

PLANES AND DIRECTION OF THE BODY GENERAL OSTEOLOGY SKELETON OF THE SPINE AND THORAX

1. lecture and seminar, DENTISTRY AUTUMN 2016
Lecturer: RNDr. MICHAELA RAČANSKÁ, Ph.D.

Department of Anatomy

- Blue floor: dissecting rooms
- Red floor: seminar rooms,
computer room,
ossarium (lending bones) against to the index, it is
not allowed to take them away from the department, you can study in the
red floor),
room with X-rays,
museum, space for students
- Yellow floor: offices, laboratories

Lending of bones (first five weeks of tuition)

monday

8– 16. 00*

tuesday

8 – 16.00*

wednesday

8.00 – 17.00*

thursday

8.00 – 17.00*

friday

8.00 – 16.00*

***in each whole hour, lending bones** against to ISIC, it is not allowed to take them away from the department, you can study in the red floor

Syllabus

Lectures: We 13,20-15,00

Seminars: We 15,40- 17,20

Change! App.13,30-16,50 lecture and seminar together

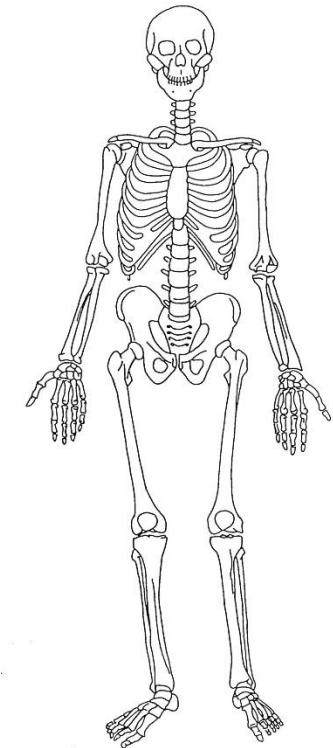

P2 blue floor

Week and date		Lectures	Seminars
1.	21. 9. 2016	Planes and direction of the body. General osteology. Skeleton of the spine and thorax.	Introduction to the study, X-rays anatomy. Anatomical museum.
2.	28. 9. 2016	State holiday	
3.	5. 10. 2016	Skeleton of the upper limb.	Skeleton of the upper limb
4.	12. 10. 2016	Skeleton of the lower limb	Skeleton of the upper extremity and lower extremity
5.	19. 10. 2016	Neurocranium	Neurocranium
6.	26. 10. 2016	Splanchnocranum	Splanchnocranum
7.	2. 11. 2016	Cavities of the skull	Cavities of the skull
8.	9. 11. 2016	General arthrology Joints of the skull, spine and thorax	General arthrology Joints of the skull, spine and thorax.
9.	16. 11. 2016	Joints of the upper extremity and lower extremity, pelvis	Joints of the upper extremity and lower extremity. The pelvis.
10.	23. 11. 2016	- ,,,,,,self study	-,,,,,,,,,,self study
11.	30. 11. 2016	Control examination (osteology, arthrology)	
12.	7. 12. 2016	General myology. Introduction to the study of the muscles Muscles and fasciae of the head and neck The muscles of the thorax, abdomen and back	Muscles and fasciae of the head. The muscles of the thorax, abdomen and back
13.	14. 12. 2016	Muscles of the upper extremity	Muscles of the upper extremity
14.	21. 12. 2016	Muscles of the lower extremity	Muscles of the lower extremity
15.	4. 1. 2016	Spare lectures	

Course objectives

At the end of the course students should be able to:

1. Name all parts of the human skeleton including the detailed relief.
2. Describe correctly joints of the bones.
3. Describe the movements occurring at each joint.
4. Identify individual muscles of the human body, discuss their attachments and innervations. Define actions of individual muscles and muscular groups.
5. Define skeletal structures demonstrated by radiographs in basic projections.

Where you can study from?

Liebgott, Bernard. *The anatomical basis of dentistry*. 3rd ed. Mosby, ISBN 0-323-06807-3

PÁČ, Libor, Ladislava HORÁČKOVÁ a Hana NECHUTOVÁ. *Anatomy of human locomotor system*. 1. vyd.

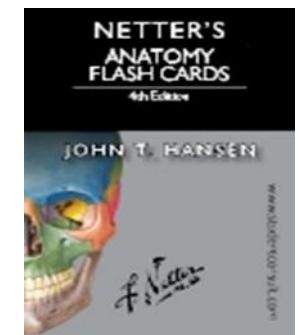

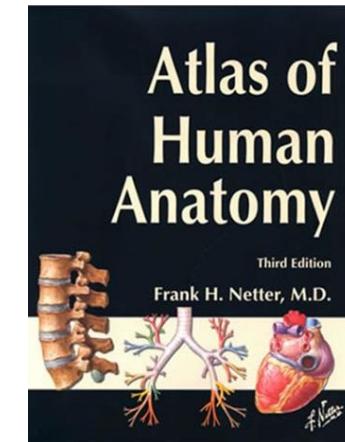

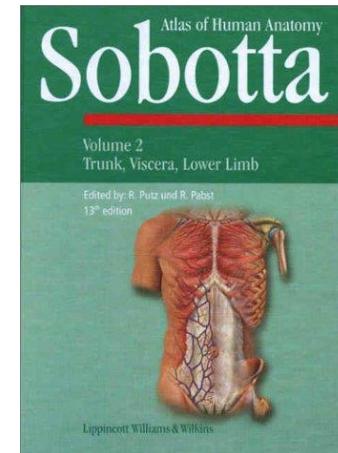

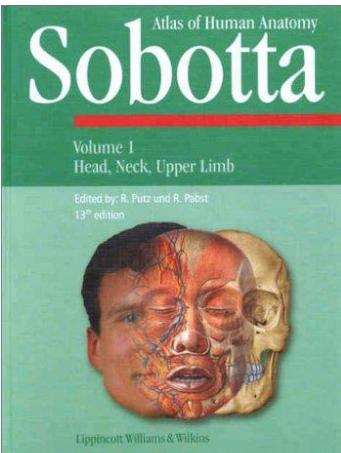

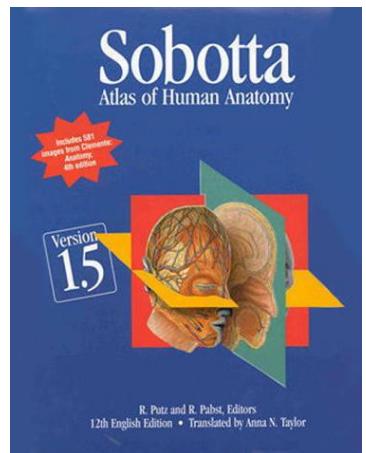

Brno: Masarykova univerzita Brno, 2010. 119 s. ISBN 978-80-210-5258-1.

Atlas of human anatomy. Edited by Johannes Sobotta - Reinhard Putz - Reinhard Pabst - Renate Putz. 13th English ed., 21st German. Philadelphia: Lippincott Williams & Wilkins, 2001. 404 s. ISBN 0-7817-3174-7.

NETTER, Frank H. *Atlas of human anatomy*. 4th ed. Philadelphia: Saunders Elsevier, 2006. 548 color. ISBN 1-4160-3385-8.

Frame – studying materials on the IS

Test on the beginning of each lecture!!!

ANATOMY OF HUMAN
LOCOMOTOR SYSTEM

Libor Páč
Ladislava Horáčková
Hana Nechutová

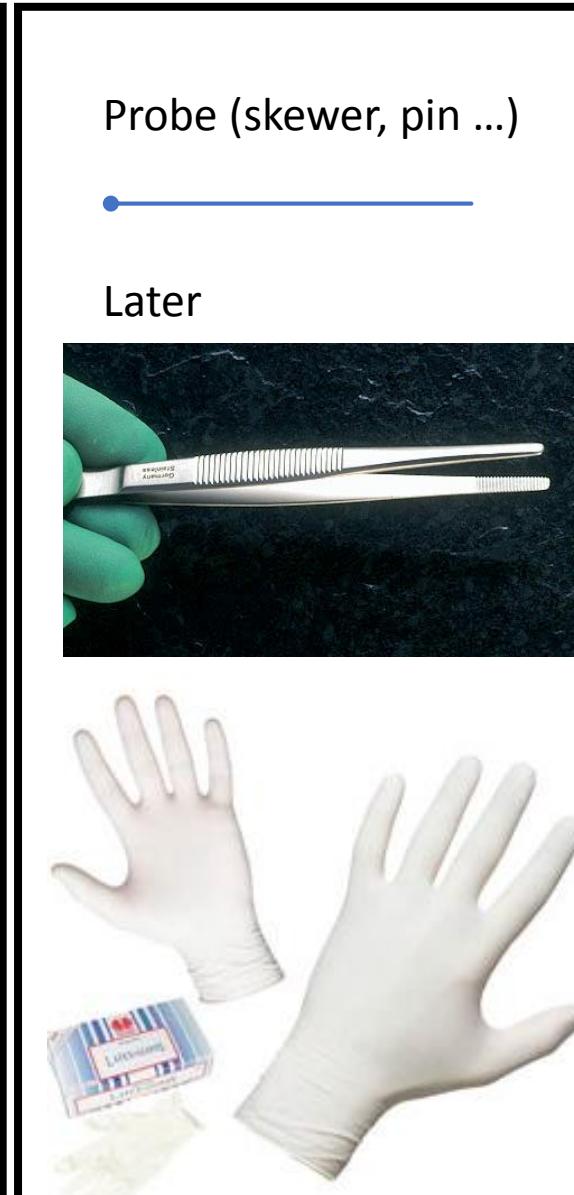

BRNO 2012

**WHAT YOU WILL NEED?
and
SAFETY AT WORK**

Long hair pin together, painted nails, earings, rings and bracelets x

OR

A white double-buckle sandal with a cork sole is shown from the side, symbolizing an alternative method.

Later

A pair of white nitrile gloves is shown next to a small, rectangular box of 'Lip Balm' with a red heart logo.

Safety at work

- Every accident (even small injuries) that happens during your education immediately report, write to the accident book, and will be treated
- If a student becomes pregnant – please report, not allowed to attend the dissection rooms

Anatomical nomenclature

Terminologia Anatomica – International Anatomical terminology (FCAT) 1998

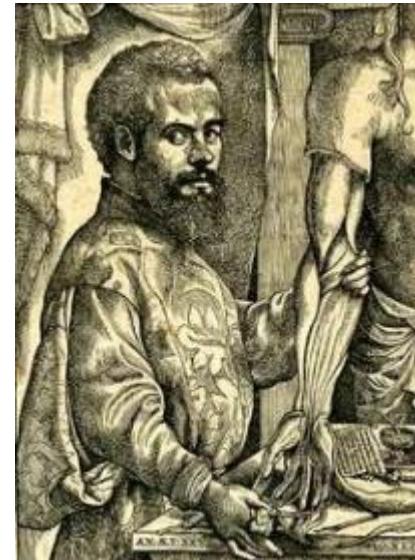

Anatomy is the basis of the language of medicine. Students learn a new language consisting of at least 4500 words. International.

Many anatomical terms are derived from Latin and Greek.

To describe the relationship of one structure to another, the anatomical nomenclature should be used.

To be understood you must express yourself clearly, using the official terms in the correct way.

- 1. Andreas Vesálius, founder of the modern anatomy, 16. century.
- 2. Basiliensis Nomina Anatomica, B. N. A.,
1895
- 3. Ienaiensis Nomina Anatomica, I. N. A.,
1935
- 4. Parisiensia Nomina Anatomica, P. N. A.,
1955 accepted 1960, last corrections - 1985 (5640 terms)
- 5. TERMINOLOGIA ANATOMICA 1998

Anatomical nomenclature

The first word is name of described formation,
next adjectives specificate it
and in the end there is a name of formation where the described
formation is located.

Examples:

Collum (neck) **radii** (of radius)

Collum (a neck) **anatomicum** (anatomical) **humeri** (of humerus)

Collum (a neck) **chirurgicum** (surgical) **humeri** (of humerus)

Tuberculum (a tubercle, a bulge) **majus** (big) **humeri** (of humerus)

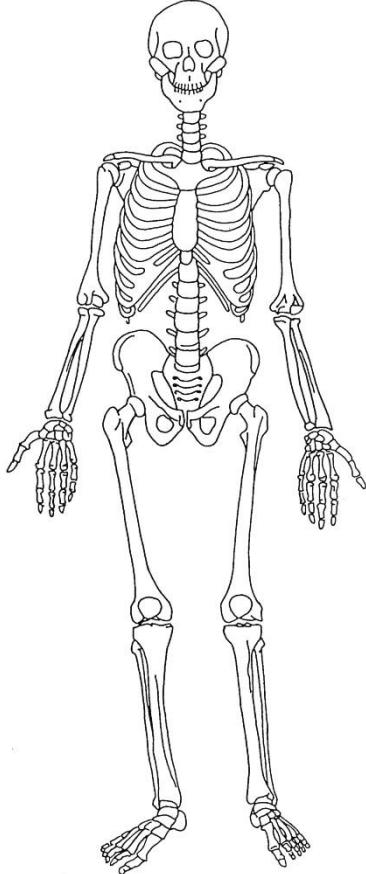

Spina (a thorn) **iliaca** (iliac) **anterior** (fore) **superior** (upper) **ossis coxae** (of coxal bone)

Epicondylus **medialis** **humeri**

Epicondylus **medialis** **femoris**

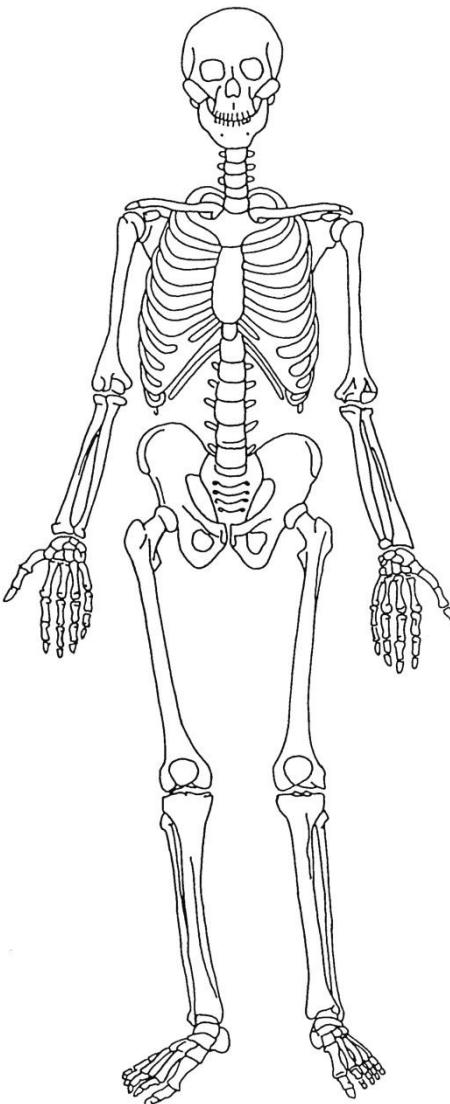

General osteology

Before we'll start, take a piece of paper and write down what you already know regarding:

- What is the composition of the bone?
- What types of bones do you know?

