

Pharmaceuticals in operative dentistry

- For dental pulp
- Disinfection and antiseptics
- Antibiotics
- Corticoids
- Devitalization
- Local fluoridation
- Desensitizers

Suspension
Cements

Subbase
Root canal filling

Antiflogistic

Calcification effect –
dentinogenesis

Desinficiens

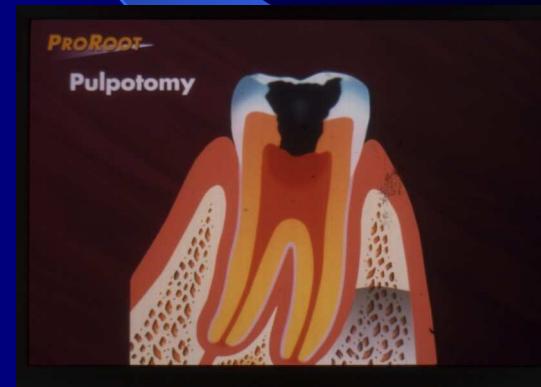

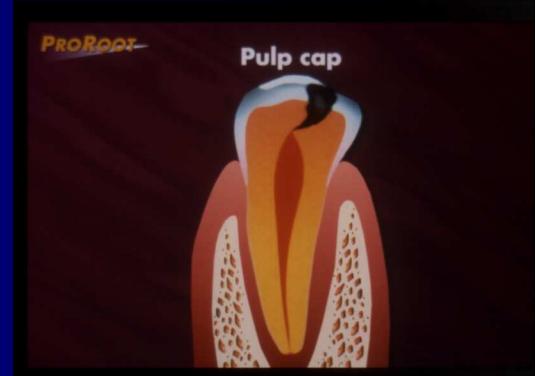

MTA

- A special material containing gallium oxide and others metal oxides

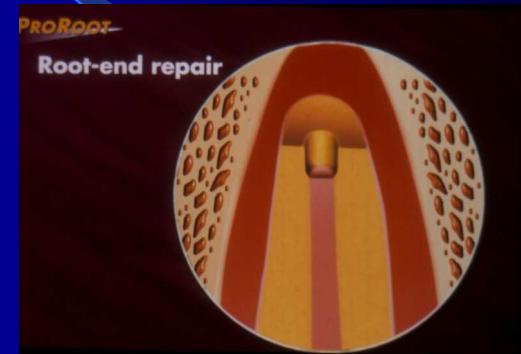

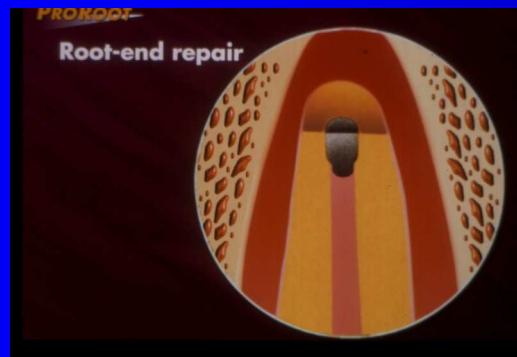

MTA

- Direct pulp capping
- Healing of perforation
- Apexification

MTA - použití

- Apikální chirurgie

Disinfection

- Natriumhypochlorit
- Chloramin
- Chlorhexidin
- Hexetidin
- Peracetic acid
- Peroxid vodíku
- Phenolic based – phenol, chlorphenol, trikresol
- Formalin

