

**THERMOREGULATION
AND SYMPATHETIC
NERVOUS SYSTEM**

Seriously impaired thermoregulation

45

Death

Heat stroke

40

Hard exercise, fever

Effective thermoregulation

35

**Normal body temperature
(36,3 – 37,1°C)**

Impaired thermoregulation

30

Loss of consciousness

Cessation of thermoregulation

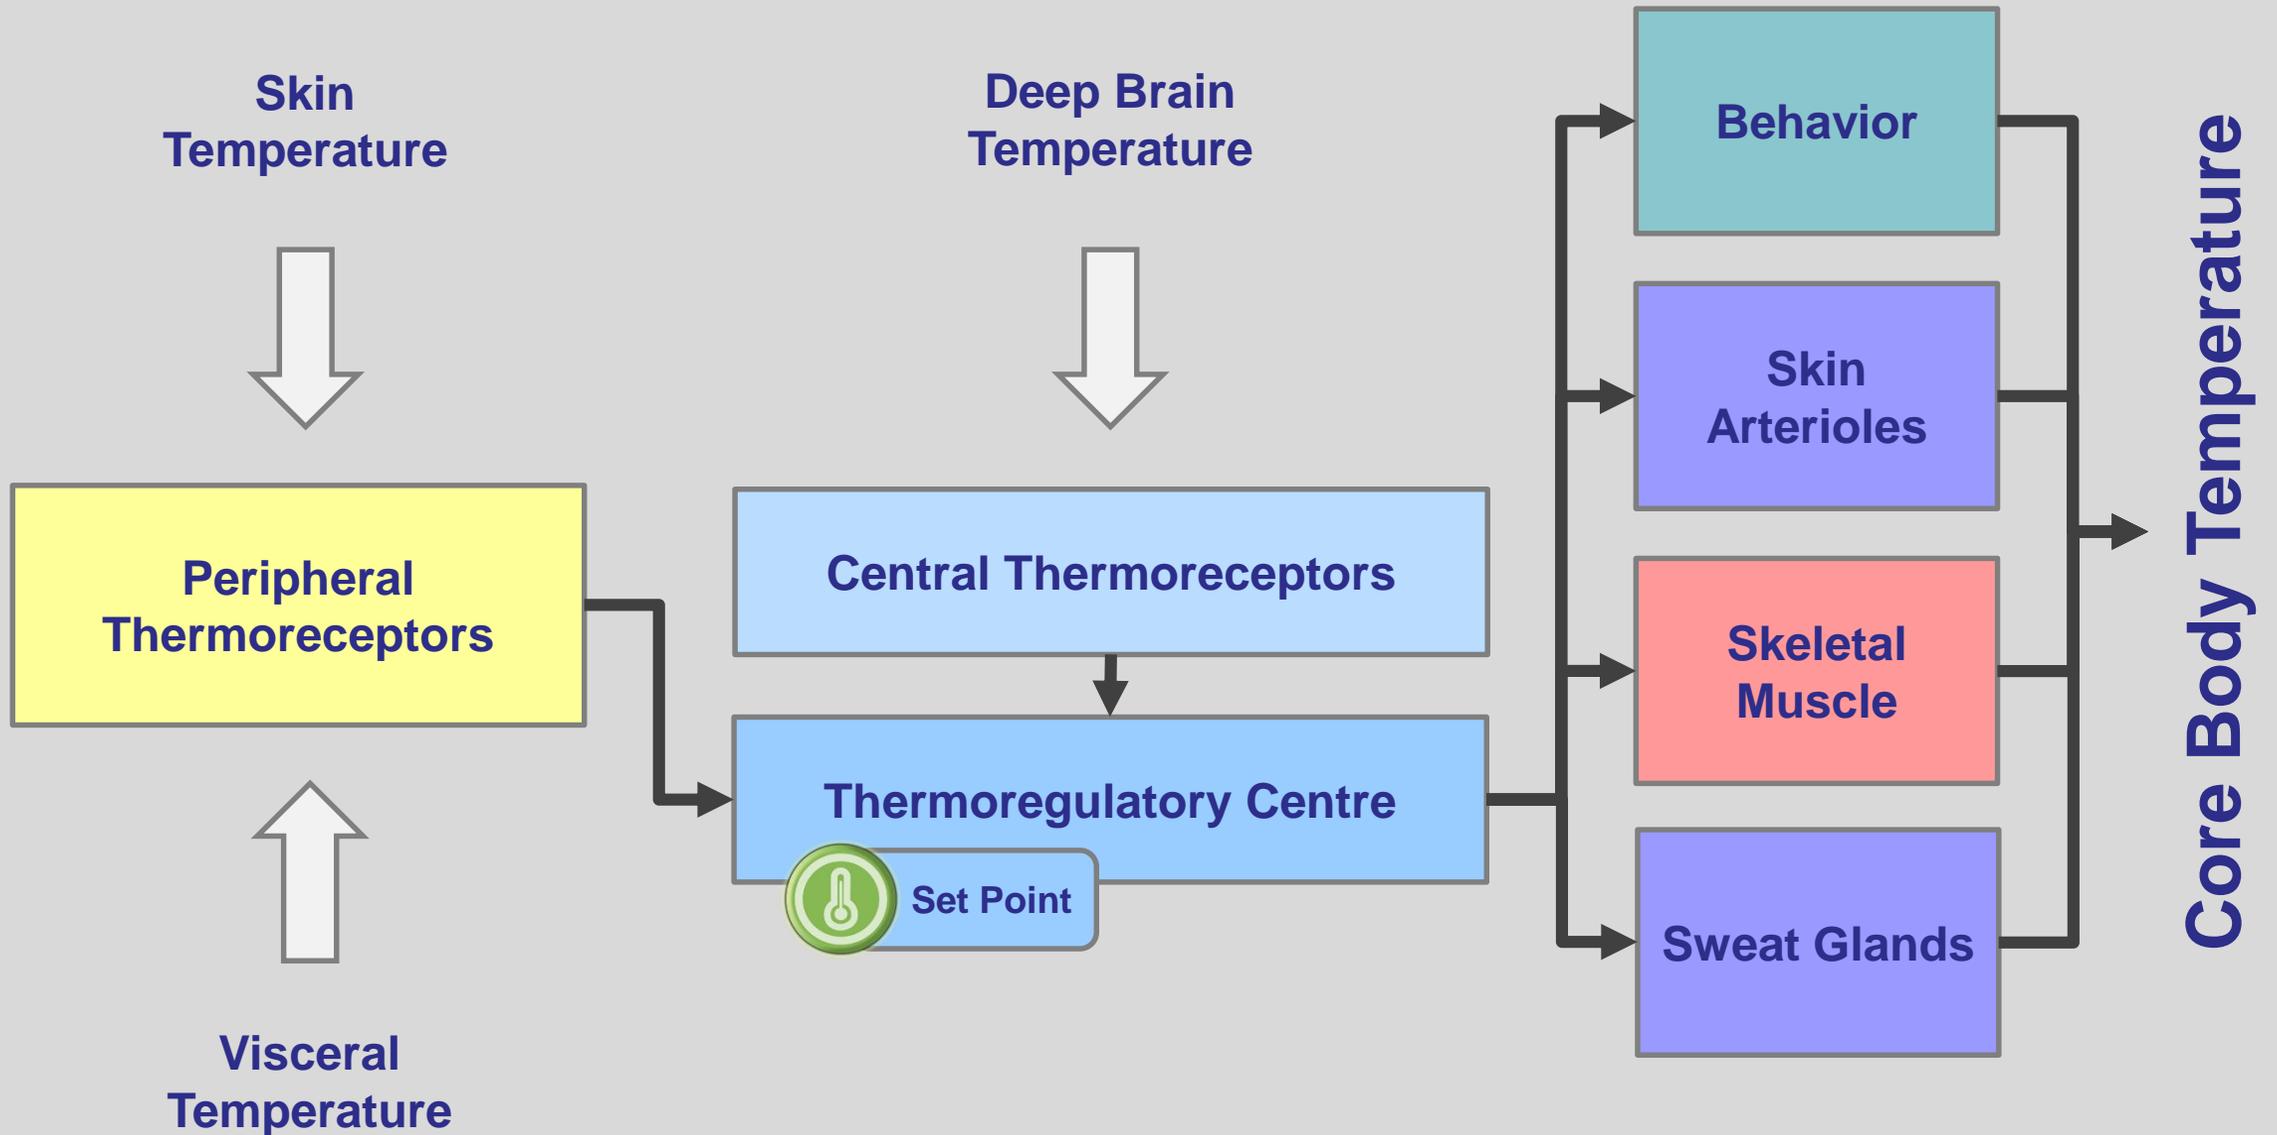