General osteology

- The skeleton is composed of a living, dynamic, rigid, connective tissue that forms bones and cartilages
- In total 214 (incl. sesamoid bones), it varies
- Cartilage at the places where flexibility is important, or covers articulation surfaces

FUNCTION OF SKELETAL SYSTEM

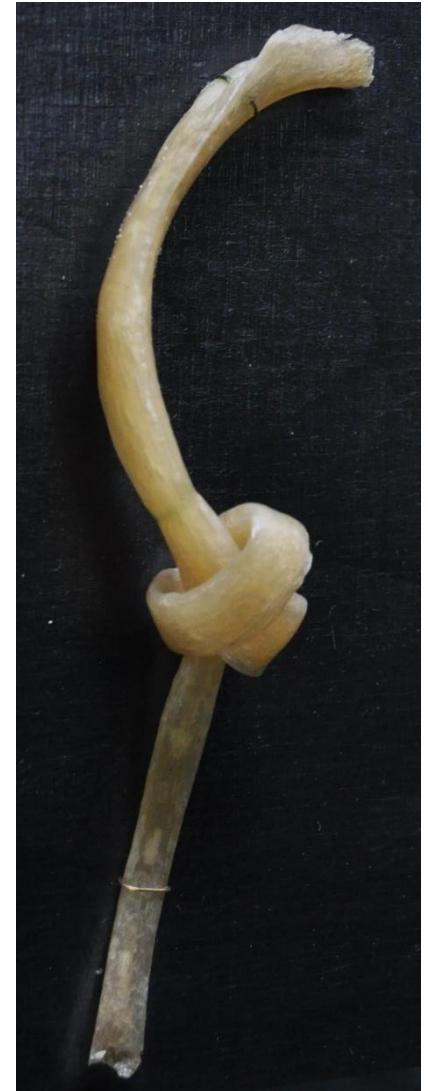

- Support
- Protection of vital organs
- Together with muscles a mechanism for movement
- Storage of calcium (99 % of body's calcium is stored in bone) and other salts
- A source of blood cells (Bone marrow in the central cavity, hemopoetic (blood- forming) cells

Basic structure of bones

- Bone as a connective tissue consists of :
 - bone cells (**osteocytes**)
 - Ground substance+ collagenous fibrils form - **osteoid** (ossein) – organic material
 - Different salts – hardness and strength – anorganic material

A salt free or decalcified bone is pliable

- in young 52% of organic component
- In elderly 40 %

TYPES OF BONE ACCORDING TO THE STRUCTURE

1) compact bone

A relatively solid mass of bone

Commonly seen as a superficial layer
of bone, that provides strength

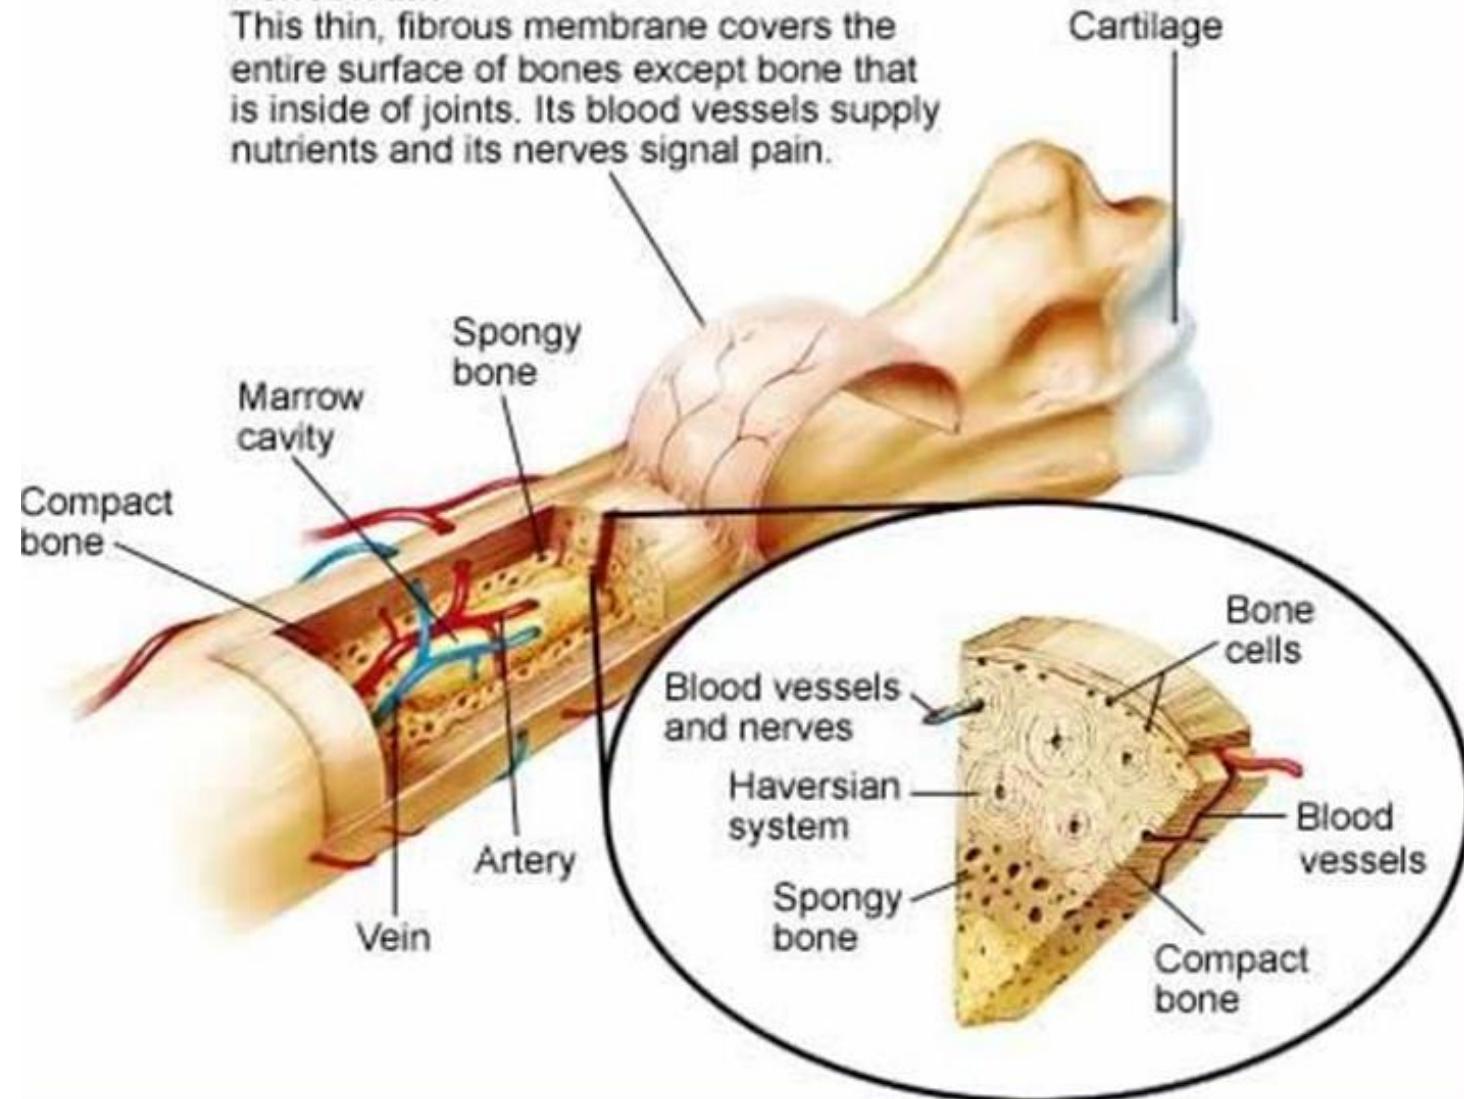

2) spongy (trabecular or cancellous) bone

A less dense trabeculated network of bone
spicules making up the substance of most
bones, surrounding an inner marrow cavity,

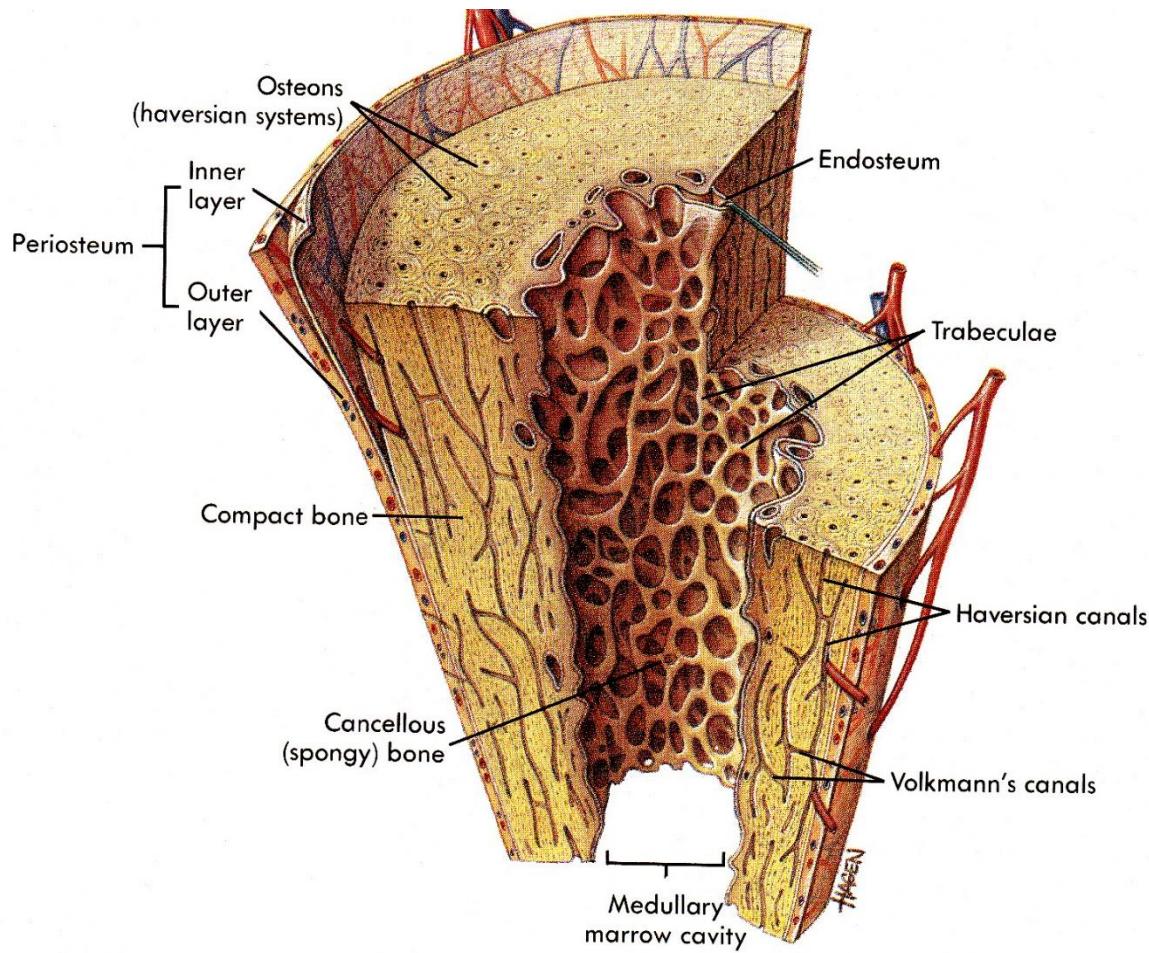

Periosteum

This thin, fibrous membrane covers the entire surface of bones except bone that is inside of joints. Its blood vessels supply nutrients and its nerves signal pain.

