EEP

(European) energy policy (EEP)

 = manner in which given authority (EC + govts) address issues of energy development: production, distribution, consumption.
 Deals with legislation, incentives to investments, guidelines for energy consevation, taxation, other public policy techniques, international treaties...

□ 1) Does European energy policy matter?

 \square 2) Who has sovereignty over this policy in the EU?

Process of communitarization

Combination of 3 factors ('flows') needed:

- Situation defined as a problem (discourse framing)
- Solution offered by Commission (path dependency)
- General development in the area (global prices of energy, consumption, enlargement of the EU etc.).
- Coupling of those factors > window of opportunity (crisis) = development of given issue on the EU level.
- Discourse framing: construction of a narrative about why the isssue is European in scope. That the problem is a common European one.
- Path dependency: values and norms (prointegrated mission) embedded withing the Commission, continuity

- 1) The end of the WWII 70s: first EC/EU institutions
- 2) 70s first half of 80s: external difficulties
- 3) 86 2000: common energy market and environmental issues
- 4) The last decade Completition of the (legaly based) EEP shared competence between EU and MS

Post-war period - ECSC

- 51, resp. 52. Robert Schuman, Jean Monnet.
- Idea of supranational organization with independent management (High Authority).
- De jure common market with coal and steel.
- Independence questioned by introducing Council of Ministers, governments intefered frequently.

OECD – Europe: The overall energy						
consumption, in %						
	1950	1955	1960	1965	1973	
Solid	83	75	61	45	23	
fuels						
Liquid	14	21	30	59	55	
fuel						
Natural	Less	Less	2	3	10	
gas	than 1	than 1				
Hydroel	1	3	3	3	6	
ectricity		5	5	5	V	
Nuclear	0	0	Less	Less	1	
			than 1	than 1		

Post-war period - EURATOM

"Our children will enjoy in their homes electrical energy too cheap to meter... It is not too much to expect that our children will know of great periodic regional famines in the world only as matters of history, will travel effortlessly over the seas and under them and through the air with a minimum of danger and at great speeds, and will experience a lifespan far longer than ours, as disease yields and man comes to understand what causes him to age.,,

LL. Strauss - Chairman of the US Atomic Energy Commission

Post-war period - EURATOM

27. 10. 1957

- **T**o promote research and disseminate the information
- **T**o establish uniform safety standards to protect the workers and public
- **D** To facilitate investments developing the nuclear energy in the EU
- To ensure that all users in the EU receive a regular and equitable supply of ores and nuclear fuels common supply policy
- Weakened by the disputes between France on one side and Germany and Italy on the other
- Now role of the Euratom is limited mainly to the inspection and preparation of safety regulations.

European Economic Community

"...to promote throughout the Community a harmonious, balanced and sustainable development of economic activities, a high level of employment and of social protection, equality between men and women, sustainable and non-inflationary growth, a high degree of competitiveness and convergence of economic performance, a high level of protection and improvement of the quality of the environment, the raising of the standard of living and quality of life, and economic and social cohesion and solidarity among Member States.

- Articles 30 37 removing of quantitative restrictions on import and export, regulation of state monopolies.
- Articles 85-94 regulates the relations between companies, state aid to business, limitation of monopoly behavior

The end of the WWII – 70s: first EC/EU institutions

1) ECSC and Euratom didn't lead to the common energy policy. The former – social instrument to assist to the run-down of coal mining. The later – limited contribution to developing nuclear power in Europe.

2) Their successes never spilled-over to the other areas.

= The development facilitated and controled by govts, limited powers and autonomy of supranational bodies. No general energy policy, just in strictly defined areas.

70s and 80s- Eve of the oil crisis

- The dramatic rise of the West dependency on imported oil since 1955
- M. Gaddafi he led other producers with an effort to limit the power of MNOCs. (expropriation).
- □ Impact of OPEC rising the prices, co-ordination of producers

Nationalization in period of 1970 - 1974			
Saudi Arabia	0 % - 58,5 %		
Kuwait	1,2 % - 55,1 %		
Algeria	14,6 % - 76,9 %		
Quatar	0 % - 60 %		
UAE	0 % - 49,5 %		

70s and 80s - First oil crisis

- 23.8.73 A. Sadat + King Faisal considering the use of oil weapon
- 16.10. the producers raised the price of oil for 70%, then limiting the export
- Following Nixon's decision to support Israel, Libya and S.A. introduced total embargo on export
- \square 23.12.1973 the price rose again for 128%
- The promise of a negotiated settlement between Israel and Syria was sufficient to convince Arab oil producers to cancel the embargo in March 1974

70s and 80s - First oil crisis

□ Results

- Stagflation and damaged economies
- Serious impact on the developing countries
- Physical shortage of fuels
- EC failed to address this crisis

EU's role in the oil crisis

- 1968 'Community Energy Policy' call for 'common energy policy which fully integrates the energy ... to counterbalance risks of dependence on imports'. – opposition from Netherland – Shell and (after 73) from UK.
- 72/425 directive imposing an obligation on MS to maintain minimum stocks of crude oil and/or petroleum products
- 1973 Discussion about common response to the rising price of oil failed. No common reaction during crisis. MS prefere to deal with producers separately. Only resolution asking Israel for restraint in the war issued.
- MS blames the US and its foreign policy, the US wants market forces to solve the problem, not willing to come under any pressure from Arab states.

