

Pediatric infectious diseases and exanthems

Mikolášek, Musil

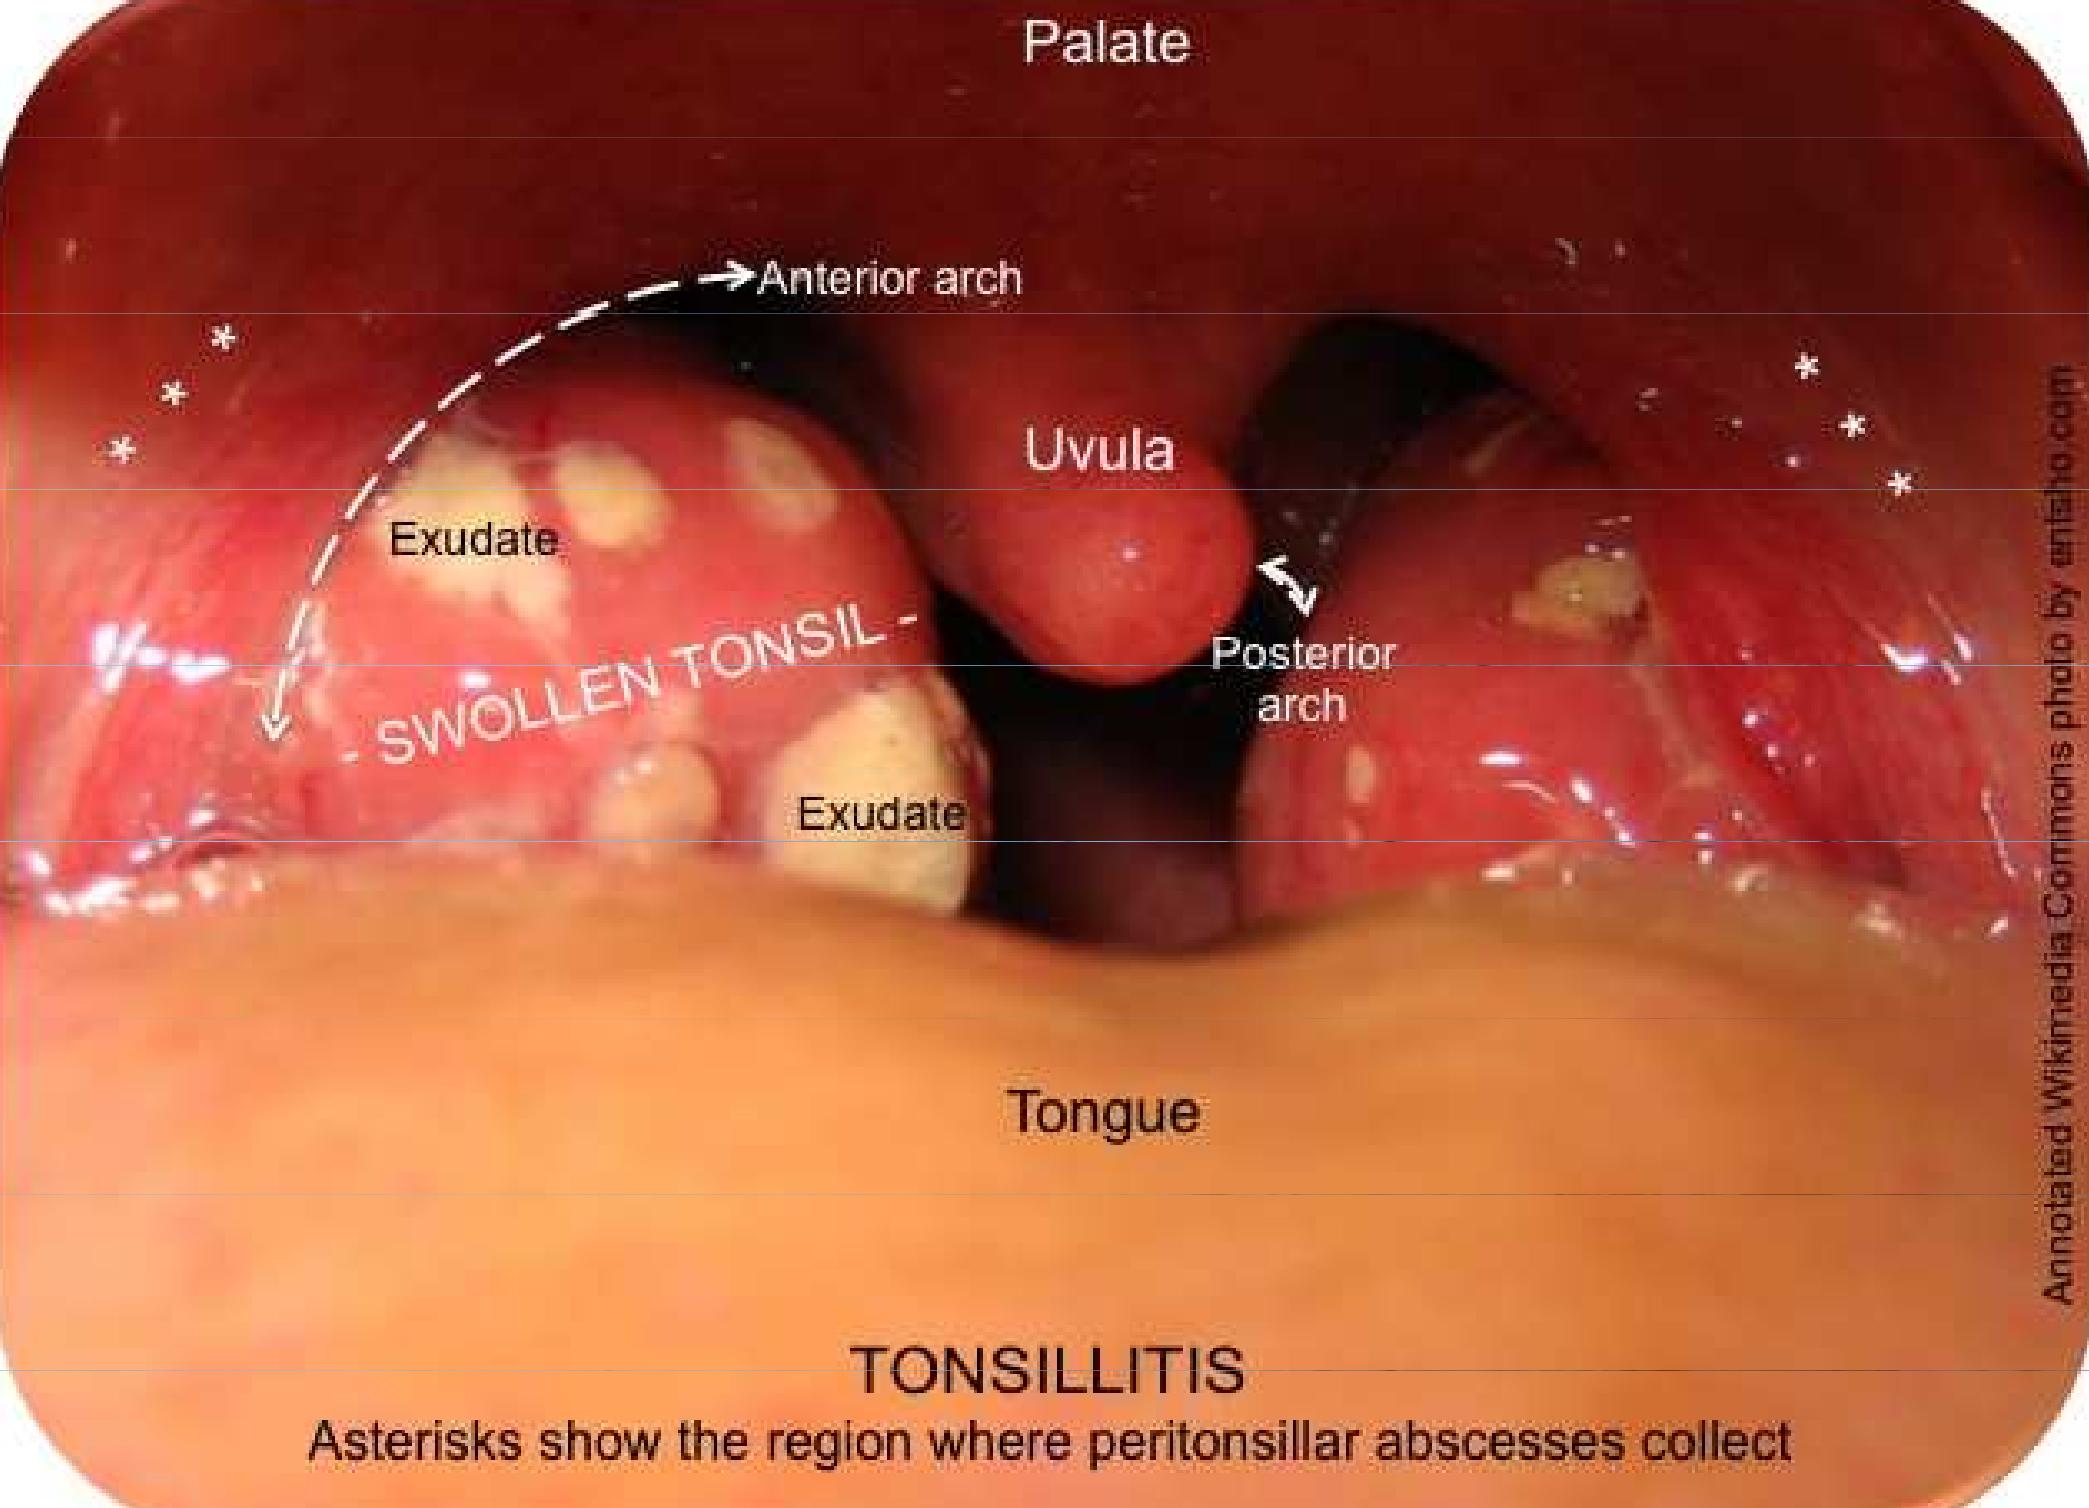

*Department of Pediatric Infectious Diseases, Faculty of Medicine,
Masaryk University, University Hospital, Brno, Czech Republic*

Tonsillitis

- *Streptococcus pyogenes*
- Fever
- Chills
- Sore throat
- Lymphnodes
submandibular

