# Where to look for p5

**p5.js website**, the tool, docs

<https://p5js.org>

<https://p5js.org/reference/>

<https://p5js.org/examples/>

There are useful tutorials also on Processing website:

<https://processing.org/tutorials>

**Daniel Shiffman**, best p5 and Processing tutorials  
[Intro to p5.js](#) - playlist, **Coding train**, the channel

**Sketches**, ideas

<https://openprocessing.org>

**Books** with examples

[generative-gestaltung.de](https://generative-gestaltung.de)

Data-driven Graphic Design

Form+Code

# The coding train playlist

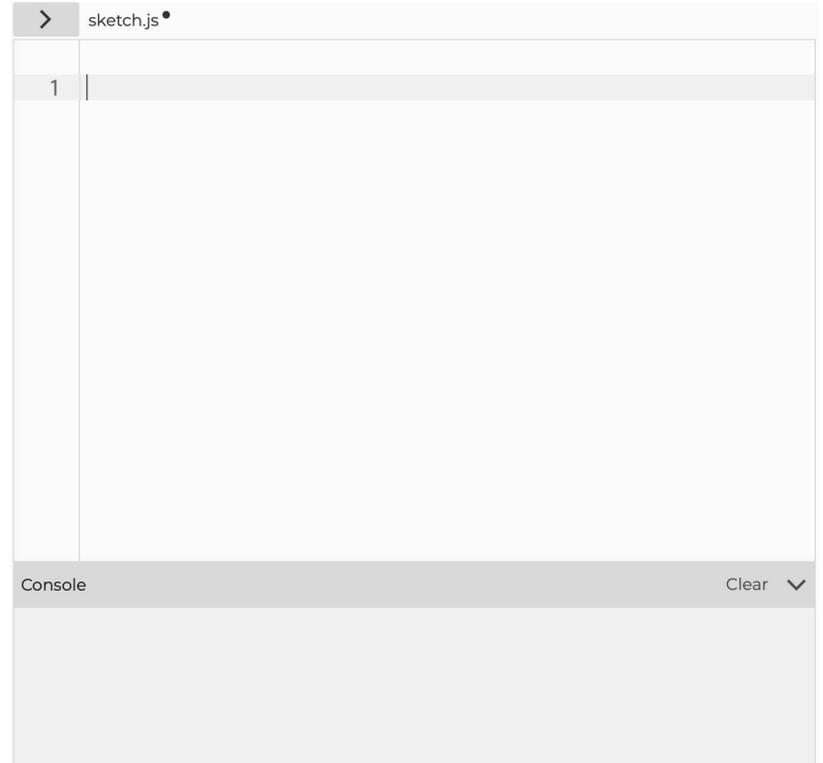

Loads of good video tutorials...

# The online IDE

<https://editor.p5js.org/>

that's what we use (for now) during classes  
[video tutorial](#)

Alternatively, you can setup VS Code at home  
(most popular IDE for JavaScript).  
You'll need a plugin. I also recommend using some  
AI code completion (Github copilot, etc.).  
[VS Code video tutorial](#)

# The inevitable functions

```
function setup ( ) {  
  // runs only once,  
  // at the beginning of the program  
}
```

```
function draw ( ) {  
  // runs in loop 30 times per second  
}
```

You can use `loop( )` and `noLoop( )` functions, or set the speed using `frameRate()`.

```
> sketch.js  
1 function setup() {  
2  
3 }  
4  
5 function draw() {  
6  
7 }
```

Console Clear ▼

# Controlling the canvas

**createCanvas** ( width, height )

**createCanvas** ( windowWidth, windowHeight )

stretch it

**fullscreen** ( boolean )

**background** ( int )

**print** ( string )

```
> sketch.js •  
  
1 function setup() {  
2   createCanvas(400,400);  
3   //fullscreen(true);  
4  
5   print("Hello world");  
6 }  
7  
8 function draw() {  
9   background(230);  
10 }
```

