Instrukce

- Do protokolu vložit:
- Histogram a dot plot s měřeným znakem CD63 (CD203c je pro kontrolu, zda opravdu došlo k aktivaci buněk – do protokolu vkládat není nutné).
- Vypsát % CD63+ pozitivních buněk (- a + kontrola, ředění 10x).
- Ti, kterým vyšetřovaný alergen vyšel negativní, navíc do protokolu vloží pozitivní výsledek od jiné skupiny (viz. červená barva)
- Interpretace – jak vyšly kontroly? Je výsledek pozit./negat.? Pokud je pozitivní, co to pro pacienta znamená?
