Synapse

- Communication between neurons

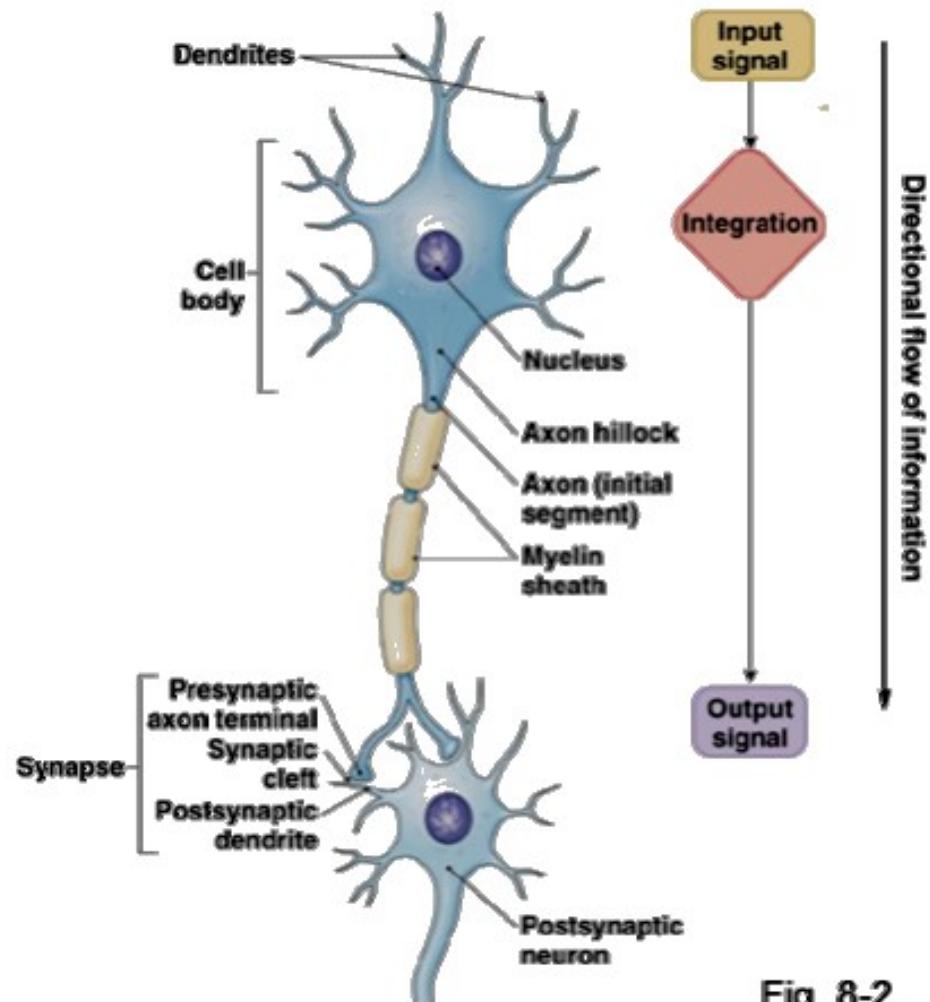

Fig. 8-2

Synapse

- Communication between neurons
- Electrical
- Chemical

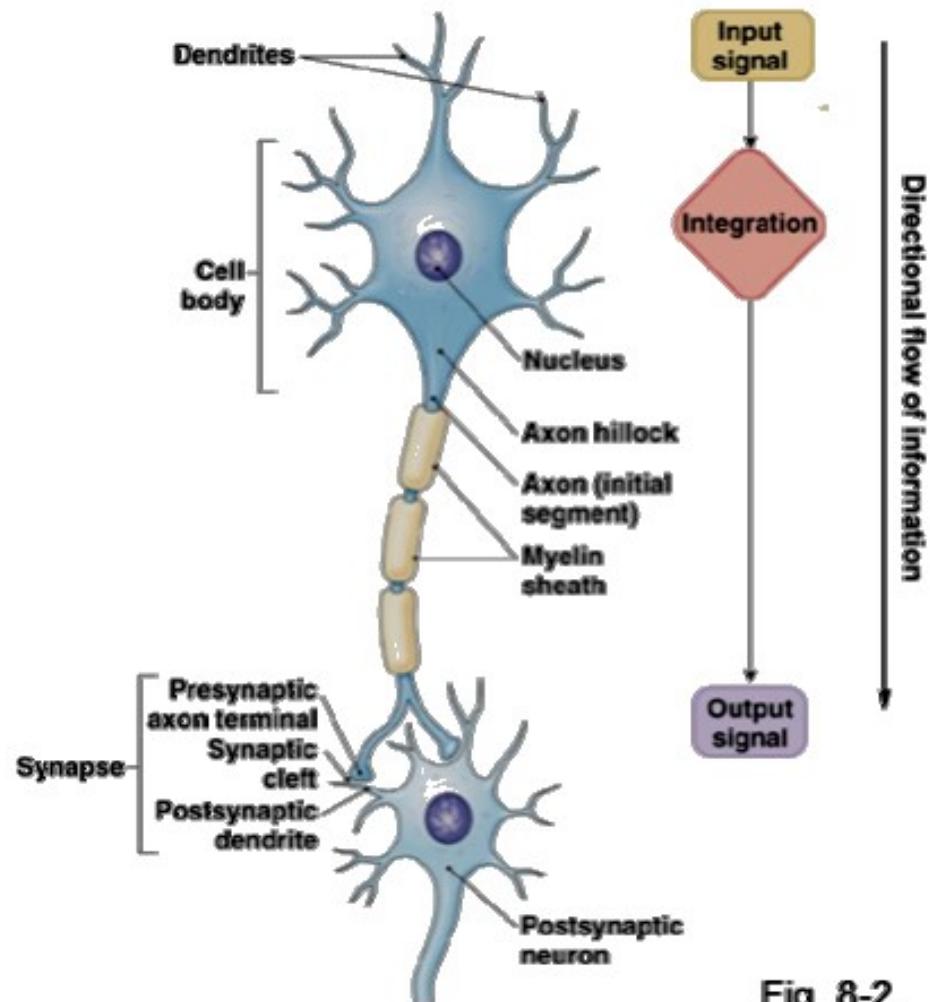

