

You are the bioregional council

1. How do you decide who is on the council: which groups are presented? Future generations? Other species?
2. What evidence/information do you accept?
3. Which are your most important resources?
4. Can you develop a hierarchy of needs?
5. How would you balance the need for biofuels against the need for meat?
6. How would you encourage people to live more sustainable lifestyles?
