May 25, 2021

Big models

- bigger is better
- many layers
- need big machines
- using advanced hardware: GPU, TPU

PA154 Jazykové modelování (13) Natural Language Modelling

BERT

- Google
- pre-training on raw text
- masking tokens, is-next-sentence
- big pre-trained models available
- domain (task) adaptation

<code>Input:</code> The man went to the <code>[MASK]_1</code> . He bought a <code>[MASK]_2</code> of milk . <code>Labels:</code> <code>[MASK]_1 = store; <code>[MASK]_2 = gallon</code></code>

Sentence A = The man went to the store.
Sentence B = He bought a gallon of milk. Label = IsNextSentence

Sentence A = The man went to the store.
Sentence B = Penguins are flightless. Label = NotNextSentence

PA154 Jazykové modelování (13) Natural Language Modelling

3/11

GPT

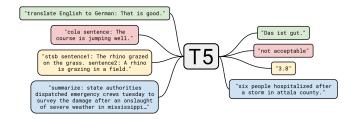

- Open Al
- GPT-2: 1.5 billion parameters
- GPT-3: 175 billion parameters
- very good text generation → potentially harmful applications
- Misuse of Language Models
- bias generate stereotyped or prejudiced content: gender, race, religion
- Sep 2020: Microsoft have "exclusive" use of GPT-3

PA154 Jazykové modelování (13) Natural Language Modelling

4/11

T5: Text-To-Text Transfer Transformer

- Google AI
- transfer learning
- C4: Colossal Clean Crawled Corpus

Pretrained models

- huge training data
- long training time
- small model
- fine tuning on target task
- multi-language models
- universal tokenization: subword units
 - ► Byte-Pair Encoding (BPE)
 - ▶ WordPiece
 - ► SentencePiece

PA154 Jazykové modelování (13) Natural Language Modelling 5/11 PA154 Jazykové modelování (13) Natural Language Modelling

ALBERT

- A Lite BERT
- factorized embedding parameters
- cross-layer parameter sharing
- inter-sentence coherence loss Next Sentence Prediction \rightarrow Sentence-Order Prediction
- \blacksquare much smaller: No. parameters: $108M \rightarrow 12M$ (base)

Sentence A = The man went to the store. Sentence B = He bought a gallon of milk. Label = IsNextSentence

Sentence A = The man went to the store. Sentence B = Penguins are flightless. Label = NotNextSentence

PA154 Jazykové modelování (13) Natural Language Modelling

Intrinsic evaluation

- direct evaluation of word embeddings
- semantic similarity (WordSim-353, SimLex-999, ...)
- word analogy (Google Analogy, BATS (Bigger Analogy Test Set))
- concept categorization (ESSLLI-2008)

PA154 Jazykové modelování (13) Natural Language Modelling

Extrinsic evaluation

- using the model in a downstream NLP task
- Part-of-Speech Tagging, Noun Phrase Chunking, Named Entity Recognition, Shallow Syntax Parsing, Semantic Role Labeling, Sentiment Analysis, Text Classification, Paraphrase Detection, Textual Entailment Detection

9/11

Multi-task benchmarks

- GLUE (https://gluebenchmark.com) nine sentence- or sentence-pair language understanding tasks
- SuperGLUE (https://super.gluebenchmark.com) more difficult language understanding tasks
- XTREME Cross-Lingual Transfer Evaluation of Multilingual

(https://sites.research.google/xtreme) 40 typologically diverse languages, 9 tasks

Libraries and Frameworks

- Dive into Deep Learning: online book https://d21.ai
- Hugging Face Transformers: many ready to use models https://huggingface.co/transformers
- jiant: library, many tasks for evaluation https://jiant.info
- GluonNLP: reproduction of latest research results https://nlp.gluon.ai
- low level libraries: NumPy, PyTorch, TensorFlow, MXNet
