

# Význam microRNA (v onkologii)

## MUDr. Mgr. Marek Mráz

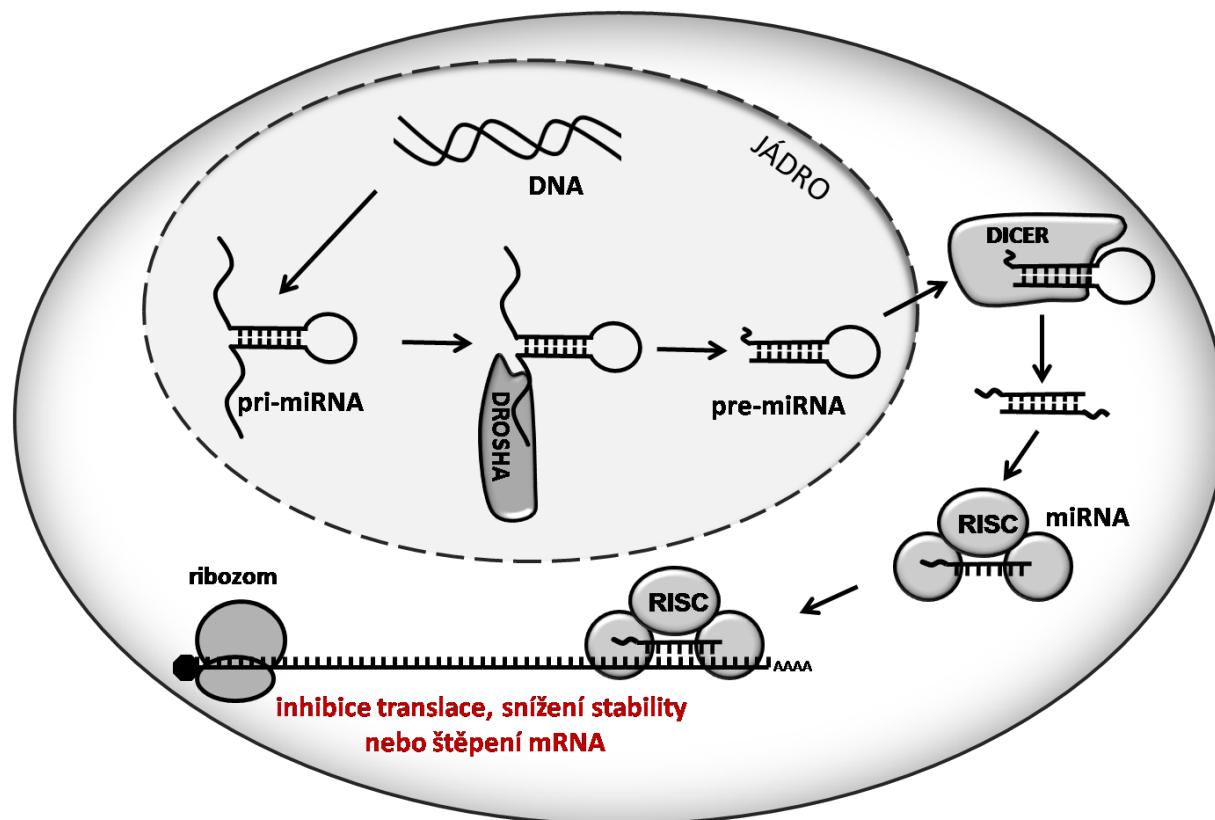

- Lidské miRNA geny: cca 1000

## microRNA (miRNA)

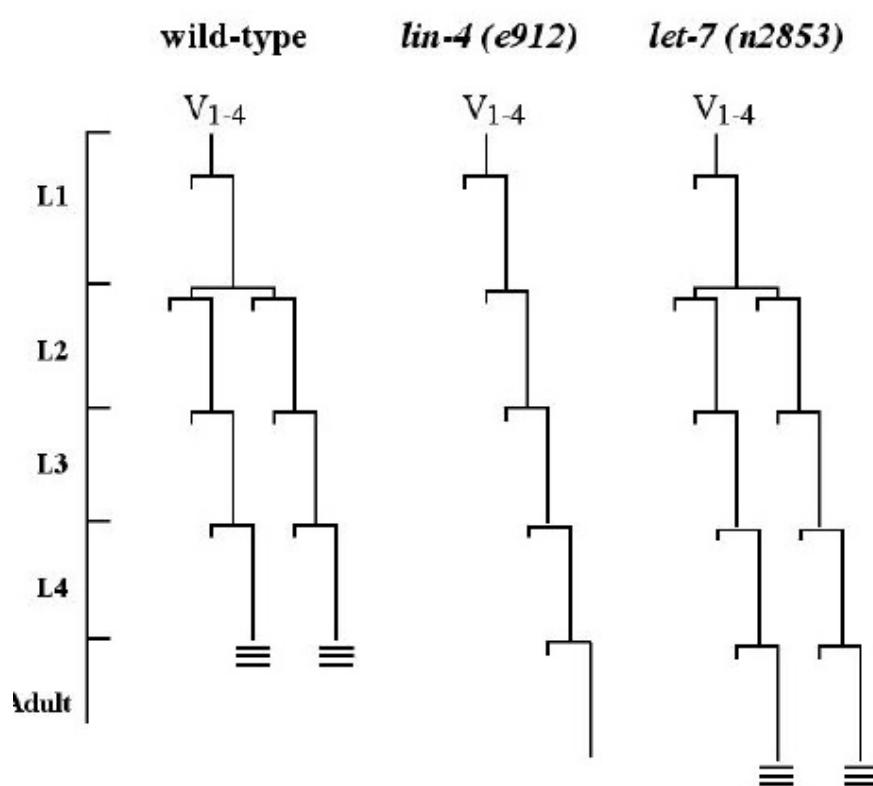

- krátké RNA molekuly  
~22 nukleotidů
- komplementární vazba k  
cílové mRNA
- inhibují translaci a snižují  
stabilitu mRNA

Stovky evolučně  
konzervovaných microRNA

