### What can you expect

- What is quality?
- Agile development in nutshell
- Project deviations
- Barriers of quality improvement
- Automation
- Dashboards
- Reviews
- ISO and CMMI

Page 3/35 11.04.2016 Quality and testing in agile Jan Verner

### What is quality?

Page 4/35 11.04.2016 Quality and testing in agile Jan Verner

A problem has been detected and Windows has been shut down to prevent damage to your computer.

DRIVER\_IRQL\_NOT\_LESS\_OR\_EQUAL

If this is the first time you've seen this Stop error screen, restart your computer. If this screen appears again, follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware or software manufacturer for any Windows updates you might need.

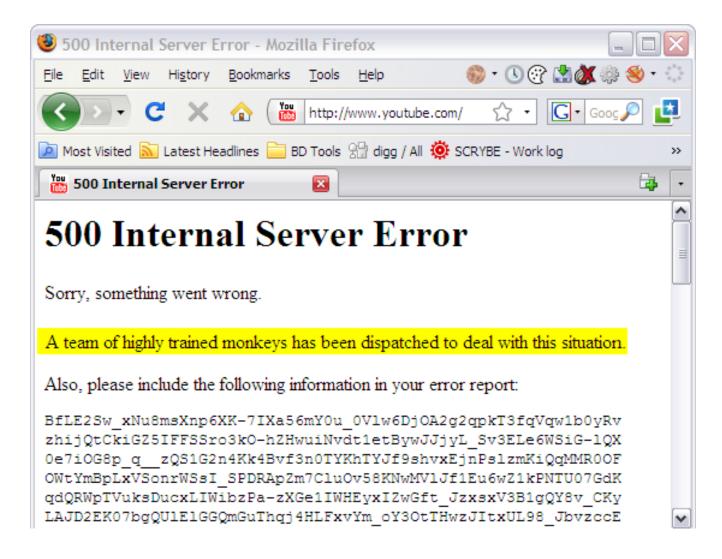

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to select Advanced Startup Options, and then select Safe Mode.

Technical information:

\*\*\* NDIS.sys - Address FFFFFADFC80B5578 base at FFFFFADFC80AD000, DateStamp 45d699f1

Beginning dump of physical memory

Physical memory dump complete. Contact your system administrator or technical support group for further assistance.

Page 6/35 11.04.2016 Quality and testing in agile Jan Verner

### What is quality?

- No bugs
- Fast and responsive software
- Satisfied user or customer
- Compliance with legislatives
- Compliance with internal rules

•

Page 7/35 11.04.2016 Quality and testing in agile Jan Verner

### What is quality?

Software functional quality reflects how well it complies with or conforms to a given design, based on **functional requirements** or specifications.

Software structural quality refers to how it meets **non-functional requirements** that support the delivery of the functional requirements.

Page 8/35 11.04.2016 Quality and testing in agile Jan Verner

### What is agile development?

Individuals and interactions over processes and tools

Working software **over** comprehensive documentation

Customer collaboration over contract negotiation

Responding to change over following a plan

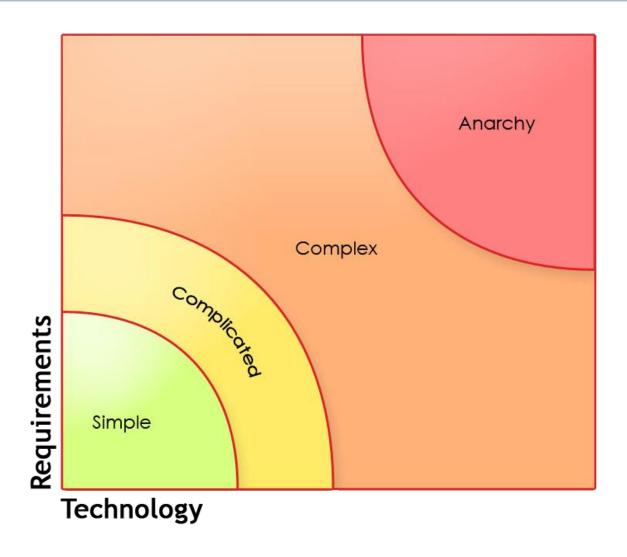

That is, while there is value in the items on the right, we value the items on the left more.

