See the content of a certificate:

openssl x509 -text -noout -inform DER -in csca.der

Certificate:

Data:

Version: 3 (0x2)

Serial Number: 1 (0x1)

Signature Algorithm: 1.2.840.113549.1.1.10

Issuer: C=CZ, O=Czech Republic, OU=Ministry of Interior, CN=CSCA_CZ

Validity

Not Before: Jul 24 00:00:00 2006 GMT

Not After : Oct 24 23:59:59 2021 GMT

Subject: C=CZ, O=Czech Republic, OU=Ministry of Interior, CN=CSCA_CZ

Subject Public Key Info:

Public Key Algorithm: rsaEncryption

RSA Public Key: (3072 bit)

Modulus (3072 bit):

Convert certificate from DER to PEM:

openssl x509 -out csca.pem -inform DER -in csca.der

Prepare the C and H files for the ASN.1 structures:
asn1c -fnative-types sod.asn1

Compile a sample DER-XML converter:
gcc *.c -o LDSview -I. -DPDU=LDSSecurityObject

rm converter-sample.c
cp ? sod_sample.c

Compile a sample application:
gcc *.c -o LDStest -I.

Assignment: Modify the sample program displaying the LDS Security object to include verification of the hash of the datagroup (based on the files read from an ePassport). To test your application use the Sample_Data provided. [10 points]
