

Anatomy		Microscopic anatomy		Hormones and target tissues				
Anterior lobe (adenohypophysis)	pars distalis	a. carotis int. → aa. hypophysiales sup. → <b>primary capillary plexus</b> in eminentia mediana receives neurosecretions from hypothalamus → vv. portales hypophysiales distribute neurosecretions to → <b>secondary capillary plexus</b> in anterior lobe → efferent hypophyseal veins → vv. jugulares internae	trabecular epithelium in cords and clusters, reticular fibers		lack hormonal activity			
			<b>chromophobes</b>	undifferentiated cells degranulated chromophilic cells stromal cells				
	pars tuberalis		<b>chromophils</b>	<b>acidophilic</b> nonglandotropic	mammatropic cells	<b>dopamin (PIH)</b> $\perp$ (PRF → prolactin)	mammary gland in gravidity and lactations	
					somatotropic cells			
				<b>basophilic</b> glandotropic	corticotropic cells	<b>somatostatin (GHIH)</b> $\perp$ <b>GHRH</b> → <b>somatotropin (STH)</b>	directly liver and growth plates other tissues via somatomedins	
	pars intermedia	Rathke's cysts		thyrotropic cells	<b>glycoproteins</b>	<b>CRH</b> → <b>ACTH, MSH</b>	adrenal cortex → cortisol melanocytes	
	gonadotropic cells	<b>TRH</b> → <b>TSH</b>		thyroid → thyroxin, T3				
	<b>small peptides</b>	<b>GnRH</b> → <b>FSH (ICSH), LH</b>		gonads → androgens, estrogens, progesterone				
Posterior lobe (neurohypophysis)	eminetia mediana → infundibulum	a. carotis int. → aa. hypophysiales inf. → fenestrated capillaries → efferent hypophyseal veins	nonmyelinated <b>axons</b> of hypothalamic neurons n. supraopticus, n. paraventricularis (tractus hypothalamohypophysialis), <b>pituicytes</b>		<b>ADH</b>	tubulus reuniens, ductus colligens t.media of vessels		
	pars nervosa				<b>oxytocin</b>	myometrium of uterus during gravidity myoepithelium of lactating mammary gland
