# Features of academic spoken English

#### Introduction

Academic speaking is similar in many ways to academic writing: it is linear, it is explicit, it has one central point and it is presented in standard language. However, it is less complex and objective than written language.

## Formal

In general this means that when you are speaking you should avoid colloquial words and expressions.

## **Explicit**

It is the responsibility of the speaker in English to make it clear to the listener how various parts of the talk are related.

#### Responsible

In academic speaking you are responsible for demonstrating an understanding of the source text. You must be responsible for, and must be able to provide evidence and justification for, any claims you make.

#### Complex

Spoken language is less complex than written language. Spoken language has shorter words, has a less varied vocabulary. It uses more verb-based phrases than noun-based phrases. Spoken texts are longer and the language has less grammatical complexity.

#### **Objective**

Spoken language in general has more words that refer to the speaker. This means that although the main emphasis should be on the information that you want to give and the arguments you want to make, it is not unusual to refer to yourself or your audience.

## **Recognising lecture structure**

**Signals** 

The tables below show some of the most common signals used in lectures to indicate structure (Leech & Svartvik, 1975). Listen for them in your lectures.

- 1. Introducing
- 2. Giving background information
- 3. Defining
- 4. Enumerating/Listing
- 5. Giving examples
- 6. Showing importance/Emphasising
- 7. Clarifying/Explaining/Putting it in other words
- 8. Moving on/Changing direction
- 9. Giving further information
- 10. Giving contrasting information
- 11. Classifying
- 12. Digressing
- 13. Referring to visuals
- 14. Concluding

#### 1. Introducing

At the beginning of a lecture, or a section of a lecture, the lecturer will give you some idea about the structure of the lecture.

What I intend to say is	
What I'd like to do is to discuss	
What I intend to do is to explain	
In my talk today,	
My topic today is	
Today, I'm going to talk about	
I'm going to talk to you about	
My colleagues and I are going to give a short presentation on	
Today I want to consider	
In this talk, I would like to concentrate on	
The subject of this talk is	
The purpose of this talk is to	
This talk is designed to	

#### 2. Giving background information

Before the new information is given, the lecturer will often summarise what you are expected to know about the subject to be covered.

As we know As we have already seen As we have all read It's clear that

It goes without saying	
We all understand	
It is understood	
You'll remember	

## 3. Defining

In a lecture, it is often necessary to define the terms that will be used. This is important as familiar words can have specific meanings in different subjects.

x	is is called is known as may be defined as is a type of Y that/which				
By					
	This term is used generally to mean In the field of Y, the term refers to				
A type of Y which is X.					

### 4. Enumerating/Listing

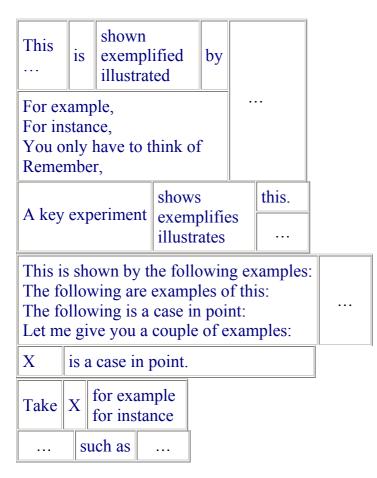

The lecturer will often be explicit about the order in which new points will be mentioned. To make the order clear we use various links and connectives.

First	ly					
Seco	ndly					
Next	-					
Ther	ı					
Thire	dly					
Last	ly					
Fina	lly					
First	First of all					
In th	e first pla	ace				
	For one thing					
To b	To begin with					
	e second					
For a	another t	hing				
first						
The second point I'd like to make is						
next						

last	

#### 5. Giving examples

In lectures, it is common to make generalisations. These generalisations are often supported with examples.

#### 6. Showing importance/Emphasising

When you are taking notes, you cannot write down every word. You need to distinguish between important and less important information. The lecturer can use these signals to draw your attention to the important points.

I want to stress	
I want to highlight	
I'd like to emphasise	
I'd like to put emphasis on	
It's important to remember	
that	
We should bear in mind that	
Don't forget that	

The crucial point is The essential point is The fundamental point is	
Furthermore, What's more, This supports my argument that, It follows, therefore, that What (in effect) we are saying is	

## 7. Clarifying/Explaining/Putting it in other words

The lecturer will try to explain the meaning of difficult concepts. To do this he or she may repeat the information using different words.

In other Or rathe That is Basical	er, to say,		
-	it that another way,	,	
By which	ch I mean		
-	could say		
The poi	nt I'm making is		
That is	to say,		
That is,			
Namely	, ,		
i.e.			
That me	eans		
What I	'm suggesting 'm trying to say meant to say should have said	is	
Let me	put it another way	•	

#### 8. Moving on/Changing direction

The lecture will be organised around several different points. It is important to notice when the lecturer moves from one point to the next. Listen for these signals.

That's all I want to say about X. OK Now

All right	
Having looked at, I'd now like to consider	
I'd like now to move on to	
Turning now to	
So let's turn to	
Moving on now to	
I now want to turn to	
The next point is	
Another interesting point is	
The next aspect I'd like to consider is	
I'd now like to turn to	
Let's now look at	
If we could now move on to	

## 9. Giving further information

These signals show that the lecturer is proceeding in the same direction and giving more information.

-				
Furtherm	nore,			
An addit				
Another	point			
A further	point			
A similar	r point			
In addition	on			
Moreove	r			
Similarly	7			
Apart fro	om,			
Not only				
We can a				
I could a				
Further				
As well a				
Besides				
	also.			
as well.				

## 10. Giving contrasting information

These signals show that the lecturer is proceeding in a different direction and giving unexpected or contrasting information. It is important to listen to this.

Although	
However	
On the other hand	
Whereas	
Despite	
Nevertheless	
But	
Alternatively	

## 11. Classifying

When we classify, we arrange members of a group. The lecturer may use the following signals to show that a classification is being made.

There are	;	typ kin	ds				: Y and Z. . These are Y and Z.	
The	N	cate sort	egories		of X are Y a		X are Y and Z.	
X	com	iists of prises be div	ided into	N	c k t	kinds		. These are Y and Z. : Y and Z.
Y and Z a	are	classe kinds types catego variet	ories	of X.				
X may be	e clas	sified	accordin on the b dependi	oasis o				

#### 12. Digressing

Sometimes the lecturer may leave the main subject of the lecture for a while and then come back to it.

Incidentally By the way While I remember Before I forget

#### 13. Referring to visuals

The following signals can be used to refer to a handout or an OHT or PowerPoint slide.

On this graph, Take a look at this. Let's have a look at this. I'd like you to look at this. I'd like to draw your attention to Here we can see The shows The graph illustrates The horizontal axis represents	
The horizontal axis represents	
The vertical axis represents As you can see, If you look closely, you'll see	

## 14. Concluding

The lecture should end with a summary of the main points made.

So, We've seen that First we looked at ... and we saw that Then we considered ... and I argued that . . . In short, To sum up In conclusion, I'd like to emphasise that That completes my lecture.

TASK:

Look at the pictures below. Each of them represents giving a lecture. Describe what you can see in the picture, comment on the place, audience, possible topics, outline the lectures being given.
