

GENERAL EMBRYOLOGY 1

- Meiosis. Development of gamets. Fertilization. Cleavage.
- Implantation. Changes in blastocyst during implantation.
- Differentiation of embryoblast.
- Germ disc. Development of embryonic mesoderm and notochord. Somites. The other axial organs of embryo.
- Flexion of embryo. Development of the umbilical cord.

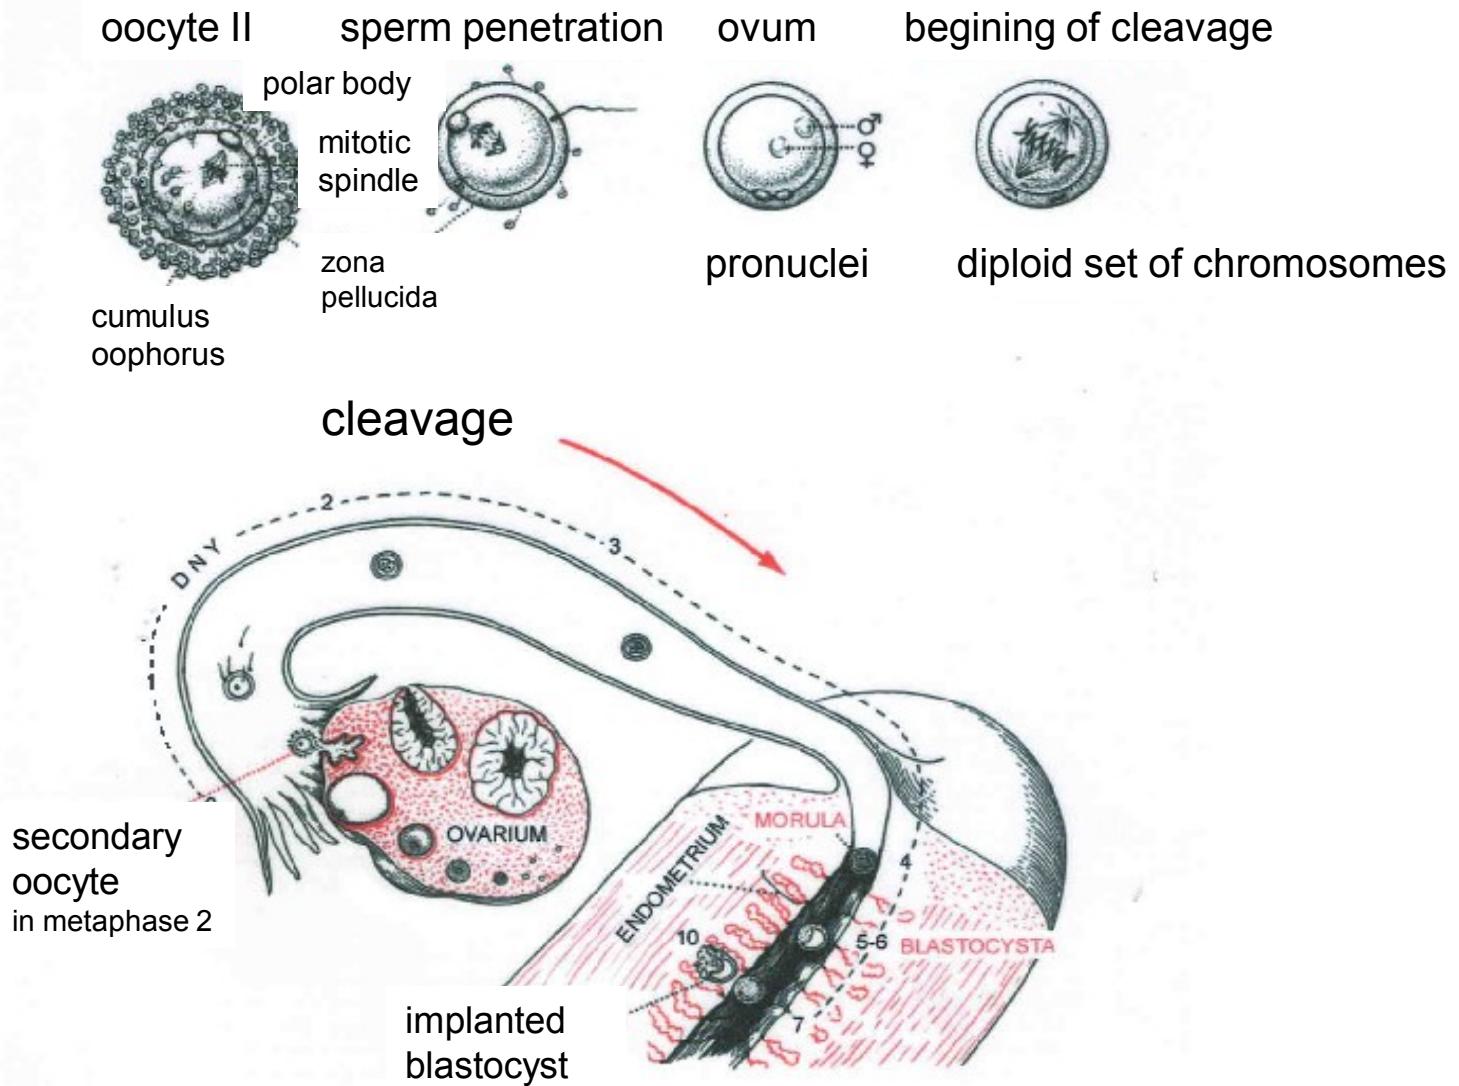

MITOSIS AND MEIOSIS – the main differences