Console Clear ▾

Hello world

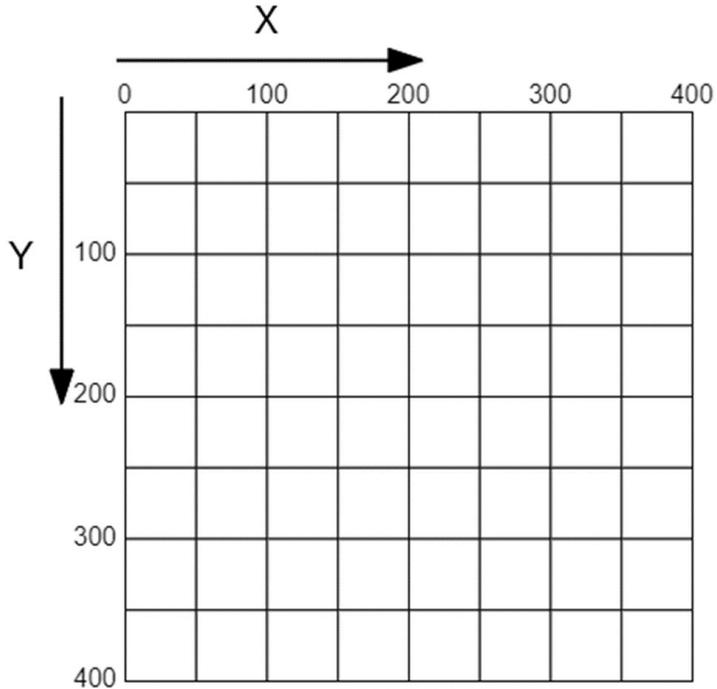

>

# Coordinate system

`circle ( 0, 0, 150 );` // at origin, of diameter 150 px

**Where does it appear?**

# Coordinate system

[Coordinates, shapes: tutorial](#)

```
sketch.js
1 function setup() {
2   createCanvas(400,400);
3 }
4
5 function draw() {
6   background(230);
7   circle(0,0,150);
8 }
```

