

# Metabolic disorders

Z. Rozkydal

# Metabolic disorders- osteopathy

- Osteoporosis
- Osteomalacia
- Primary hyperparathyreoidisms
- Secondary hyperparathyreoidisms:
  - renal osteodystrophy
  - gastrointestinal osteodystrophy

# Composition of bone

50 % anorganic material (hydroxyapatit crystals)

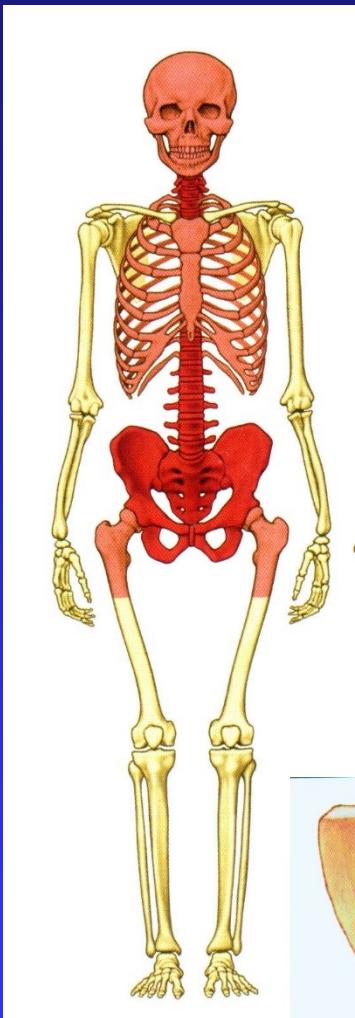

25 % organic bone matrix (osteoid):

90 % collagen type I

10 % other proteins (osteocalcin,  
osteonectin, proteoglycans, enzymes)

25 % water binding on collagen and proteoglycans

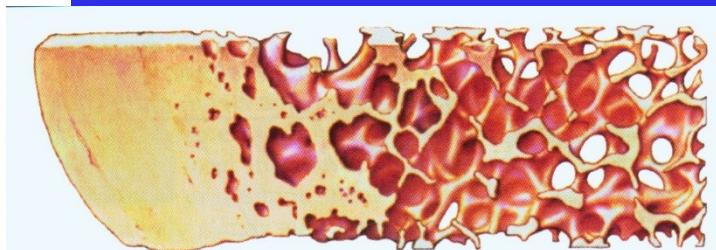

# Skeleton

Weight 5 kg

Cortical bone 4 kg

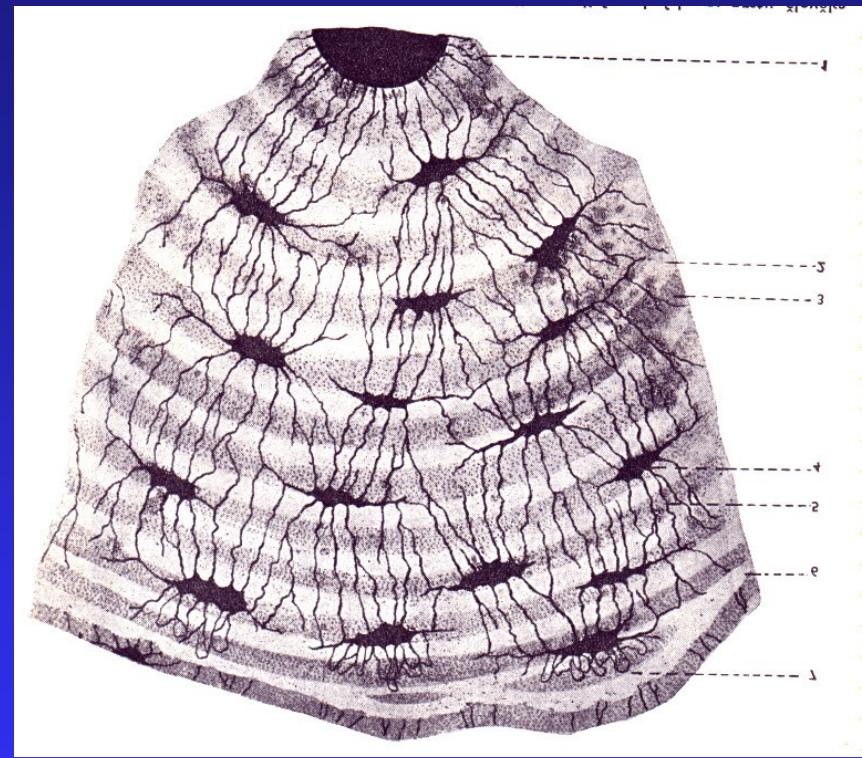

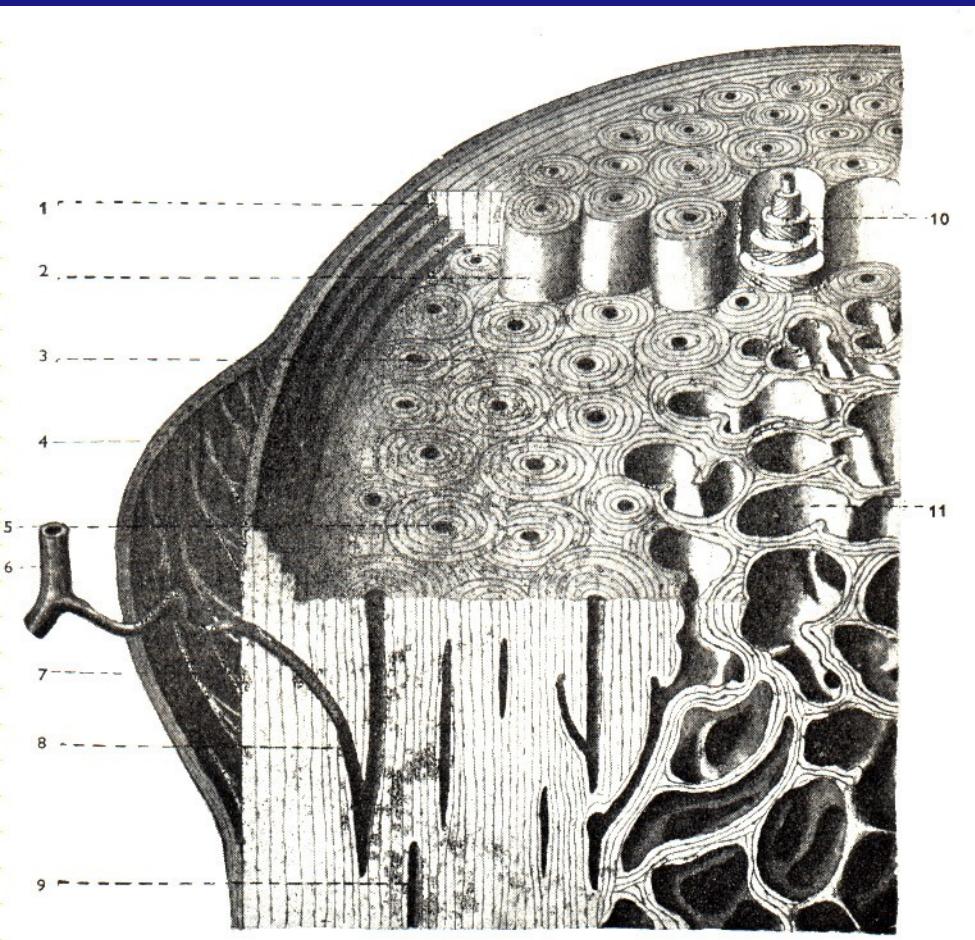

Trabecular bone 1 kg

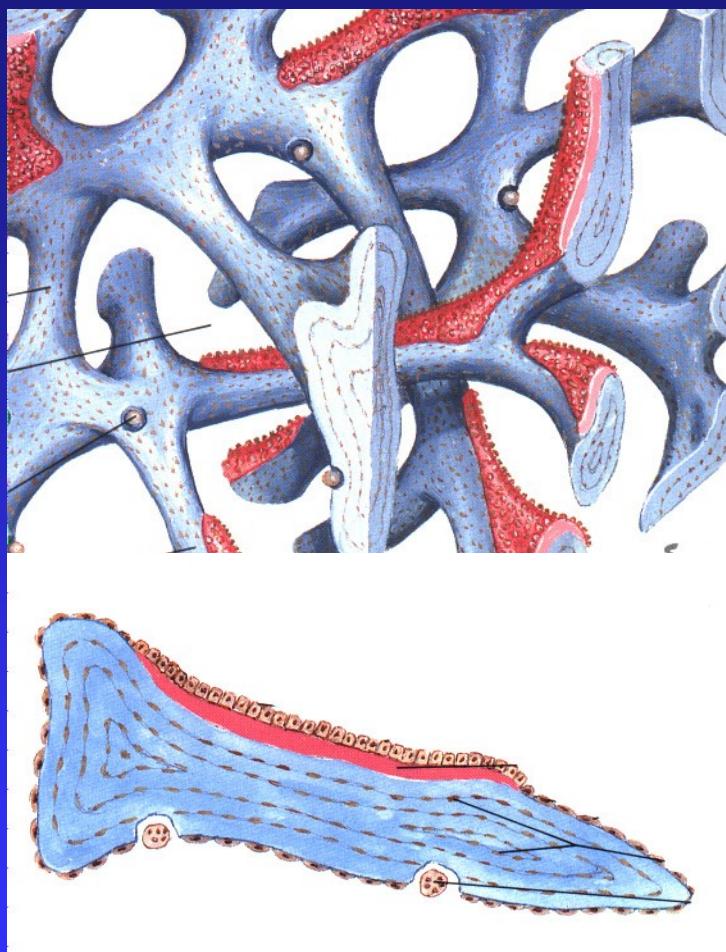

Cortical bone

Trabecular bone

# Cortical bone- Haversian system

# Trabecular bone

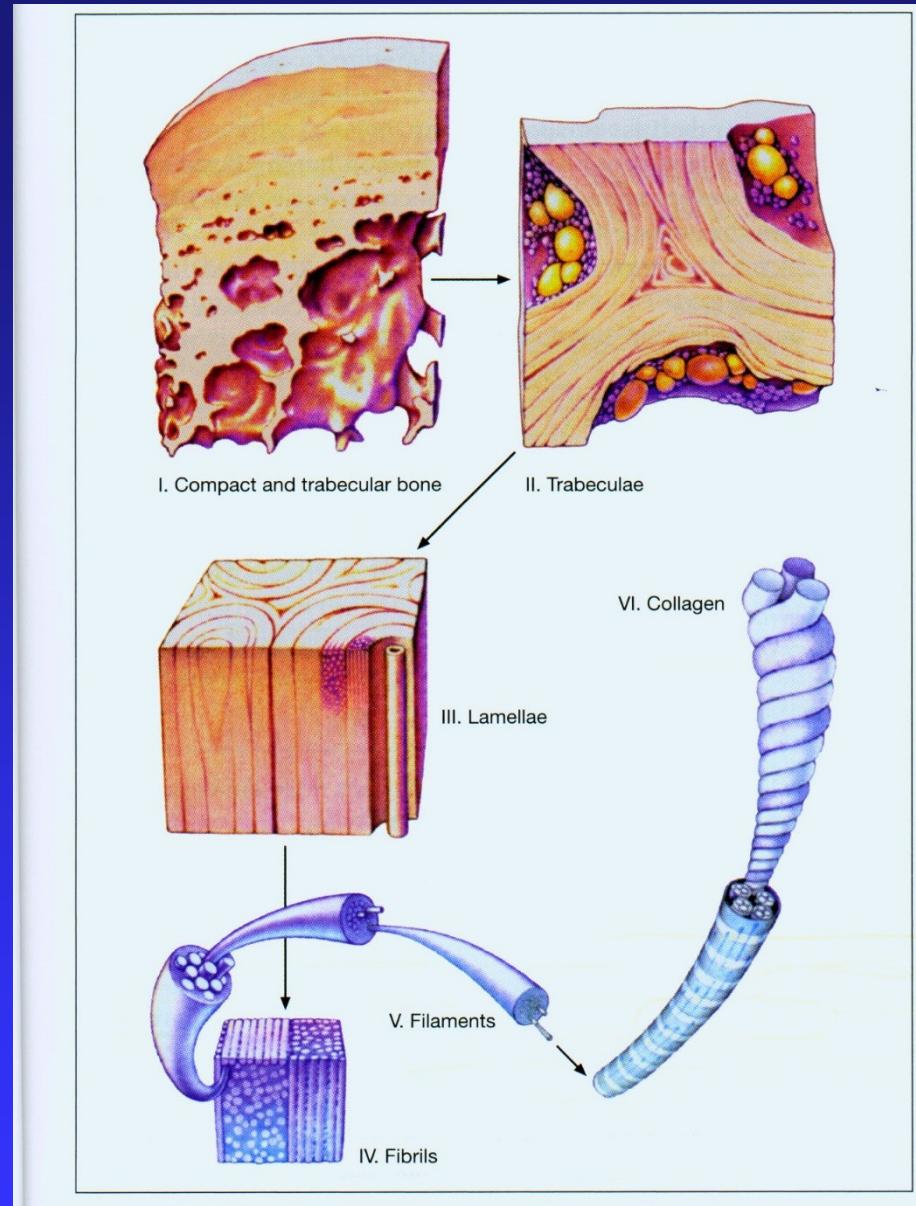

## Trabecular bone:

- 20% of the skeleton
- 80% of remodelling

## Cortical bone:

- 80% of the skeleton
- 20% of remodelling

Collagen type I.

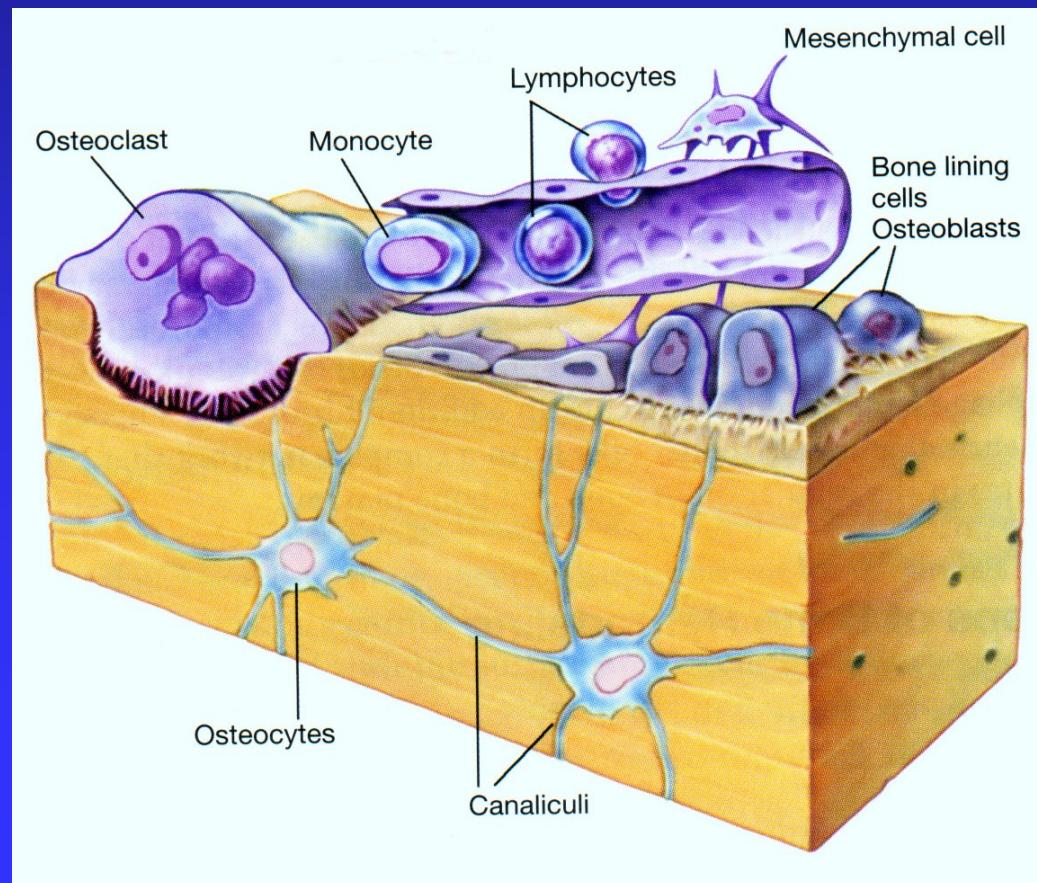

# Osteoblasts:

They produce osteoid- organic part of matrix

They provide mineralisation of bone

They produce alkaline phosphatase

– indicator of the synthesis of proteins

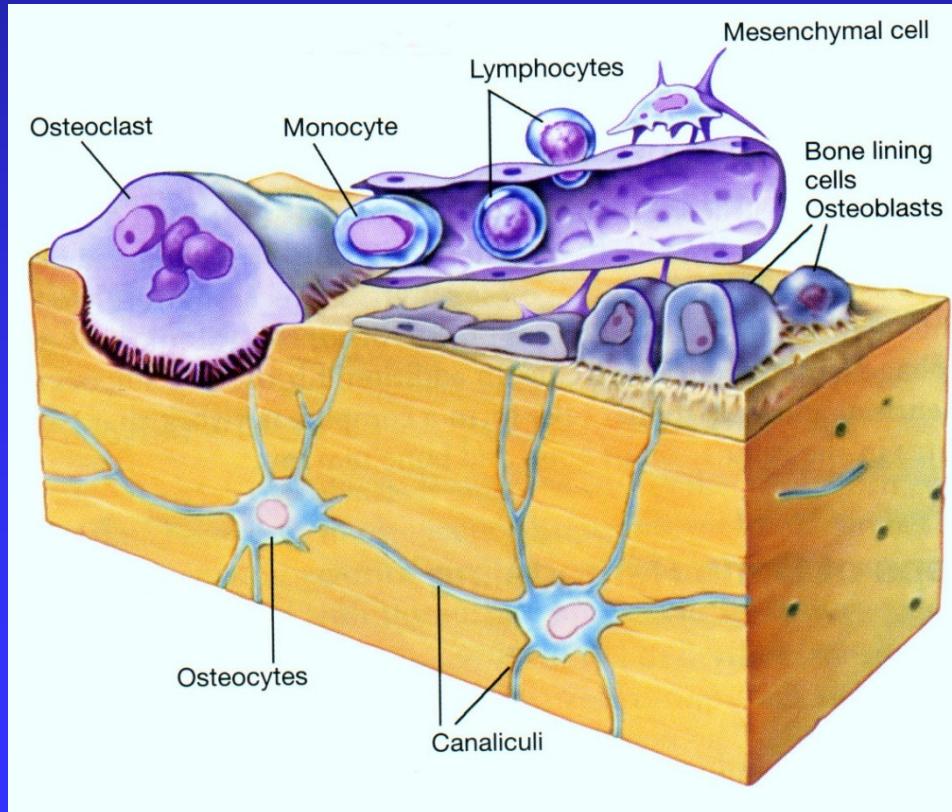

Osteoclasts:

Large multinuclear cells

They are localised in Howship lacunes on the surface od bone

They produce acid phosphatase and lytic enzymes

They dissolve hydroxyapatite crystals and bone matrix

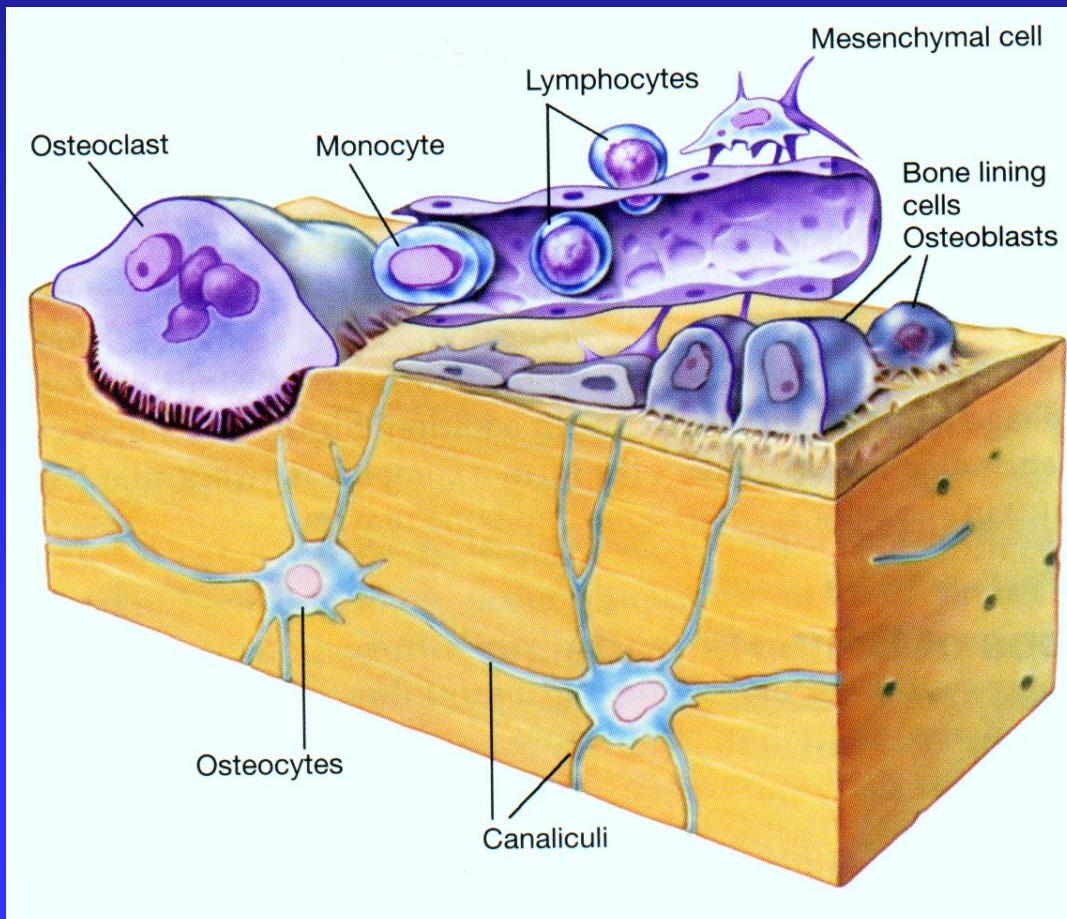

# Osteocytes

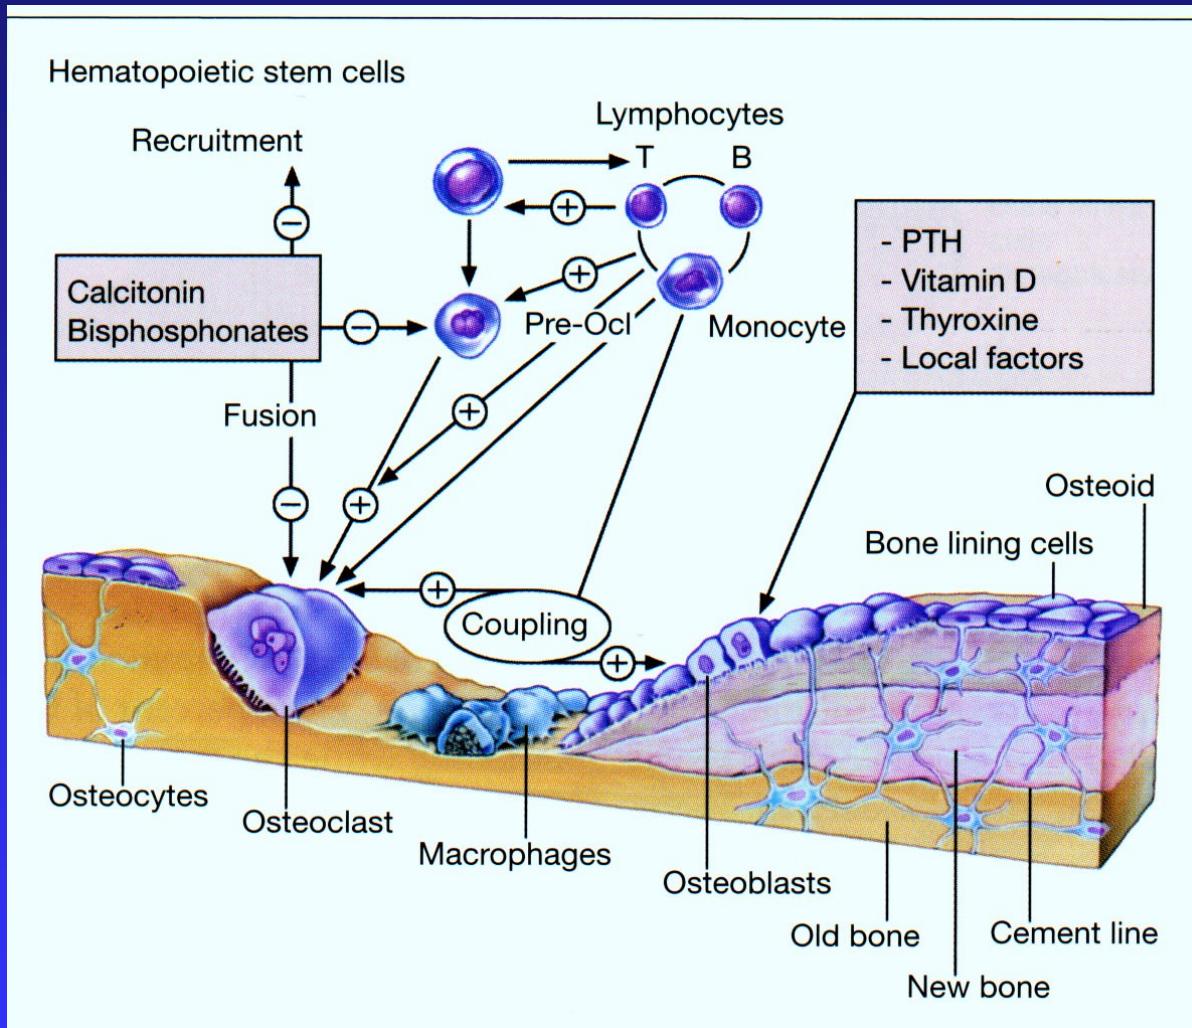

They lie in lacunes of corticals and trabecular bone

They are connected wit canaliculi

They maintain metabolism of bone

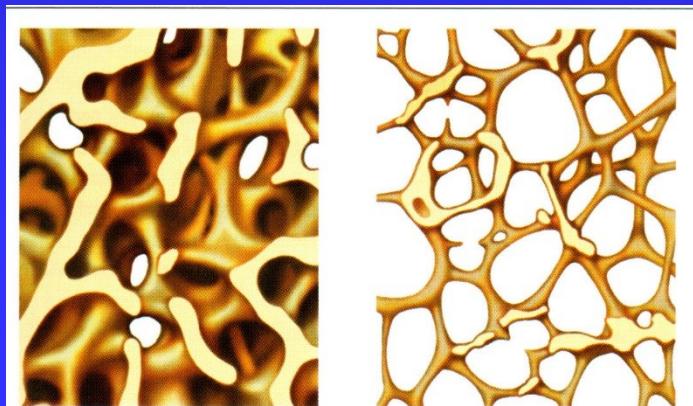

# Remodelling of bone

Resorption is finished in 2 weeks  
Mineralisation up to six months

# Osteoporosis is a systemic disorder of the skeleton

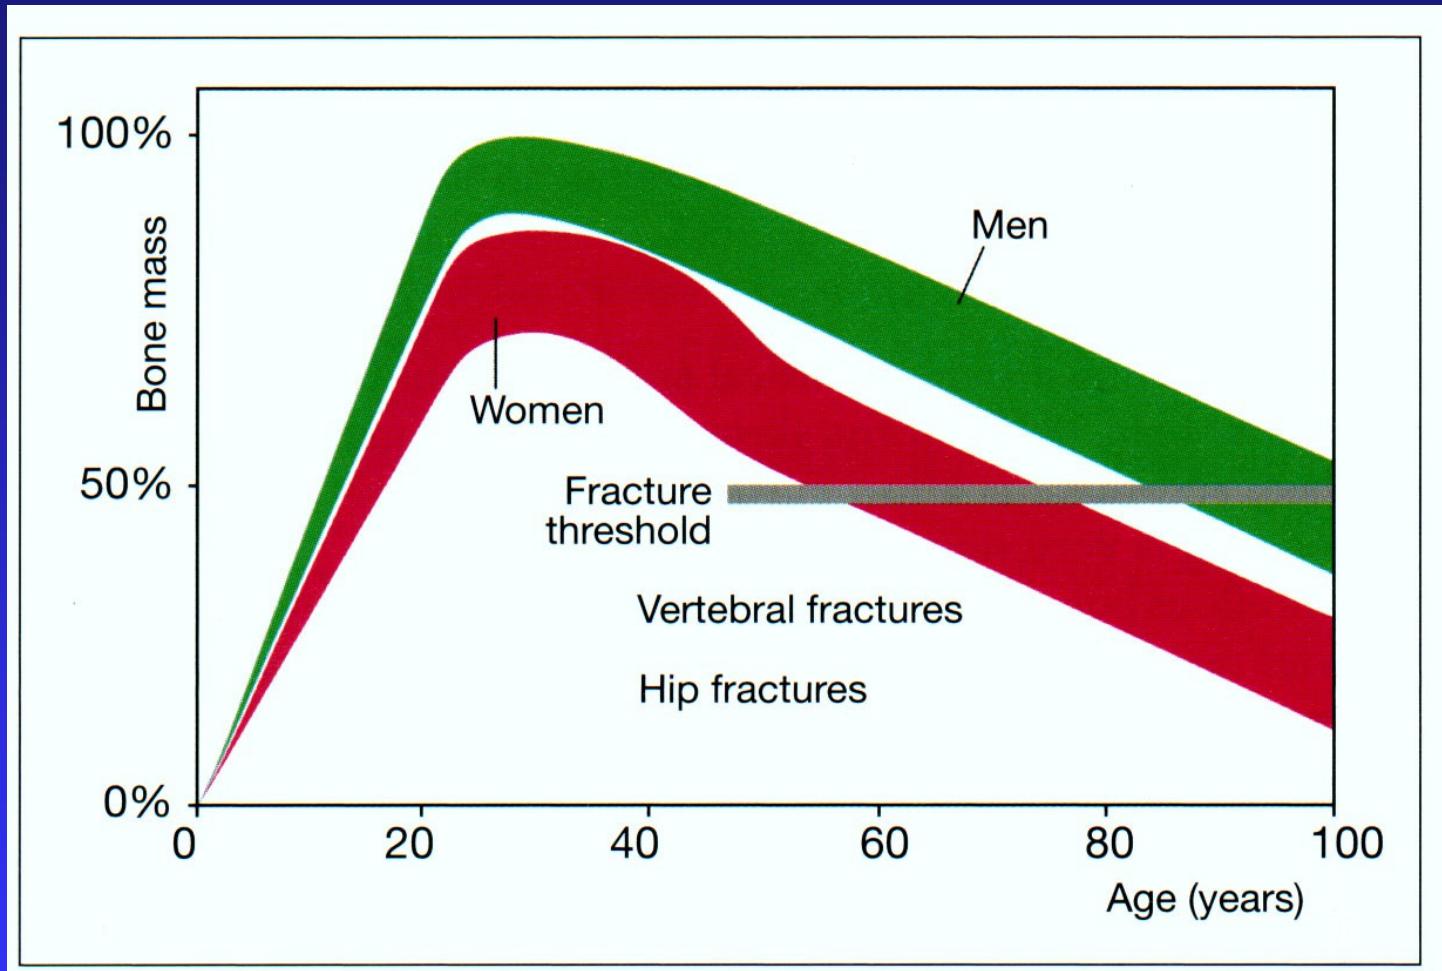

- Diminished strength of bone
- Low bone density
- Impaired microarchitecture
- Tendency to fractures
- Loss of organic and anorganic bone

# Osteoporosis

- primary:
  - idiopathic
  - postmenopausal - type I.
  - involutional (senile) - type II.
- secondary - type III.

# Peak bone mass – at 30 years of age

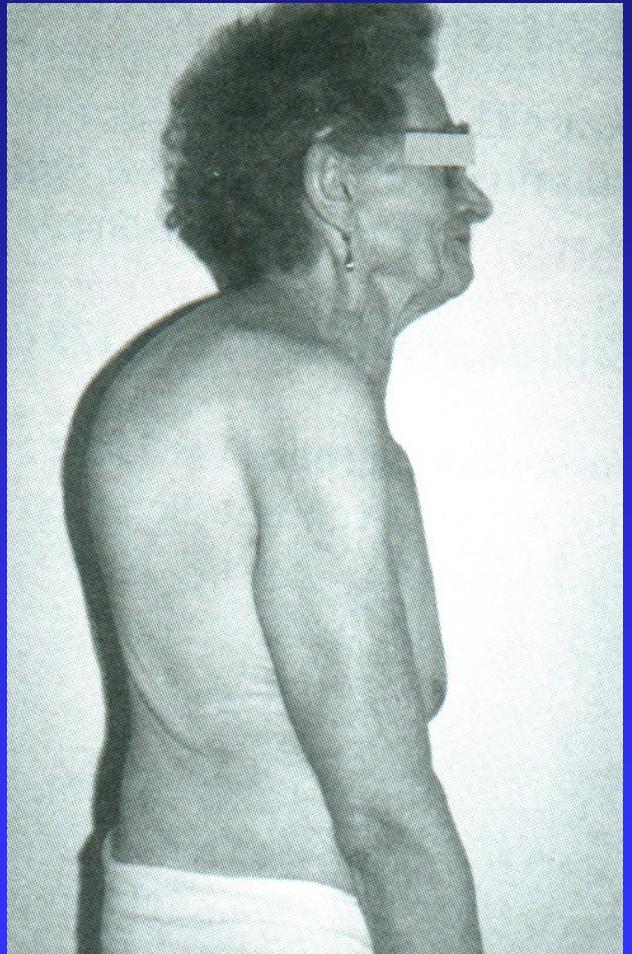

Bone loss:

Before menopause    0,3 % / year

After menopause     3 % / year

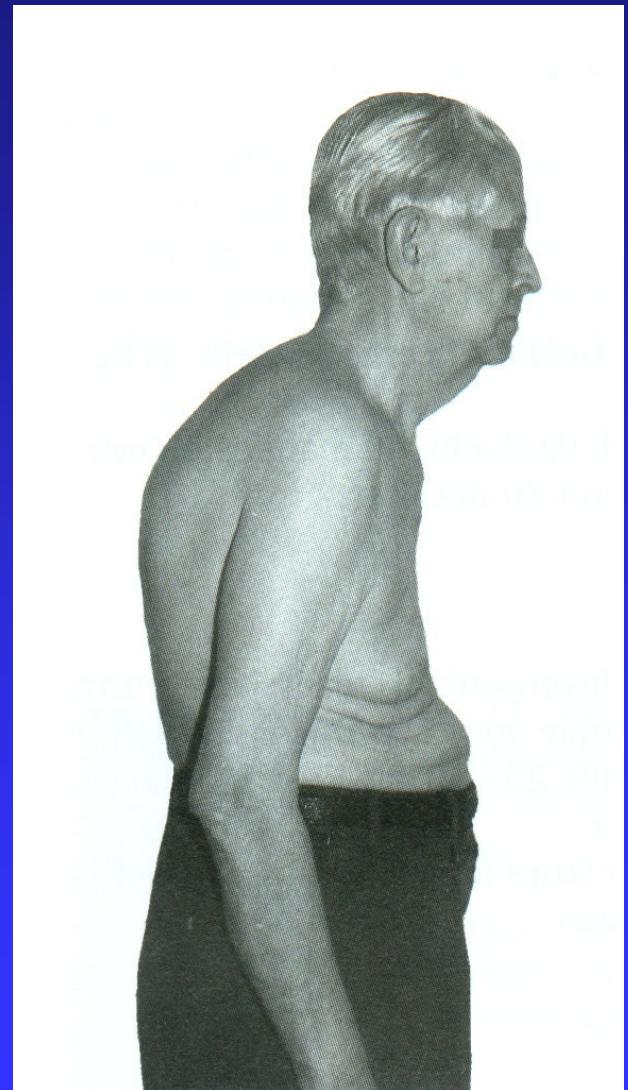

# Clinical symptoms

- Back ache
- Diminished ability to work
- Problems with walking  
and standing
- Problems with lifting heavy  
objects
- Sharp pain- in a case of fracture

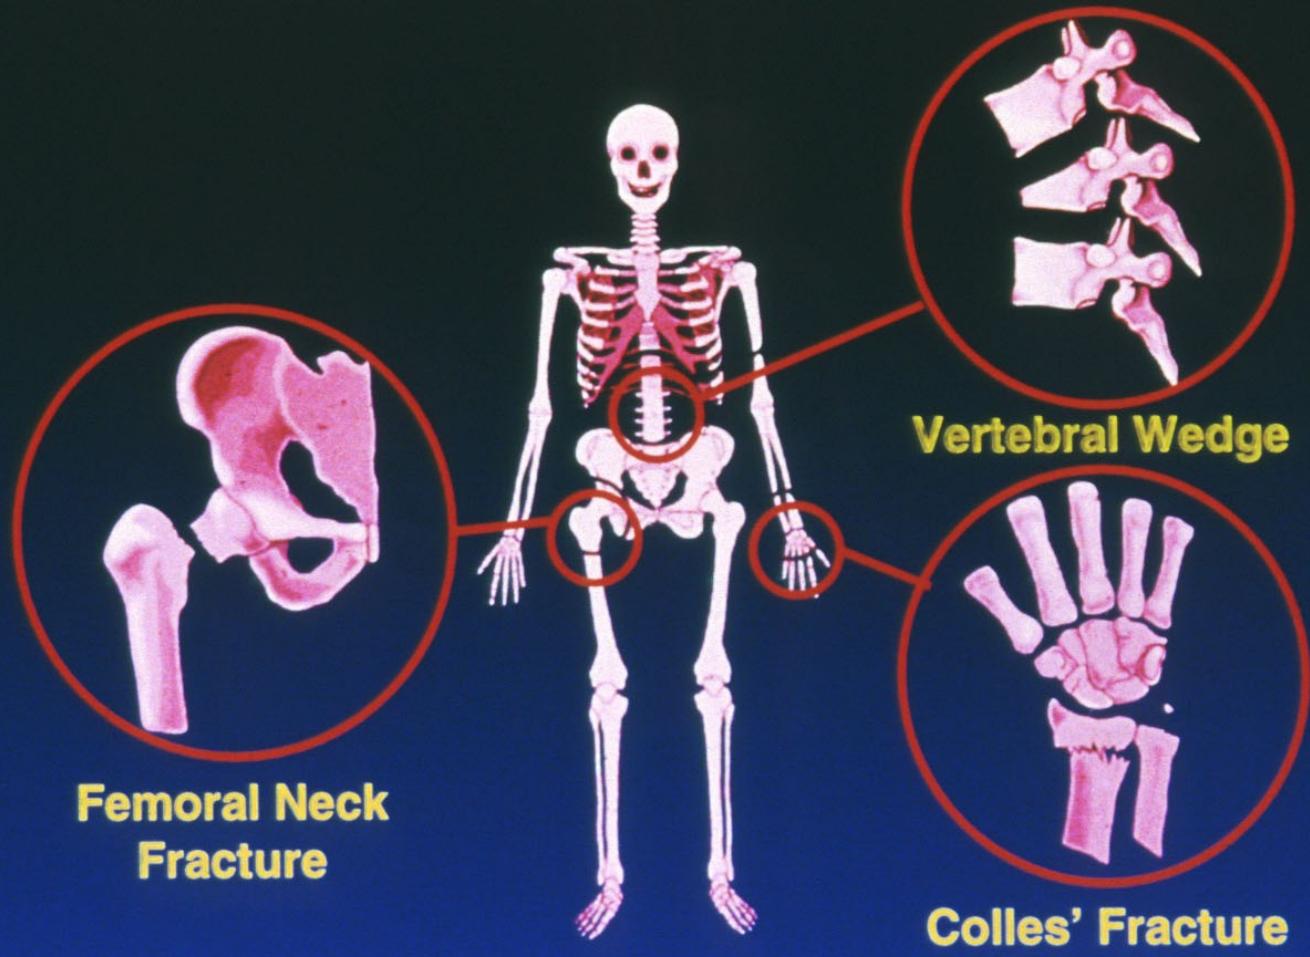

# Examination

- Tenderness on spinous process
- Limited movements of the spine
- Paravertebral spasm
- Thoracis kyphosis
- Widow's hump
- Lower length of the stature

# THE COMMON FRACTURES OF OSTEOPOROSIS

---

# Postmenopausal osteoporosis

- 80% of all cases
- 25 % of female are involved
- Between 50- 65 years
- Loss of estrogens- high activity of osteoclasts
- Trabecular bone most often affected

# Senile osteoporosis

Over 70 years, ratio female: male = 2 : 1

The cause: no production of osteoblasts in bone marrow  
Cortical and trabecular bone

# Secondary osteoporosis

- Corticosteroids
- Hyperthyreosis
- Malabsorption
- Alcoholisms
- After trnsplantations

# Osteoporosis in men

- Primary
- Hypogonadism

# Risk factors

- Low stature
- White and yellow ethnics
- Low physical activity
- Low nutrition with calcium

# Risk factors

- Higher age
- Low BMI
- Occurrence in family

# Hypogonadal conditions

- premature amenorrhoea
- surgery of ovaria
- oligomenorrhoea, amenorrhoea
- nullipara
- low endogenous estrogen
- mental anorexia

# Risk factors- drugs

- corticosteroids
- anticonvulsives
- diuretics
- heparin

# Risk factors

- malabsorption
- chronic disorders of liver
- chronic disorders of kidney
- alcohol

