

Dear colleagues,

For next lecture please work on topics: in questions 1,2,3,4,14,15,16,17,18.

Morphology and physiology of dental pulp, reaction on irritation, classification of pulpal diseases.

These topics are in questions:

Question 1, 2, 3, 4 – presentations from prof. Kukletova and me – Endodontics. 1. Importance of calcium hydroxide will be explained more together with other bioactive materials, so this topic does not involve.

Question 14 – case selection and treatment planning. Principally this topic is indication and contraindication of endo treatment. Local, regional and systemic factors must be considered. Here also indication and contraindication of endo treatment should be discussed. See the presentation Endodontics Ia

Continue to the instrumentation:

15 Phases of endodontic treatment, rubber dam in endodontics and preendo treatment.

16 Access opening

17 focus on instruments and the principle of work with them. A little bit more will be explained. Take it from preclinical endodontics.

18: techniques and methods of root canal shaping. Find in preclinical, I will add some.

For these questions go to the preclinical endodontics presentation..
