FDIS 15289:2006** - Content of systems and software life cycle process information products (Documentation), neaktualizováno

Standardy dokumentace pro uživatele, přijaté nebo schvalované

- ISO/IEC 26511 Software and systems engineering -- User documentation requirements for managers
- ISO/IEC 26512. Software and systems engineering. Requirements for acquirers and suppliers of user documentation
- ISO/IEC 26513:2009, Systems and software engineering – Requirements for testers and reviewers of user documentation
- ISO/IEC 26514:2008 Systems and software engineering -- Requirements for designers and developers of user documentation

Návrhy norem dokumentace

- ISO/IEC NP 26516 Software and Systems Engineering - Reference model for software and sysyems product lines
- ISO/IEC NP 26517 Software and Systems Engineering - Tools and methods of requirements engineering and management for product lines

WG 2 Standards and User Documentation Development

- **Defining Documentation**

- Deciding the most appropriate forms of documentation and the types of guidance that could be provided (18019)

- **Setting Objectives**

- Collecting the project requirements (usability, accessibility, translation, packaging, standards, legal, costs, quality, approvals, resources, etc) and preparing the documentation proposal (9127/15910/18019)

- **Planning**

- Creating the documentation plan and conducting reviews (15910/18019)

WG 2 Standards and User Documentation Development

- **Analysis & Design**

- Identifying audiences, tasks, information, usability & accessibility, the document suite, document structures and style guides (18019 + Annex F (Writing style guides))

- **Development & Review**

- Preparation, review and updating of the draft. Preparation of the document masters, localization, translation and archiving (18019)

- **Evaluation & Updating**

- Evaluation and updating of the documentation (18019 + Annex C (Evaluation))

WG 2 Standards and User Documentation Development

- **Design of the documentation**
 - Copyright and version details, documentation overview, process and task descriptions, explanations, messages, definitions, concepts, navigation, presentation, icons and illustrations (9127 & 18019 + Annexes B (Design checklist) & E (Printed documentation)).

WG 2 – What's next?

SC 7 Study Group on User Documentation Standards

- Established at SC 7 Montreal Plenary (May 2003)
- Reported on at SC 7 Helsinki Plenary (May 2005)
 - Recommended restructuring and revision of S/W documentation standards based upon user's needs
- Work already underway in WG 2 , but help is needed
 - Current standards will not be revised, but content (including IEEE 1063) will be revised and re-used in a new suite

New WG 2 Standards, dokumentace pro vývojáře a pro uživatele

Target Audience	User Documentation			Software & Life Cycle Documentation		
	Project	Editor	Priority	Project	Editor	Pr a priority
Documentation Managers	ISO/IEC 26511	Australia (NWI)	1	ISO/IEC 26521	New Zealand	2
Documentation Acquirers & Suppliers	ISO/IEC 26512	tbd	4	ISO/IEC 26522	tbd	4
Documentation Testers & Assessors	ISO/IEC 26513	United Kingdom	2	ISO/IEC 26523	tbd	3
Documentation Designers & Developers	ISO/IEC 26514	USA (NWI)	1	ISO/IEC 26524	Canada	3

Připravované normy

- ISO/IEC 27001:2005 Specification for an Information Security Management System
- ISO 27001 is the formal standard against which organizations may seek independent certification of their Information Security Management Systems (meaning their frameworks to design, implement, manage, maintain and enforce information security processes and controls systematically and consistently throughout the organizations).