http://agilemanifesto.org/

Page 9/35 11.04.2016 Quality and testing in agile Jan Verner

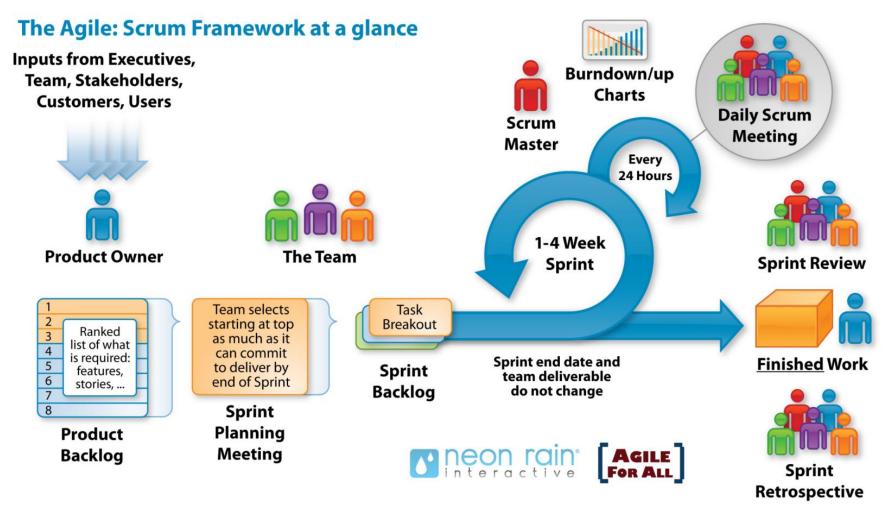

### When should we use agile?

Page 10/35 11.04.2016 Quality and testing in agile Jan Verner

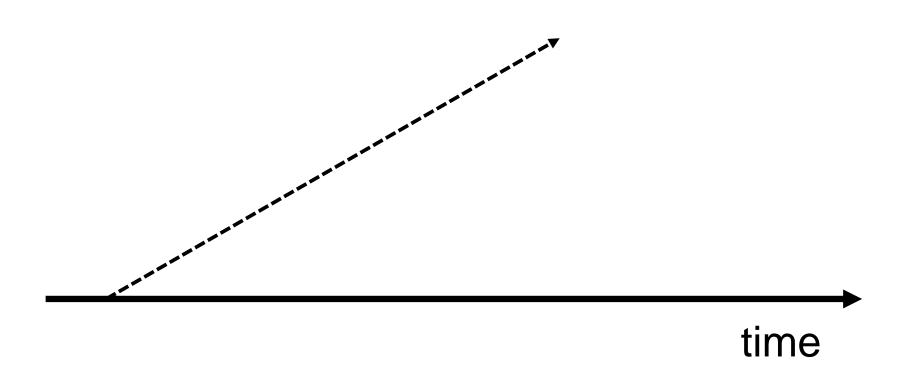

### Agile process in detail

agileforall.com

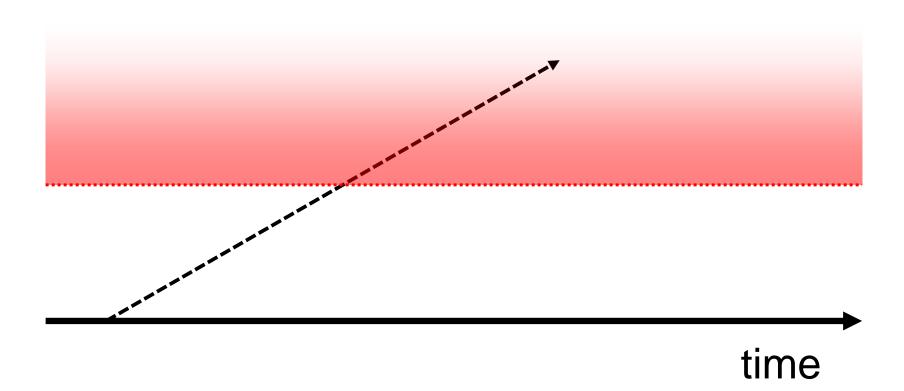

Page 11/35 11.04.2016 Quality and testing in agile Jan Verner

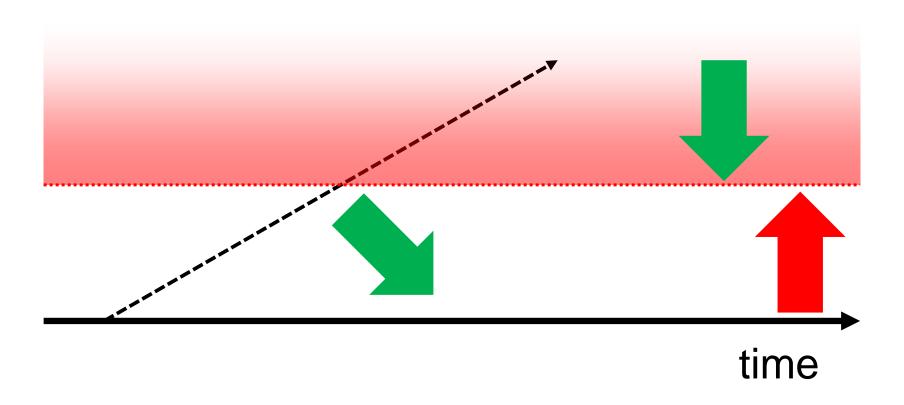

Page 12/35 11.04.2016 Quality and testing in agile Jan Verner

Page 13/35 11.04.2016 Quality and testing in agile Jan Verner

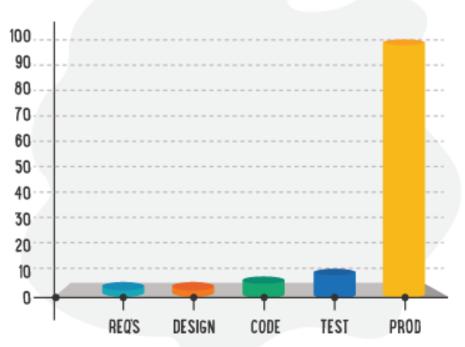

Page 14/35 11.04.2016 Quality and testing in agile Jan Verner

## THE RELATIVE COST OF FIXING DEFECTS

### Fail fast Learn fast

ILLUSTRATION BY SEGUE TECHNOLOGIES

