

The Concept of "Software"

"Software" Definition

MVV59K Software Law (fall semester 2010)

Tento projekt je spolufinancován Evropským sociálním fondem a státním rozpočtem České republiky.

Mgr. Jaromír Šavelka

lecturer

Institute of Law and Technology, Faculty of Law, Masaryk University Office s61 (office hours from 14:30 to 16:30)

 Introduce "Software" as a term with multiple meanings

- Explain basic terms connected to
 - Computer hardware
 - Computer software

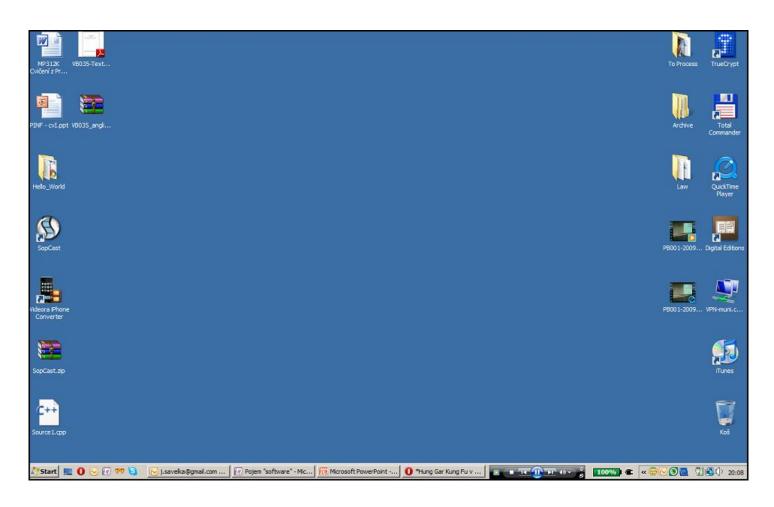

What is software?

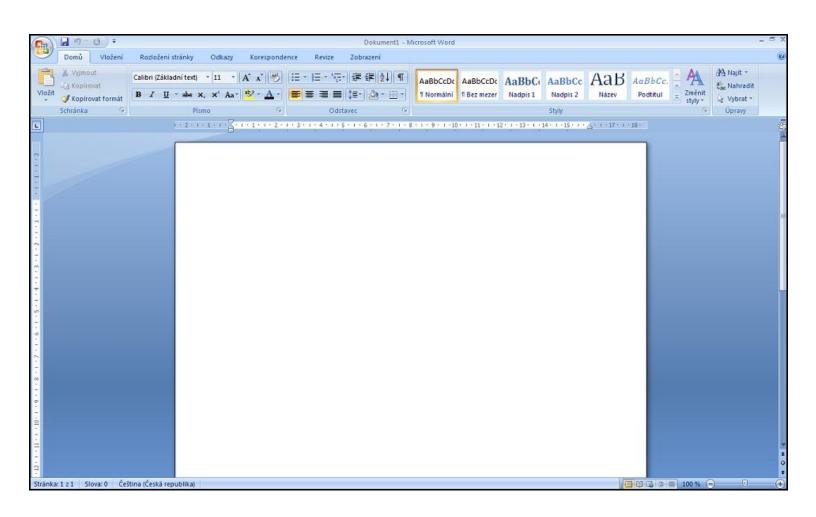

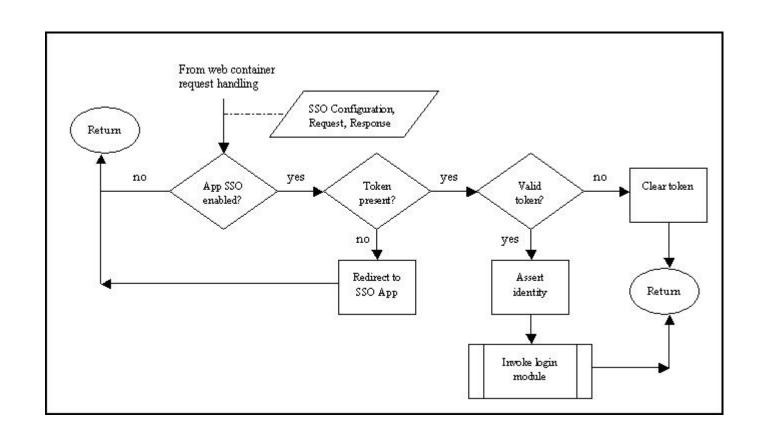

```
// double Tap_to_DB(__int16 Tap, __int16 TotalTaps);
// input: Tap -- __int16, Tap should be greater then 0 and less than Total Taps.
               If Tap equal to Total Taps, the result should be negative infinity
        Total Taps -- __int16, Total Taps should bigger than 0
// output: Function will returns the dB value as double
double Tap_to_DB(__intl 6 Tap, __intl6 TotalTaps)
        int16 tmp a;
       double dB Value, tmp b;
       // Check input value
       tmp a = Tap;
       if(Tap >= TotalTaps) tmp_a = TotalTaps - 1;
       if(Tap < 1)
                            tmp a = 1;
       // Convert to dB value
       tmp_b = (double)(TotalTaps - tmp_a);
       tmp_b = tmp_b / (TotalTaps - 1);
       dB_Value = 20 * log10(tmp_b),
       return(dB_Value);
```

What is software?