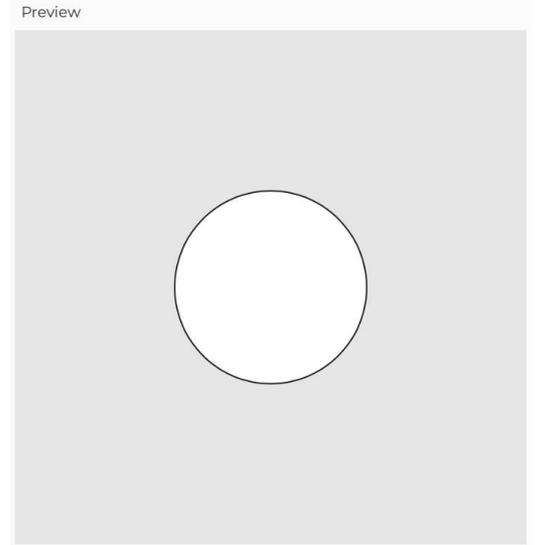

Preview

Console

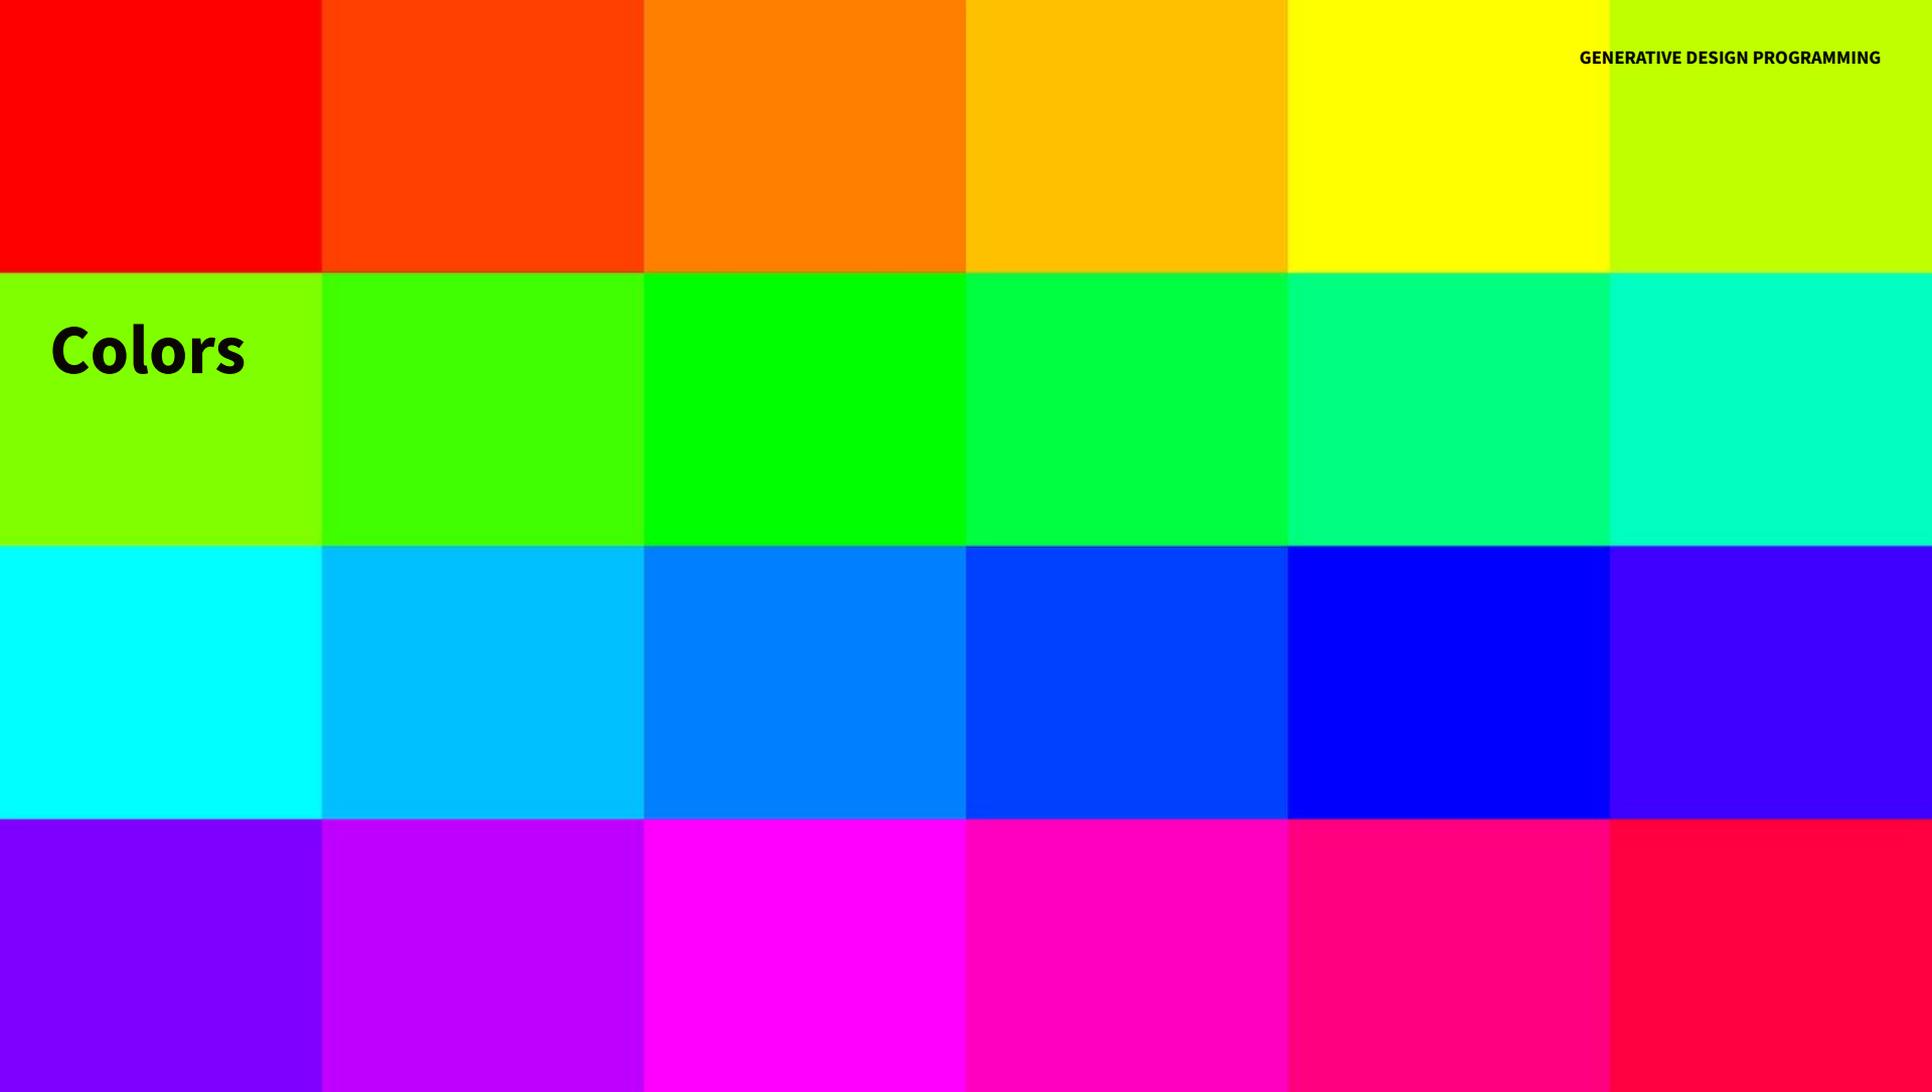

# Center it

To help, we have some built-in variables...