Page 15/35 11.04.2016 Quality and testing in agile Jan Verner

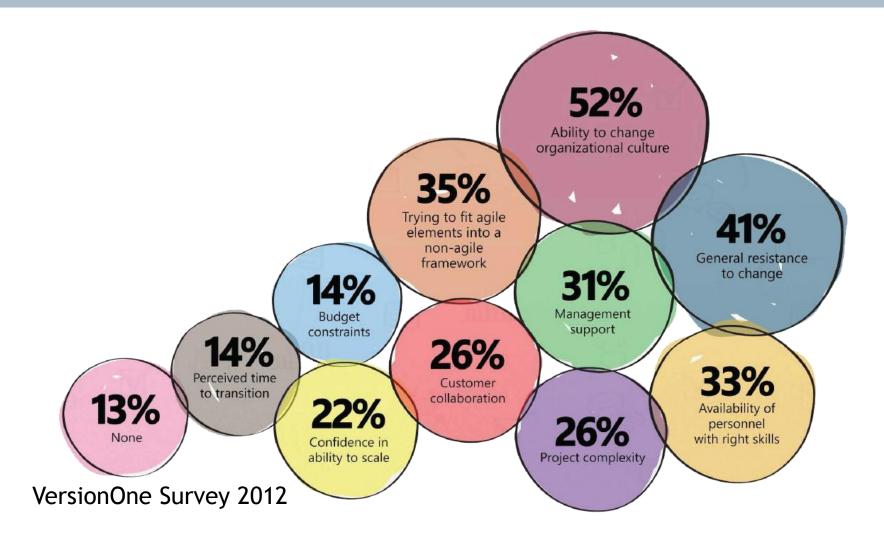

### Three key messages for agile

- Communication within team is basis
   [email, communicator, face to face meeting, minutes of meeting]
- Product owner is key role
   [training, will to change mindset, non-waterfall approach]
- Retrospective quality is essential [focus on improvements, focus on positives]

Page 16/35 11.04.2016 Quality and testing in agile Jan Verner

Page 17/35 11.04.2016 Quality and testing in agile Jan Verner

### **Quality-focused thinking**

It is about mindset of the people
It is about cultural change
Positive results generate positive results

Start doing the quality already during interviews

[early detection, ability to solve difficult situations, creativity test]