BONE STRUCTURE

Periosteum

External fibrous (periost)
Internal cambious layer
(osteoblasts, Sharpey's fibers, remodeling
the site of osteoblasts – built up bone and help of healing
– fractures)

Substantia compacta

Substantia spongiosa

Bone architecture, trajectories

Endosteum

Bone reconstruction, it is not possible to peel it off

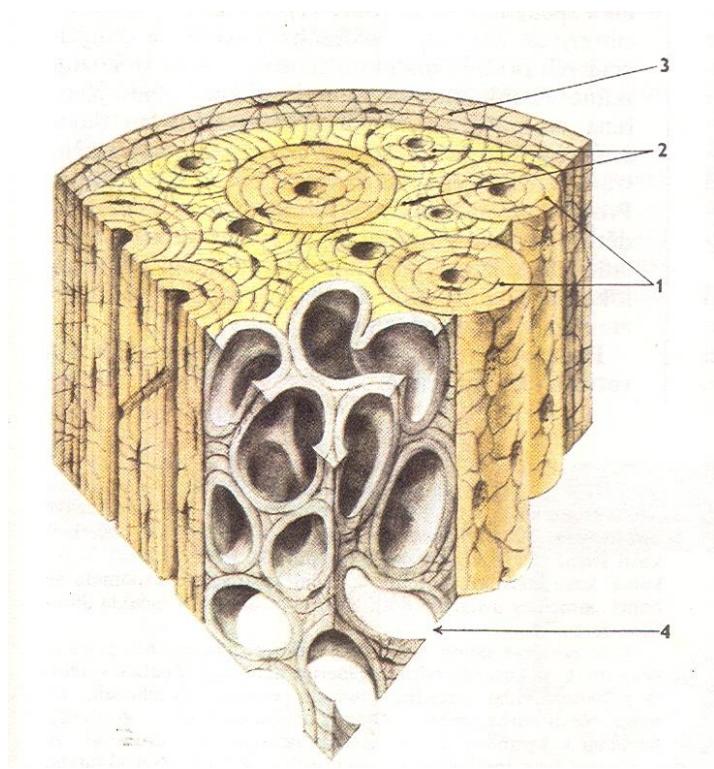

Cavitas medullaris

- (bone marrow)

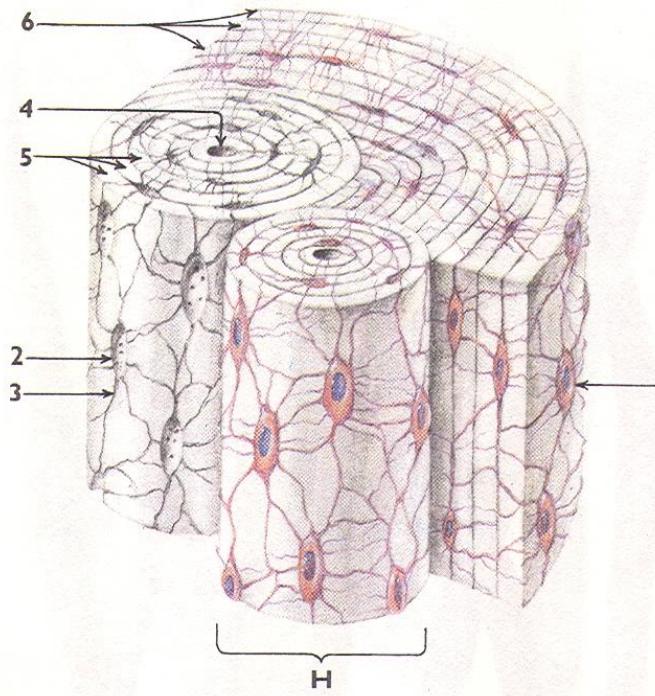

medulla ossium rubra
medulla ossium flava
medulla ossium gelatinosa

Lamellar bone tissue

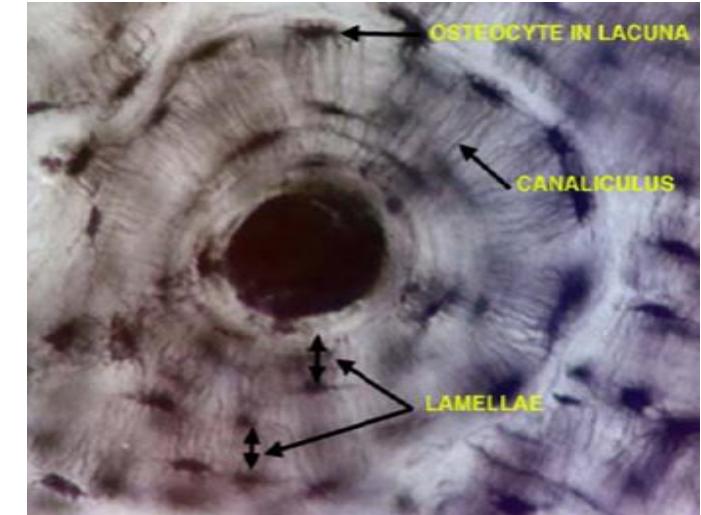

- 1 – Haversian lamellae
- 2 – interstitial lamellae
- 3 – superficial lamellae
- 4 – lamellae of spongy bone

H – Haversian system of lamellae, osteon

- 1 – osteocyte
- 2 – lacuna
- 3 – canaliculus osseus
- 4 – Haversian canal of osteon
- 5 – concentric lamellae of osteon
- 6 – superficial lamellae

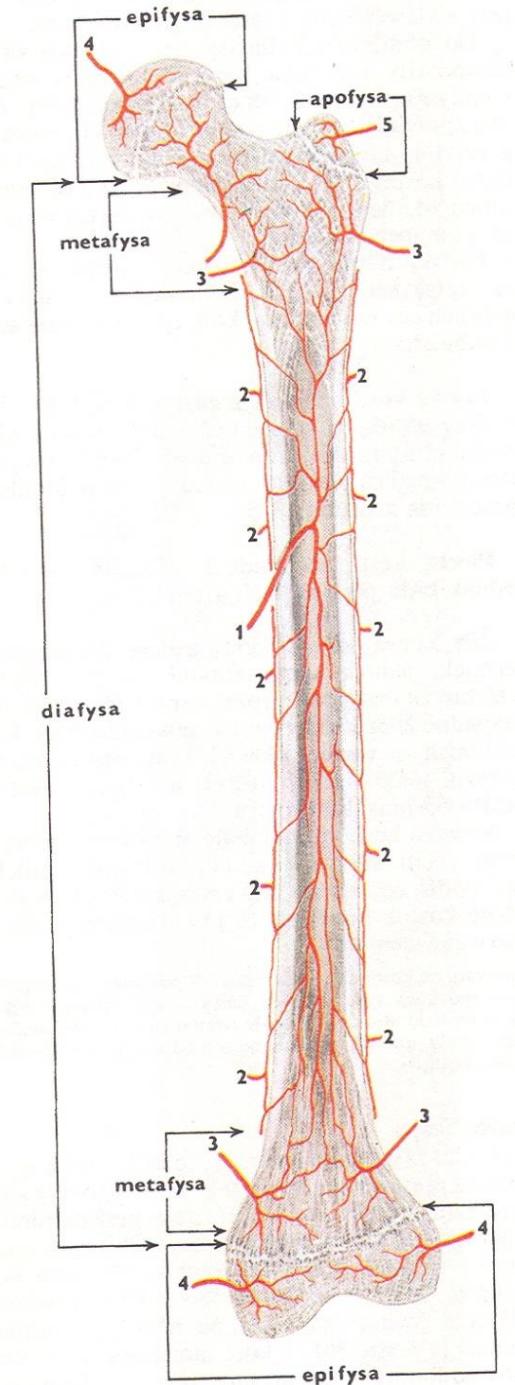

BONE MARROW

Medulla ossium rubra – red bone marrow
(active hematopoetic tissue)

Medulla ossium flava – yellow bone marrow
(source of energy for organism)

Medulla ossium gelatinosa – grey bone marrow

BLOOD SUPPLY

- Nutrient arteries (one or more, through the diaphyssis)
- Periosteal arteries (supply the compact bone)
- Metaphysial arteries
- Epiphyseal arteries
- Apophyseal arteries

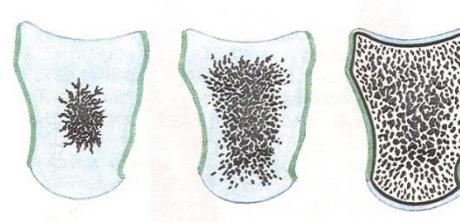

BONE DEVELOPMENT (ossification)

1) Intramembranous formation

Flat bones

Direct calcium deposition

into mesenchymal model of the bone

2) Endochondral formation

Long bones, irregular bones

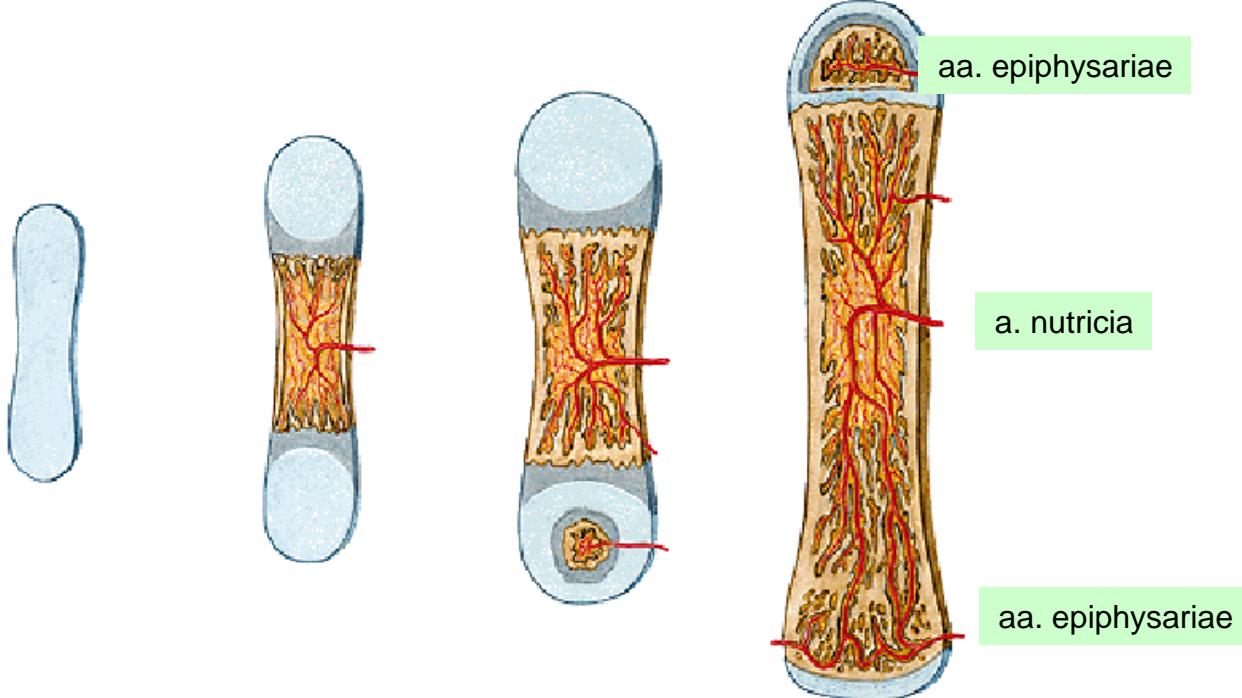

Calcium deposition into a cartilaginous model of the bone

a) perichondral

originates in diaphysis

b) enchondral

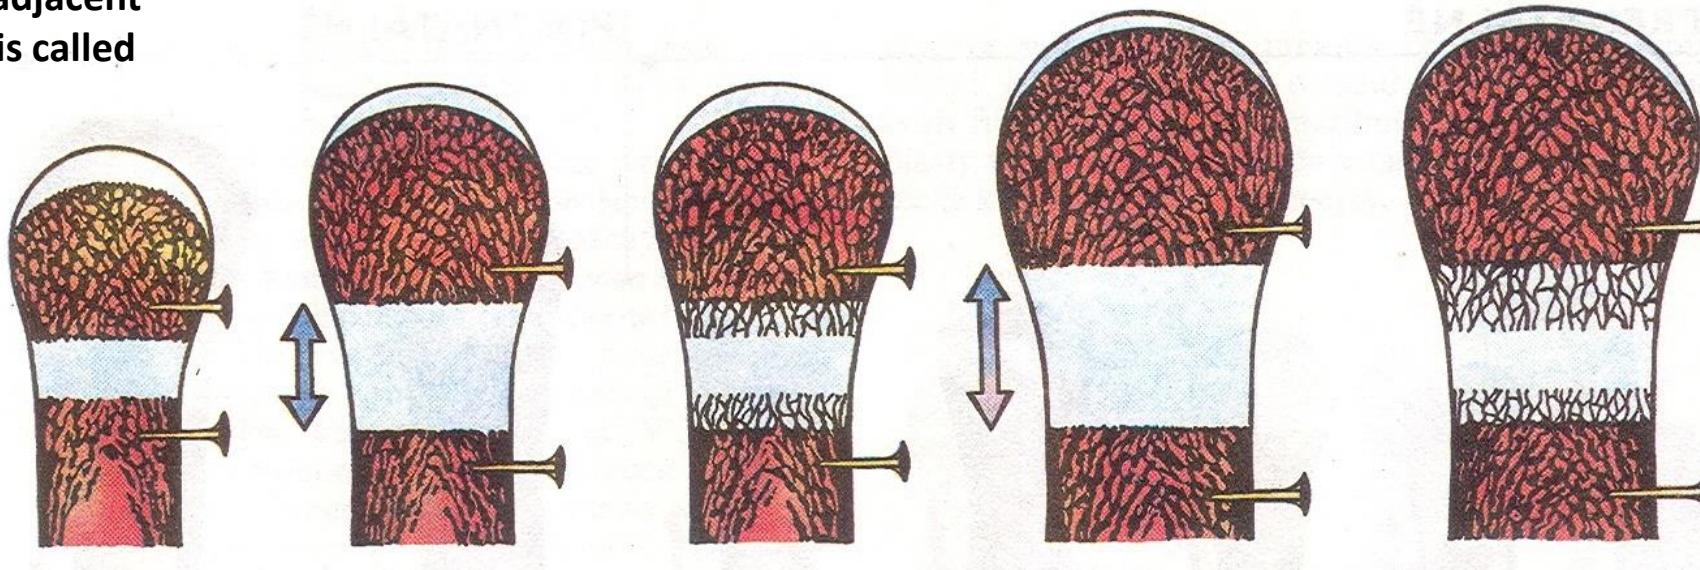

in cartilage near epiphyses

Growth plate = epiphyseal disk
is necessary for growth in length, forms a layer between
the epiphysis and the diaphysis.

The part of diaphysis adjacent
to the epiphysial disk is called
metaphysis.

Bone growth

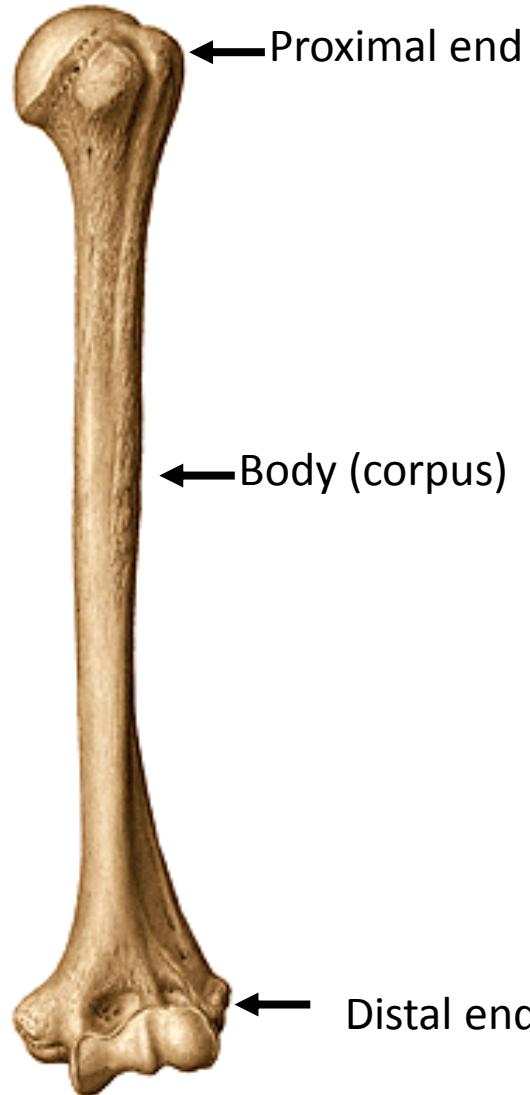

Growing of the **epiphyseal cartilage** followed ba the osification of both epiphysis and diaphysis
as the background of growing into the **length**

To the **thickness** growth the bone thanks to the **periostal** cells of the cambial (inner) layer!