Antibiotics and cortikoids

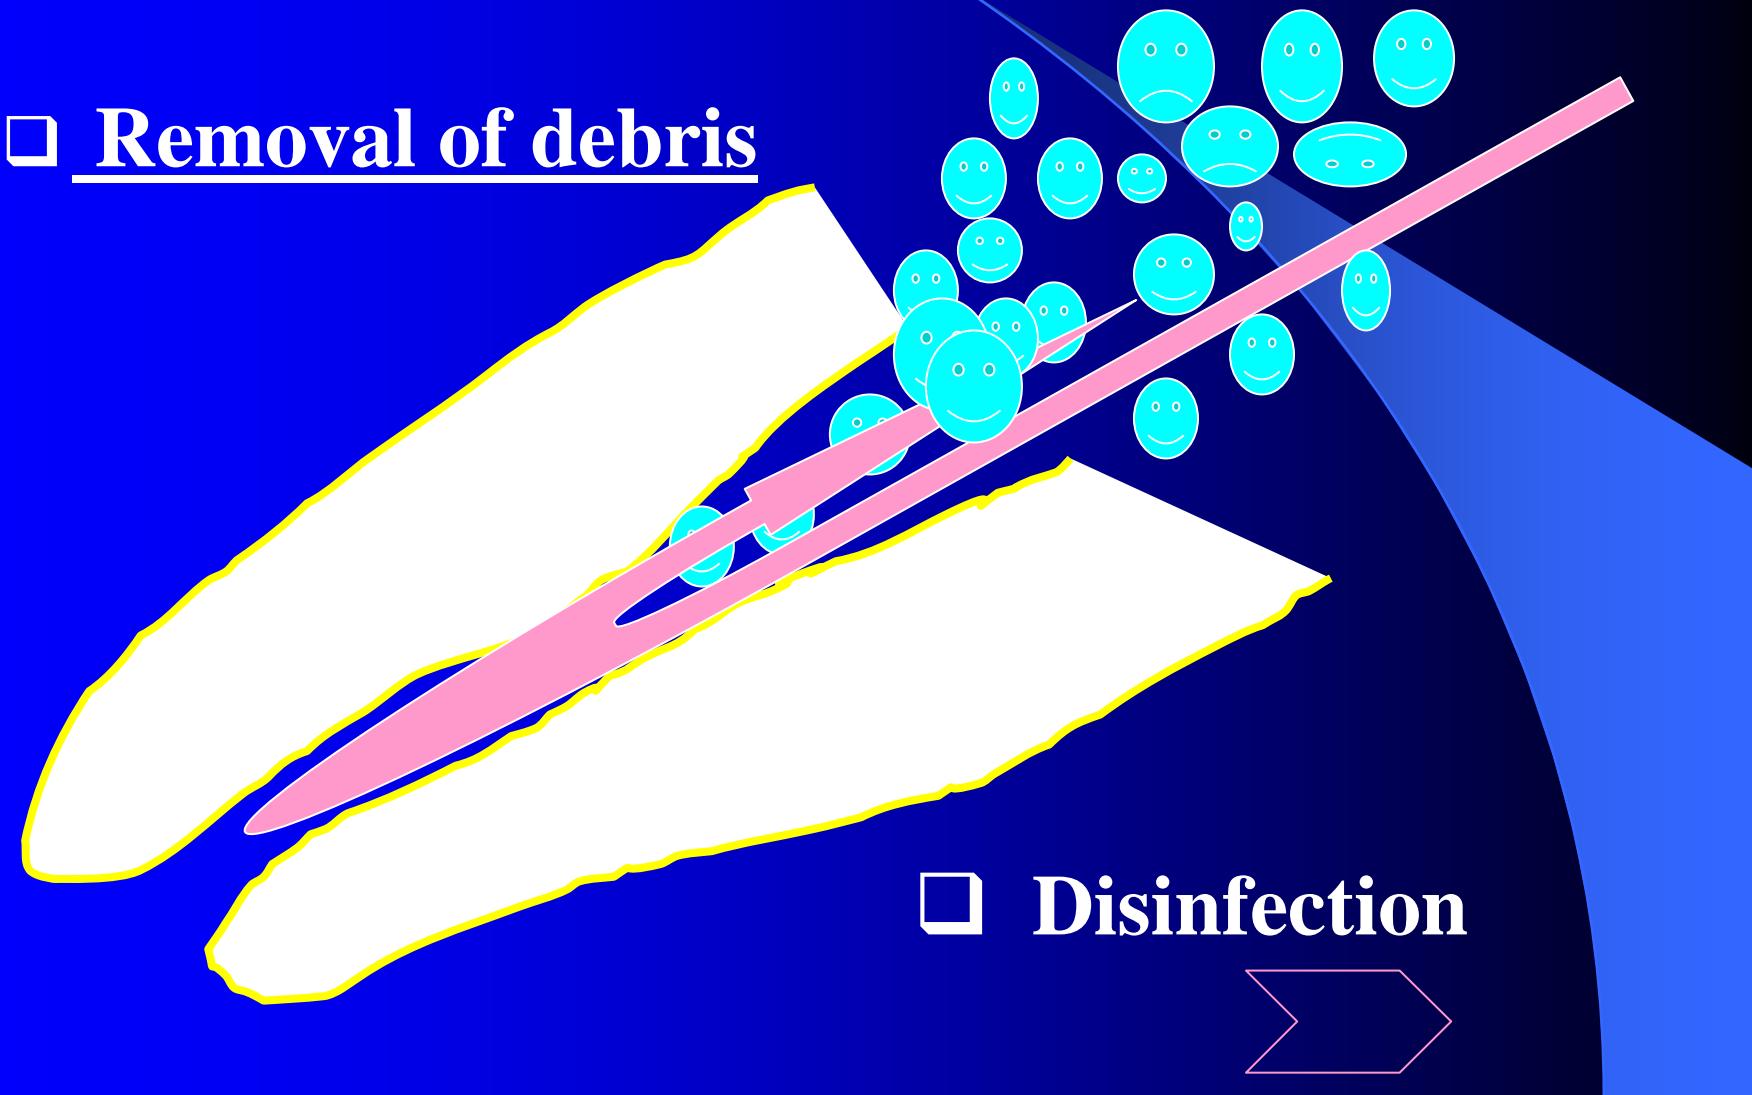

Bacitracin, Neomycin.

Dexametason, Triamcinolon.