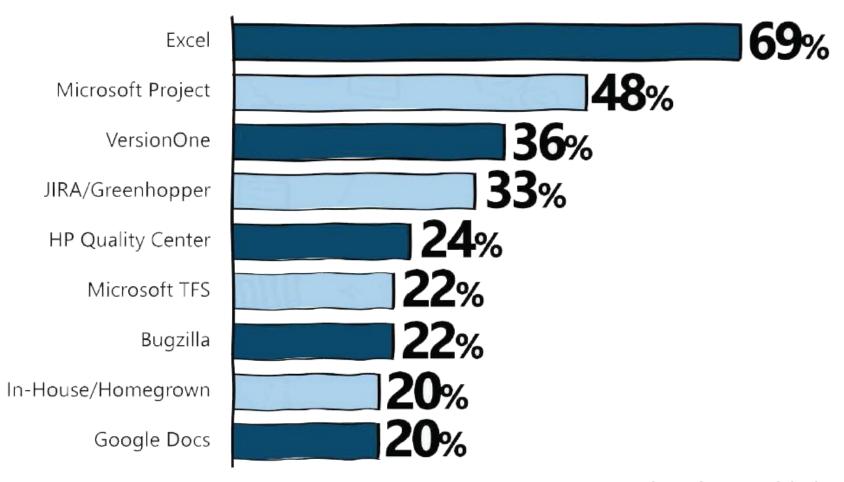

You have to invest into development of the people

[one to one, coaching, feedbacks]

Page 18/35 11.04.2016 Quality and testing in agile Jan Verner

## Barriers of agile adaptation

VersionOne Survey 2012

Page 19/35 11.04.2016 Quality and testing in agile Jan Verner

# The truth is

We are lazy.
We will not repeat processes.
We want to improve.
We make errors, it is natural.
We fall ill time to time.
We may leave the project.

Page 20/35 11.04.2016 Quality and testing in agile Jan Verner

### Realize human weaknesses

Do you have a new idea? Does your idea work?

Automate it!

Page 21/35 11.04.2016 Quality and testing in agile Jan Verner

### **Automatic tests**

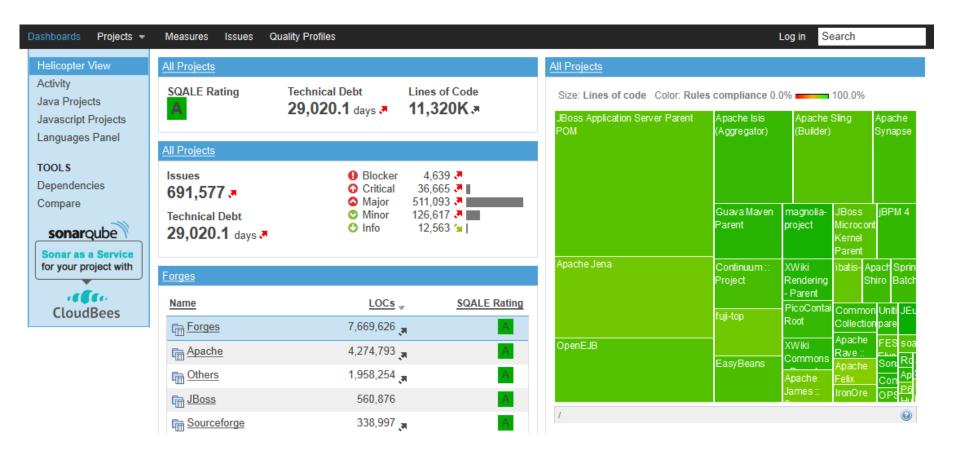

- Can not tell you that you have not done a bug.
- Save time for developers.
- Save time for testers.
- Specially suitable for unit tests.
- Can be used to calculate test coverage.
- Advances motivation of testers.
- Maintenance of tests is needed.