**width, height** // of the artboard in pixels

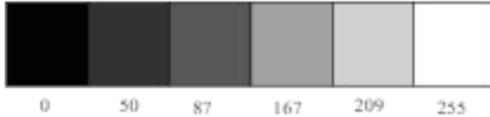

# Colors

# Digital colors

## Grayscale (8bit)

0-255

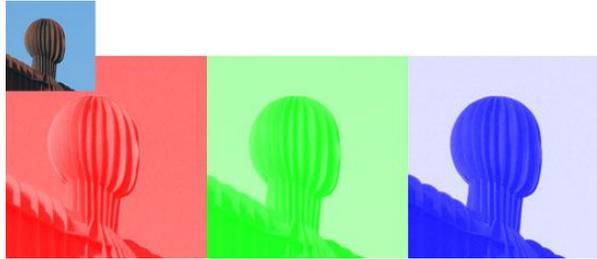

eg.

**background ( 230 )**

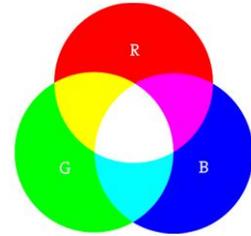

## RGB, Red-Green-Blue (8bit \* 3 channels)

0-255, 0-255, 0-255

eg.

**background ( 0, 210, 0 )**

# Color functions

Before drawing shapes, we use these to set the colors:

**Fill**    `fill ( color )`  
           `noFill ( )`

**Stroke**    `stroke ( color )`  
               `noStroke ( )`  
               `strokeWeight ( number )`

And for the background:

**Background**    `background ( color )`  
                   `clear ( )`

The **color** can be either 1, 3, or 4 arguments:

**number** 0-255 for grayscale

`fill ( 255 )`

**string** hexcode, rgb(a) css-style

`fill ( "#CD5C5C" )`

`fill ( "rgb(205, 92, 92)" )`

**3 numbers** 0-255 for RGB

`fill ( 0, 244, 12 )`

**+ 1 number 0-1.0** for opacity/alpha

`fill ( 0, 244, 12, 0.23 )`

**object - variable with stored color**

## Saving colors

You can also store colors in variables:

```
let c_magenta = color ( red, green, blue );
```

```
fill ( c_magenta );
```

Inside the functions (in **draw()**), consider using **const** keyword instead to declare a constant.

You may also see declaration with **var** from older version of JS, which has sort of weird behavior. Stick to **let** or **const**.

Look at [Javascript basics \(MDN\)](#)

# RGB (red - green - blue)

	<b>255r</b>	<b>200g</b>	<b>87b</b>
	<b>245r</b>	<b>138g</b>	<b>90b</b>
	<b>235r</b>	<b>71g</b>	<b>118b</b>
	<b>158r</b>	<b>82g</b>	<b>170b</b>
	<b>81r</b>	<b>88g</b>	<b>187b</b>
	<b>?r</b>	<b>?g</b>	<b>?b</b>

# RGB (red - green - blue)

	<b>255r</b>	<b>200g</b>	<b>87b</b>
	<b>245r</b>	<b>138g</b>	<b>90b</b>
	<b>235r</b>	<b>71g</b>	<b>118b</b>
	<b>158r</b>	<b>82g</b>	<b>170b</b>
	<b>81r</b>	<b>88g</b>	<b>187b</b>
	<b>14r</b>	<b>188g</b>	<b>191b</b>

**HSB = Hue  
Saturation  
Brightness**

# HSB (hue-saturation-brightness)

	<b>40h</b>	<b>66s</b>	<b>100b</b>
	<b>19h</b>	<b>63s</b>	<b>96b</b>
	<b>343h</b>	<b>70s</b>	<b>92b</b>
	<b>292h</b>	<b>52s</b>	<b>67b</b>
	<b>236h</b>	<b>57s</b>	<b>73b</b>
	<b>?h</b>	<b>?s</b>	<b>?b</b>

# HSB (hue-saturation-brightness)

	<b>40h</b>	<b>66s</b>	<b>100b</b>
	<b>19h</b>	<b>63s</b>	<b>96b</b>
	<b>343h</b>	<b>70s</b>	<b>92b</b>
	<b>292h</b>	<b>52s</b>	<b>67b</b>
	<b>236h</b>	<b>57s</b>	<b>73b</b>
	<b>181h</b>	<b>93s</b>	<b>75b</b>

