

Endodontic treatment – root canal shaping

Phases of the endodontic treatment

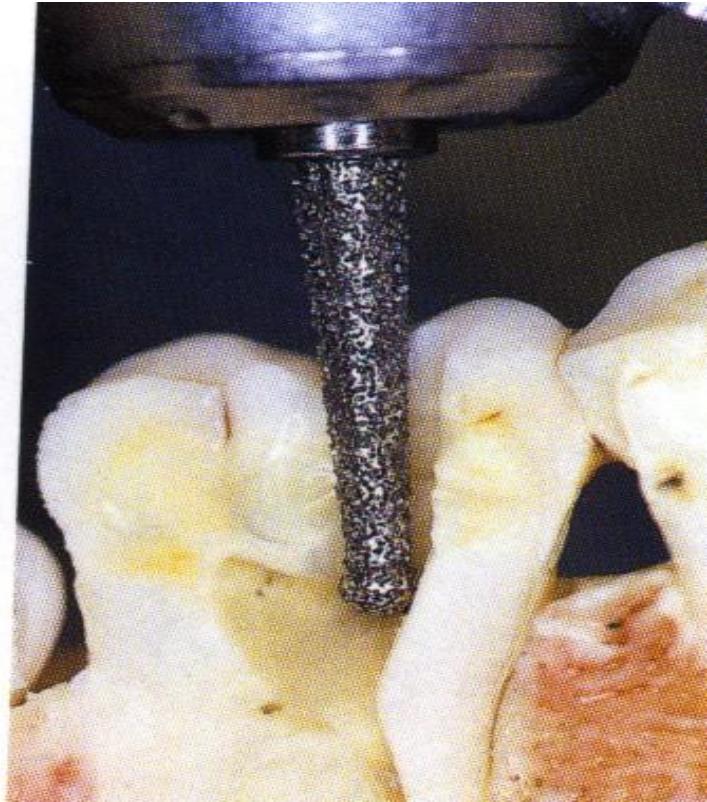

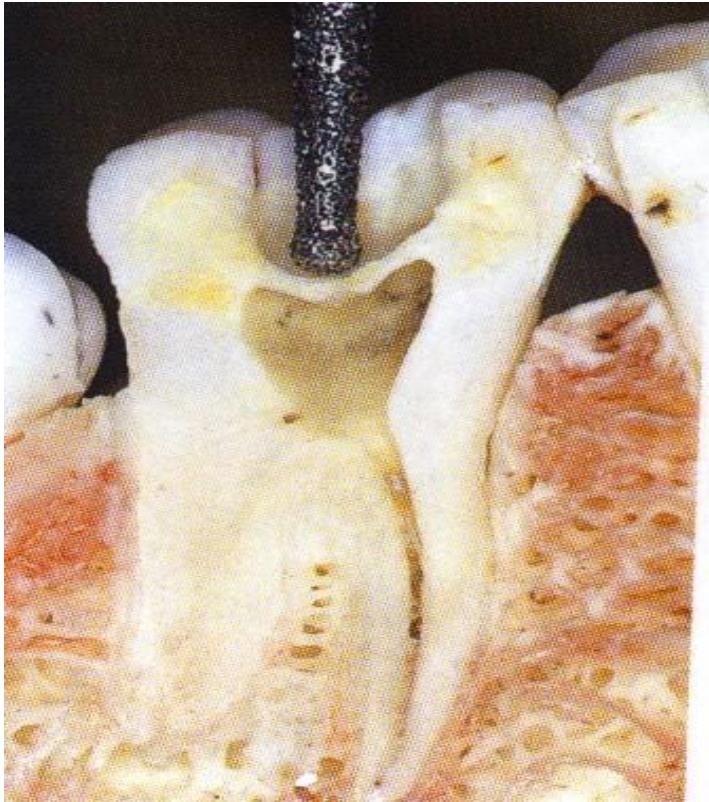

- **Investigation, diagnostic radiogram, consideration (local, regional, systemic factors)**
- **Removal of old fillings, carious dentin, temporary restoration - contours of treated tooth.**
- **Dry operating field**
- **Preparation of the access (endodontic cavity)**