Palate

Anterior arch

Uvula

Exudate

Posterior
arch

SWOLLEN TONSIL

Exudate

Tongue

TONSILLITIS

Asterisks show the region where peritonsillar abscesses collect

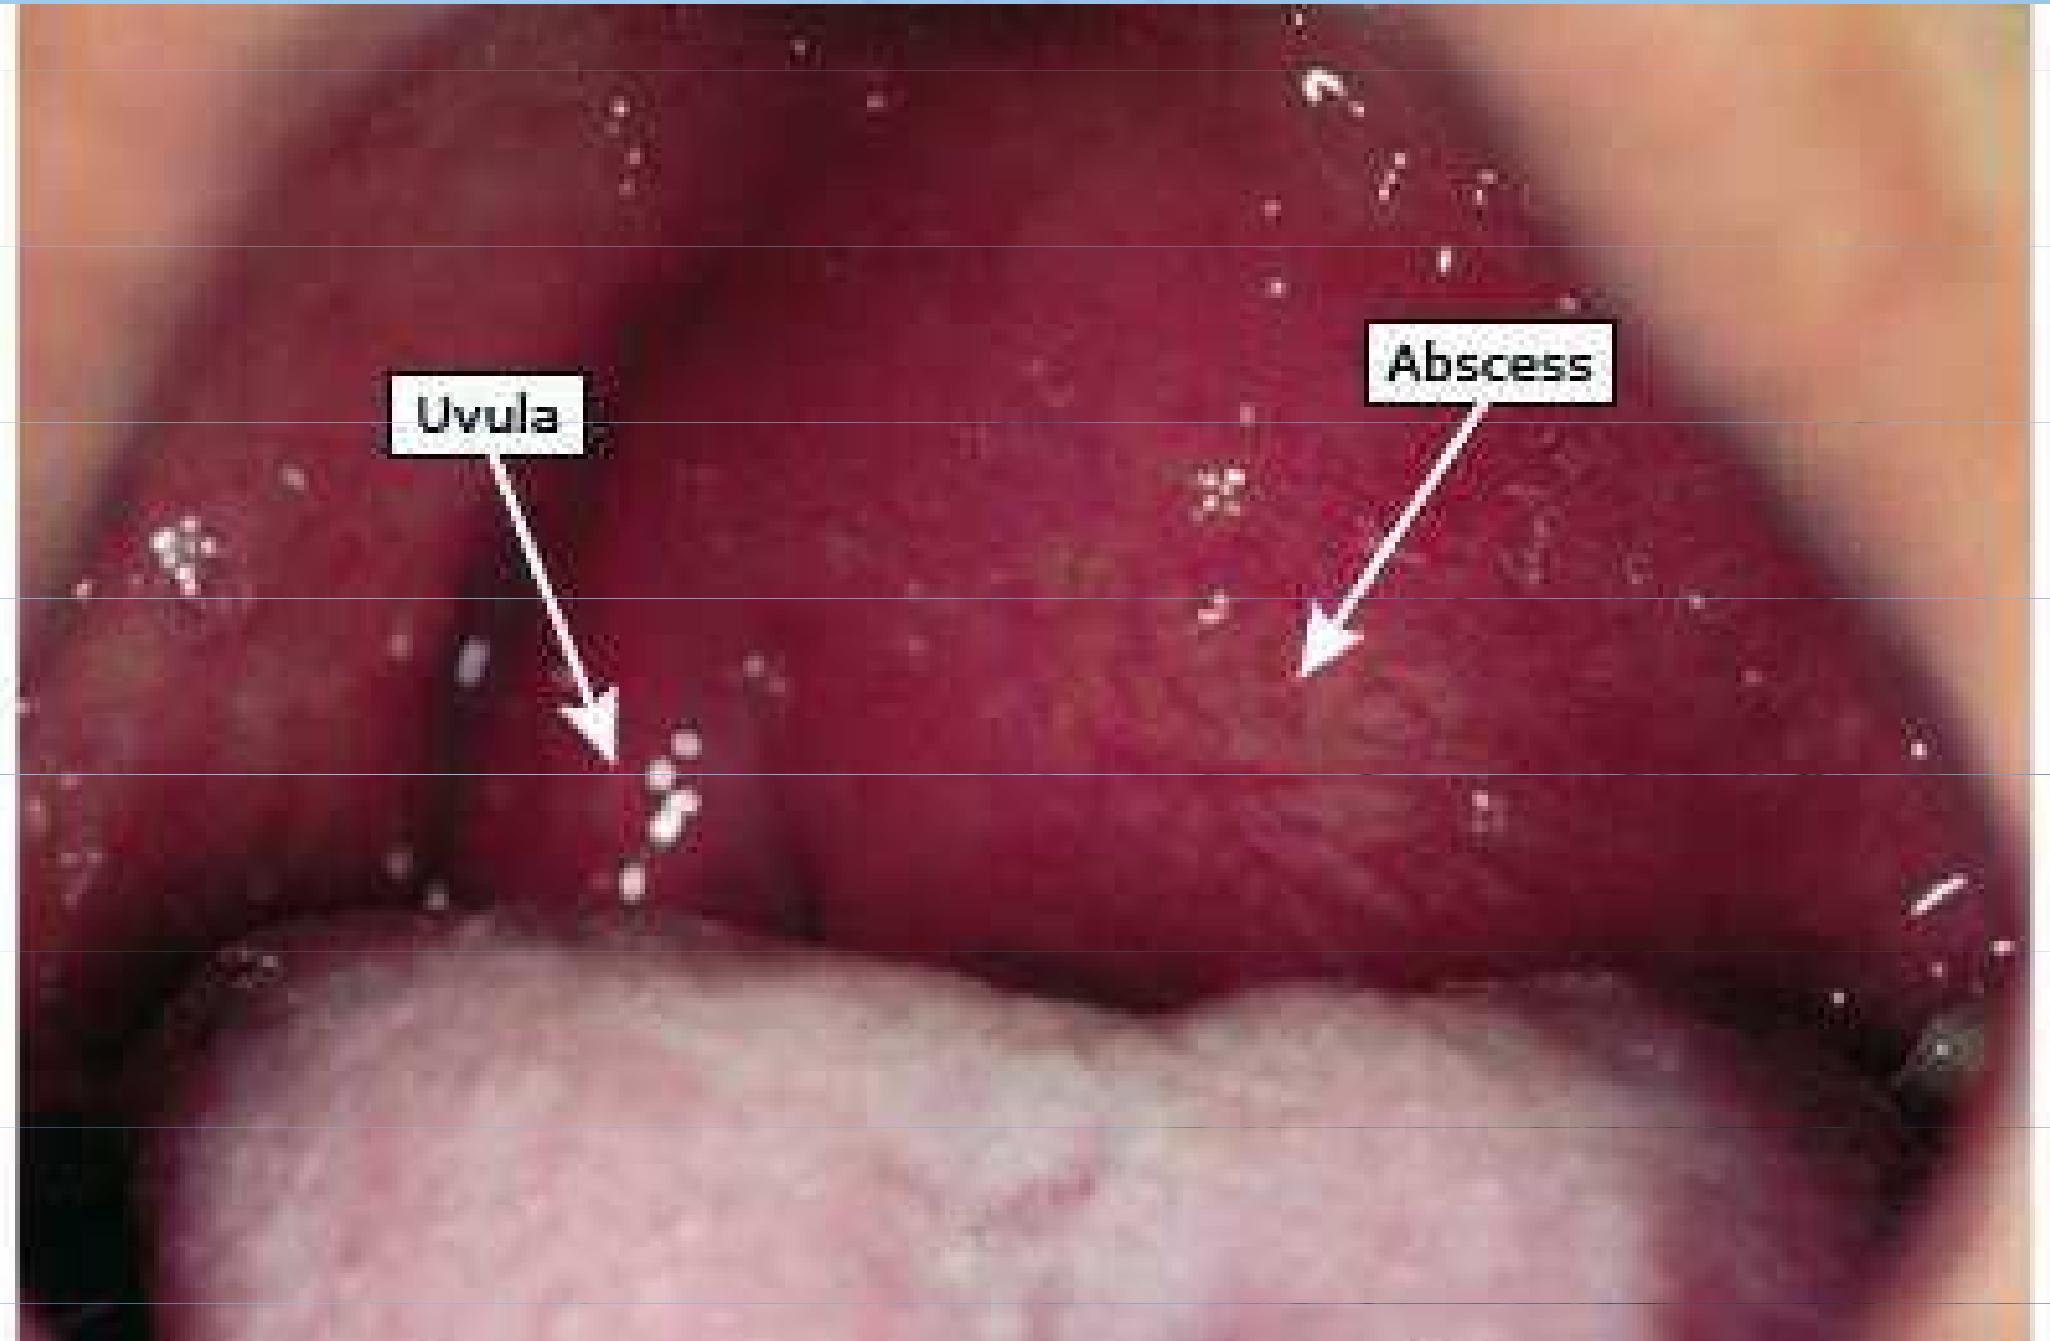

Palate

- Unilateral sore throat (occasionally accompanied by ipsilateral ear pain)
- Dysphagia with pooling of saliva and drooling
- Trismus (inability to open the mouth due to muscle inflammation and spasm of the masticator muscle)
- Torticollis

Tongue

TONSILLITIS

Asterisks show the region where peritonsillar abscesses collect

Treatment of tonsillitis

PNC!!! - first choice!!!