# Diagnostic tools

DEXA

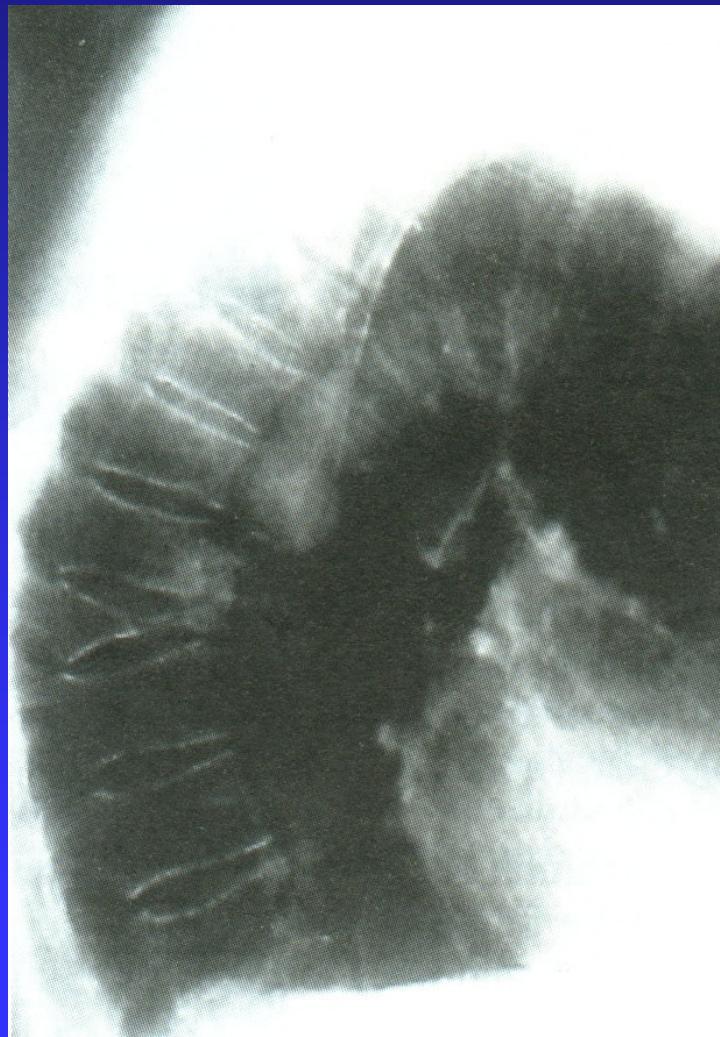

QCT

FRAX

Imaging methods

Laboratory tests

X-ray shows bone loss of  
30 % or more

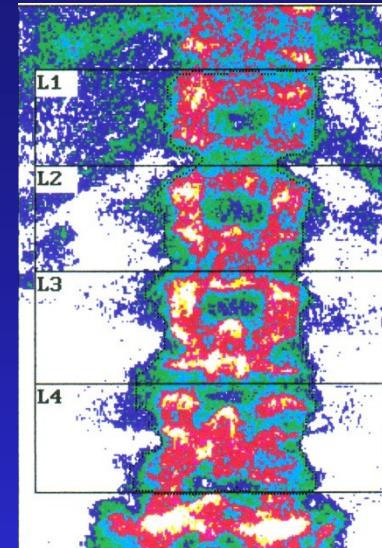

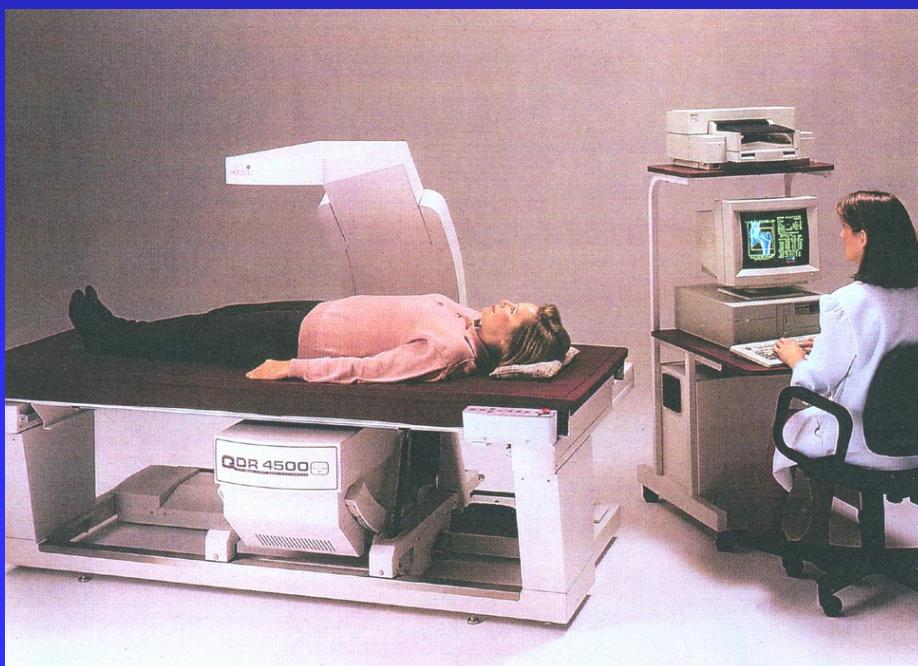

# DXA – Dual Energy Absorptiometry

BMD v g/cm<sup>2</sup>

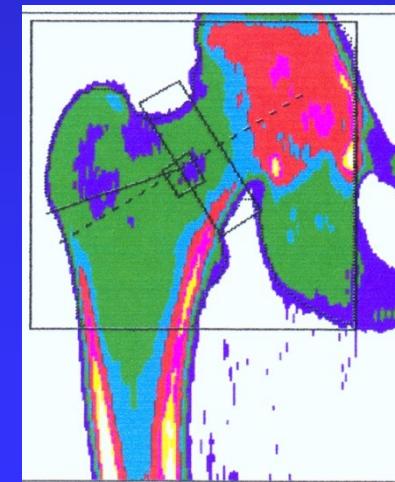

T score

Z score

Change

L1-L4

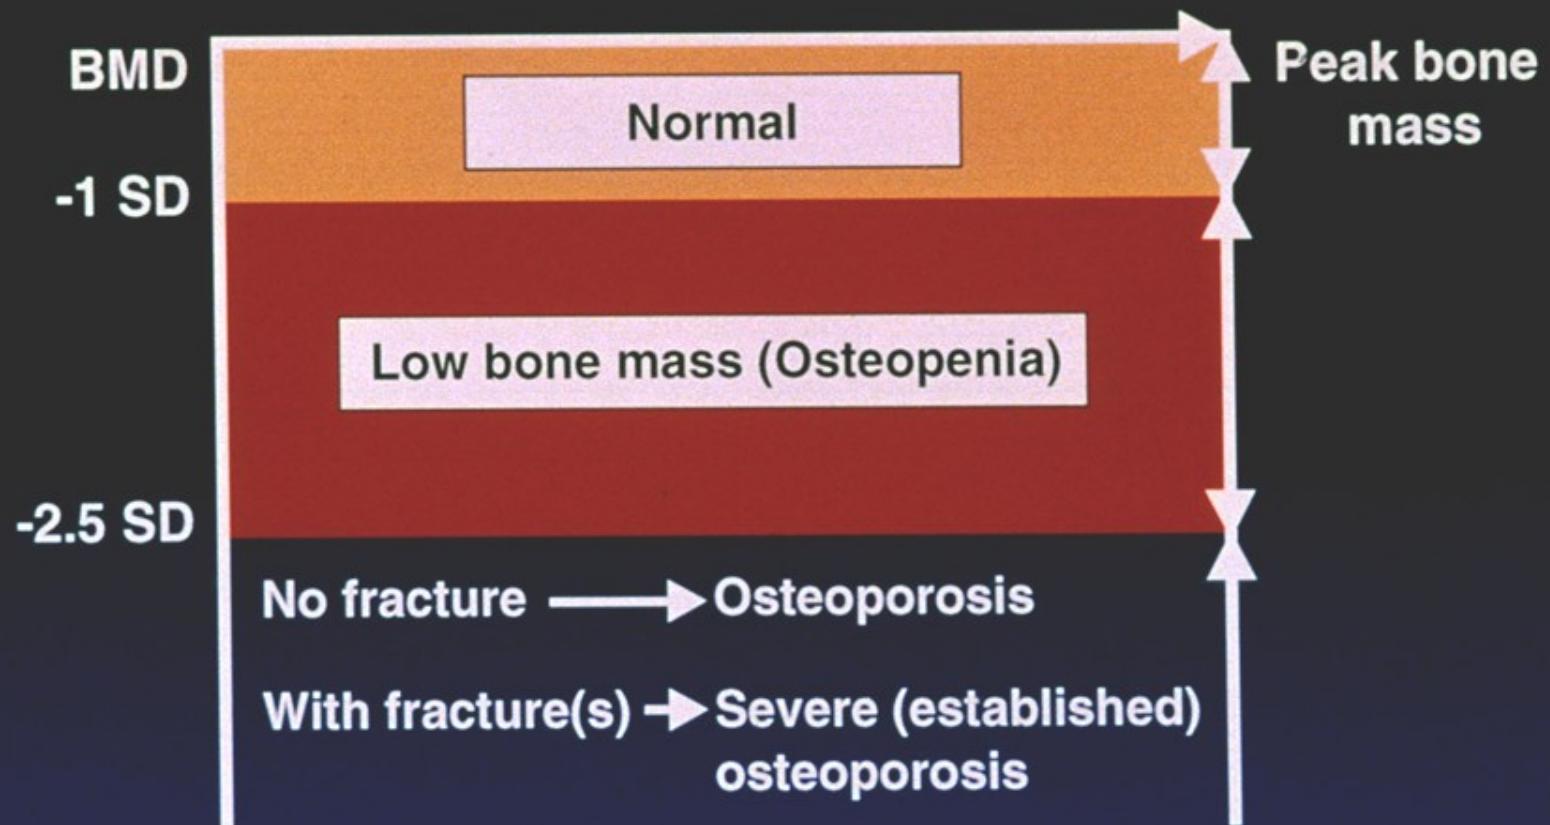

Hip Total

Hip neck

Wrist

## WHO DEFINITION OF OSTEOPOROSIS

---

# FRAX

## FRAX

– fracture risk assessment tool  
10 year risk of a major fracture

The screenshot shows the FRAX® WHO Fracture Risk Assessment Tool Calculation Tool. At the top, there's a navigation bar with links for HOME, CALCULATION TOOL, PAPER CHARTS, FAQ, and REFERENCES. Below the navigation bar, the title 'Calculation Tool' is displayed. A message asks the user to answer questions to calculate the ten-year probability of fracture. The form includes fields for Country (UK), Name / ID, and a link to 'About the risk factors'. On the left, there are conversion tools for Weight (from pound to kg) and Height (from inch to cm). The main questionnaire section contains 12 risk factors, each with a radio button for 'No' or 'Yes'. Factor 12 is 'Femoral neck BMD (g/cm²)' with a dropdown for 'T-Score' showing '-2.3'. Below the questionnaire is a red box containing the results: 'BMI 20.2', 'The ten year probability of fracture (%)', 'with BMD', 'Major osteoporotic fracture: 23%', and 'Hip fracture: 5.5%'. There's also a link to 'View NOGG Guidance'.

## Clinical data

Age

Sex

Weight

Height

Sustained fractures

Fracture in parents

Smoking

Alkohol 3 or more units/day

Corticosteroids

Rheumatoid arthritis

Secondary osteoporosis

Combination DXA + FRAX

# Diagnostic tools

HR- pQCT

Pair biopsies- histology, histomorfometry  
2 D micro CT, microindentation  
SEM

Finite element analysis

Raman microspectroscopy

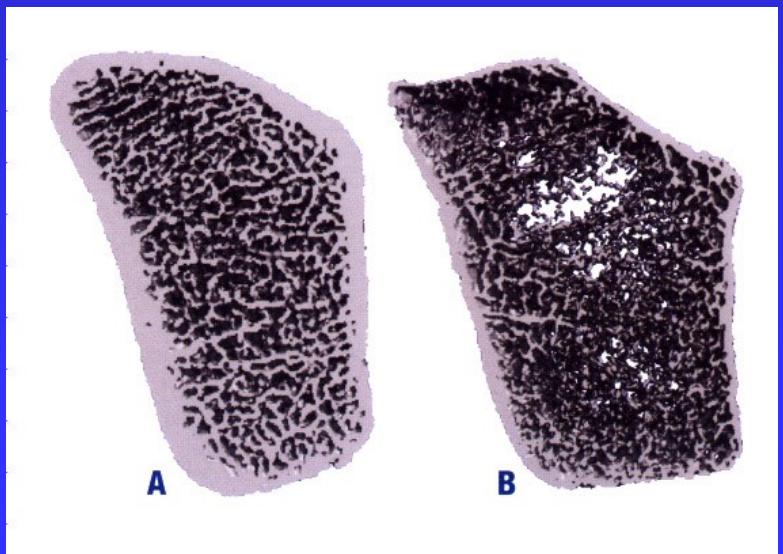

# HR- pQCT

High resolution, peripheral,  
quantitative CT

Noninvasive measurement  
of bone morphology

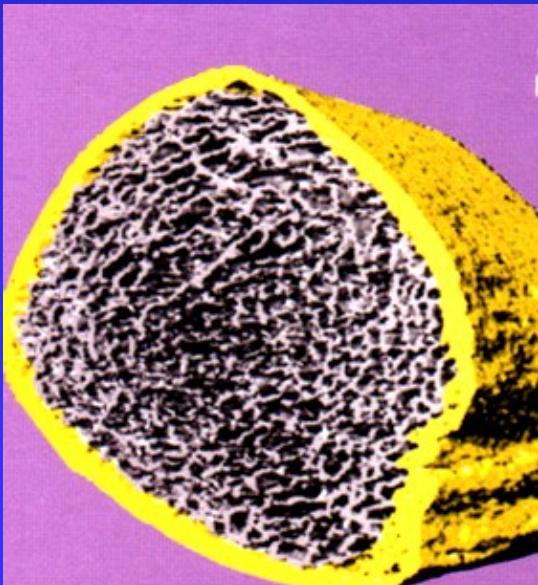

Virtual biopsy

Assess microarchitecture  
up to 82  $\mu\text{m}$

# Xtreme CT

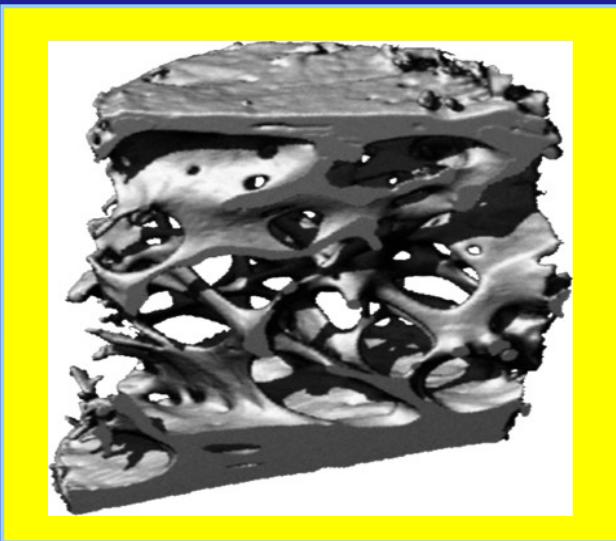

Assess thickness  
of cortical bone

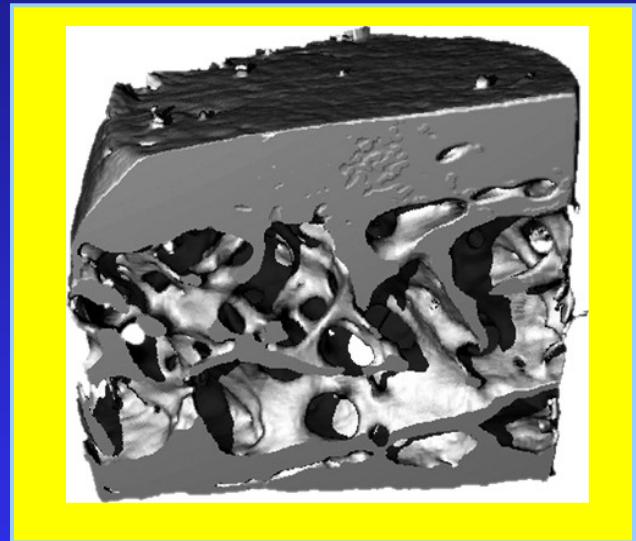

SCANCO  
Xtreme CT  
HR qCT

# Pair biopsies- before and after treatment

Placebo 36 months

PROTELOS 36 months

Thickness of cortical bone      + 18 %       $p=0,008$

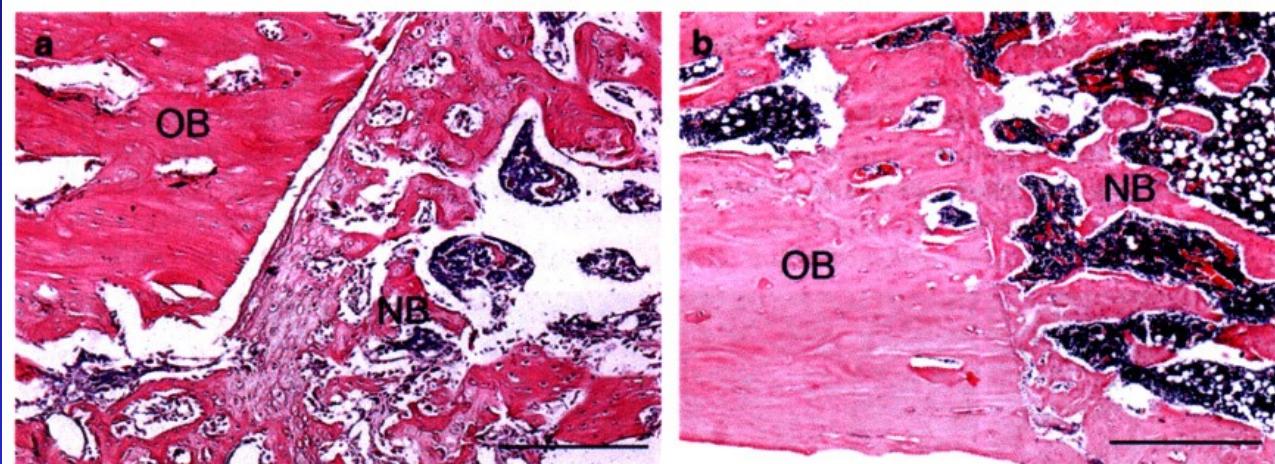

Number of trabeculae      + 14 %       $p=0,05$

# Histology

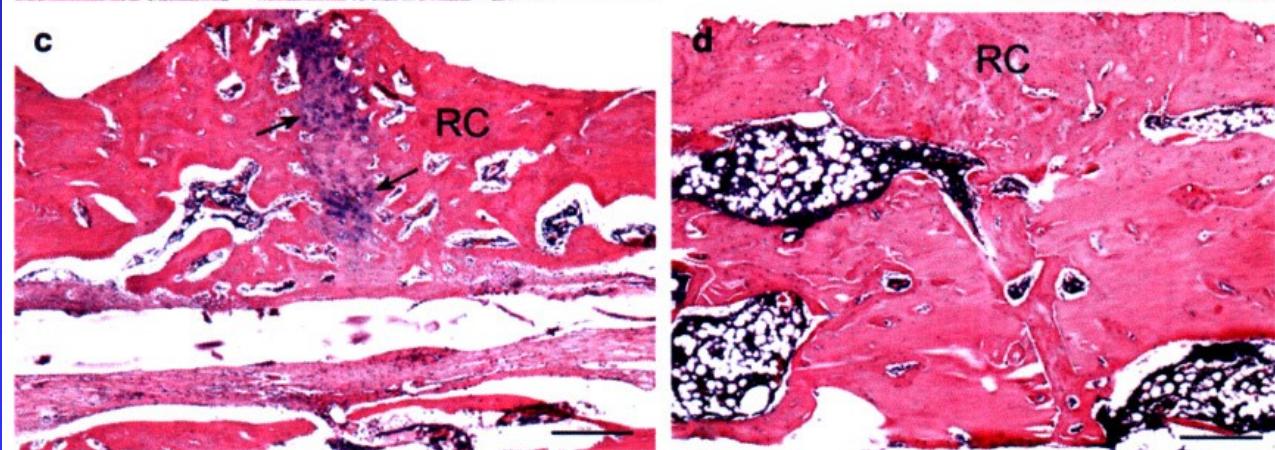

Kontrola

OVX a SR

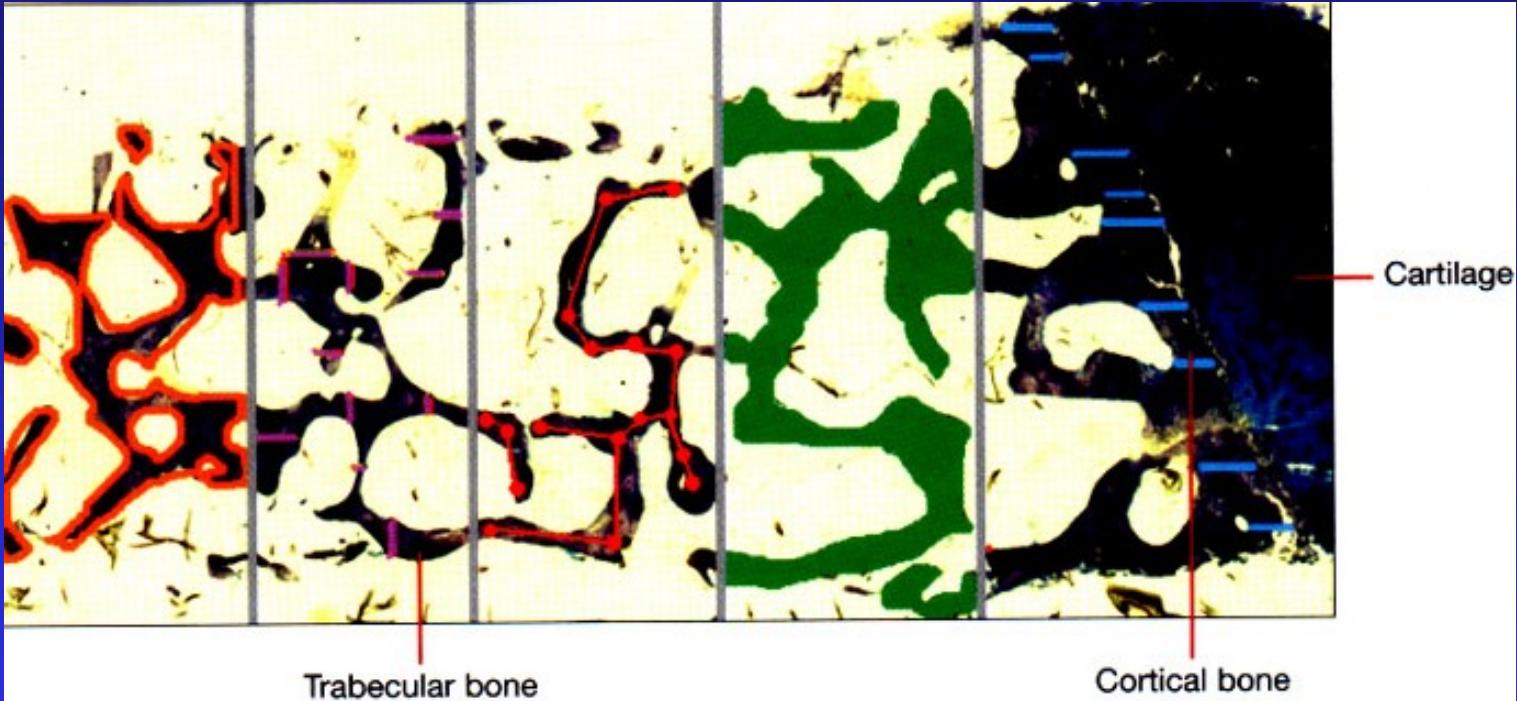

4 t.

