

# Clinical examination in orthopaedics

Z. Rozkydal

L. Pazourek

# Clinical examination

The aim- establish the diagnosis

1. History
2. Objective examination - general
3. Objective examination - local
4. Laboratory tests
5. Imaging methods

# History

Family

Personal

Pharmacological

Social

Occupation

Epidemiological

Current problems

Analysis of pain

# Family

- Congenital abnormalities
- Important diseases in family (heart, DM, haemophilia, oncological diseases, neurological diseases, TB)
- Birth, miscarriage

# Personal

- Important general diseases (hypertension, DM, heart, tumors, lung problems)
- Coagulopathies
- Infections
- Injuries: consequences, complications
- In children- pregnancy  
psychomotor development

# Current symptoms

## Local

Pain, motor function, limping, deformity, ROM, swelling, loss of sensation

General: fever, shivering, cachexia

## Cause of the problem

- injury
- overloading
- Infection
- systemic diseases (endocrine, metabolic, inflammation, neurological, haemotological.)

- Development of symptoms
  - Onset, duration
  - Intensity
  - Aleviation, increasing factors
- Present management
  - Examination in the past time
  - Conservative therapy
  - Operative therapy
- Mobility, occupation
- Emotions, psychological condition
- Simulation, dissimulation, aggravation

# Analysis of pain

Intensity, frequency, duration

Acute, chronic

Local, irradiating

Visceral

Type- sharp, blunt, burning, stabbing

Neuralgia

Nerve root pain

Phantom pain

Neurogenic claudication

# Analysis of pain

Localised, diffuse

Psychological background

During activity or in rest

VAS – visual analogue scale

Scale of ten degrees

0 - no pain

10 - the most severe pain not bearable

Pain 5 or more- change of management

# Pharmacology

- Medicines used currently
- Important medicines: warfarin, heparin, other anticoagulants, antiepileptics, cytostatics, immunosuppressives, NSA, corticoids, biological treatment,
- Alcohol, smoking, drugs
- Allergy (antibiotics, metal, disinfections)

# Occupation and social

- Occupation, type of work, manual labor
- Rent
- Social situation (living, marriage)
- Subsequent management

# Gynecological history

- Cycles, gravidity, menopause, current gynecological problems
- Epidemiological history  
influenza, viral infections, herpes simplex, focal infections (UTI, stomatological infections, ulcers, erysipel)

# Objective examination

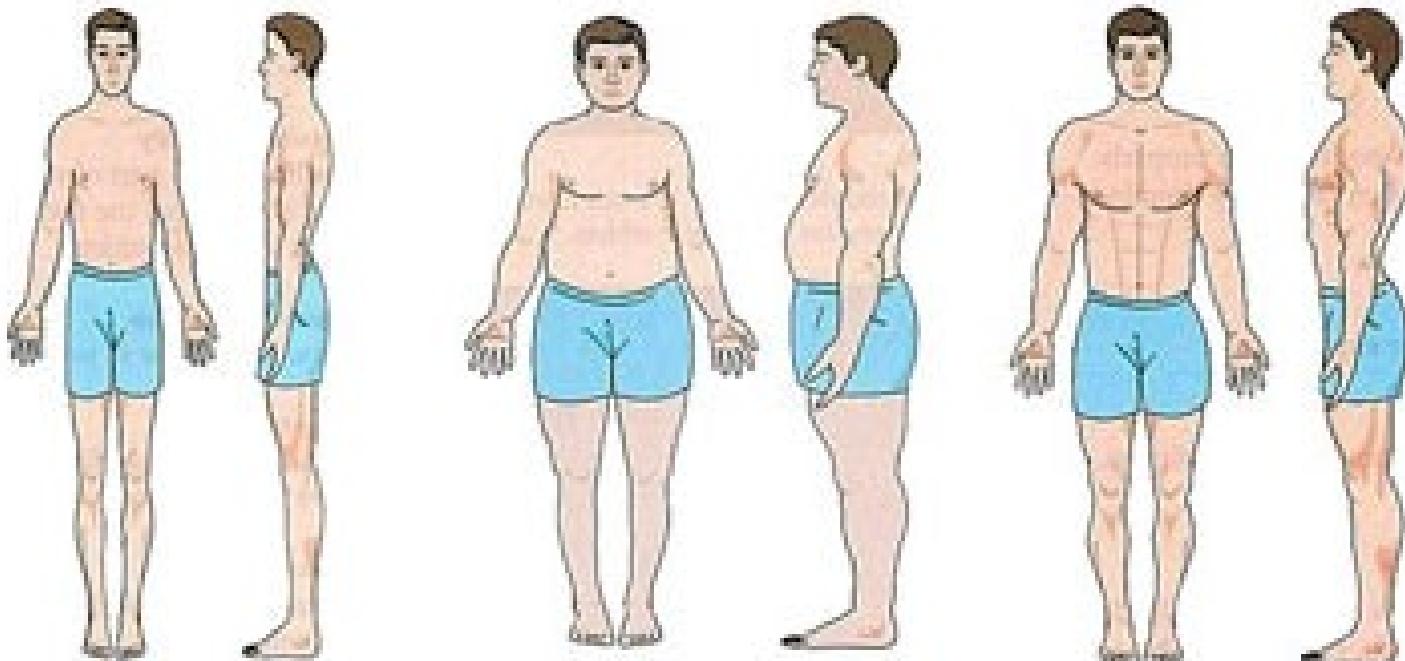

General examination

General orthopaedic examination

Local orthopaedic examination

Posture and gait

# Somatotype

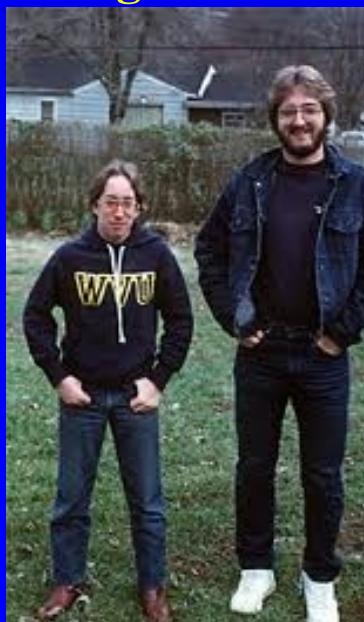

asthenic

pycnic

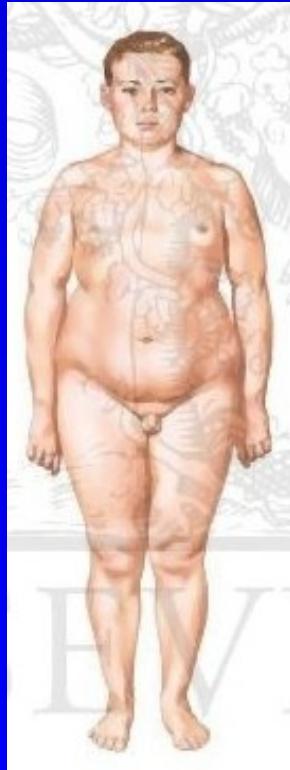

normosthenic

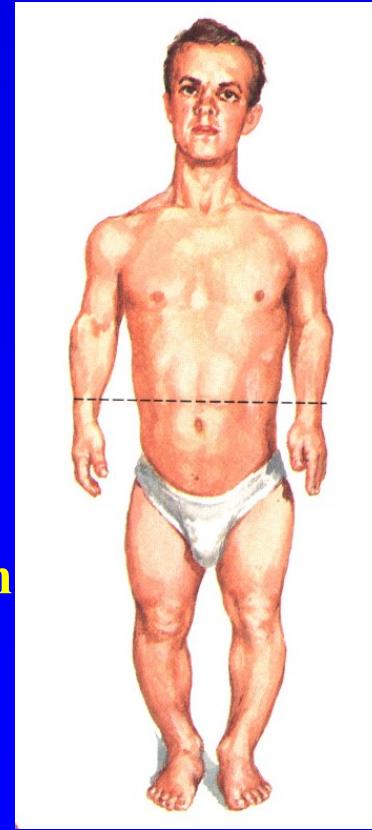

Gigantisms

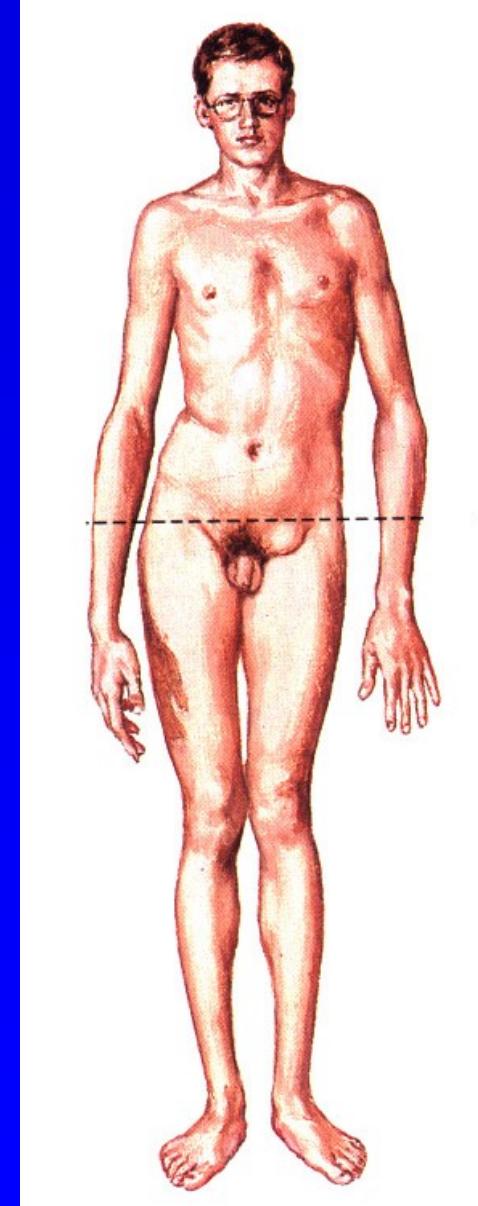

Nanisms

Fröhlich syndrom

Achondroplasia

Marfan syndrom

# Nutrition

- **Body mass index:**  $\frac{\text{weight kg}}{(\text{BMI}) \text{ height}^2 \text{ m}^2}$
- Below 20 - cachexia
- 20-25 - normal weight
- 25-30 - overweight
- 30-35 - obesity
- Over 35 - severe obesity