25

Cardiac arrhythmias

HYPERTHERMIA

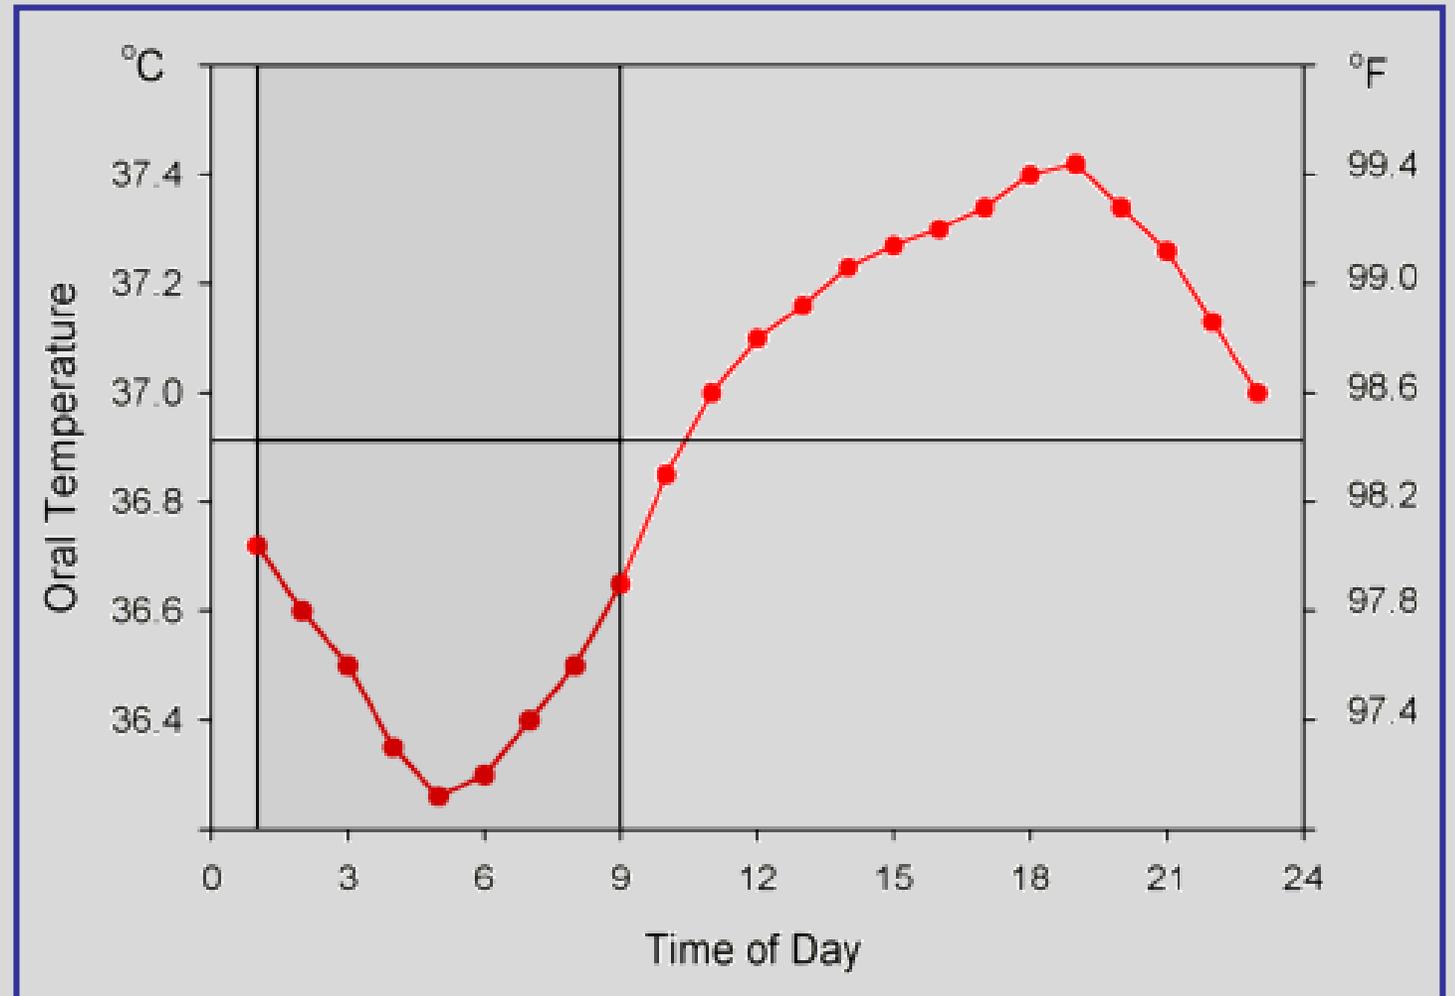

HYPOTHERMIA

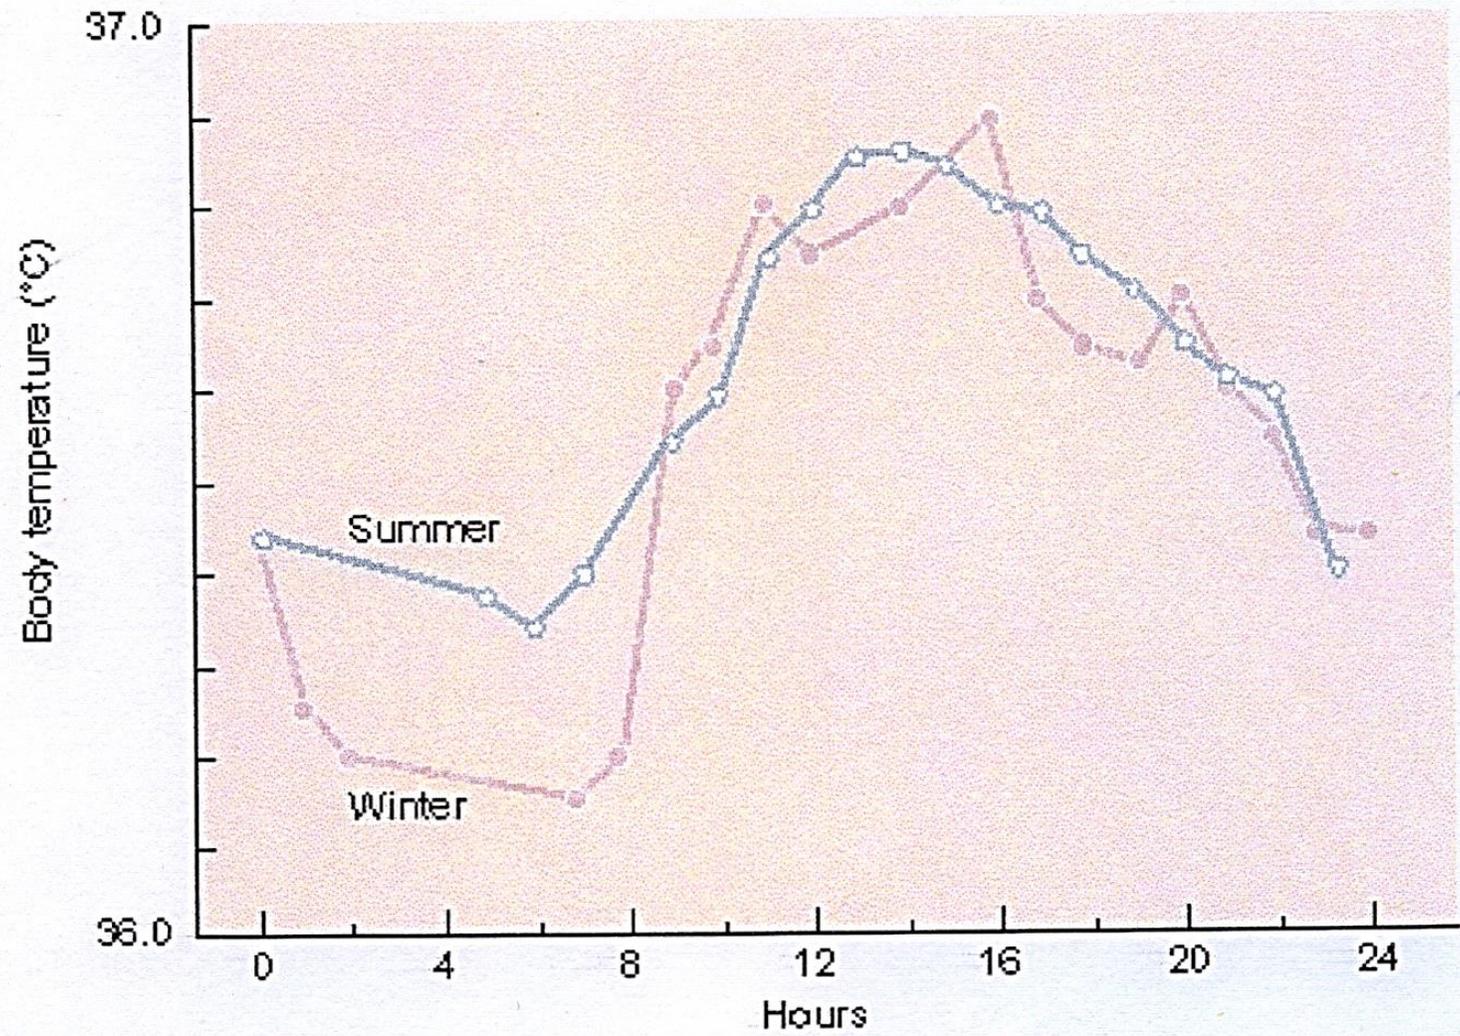

Ambient Temperature