Classification of bones according to the shape

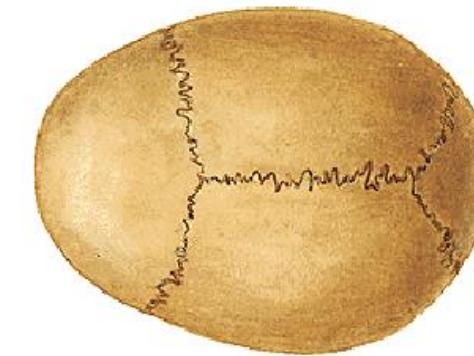

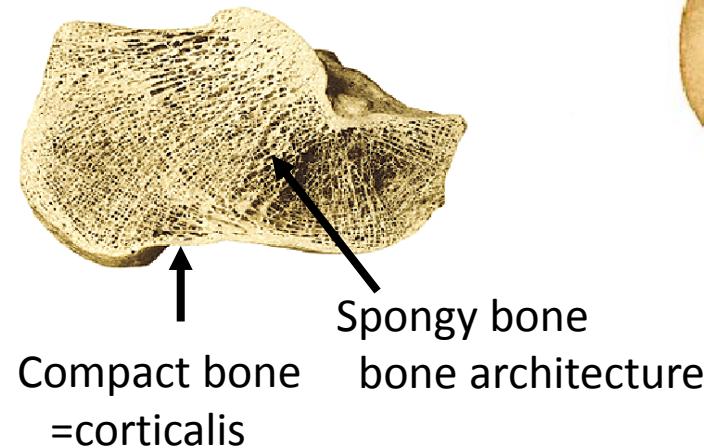

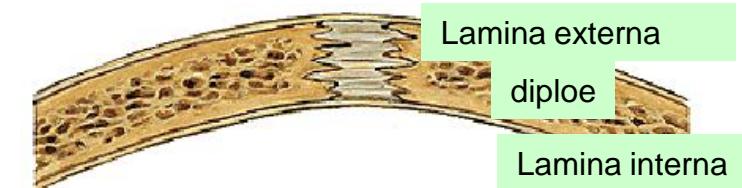

Ossa longa (long bones)

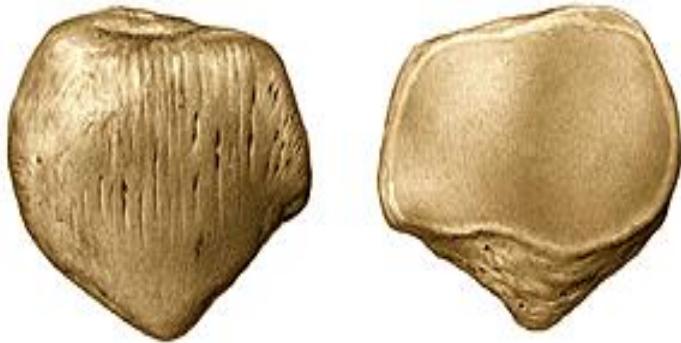

Ossa brevia (short bones)

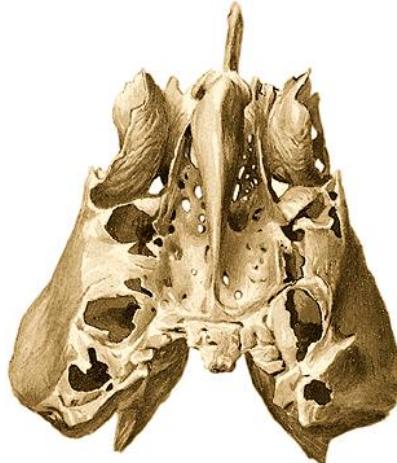

Ossa plana (flat bones)

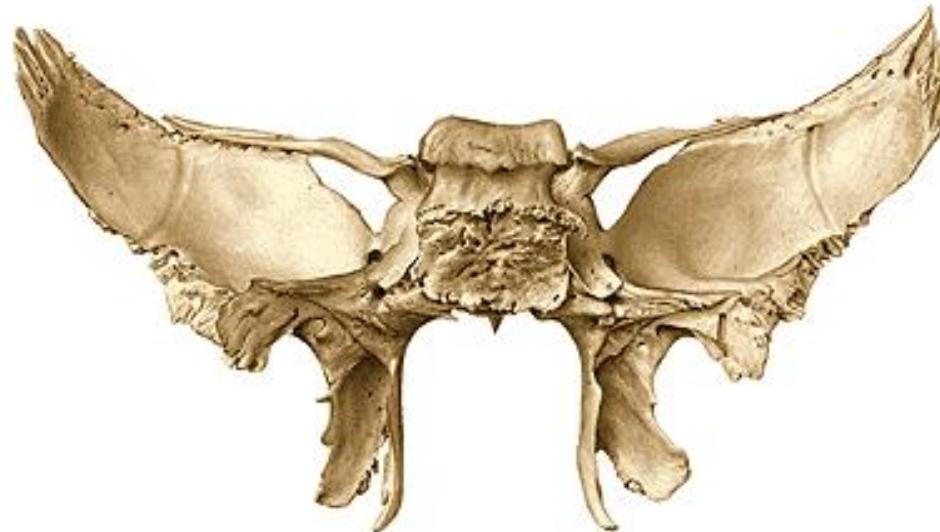

Ossa sesamoidea (sesamoid bones) – in tendons of some muscles

Ossa pneumatica (pneumatized)
– paranasal sinuses

Ossa irregularia (irregular)

Control questions?

The bones are classified by their shape.

Which of the following shapes is used to define the kneecap (patella)?

- a. Long
- b. Flat
- c. Irregular
- d. Short
- e. Sesamoidal

Which of the following portions of the long bone is most important in lengthening the bone?

- a. Diaphysis
- b. Epiphysis
- c. Epiphyseal plate
- d. Apophysis
- e. metaphysis

Orientation on the body

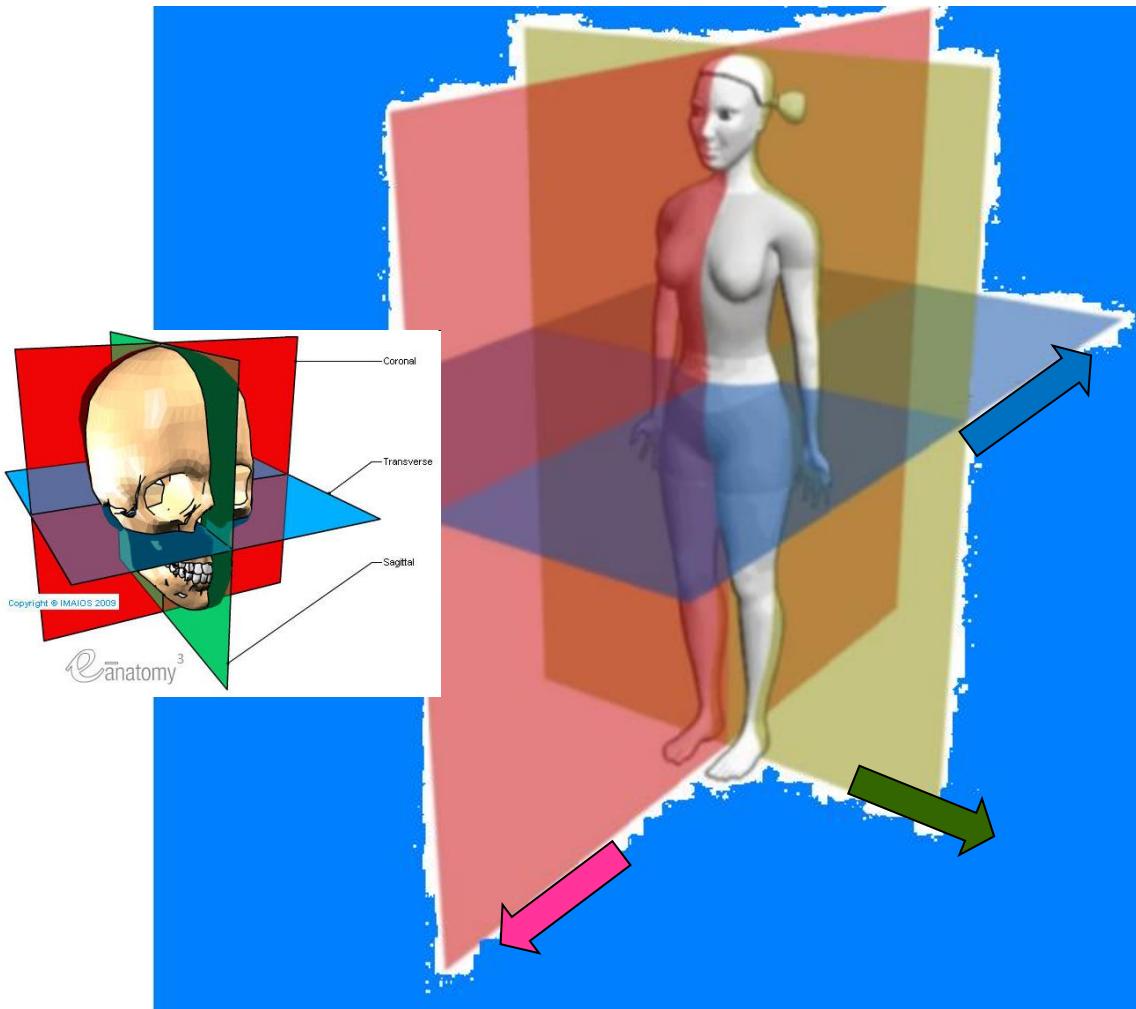

Anatomical position
standard erect position

X

Not a military position!

PLANES – 3 anatomical planes or sections

←
Sagittal plane (median),
Midsagittal
vertical plane - Right and left
acc. to sagittal axis

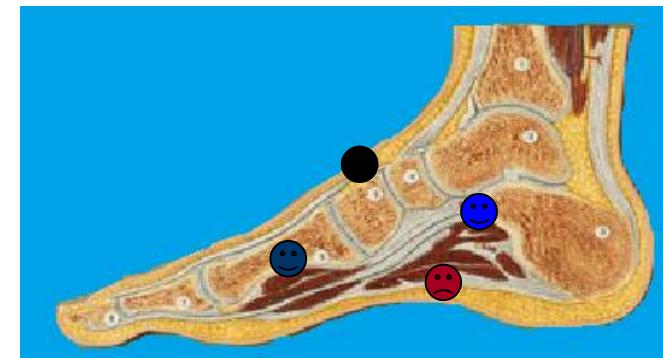

←
Transverse plane (horizontal, axial, cross sections)
Vertical plane - Superior and inferior
(acc. to transversal axis)

←
Frontal plane (coronal)
Anterior and posterior
(acc. to longitudinal axis)

Directions on the body

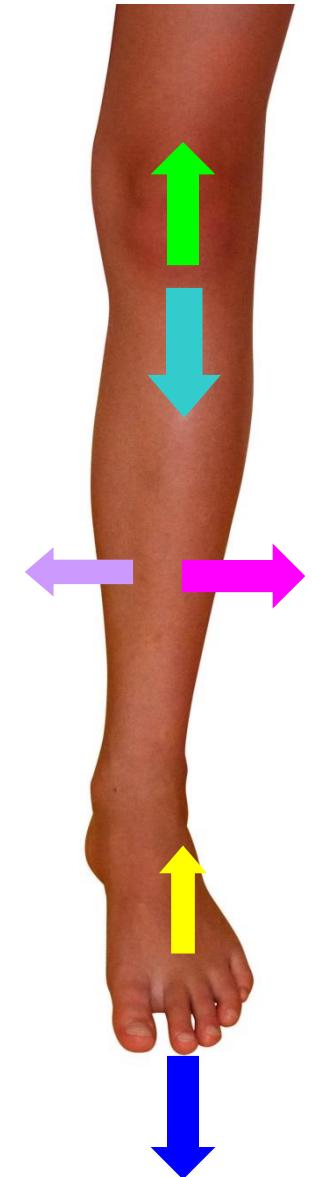

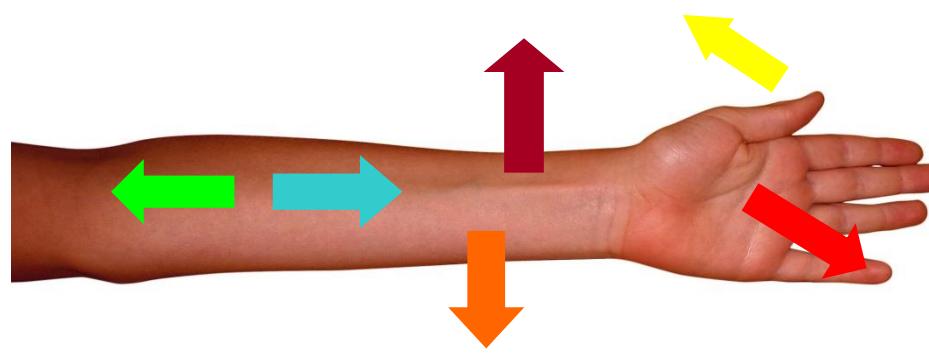

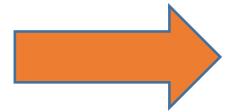

↗	cranialis	↗	caudalis
😊	superior	😊	inferior
➡	ventralis	➡	dorsalis
😊	anterior	😊	posterior
➡	medialis	➡	lateralis
😊	medianus	😊	medius (intermedius)
😊	dexter	😊	sinister
●	superficialis	😊	profundus
😊	internus	😊	externus

Directions at the limbs

- PROXIMALIS
- DISTALIS
- RADIALIS (lateralis)
- ULNARIS (medialis)
- PALMARIS
- DORSALIS
- PLANTARIS
- FIBULARIS (lateralis)
- TIBIALIS (medialis)

Are you ok with the directions?