# Color modes

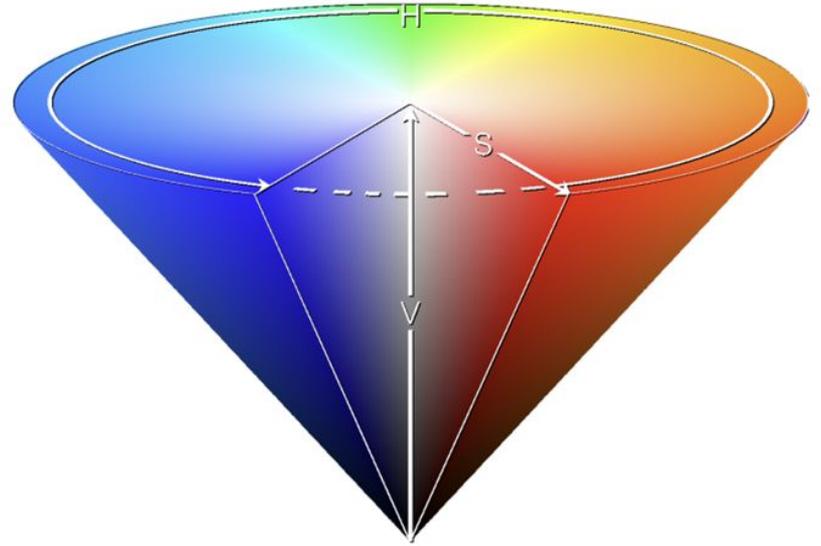

**colorMode** ( *string mode, number max, ...* )

```
//colorMode(RGB, r, g, b, alpha)
```

**colorMode** ( RGB, 255, 255, 255, 255 ) // rgba defaults

```
//colorMode(HSB, h, s, b, alpha)
```

**colorMode** ( HSB, 360, 100, 100, 1.0 ) // hsba defaults

# Color opacity

People also call it **alpha, transparency**.

## RGB

```
fill ( 255, 0, 0, 255)  
    // range from 0 to 255,  
    0 being completely transparent and 255 is 100% opaque
```

## HSB

```
fill ( 320, 100, 100, 0.23 )  
    // default range is 0.0-1.0
```

# Sketch #1: Hello circles

**Make two circles of your favorite color.  
Make the color transparent.  
Position the circles such that they overlap.**

Code

# Basic shapes

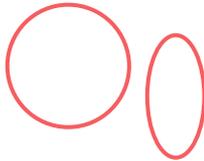

**point**( x, y )

**line**( x1, y1, x2, y2 )

**circle**( x, y, radius )

**ellipse**( x, y, width, height )

**square**( x, y, length )

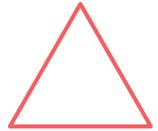

**rect**( x, y, width, height )

**rectMode**(CENTER | CORNERS)

// is x,y center or top left?

**triangle**( x1, y1, x2, y2, x3, y3 )

# Sketch #2: Mickey

Make an abstract figure using all the shapes you know.

**Back to circle**

# Mouse interaction

**mouseX, mouseY**

// x and y mouse position

```
> sketch.js •  
1 function setup() {  
2   createCanvas(400,400);  
3 }  
4  
5 function draw() {  
6   background(230);  
7   circle(mouseX,mouseY,150);  
8 }
```

Console Clear ▾

>

# Mouse interaction

```
Function mousePressed ( ) { // here goes your art }
```

```
mouseClicked ( ) { ... }  
mouseDragged ( ) { ... }  
mousePressed ( ) { ... }  
mouseReleased ( ) { ... }
```

```
keyPressed ( ) { ... }  
keyTyped ( ) { ... }  
key  
keyCode
```

# Let me take a selfie

```
keyPressed ( ) {  
  if (key === "s") {  
    save();  
  }  
  ...  
}
```

Check **keyCode** for special keys (LEFT\_ARROW, BACKSPACE, ESC, ... [see more](#)):  
if (keyCode === RETURN) ...

Use **keyTyped()** if you want to distinguish between  
lower and uppercase letters...

Code

->

# Fading effect

```
function draw () {  
  background ( 255, 10 );  
  fill ( "#f55e61ff" );  
  ellipse ( random( width ), random( height ), 100, 100 );  
}
```

[Code](#)