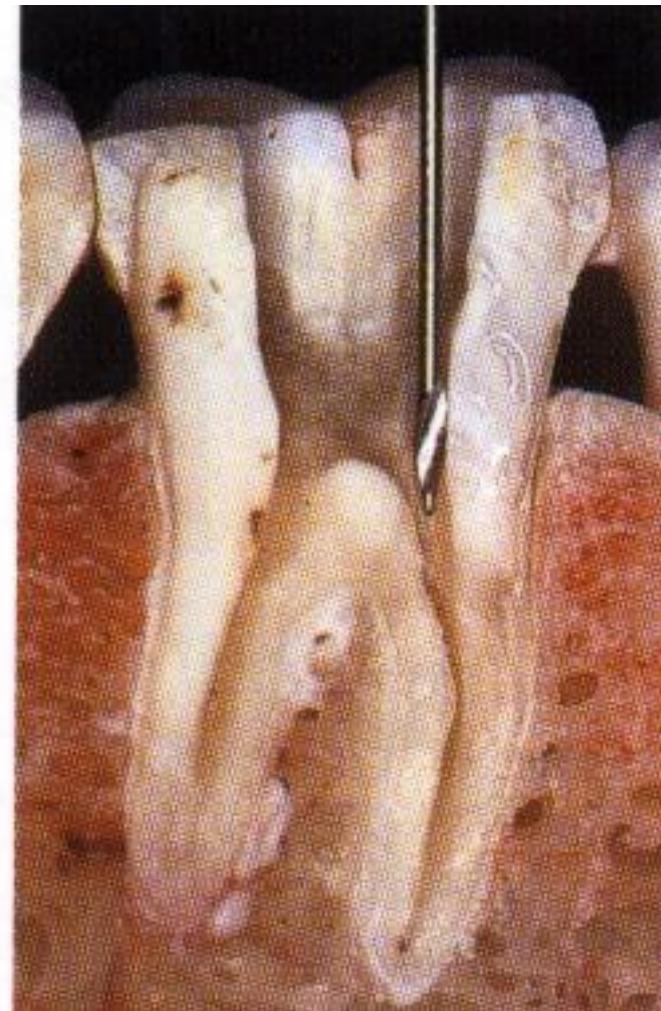

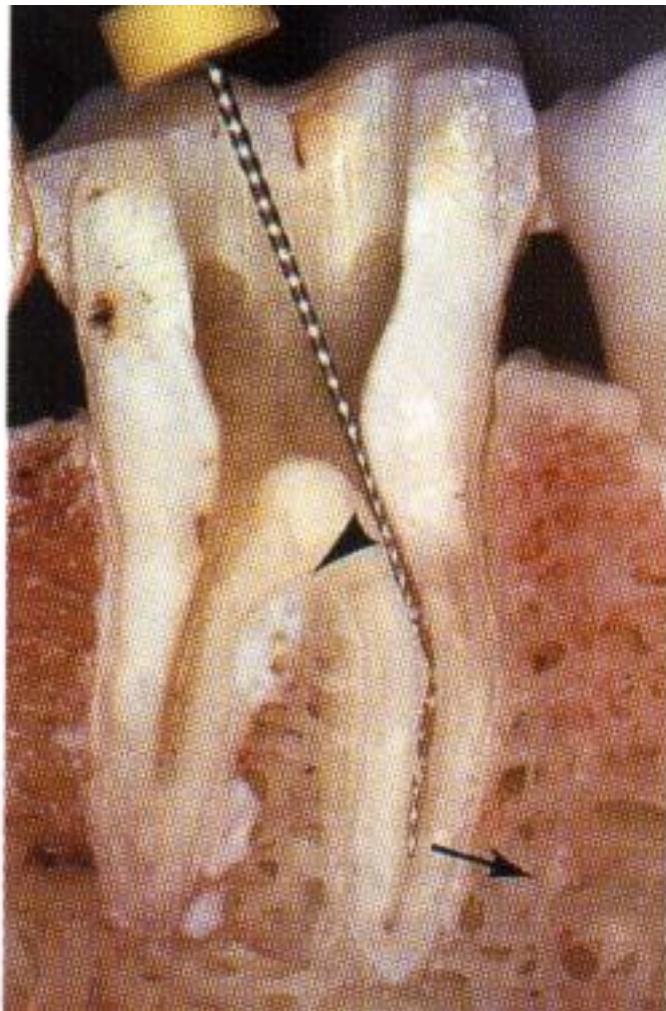

Phases of the endodontic treatment

- **Opening of root canals**
- **Initial flaring and removal of content of root canal**
- **WL (working length)**
- **Root canal shaping and cleaning (irrigation)**
- **Rekapitulation**
- **Drying**
- **Filling**
- **Radiogram**
- **Postendodontic treatment**

Canal shaping

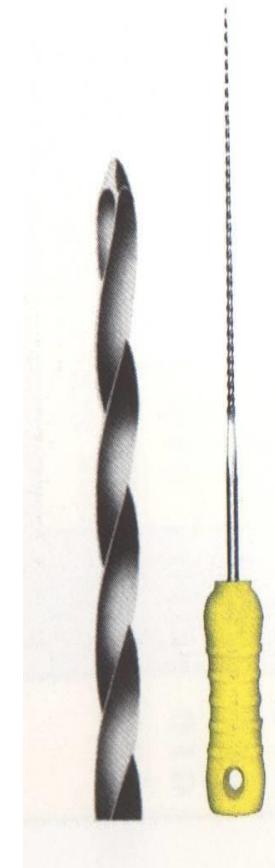

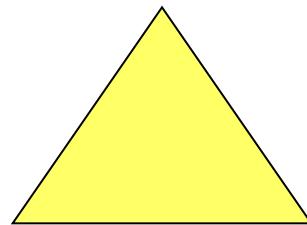

- Reamers (penetration)
- Files (shaping)