8 t.

# Histomorfometry

Povrch kosti

Mineralizovaný povrch

Erodovaný povrch

Tloušťka trabekul

Konektivita trámců

Trabekulární objem

Kortikální tloušťka

# FEA- finite element analysis

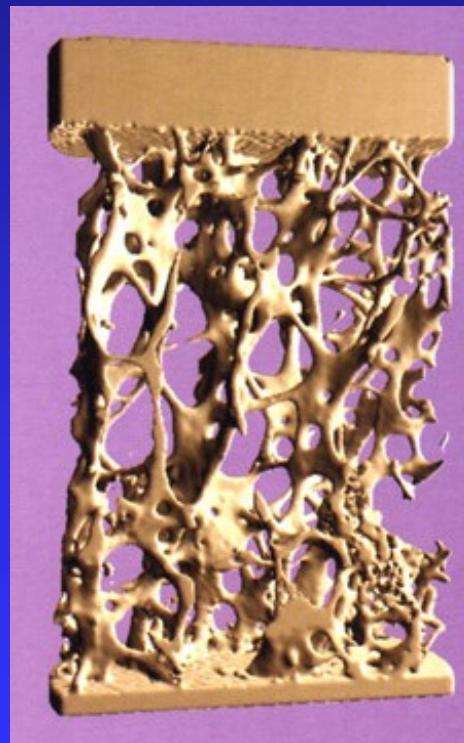

Trabecular bone (upto 82 µm)

Healthy bone

Plates

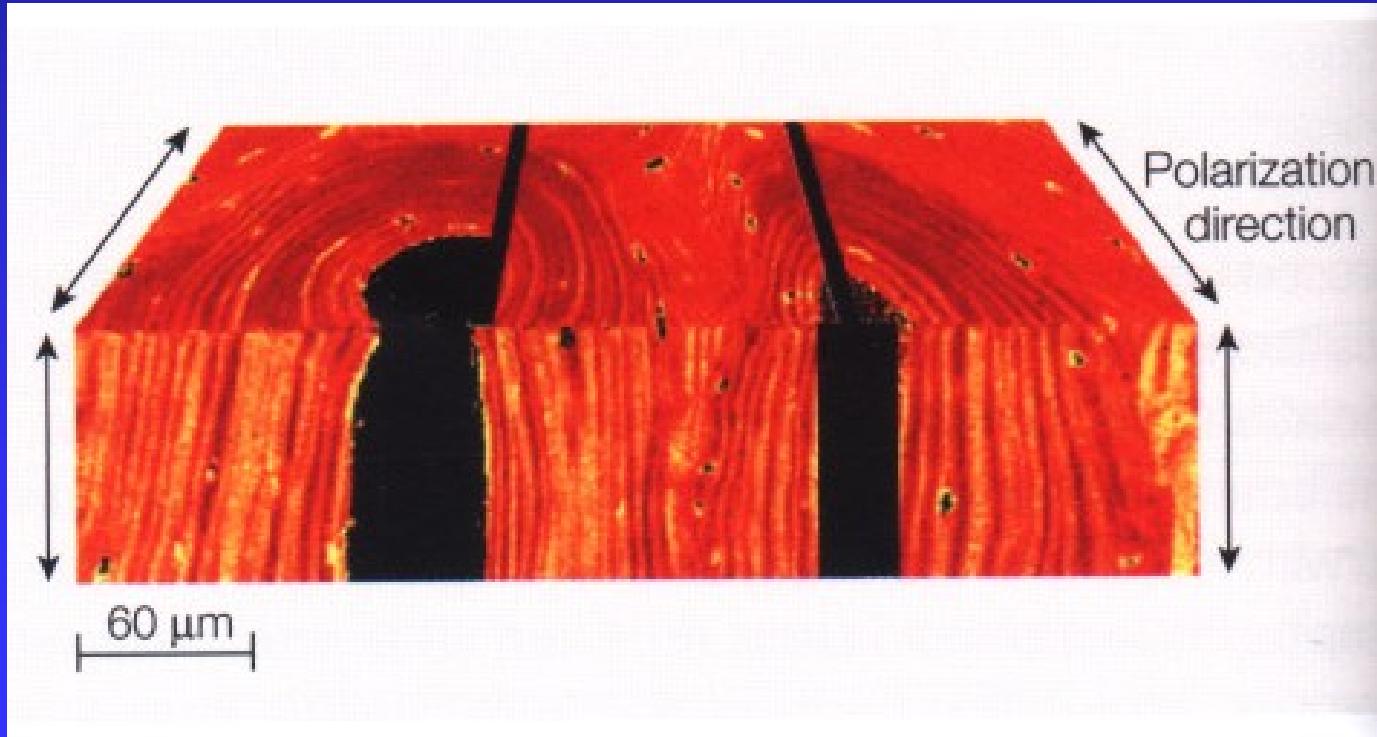

Osteoporotic bone

Rods

# Raman microspectroscopy - cortical porosity

Increases after 40 years of age  
- begins with resorption around Havers canal

Raman microspectroscopy

# Laboratory tests

Calcium (Normal calcium 2,0 – 2,75 mmol/l)

Phosphorus (Normal phosphorus 0,7- 1,5 mmol/l)

ALP, bone isoemzyme of ALP

Vitamin D normal level: 20-80 ng/ml

Parathormon

Osteocalcin

CTX- C terminal peptid of collagen

NTX- N terminal telopeptid of collagen

Pyridinolin, deoxypyridinolin

Acid phosphatase

## Bone formation

ALP normal level 2,7 ukat/l in man and 2,3 ukat/l in woman.

- indicator of osteoblasts function. Marker of bone formation.

High levels in osteomalacia !!

Bone isoenzyme ALP- marker of bone formation.

Osteocalcin 3,4- 11,7 ng/ml u mužů, a 2,4- 10,0 ng/ml u žen.

C terminal propeptid of collagen I (PICP)

N terminal propeptid of collagen I (PINP) - products of collagen synthesis

# **Bone resorption**

Tartrate resistant acid phosphatase – marker of bone resorption

Pyridinolin and deoxypyridinolin (crosslinks)

- marker of collagen degradation

CTX- (C terminal peptid of collagen I)

NTX (N-terminal peptid of collagen I)

- products of proteolytic resorption of collagen in bone

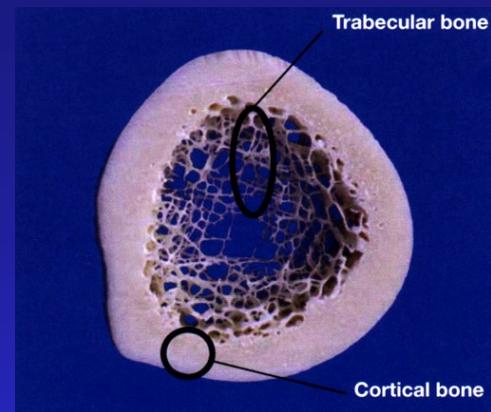

**Vitamin D** 40-80 ng/ml, under 20 ng/ml (severe hypovitaminosis)

**Parathormon** normal level 10-65 ng/ml.

# Strength of bone

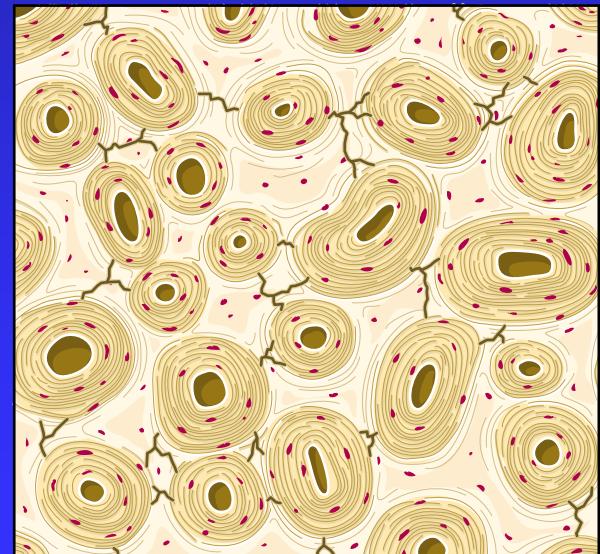

Density from BMD predicts only  
60-75 % od mechanical power of bone

Quality of cortical and trabecular bone,  
collagen and bone mineral

Cumulation of microdamage  
and microfractures

Remodelation of bone:  
-permanent removal of old  
and damaged bone

Microcracks

# Prevention of osteoporosis

- Maximal peak bone mass
- Management of disorders in children
- Removal of risk factors
- Management of gastrointestinal disorders
- Nutrition with calcium and vitamin D
- Physical activity

# Management

Analgetics

Physiotherapy

Nutrition (proteins, calcium)

Calcium - 1300 mg/day

Vitamin D - 800 I.U/day

Drugs

Orthesis

Surgery

Physiotherapy:

Bone crystals are orientated according the forces

Piesoelectric efect activates osteoblasts for more production of bone osteoid

# Nutrition

BMI 23-25

Proteins 1,0 g/kg/day

+ 30g of proteins /day

IGF-1 – insulin like growth factor

# Calcium

1,5 g / day

Application in the evening

# Calcium

- Calcium eff. Pharmavit 500, 1000 mg
- Calcium Sandoz forte 500 mg eff.
- Calcium Slovakofarma eff.
- Maxi-Kalz eff tbl, 100, 500 mg.
- Vitacalcin pulvis, tablety
- Biomin H plv.- Ca, Mg + IGF-1.

# Calcium

- Kombi-Kalz pulv, 1000Ca+ 880 IU vit D.
- Osteocare tbl.
- Caltrate plus tbl
- Calcium 500 + vit D3 eff.
- Calcium D forte cps
- Calcicew

# Vitamin D

7-dihydrocholesterol

In the skin -UV beams -cholecalciferol

In liver conversion to 25-OH vit. D3

In kidneys conversion to 1,25 dihydroxy-vit. D3

Active agent is calcitriol 1,25 (OH) D3.

80-90% of daily use is covered by sun radiation

# Vitamin D

60 % off seniors have hypovitaminosis of  
vitamin D

Optimal level in blood is 80 nmol/l  
Hypovitaminosis - bellow 20 nmol/l

Dosage: 800 IU/day

# Vitamin D

- Infadin gtt, vit D cps., Vigantol oel, gtt
- Rocaltrol cps, Vitamín D Slovakofarma cps
- Calciferol inj.
- 1 alfa (OH) D3 – alfakalcidol - Alpha D3
- 1 alfa (OH) D2 – doxercalciferol ( Hectorol)
- 22 oxakalcitriol (OCT)
- 19 nor 1,25 (OH)2 D2 – parikalcitriol (Zemplar)

# Management of osteoporosis

Inhibition of bone resorption  
Stimulation of bone formation

Bisphosphonates- Alendronát (Fosavance)

Risedronát (Actone)

Ibandronát (Bonviva)

Zolendronát (Aclasta)

Denosumab (Prolia)

Parathormon, teriparatid

– syntetic parathormon 1-34 fragment  
(Forsteo)

SERM- bazedoxifen

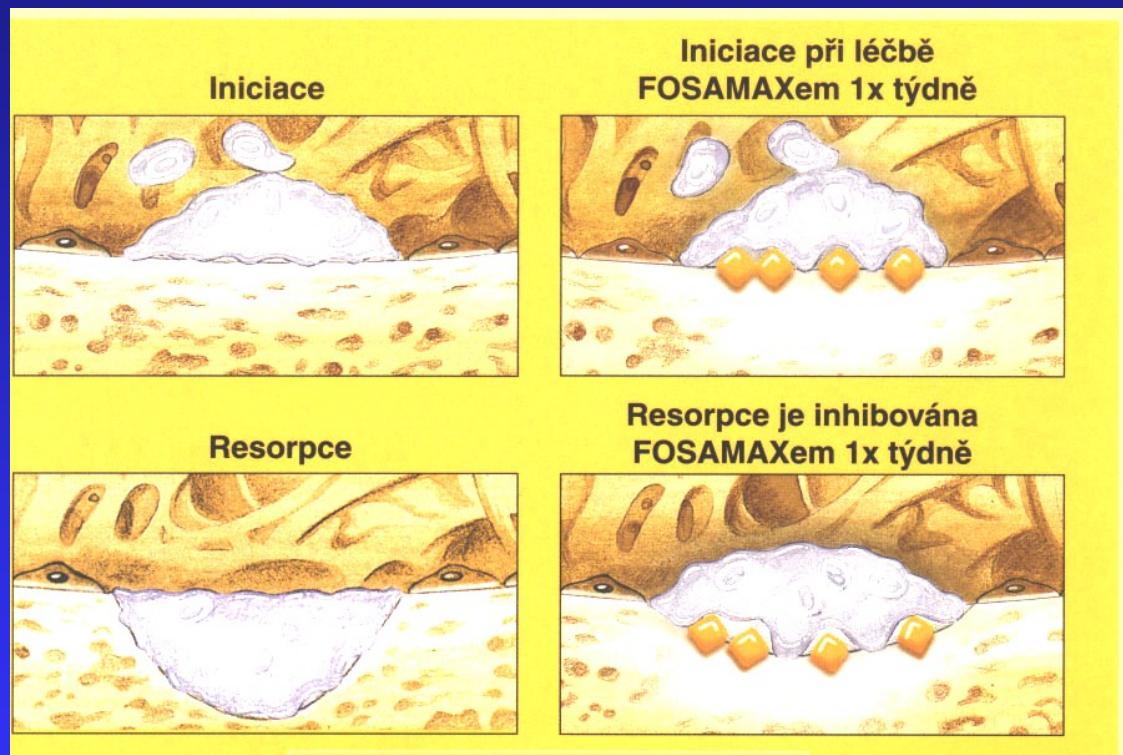

# Bisphosphonates

Incorporation in HA crystals and matrix

Inhibition of formation,  
agregation and  
dissolution of crystals

Inhibition of bone  
resorption

Fosamax

# Bisphosphonates

- Reduction of activity of osteoclasts
- Induction of apoptosis of osteoclasts

# Bisphosphonates - indications

Osteoporotic fractures

All forms of osteoporosis

Paget 's disease of bone

Hypercalcemia in carcinomas or myeloma

# Bisphosphonates

Pamidronate - Aredia inj.

Clodronate – Bonefos inj, cps., Lodronat inj, cps.

Ibandronate – Bonviva tbl., Bondronate inj.

Alendronate – Fosamax 70 mg tbl., Alendros tbl.

Risedronate - Actonel tbl.

Zoledronate – Aclasta inj.

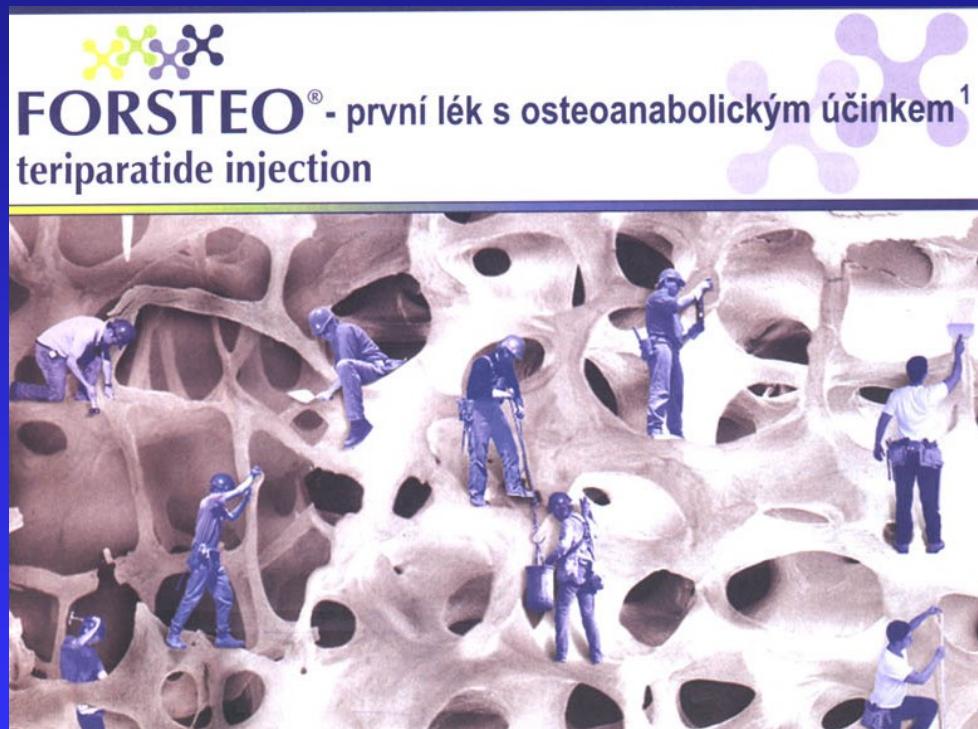

# SERM - selective modulators of estrogen receptors

## Bazedoxifen

- Agonists on bone and cardiovascular apparatus
- Antagonists on endometrium and breast
- They bind on the same place as estrogens (receptors alfa, beta )

# Teriparatid – synthetic parathormon 1- 34 fragment

Stimulates bone formation  
Stimulates osteoblasts  
and remodeledation  
Improves the strength  
of trabecular and cortical  
bone