# Skin

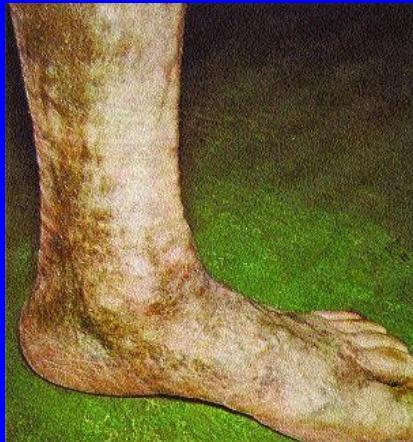

- Colour

- pigmentation, naevus

- Trophicity, turgor

- Fistulas, ulcers
- Subcutaneus nodes
- nails

- Lymfadenopathy, soft tumors, inflammations

# Swelling

- Local
- General
- Anasarca
- Decollement

**Local signs of inflammations:**  
readness, swelling, pain, warm, limited function, soft mass, effusion, discharge

# Soft mass

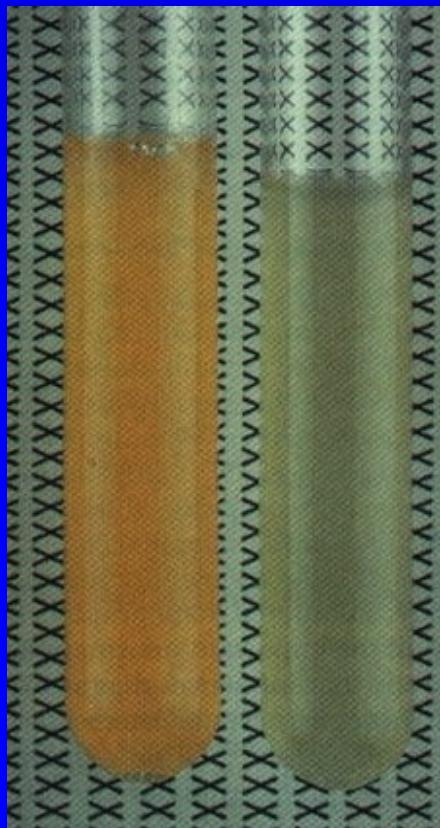

- Haematoma
- Lymphonodes
- Tumor

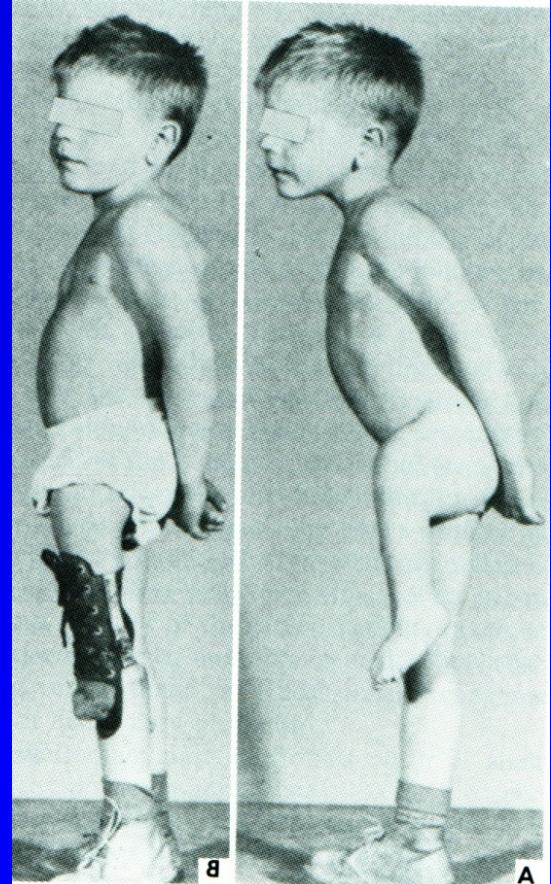

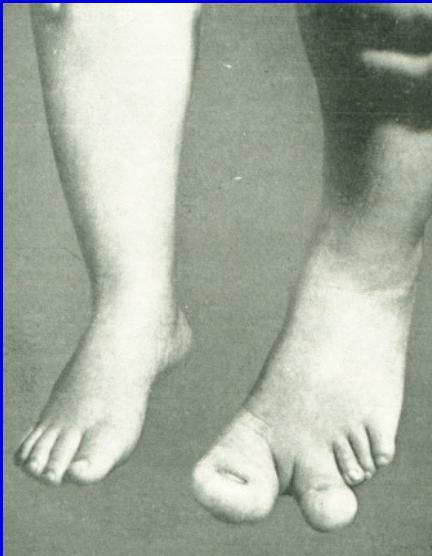

# Effusion

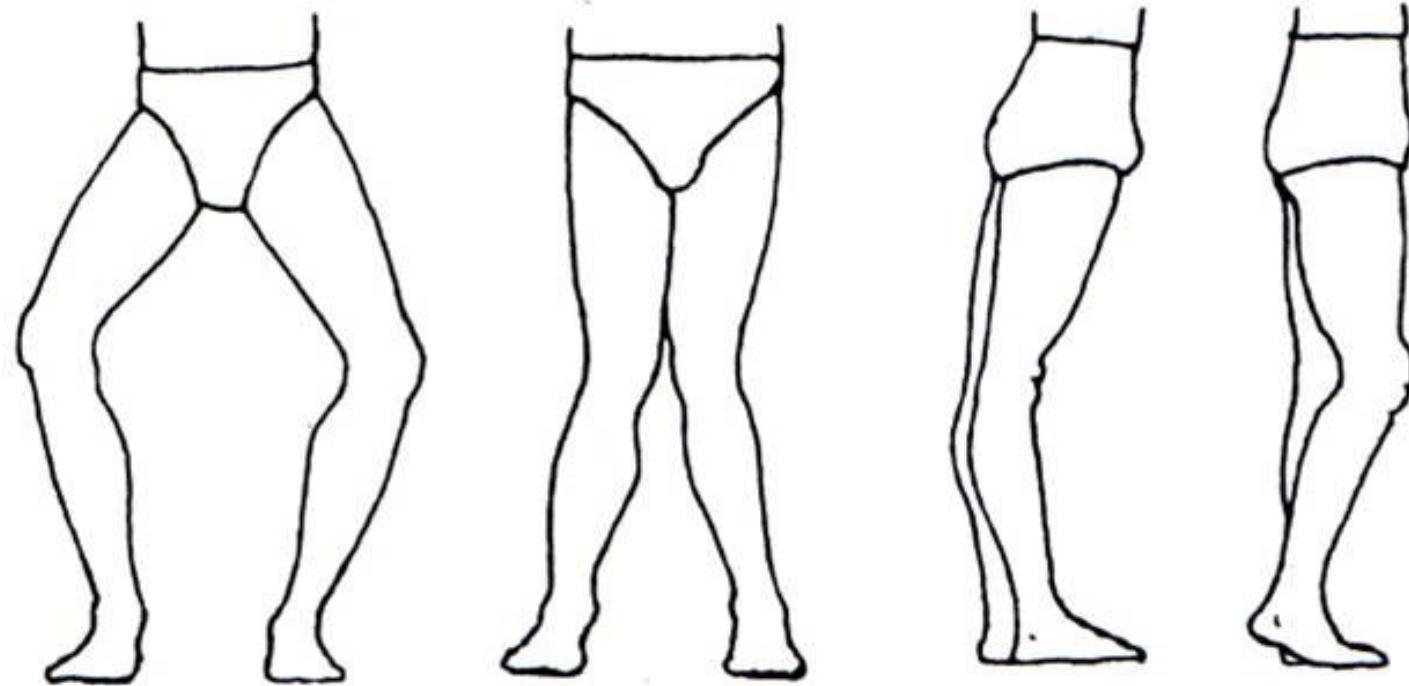

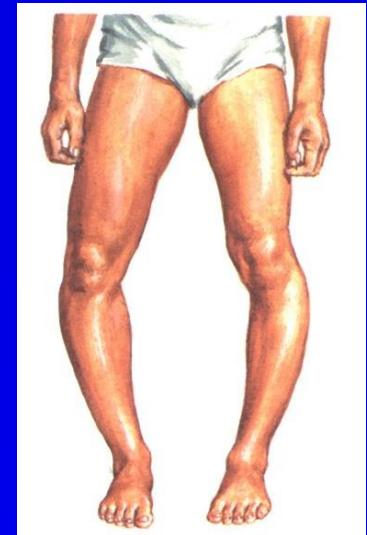

# Congenital deformity

- 1. Shape, size
- 2. Differential
- 3. Duplicity
- 4. Gigantisms
- 5. Hypoplasia

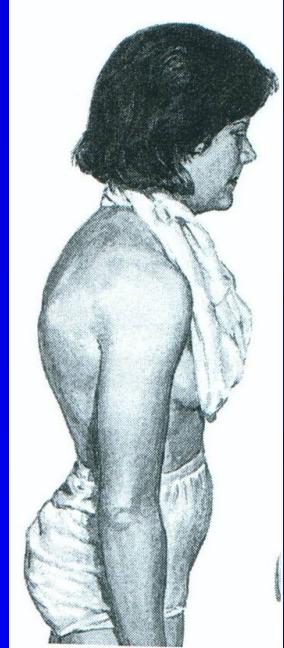

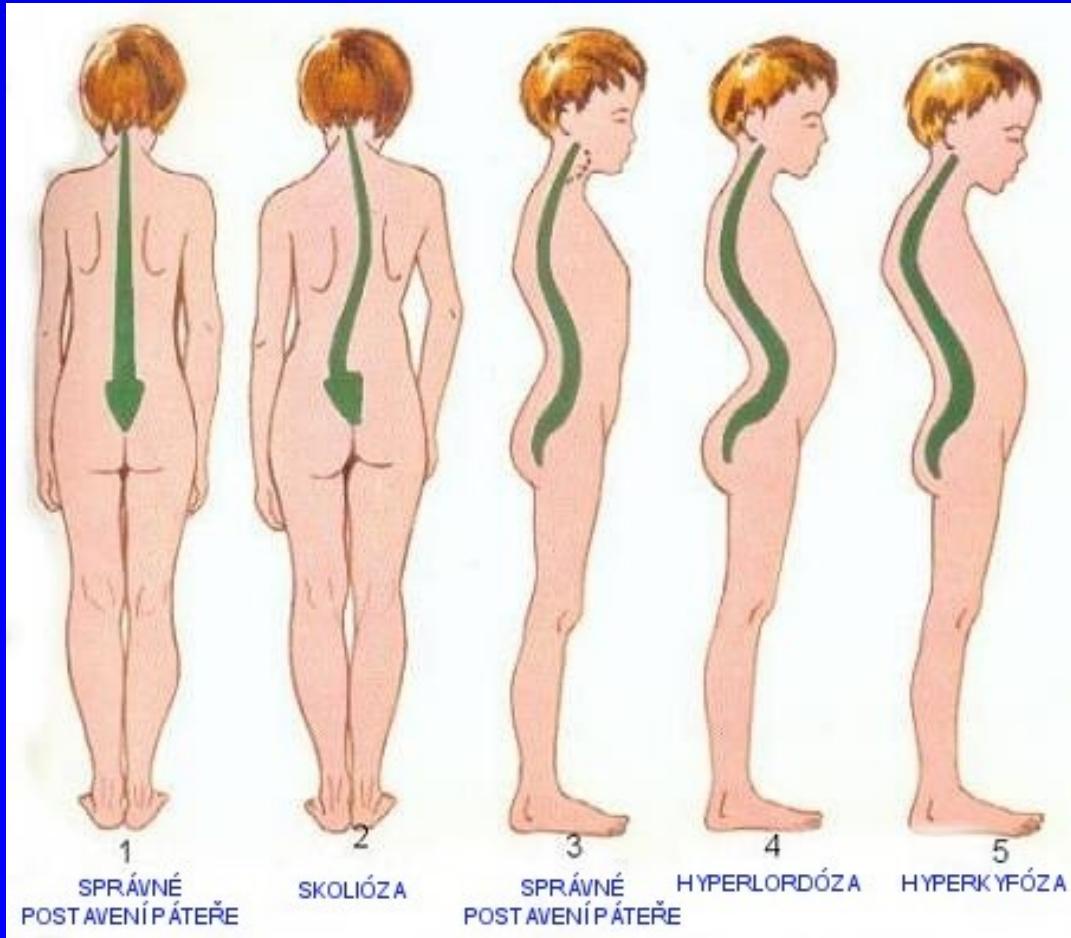

# Malalignment

- varus x valgus
- antecurvature x recurvature
- rotation deformity

# Deformity of spine

- Scoliosis
- Hyperkyphosis, hyperlordosis

# Hand deformities

Boutonniere deformity

Swan neck deformity

# Foot deformities

Talipes  
cavus

Talipes  
equinus

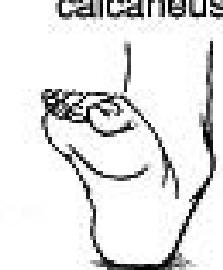

Talipes  
calcaneus

Talipes  
valgus

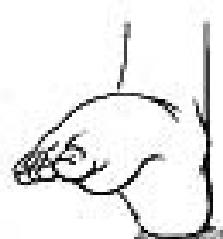

Talipes  
equinovalgus

Talipes  
calcaneovalgus

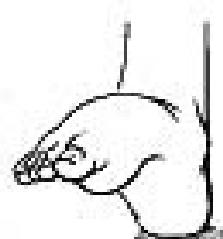

Talipes  
varus

Talipes  
cavovarus

Talipes  
equinovarus

Talipes  
calcaneocavus

Bunion

Claw toe

# Length of extremity

## Lower extremity

- Spinomaleolar distance
- Umbilicomaleolar distance
- Support during standing
- X-ray of the hip, knee, ankle joint

Upper extremity: acromion- 3. finger

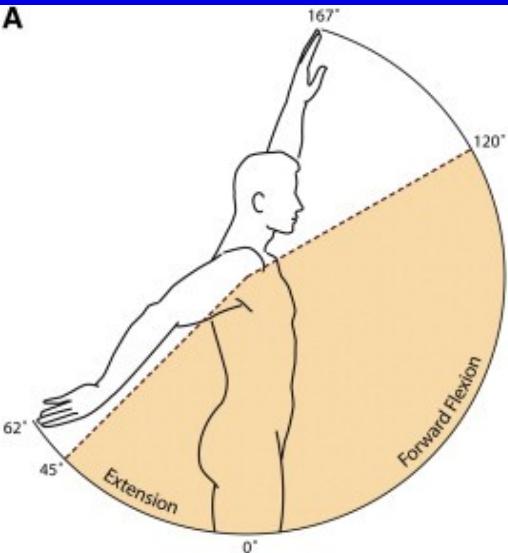

- Circumferential measurement

# ROM

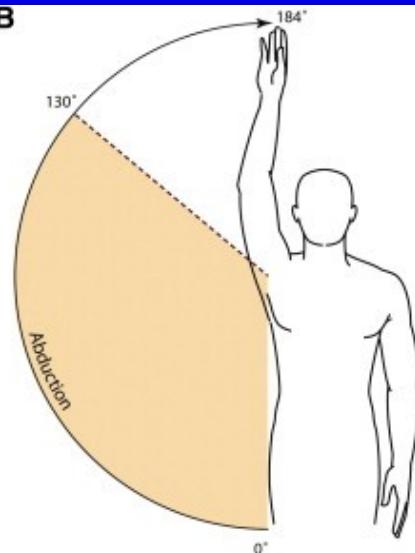

- Active and passive movements
- Sagital
- Frontal
- Transversal = horizontal
- Rotation