GROWTH AND MATURATION OF OVARIAN FOLLICLES

FERTILIZATION AND IMPLANTATION

FERTILIZATION

Zygote

– 18 h after fertilization

24 h

45 h

72 h

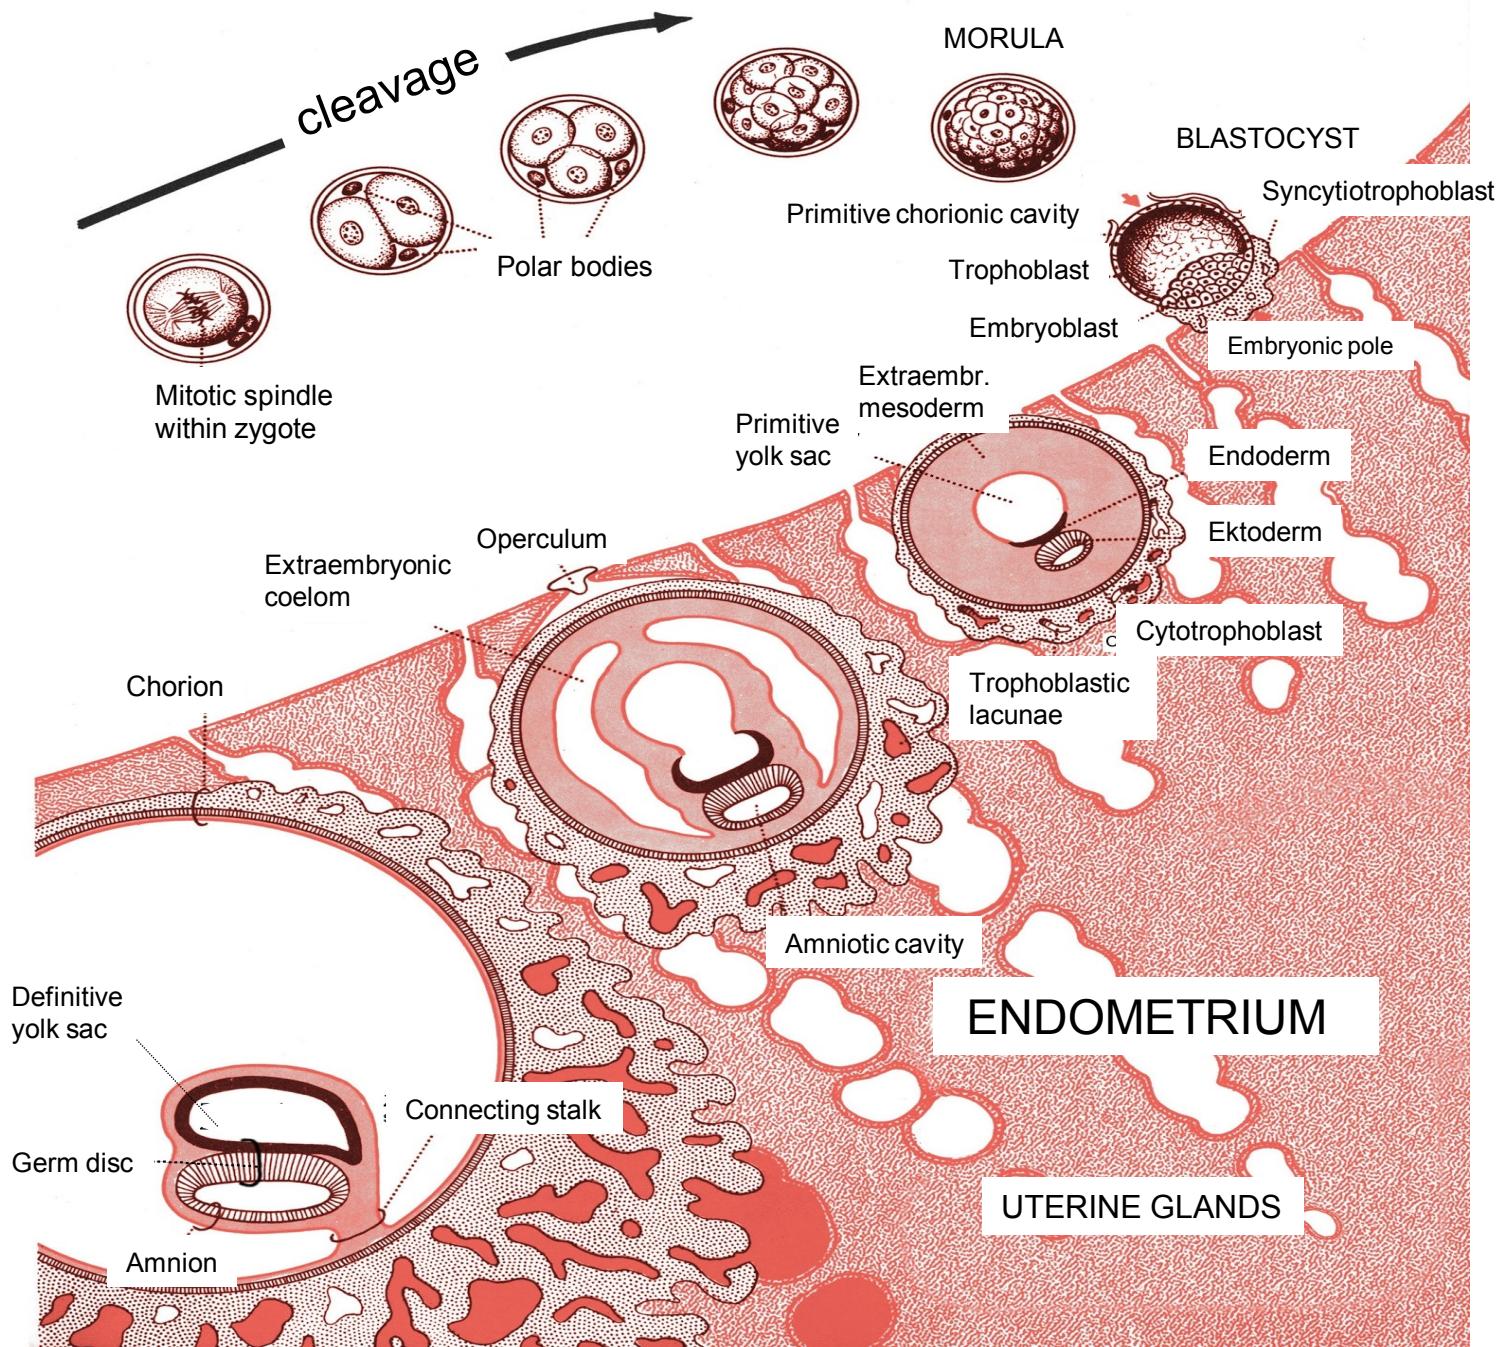