Reamer

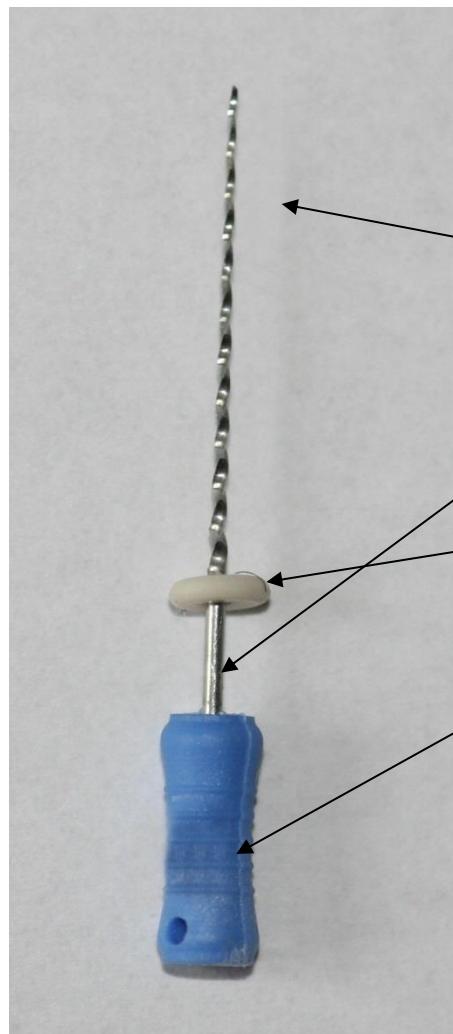

K -reamer

Triangl or square wire spun

Symbol

Reamer

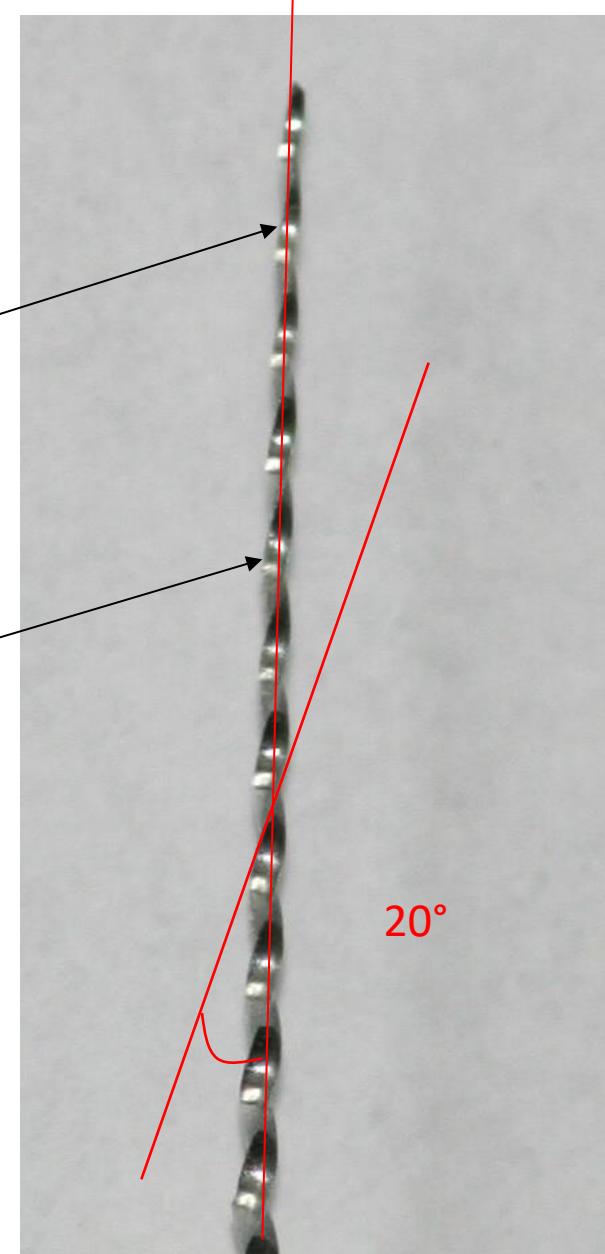

Reamer

Blades

Space for dentin chips

Rotation – reaming action - penetration

Reamer

Rotation (clockwise) – penetration

**Application of plastic material
(counterclockwise)**

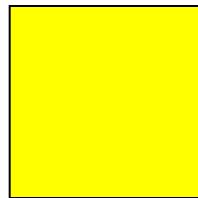

Files

- 1. K-file**
- 2. K-flexofile, flexicut, flex-R**
- 3. K-flex**
- 4. H-file, S-file**