# Shoulder

A

B

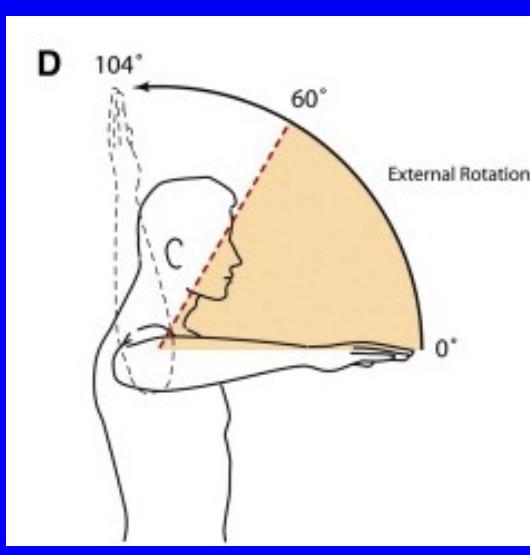

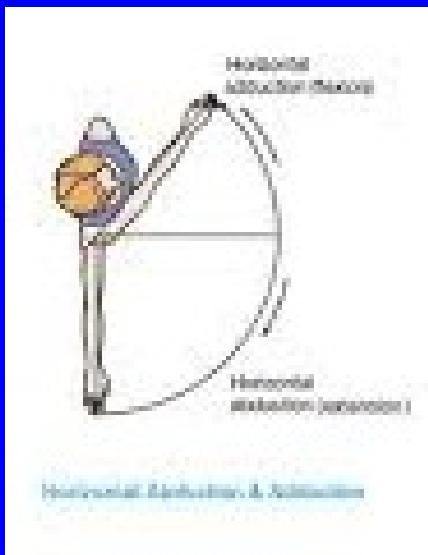

S: extenze - 0 - flexie  
50 - 0 - 180

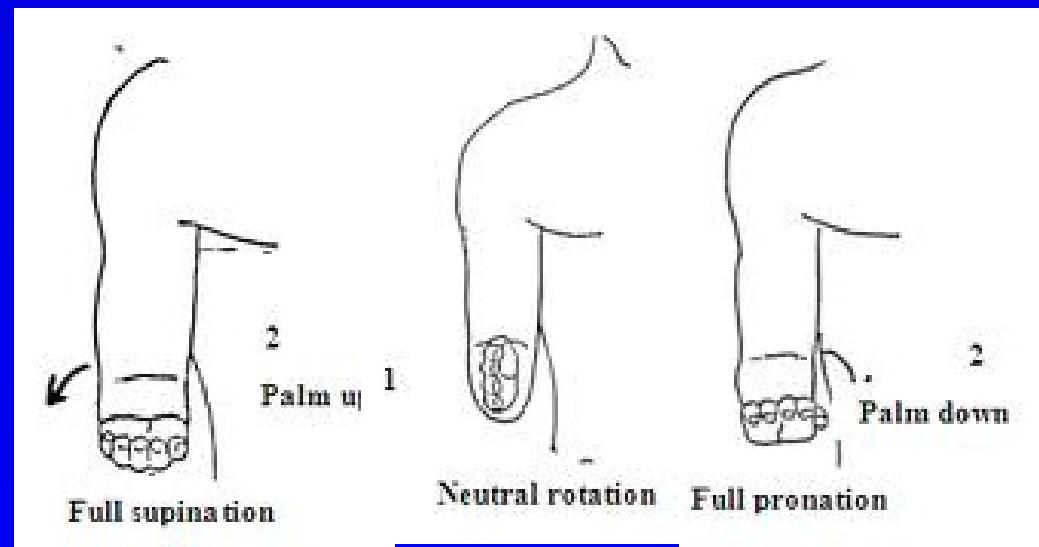

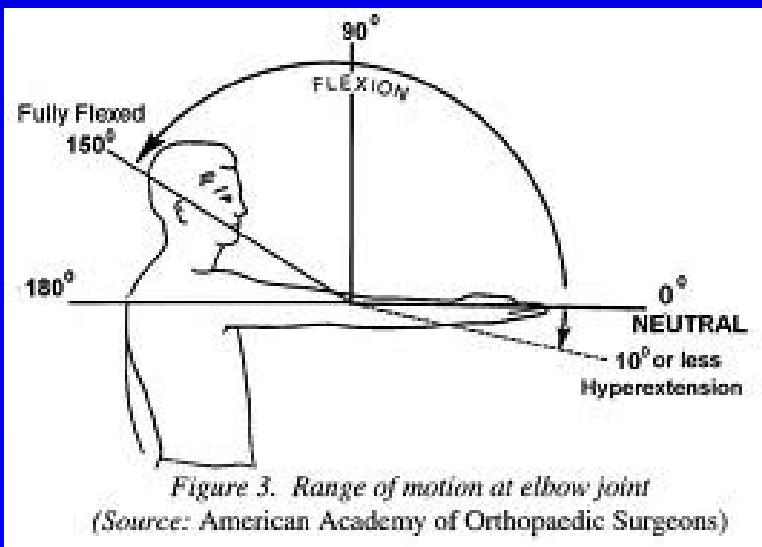

F: abdukce - 0 -  
addukce  
180 - 0 - 25

T: abdukce - 0 -  
addukce  
110 - 0 - 30

R: ZR - 0 - VR  
90 - 0 - 90

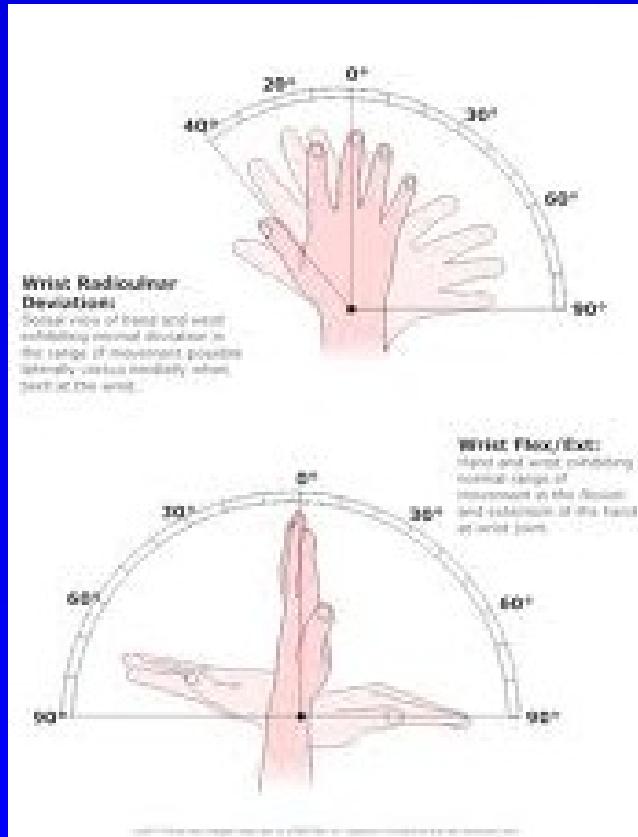

# Elbow

S: extenze - 0 -  
flexe  
**10 - 0 - 150**

R: supinace - 0 - pronace  
**90 - 0 - 90**

# Wrist

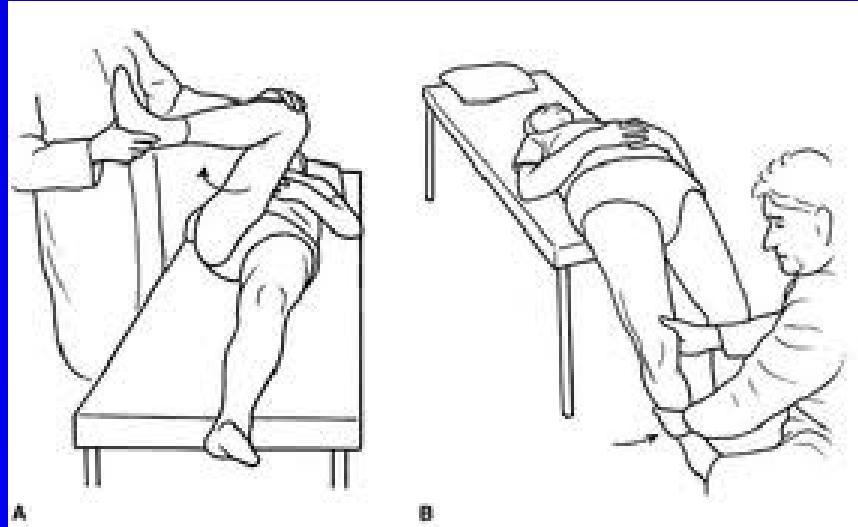

F: rad. dukce - 0 - uln.  
dukce

20 - 0 - 40

S:extenze (dorz. flexe) - 0 – flexe (palm. flexe)  
80 - 0 - 80

# Hip

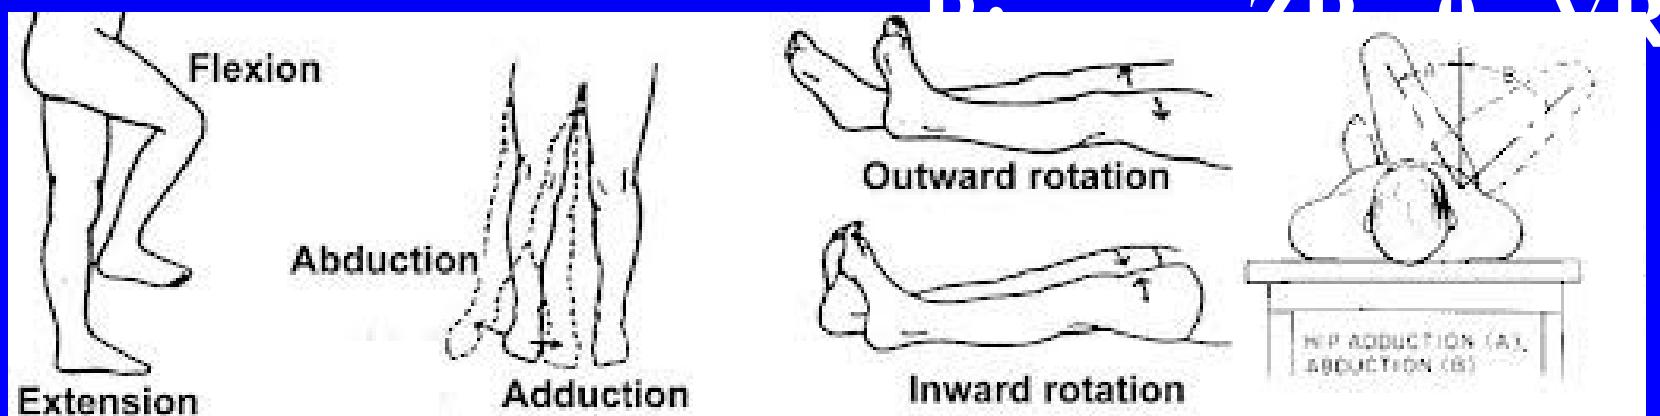

S: extenze - 0 - flexe  
15 - 0 - 140

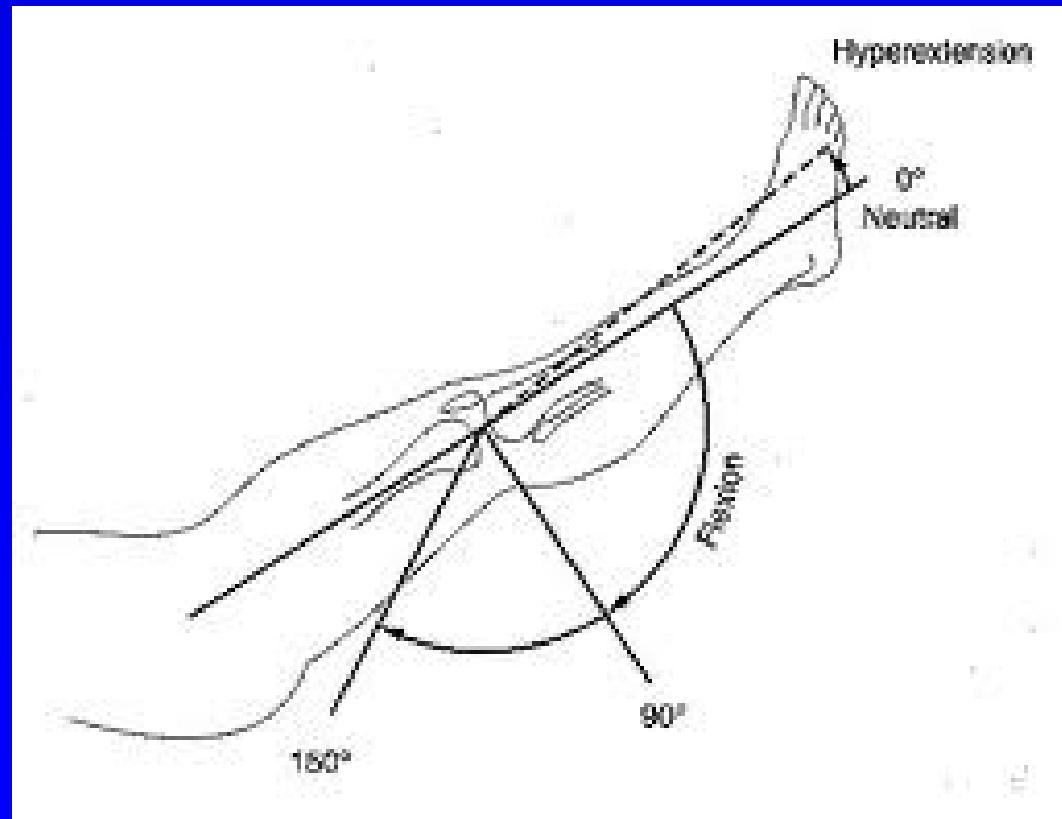

F: abdukce - 0 -  
addukce  
60 - 0 - 40

T: abdukce - 0 -  
addukce  
80 - 0 - 30

P: 0 - 0 - VR

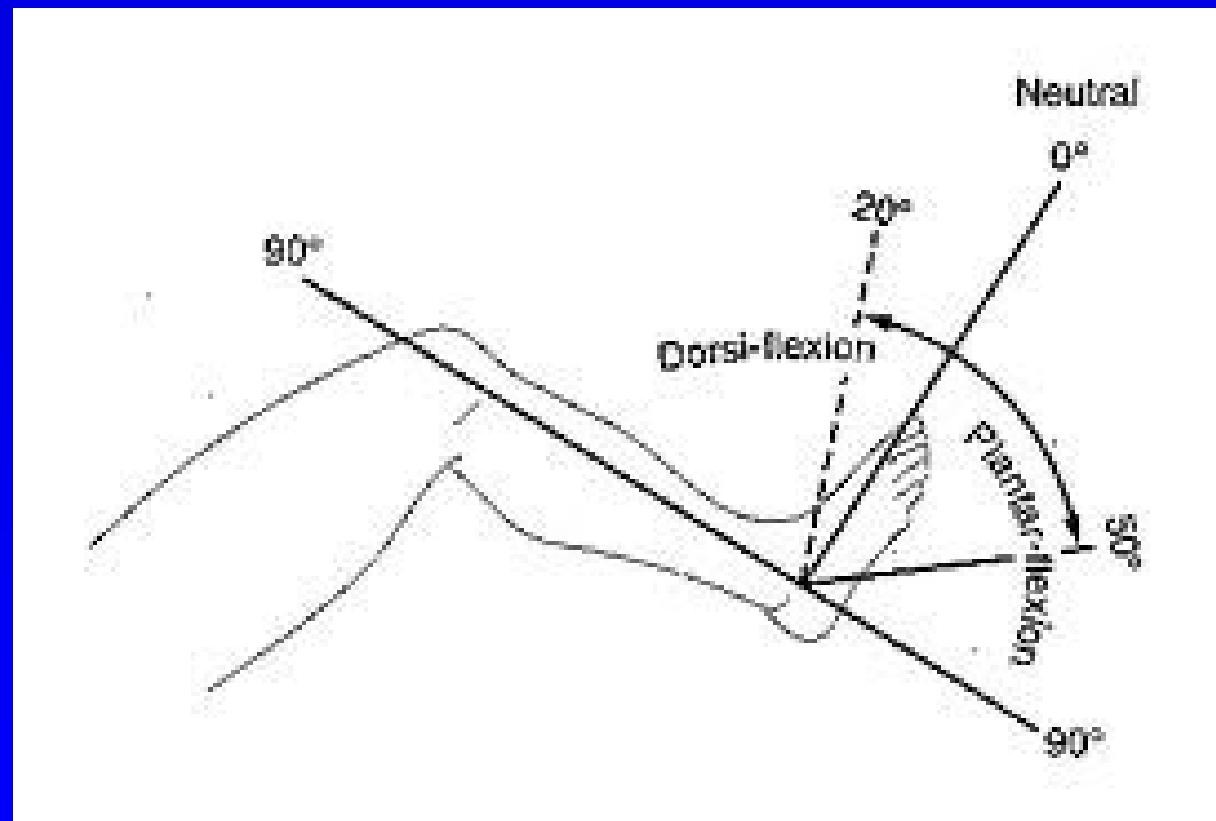

# Knee

S: extenze - 0 -  
flexe  
0 - 0 - 140

# Ankle

S: extenze (dorziflexe) - 0 - flexe  
(plantiflexe)