EC's role in the oil crisis

- □ 1975 attempt to restrict oil and gas use in power generation
- 1977 proposal to introduce crisis management measures refused by UK
- 1981 development of an Energy strategy for Europe EC accepted its limited role in this sector
- 1986 to promote energy conservation and indigenous coal, limit combusing the imported fuels to produce electricity
- 1987 proposal for shared financing of common research on possible development of oil fields in EC – refused by UK
- = no legally binding tools, no discernible effect on decision making. EC recommendations largely ignored.

What failed?

- Situation defined as a problem oil crisis
- Solution offered by the Commission EC had no experience in the external energy relations, due to the long period of low prices and amply supplies
- General development in the area external dimension as a high policy, bilateral relations of MS with producers, domestic sources of oil and gas, UK

1) The end of the WWII – 70s: first EC/EU institutions

2) 70s – first half of 80s: external difficulties

= EC's effort thwarted by MS. Bilateral policy at the expense of common possition.

Period between 1985 - 2000

■ New incentives for energy on the EC level

- Weak competitiveness of European industry

 first proposals to create the internal energy market. Competition and transparency instead of national monopolies and closed markets.
- Environmental concerns tools to prevent impact of usage of energy on local and global level.
- Disintegration of Soviet block proposals to manage relations between producents and consumers (EU MS) of energy.

Period between 1985-2000

Energy policy grows gradually. Where necessary Brussels borrowed legal competence from the economic and environmental parts of the EU treaties to propose and adopt energy measures.

□ EEC

- Articles 30 37 removing of kvantitative restrictions on import and export, regulation of state monopolies
- Articles 85-94 regulates the relations between companies, state aid to business, limitation of monopoly behavior

□ Maastricht treaty

- EU's competence on the environment
- Cross-border energy infrastructure (T-E networks)

□ Amsterdam Treaty

No significant changes

- 1) The end of the WWII 70s: first EC/EU institutions
- 2) 70s first half of 80s: external difficulties
- 3) 84 2000: new activities in all three dimensions
- = Authority of EC/EU institutions strenghtened. Foundations of EEP set.

Process of creation of EEP

- □ 1995: White Paper: An Energy Policy for the European Union
- 2000: Green Paper Towards a European strategy for the Security of Energy Supply: "...the Union suffers from having no competence and no community cohesion in energy matters"
- 2006: Green Paper A European Strategy for Sustainable, Competitive and Secure Energy.
 - An internal energy market that guarantees security of supply through solidarity between MS
 - Raising security and competitiveness of energy supply through more sustainable, efficient and diverse energy mix
 - An integrated approach to tackling climate change
 - Encouraging innovation
 - An external energy policy

Fourth period – a new millennium

- □ An Energy Policy for Europe (communication):
 - **•** Energy and climate package
 - A 20% reduction in EU greenhouse gas emissions from 1990 levels;
 - Raising the share of EU energy consumption produced from renewable resources to 20%;
 - A 20% improvement in the EU's energy efficiency.
 - = + EU ETS (2009/29/ES) + CCS (2009/31/ES)
 - **Third liberalization package**
 - Unbundling
 - Promotion of an internal energy market and the removal of restrictions to trade between MS
 - Agency for Cooperation of Energy Regulators (ACER) + European Networks for Transmission System Operators
 - The protection of the consumers have to be strenghtened

Treaty of Lisbon (2007)

□ Head XXI: Energy:

- (a) ensure the functioning of the energy market;
- **(**b) ensure security of energy supply in the Union; and
- (c) promote energy efficiency and energy saving and the development of new and renewable forms of energy; and
- (d) promote the interconnection of energy networks.
- ordinary legislative procedure (co-decision) shared competences

Article 122 (former 100) : Without prejudice to any other procedures provided for in the Treaties, the Council, on a proposal from the Commission, may decide, in a spirit of solidarity between Member States, upon the measures appropriate to the economic situation, in particular if severe difficulties arise in the supply of certain products, notably in the area of energy.'

Treaty of Lisbon (2007)

- Apart from the explicit energy competences, Union actions in this area are guided by:
 - Art 24 and 114 TFEU internal market
 - Art 191-193 TFEU environmental protection
 - Art 113 TFU taxation
 - Art 107-108 TFEU state aid
 - Art 206 TFEU EU trade policy
 - □ Art 170 172 TFEU TEN-E
 - And others

Process of communitarization

- Situation defined as a problem (RF Ukr crisis, negotiation about Kyoto protocol)
- Solution offered by Commission (common integrated policy)
- General development in the area (volatile prices of energy commodities, new member states, decreasing domestic production, new world consumers of energy...).

- 4) Last decade: completition of the (legaly based) EEP
- = continuing process of adjusting and revising of common energy policy.
- = domination of supranational principle in the area of internal market and environmental aspects of energy
- = intergovernmental approach preserved in the external dimension.