Page 22/35 11.04.2016 Quality and testing in agile Jan Verner

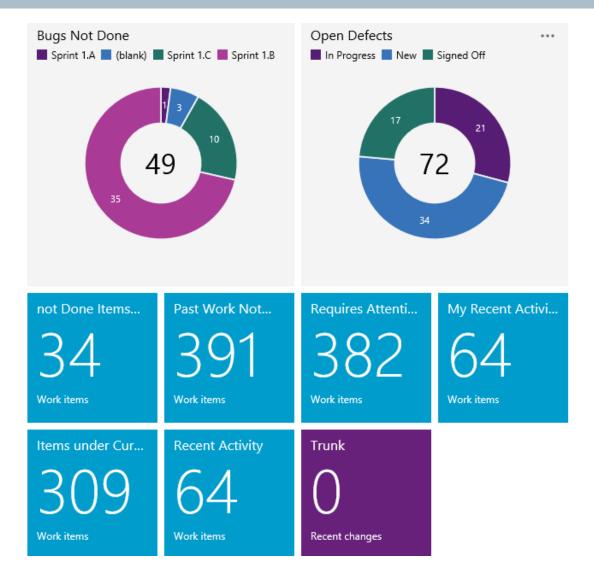

### Dashboards - SonarQube

Page 23/35 11.04.2016 Quality and testing in agile Jan Verner

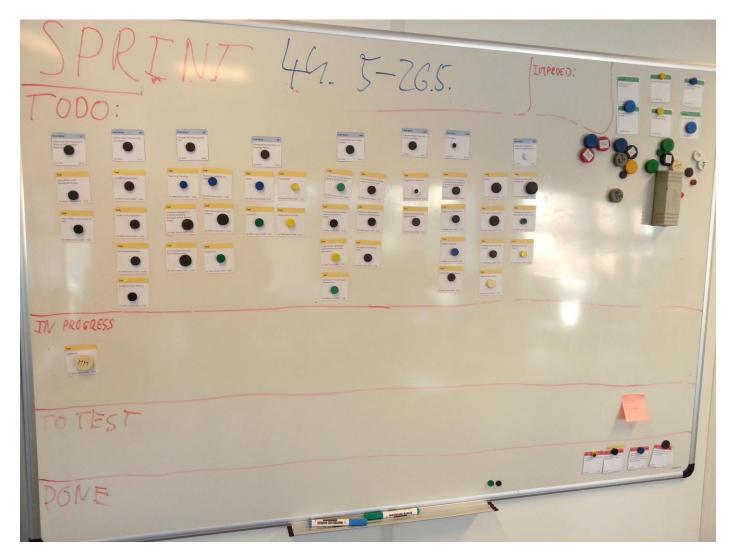

### Dashboards – Team Foundation Server

Page 24/35 11.04.2016 Quality and testing in agile Jan Verner

### Dashboards - physical

Page 25/35 11.04.2016 Quality and testing in agile Jan Verner

### Pair programming

Page 26/35 11.04.2016 Quality and testing in agile Jan Verner

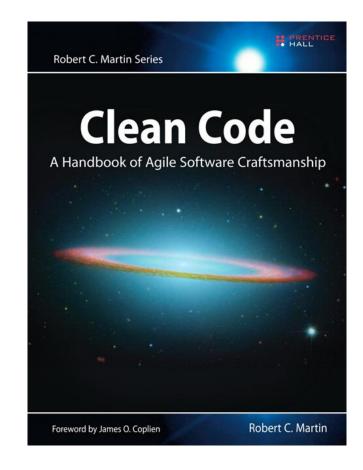

### Code reviews

Search for errors
Share know how
Train in new members faster
Review architecture
Make user interface review
Define common coding guidelines
Use dashboards statistics as input

SitraffCommonCodingGuidelines\_61.html

Page 27/35 11.04.2016 Quality and testing in agile Jan Verner

### **C**ode reviews

- ... software testing alone has limited effectiveness -- 25 45%
- ... effectiveness of design and code inspections are 55 and 60 percent.
- In a group of 11 programs developed by the same group of people, the first 5 were developed without reviews. The remaining 6 were developed with reviews. After all the programs were released to production, the first 5 had an average of **4.5 errors per 100 lines of code**. The 6 that had been inspected had an average of only **0.82 errors per 100**. Reviews cut the errors by over 80 percent.
- The Aetna Insurance Company found 82 percent of the errors in a program by using inspections and was able to decrease its development resources by 20 percent.
- A study of an organization at AT&T with more than 200 people reported a 14
  percent increase in productivity and a 90 percent decrease in defects after
  the organization introduced reviews.