20 - 0 - 50

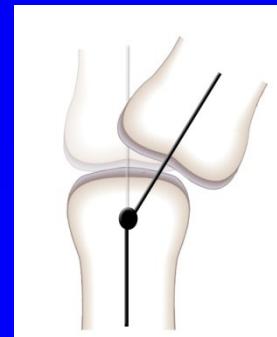

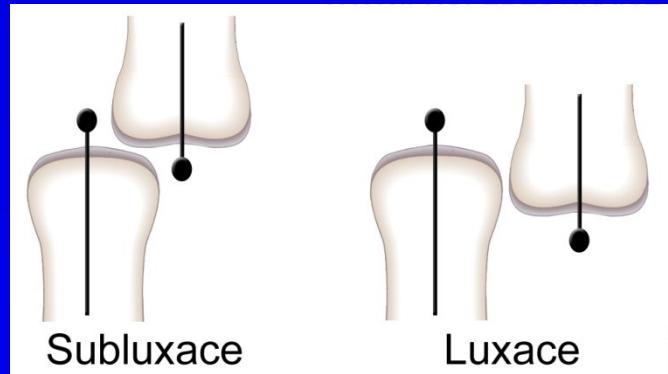

# Ancylosis

- Extrarticlar
- Intraarticular

# Stability of joints

- Stable joint
- Unstable joint
- Instability
  - acute
  - chronic
  - habitual

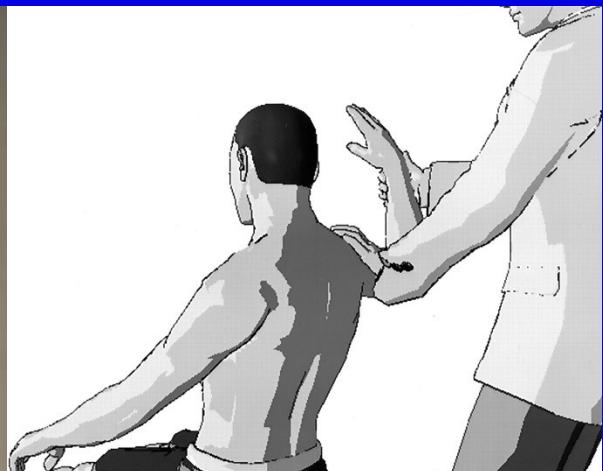

Deviace

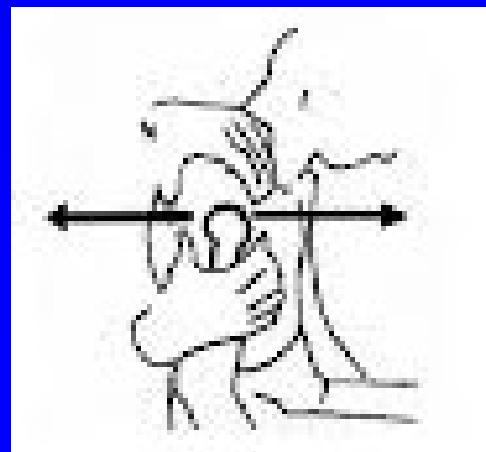

Desaxace

# Shoulder

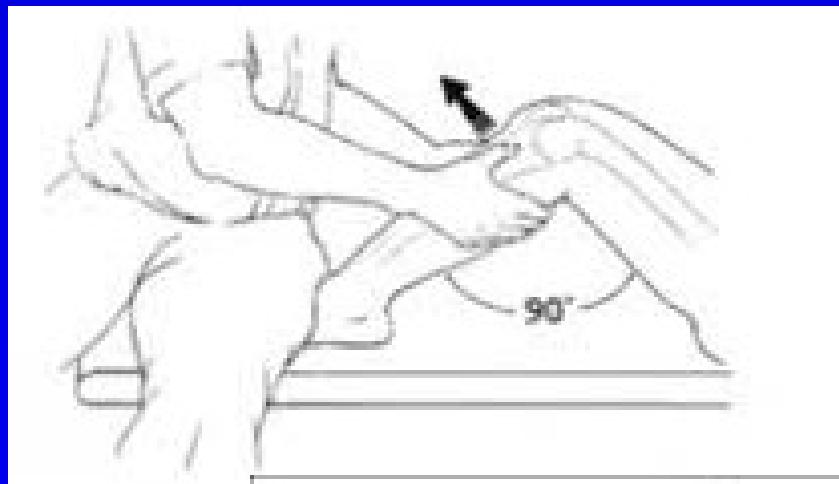

Apprehension test

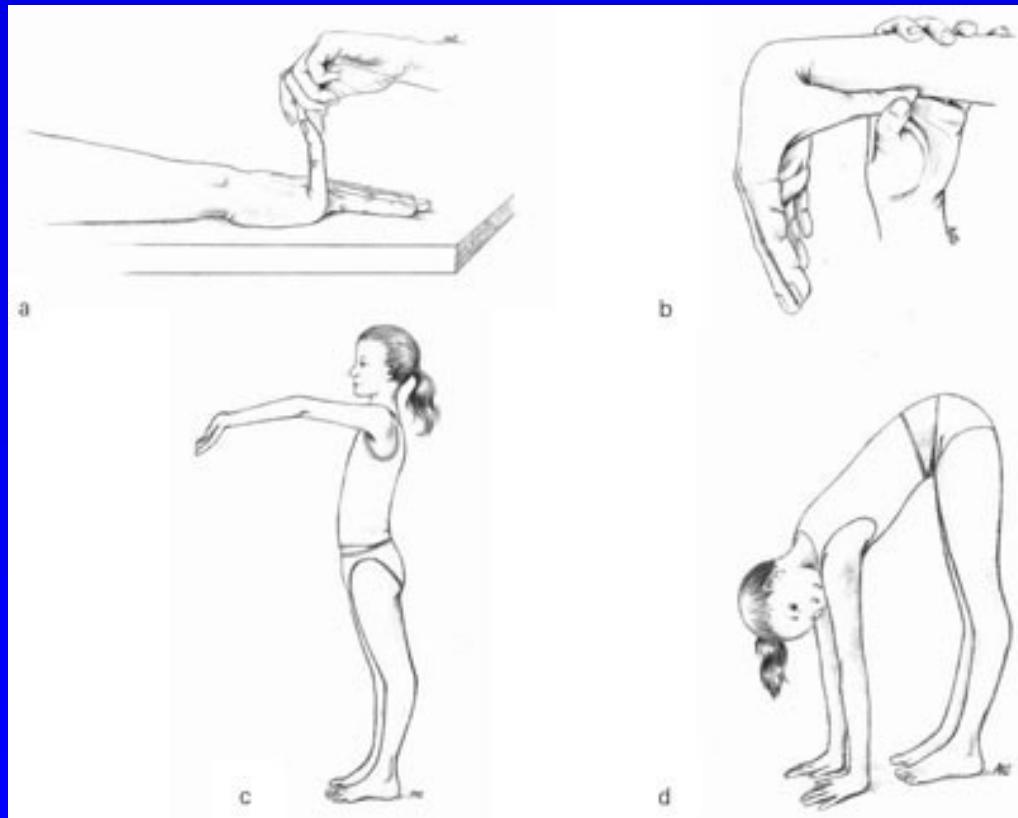

Drawer sign

# Knee

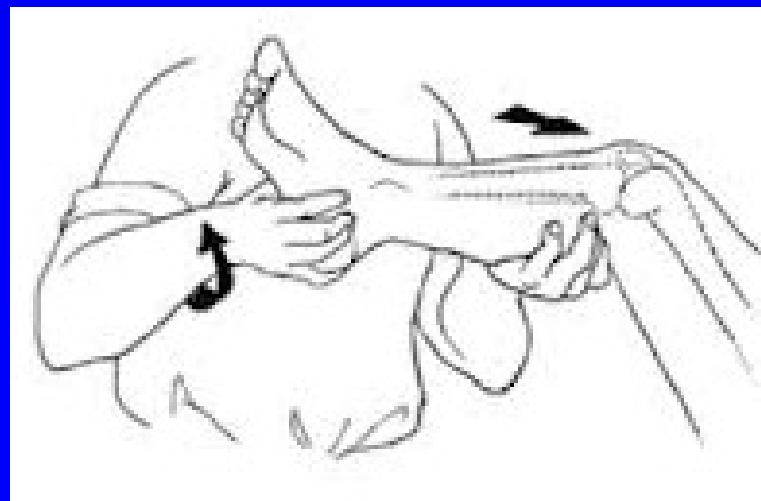

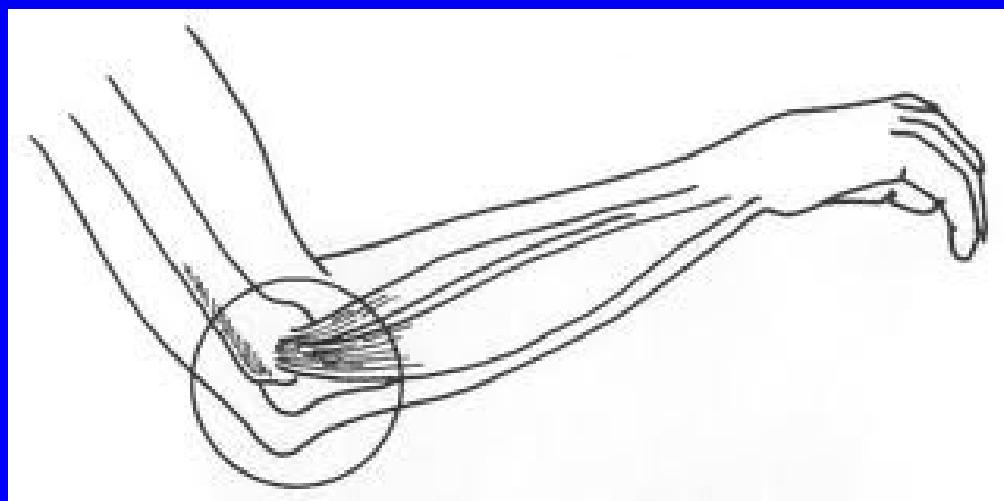

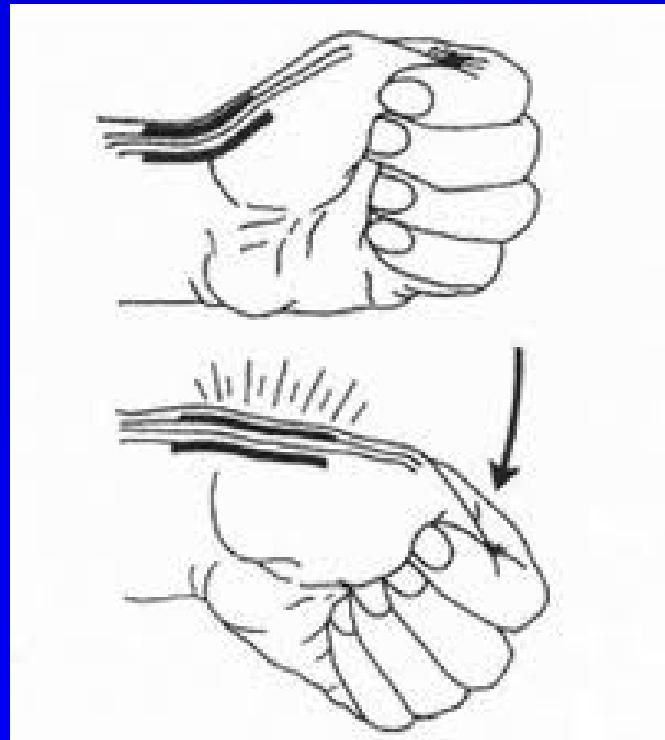

# Laxity

- test

# Maneuvers

- Maneuvers

# Sound phenomena

- Crepitus

# Contracture

- Lumbago, torticollis
- Cerebral palsy

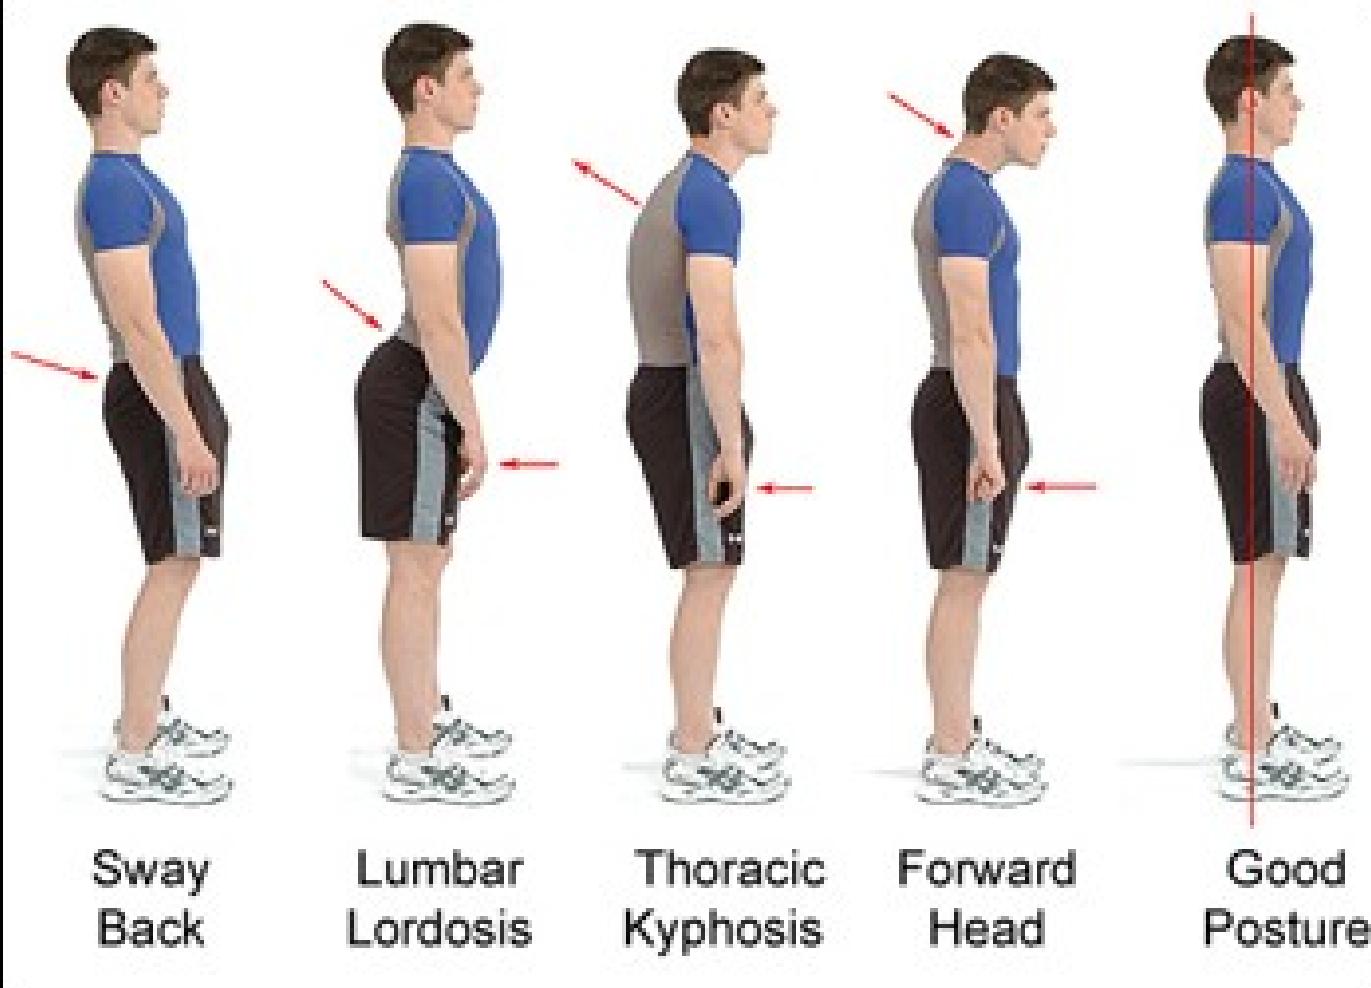

# Muscles

- Trophicity
- Tonus
- Cramps
- Power

# Muscle test

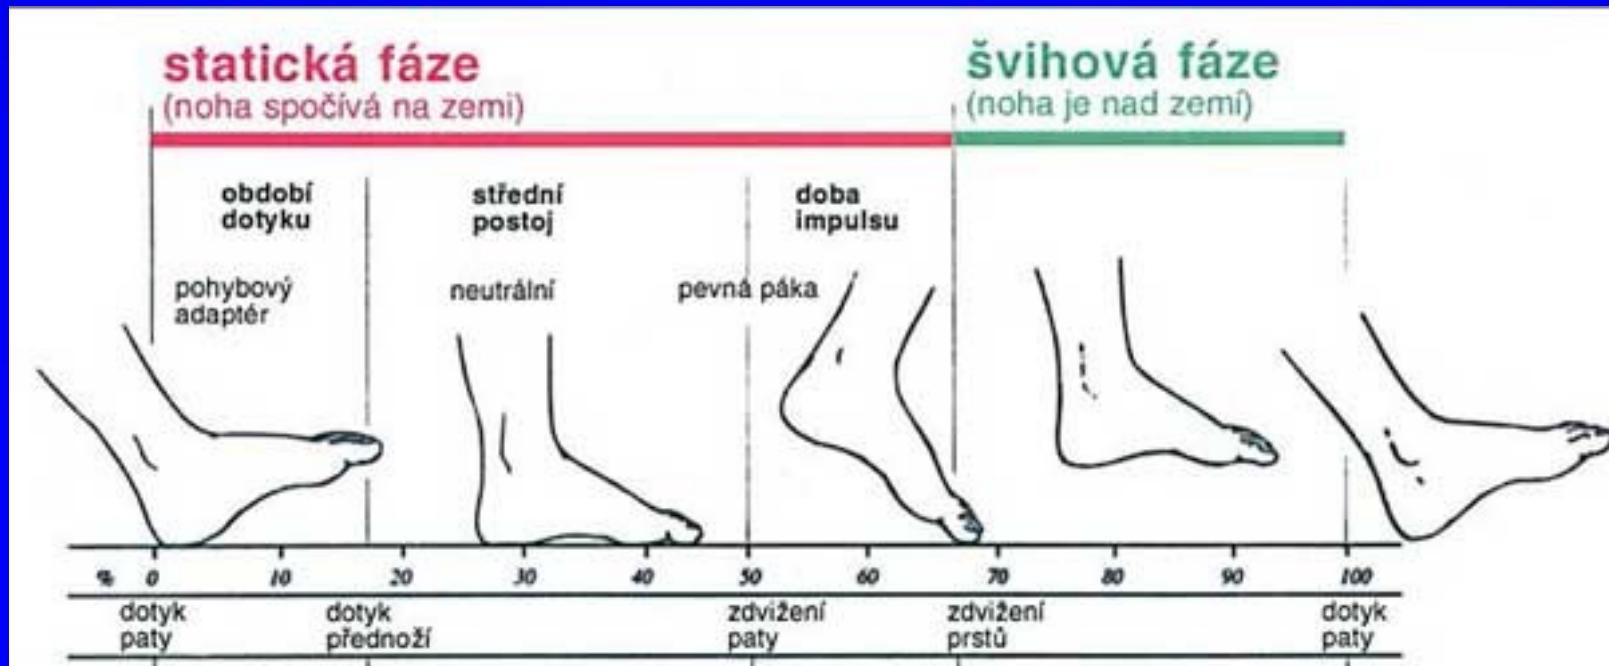

0 - no activity	0 %
1 - trace	10 %
2 - motion without gravity	25 %
3 - motion against gravity	50 %
4 - motion against gravity and slight resistance	75 %
5 - normal activity	100 %