- high susceptibility ~ 100 % for *S. pyogenes*
- bactericidal atb
- compliance (short elimination half-time) – 4x/day
- ~30 % is secreted on oral mucous membranes

CFS I. gen.

- postantibiotic efect, compliance, cross-reactivity rates with PNC of ~ 1 %
- wider spectrum, postantibiotic collitis, resistance?

Clindamycin

- ~100 % secretion on mucous membranes
- bacteriostatic effect, resistance 5 % for *S. pyogenes* (2013 CZE), postantibiotic colitis

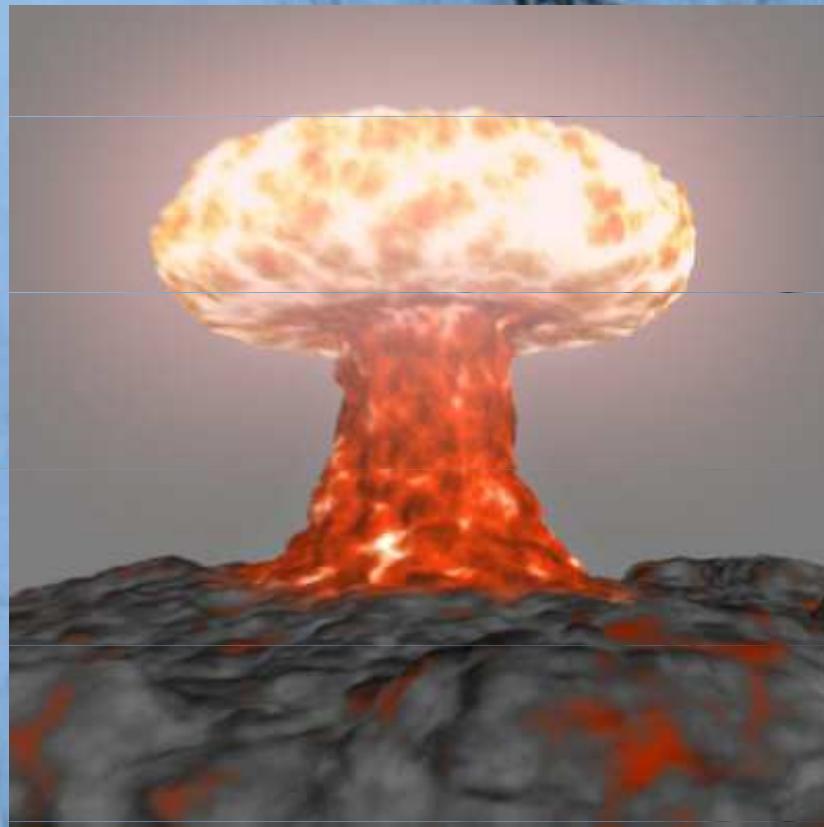

Macrolides – compliance, ~ 100 % secretion on mucous membranes
bacteriostaic effect, resistance 5 % for *S. pyogenes* (2013 CZE)

AMINOPNC ?