- Septomyxin
- Ledermix

Irrigation

Removal of debris

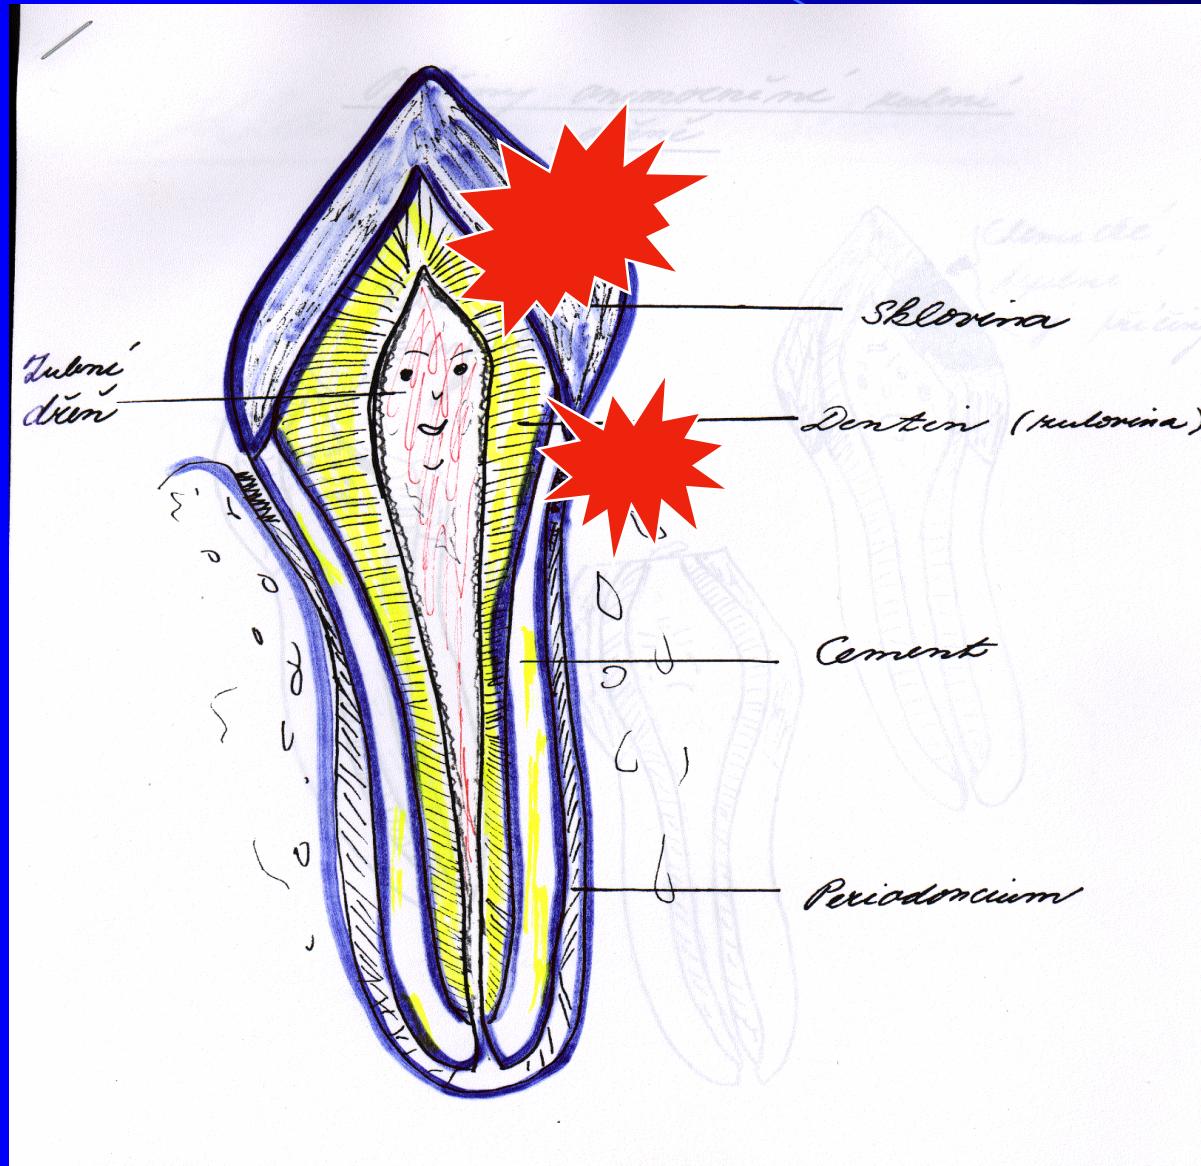

Disinfection

Root canal irrigants

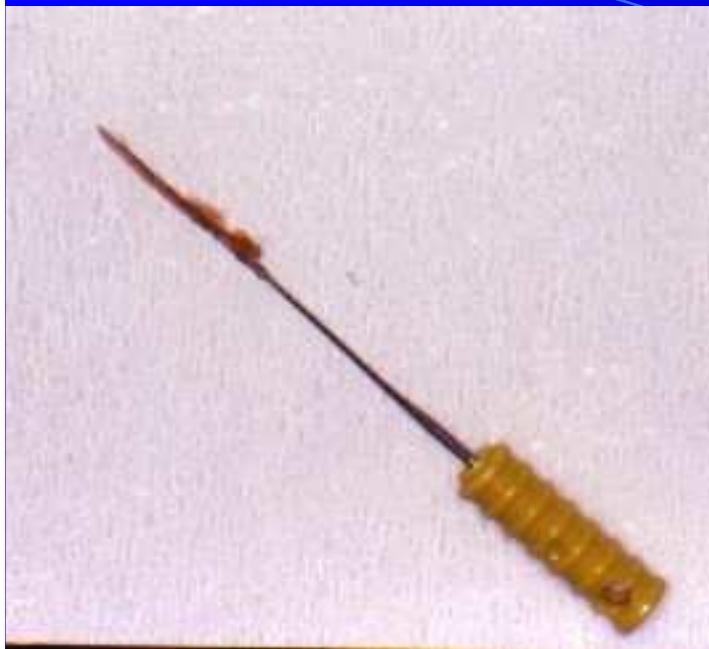

- Natrium hypochlorit : 1 – 5%
- Chlorhexidin: 0,12%
- Chloramin: 1 – 2 %
- EDTA: gel or solution 17%

Morfological basis of endodontics

Nekrotizační vložky

- Arsenik
- Kobaltová pasta
- Paraformaldehydová pasta

Odontoblasty
Predentin
Dentin

Local therapeutics

- Fluorids
- Recaldent
