Exercise 1 We consider (undirected) graphs as structures of the form $\mathfrak{G} = \langle V, E \rangle$ where E is the binary edge relation. Express the following statements in first-order logic.

- (a) All vertices are neighbours.
- (b) The graph contains a triangle.
- (c) Every vertex has exactly three neighbours.
- (d) Every pair of vertices is connected by a path of length at most 3.

Exercise 2 Let *f* be a binary function symbol, *g*, *h* unary, and *c* a constant symbol.

- (a) Find the most general unifier for the following pairs of terms.
 - (i) f(g(x), y) and f(x, h(y))(ii) f(h(x), x) and f(x, h(y))(iii) f(x, f(x, g(y))) and f(y, f(h(c), x))(iv) f(f(x, c), g(f(y, x))) and f(x, g(x))
- (b) Solve the following set of term equations

$$x = f(y,z), \quad y = g(u), \quad z = h(y), \quad u = f(v,w), \quad v = f(c,w)$$

Exercise 3 Consider the following formulae.

(a)
$$\exists x \exists y \forall z [z = x \lor z = y]$$

(b)
$$\forall x [\exists y R(x, y) \rightarrow \exists y R(y, x)]$$

(c)
$$\forall x [\forall y \exists z [R(x, f(y, z))] \rightarrow \forall y \forall z [R(f(x, y), f(x, z)) \lor R(y, z)]]$$

(d) $\exists x \forall y R(x, y) \land \forall x \exists y R(x, y) \land \forall x \forall y [R(x, y) \rightarrow \exists z [R(x, z) \land R(z, x)]]$

For each of them

- (1) transform it into Skolem normal form;
- (2) transform it into a set of clauses.

Exercise 4 Use the resolution method to check that the following formulae are inconsistent.

(a)
$$\forall x \forall y [x \le y \to (P(x) \leftrightarrow P(y))] \land \forall x \forall y [x \le y \lor y \le x] \land \exists x P(x) \land \exists x \neg P(x)$$

- (b) $\forall x \exists y [y \le x \land \neg E(x, y)] \land \forall x \forall y [x \le y \land y \le x \rightarrow E(x, y)] \land \exists x \forall y [x \le y]$
- (c) $\forall x \forall y [R(x, y) \rightarrow (P(x) \leftrightarrow \neg P(y))] \land \forall x \forall y [R(x, y) \rightarrow \exists z [R(x, z) \land R(z, y)]] \land \exists x \exists y R(x, y)$
- (d) $\forall x R(x, f(x)) \land \forall x \forall y \forall z [R(x, y) \land R(y, z) \rightarrow R(x, z)] \land \forall x \forall y [E(x, y) \rightarrow \neg R(x, y)] \land \exists x E(x, f(f(x)))$

Exercise 5 Use SLD resolution to check that the following set of Horn-formulae is inconsistent.

```
(a) \forall x T(x, x),

\forall x \forall y \forall z [E(x, y) \land T(y, z) \rightarrow T(x, z)],

E(a, b),

E(b, c),

E(c, d),

\neg T(a, d).

(b) \forall x T(x, x),

\forall x \forall y \forall z [T(x, y) \land E(y, z) \rightarrow T(x, z)],

E(a, b),

E(b, c),

E(c, d),

\neg T(a, d).

(c) R(c, x, x),

\forall x \forall y \forall z \forall w [R(x, f(y, z), w) \rightarrow R(f(y, x), z, w)],

\neg \forall x \forall y [R(f(x, f(y, c)), c, f(y, f(x, c)))].
```