Morula – 96 h

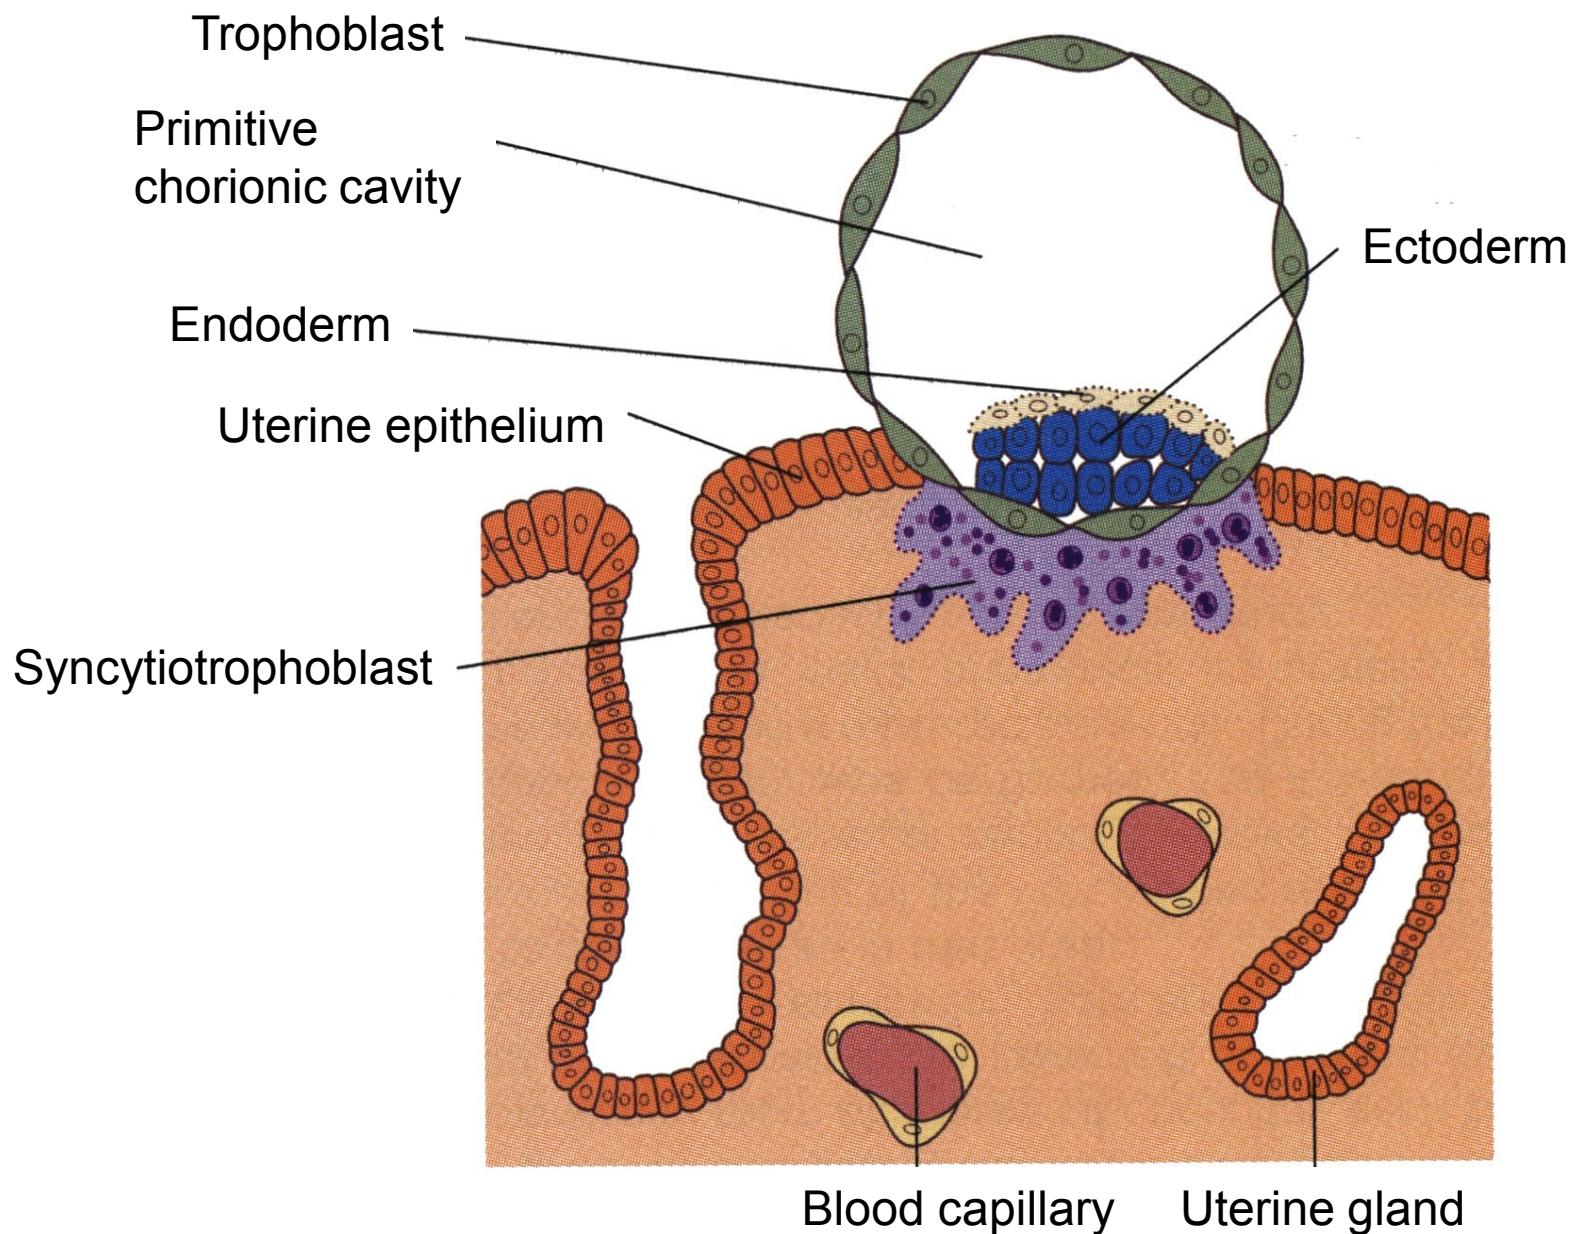

Blastocyst

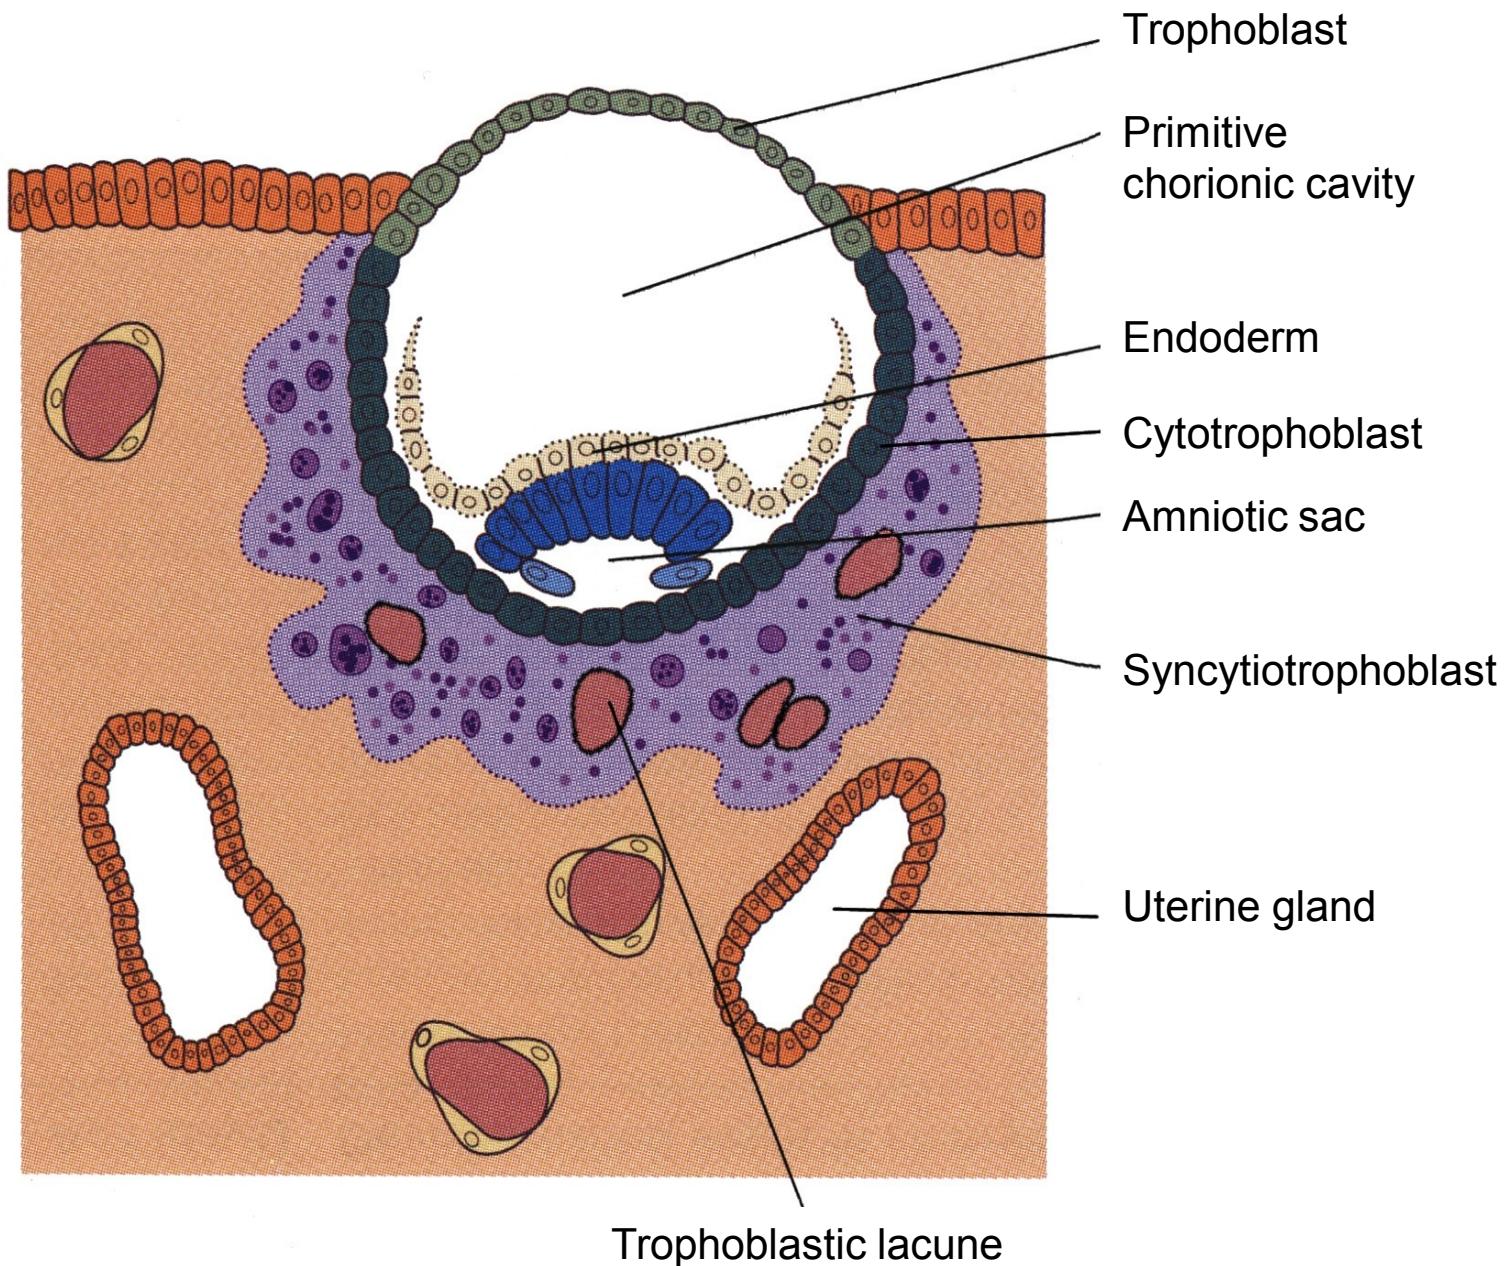

CLEAVAGE AND IMPLANTATION

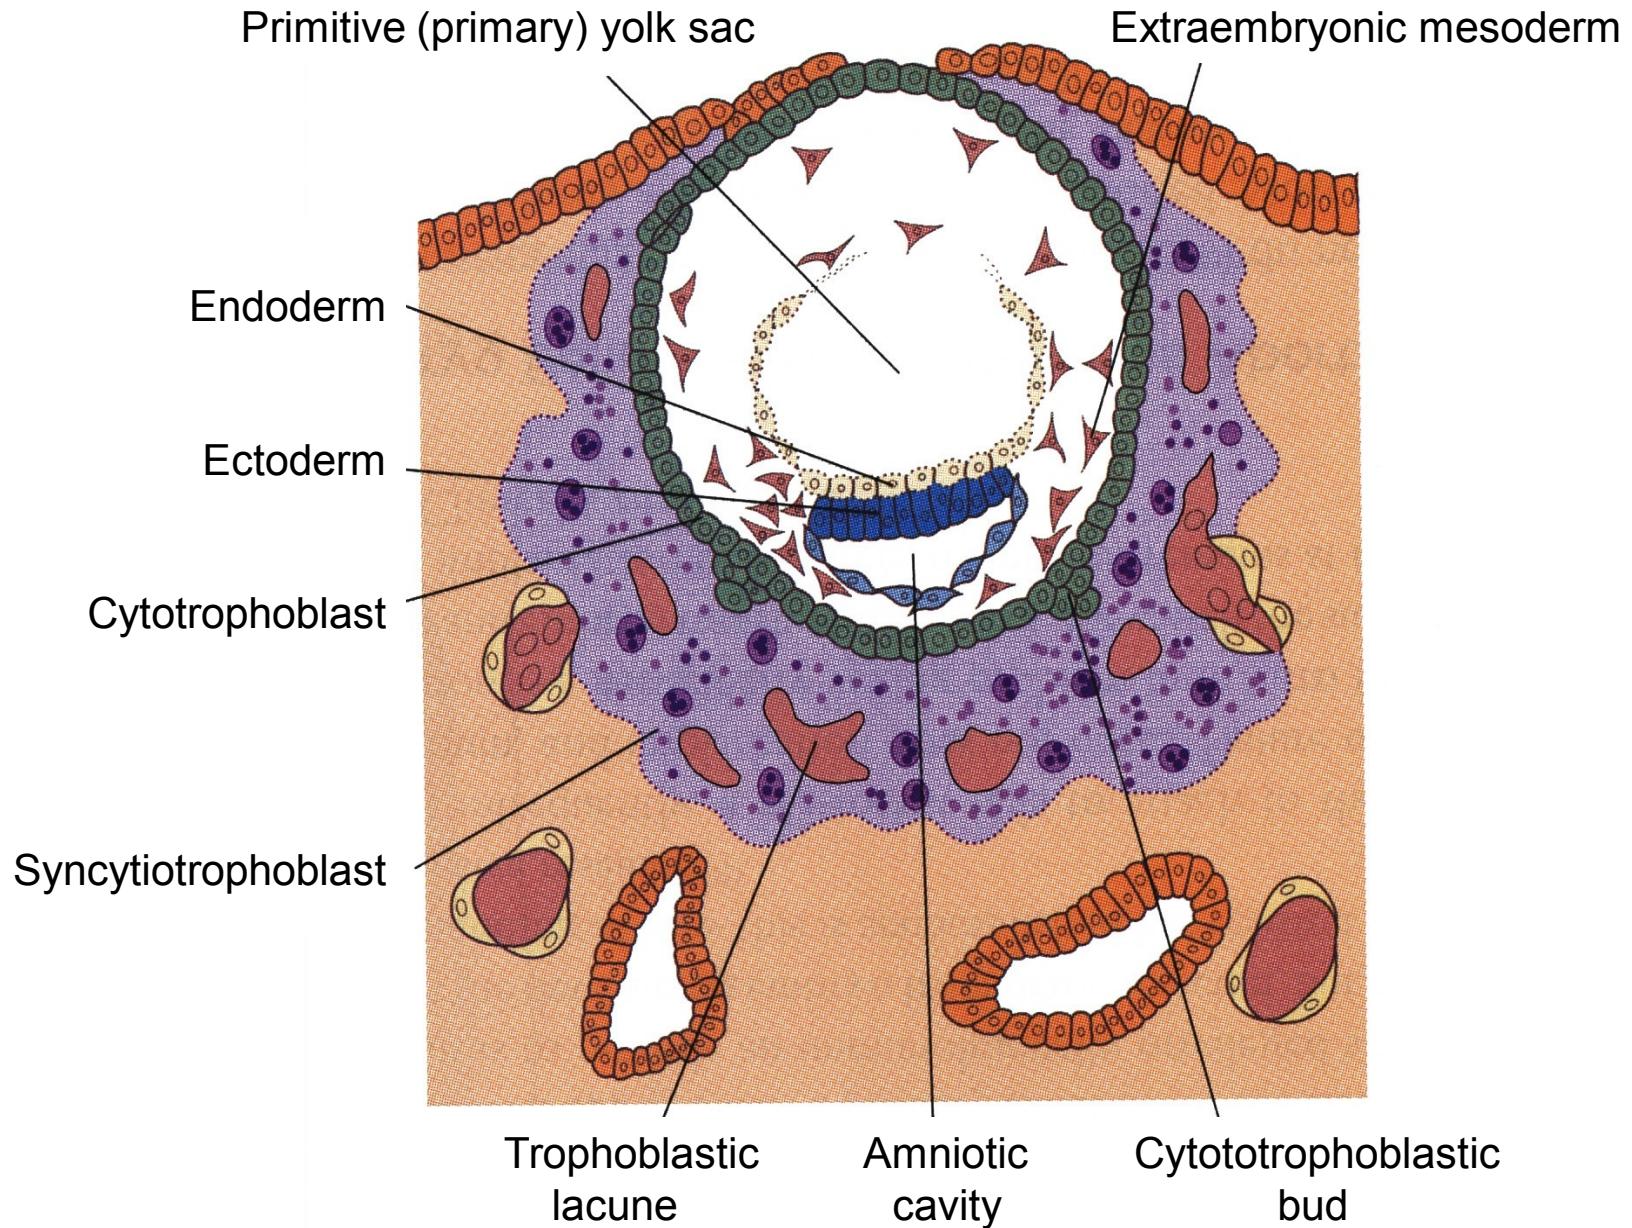

IMPLANTATION – DAY 7