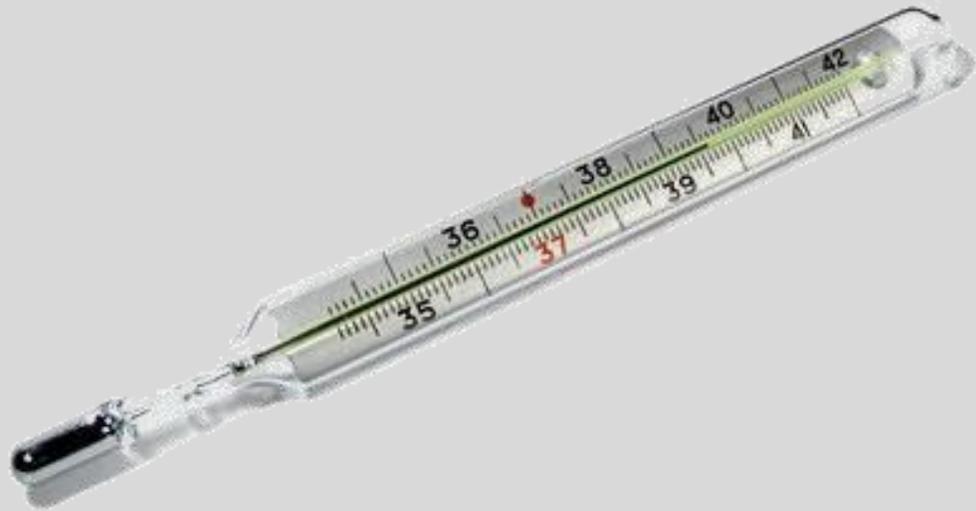

Variations of core body temperature

- Circadian rhythm
- Menstrual cycle (circamensal rhythm)
- Seasonal variations (circannual rhythm)
- Ageing

