"Gonorrhea, syphilis, chlamydia, herpes,  
HIV positive, genital warts..."

# The most frequent agents of STD

- Papillomaviruses
- Chlamydiae
- Yeasts

## Other common agents of STD:

HBV,

HCV

HIV

HSV 2

*Mycoplasma & Ureaplasma  
Gardnerella vaginalis*

*Trichomonas vaginalis  
Sarcoptes scabiei  
Phthirus pubis*

# Papillomaviruses

The most frequent agent of genital infections

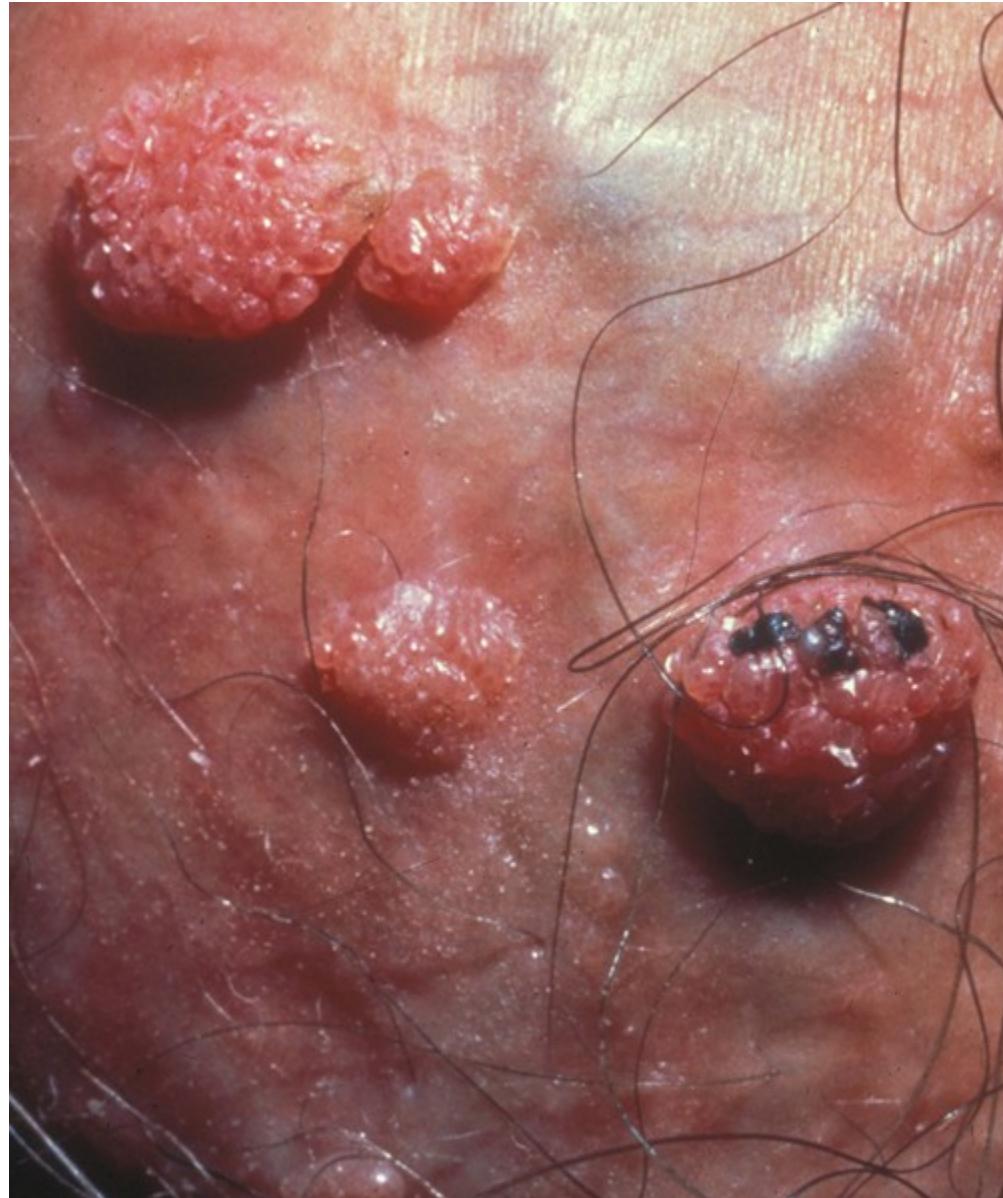

Genotypes 6, 11 and many others:

both & : anogenital warts  
(condylomata acuminate)

Genotypes 16, 18 and some other  
: infection of cervix → Ca

Vaccination against carcinogenic types!