- 1) Which of the following terms is synonymous with the frontal plane?
 - a. Axial
 - b. Coronal
 - c. Sagittal
 - d. Transverse
 - e. Cross section

2)

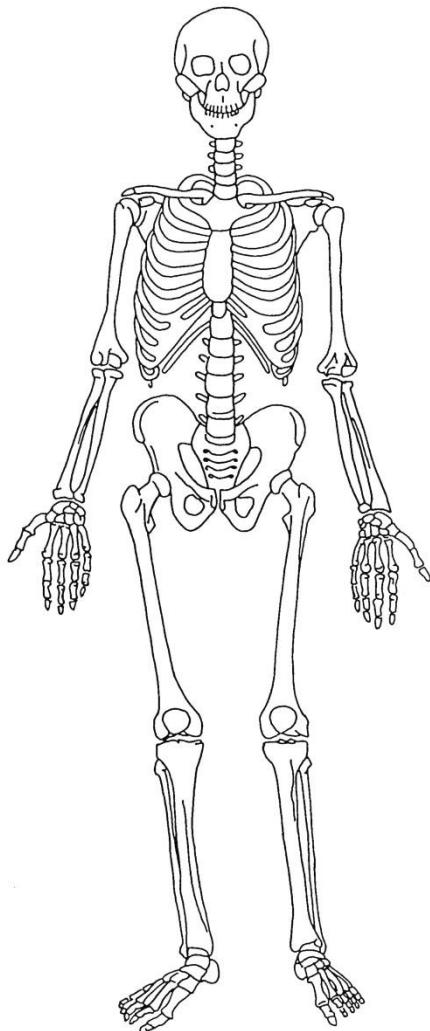

The green arrow faces

3)

The green part of body

How to describe bones

- knowledges of the general osteology, basic orientation on the body with planes are obvious

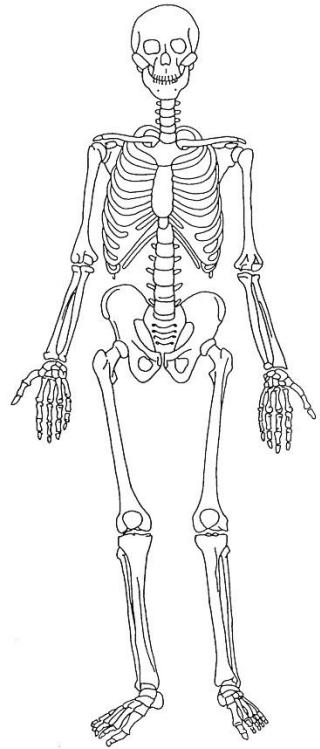

In describing bones we proceed according to the following outline::

1. Name of the bone (english, latin)
2. Type of the bone (long, short)
3. Dividing into separate parts (ends, body, surfaces, borders....)
4. Description of the positive and negative relief of the isolated parts
5. In paired bones estimate the laterality

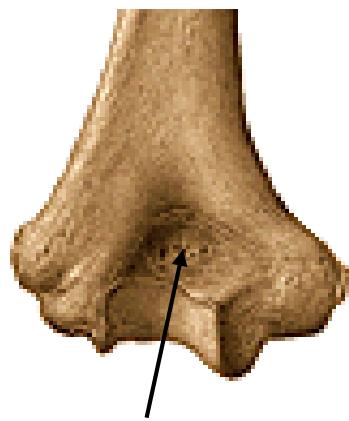

IMPORTANT!!! STUDY WITH THE BORROWED MATERIAL IN THE BONY ROOM OR IN THE MUSEUM AT THE DEPARTMENT!!!

Marking of bones -positive and negative relief

	<ul style="list-style-type: none">• Sulcus – a groove• Incisura – a notch• Canalis – a canal	<p>Internus – internal Externus – external Superficialis – superficial Profundus – deep</p>
NEGATIVE	<ul style="list-style-type: none">• Fossa – a pit, hollow• Fovea – a pit, hollow• Foramen – an opening, orifice, gap• Groove – a furrow	<p>Caput – a head Capitulum – a small head Collum, cervix – a neck</p>
POSITIVE	<ul style="list-style-type: none">• Processus – a projection, prominence• Spina – a thorn• Tuberculum – a tubercle• Tuber – a torus• Tuberrositas – a tuberosity, large rounded eminence	<p>Os, ossis, ossa – a bone, bones Articulus – a joint Facies – a facet, surface</p>

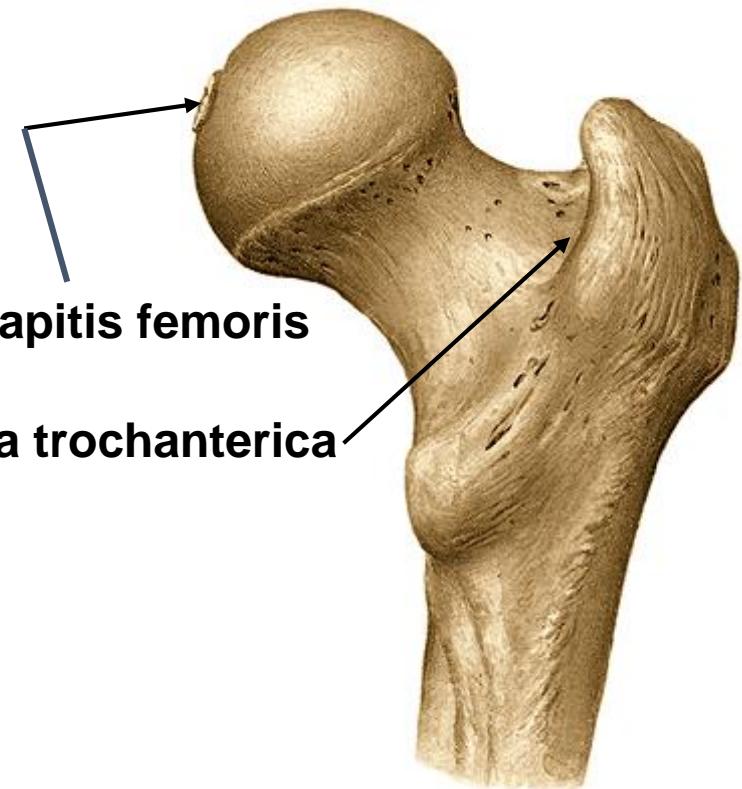

Fossa x fovea

Fossa olecrani

Fossa iliaca

Fovea capitis femoris

Fossa trochanterica

Caput x condylus

Caput humeri

Epicondylus med. et lat. humeri

Caput tali

Caput femoris

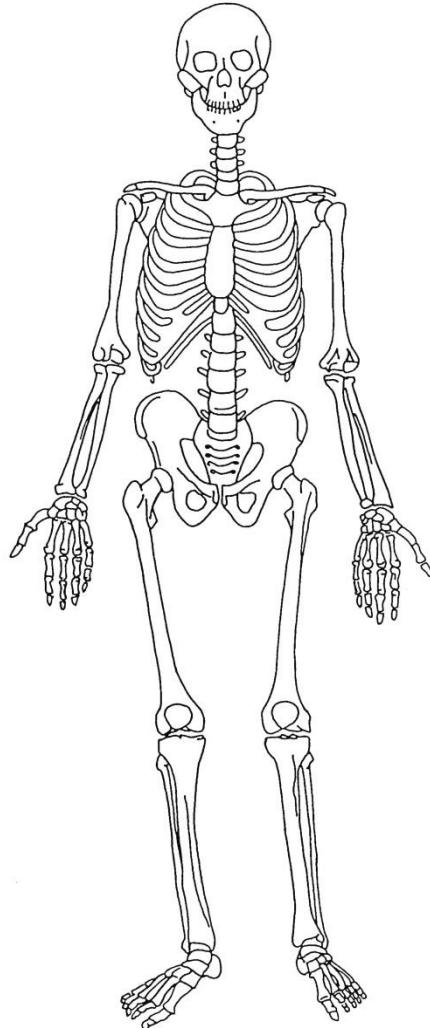

**Condylus medialis
et lateralis
et epicondylus med. et lat. femoris**

Incisura x foramen

Incisura scapulae

Foramen obturatum

AXIAL SKELETON

Bones of the skull

Vertebral column (spine)

Ribs

Sternum

Central line of the body (80)

APPENDICULAR SKELETON

Bones of the limbs

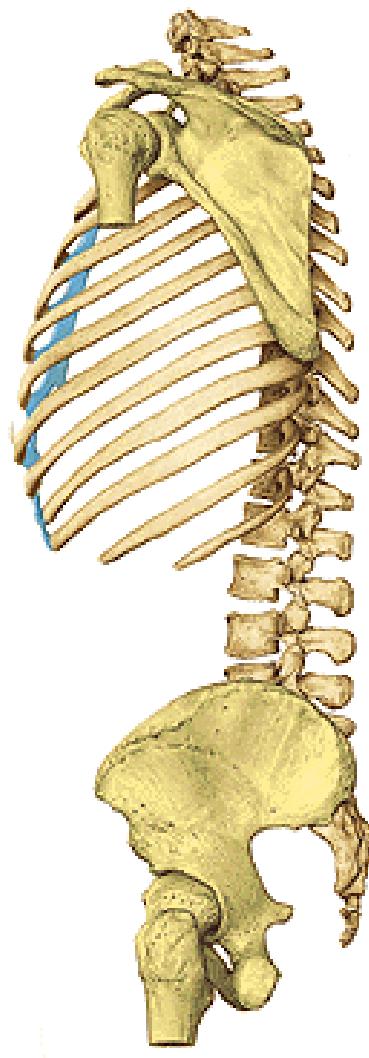

Pectoral girdle

Pelvic girdle

Attach the limbs to the body's axis (134)

Thorax

Columna vertebralis (vertebral column, spine 26)

Costae (ribs, 24)

Sternum (breast bone)

COLUMNA VERTEBRALIS (vertebral column)