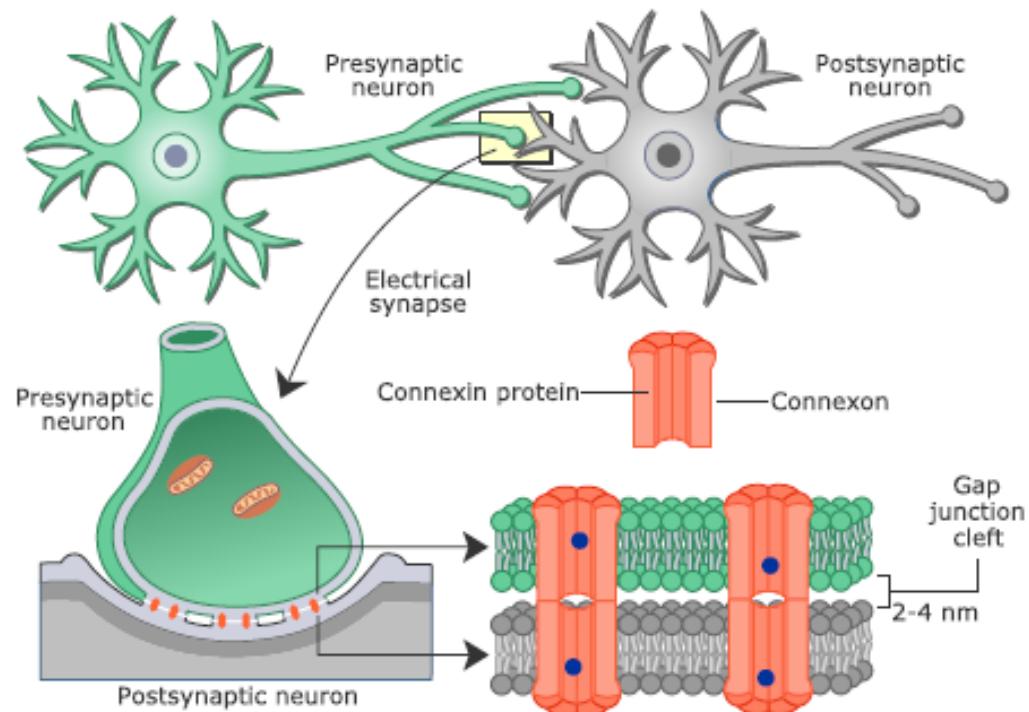

Fig. 8-2

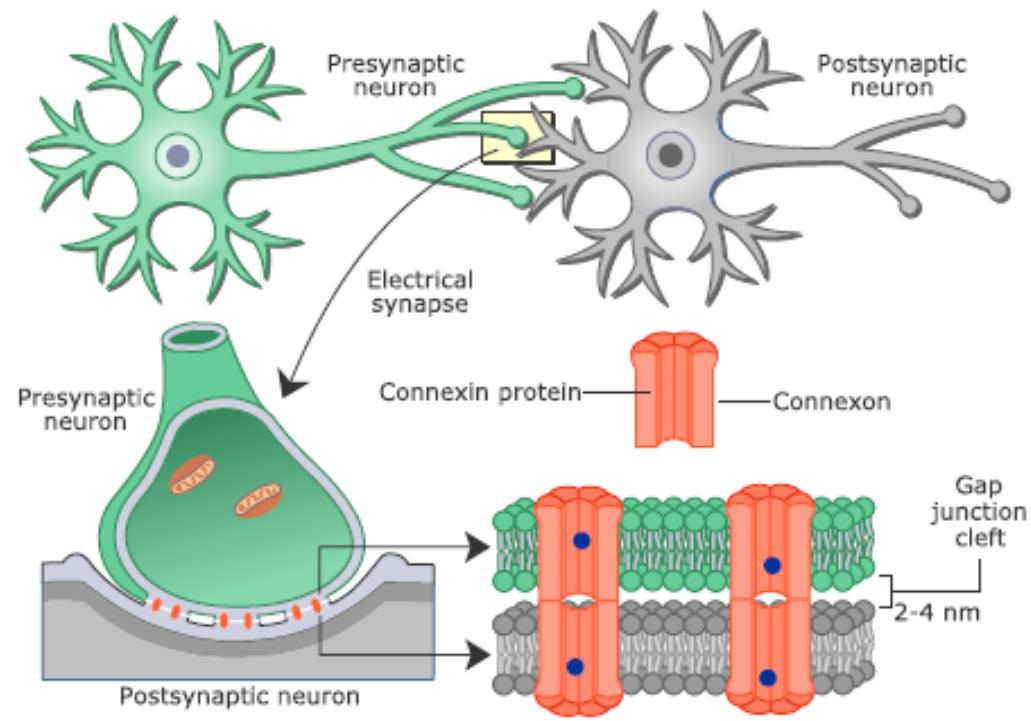

Electrical synapse

- Evolutionary old
- Less frequent than ch.
- Ubiquitous