## Anogenital warts (condylomata accuminata)

# Chlamydiae

*Chlamydia trachomatis* serotypes D to K

: urethritis

: cervicitis

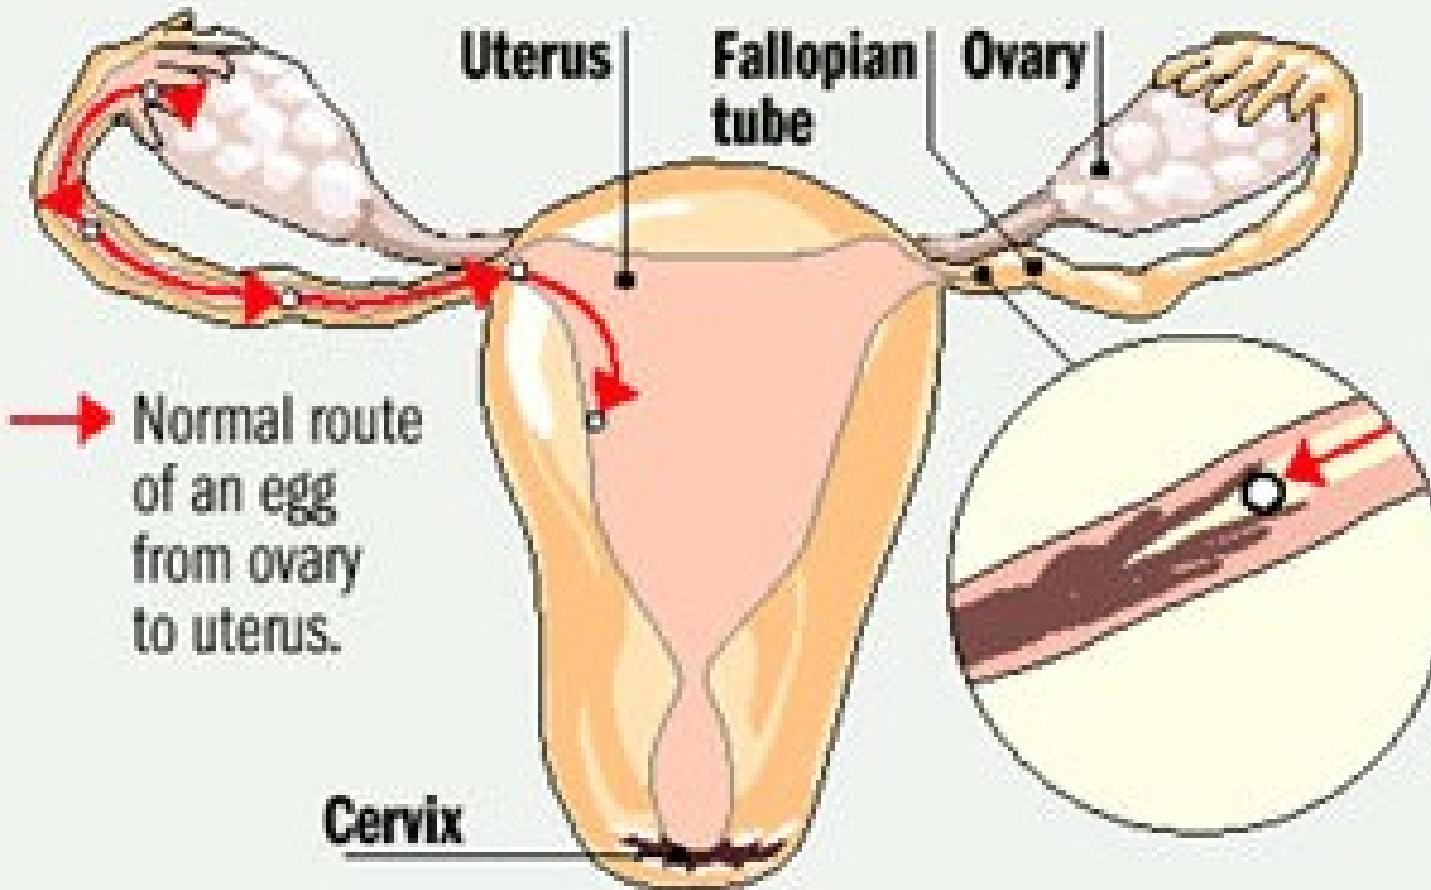

Therapy: macrolides and tetracyclines