# New agents

## 1. Monoclonal sclerostin antibodies

Romosozumab, Blosozumab

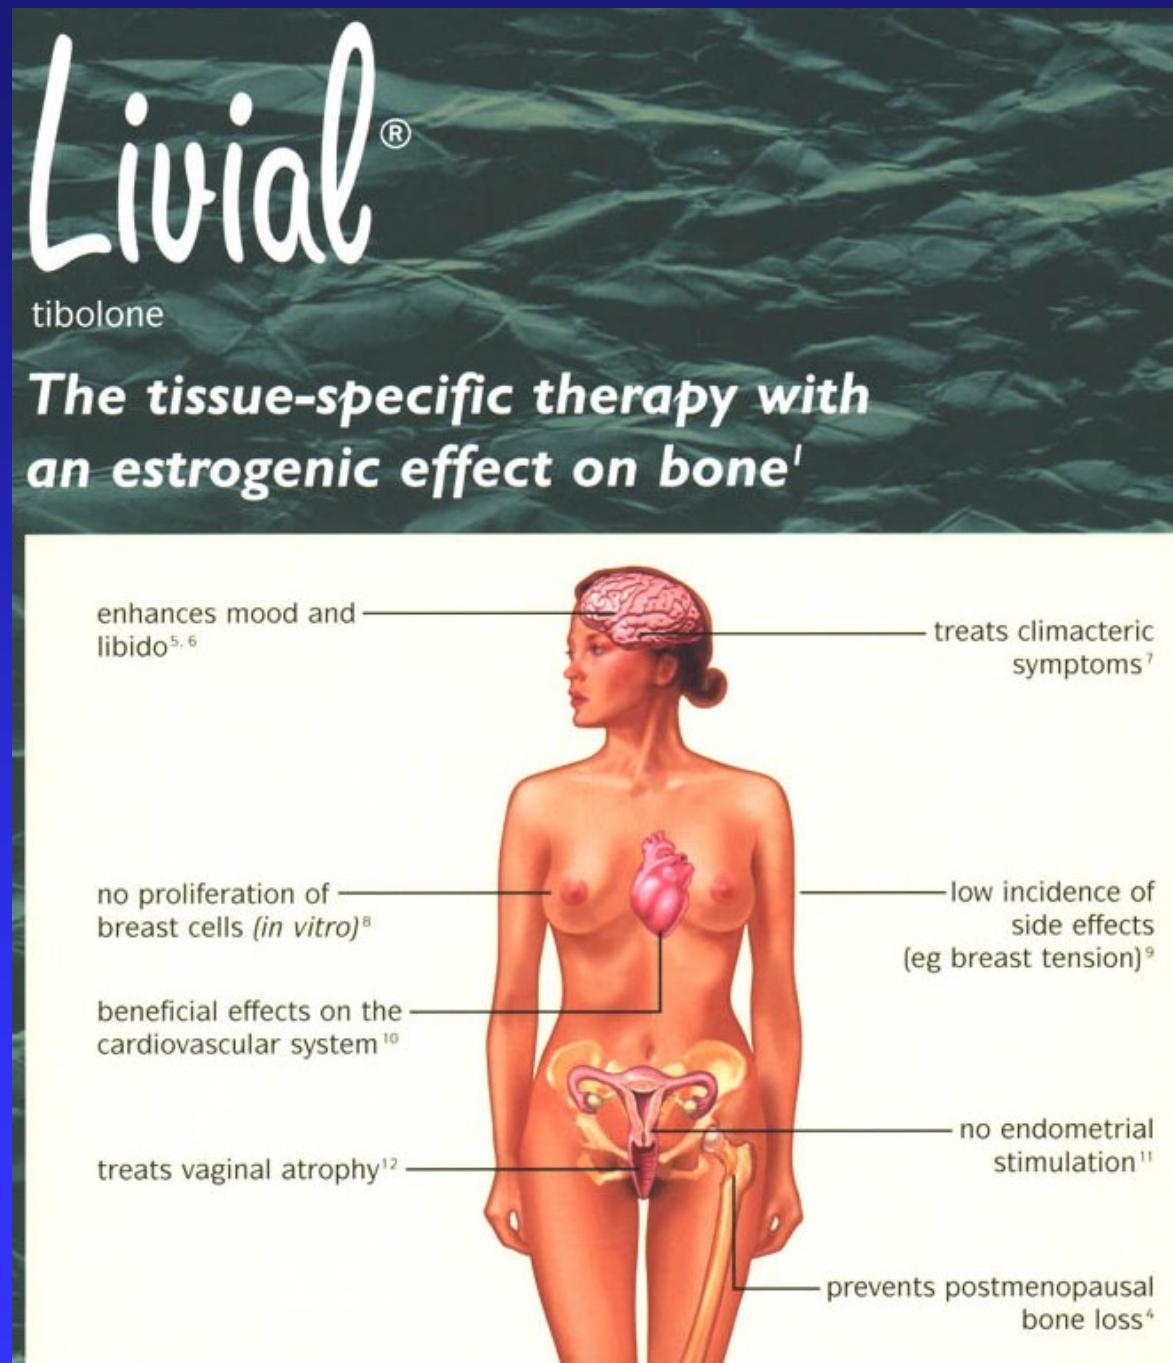

Osteoformative effect

Sclerostin – inhibitor of osteoblasts  
production from osteocytes  
stimulates bone resorption via RANKL

## 2. Inhibitors of katepsin K- inhibition of bone resorption

Odanatocibe

HRT  
no evidence of effect

# Frailty syndrom

1. Loss of weight 4-5 kg/year
2. Exhaustion
3. Muscle weakness / handgrip      more than 20 %
4. Lower velocity of gait                less than 20 %
5. Lower physical activity                less than 20 %

# Frailty syndrom

Subclinically

Early frail

Late frail

Endstage frailty syndrom: terminal geriatric deterioration

# Frailty syndrom

Disposition to falls

Disposition to organ decompensation

Worsening of cognitive functions

Need for help in daily activities

Sarcopenia

Osteoporosis

Low level of vitamin D

# Occurrence

Advanced age

7 % persons over 65 years

25 % persons over 75 years

Loss of muscle power 20 % in 65-70 years

Loss of muscle power 60 % in 80 years

Cause: longlasting deficiency of vitamin D

# Risk factors of frailty syndrom

Cardiovascular disease

Diabetes mellitus

Atherosclerosis

Renal failure

Neurologic disorders

Obesity

Hormonal dysfunction

Hypovitaminosis D

# Prevention and treatment of frailty syndrom

Frailty syndrom is reversible

Nutrition and proteins 1,3 g/kg/day

Vit D 800 IU/day till 2000 IU/day

Vigantol 1 drop = 500 IU, alpha kalcidol 1 µg

Strengthening of muscles, exercise, walking

Strengthening of stability, prevention of falls

Prevention of atherosclerosis

Management of other comorbidities

Aleviating of pain

Stop walking when talking

# Sarcopenia

Loss of muscle substance more than 20-30 %

Dysbalance between synthesis and degradation of muscles  
(myostatin, glucorticoids, sexual hormones, insulin, IGF-I )

Osteopenia

Sedentary way of life

# Sarcopenia

Muscle densitometry: below 2 SD – man under 7,26 kg/m<sup>2</sup>  
- woman under 5,45 kg/m<sup>2</sup>

MRI

Hand grip- dynamometr

Flexion- extension of the knee

Maximal forced breathing out

Velocity of gait

Test of balance

Get up and go test

Walking on stairs

# Medication

Vit D 800 IU/day till 2000 IU/day

Vigantol 1 drop = 500 IU

Alpha kalcidol 1 µg

Testosteron

Ghrelin

GH secretogoga

Estrogens

Leptin

# Consequenses of sarcopenia

Lower physical activity (myosteatosis, sarkopenic obesity)

Sarcoporosis

Higher risk of falls

Risk factors for developing of sarcopenia:  
Parkinson sy, multiple sclerosis, CVA, catarracta

# Management

Farmacotherapy of osteoporosis diminishes risk of fragility fractures only 20-50 %

- + frailty syndrom
- + sarcopenia
- + osteoarthritis
- + other comorbidities
- + prevention of falls

# Differential diagnosis

Osteoporosis with corticosteroids

Condition after transplantations

Cushing syndrom

Hyperthyreosis

Rheumatoid arthritis

Osteogenesis imperfecta

Fibrous osseous dysplasia

Osteomyelitis

Myeloma, tumors, osteolytic metastasis

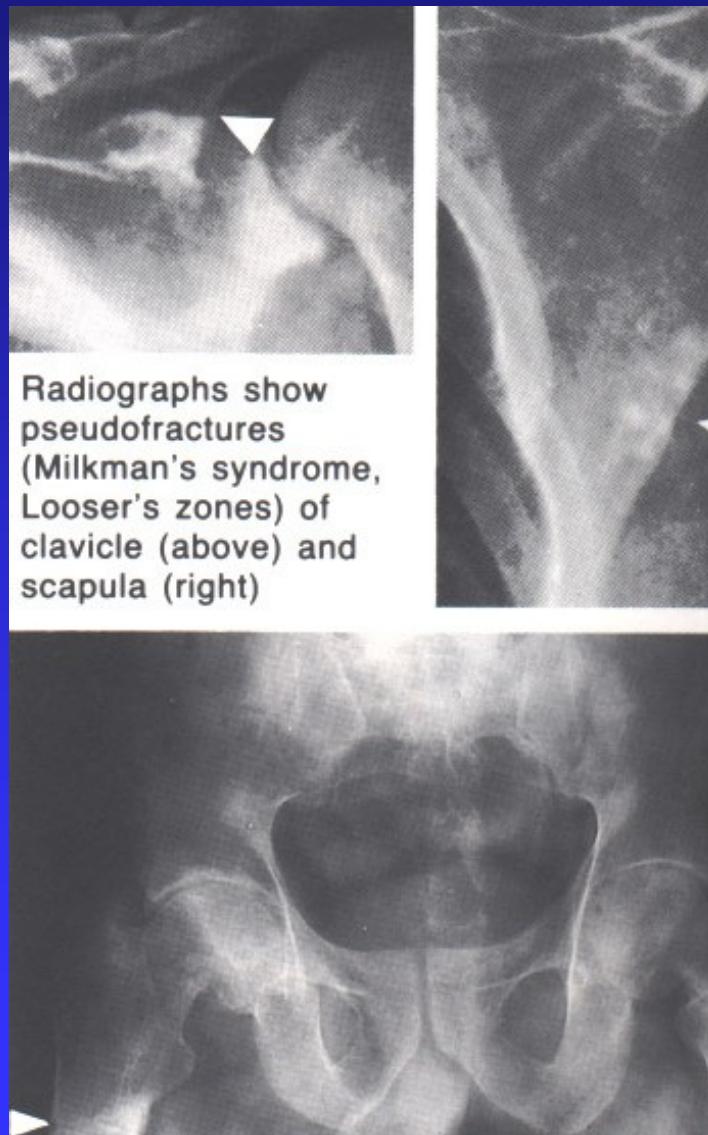

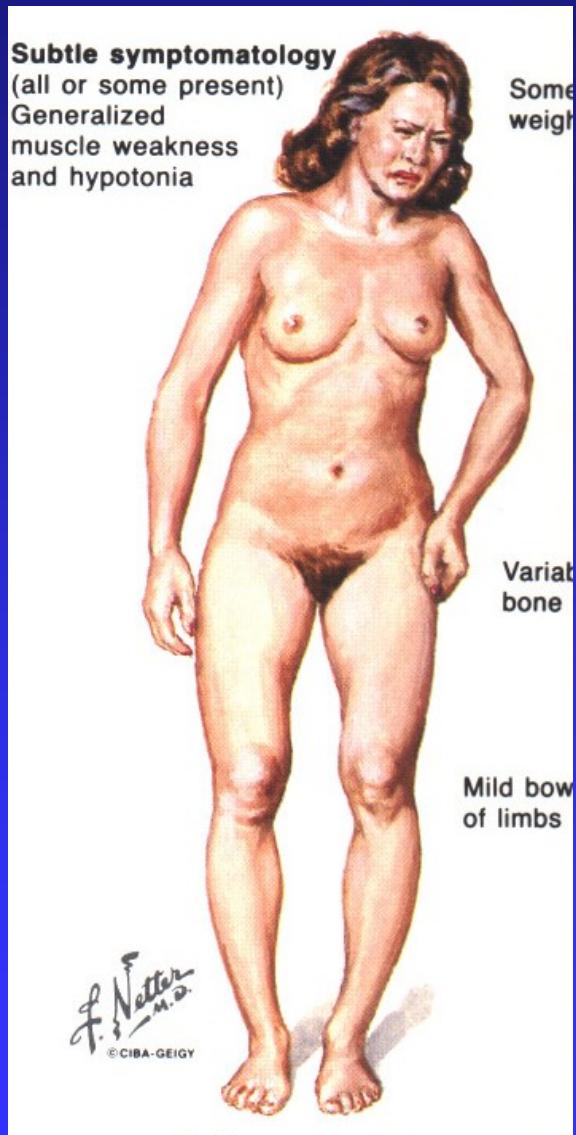

Malnutrition

Algoneurodystrophy

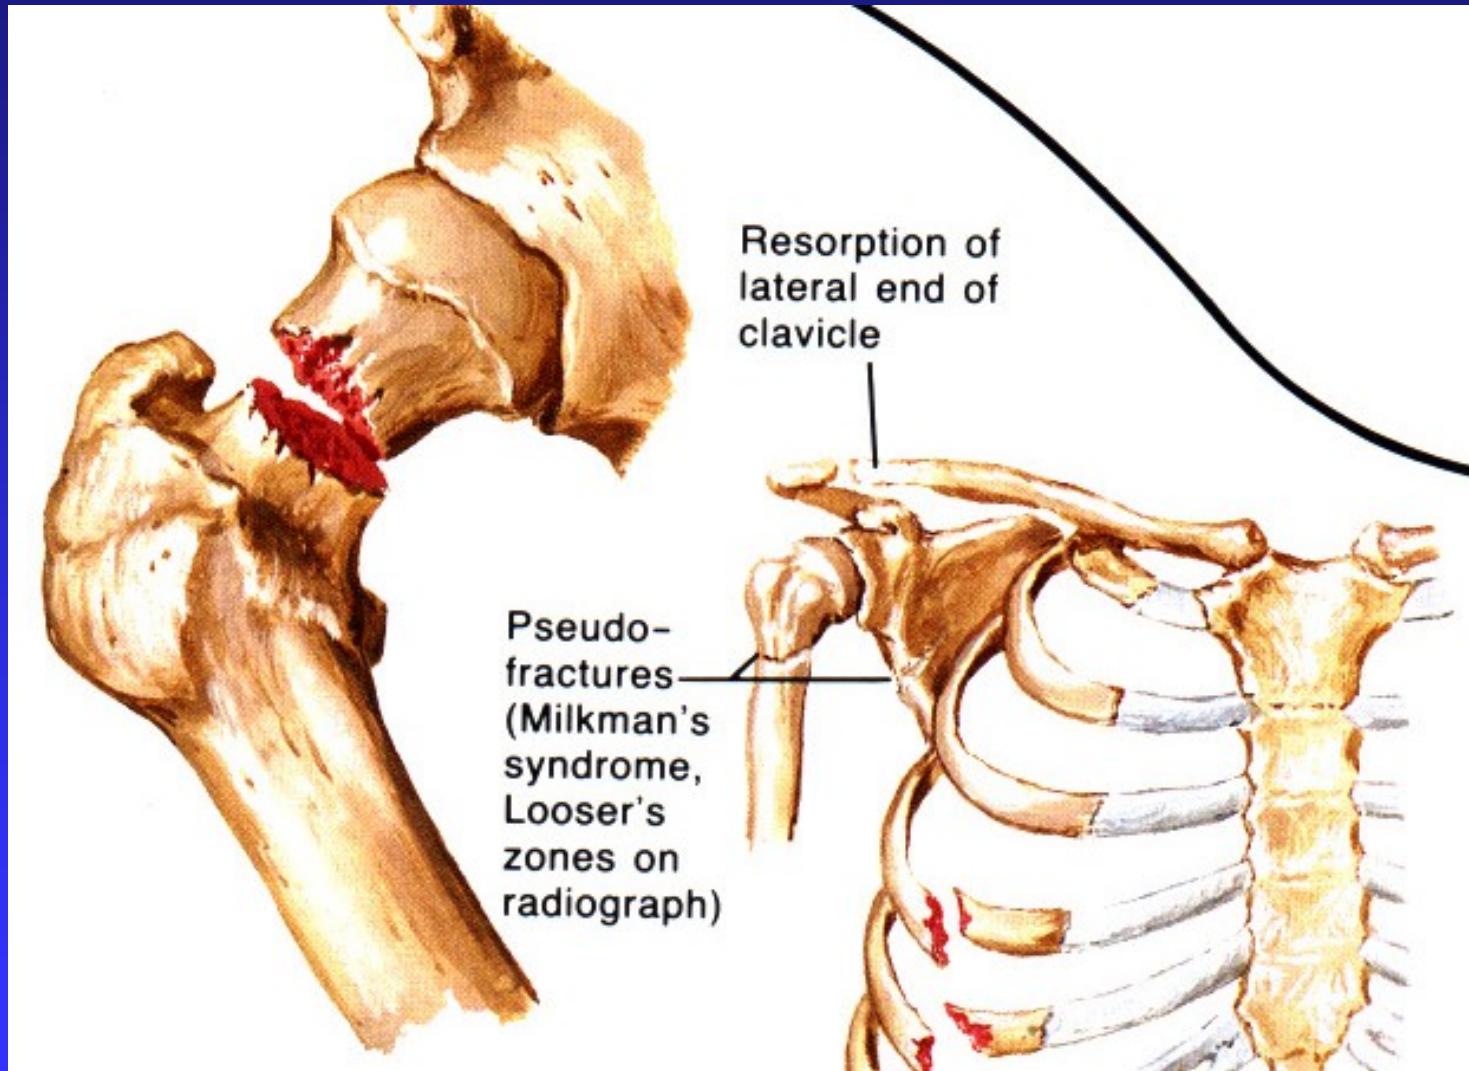

# Osteomalatia

- Systemic disorders in adults
- Bone is in a form of nonmineralised osteoid
- Calcium is not laid in HA crystals
- Bone is soft
- The cause: lack of vitamin D

# Osteomalatia

# Osteomalacia

# Symptoms

- Diffuse pain in skeleton
- Muscle weakness
- Tenderness of bones
- Deformities of bones
- Thoracic kyphosis

# Laboratory tests

- High level of alcaline phosphatase
- High level of bone isoenzyme of ALP
- Low level of calcium
- Normal level of phophorus

# Radiological finding

Rarefaction of skeleton

Narrow cortical bone

Looser's zone of remodelling

- non mineralised osteoid

Biconcave shape of vertebrae

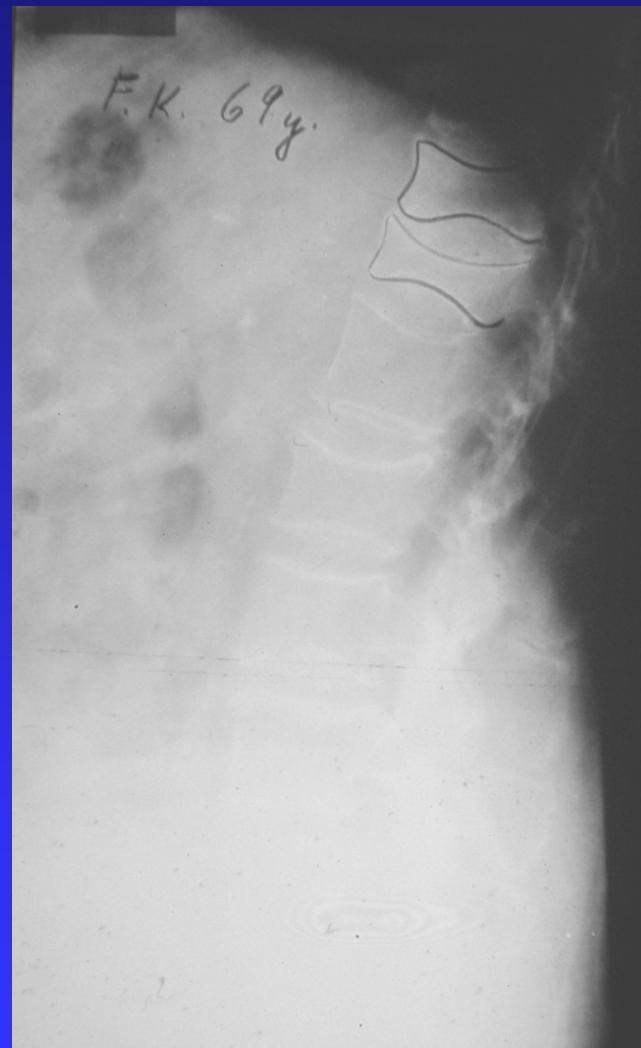

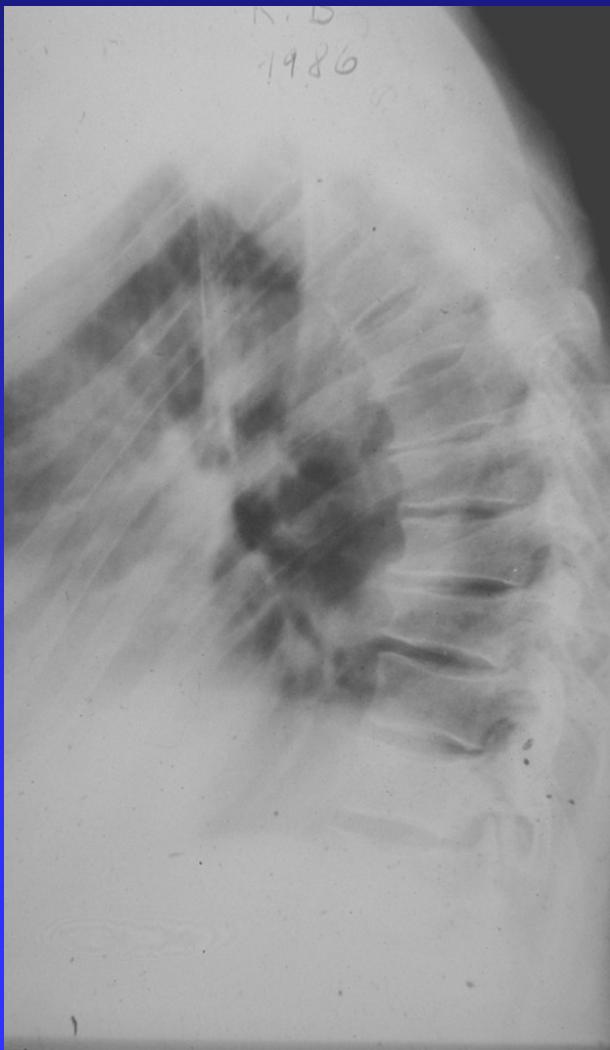

coxa vara

Protrusion of acetabulum

Thoracic hyperkyphosis

# Osteomalacia

# Prevention

- Vitamin D - sun radiation and in food
- Application of vitamin D in renal and liver disorders