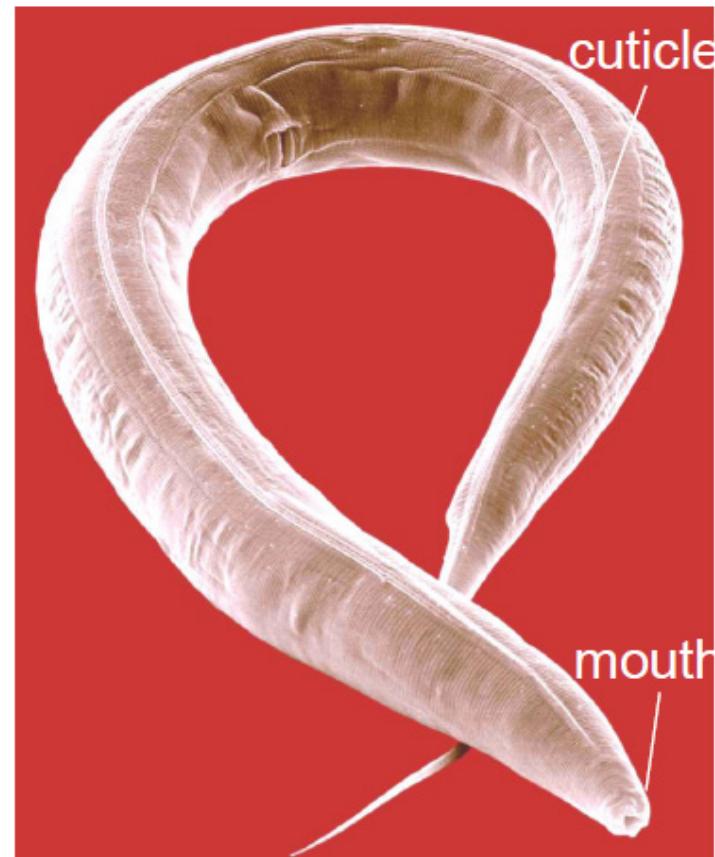

# MicroRNAs were discovered by V. Ambros and G. Ruvkun in *C. elegans*

Lee et al. 1993 *Cell*

Reinhart et al. 2000 *Nature*

courtesy of F. Slack

# microRNA genes map to cancer loci

**Table 2.** Examples of miRs located in minimal deleted regions, minimal amplified regions, and breakpoint regions involved in human cancers