K file

Wire triangl or square

Symbol is always square

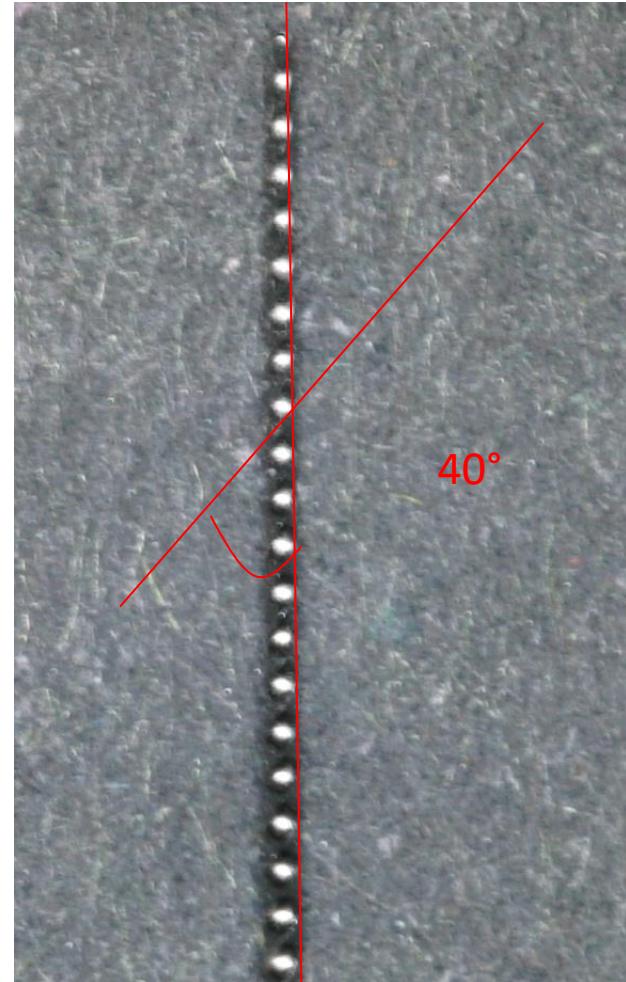

K-file

Filing

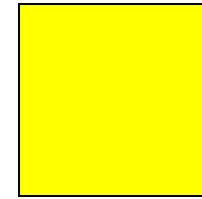

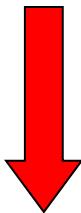

Also rotation

$45^\circ - 90^\circ$

K-flexofile, flexicut, flex-R

- Triangle wire always

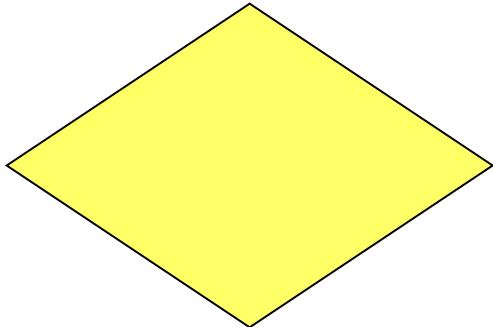

Flexibility

K- flexofile a flex – R file: non cutting tip and first blades are blunt

Like K-file

K- flex

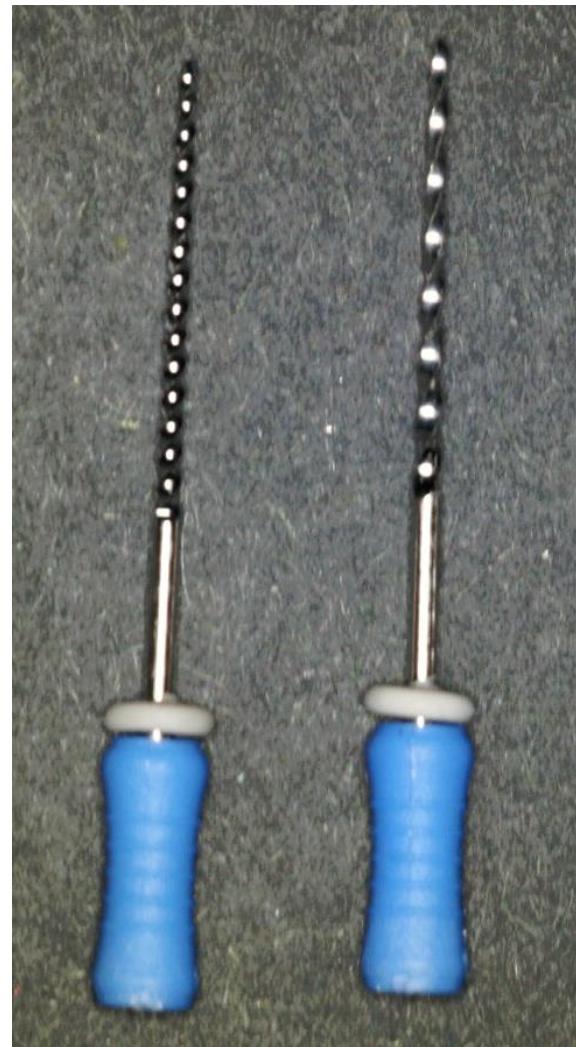

Rhombus

Two blades in action

Enough space for dentin chips

Flexibility, effifacy

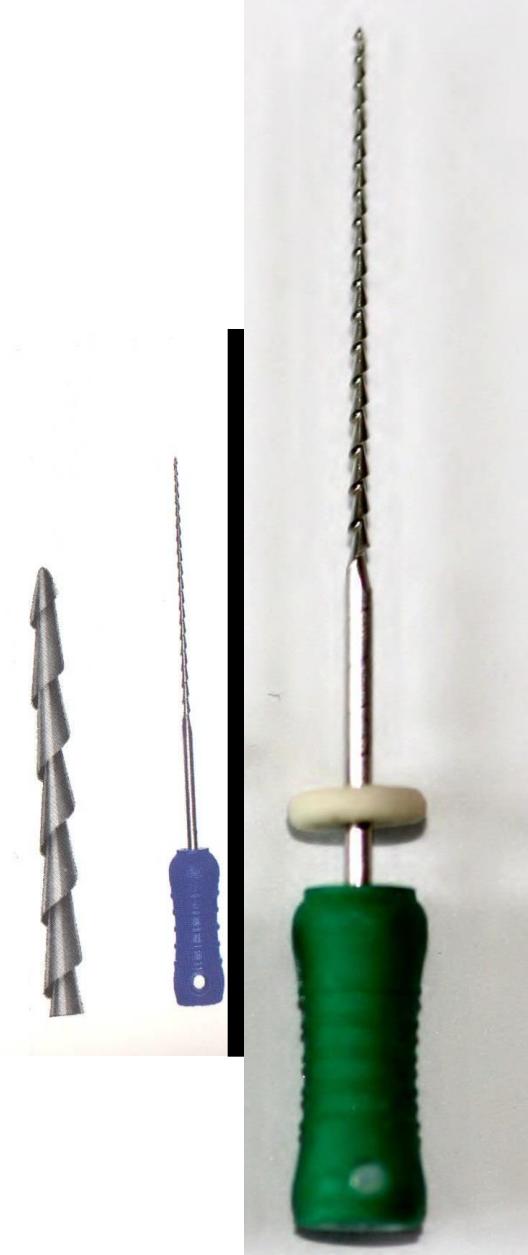