# Therapy

- Vit. D 10 000 IU per day i.m.
- Calciferol inj.
- Vit. D p.os 2000 IU daily
- Calcium 1000 - 2000 IU daily
- Food with milk, sea fish

# Rickets

1. Lack of vitamin D
2. Lack of phosphates

Inability to calcify of matrix

Bone is soft

Bending of bone

Wide growth plates

Metaphysis is wide

Deformities of bones

# Rickets

Fatigue

Enlargement of abdomen

Walking ability - worsened

Craniotabes

Large fontanelles

Dental disturbances

Caput quadratum

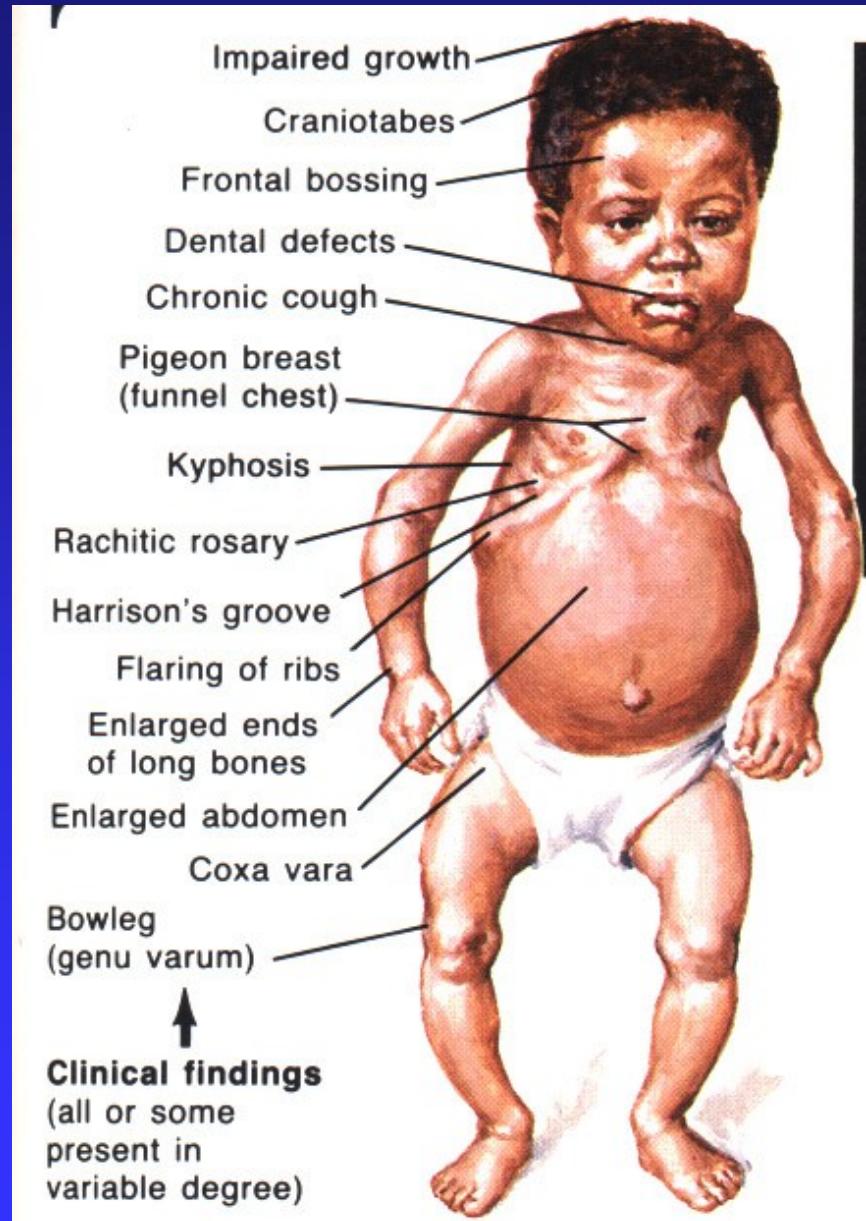

Harrison's groove

Rachitic rosary

Pectus carinatum

Crura et coxa vara

Pedes plani

# Management

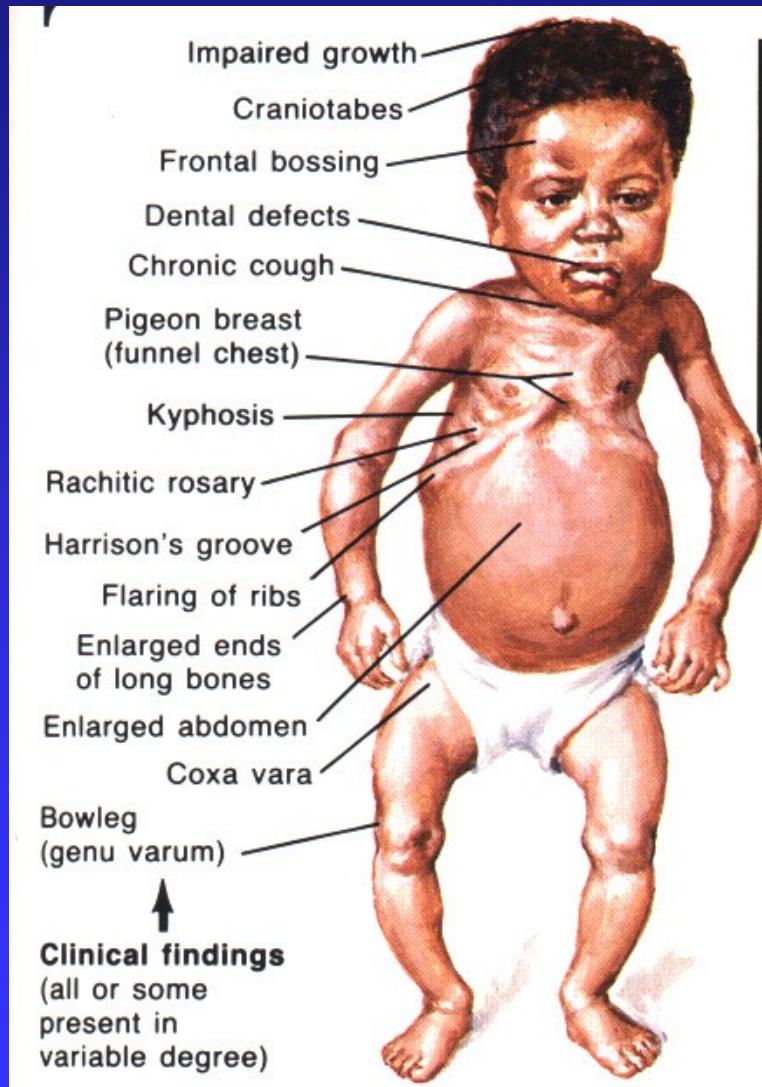

Vitamin D 500- 1000 IU/day 10 weeks

Sun radiation

Milk products with vitamin D

Orthesis

Osteotomies

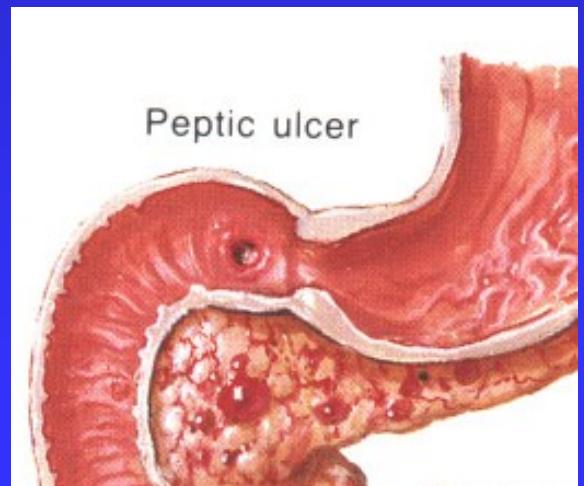

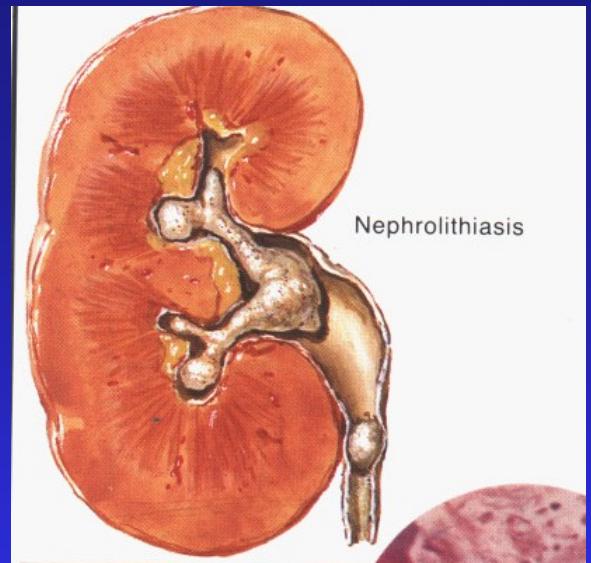

# Hyperparathyreoidisms

## - HPT

- Adenoma of parathyroid glands
- Hyperplasia of parathyryoid glands
- Carcinoma of parathyrdoid glands

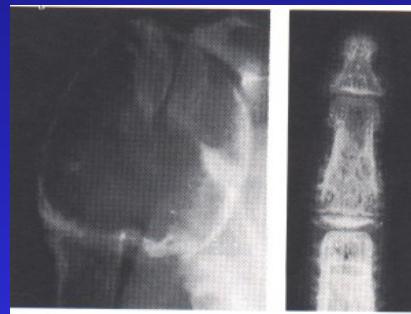

# Primary HPT

- Nefrolithiasis, polyuria, polydypsia
- Osteodystrofia fibrosa cystica generalisata
- Gastrointestinal problems
- Acute pancreatitis, cholelithiasis
- Muscle weakness, fatigue, bone pain
- Chondrocalcosis, calcifications

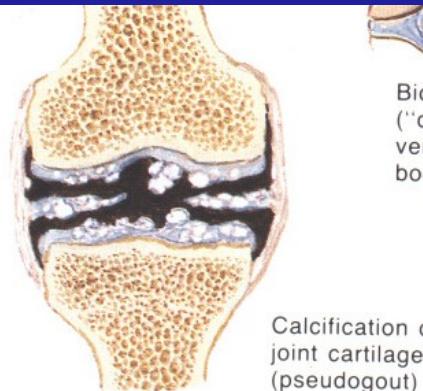

# Primary HPT

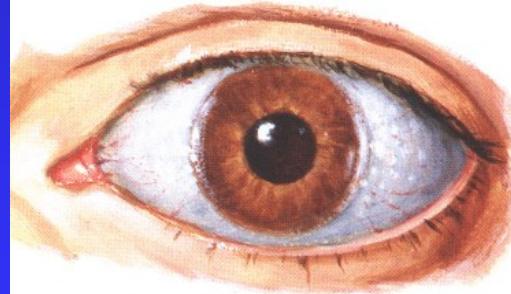

- High level of calcium
- Hypofosfatemia
- Hyperfosfaturia
- High level of ALP
- High level of parathormon

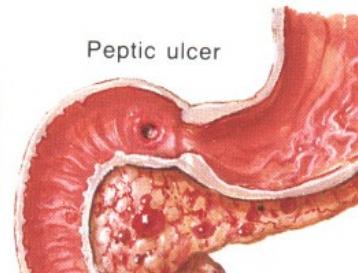

Radiographs show bone rarefaction, cysts, fractures (left); subperiosteal resorption (right)

Calcification of joint cartilage (pseudogout)

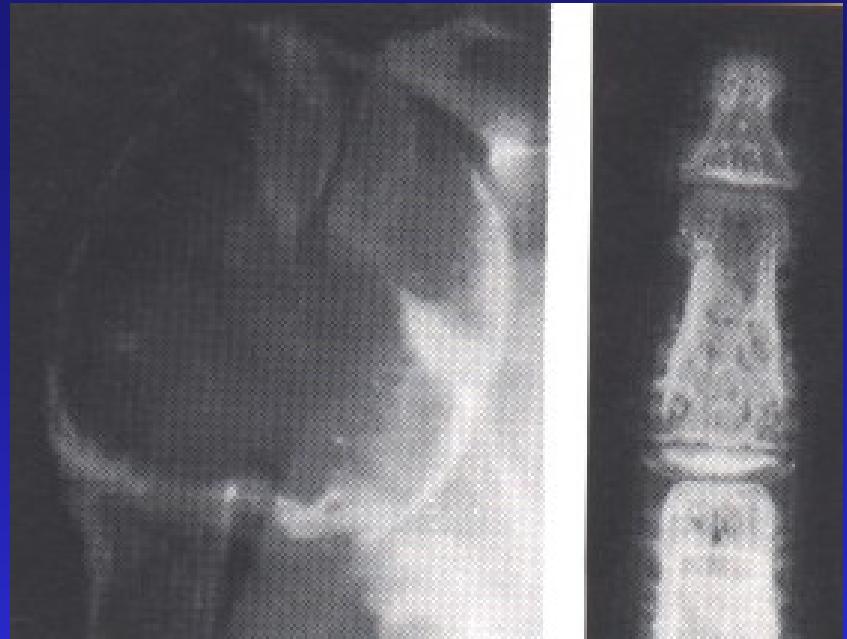

Peptic ulcer

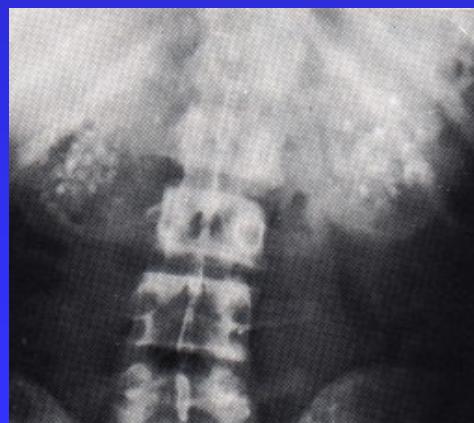

Bio  
("c  
ve  
bo

# Radiological finding

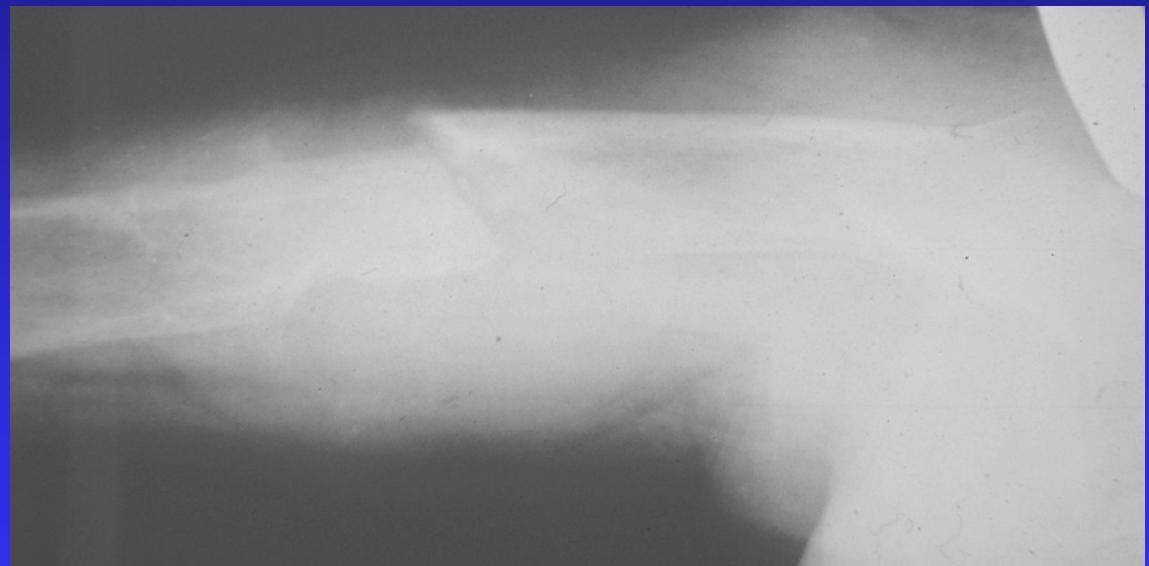

Rarefaction in skeleton  
Narrow corticalis bone  
Resorption in phalangs  
Large cysts as bone tumors

Kyphosis  
Coxa vara  
Fisures and complete fractures

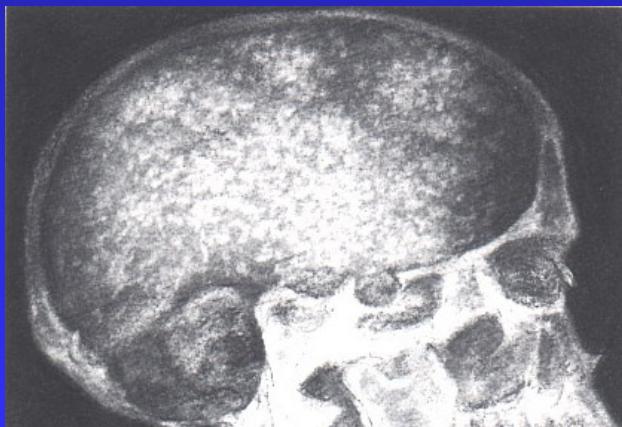

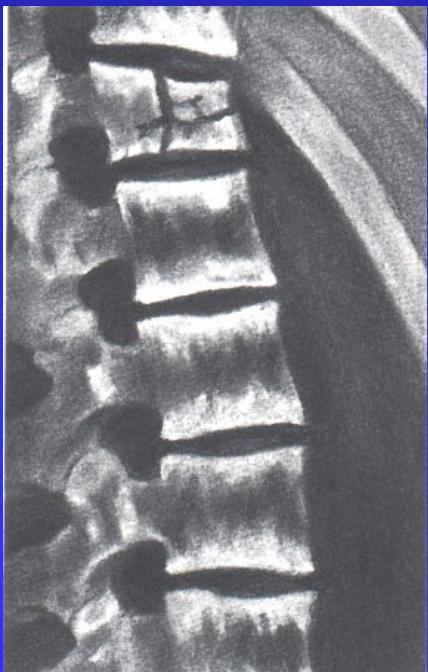

# Primary HPT

# Renal osteodystrophy - secondary HPT in renal disorders

Secondary hyperplasia of parathyroid glands

# Renal osteodystrophy

Fatigue, bone pain

Muscle weakness

Fractures

Th: Treatment of renal disorders

vitamin D3

calcium

## Secondary HPT

- Malabsorption of vitamin D

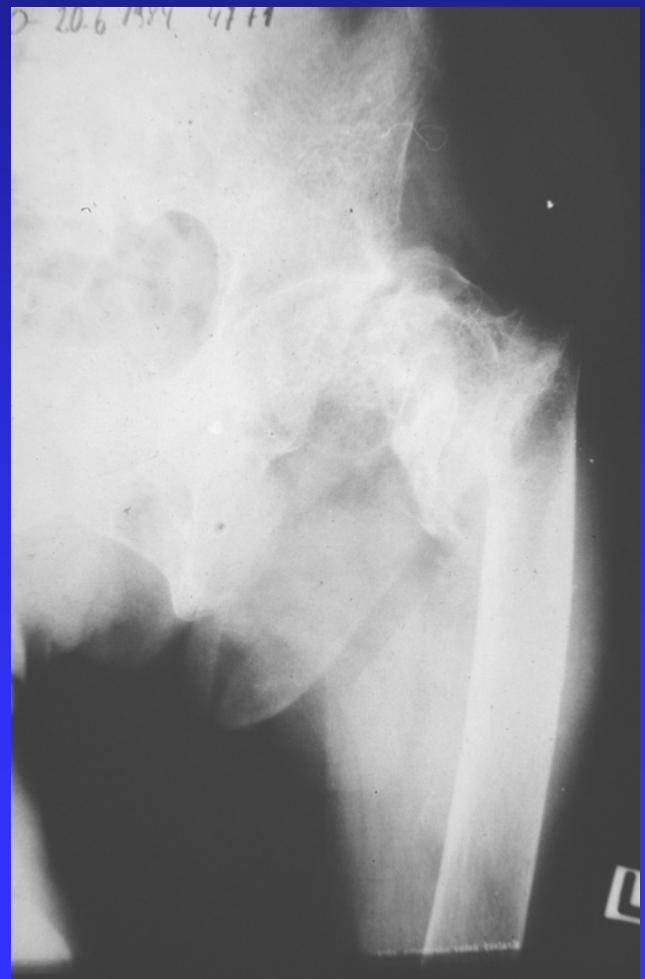

Resection of the stomach or intestine,  
gall bladder problems, coeliakia,  
pancreatitis

Pain in bones

Muscle weakness

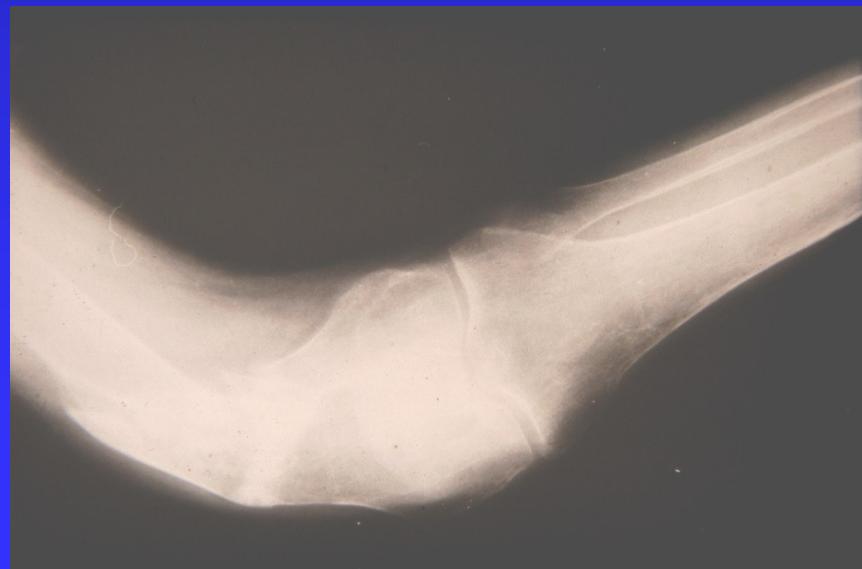

Pseudofractures

Deformities of bone

Secondary HPT  
- malabsorption of vitamin D

# Paget 's disease of bone

- Sir James Paget in 1876
- Chronic disease
- Slow viral infection (distemper virus from group of paramyxoviruses)
- GB, USA, Australia, New Zealand, France  
Germany, Malta.