Chromosome	Location (defining markers)	Size, Mb	miR	Hystotype	Known OG / TS
3p21.1-21.2-D	ARP-DRR1	7	<i>let-7g/miR-135-1</i>	Lung, breast cancer	—
3p21.3(AP20)-D	GOLGA4-VILL	0.75	<i>miR-26a</i>	Epithelial cancer	—
3p23-21.31(MDR2)-D	D3S1768-D3S1767	12.32	<i>miR-26a; miR-138-1</i>	Nasopharyngeal cancer	—
5q32-D	ADRB2-ATX1	2.92	<i>miR-145/miR-143</i>	Myelodysplastic syndrome	—
9q22.3-D	D9S280-D9S1809	1.46	<i>miR-24-1/miR-27b/miR-23b; let-7a-1/let-7f-1/let-7d</i>	Urothelial cancer	PTC, FANCC
9q33-D	D9S1826-D9S158	0.4	<i>miR-123</i>	NSCLC	—
11q23-q24-D	D11S927-D11S1347	1.994	<i>miR-34a-1/miR-34a-2</i>	Breast, lung cancer	PPP2R1B
11q23-q24-D	D11S1345-D11S1328	1.725	<i>miR-125b-1/let-7a-2/miR-100</i>	Breast, lung, ovary, cervix cancer	—
13q14.3-D	D13S272-D13S25	0.54	<i>miR-15a/miR-16a</i>	B-CLL	—
13q32-33-A	stSG15303-stSG31624	7.15	<i>miR-17/miR-18/miR-19a/miR-20/miR-19b-1/miR-92-1</i>	Follicular lymphoma	—
17p13.3-D	D17S1866-D17S1574	1.899	<i>miR-22; miR-132; miR-212</i>	HCC	—
17p13.3-D	ENO3-TP53	2.275	<i>miR-195</i>	Lung cancer	TP53
17q22-t(8;17)	<i>miR-142s/c-MYC</i>		<i>miR-142s; miR-142as</i>	Prolymphocytic leukemia	c-MYC
17q23-A	CLTC-PPM1D	0.97	<i>miR-21</i>	Neuroblastoma	—
20q13-A	FLJ33887-ZNF217	0.55	<i>miR-297-3</i>	Colon cancer	—
21q11.1-D	D21S1911-ANA	2.84	<i>miR-99a/let-7c/miR-125b</i>	Lung cancer	—

D, deleted region; A, amplified region; NSCLC, non-small-cell lung cancer; HCC, hepatocellular carcinoma; PTC, patched homolog (*Drosophila*); FANCC, Fanconi anemia, complementation group C; PPP2R1B, protein phosphatase 2, regulatory subunit A (PR 65),  $\beta$  Isoform, miRs in a cluster are separated by a slash. For references, see Table 6.

# MicroRNAs commonly associated with human cancer

miRNA	Gene Loci	Cancer association	Function*	References
miR15, miR-16	chromosome 13q14	Frequently deleted/downregulated in B-cell chronic lymphocytic leukemia. Negatively regulates the antiapoptotic gene, BCL2.	TS	Calin, 2002 Cimmino, 2005
miR-143, miR-145	chromosome 5q3233	Decreased abundance in colorectal cancer. Down-regulated in breast, prostate, cervical, and lymphoid cancer cellines. miR-145 decreased in breast cancer.	TS	Michael, 2003 Iorio, 2005
miR-21	chromosome 17q23.2	Antiapoptotic factor. Upregulated in glioblastomas and breast cancer.	OG	Chan, 2005 Ciafre, 2005 Iorio, 2005
let-7	multiple loci	Negatively regulates the Ras oncogene. Directs cell proliferation, differentiation. Decreased abundance in lung cancer.	TS	Johnson, 2005 Takamizawa, 2004
miR-142	chromosome 17q22	t(8,17) translocation that places the MYC oncogene downstream of the <i>mir-142</i> hairpin resulting in an aggressive B cell leukemia due to MYC over-expression.	N/A	Lagos-Quintana, 2002
BIC/miR-155	chromosome 21q21	Upregulated in pediatric Burkitt's lymphomas, Hodgkins, primary mediastinal and diffuse large B cell lymphomas. Upregulated in human breast cancer.	OG	Eis, 2005 Khuver, 2005 van den Berg, 2003 Metzler, 2003 Iorio, 2005
miR-17-19b cluster	chromosome 13q3132	Upregulated by the c-Myc oncogene Negatively modulates E2F1 oncogene. Loss-of-heterozygosity of cluster in hepatocellular carcinoma. Over-expressed in B-cell lymphomas.	TS/ OG	He, 2005 O'Donnell, 2005