# Posture

# Gait

- 1. heel strike
- 2. standing
- 3. toe off
- 4. swing phase

# Limping

- Antalgic gait
- Shortening of a lower extremity
- Akylosis
- Trendelenburg sign and gait
- Hemiparetic gait
- Spastic gait
- Drop foot gait
- Parkinson gait

# Imaging methods

- X-ray, arthrography
- Angiography
- Ultrasonography
- CT, MRI
- Scintigraphy
- DEXA
- Biopsy

# X-ray

In two planes

- bone hypertrophy
- bone atrophy
- osteolysis
- osteonecrosis

# Kellgren- Lawrence clasification of O.A.

I.

II.

III.

IV.

# Fistulography

# Arthrography

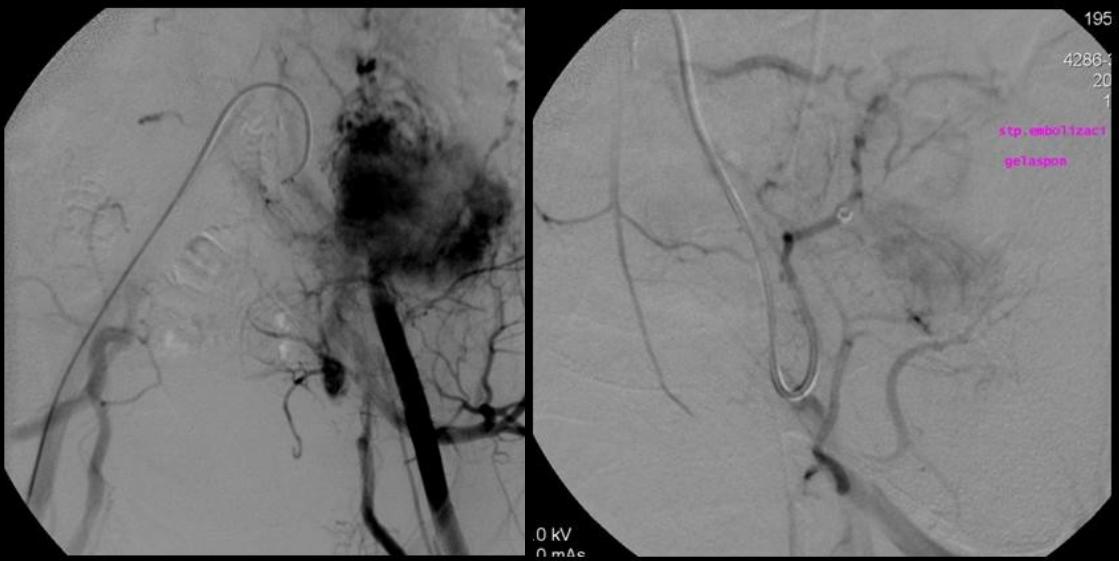

# Angiography

Clasical

CT angiography

MR angiography

Digital subtraction angiography