# Morbus Paget

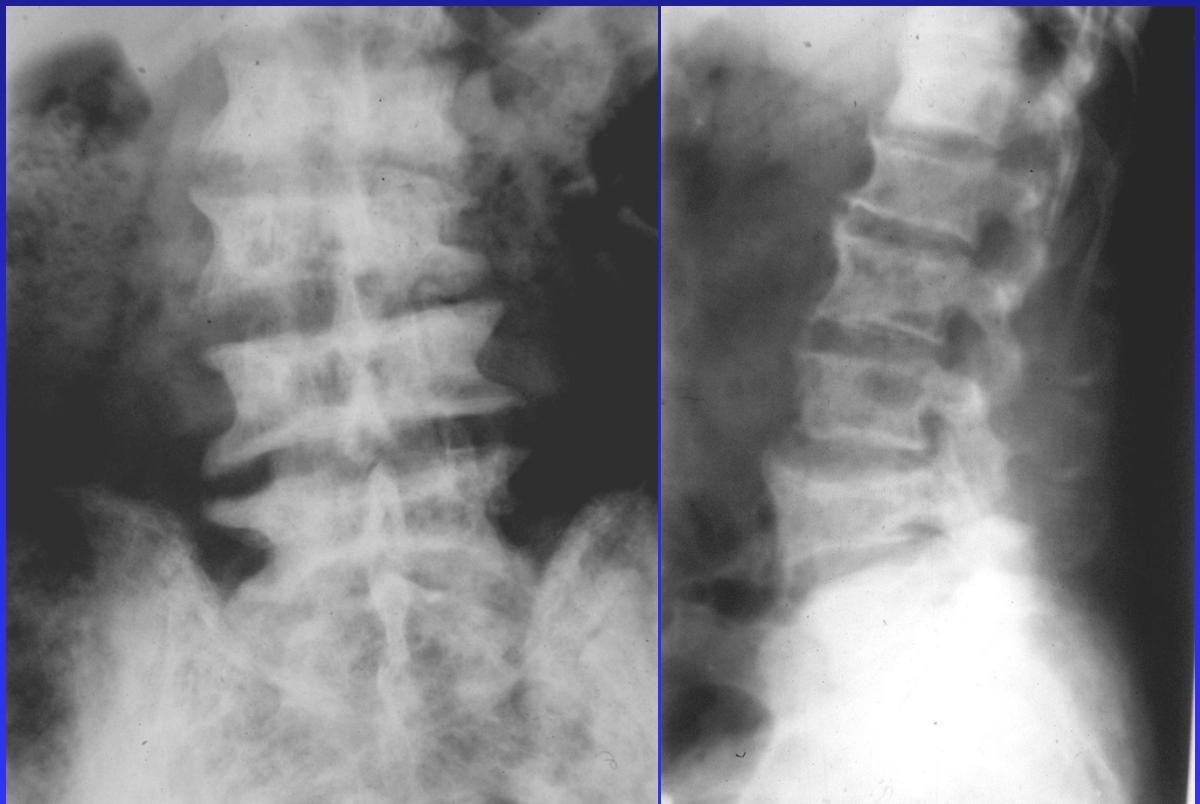

- 1. Osteolytic phase
- 2. Mixed phase
- 3. Osteoblastic phase

# Morbus Paget

- Monoostotic form - 20 %
- Polyostotic form
- 95 % are asymptomatic
- 5% symptomatic