\*Abbreviations: TS, tumor-suppressor gene; OGoncogene; N/A, not applicable

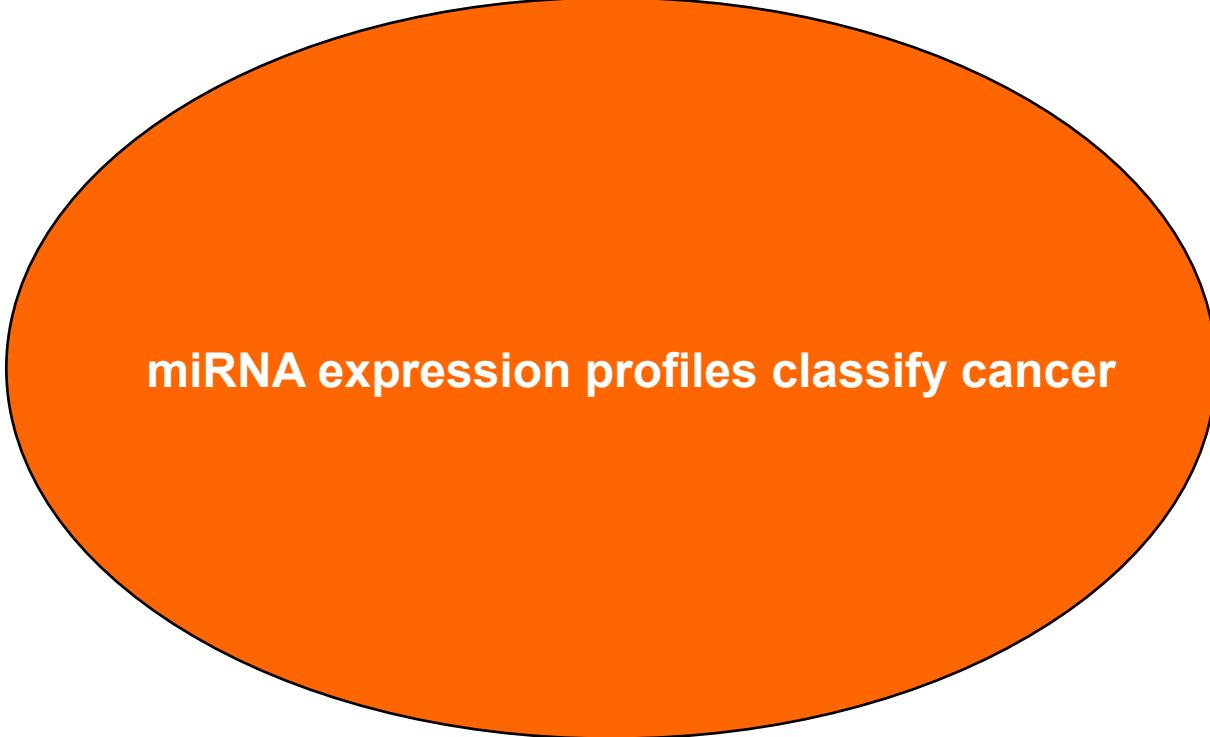

**miRNAs expression profiles clasify tumors**

**miRNAs are associated with disease prognosis**

**miRNAs are tumor-supressors and proto-oncogenes**

**miRNAs and microRNA binding sites are mutated in cancer**

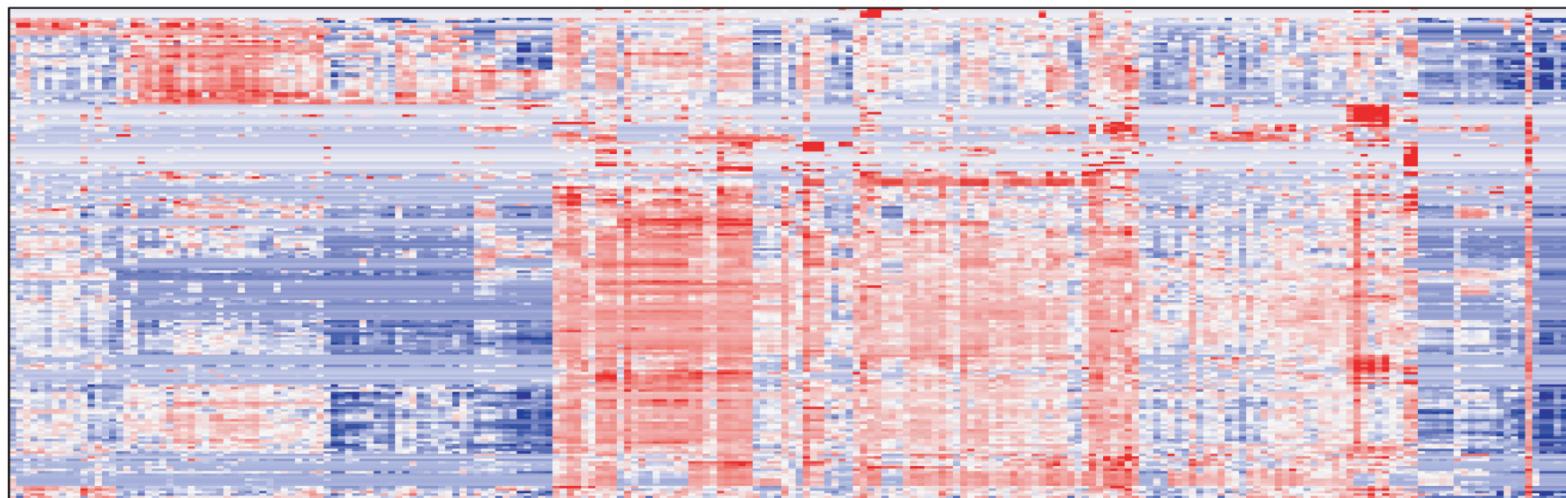

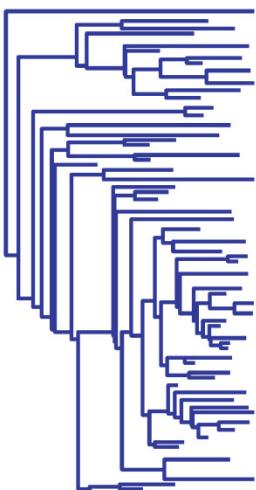

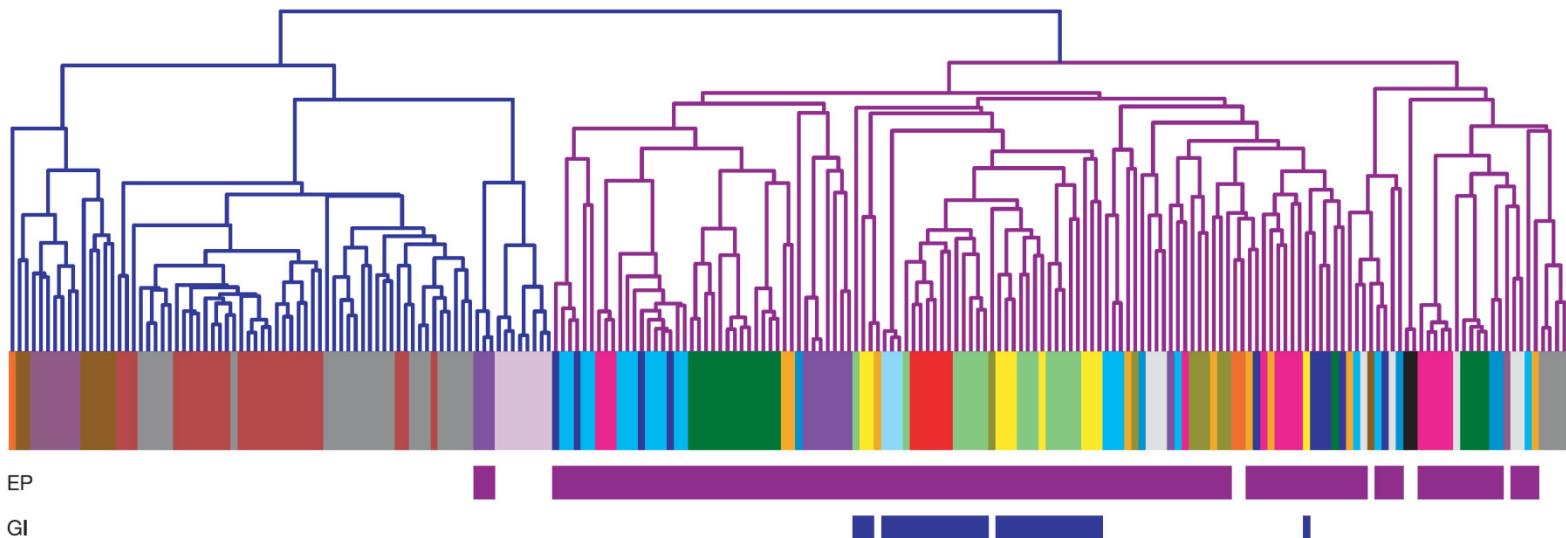

**miRNAs as drugs and targets in oncology**

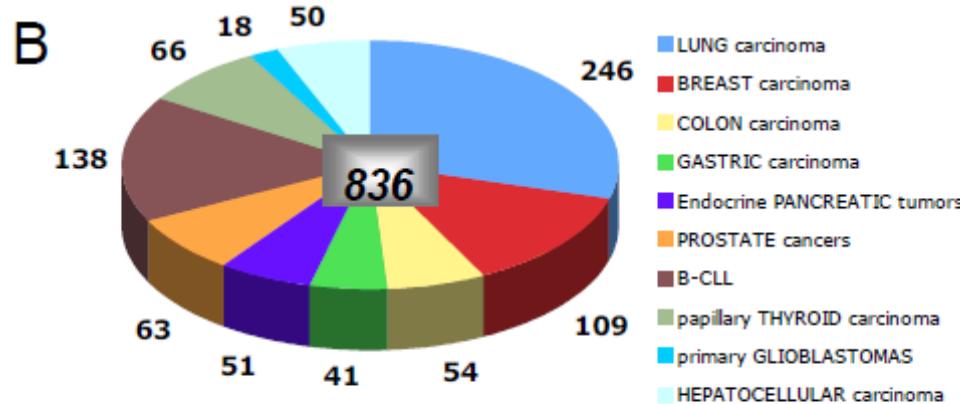

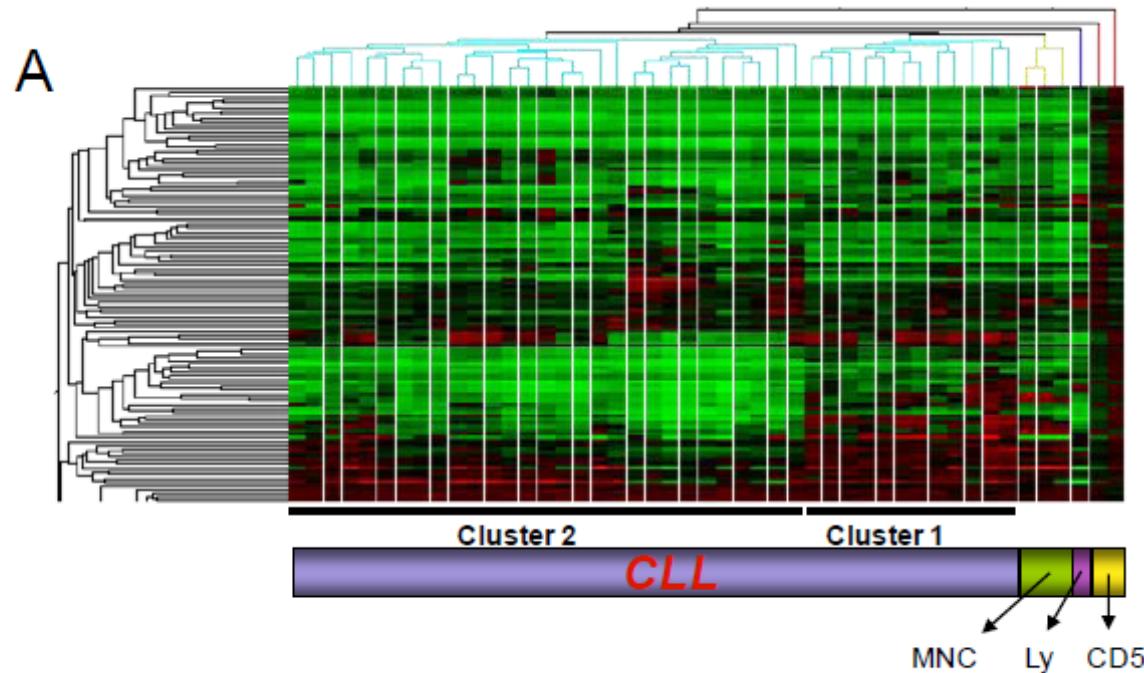

**miRNA expression profiles classify cancer**

**Table 2. The miRNAs shared by the signatures of the six solid cancers**

miR	N	Tumor type