33-34, usually 24 free vertebrae

7 vertebrae **cervicales (C)** cervical vertebra

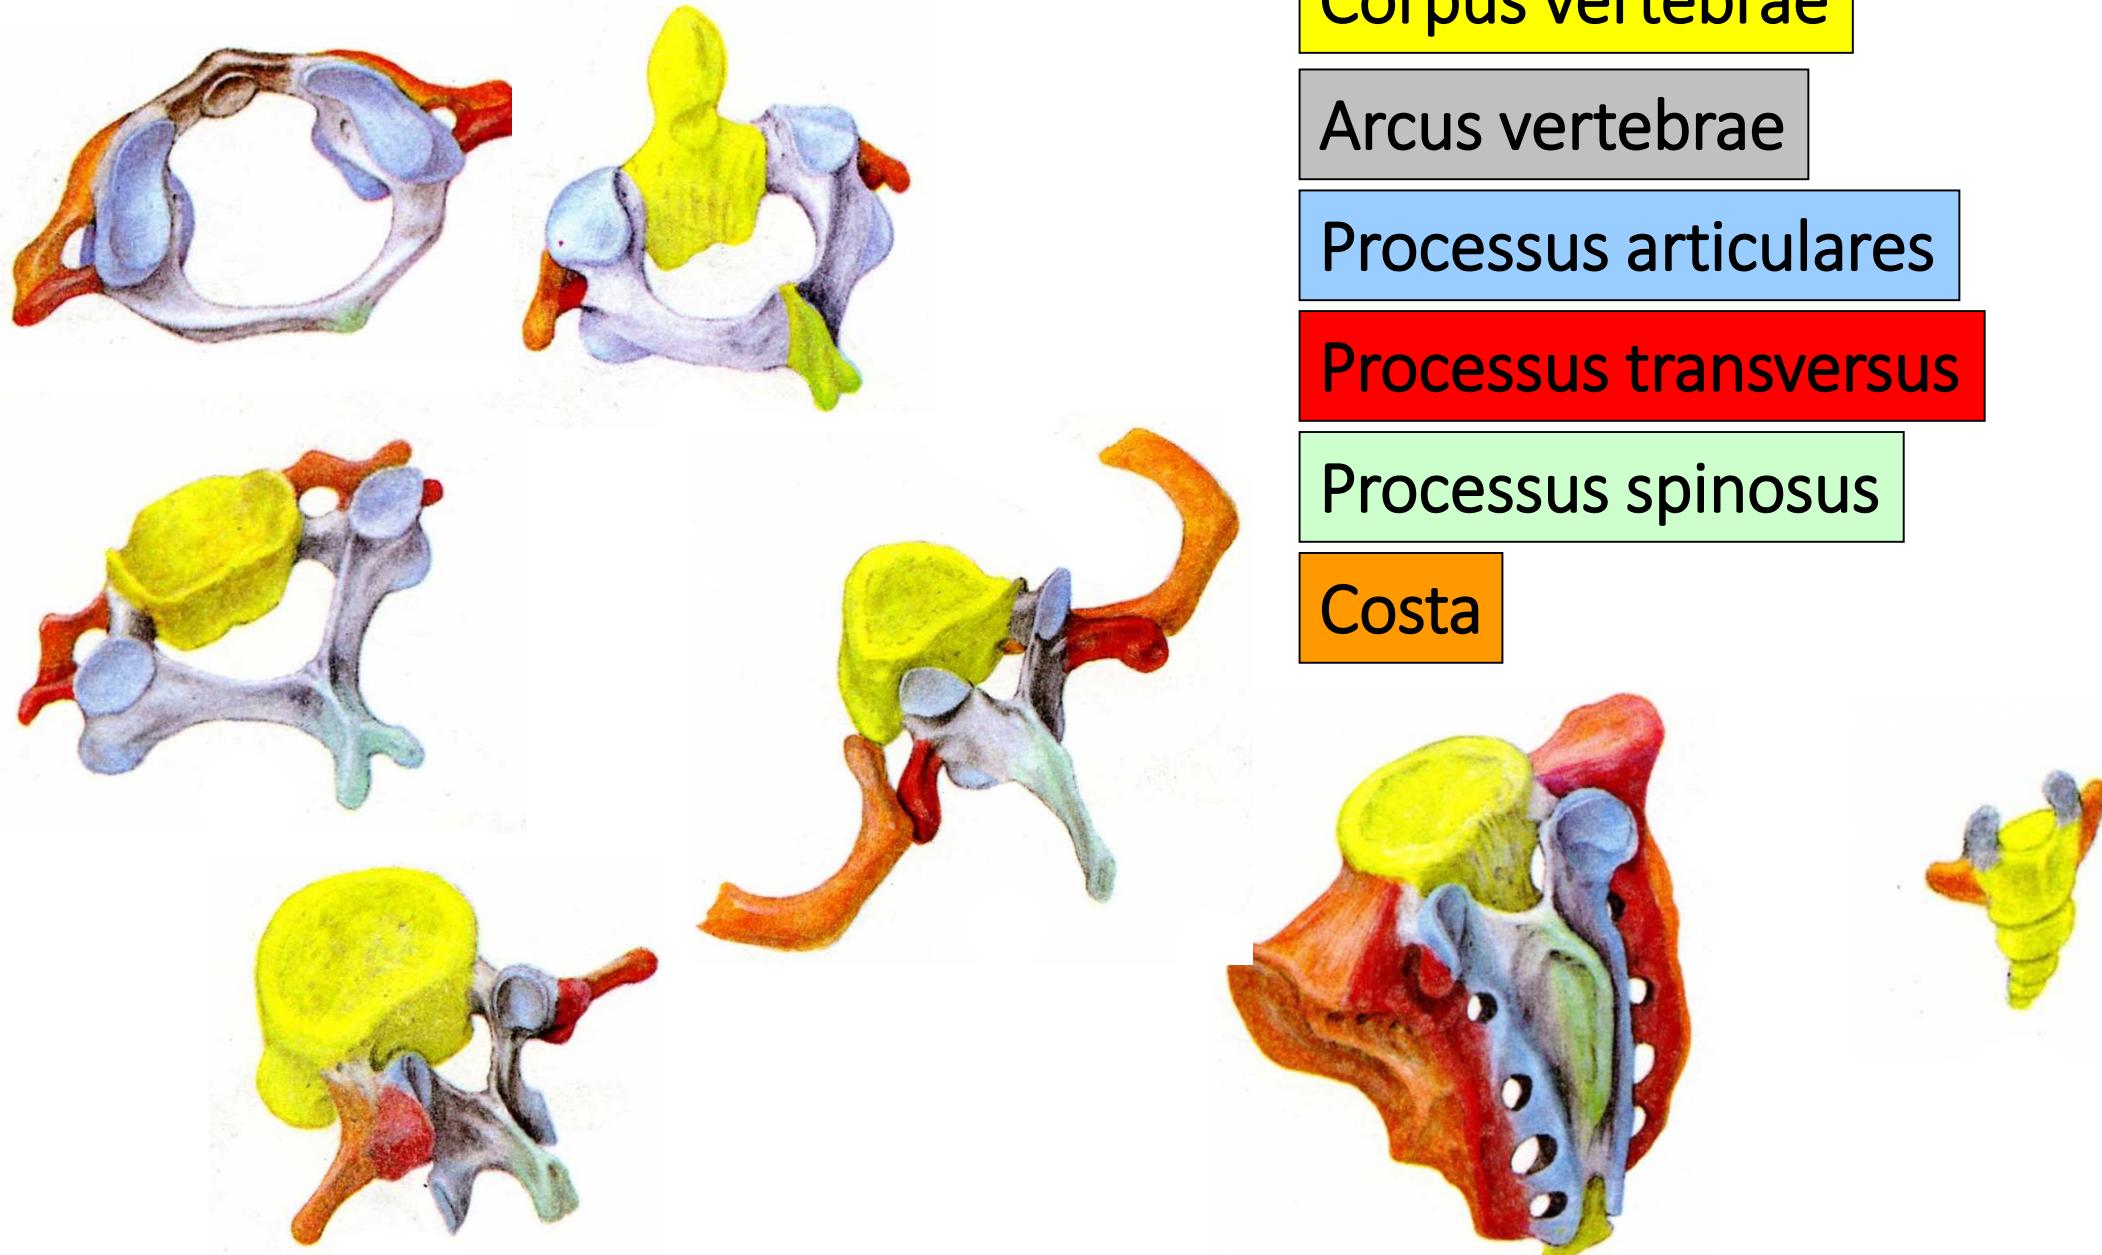

12 vertebrae **thoracicae (Th)** thoracic vertebra

5 vertebrae **lumbales (L)** lumbar vertebra

5 vertebrae **sacrales – os sacrum (sacral bone)**

4–5 vertebrae **cocygeae – os coccygis (coccyx)**

DEVELOPMENT OF VERTEBRAS

General features of all vertebrae

Corpus vertebrae

(facies terminalis superior et inferior)

Pediculus arcus vertebrae

Arcus vertebrae

Foramen vertebrale

(canalis vertebralnis)

Incisura vertebralis superior et inferior

Foramen intervertebrale

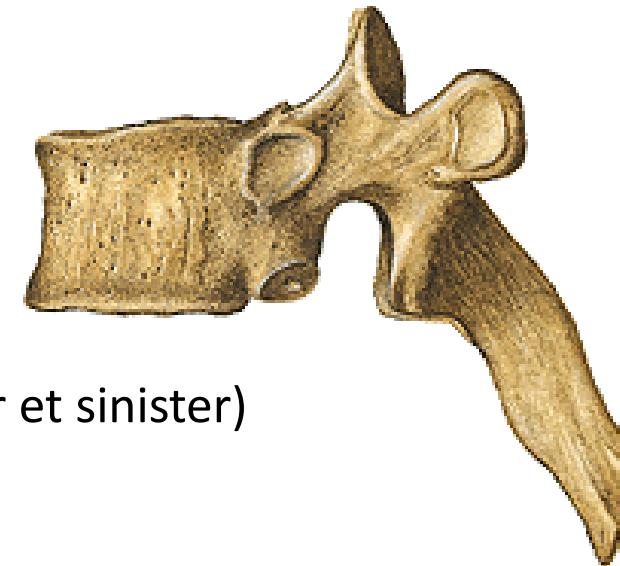

Processus vertebrales

4x processus articulares

(processus articularis superior et inferior - dexter et sinister)

2x processus transversus (dexter et sinister)

1x processus spinosus

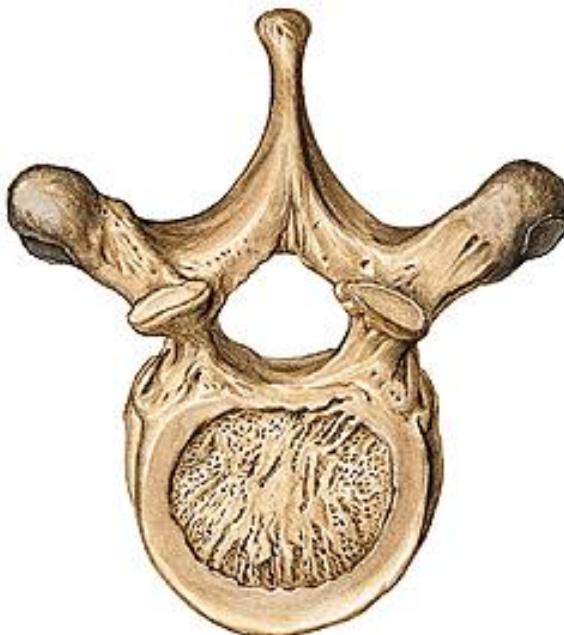

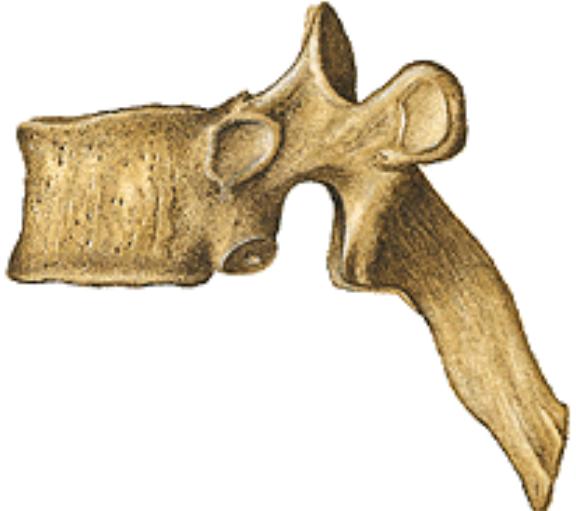

Processus vertebrales

Processus articulares (4)

processus articularis superior - dexter et sinister
processus articularis inferior - dexter et sinister

Processus transversus dexter et sinister (2)

Processus spinosus (1)

Vertebrae cervicales C₁ – C₇ (Cervical vertebrae)

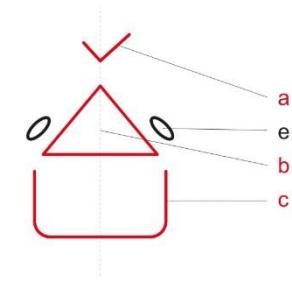

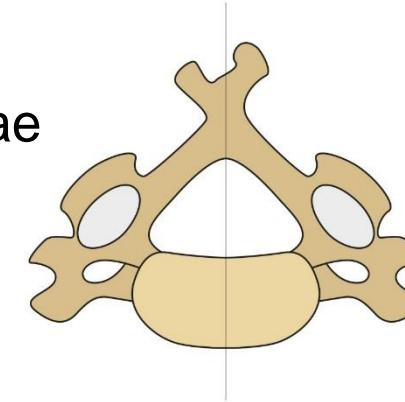

Foramen processus transversi !!!!!

Sulcus nervi spinalis

Tuberculum anterius et posterius processus
transversi

Uncus corporis vertebrae

Procesus articulares

Bifurcations of the spinous processes (C₂ – C₆)

C₆ - tuberculum caroticum

C₃ – the smallest body

C₇ – vertebra prominens

C₁ - Atlas

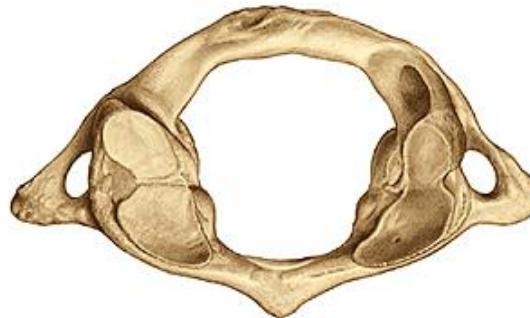

Arcus anterior et posterior atlantis

fovea dentis

tuberculum anterius et posterius atlantis

foramen vertebrale

facies pelvina

lineae transversales

foramina sacralia pelvina

promontorium

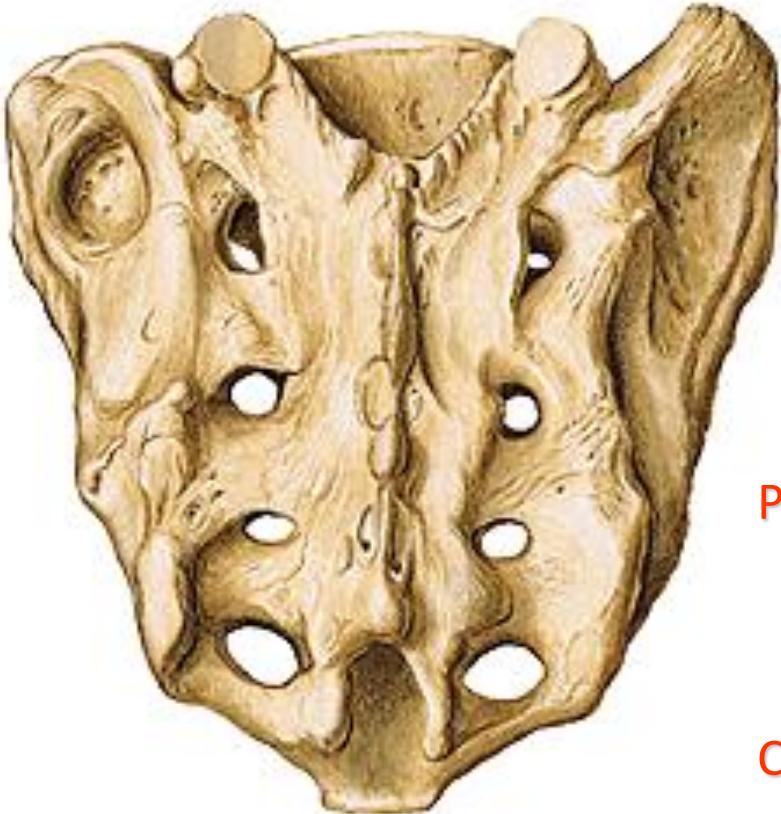

canalis sacralis – hiatus canalis sacralis

cornua sacralia

Os sacrum

Facies dorsalis

crista sacralis mediana

cristae sacrales intermediae

cristae sacrales laterales

foramina sacralia dorsalia

tuberositas sacralis

Partes laterales

facies auriculares

Canalis sacralis

hiatus canalis sacralis

cornua sacralia

Vertebrae cocygeae, os coccygis (coccyx)
(Co₁ – Co₄₋₅)