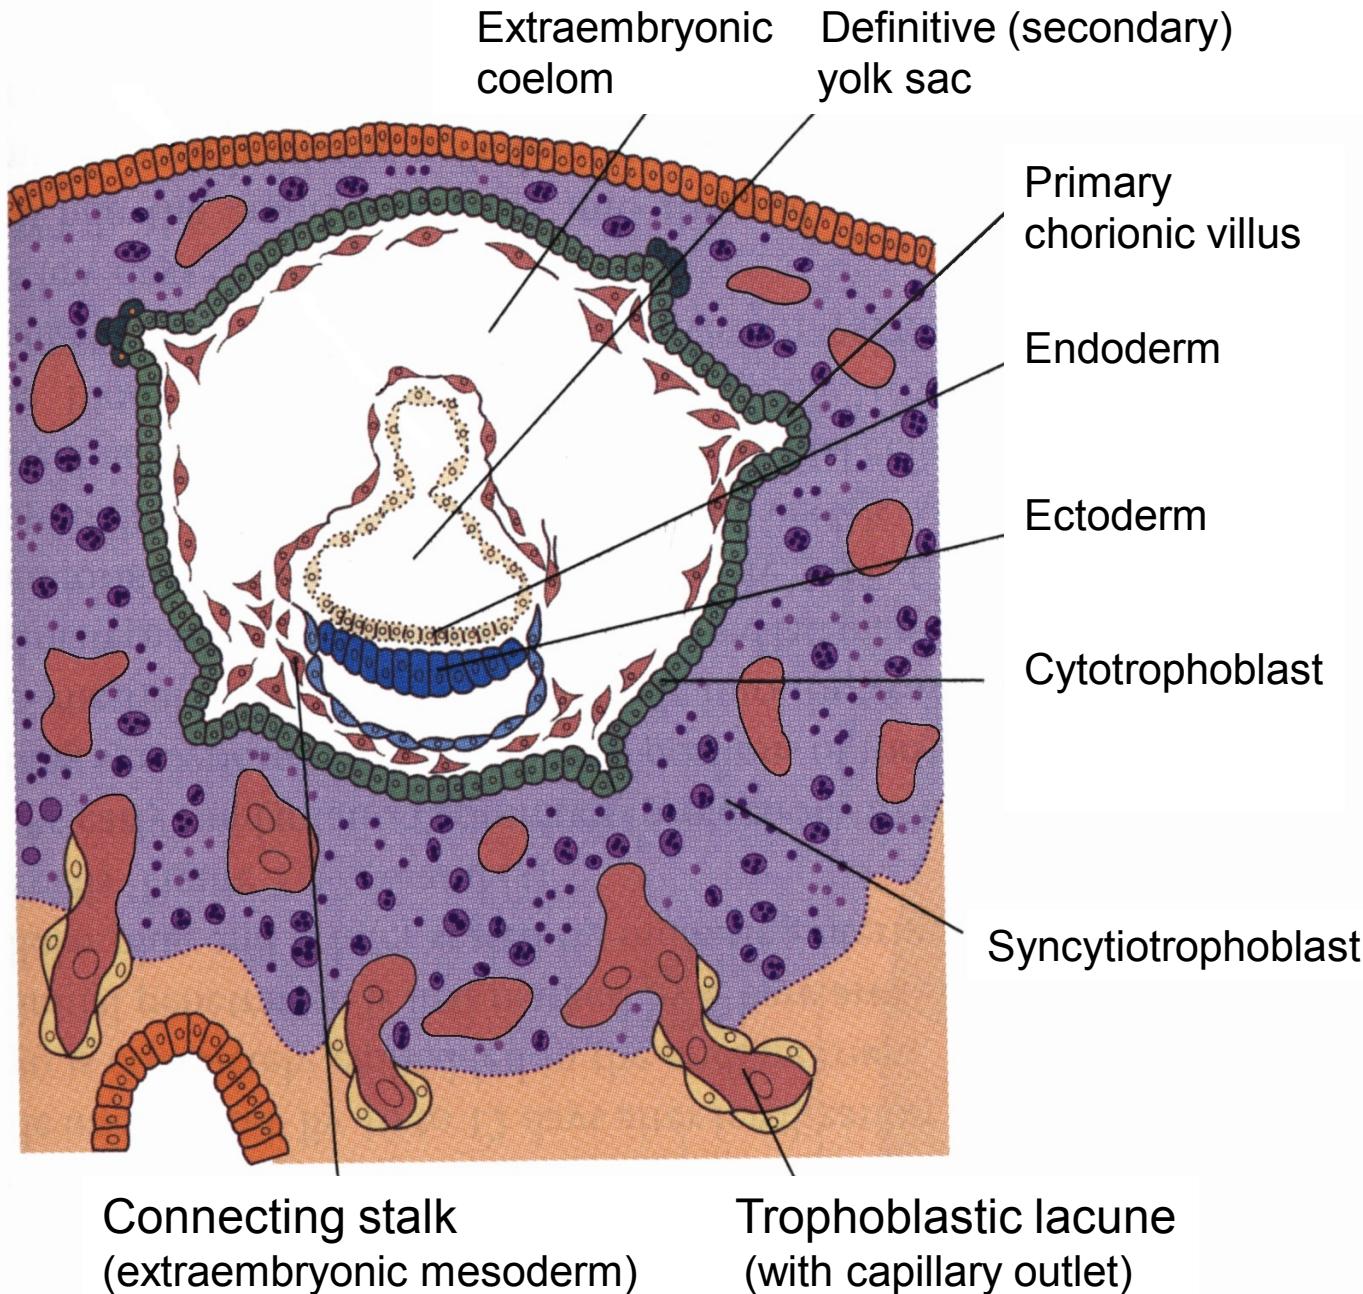

IMPLANTATION – DAY 8 1/2

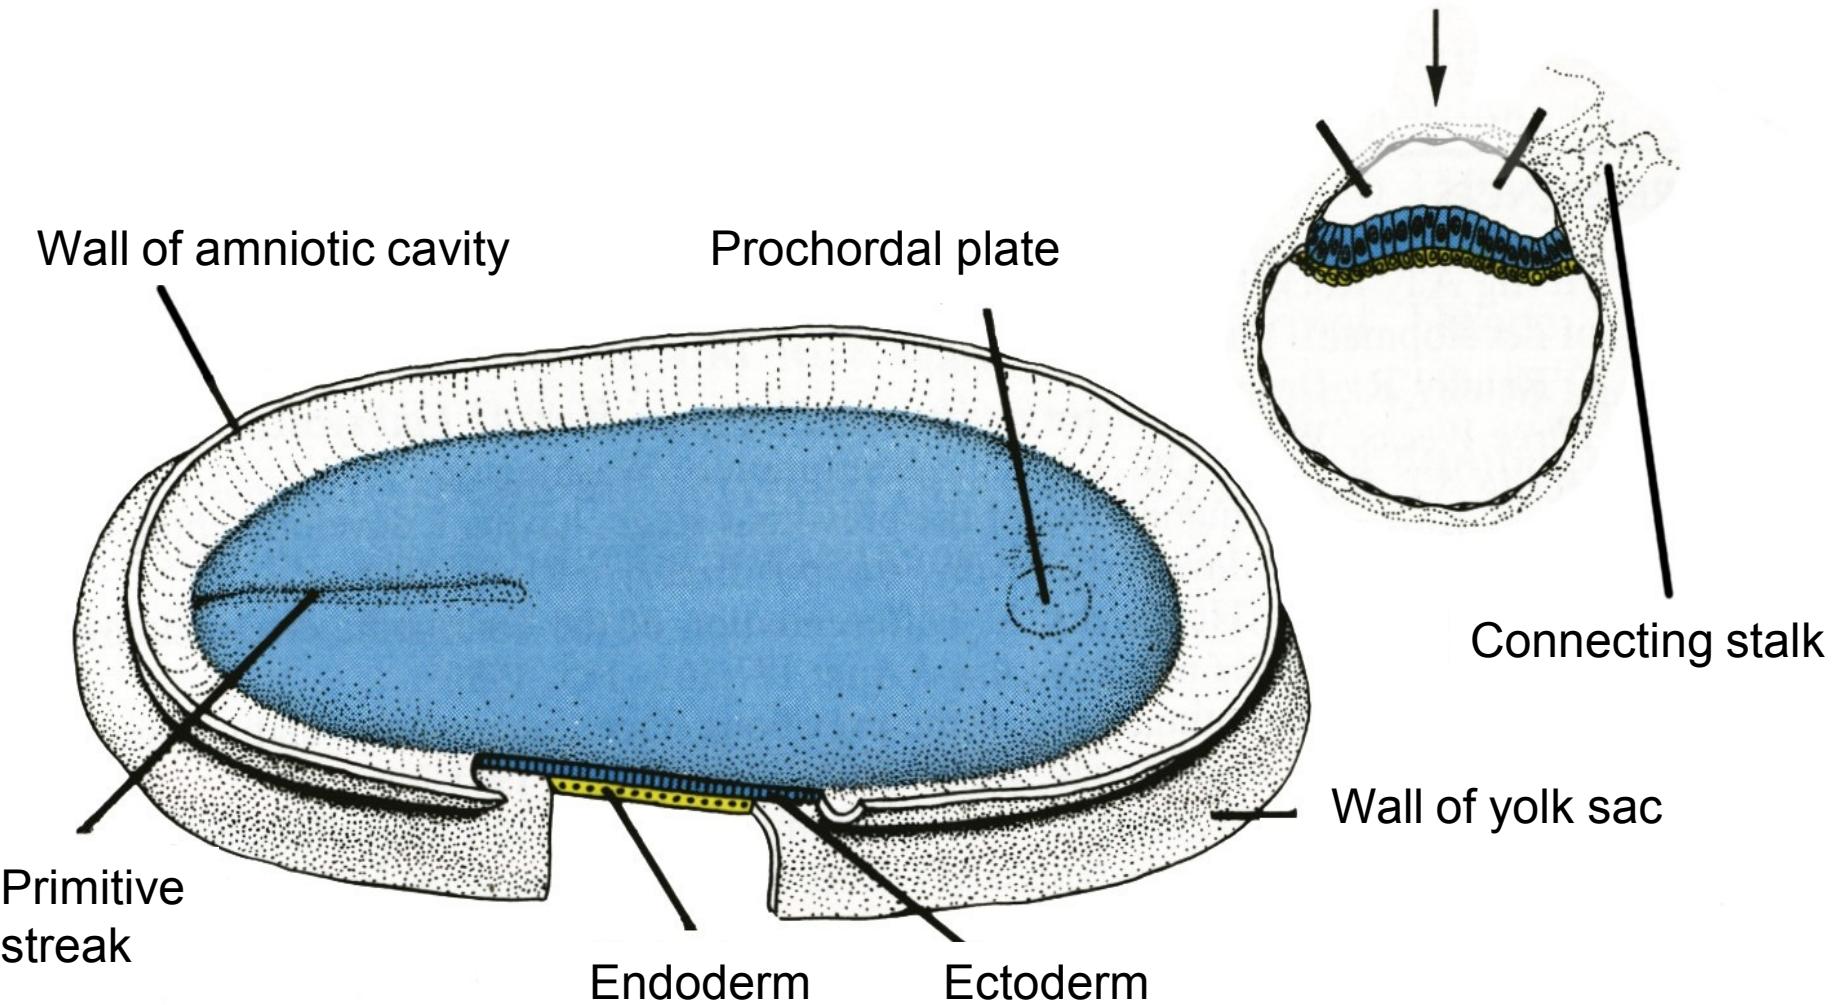

IMPLANTATION – DAY 10

IMPLANTATION – DAY 13

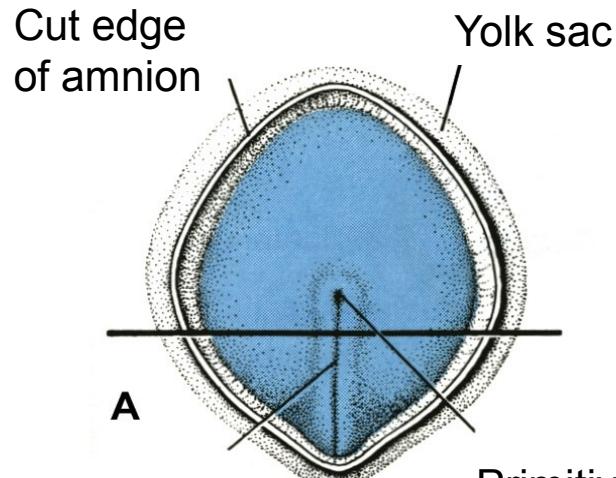