EBV infection

+

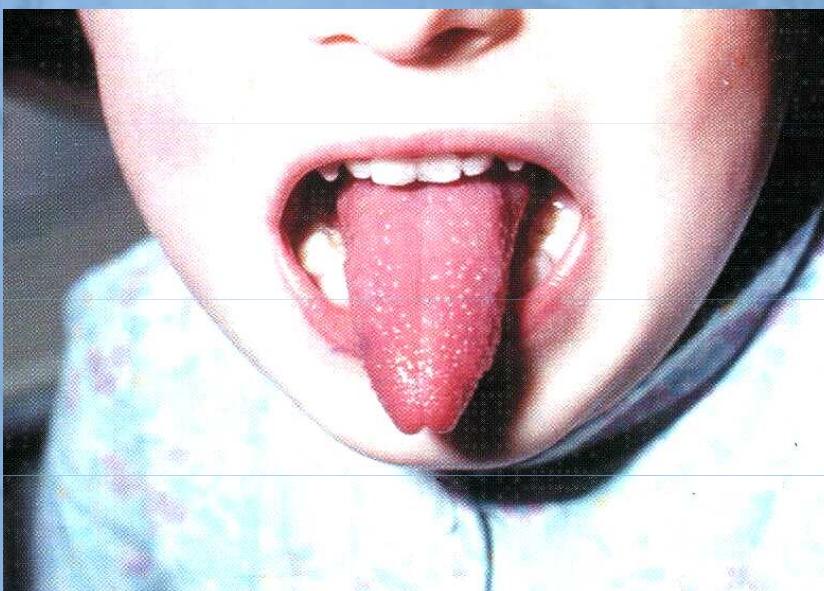

AminoPNC

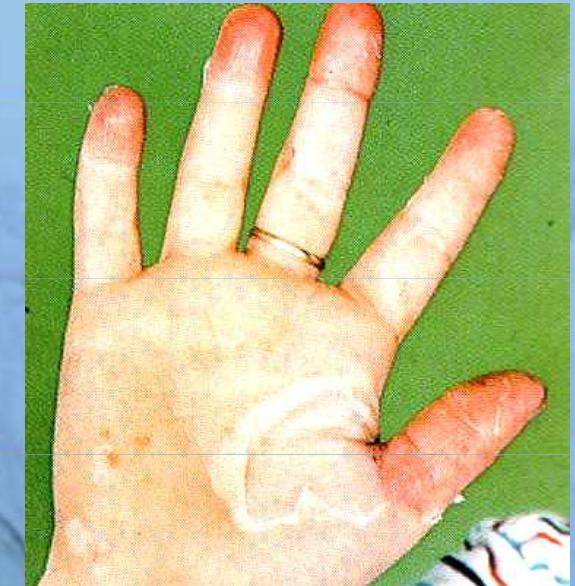

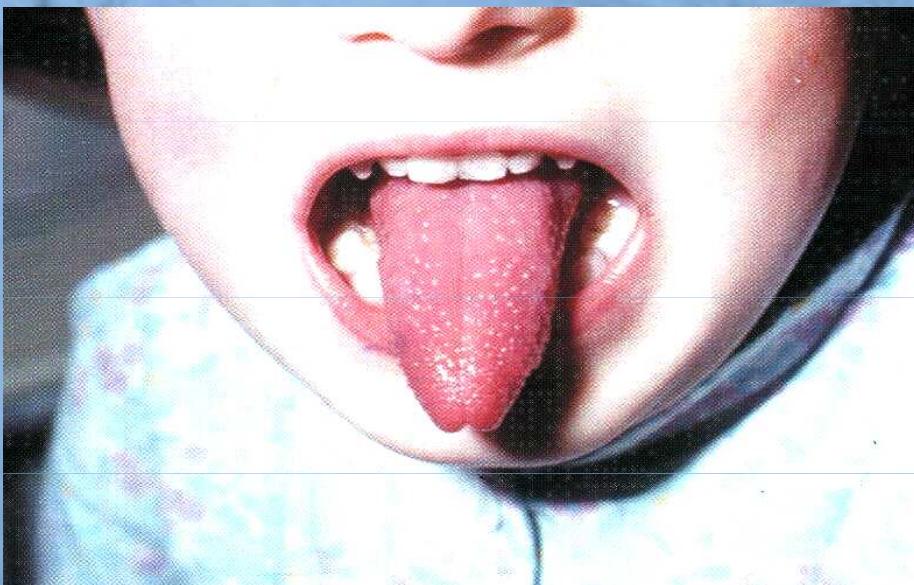

EBV infection + AminoPNC

- Non- IgE-mediated reaction
- Rash appears 5-10 days after initiation of aminopnc treatment
- EBV infection induces unrelated non-EBV heterophile antibodies
- Mechanism: circulating Atb-Ab complexes → **complement activation** → inflammation
- Not permanent

Scarlet fever

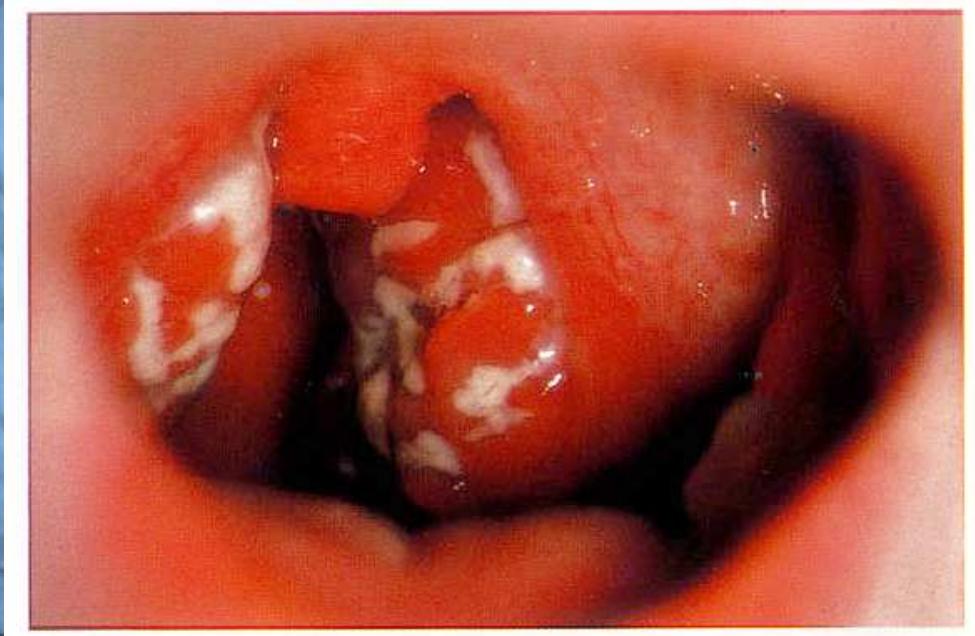

- *S. pyogenes* erythrogenic toxin (A, B, C)
- Scarlet throat
- Strawberry tongue
- Skin desquamation

Scarlet fever

- very small, confluent, fine red papules (trunk and extremities)
- "Goose bumps" (cutis anserina)