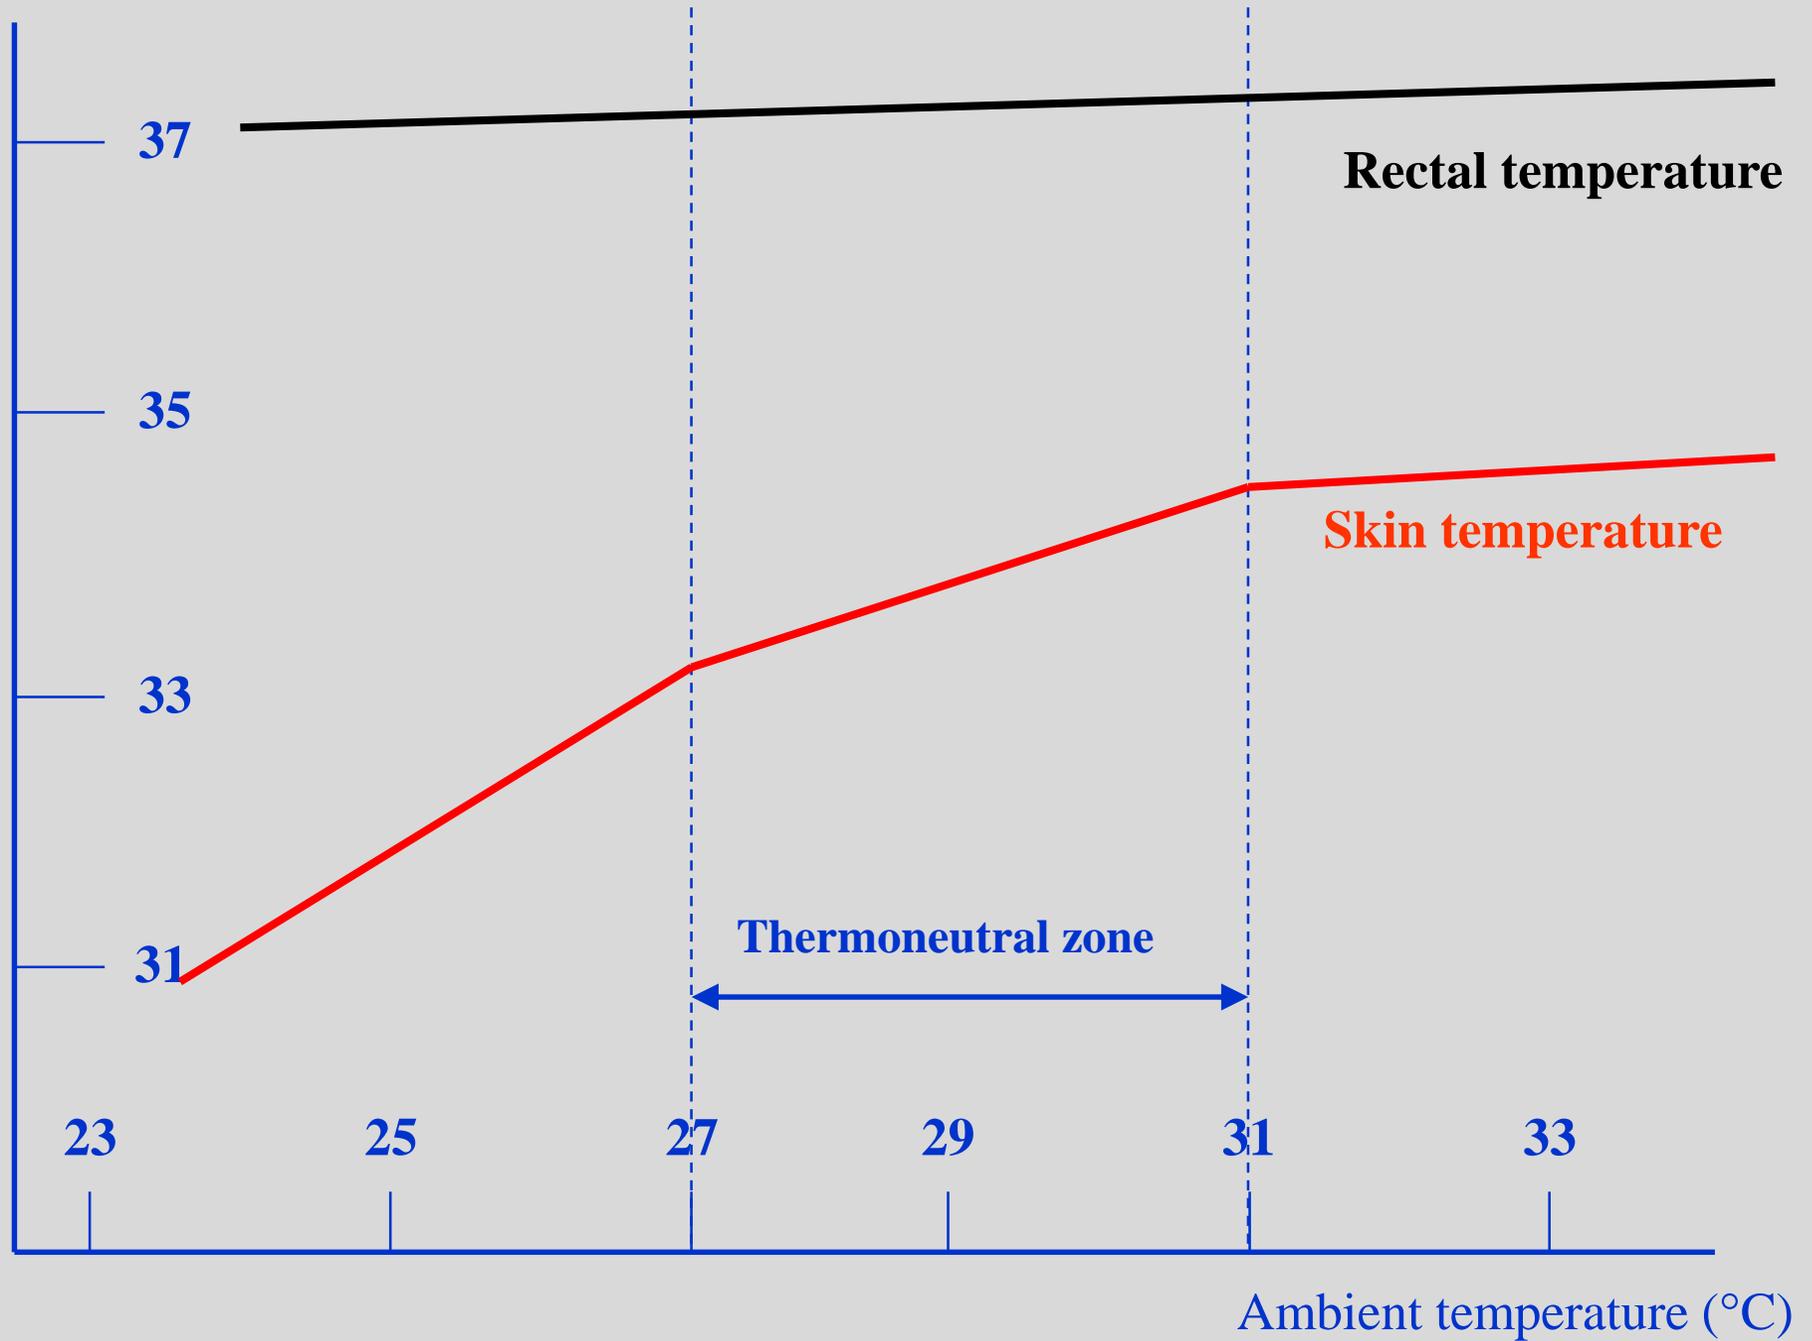

Body temperature measurement

Body temperature (°C)

Rectal temperature

Skin temperature

Thermoneutral zone

Ambient temperature (°C)