miR-21	6	Breast, colon, lung, pancreas, prostate, stomach
miR-17-5p	5	Breast, colon, lung, pancreas, prostate
miR-191	5	Colon, lung, pancreas, prostate, stomach
miR-29b-2	4	Breast, colon, pancreas, prostate
miR-223	4	Colon, pancreas, prostate, stomach
miR-128b	3	Colon, lung, pancreas
miR-199a-1	3	Lung, pancreas, prostate
miR-24-1	3	Colon, pancreas, stomach
miR-24-2	3	Colon, pancreas, stomach
miR-146	3	Breast, pancreas, prostate
miR-155	3	Breast, colon, lung
miR-181b-1	3	Breast, pancreas, prostate
miR-20a	3	Colon, pancreas, prostate
miR-107	3	Colon, pancreas, stomach
miR-32	3	Colon, pancreas, prostate
miR-92-2	3	Pancreas, prostate, stomach
miR-214	3	Pancreas, prostate, stomach
miR-30c	3	Colon, pancreas, prostate
miR-25	3	Pancreas, prostate, stomach
miR-221	3	Colon, pancreas, stomach
miR-106a	3	Colon, pancreas, prostate

The list includes 21 commonly up-regulated microRNAs in 3 or more (*N*) types of solid cancers (*P* value =  $2.5 \times 10^{-3}$ ).

A large orange oval with a black outline is centered on the slide. Inside the oval, the text "miRNAs are associated with disease prognosis" is written in white.

## *A unique miRNA signature is associated with lung cancer prognosis*

**Table 5.** Postoperative survival of patients with lung adenocarcinoma in relation to clinicopathological characteristics and miRNA expression analyzed by microarray analysis