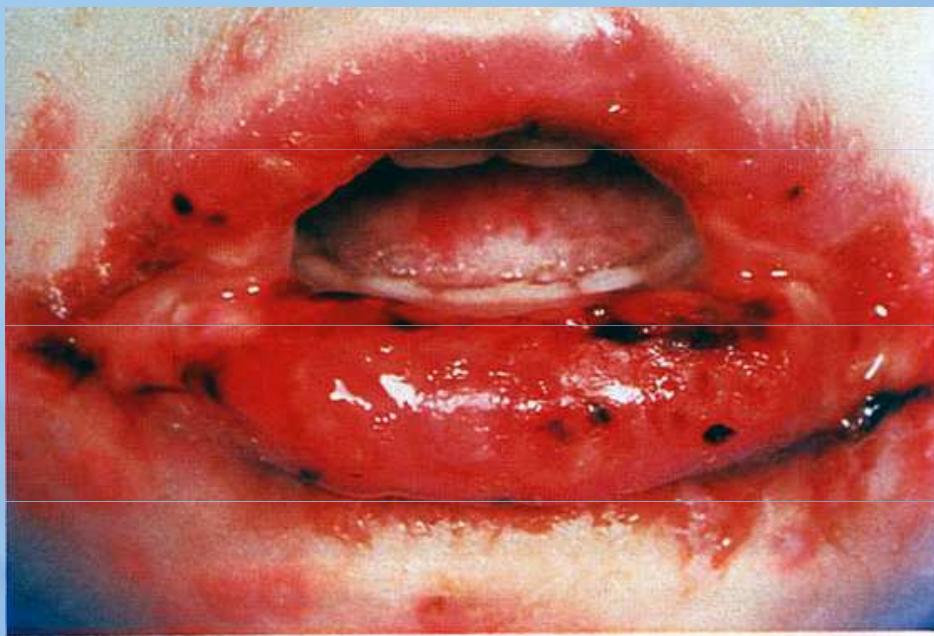

Infectious mononucleosis

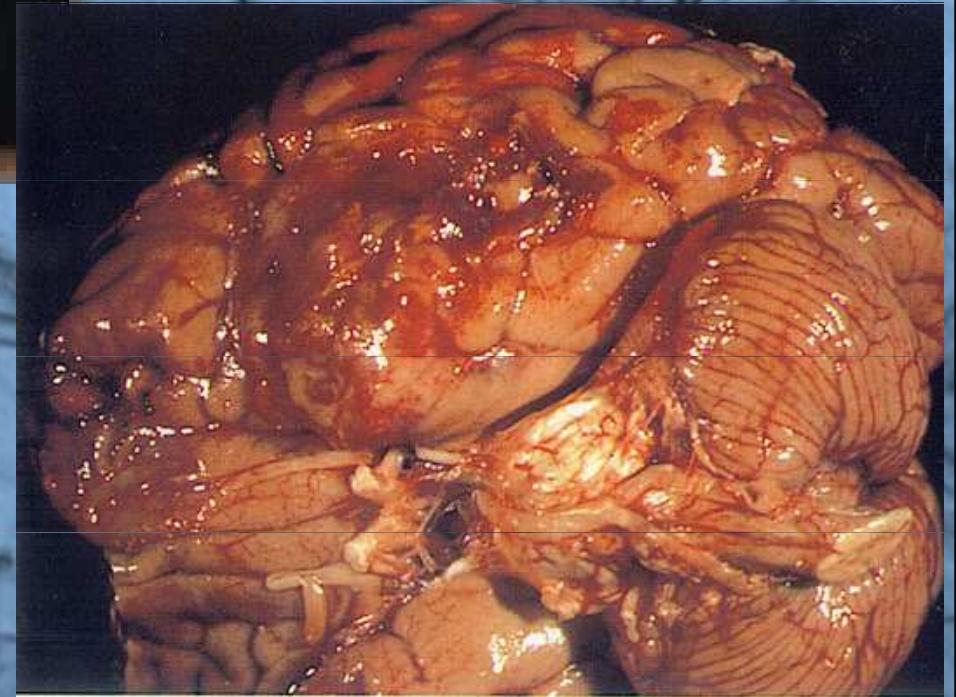

- EBV, CMV
- Herpesviridae
- Mild fever
- Sore throat
- Membranous pharyngitis
- Lymphadenopathy
- Hepatosplenomegaly
- Edema around eyes
- Fatigability
- Prolonged
- Lymphomonocytosis, ↑ LD
Hepatopathy
- Symptomatic therapy

Herpes simplex

- HSV 1, 2
- Herpesviridae
- High prevalence
- Persistent in neural ganglion
- Group of vesicles, pustules, crusts
- Around mouth, nose
- Complications

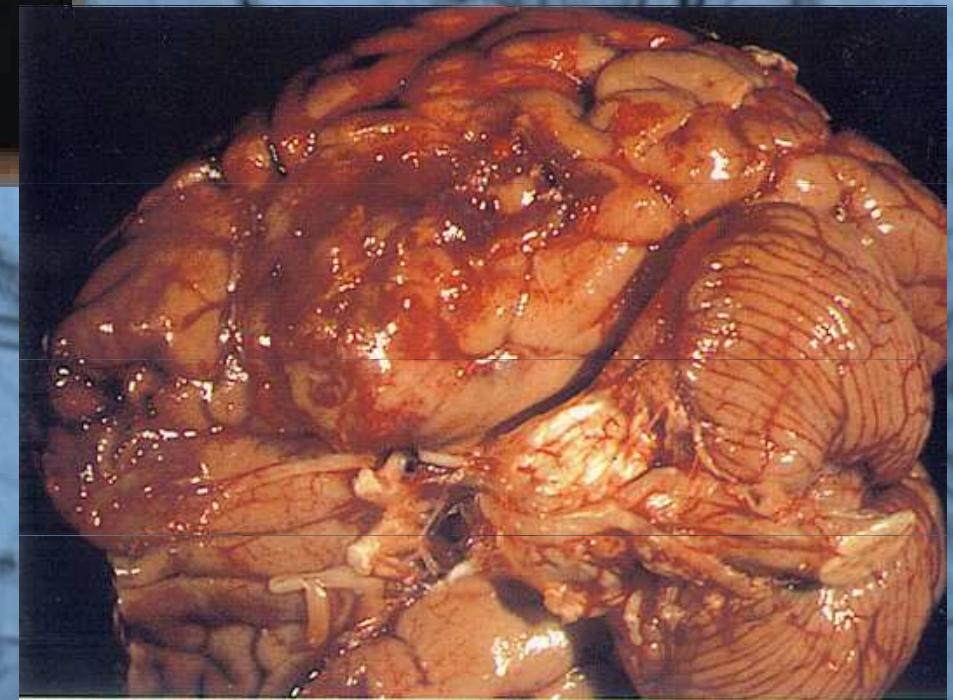

Gingivostomatitis

Herpetic
encephalitis

Varicella (chickenpox)