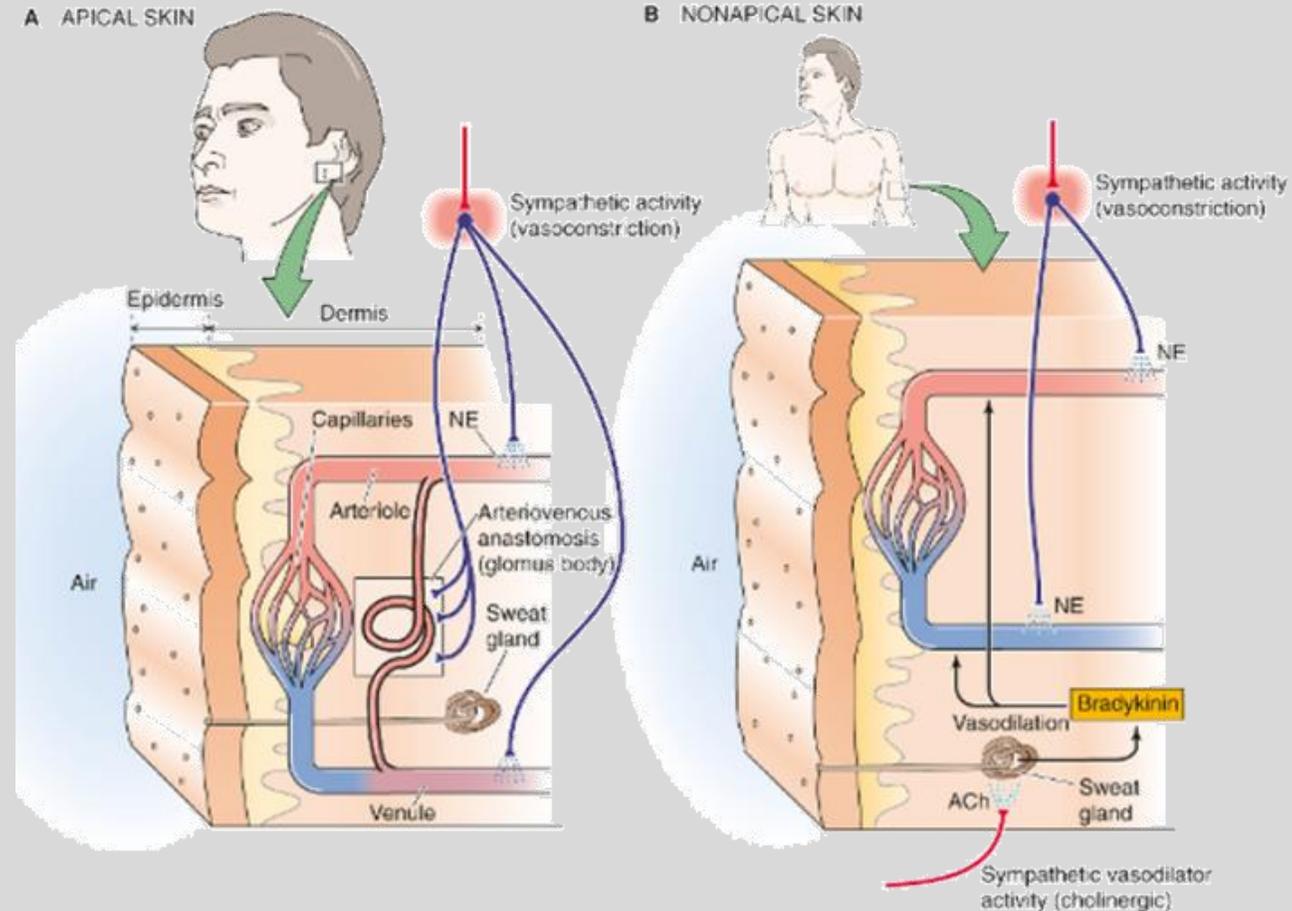

Skin blood flow control

- Apical skin

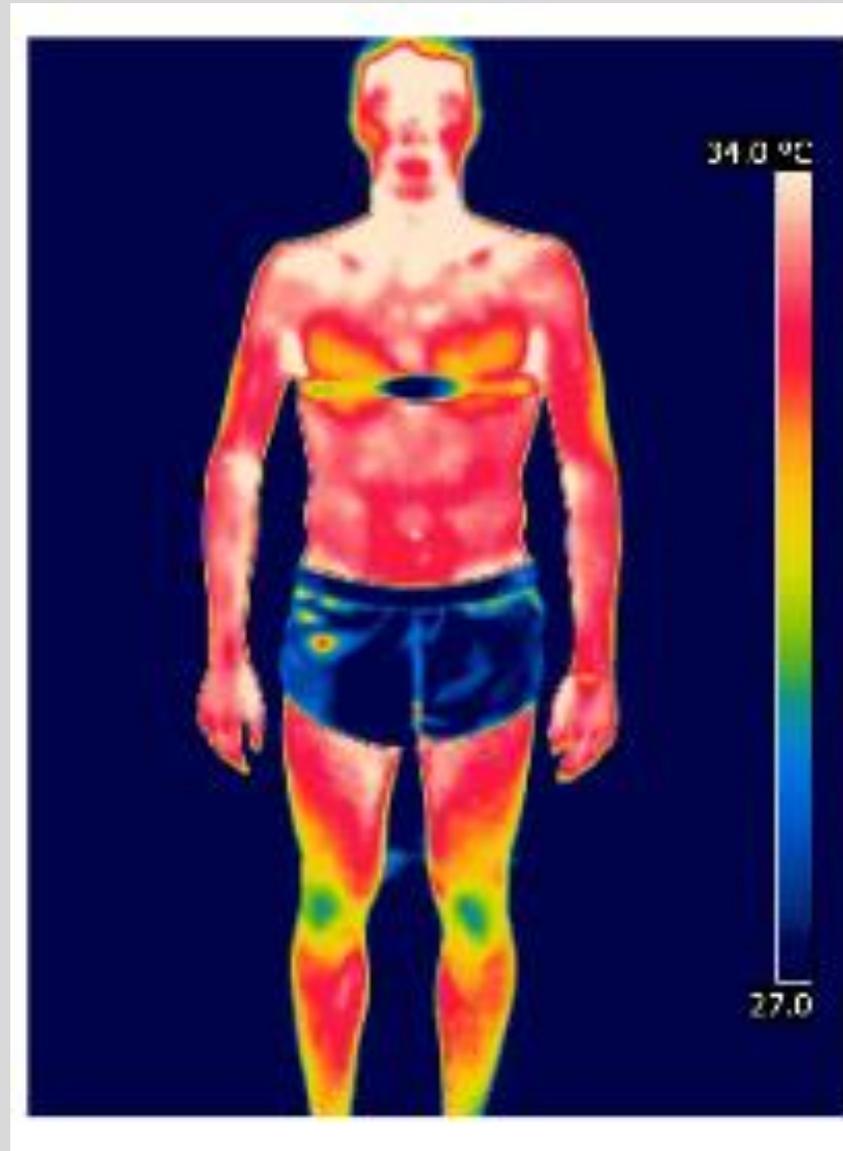

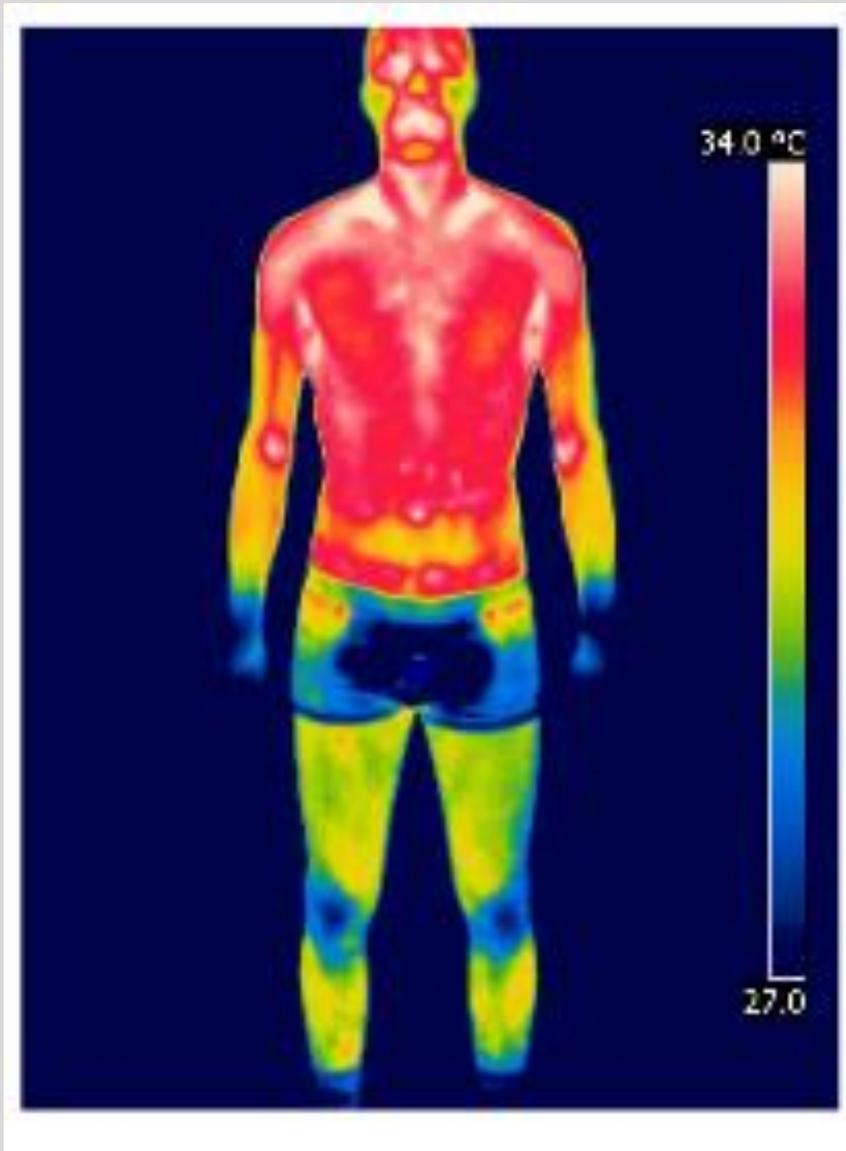

- a-v anastomoses
- Vasoconstriction: Sympath (NA- α 1)
- Vasodilation: pasive

- Non-apical skin

- Vasoconstriction: Sympath (NA- α 1)
- Vasodilation: Sympath (Ach-?)

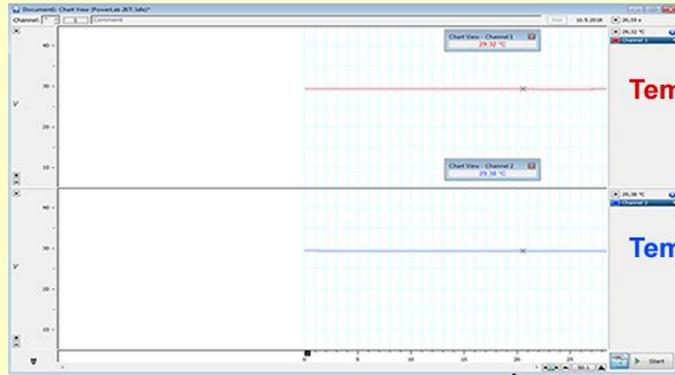

Infrared Thermography

Infrared thermal images of the anterior body for two athletes

Adopted from:
Journal of Physics: Conference Series