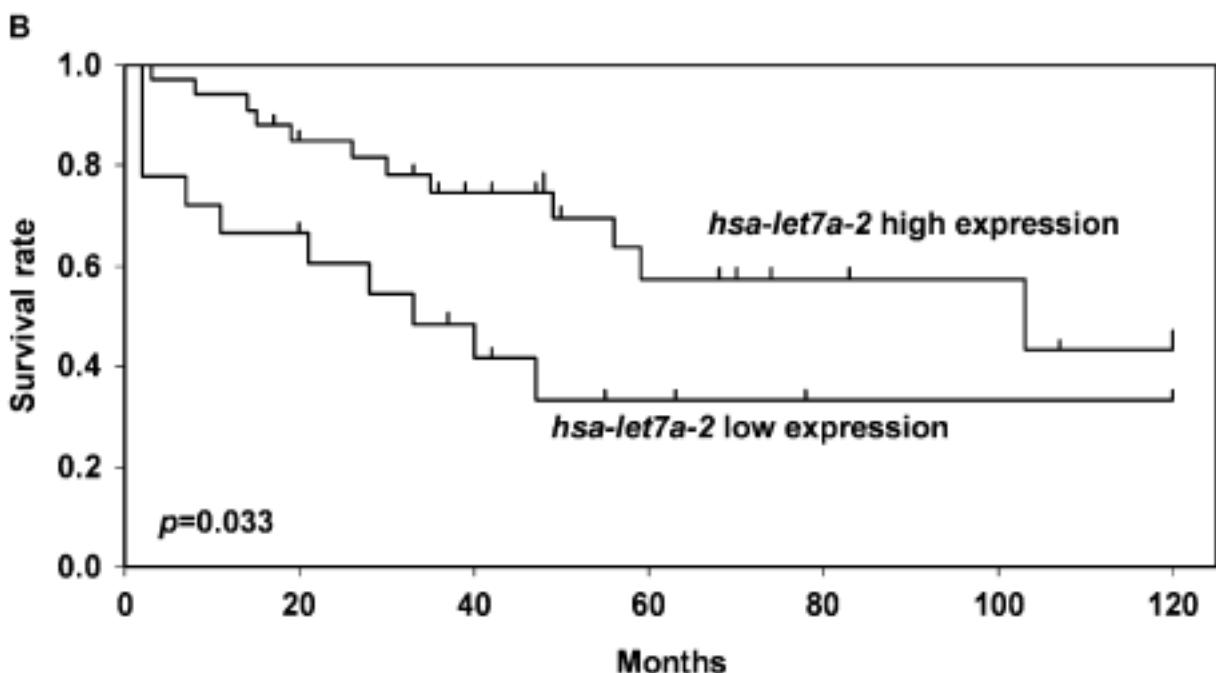

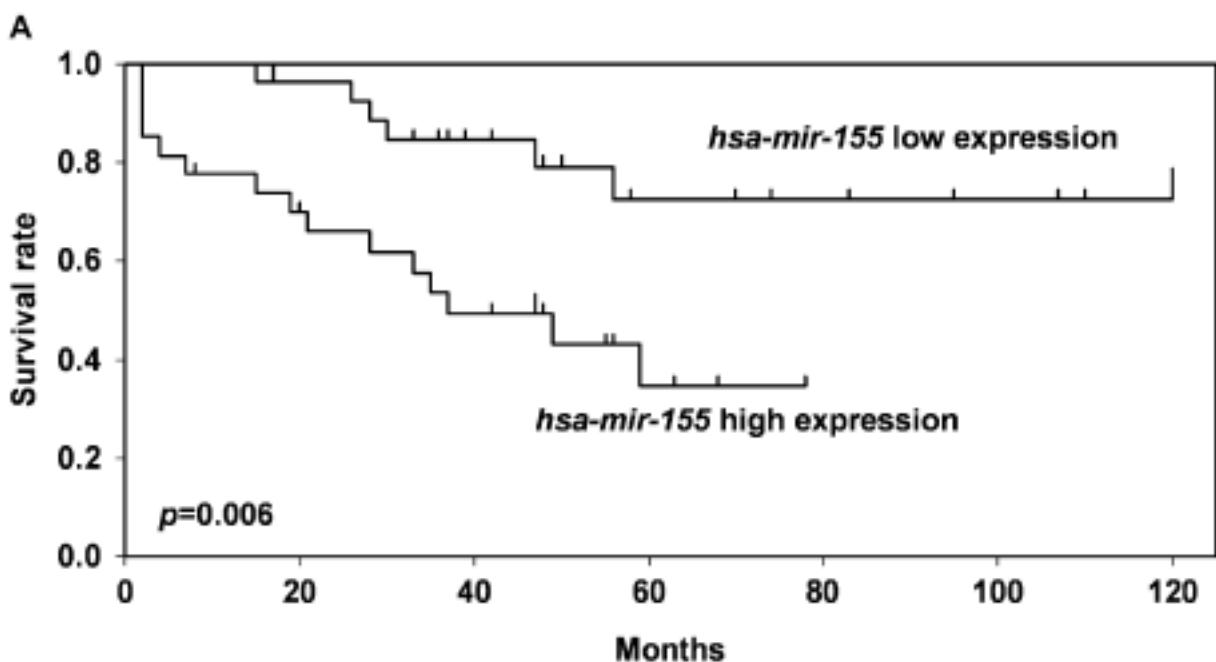

Variable	Subset	Hazard ratio (95% confidence interval)	p
→ Univariate analysis (n = 65)			
Age	age ≥ 67/age < 67	1.41 (0.67–3.06)	0.348
Sex	male/female	1.36 (0.64–2.93)	0.413
Stage	II–IV/I	2.51 (1.29–6.82)	0.010
Smoking history	current/former	1.32 (0.63–2.79)	0.456
→ hsa-mir-155 (n = 55)	high/low	3.42 (1.42–8.19)	0.006
→ hsa-let-7a-2 (n = 52)	low/high	2.35 (1.08–6.86)	0.033
→ Multivariate analysis (n = 55) <sup>a,b</sup>			
Age	age ≥ 67/age < 67	1.92 (0.71–5.17)	0.195
Sex	male/female	1.23 (0.47–3.22)	0.669
Stage	II–IV/I	3.27 (1.31–8.37)	0.013
Smoking history	current/former	1.49 (0.51–4.34)	0.457
→ hsa-mir-155	high/low	3.03 (1.13–8.14)	0.027

<sup>a</sup>Multivariate analysis, Cox proportional hazard regression model.

<sup>b</sup>hsa-let-7a-2 low/high was not statistically significant (p = 0.129).

**miRNAs as drugs and targets in oncology**

## miR-16 & miR-15 based Gene Therapy in CLL

## Summary

MicroRNAs are involved in the regulation of „everything“

MicroRNAs are abnormally expressed in cancer, which makes them also attractive as prognostic markers

Deregulation of microRNAs may be directly responsible for disease pathogenesis (miR-15-16 – deletion 13q14)

MicroRNAs are important proto-oncogenes (miR-155, miR-17-92)

MicroRNAs can work as tumor suppressors (let-7, miR-34a)

MicroRNAs represent a potential therapeutic target

Thank you for your attention