Lab. dg: direct: detection of antigen

detection of DNA

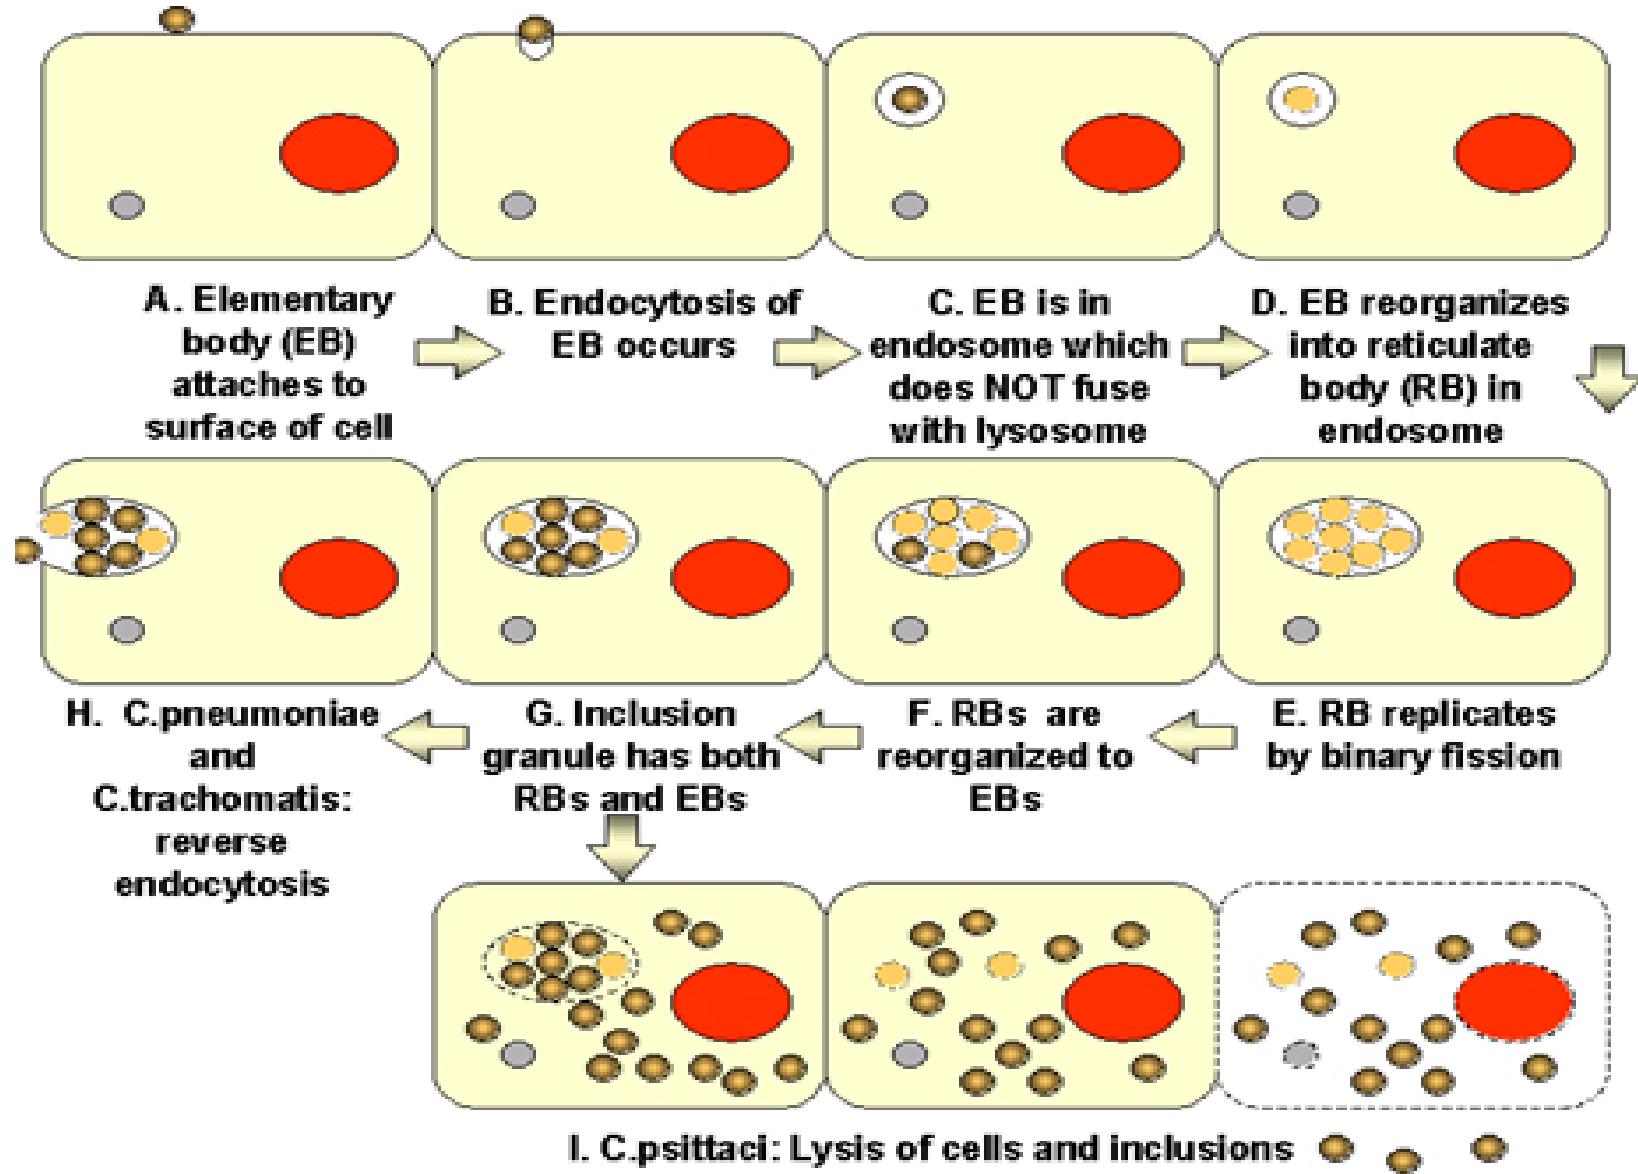

culture (special cell culture)