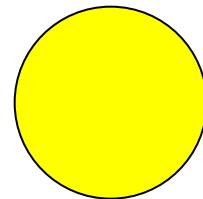

K-file a reamer: rozdíl

H-file

= Hedstroem file

Ring

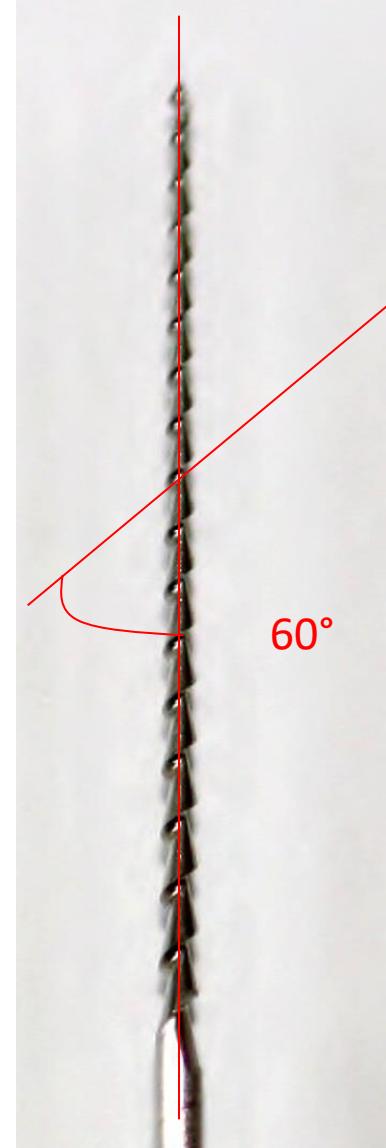

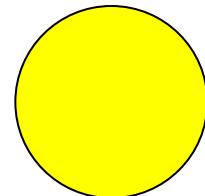

H- file

No rotation!!

Pull motion only!!

Risk of breakage in small sizes

Initial flaring

Working length

- Distance between the referential point and apical constriction
- Radiographically
- Apexlocators
- Combination

Why apical constriction

- Small apical communication
- Minimal risk of damage of periodontium
- Prevention of overfilling
- Prevention of extrusion of infection
- Good decontamination
- Good condition for root canal filling