- Primary infection of Varicella-zoster virus
- Herpesviridae
- Very contagious
- 10-21 (28) days of incubation
- Macules-papules-vesicles-pustules-crusts
- Eruption of efflorescence runs in the cycles
- Also in the scalp, mucous membranes

Herpes zoster (shingles)

- Reactivation of Varicella-zoster virus from neural ganglion
- Propagation along neural axon
- Restricted to 1 or more dermatoms
- Prodromal pain

Exanthema subitum (sixth disease)

- 90%- HHV 6, 10% HHV 7
- Herpesviridae
- 0-3 year old
- 3 days of high fever
- After the temperature falls, onset of rash (pinkish) appears
- Occipital lymph nodes
- Bulging anterior fontanelle

Hand-foot-mouth disease

- Coxsackie viruses A
16, B1,3 a 5,
enterovirus 71
- Picornaviridae
- Spring, autumn
- 2 days fever
- 7 day papules and
vesicles

image: Andrew Kerr

Megalerythema infectiosum

- Fifth disease
- Parvovirus B 19
- Parvoviridae
- Distinctive „slapped cheek“ appearance
- Irregular lacy papular-purpuric exanthema
- "gloves and socks syndrome"
- No fever, flu-like symptoms
- Arthritis (older kids, adults)

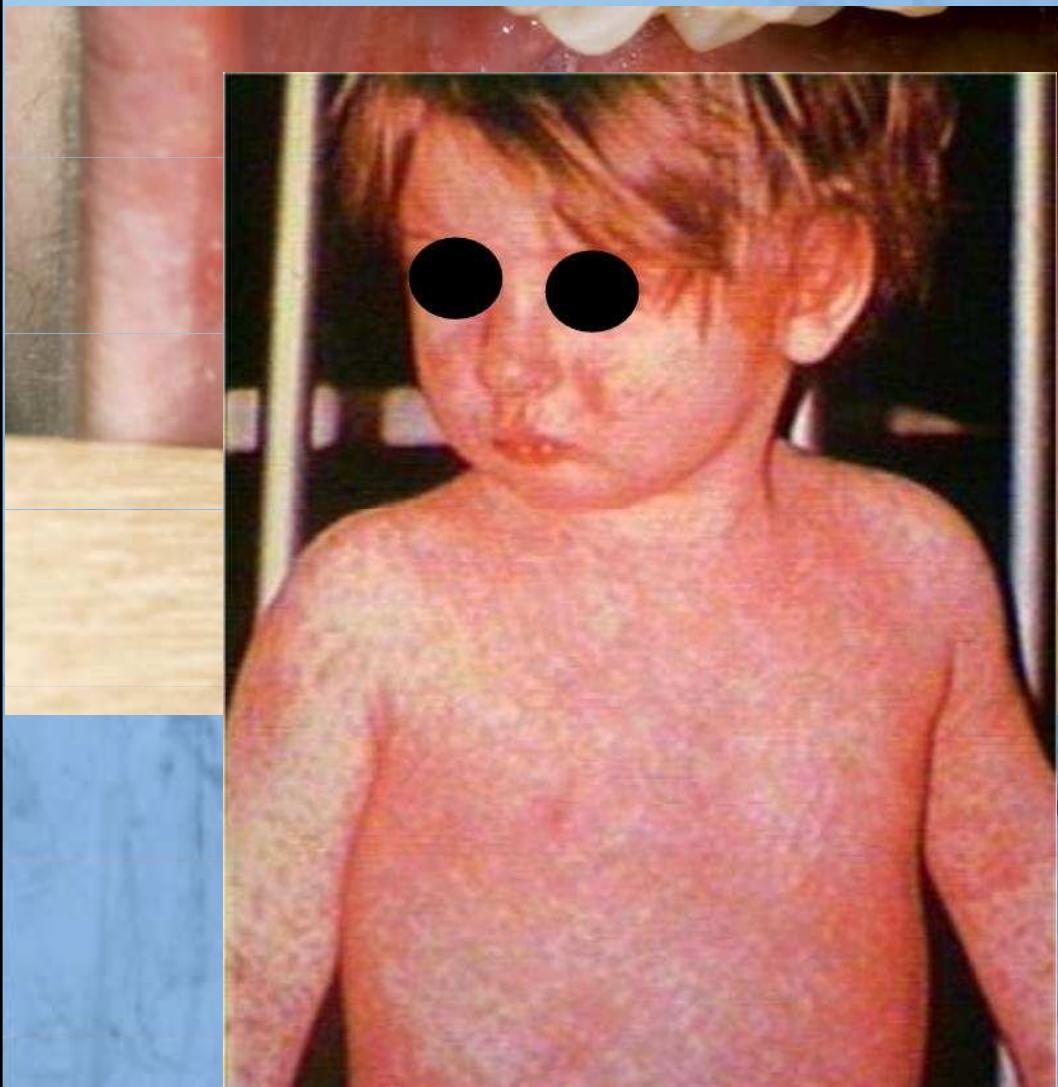

Measles (Rubeola)

- *Morbillivirus*
(Paramyxoviridae)
- Highly contagious (air droplets for several hours) – **4 days before/after** rash onset
- incubation: 10 days (prodromal), 14 days (rash)

Measles (Rubeola)

2 stages:

- Prodromal: fever, conjunctivitis, runny nose, fatigue, nausea, lymphadenopathy, **Koplik's spots**
- Exanthematic: maculopapular, confluent rash (hypersensitivity of immune system!)