# Ultrasonography

Echogenicity of tissues

Bone, fibrous tissue, muscles, adipous tissue, cartilage, fluid

Anechoogenic structure- black

Hypoechoic structure- grey

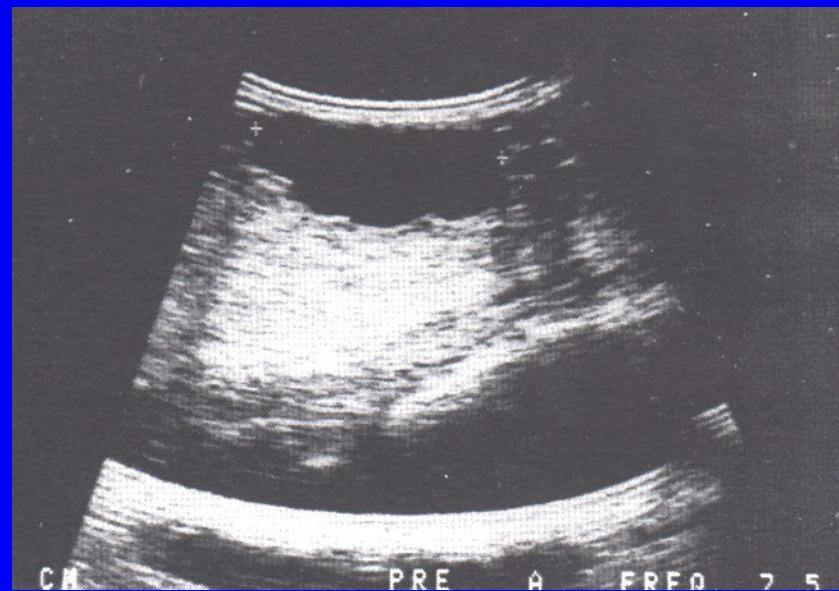

Hyperechoic structure- white

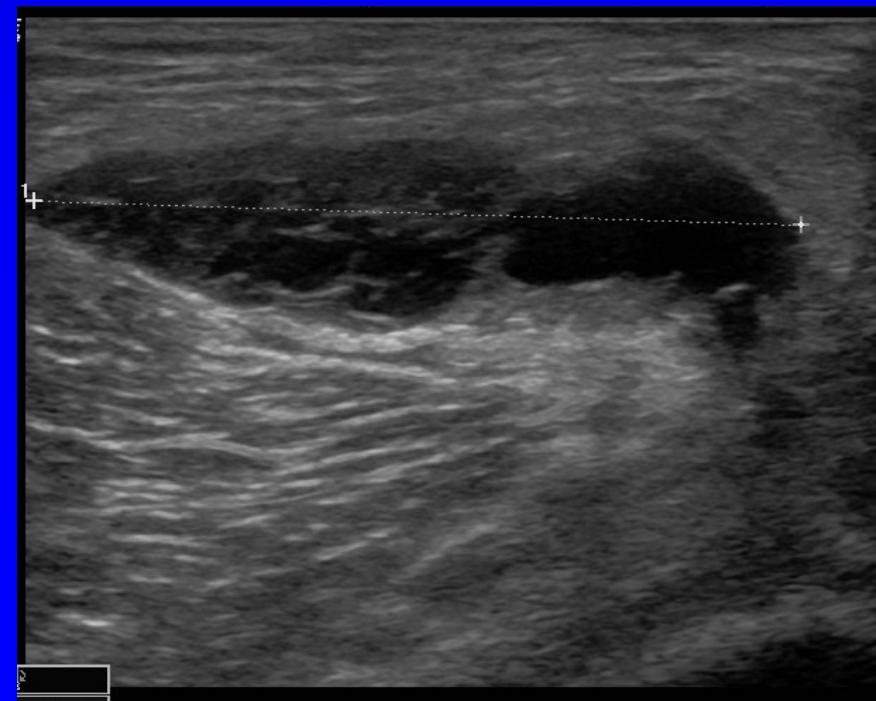

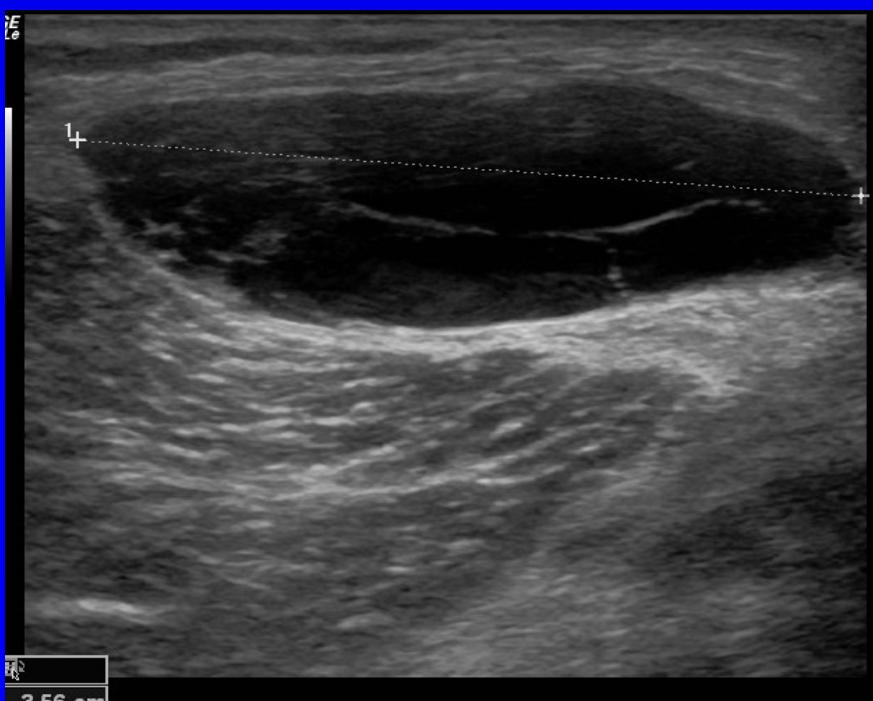

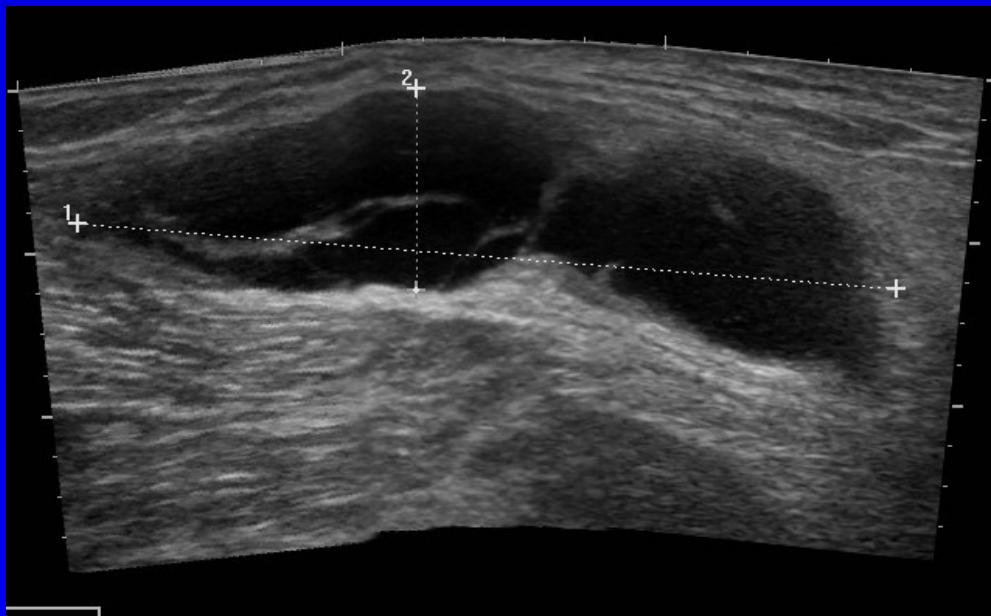

Soft tissues

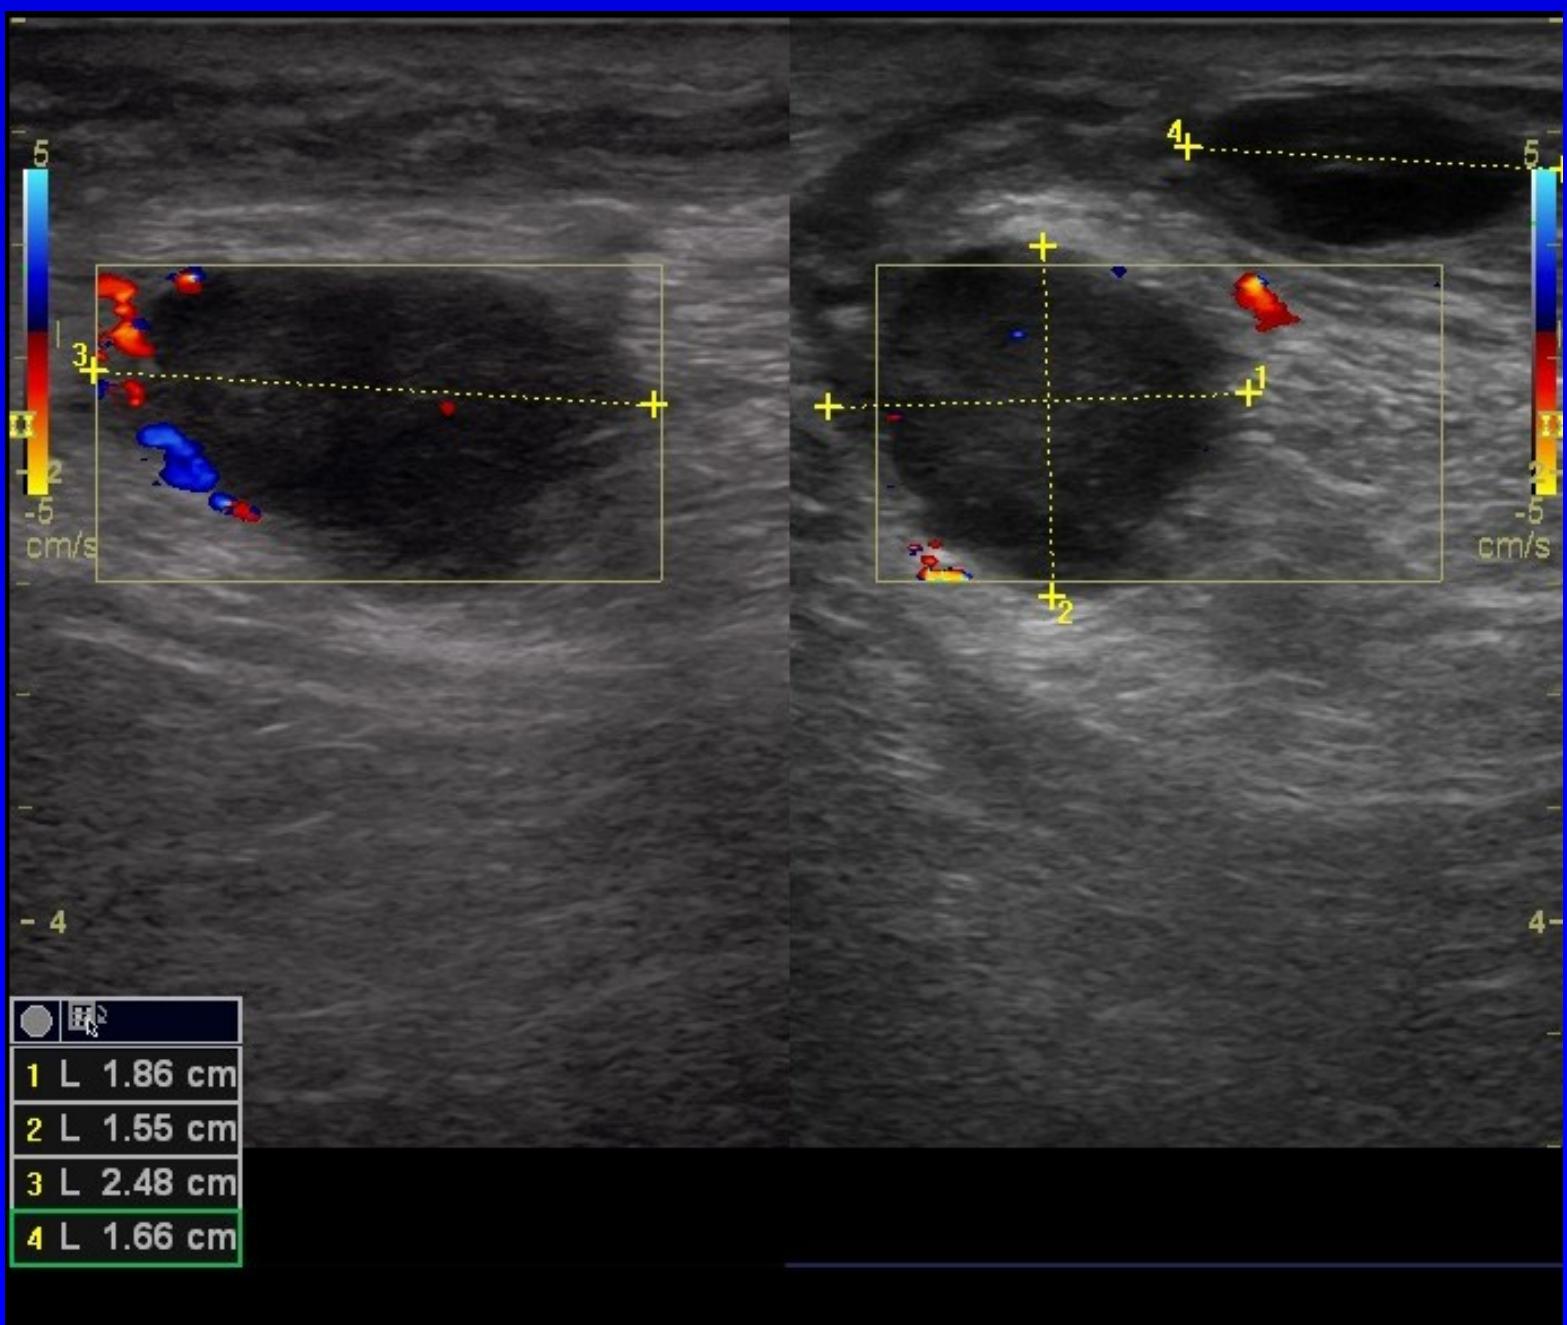

Tumors

DDH

Effusion in joints

# CT scann

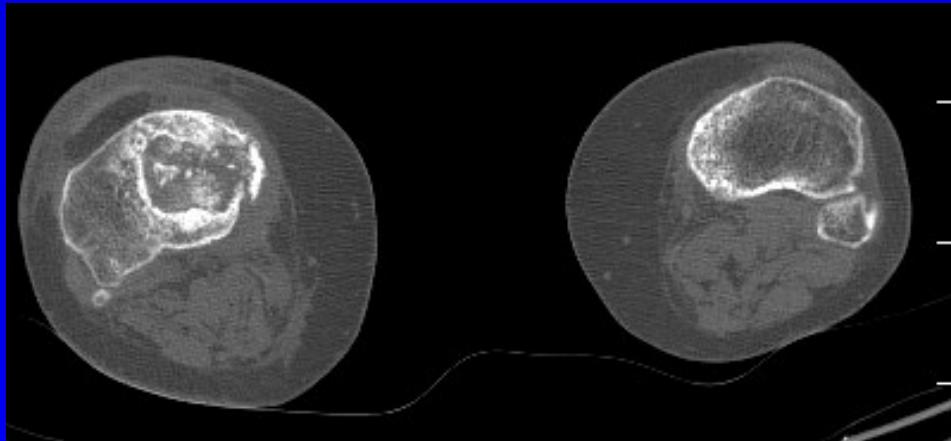

Absorption of X-ray beams

Air – 1000 H.U.

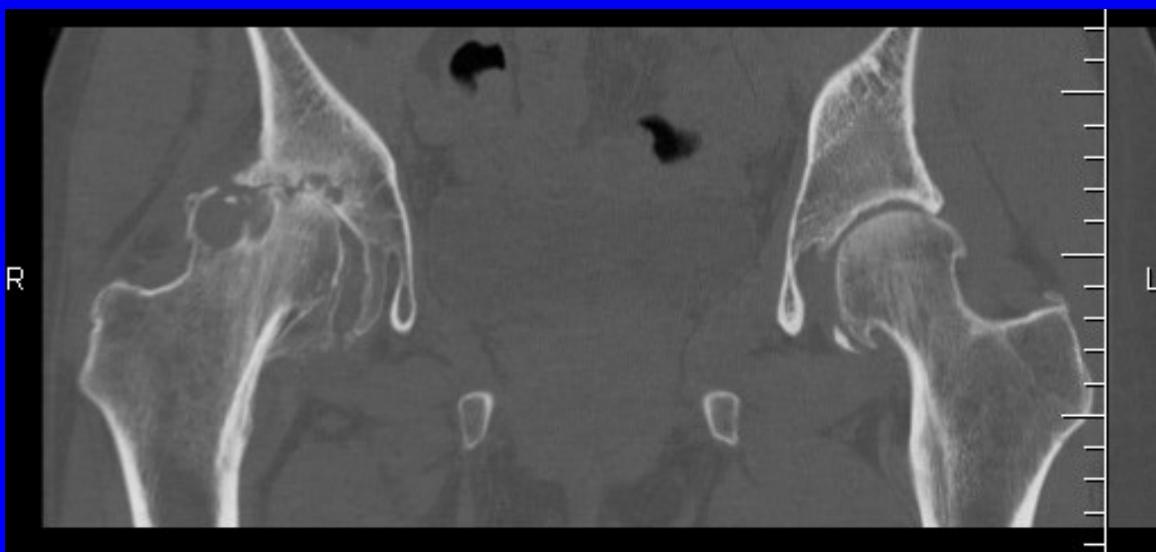

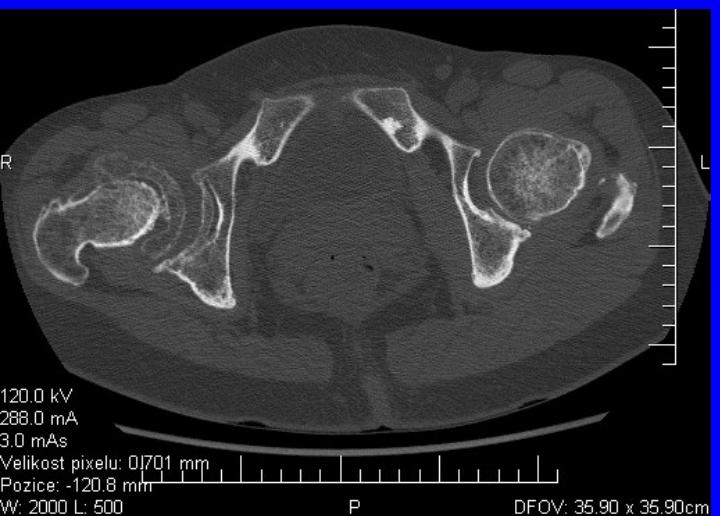

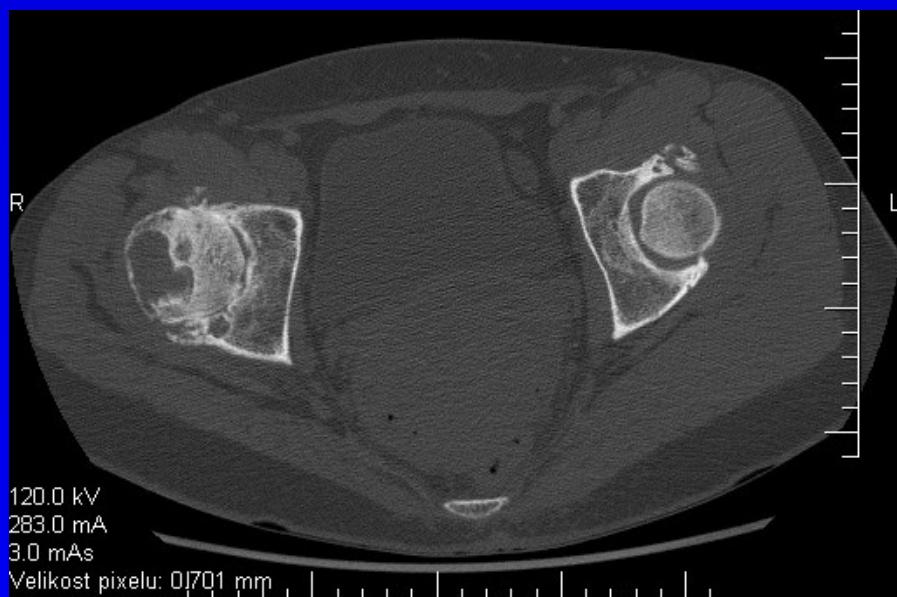

Water 0 H.U.

Bone + 1000 H.U.