DORSAL SIDE OF GERM DISC – DAY 14

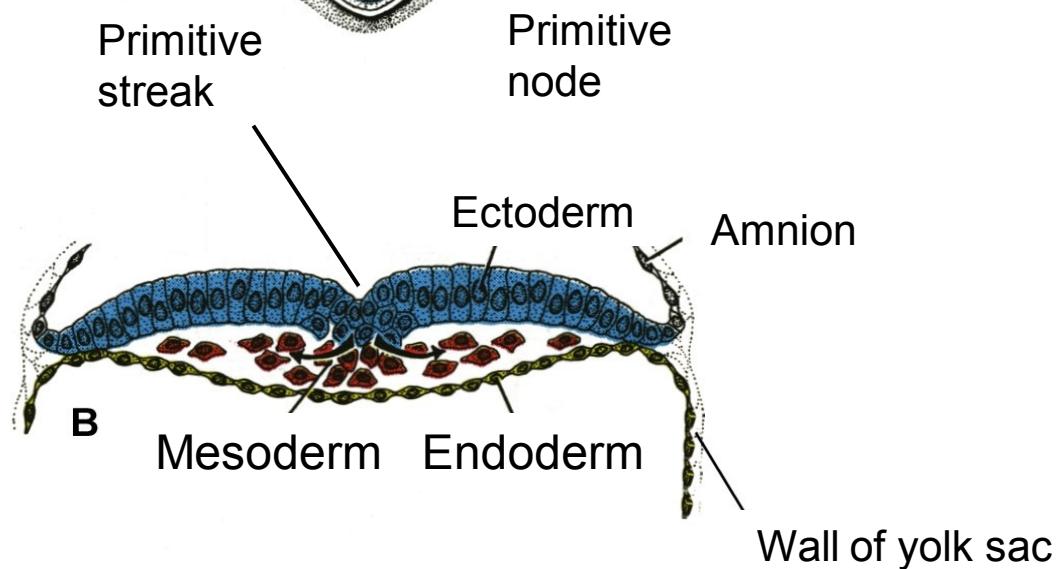

GERM DISC - DAY 16

A – view on dorsal side:

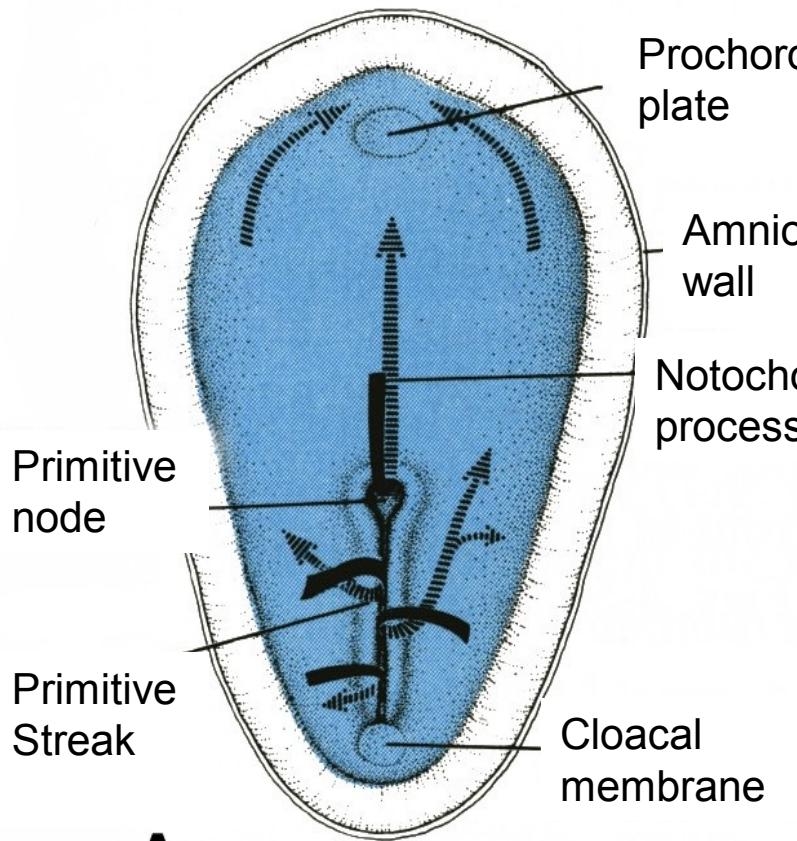

B – transverse section through germ disc:

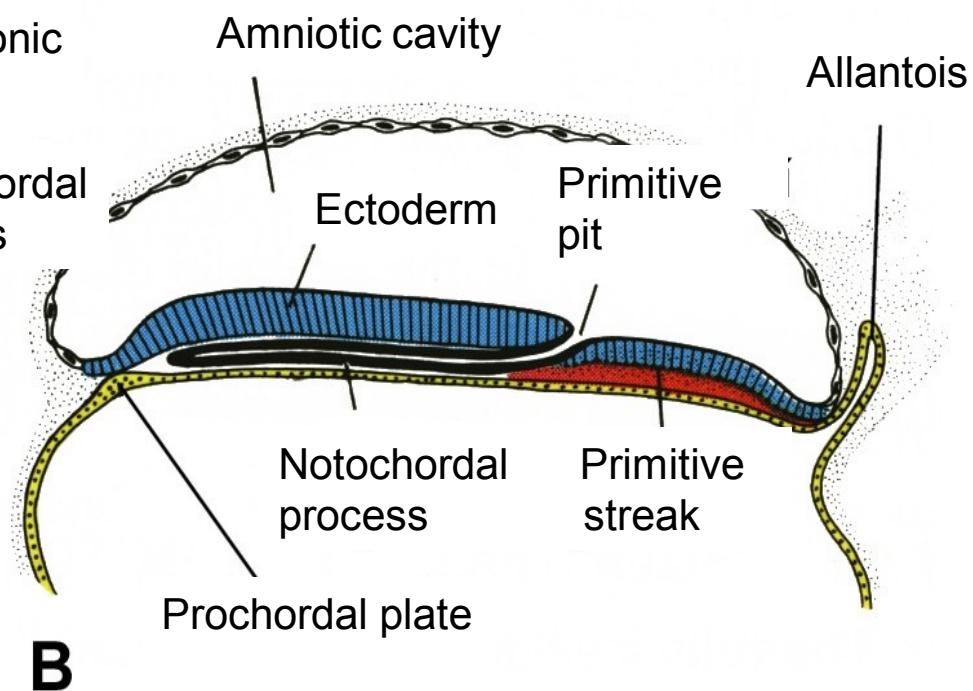

GERM DISC - DAY 16

A – view on dorsal side

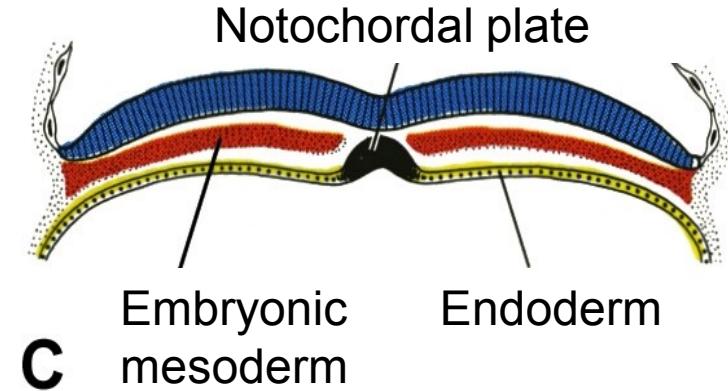

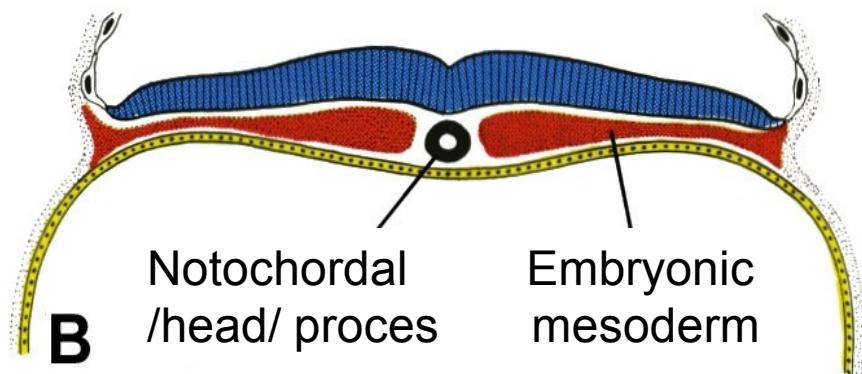

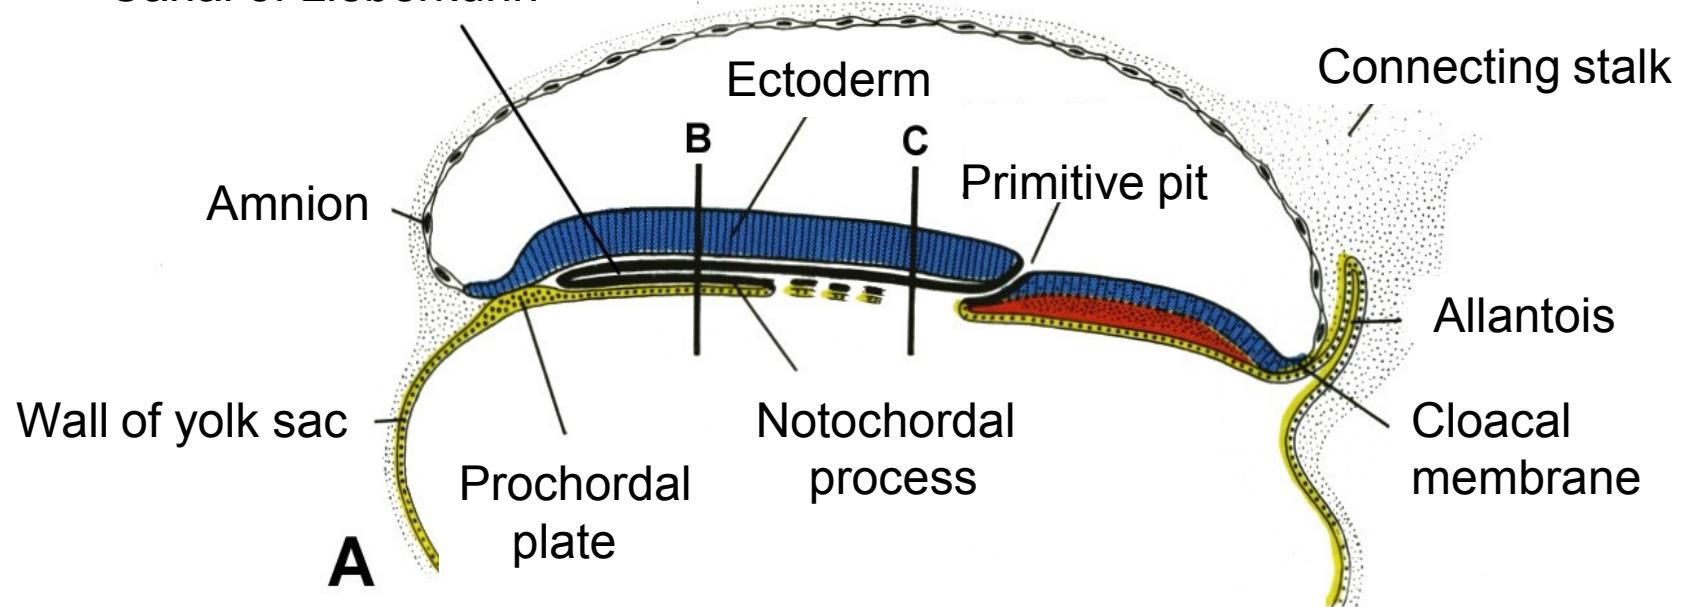