Complications: respiratory tract, CNS

Measles (Rubeola)

- Facies morbillosa ("unhappy child")
 - conjunctivitis
 - runny nose
 - rash

The Countries With The Most Reported Measles Cases

Countries by number of confirmed measles cases from January to April

German measles (Rubella)

- *Rubivirus* (Togaviridae)
- contagious (air-droplets, transplacental)
- Incubation: 12 – 23 days
- Prodromal signs +/- subfebrile
- swollen lymph nodes
- pink maculopapular rash (no confluent) on the face which spreads to the rest of the body (3 days)
- Forschheimer's sign (petechiae on the soft palate) occurs in 20% of cases

RUBEOLA

ORDINARY MEASLES

RASH
APPEARS
AT THE
HAIRLINE
AND
SPREADS
CEPHALOCAUDALLY
OVER 3 DAYS

CONJUNCTIVITIS
COUGH
CORYZA
FEVER

KOPLIK SPOTS ON
BUCCAL MUCOSA

RUBELLA

GERMAN MEASLES

LYMPHADENOPATHY

RASH BEGINS
ON THE FACE
AND SPREADS
CEPHALOCAUDALLY

HEADACHE
LOW GRADE FEVER
SORE THROAT
CORYZA

FORCHHEIMER SPOTS
ON SOFT PALATE

ROSEOLA INFANTUM

EXANTHEM SUBITUM

AFFECTS YOUNG CHILDREN
6-36 MONTHS OLD

CAUSED BY
HUMAN HERPES
VIRUS 6

ABRUPT HIGH FEVER

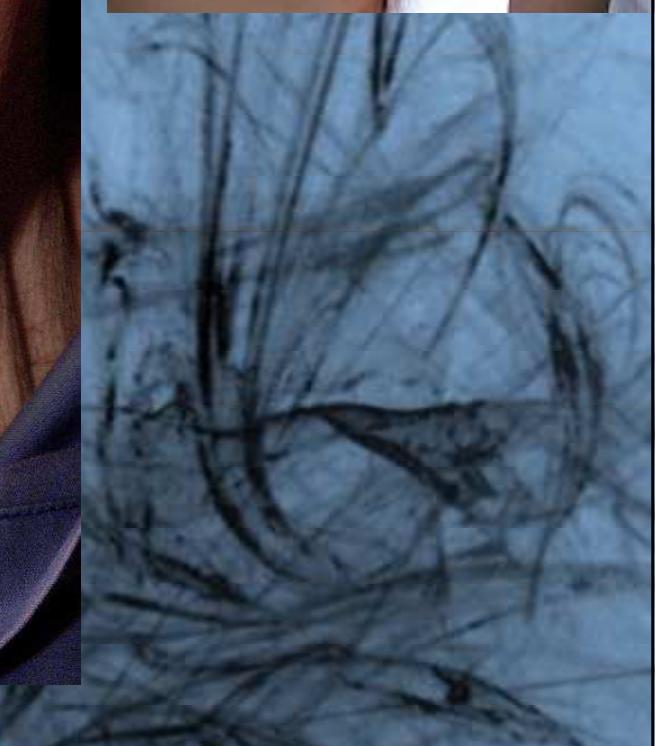

AFTER FEVER SUBSIDES,
A RASH DEVELOPS, STARTING
ON THE NECK AND TRUNK
AND SPREADING TO THE
FACE AND EXTREMITIES

Erythema migrans

- Skin form of lyme disease
- Tick-borne
- Borrelia
- Asymptomatic
- Penicillin

Impetigo

- *Staphylococcus aures*,
Streptococcus pyogenes
- Honey crusted
- Epidermis
- No fever
- Progression
- Transmission by contact
- Usually superinfection

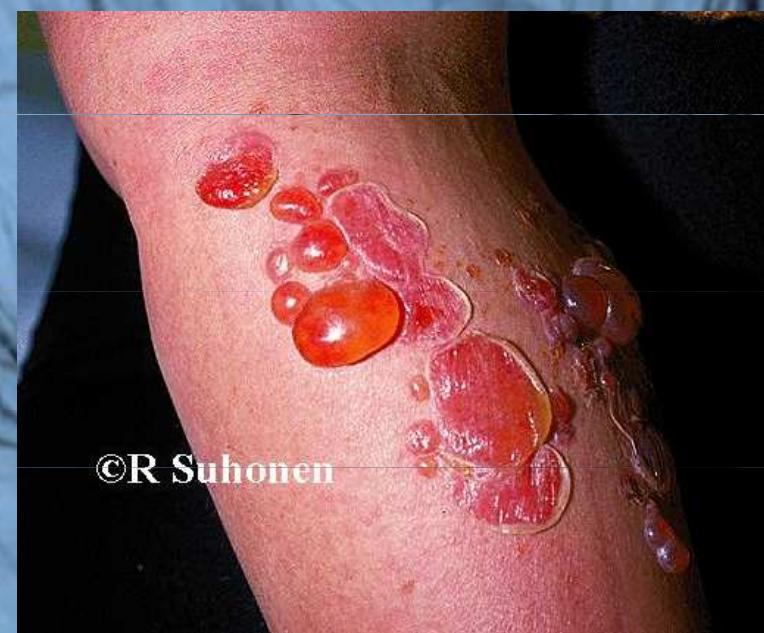

Erysipelas

- *Streptococcus pyogenes*
- Localized skin infection
- Distinct demarcation
- Local edema
- Fever, malaise and other general symptoms
- Propagation along lymph veins – red strips

© AAP

©R Suhonen

Staphylococcal scalded skin syndrome

- Exfoliative toxins A, B (*Staphylococcus aureus*)
- Neonates
- Infected umbilicus
- Vesicles or large bulla with yellow fluid
- Epidermis (stratum granulosum)
- Exfoliation
- Hospital-acquired

IMD

- purulent meningitis
- septicaemia
- mixed form

Menigococcal sepsis

- *Neisseria meningitis* (A, B, C, Y, W, X)
- Petechial rash on lower extremities
- Rapidly progressive
- Bleeding to skin, mucosa, organs
- DIC
- Death
- Plastic surgery in recovery needed

Thank you for your patience, good
bye