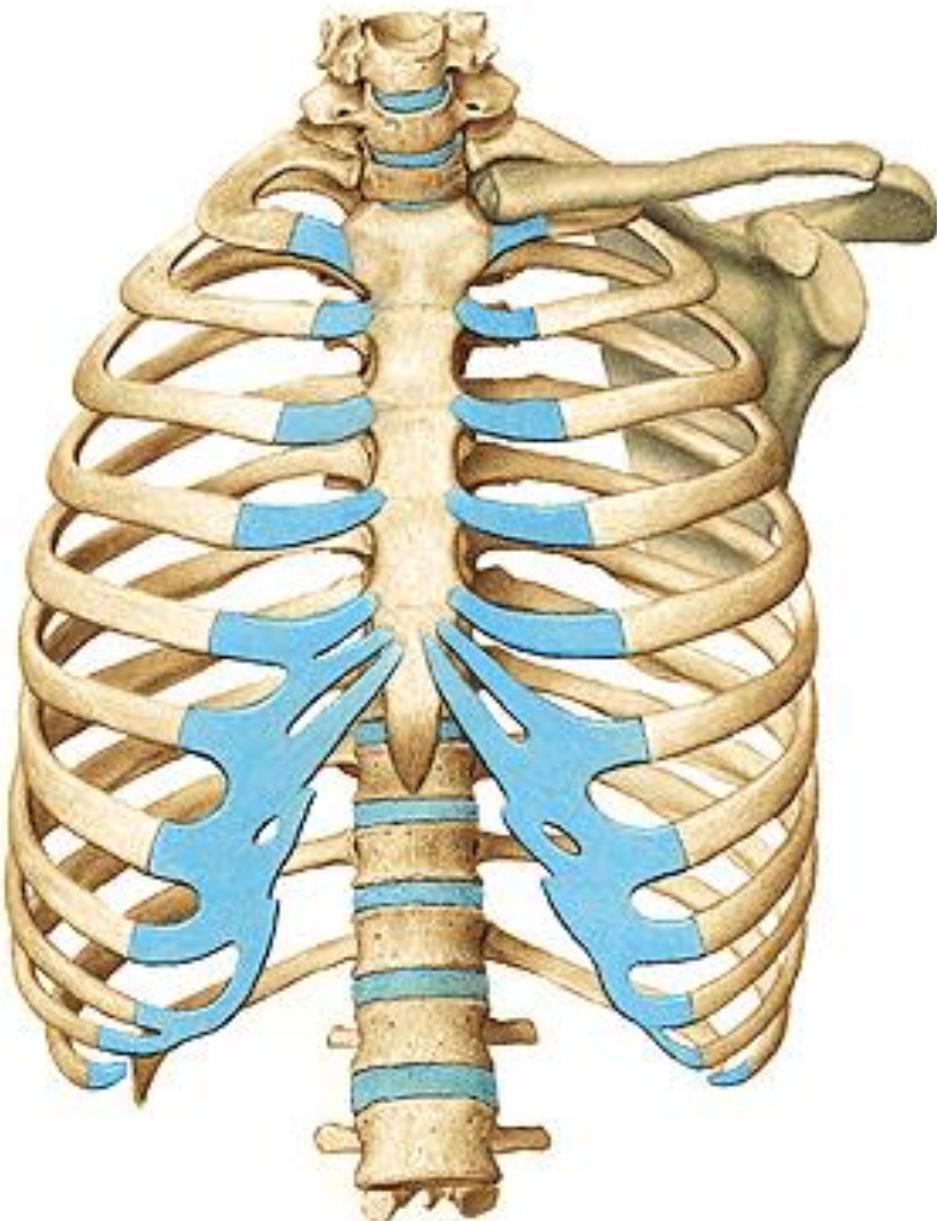

basis – facies terminalis superior

cornua ossis coccygis

apex

Costa, rib (12)

Costae verae (1.-7.)

Costae spuriae (8.-10.)

Costae fluctuantes (11., 12.)

Cervical rib

Lumbar rib (near to the kidneys)

Os costae

Cartilago costae

Caput

 facies articularis

 (2. - 10. rib - crista capitis costae)

Collum

 tuberculum costae

 facies articularis tuberculi costae

Corpus

 angulus costae

 crista costae

 sulcus costae

Costa prima

tuberculum musculi scaleni anterioris

sulcus arteriae subclaviae

tuberculum musculi scaleni medii

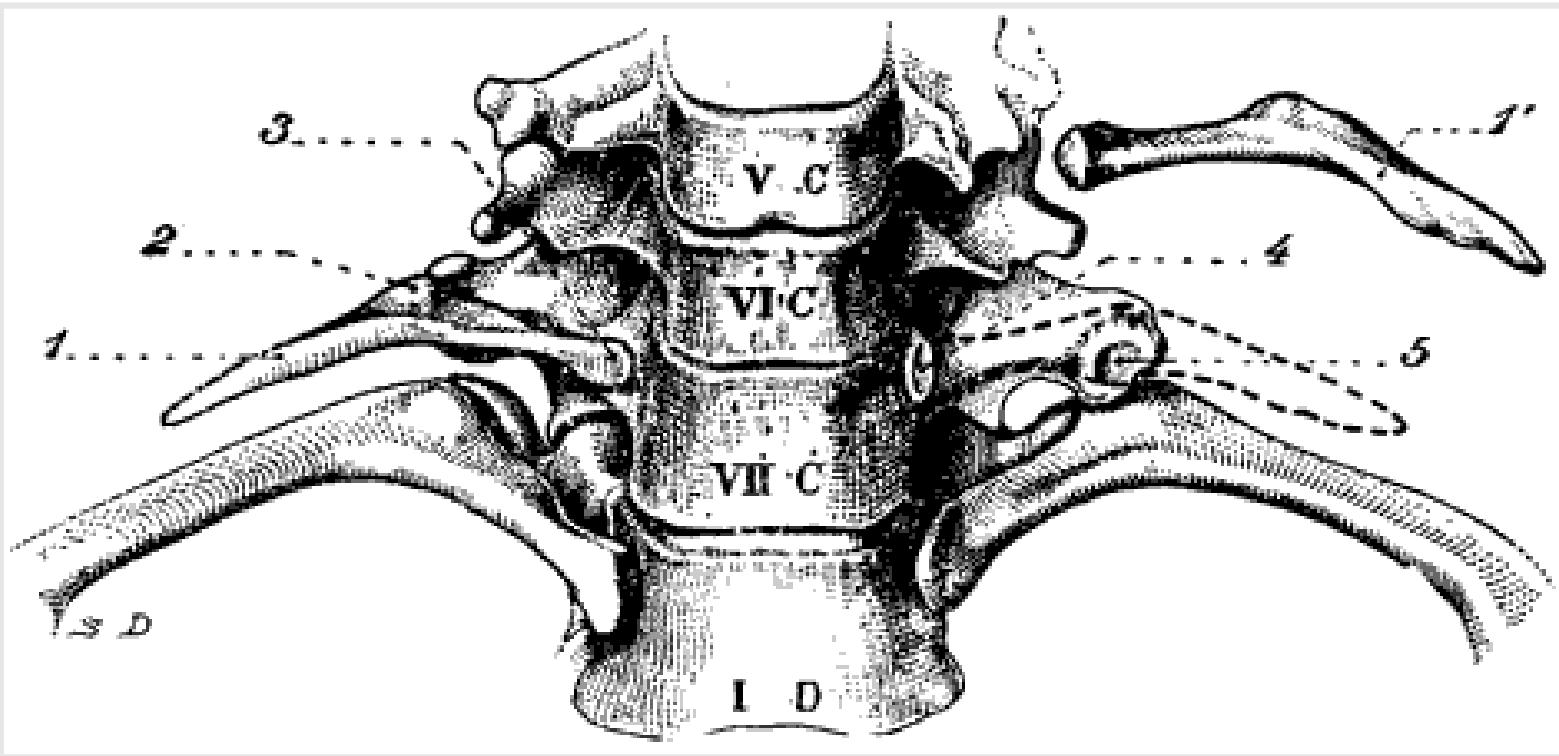

Costa secunda

tuberousitas musculi scaleni posterioris

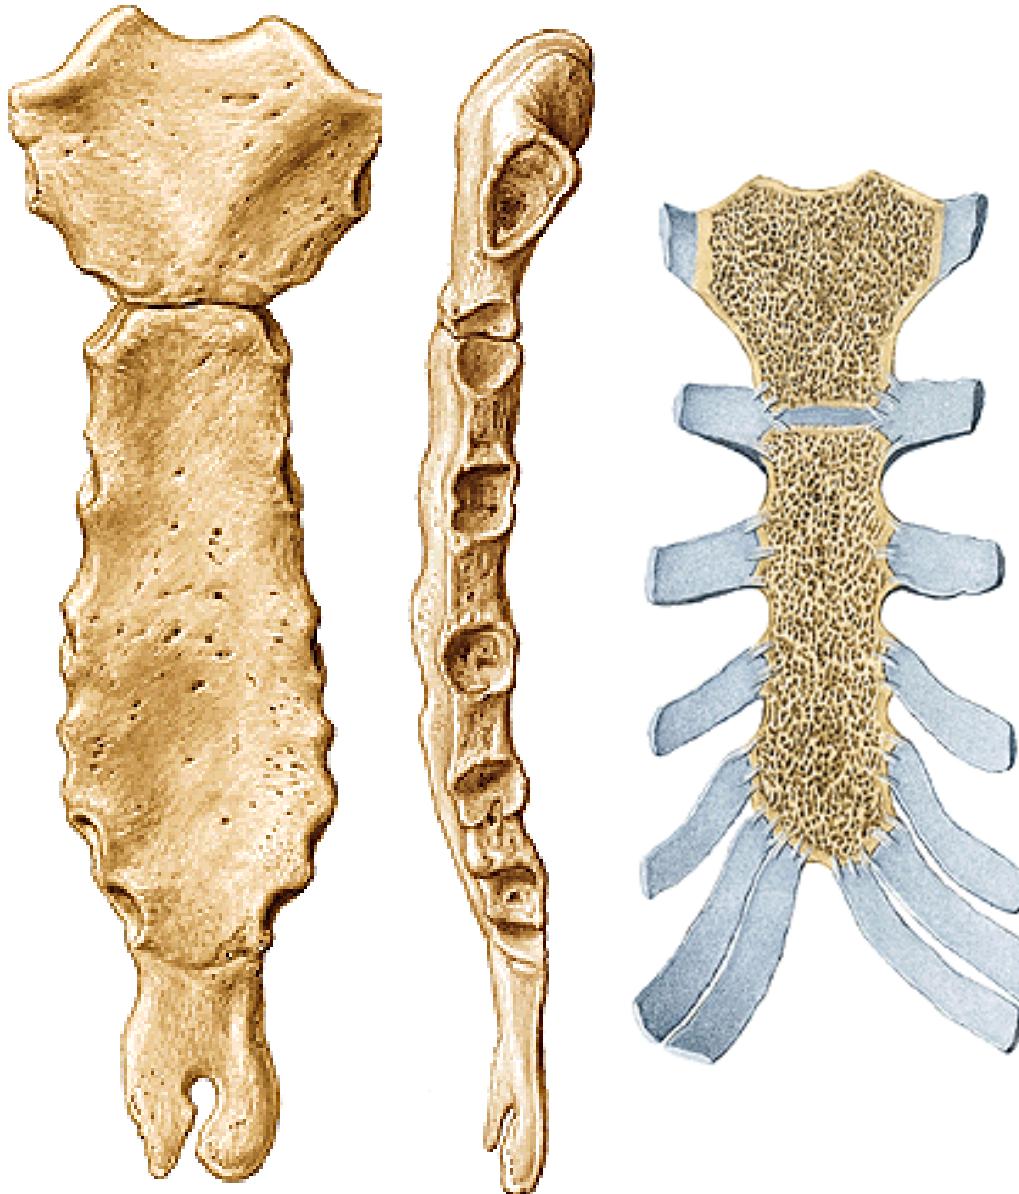

tuberousitas musculi serrati anterioris

11. and 12. ribs – tuberculum costae and sulcus costae are missing!!!

Cervical rib

Sternum (breast bone)

Manubrium sterni

incisura clavicularis

incisura jugularis

incisurae costales 1.,2.

Angulus sterni

Corpus sterni

incisurae costales (3.-7. žebro)