# CHLAMYDIA THE EFFECTS

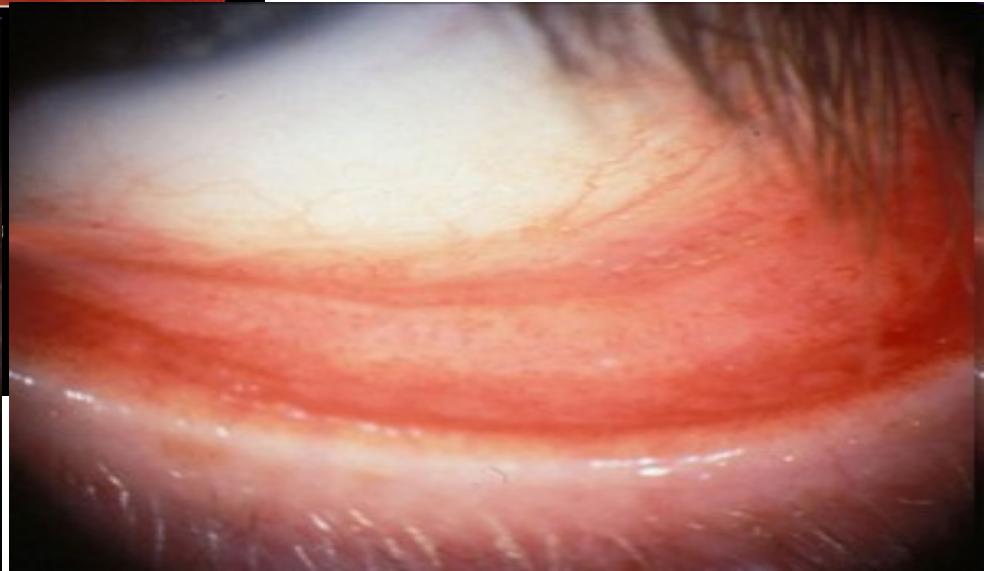

**Chlamydia** causes a build-up of scarring that can block the fallopian tube and prevent fertilisation.

# The developmental cycle of Chlamydia

## Adult Chlamydial Conjunctivitis

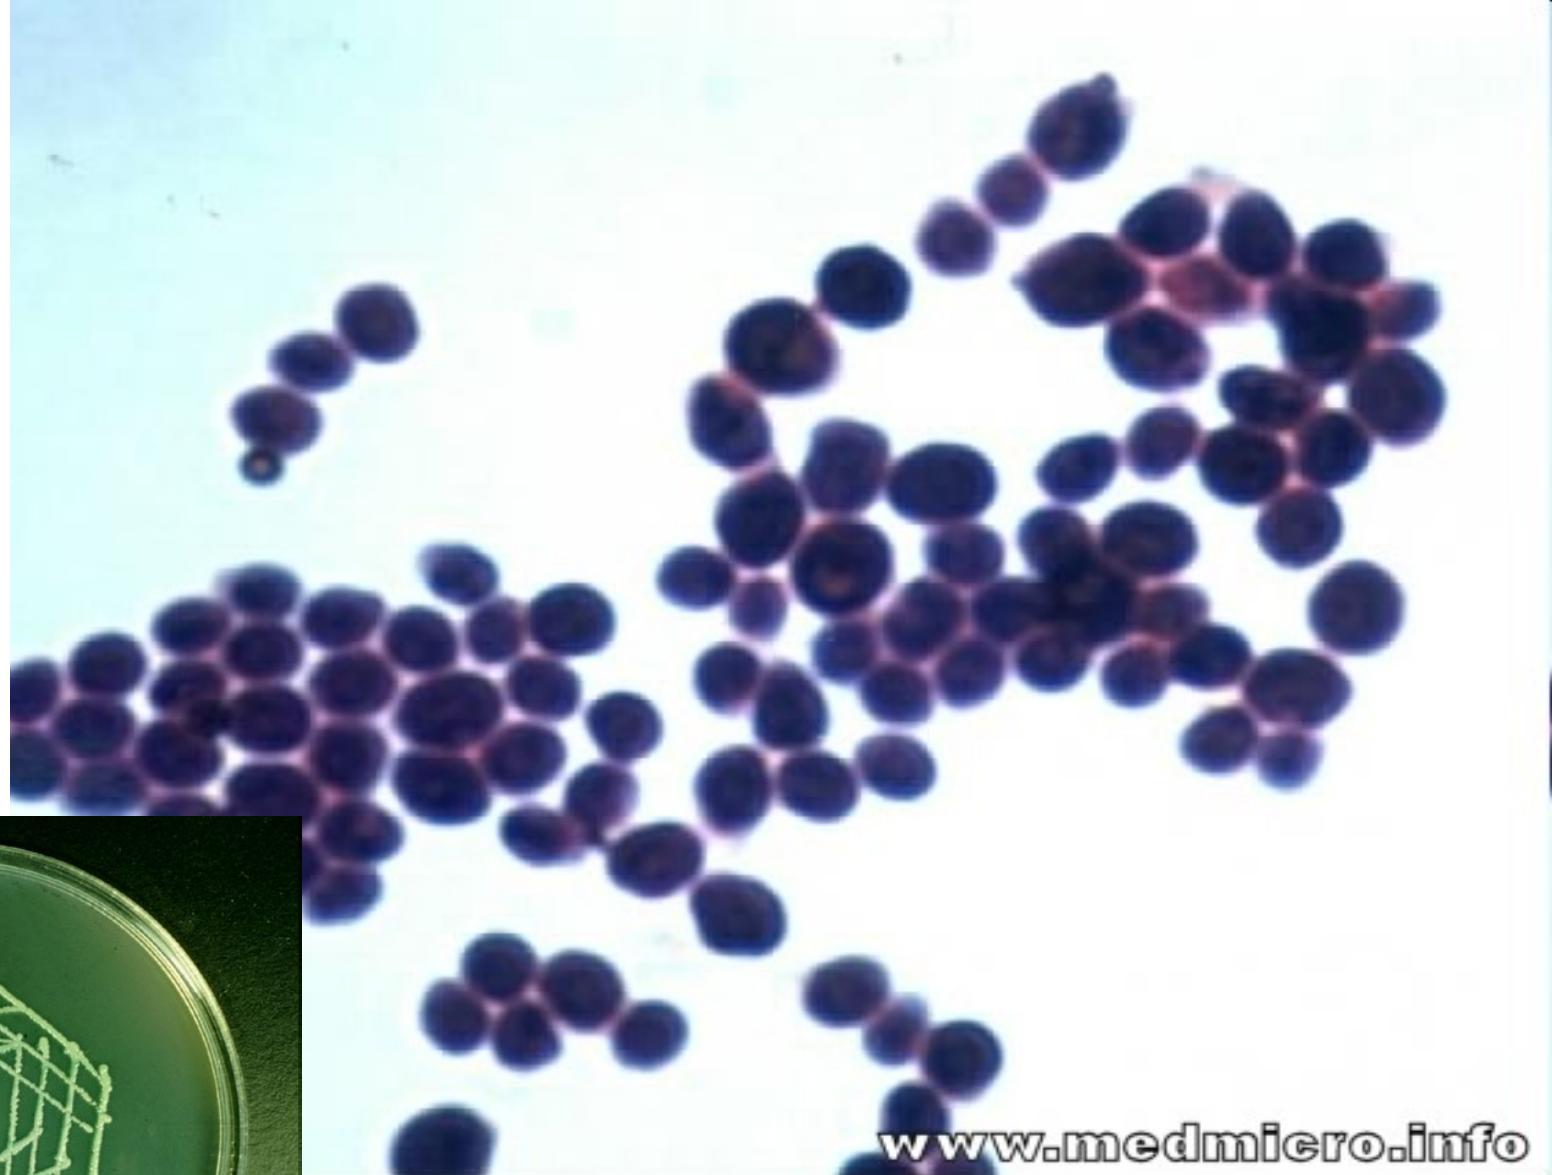

# Yeasts

*Candida albicans* : balanoposthitis  
: vaginal mycosis

Therapy: topical imidazoles (clotrimazole)  
systemic triazoles (fluconazole)

Lab. dg: microscopy  
culture (Sabouraud agar)

Seattle STD/HIV Prevention Training Center  
Source: University of Washington

<http://depts.washington.edu>

# Trichomonads

© CDC

*Trichomonas vaginalis* (a flagellate)

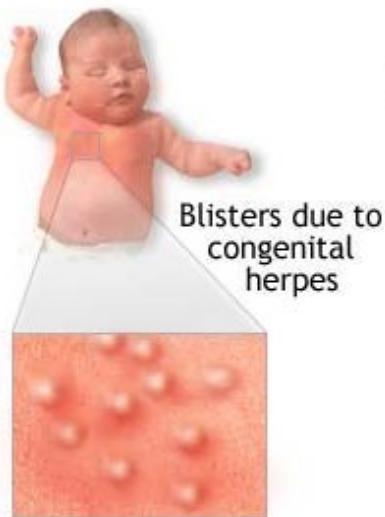

- : asymptomatic carriers
- : **vaginitis, cervicitis, urethritis**

**Therapy:** metronidazole (both partners)

**Lab. dg:** microscopy (wet mount, Giemsa stained film) & culture on special media

# Viral agents of STD – HSV 2

Mother with  
active herpes infection  
(although active infection  
may not be apparent)

©ADAM.