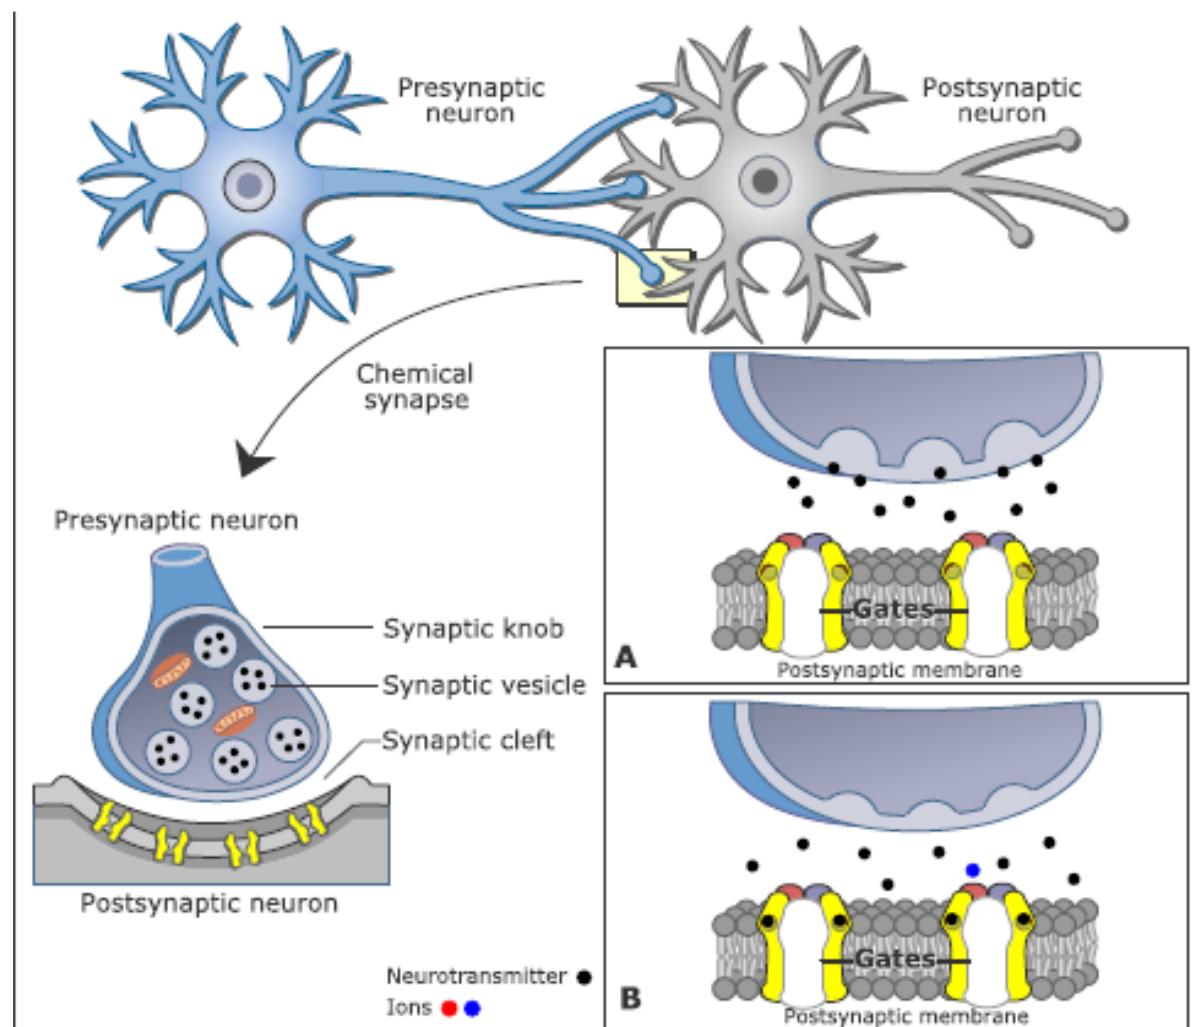

Electrical synapse

- Evolutionary old
- Less frequent than ch.
- Ubiquitous
- Gap junctions
- Bidirectional transmission
- Fast
- Strength of signal may decrease