Radiogram

X-ray with inserted root canal instrument

Safe length: average length of teeth reduced for
2 – 3mm

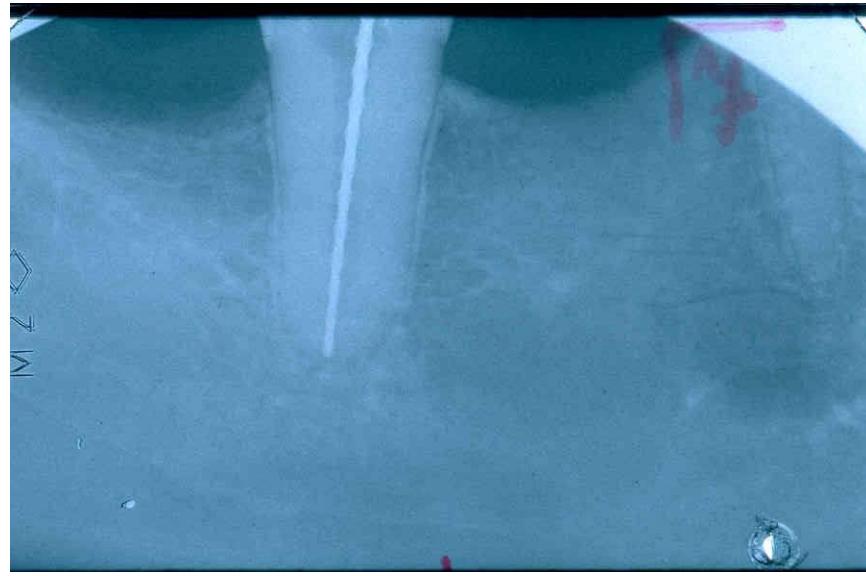

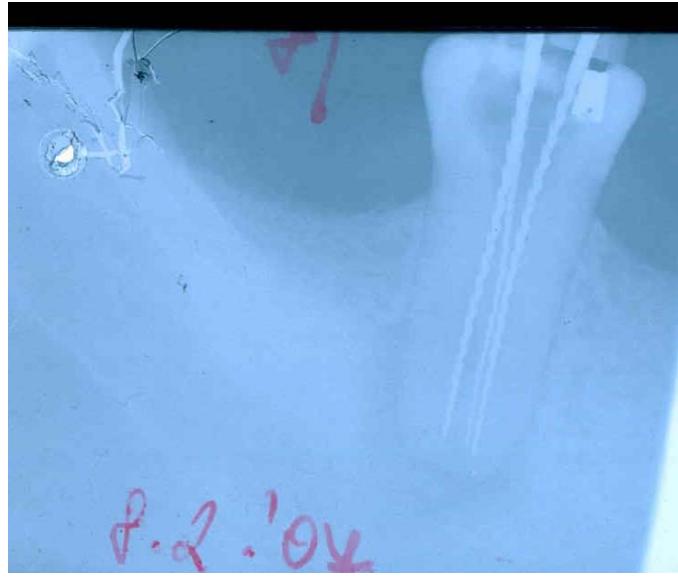

Tooth with clinical crown

Procedure

- Instrument ISO 15 introduced into the root canal, stop at the referential point
- Estimation of location of apical constriction (1 – 1,5 mm distance from x-ray apex.

If difference in the radiogram more than 23 mm
- repeat

If 2 mm or less – add to the safe length

Safe length

- Maxilla:

Reaming

Filing

Balance forced technique

Methods of shaping

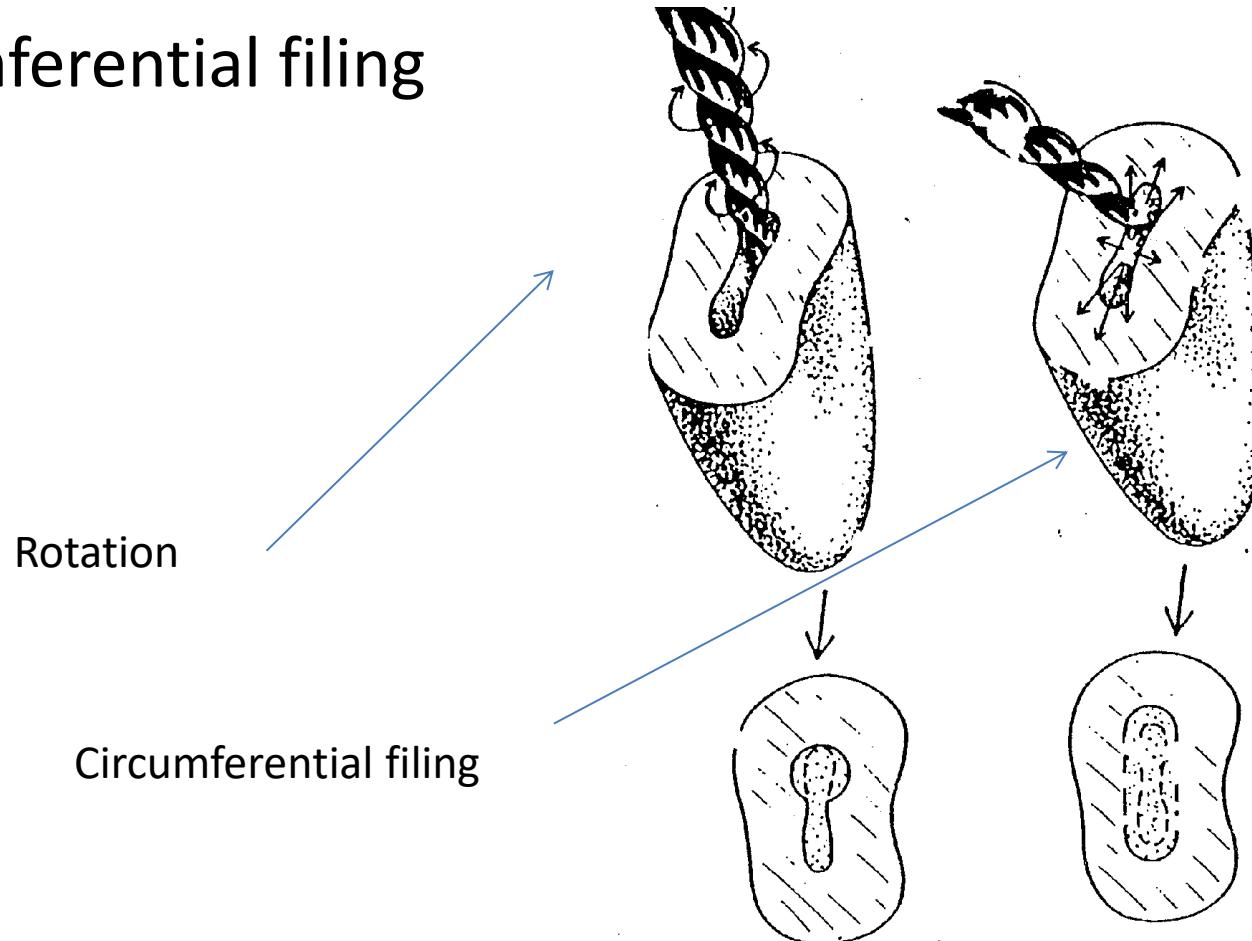

- Rotation and filing combined

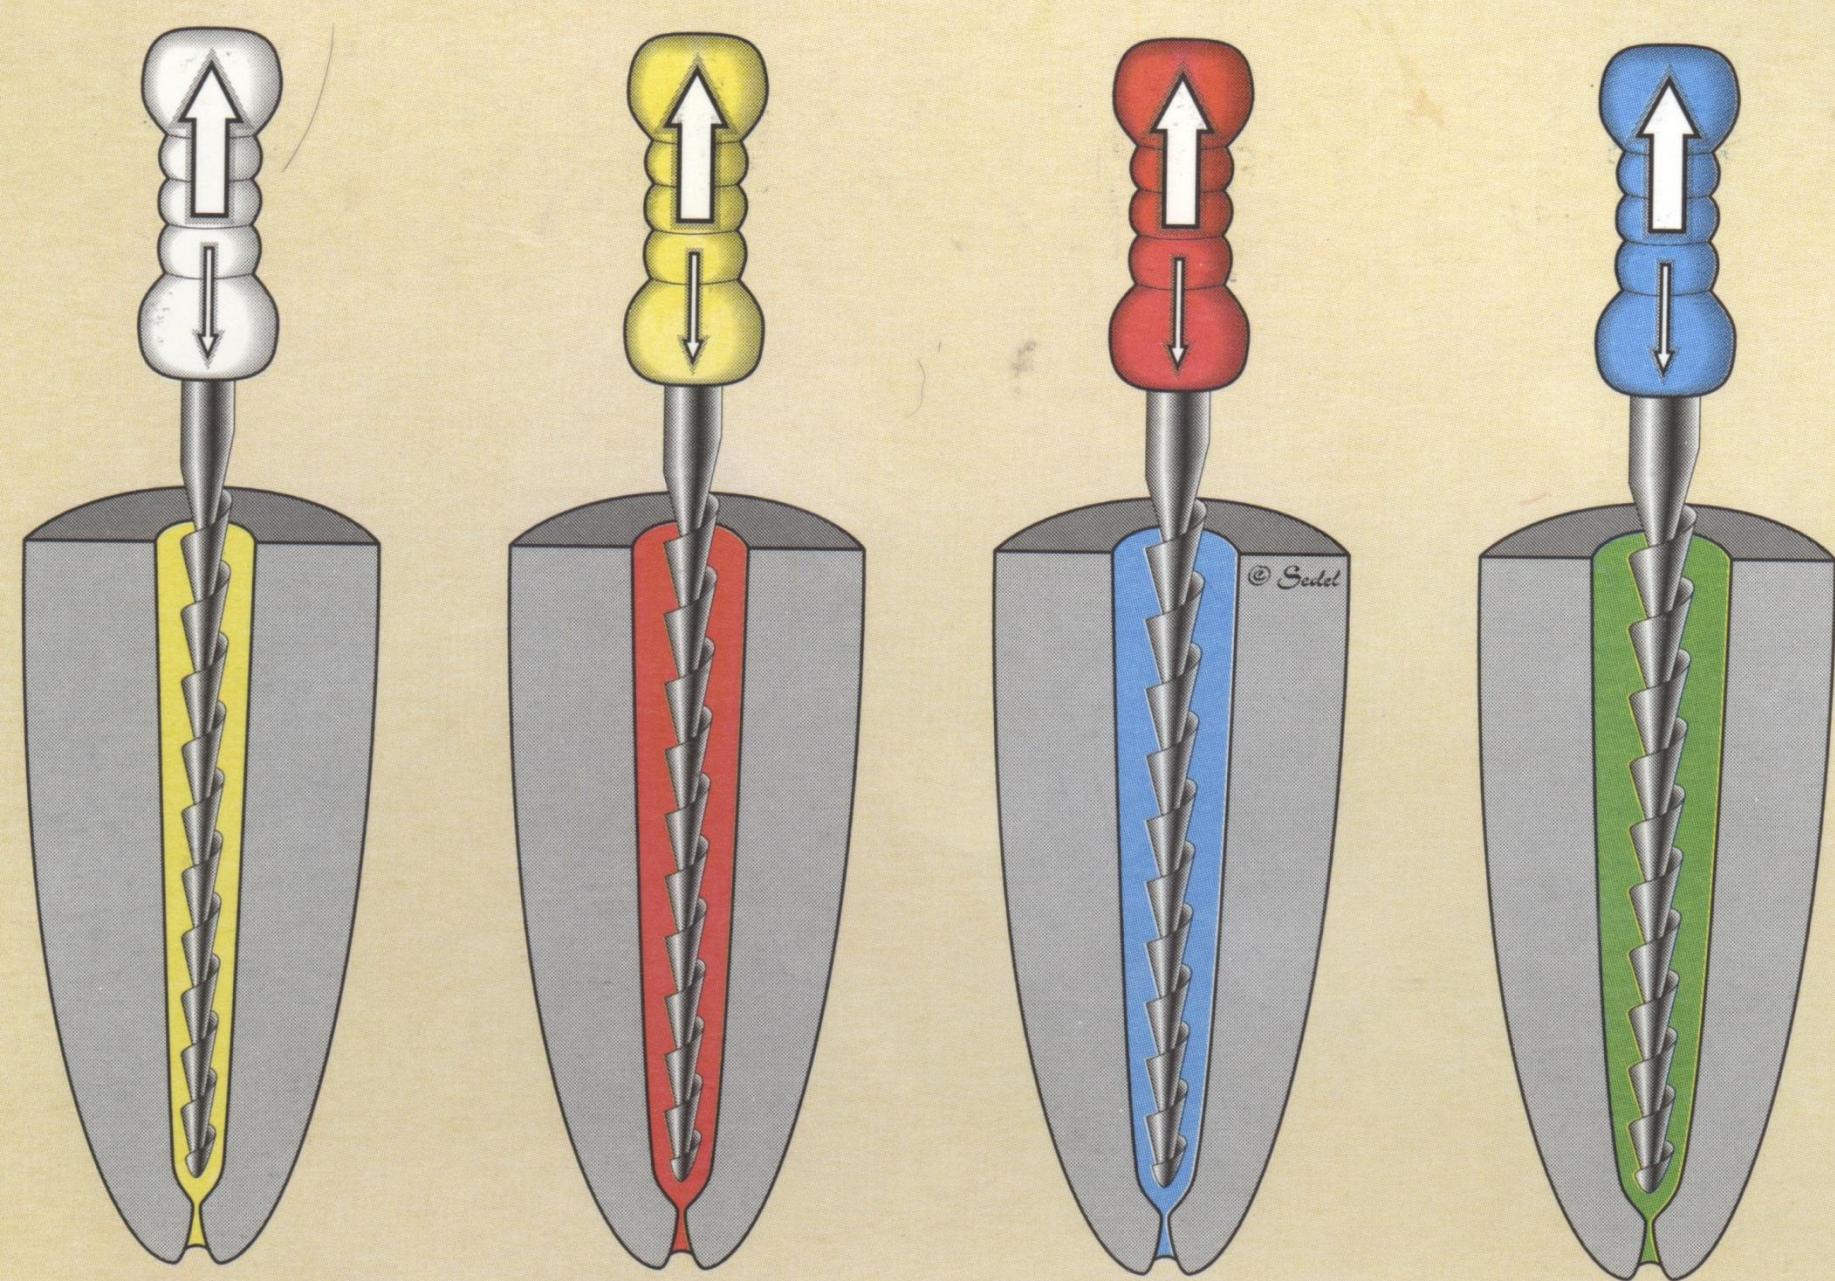

K - reamer

H- file

Methods of shaping

- Circumferential filing

Methods of shaping

- Combination of rotation and filing

Start with rotation

Finishing with filing

Suitable for straight root canals

Methods of shaping

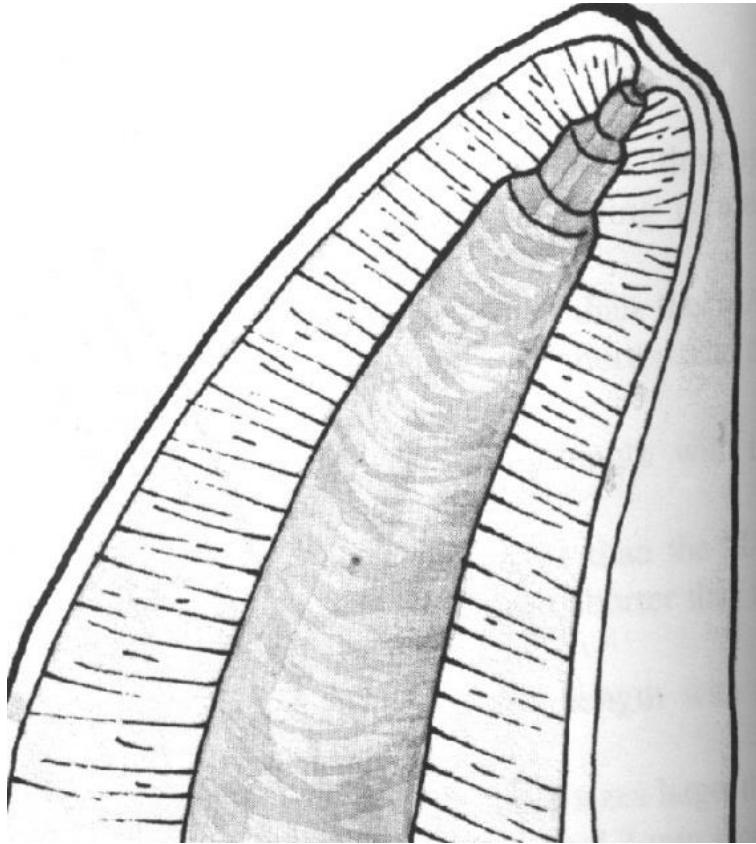

- Step back method

Increasing size with decreasing length.

Insertion of root canal instrument – WL

Next – 1 mm shorter

...

Taper
Final flaring with
the smallest instrument

H- File nebo K - Flexofile.

Method modified double flaerd

- I. Opening of root canal

- Coronal third

- II. Apical preparation

Cathetrization, measurement, shaping till ISO 30 – 35 balanced force. Master file – MAF (till WL)

- III. Step back

- Final flaring (MAF)