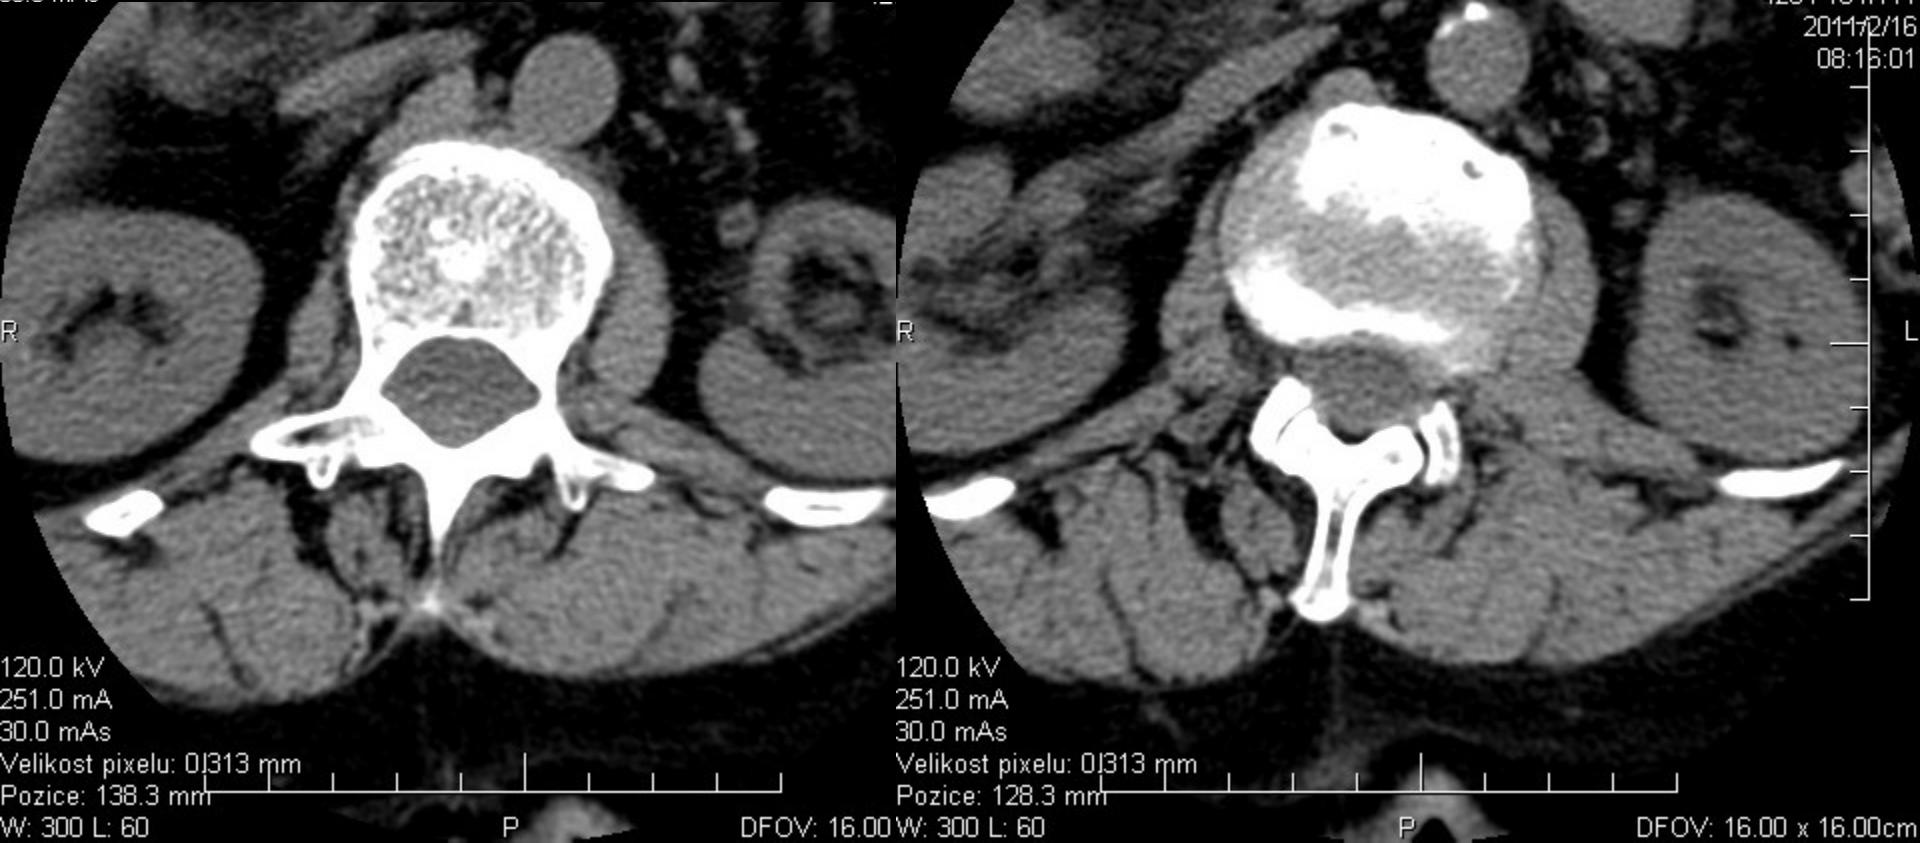

Enhancement with a dye

# CT

4204734771  
2011/2/16  
08:16:01

120.0 kV

520.0 mA

21.0 mAs

Velikost pixelu: 0|811 mm

Pozice: -530.8 mm

W: 1000 L: 200

P

DFOV: 41.50 x 41.50cm

# MRI

Magnetic field

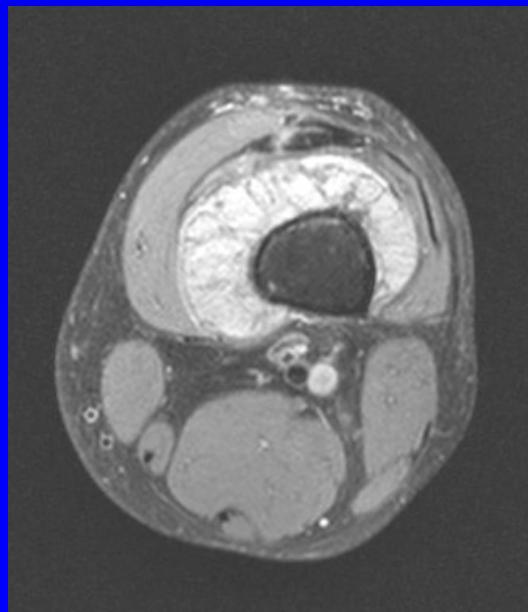

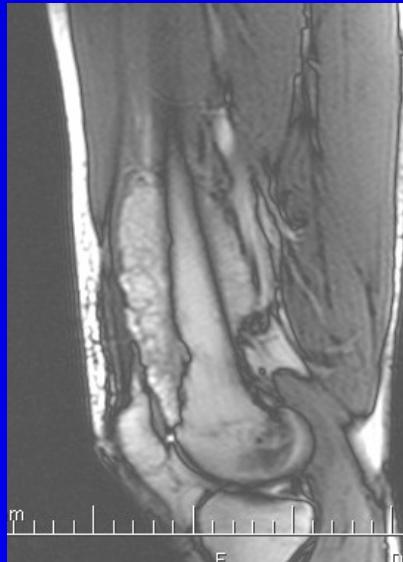

Hyposignal- dark

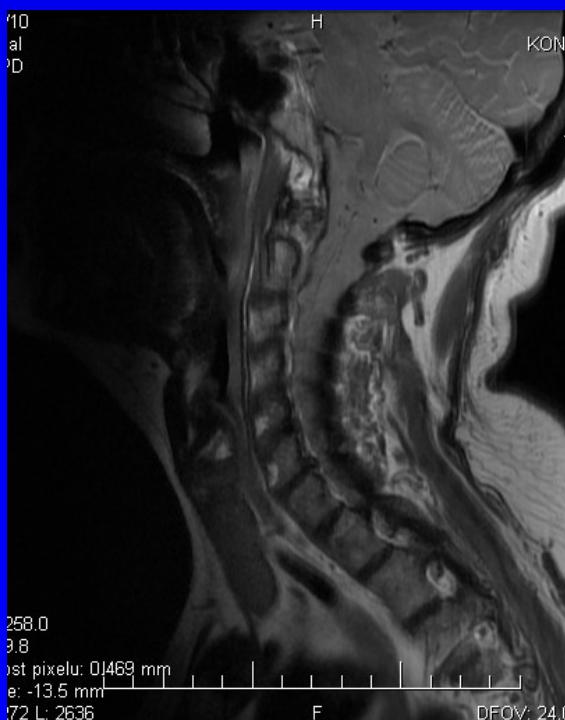

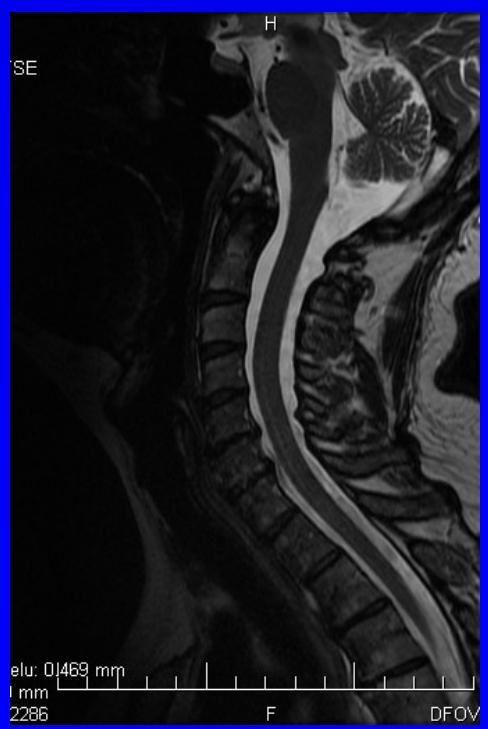

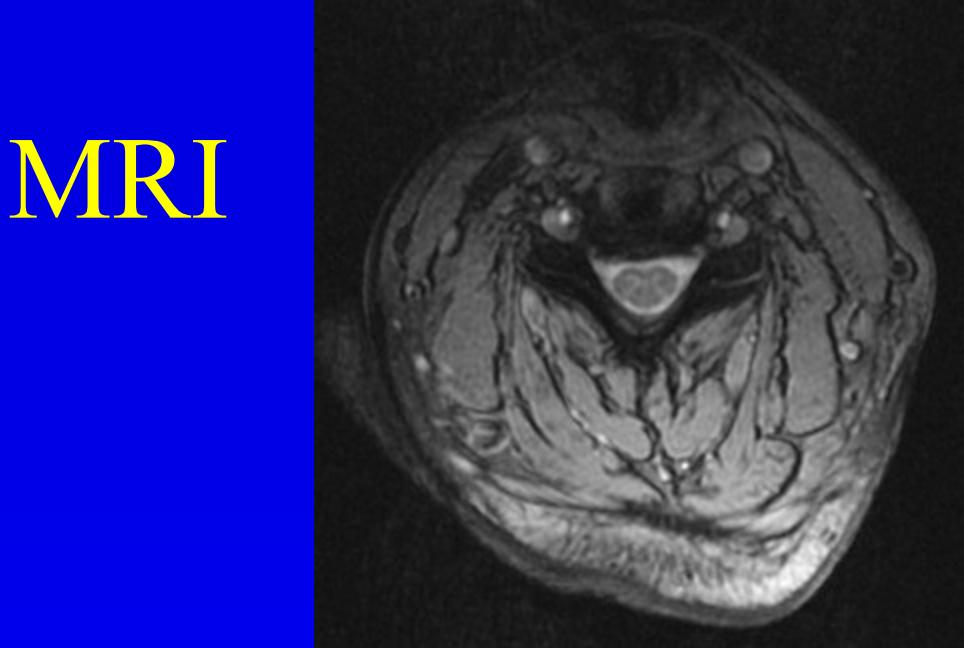

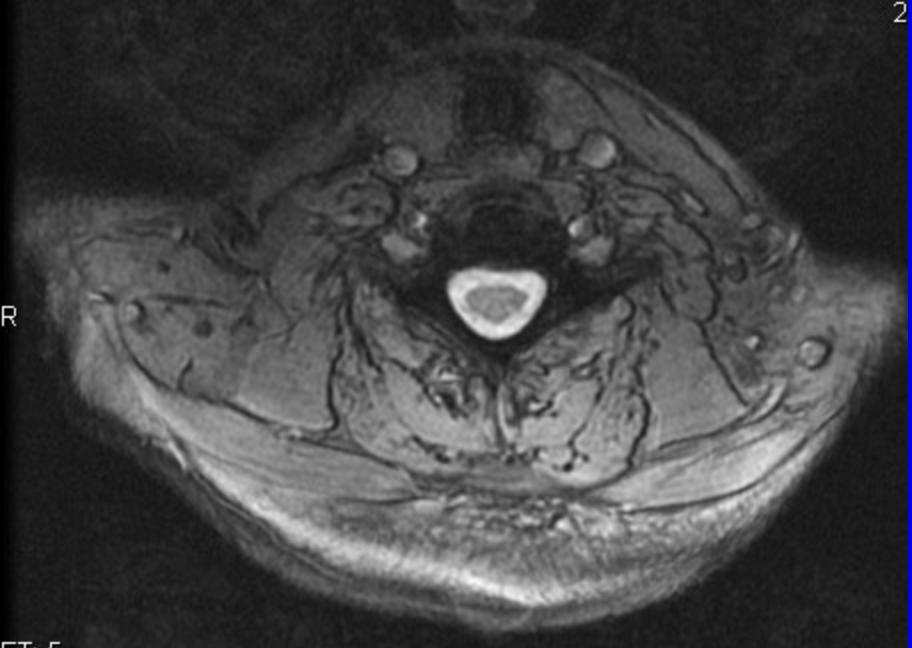

Hypersignal - white

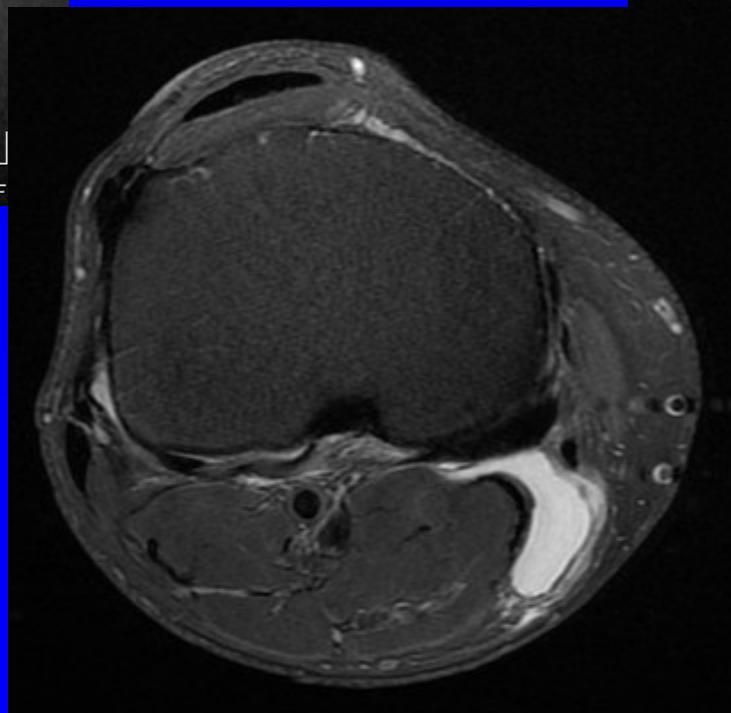

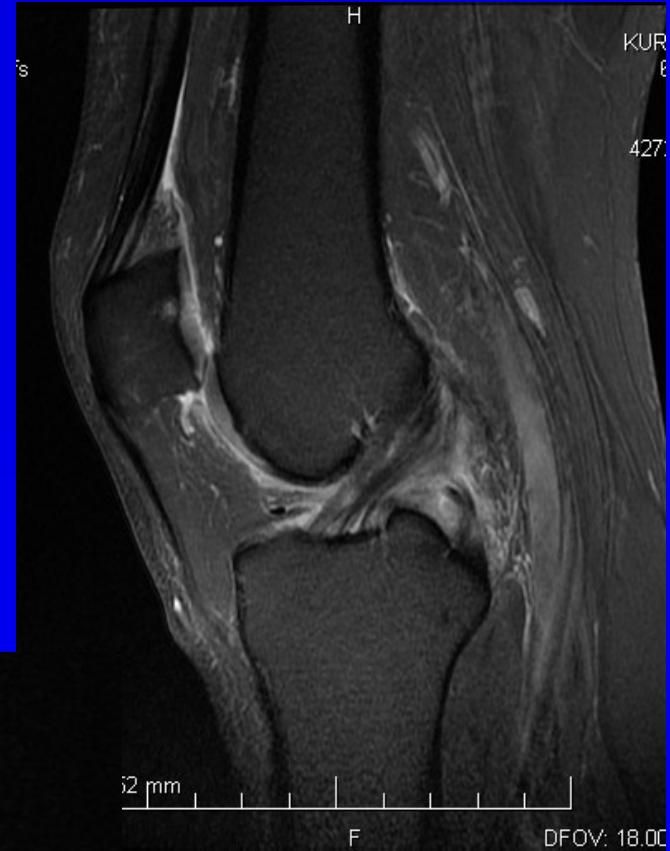

Soft tissue tumors

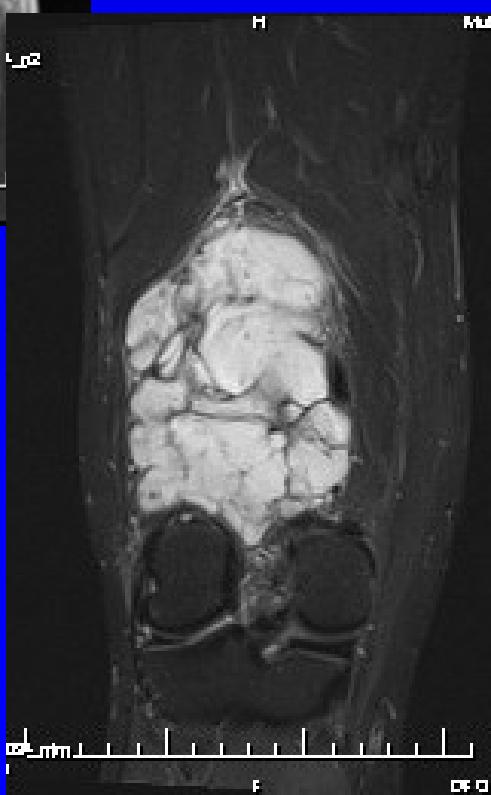

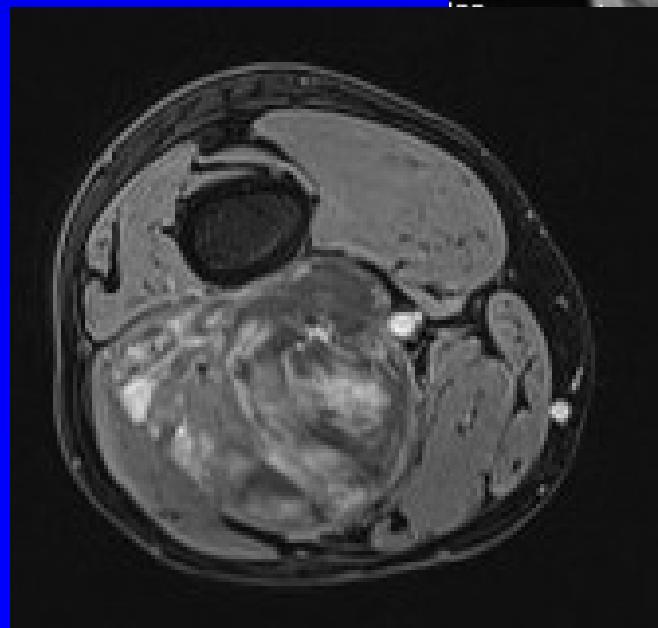

Soft tissue mass

Spine

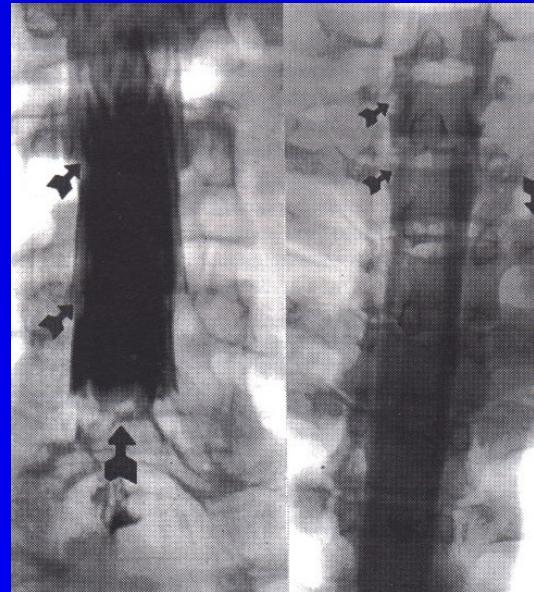

# Perimyelography

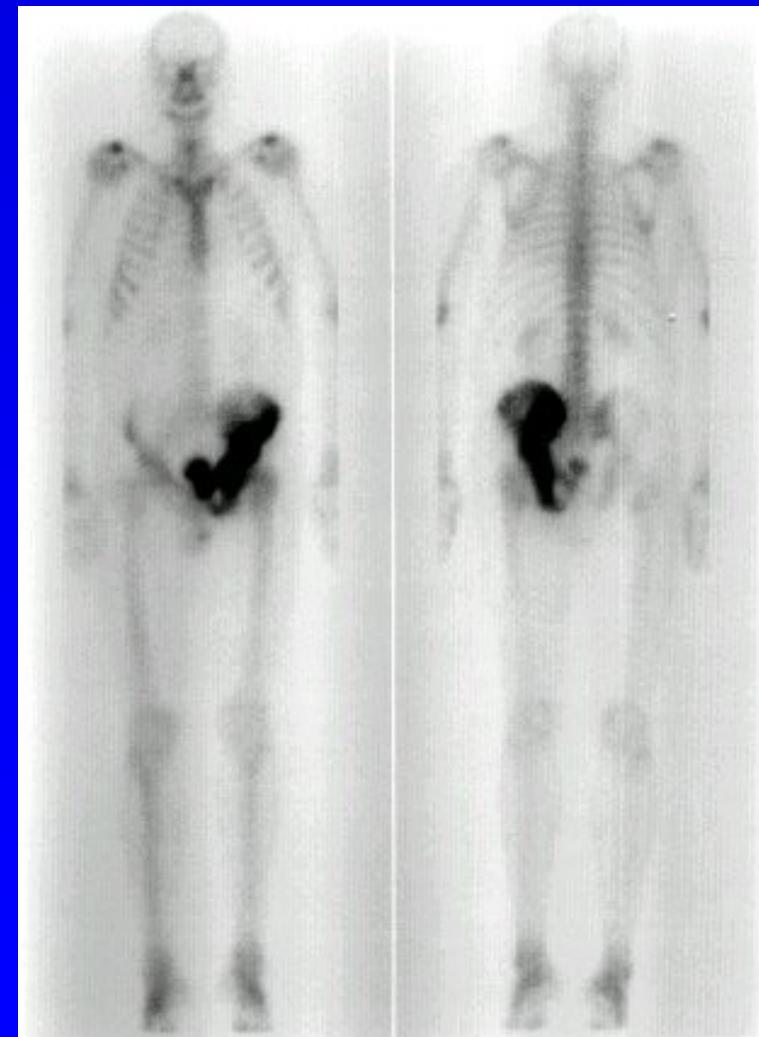

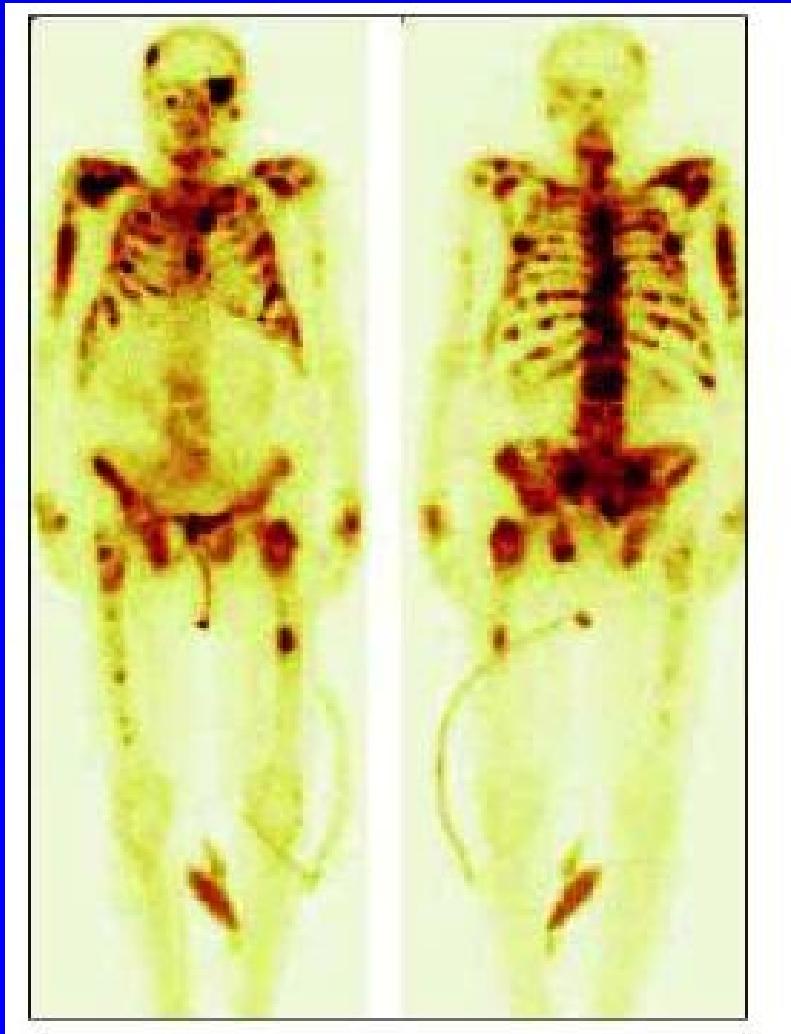