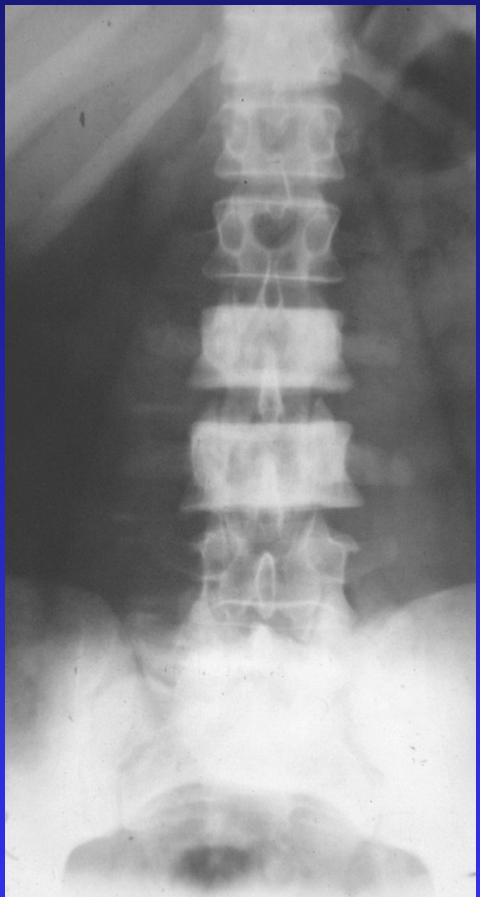

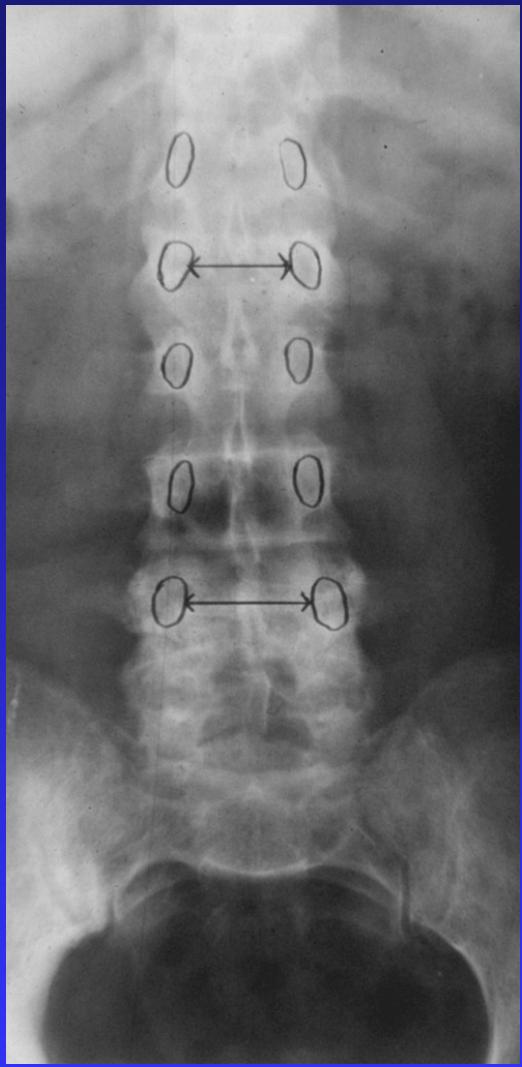

# Symptoms

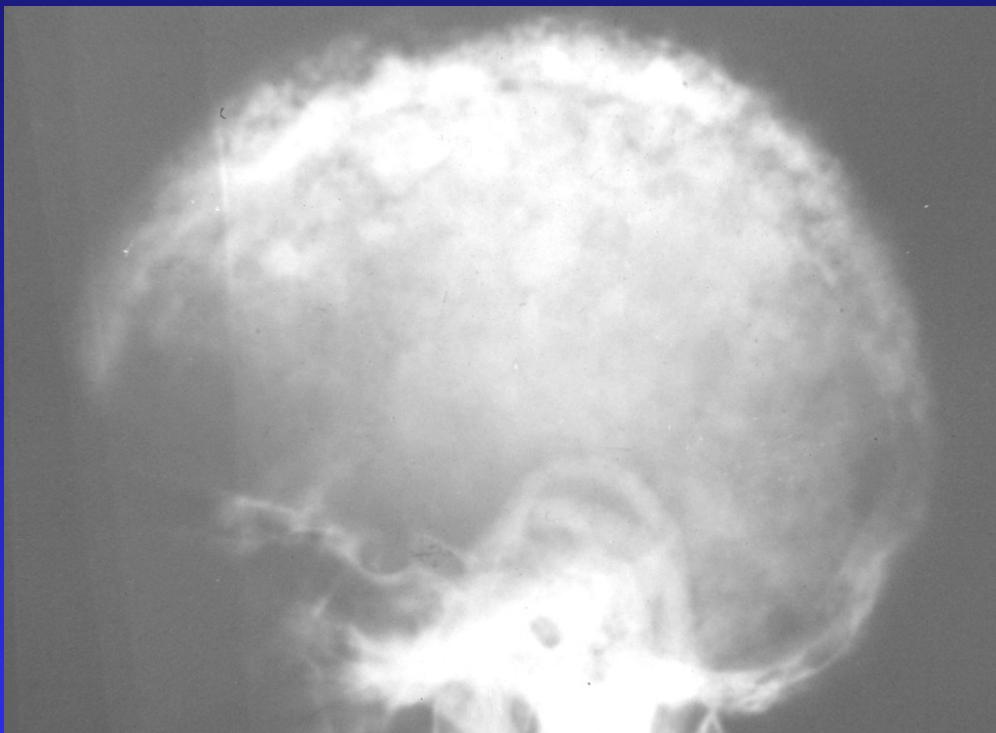

- Pain
- Fatigue
- Deformities
- Complications

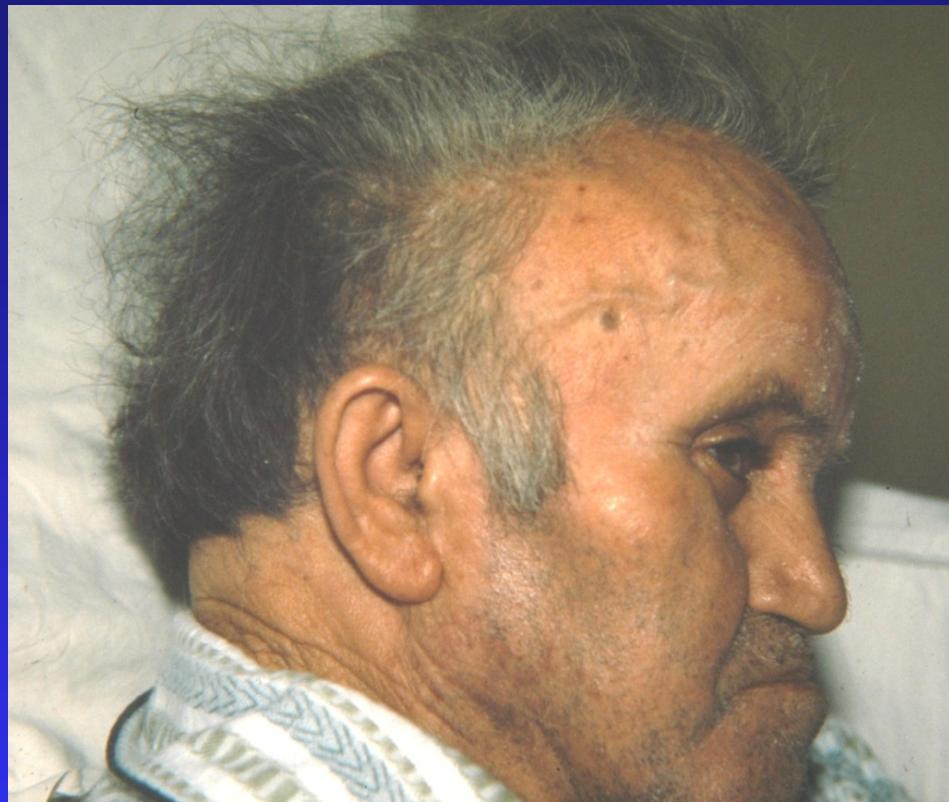

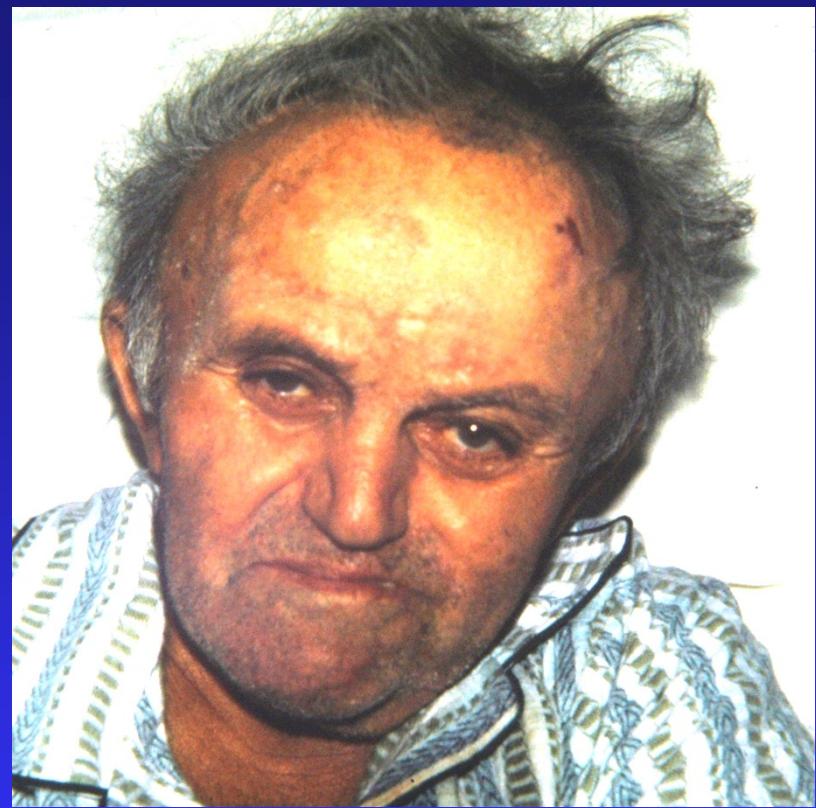

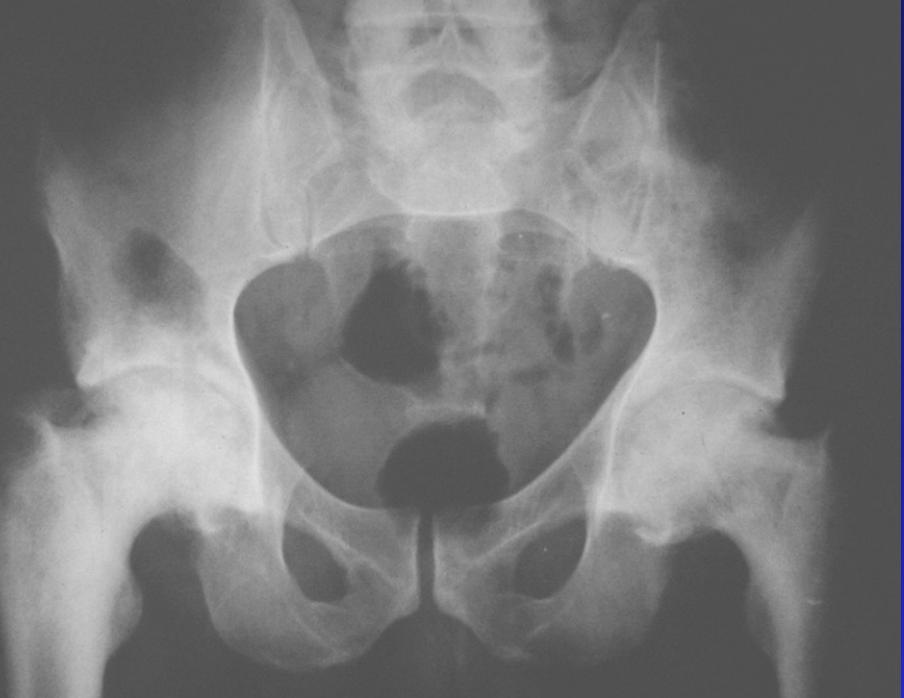

# Clinical symptoms

- Mild
- Moderate
- Severe

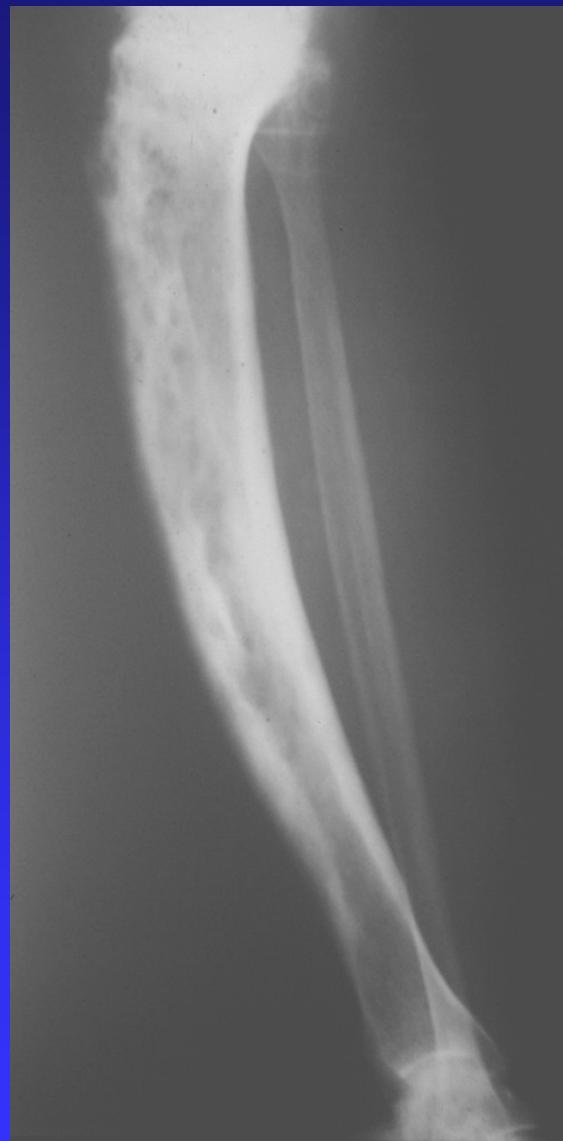

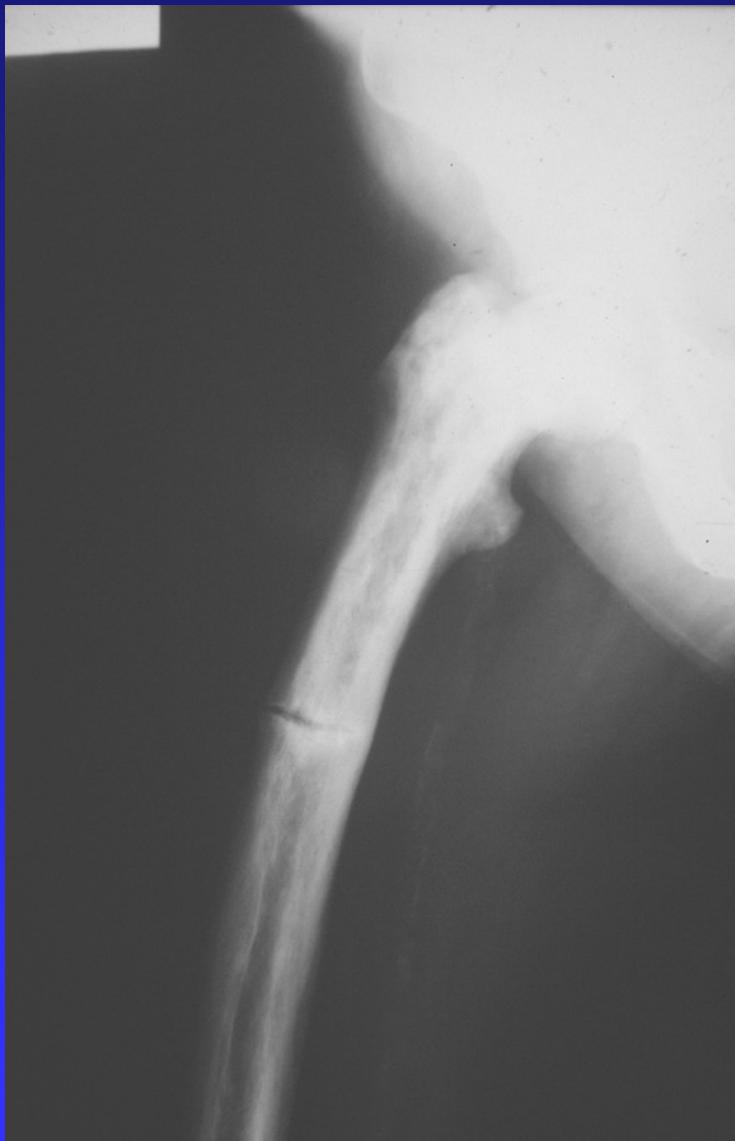

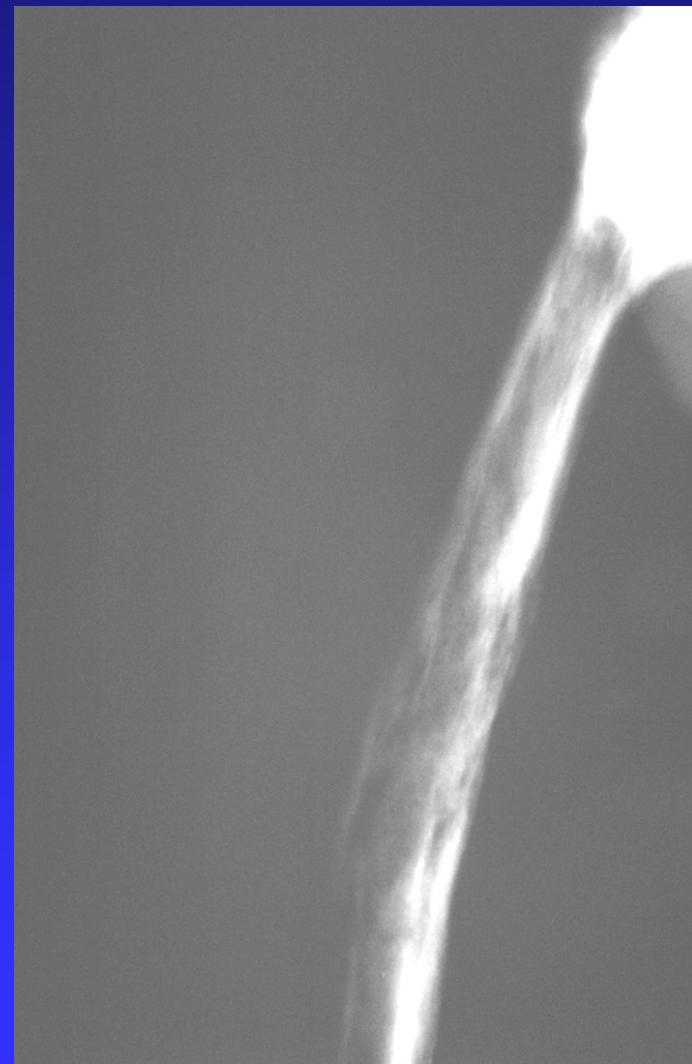

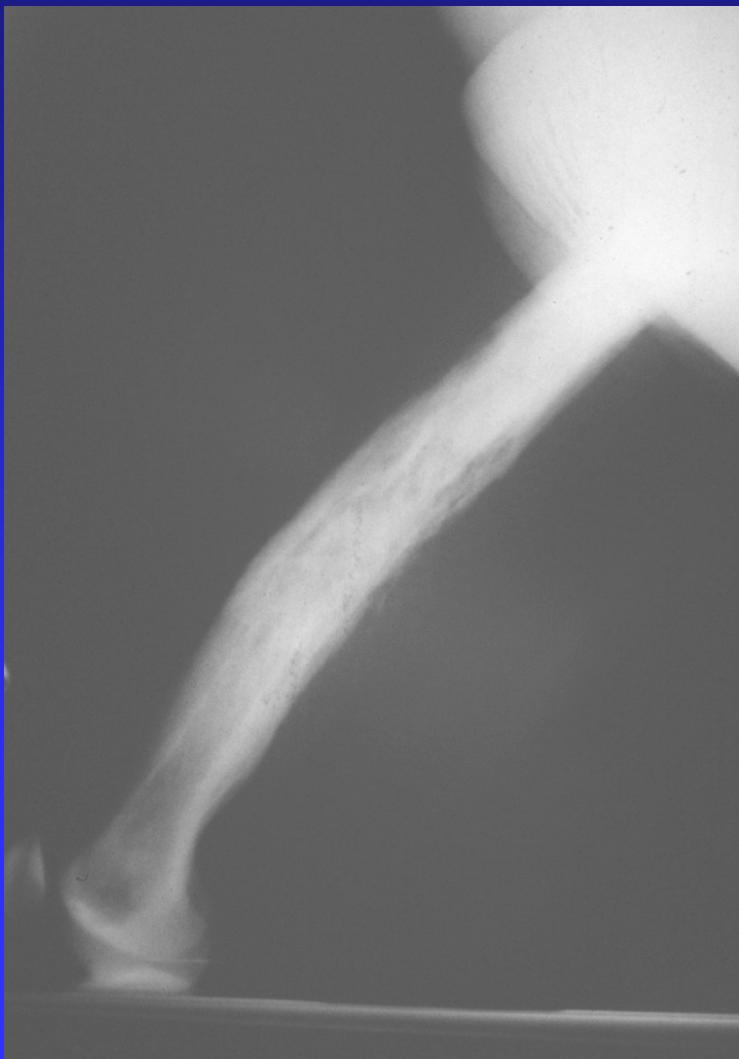

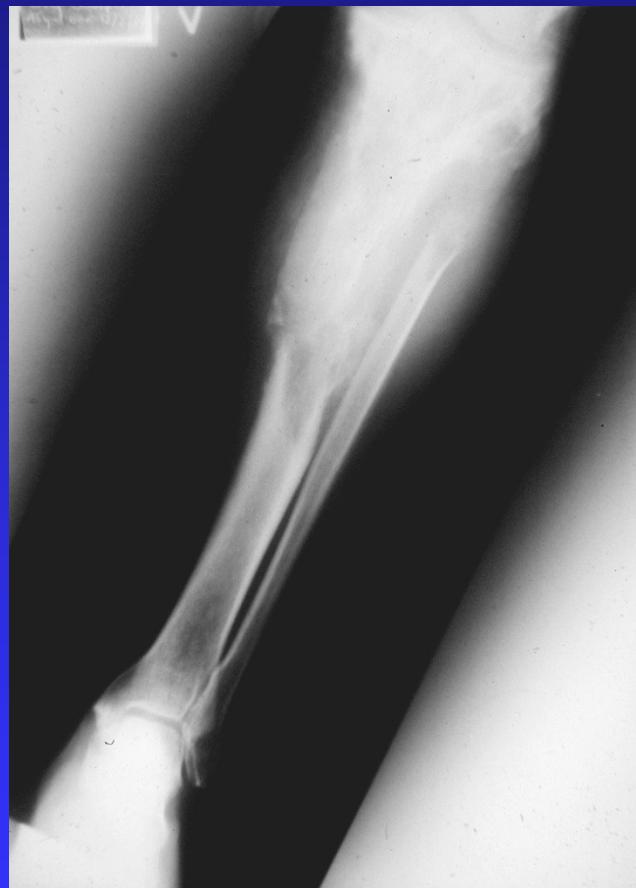

Gothic arch

# Complications

Fissures

Fractures

Osteoarthritis

Deafness

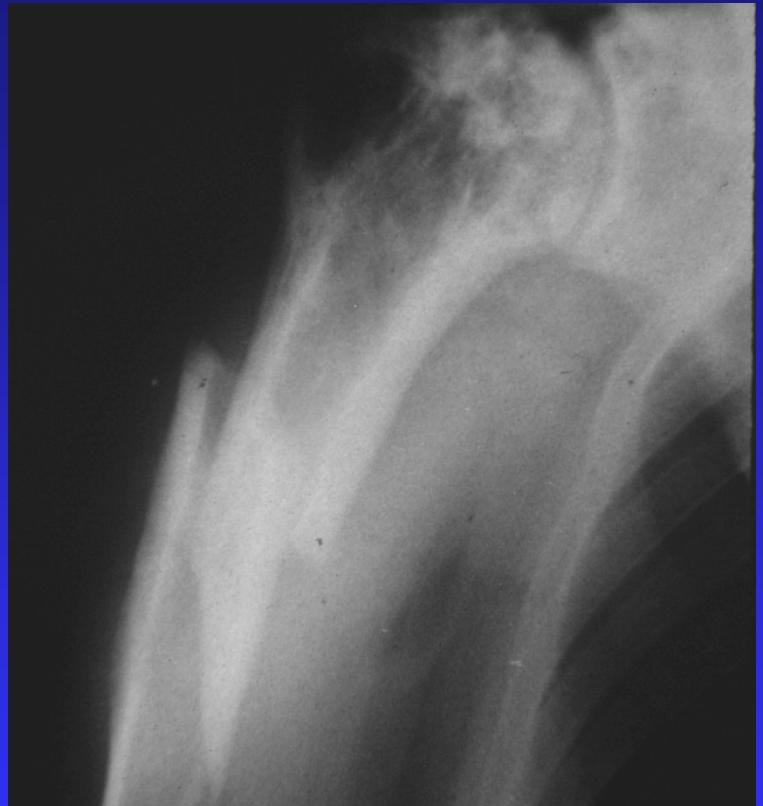

Neuralgia n. trigeminus

Basilar invagination

Vertebrobasilar insufficiency

Paraparesis, sciatica

Dental problems

# Complications

Hypertension

Ischemic heart disease

Cardiomegaly

Neoplastic degeneration

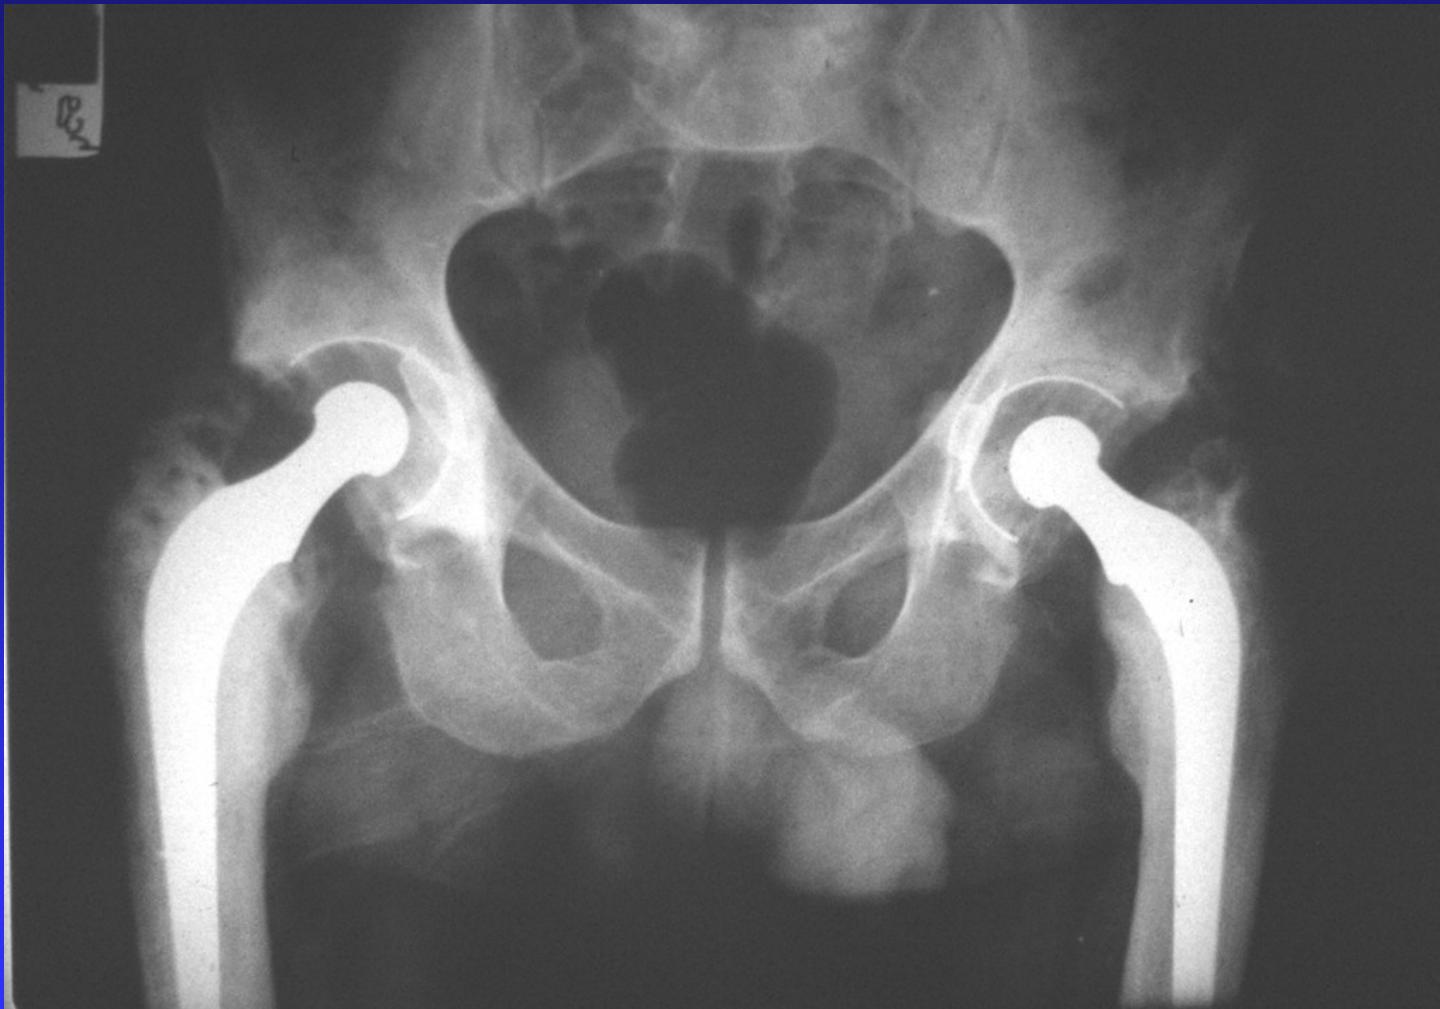

sarcoma

Nefrolithiasis

Calcifications

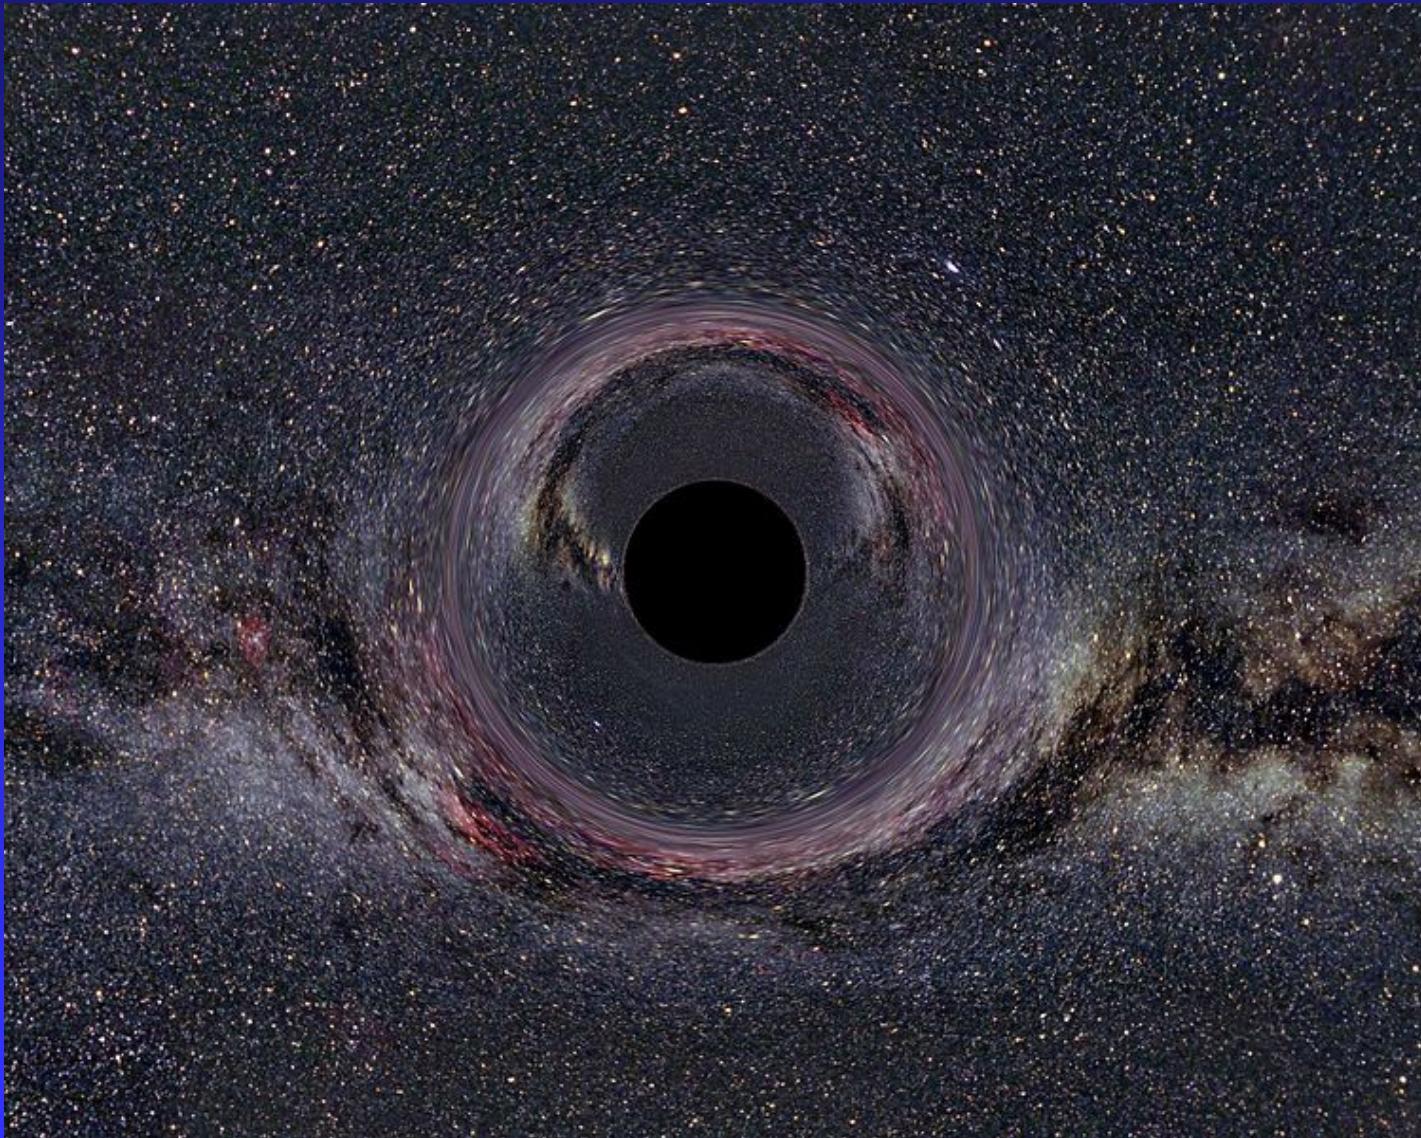

# Management

- Bisphosphonates (Fosamax 40 mg daily three months, Pamidronate, Zoledronate)
- Calcium
- Therapy of complications
- Osteosynthesis of fx
- Total knee and hip replacement

Charnley total hip arthroplasty

# Thank You for Your attention

Black Hole of the Milky Way