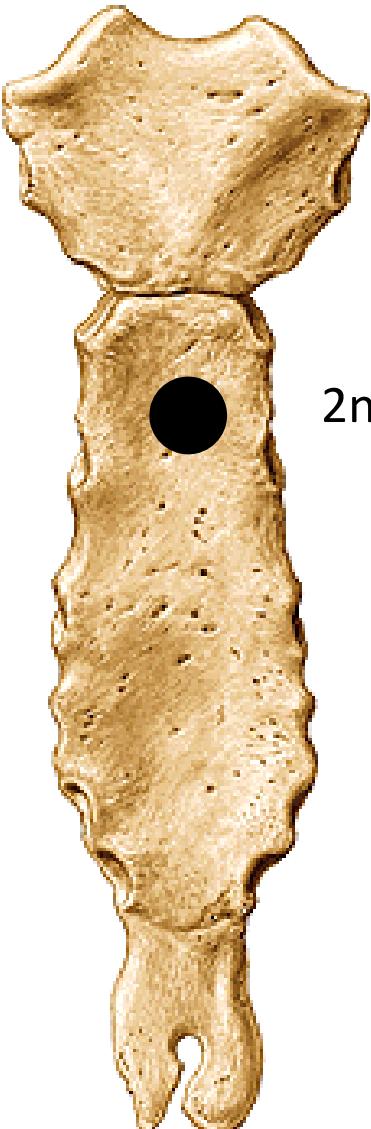

Processus xiphoideus

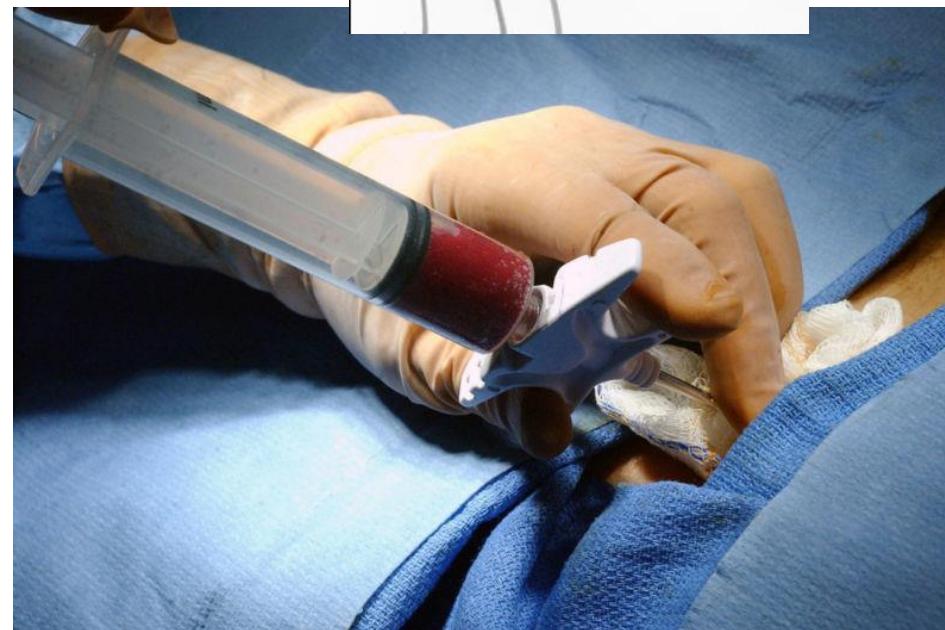

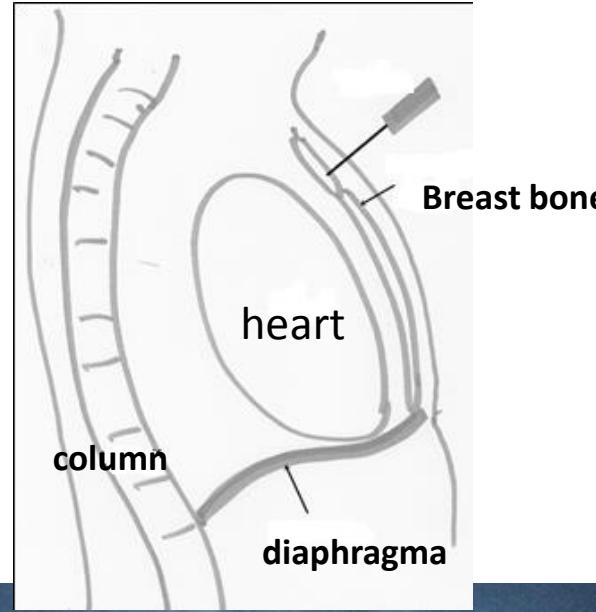

Sternebrae

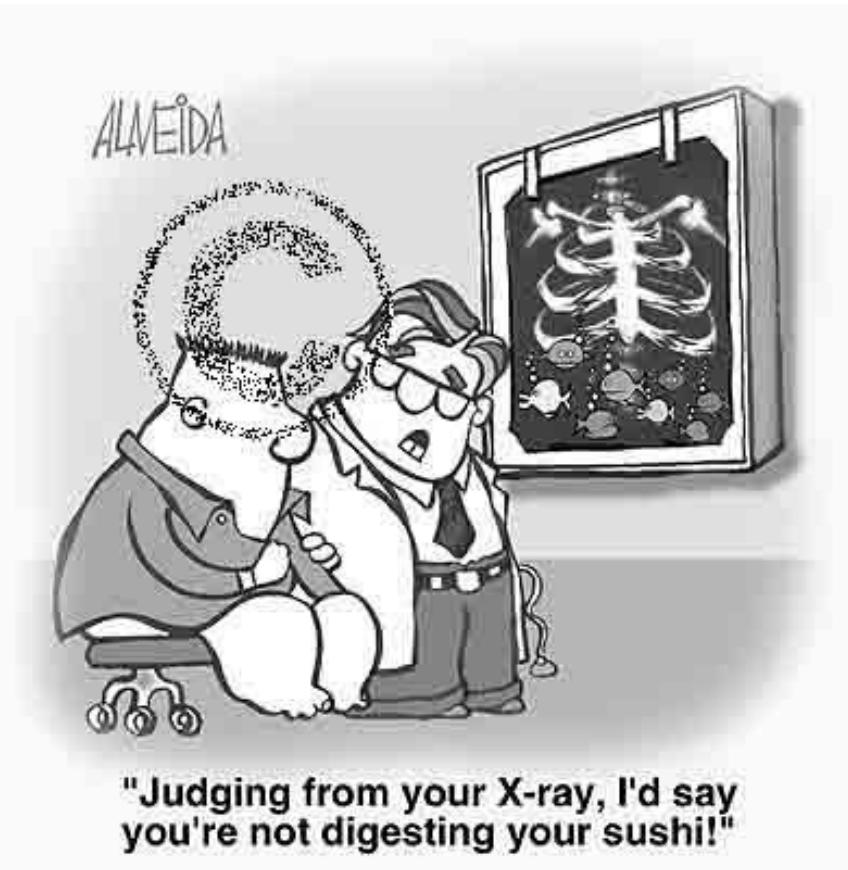

Hollow in the body of the breast bone

Sternal puncture

2nd intercostal space

"Judging from your X-ray, I'd say
you're not digesting your sushi!"

X-rays anatomy

**Anatomy is
essential for
understanding
radiology.**

Wilhelm Conrad Röntgen 1845-1923
1895 – discovery of x-ray
1901- awarded by Nobel price in physics

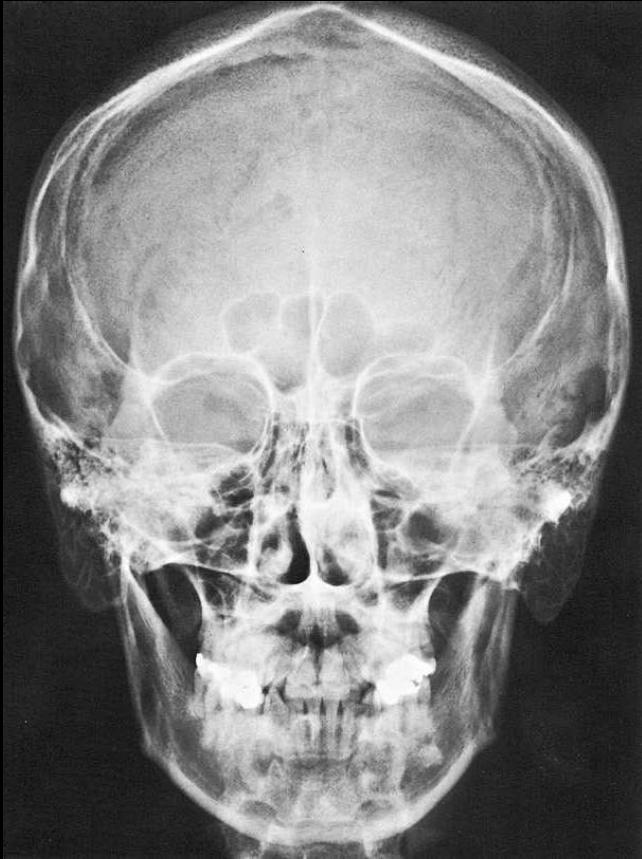

X-rays principle

- A highly penetrating beam of x-rays „transluminates“ the patient, showing tissues of differing densities on x-ray film.
- A tissue or organ that is relatively dense absorbs (stops) more x-rays than a less dense tissue.
- Like a negative
- Light structures –shadows
- Dark structures -brightening

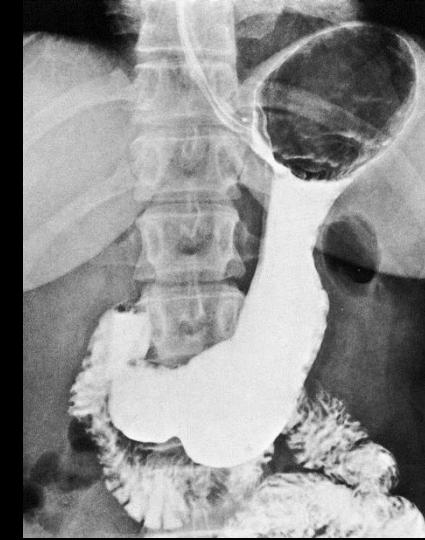

NATIVE x-ray
without using of
contrast agent

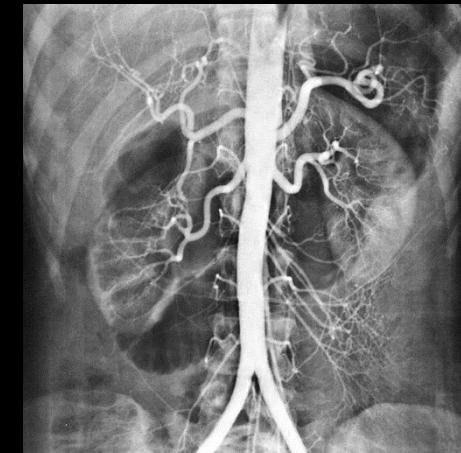

**X-rays with contrast
material** (Contrast
examination)

Negative
Gass, air

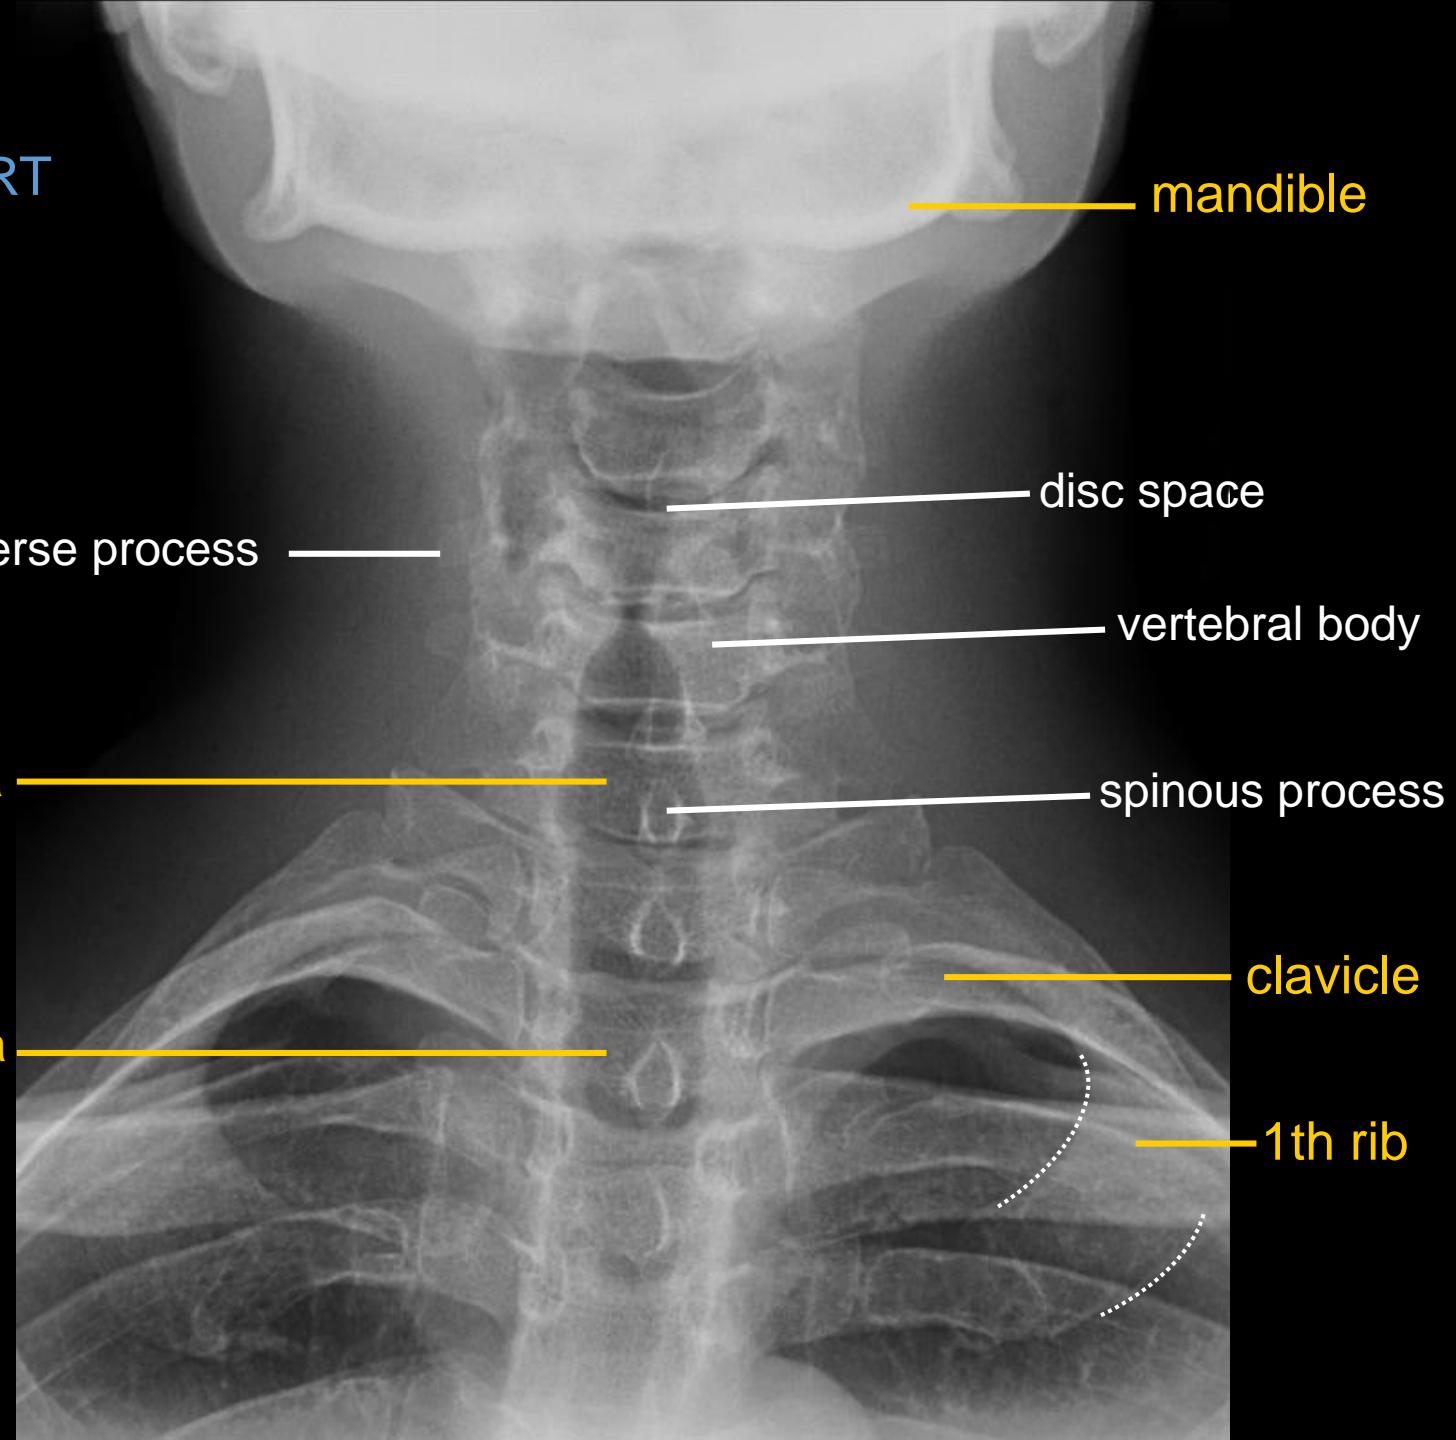

Positive
Barium sulfate

Iodine-based molecules