# Myelography

# Radiculography

# Scintigraphy

# Densitometry DEXA

Absorption of X-ray of two energies (70 and 140 kV)

BMD- bone mineral density in g/cm<sup>2</sup>

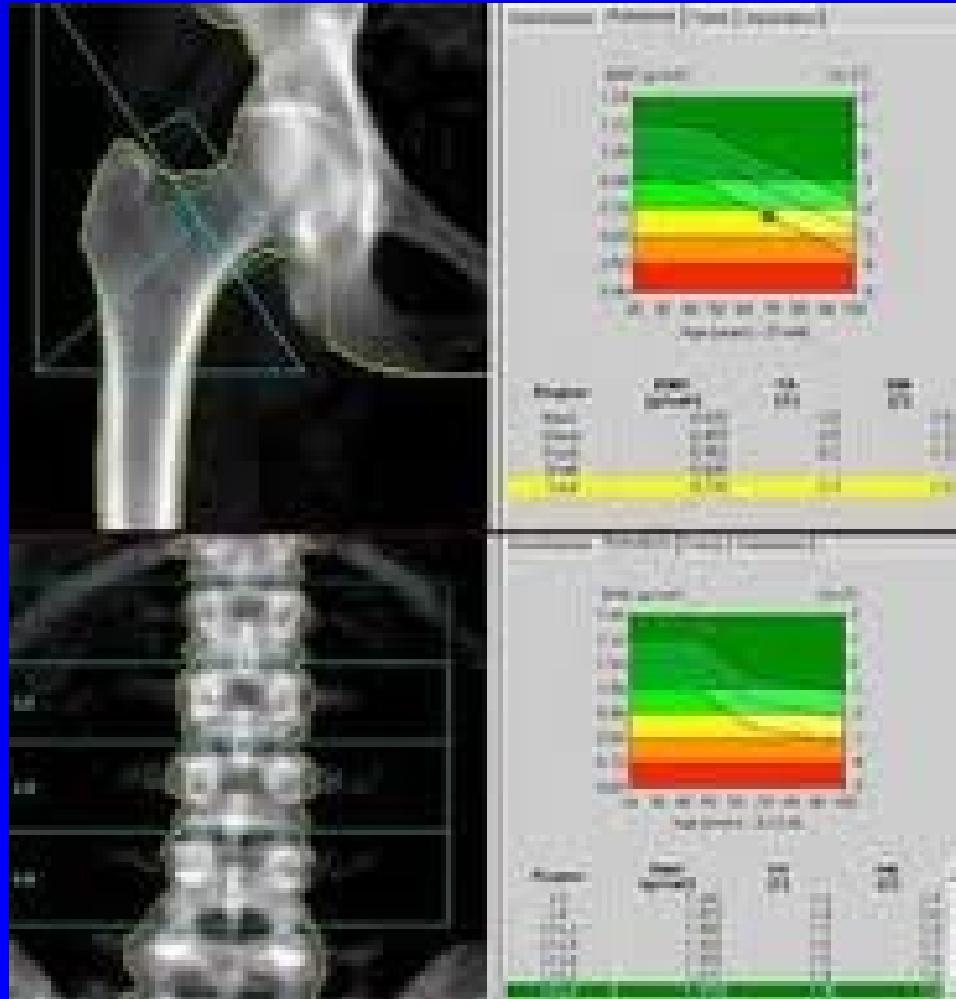

T- score - difference from peak bone mass

Z- score - difference in the same age

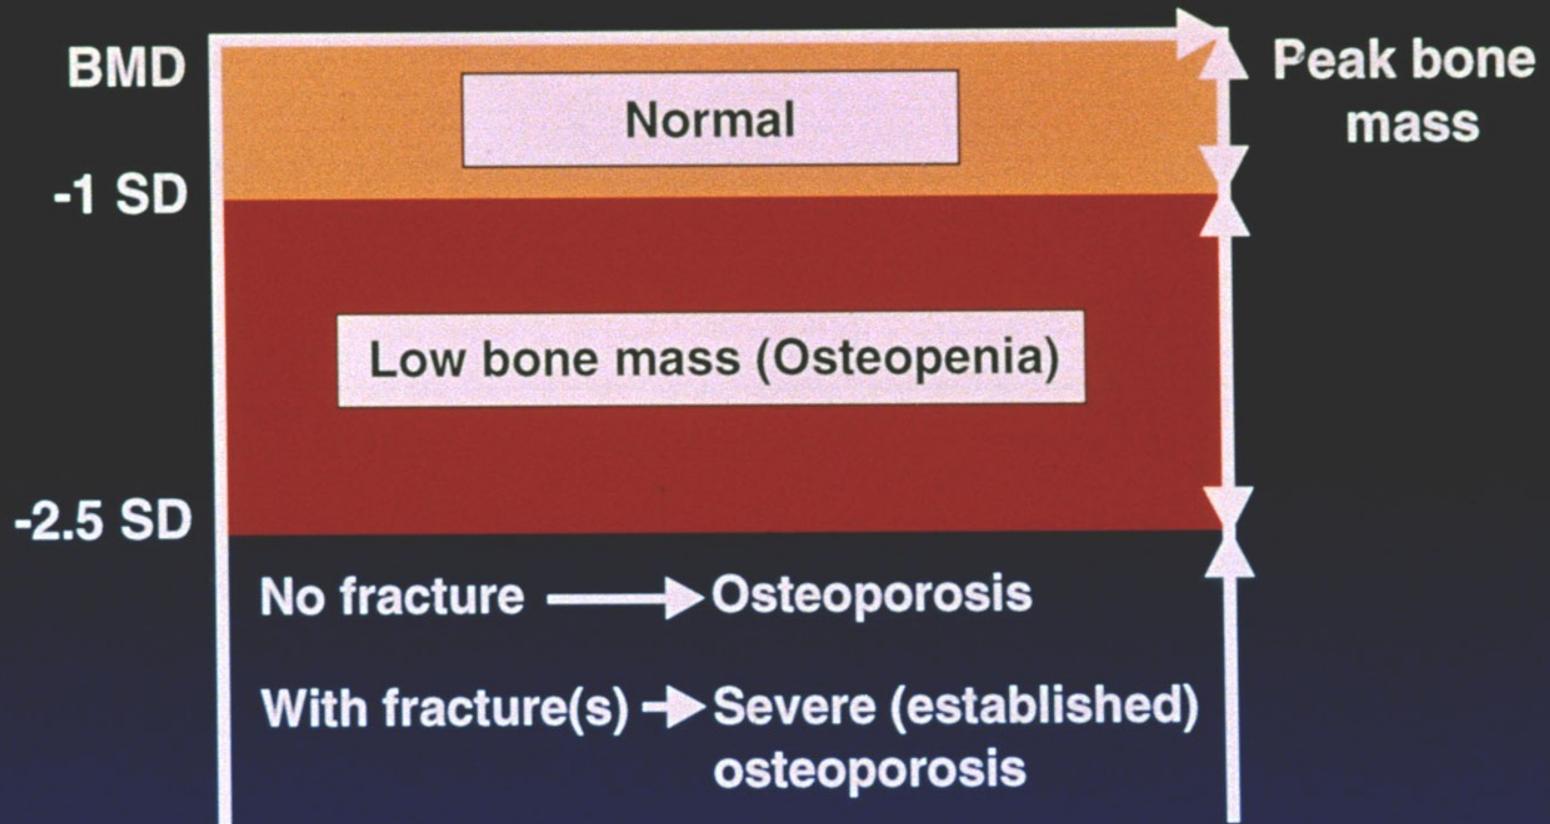

Change - difference from previous examination

1 SD = 10% of bone mass

# DEXA

## WHO definition of osteoporosis

# Laboratory tests

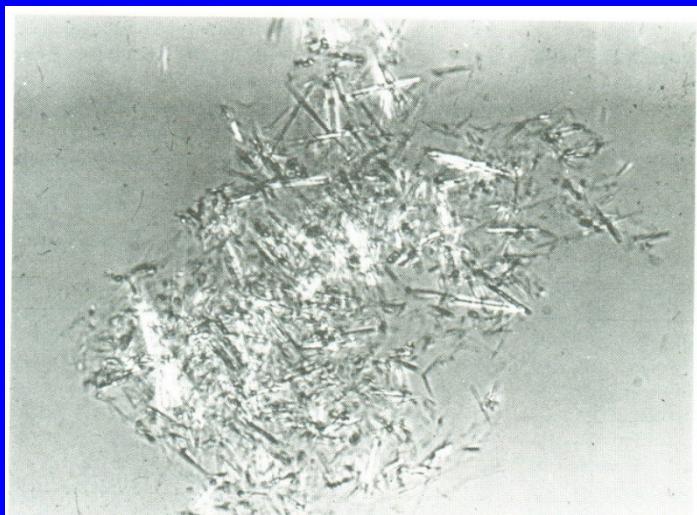

- Inflammation: ESR, leu, CRP, differential, ELFO
- Osteopathy: Ca, P, ALP, bone isoenzyme of ALP  
osteokalcin, osteonectin, PTH, vitamin D
- Bone markers- PSA

# Biochemistry

- Proteins
- Glucose
- Lactate
- Uric acid

# Joint effusion

- Microscopic
- Biochemic
- Bacteriologic
- Immunologic
- Cytologic

# Biopsy

Histological examination

Biopsy – CT, ultrasonography