Definition #1

Software is a set of all computer programs used by a computer.

Definition #2

Anything that is not hardware but is used with hardware.

Definition #3

Computer software, or just software is a general term used to describe the role that computer programs, procedures and documentation play in a computer system.

What is software?

MASARYKOVA UNIVERZITA PRÁVNICKÁ FAKULTA ÚSTAV PRÁVA A TECHNOLOGIÍ

Example

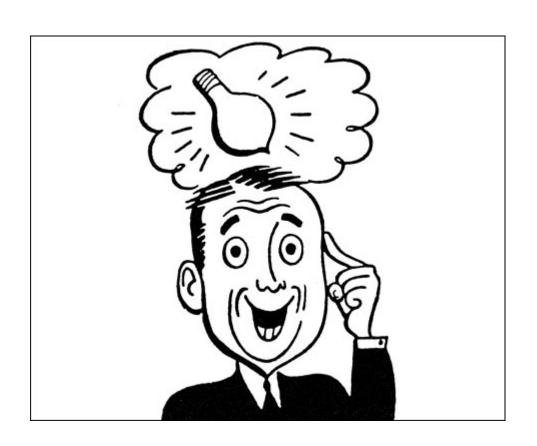

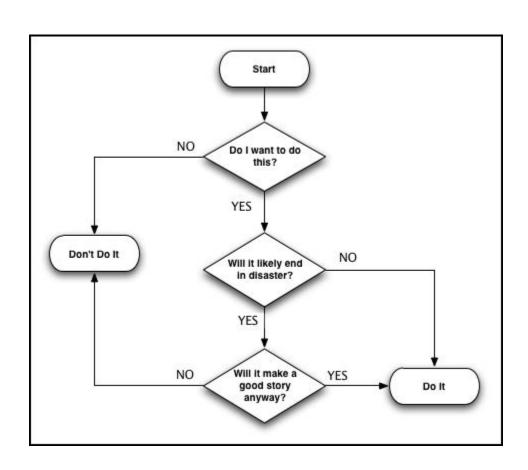

- Central processing unit (CPU)
 - Arithmetic logic unit (ALU)
 - Control unit
- Memory
 - Internal
 - External
- Input devices
- Output devices

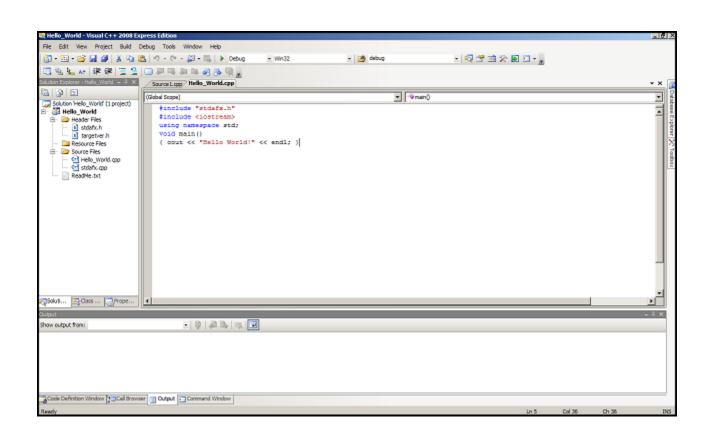

Compilation

source code - binary code

ASCII

(American Standard Code for Information Interchange)

H - 72	e - 101	l - 108	l - 108
o - 111	- 32	W - 87	o - 111
r - 114	l - 108	d - 100	! - 33

Processing of the binary code by the computer

Output – audio, video

Instructions

intended for a computer

Data

- perceptible by human
- specifically structured for a computer (data structures)

Operating systems

- Management of internal functions of a computer
- Facilitation of application programs usage

Application programs

- Compatibility with OS
- Applications programming interface
- Enable users to accomplish specific tasks

 "Software" is a term with multiple meanings (no universal definition)

Basic terms:

(CPU, Memory, I/O devices, Source code, Binary code, Compilation, ASCII, Instructions, Data, Data structures, Operating systems, Application programs, Application user interface, ...)