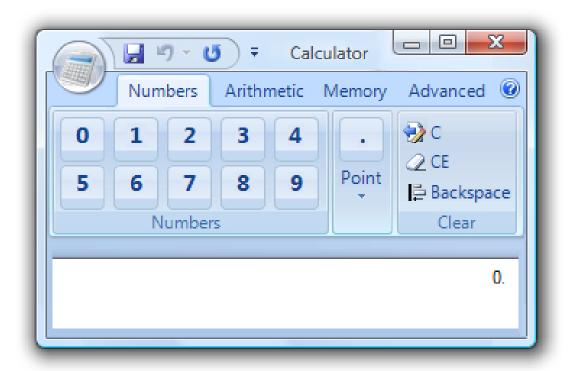

Page 28/35 11.04.2016 Quality and testing in agile Jan Verner

### **UI** reviews

- It is the very same process as code review.
- Can be used to improve visual side of the product.
- It is good way to check that nothing is forgotten

Page 29/35 11.04.2016 Quality and testing in agile Jan Verner

### **UX** testing

- Talk about emotions
- Measure time to complete a task

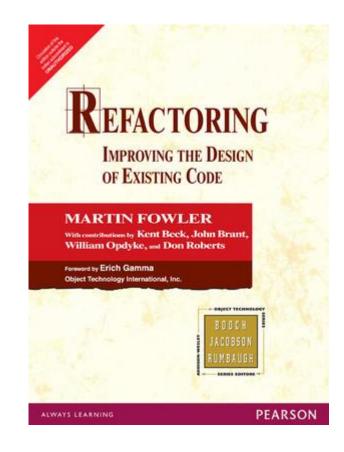

Page 30/35 11.04.2016 Quality and testing in agile Jan Verner

### Code refactoring

Improve existing code
Set of techniques
You should have automated tests
You can use tools (e.g. ReSharper)

Page 31/35 11.04.2016 Quality and testing in agile Jan Verner

### Code refactoring

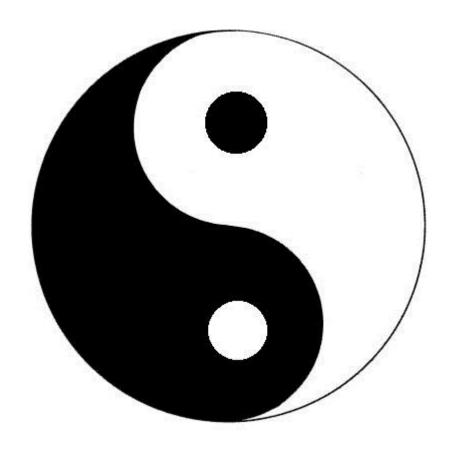

```
/// <summary>
/// </summary>
/// <param name="file">number of parts</param>
/// <param name="line">line number</param>
/// <returns></returns>
private string ExtractMethodBody(List<string> inputFile, int lineNumber)
  List<string> methodBody = new List<string>();
  int numberOfParenthesis = 0;
  bool process = true;
  int index = lineNumber + 1:
  int state = 1;
  while (process)
    switch (state)
      case 1:
        if (inputFile[index].Contains("{"))
          methodBody.Add(inputFile[index - 1]);
          numberOfParenthesis++;
          state = 2;
        else
          process = false;
        break;
        if (inputFile[index].Contains("{"))
          numberOfParenthesis++;
        if (inputFile[index].Contains("}"))
          numberOfParenthesis--;
        if (numberOfParenthesis == 0)
          methodBody.Add(inputFile[index]);
        process = false;
        break;
```

```
/// <summary>
/// Extracts method body from given list of lines from input file
/// </summarv>
/// <param name="parsedLines">list of lines with potencial method body</param>
/// <param name="lineIndex">method position in the given lines</param>
/// <returns>Methods body separated by new line characters</returns>
private string ExtractMethodBody(IList<string> parsedLines, int lineIndex)
  numberOfParenthesis = 0;
  bool operationDone = false;
  state = States.EmptyInput;
  var methodBody = new List<string>();
  while (!operationDone)
    switch ( state)
      case States.EmptyInput:
        ProcessEmptyLines(parsedLines, lineIndex, methodBody);
        break;
      case States.MethodBody:
        AdjustParenthesisCount(parsedLines, lineIndex);
        AddLineToBody(parsedLines, lineIndex, methodBody);
        operationDone = true;
        break;
```