**Herpes simplex virus 2**

& : **herpes genitalis**

**Therapy: acyclovir**

**Lab. dg:**

- **PCR**
- **serology (primary infection)**

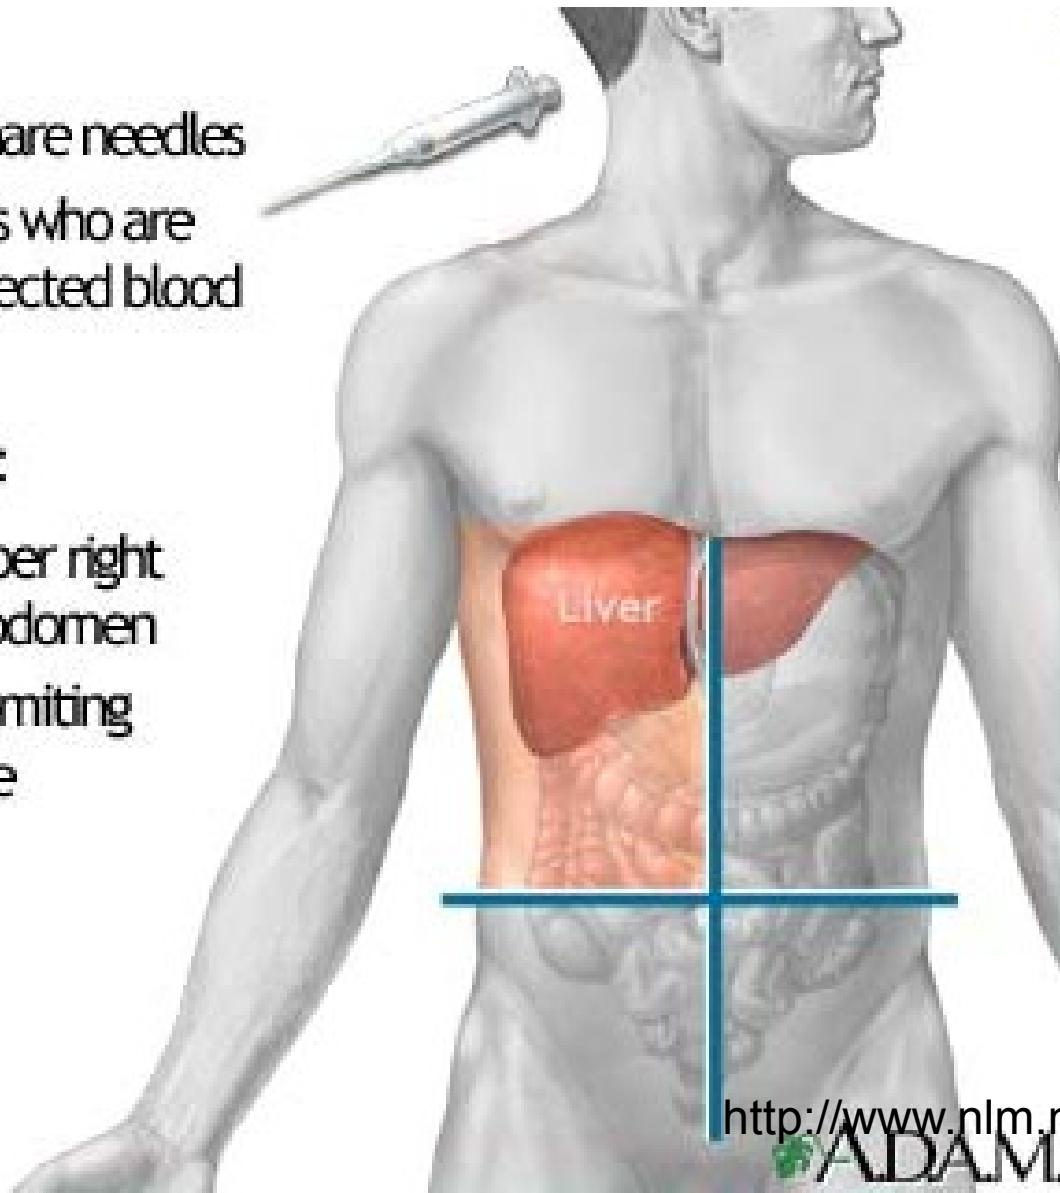

# Hepatitis B, C (VHB, VHC)

## Risk factors:

- people who share needles
- health workers who are exposed to infected blood

## Possible symptoms:

- pain in the upper right quadrant of abdomen
- nausea and vomiting
- loss of appetite
- jaundice
- fatigue
- itching