B – longitudinal section

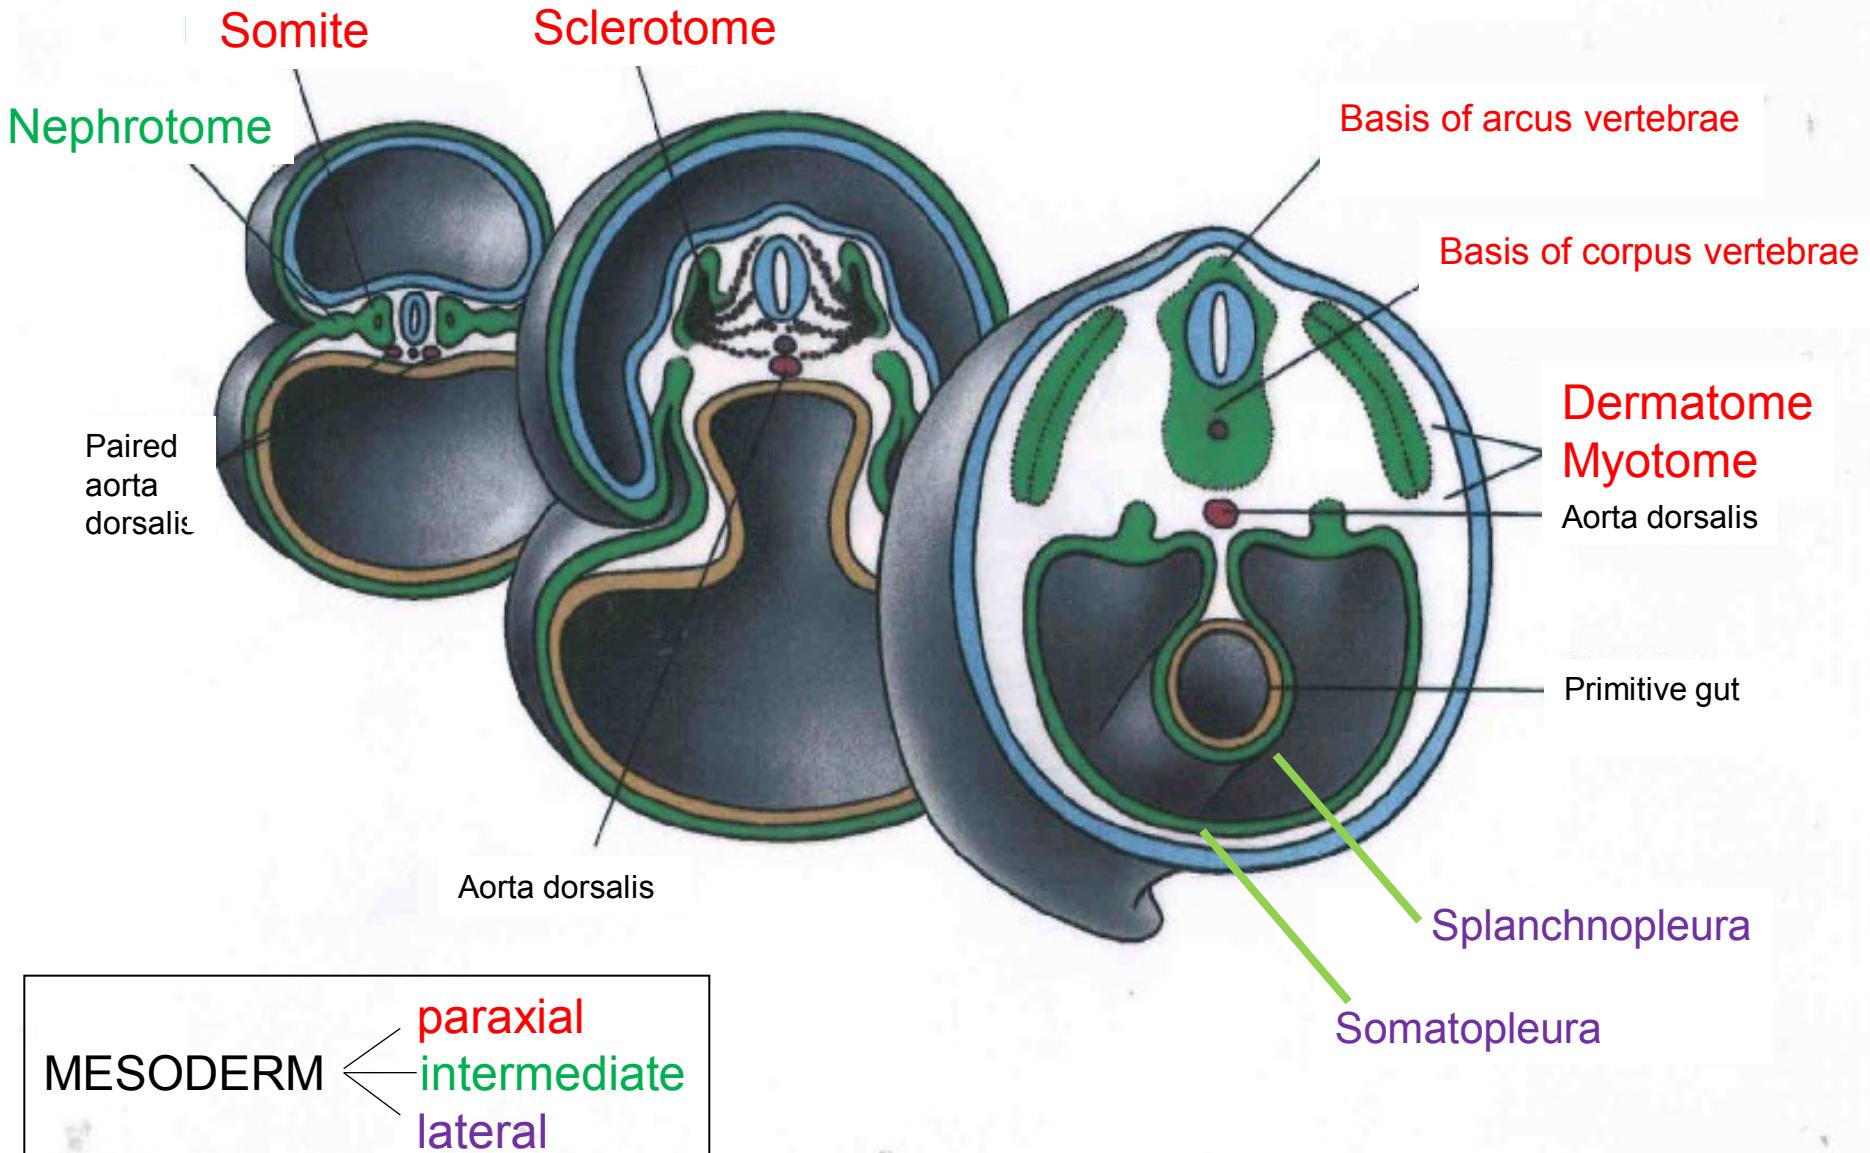

GERM DISC - DAY 17

Canal of Lieberkühn

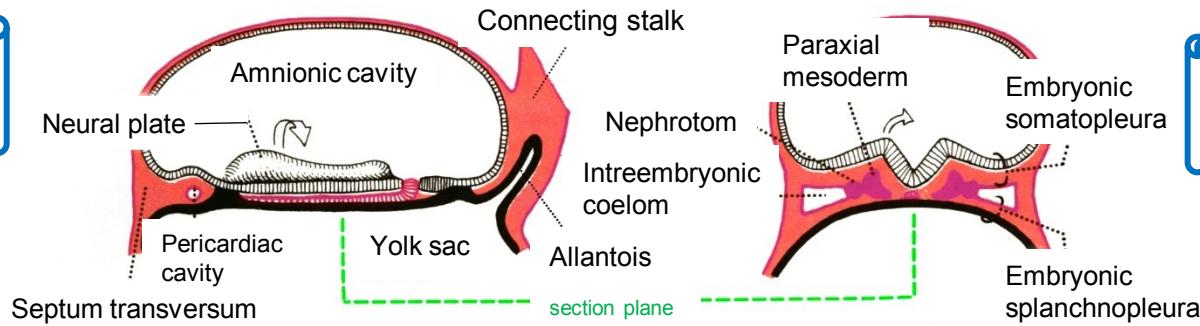

A – longitudinal section, **B**, **C** – transversal sections