## Hepatitis C virus

& : **viral hepatitis C,**  
acute and chronic

### **Lab. dg:**

- detection of viral RNA
- detection of **antibodies**  
(anti-HCV)

## Hepatitis B virus

& : **viral hepatitis B,** acute  
and chronic

A recombinant vaccine (**HBsAg**)

### **Lab. dg: markers**

**HBsAg, anti-HBs**

**HBeAg, anti-HBe**

**X anti-HBc**

**HBV DNA**

# Viral agents of STD – HIV

**Human immunodeficiency virus (HIV-1 and HIV-2)**  
& : AIDS (acquired immunodeficiency syndrome)

**Therapy: combination of antiretrovirals  
(HAART = highly active antiretroviral treatment)**

**Lab. dg: detection of antibodies + Ag  
(& confirmation of positive findings)  
special tests: viral load**

# Parasitic agents of STD

***Sarcoptes scabiei* (itch mite)**

& : scabies (mange)

**Therapy: antiscabiotics  
(permethrine, lindane)**

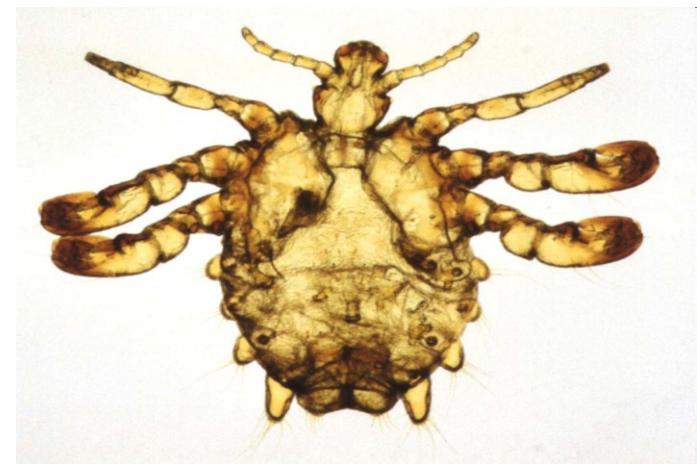

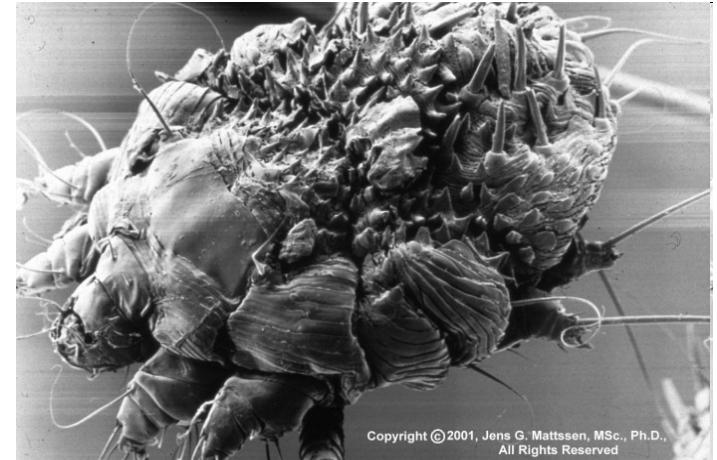

**Lab. dg: microscopy from skin**

***Phthirus pubis* (pubic louse, crab louse)**

& : pediculosis pubis  
(phthiriasis)

**Therapy: lindane**

**Lab. dg: demonstration of lice or eggs**

## Jacques-Louis David (1748-1825): Death of Marat (1783)

- Jean Paul Marat, murdered by Charlotte Corday in 1793, was initially a physician
- He was run through when taking a bath for treatment his skin disorder (probably dermatitis herpetiformis Dühring)