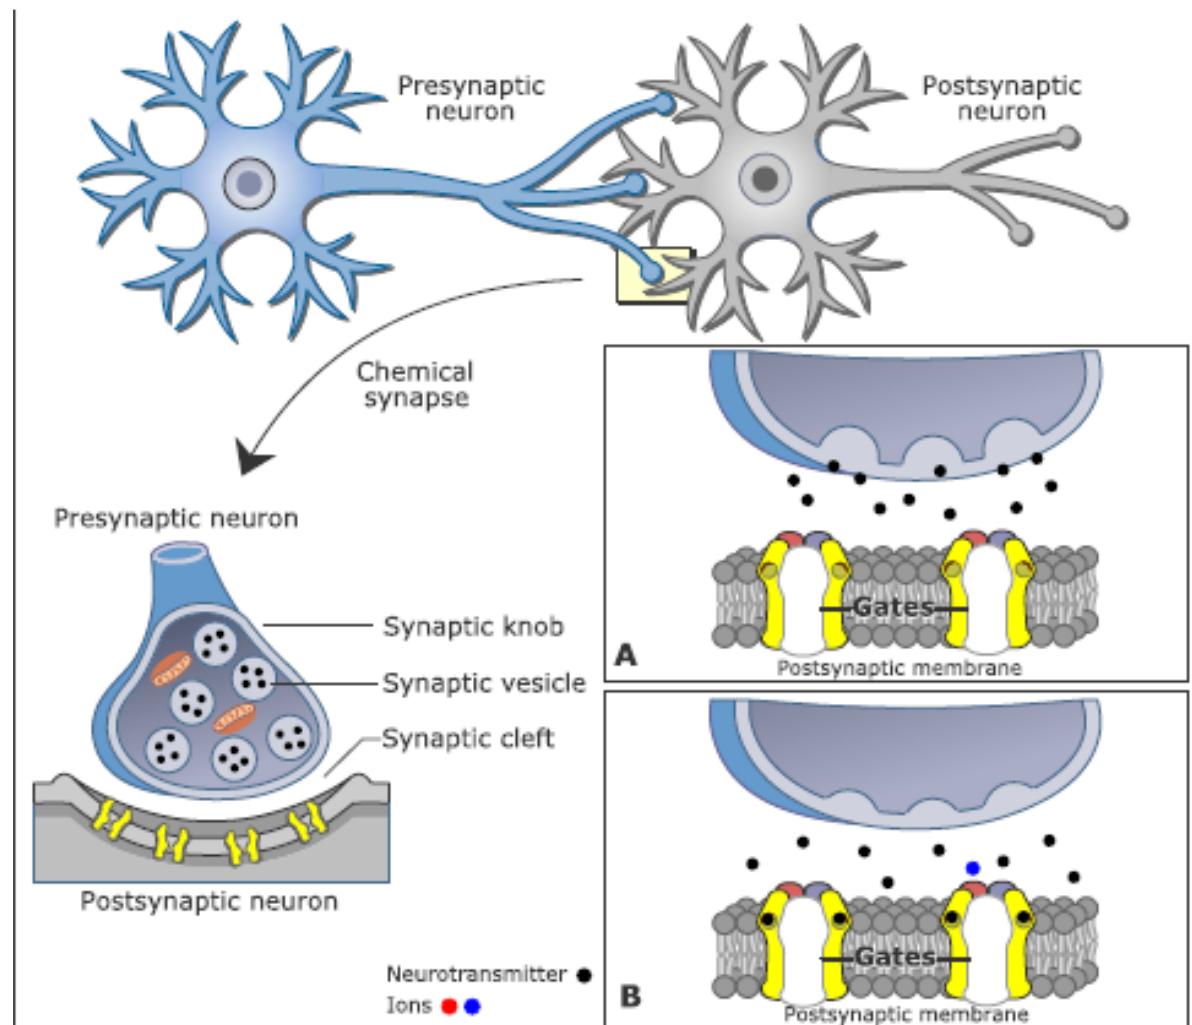

Chemical synapse

- Evolutionary young
- Majority type of s.

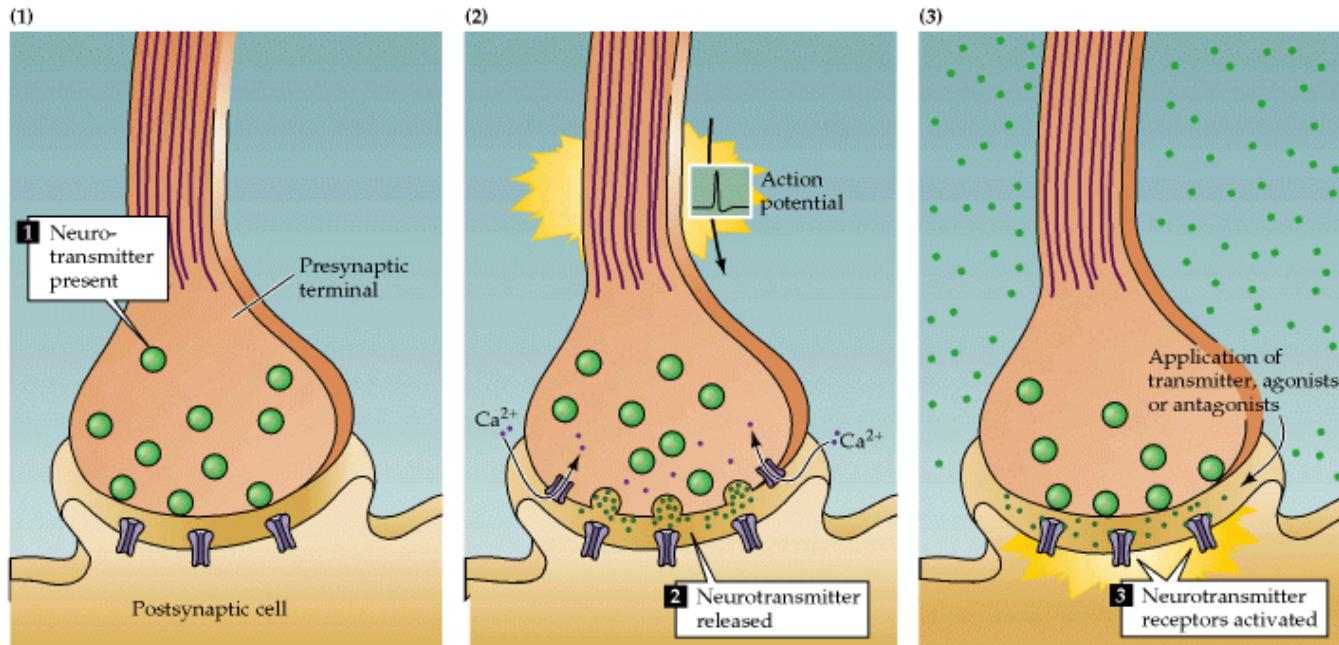

Chemical synapse

- Evolutionary young
- Majority type of s.
- Unidirectional
- Synaptic cleft
- Neurotransmitter
- Constant signal strength

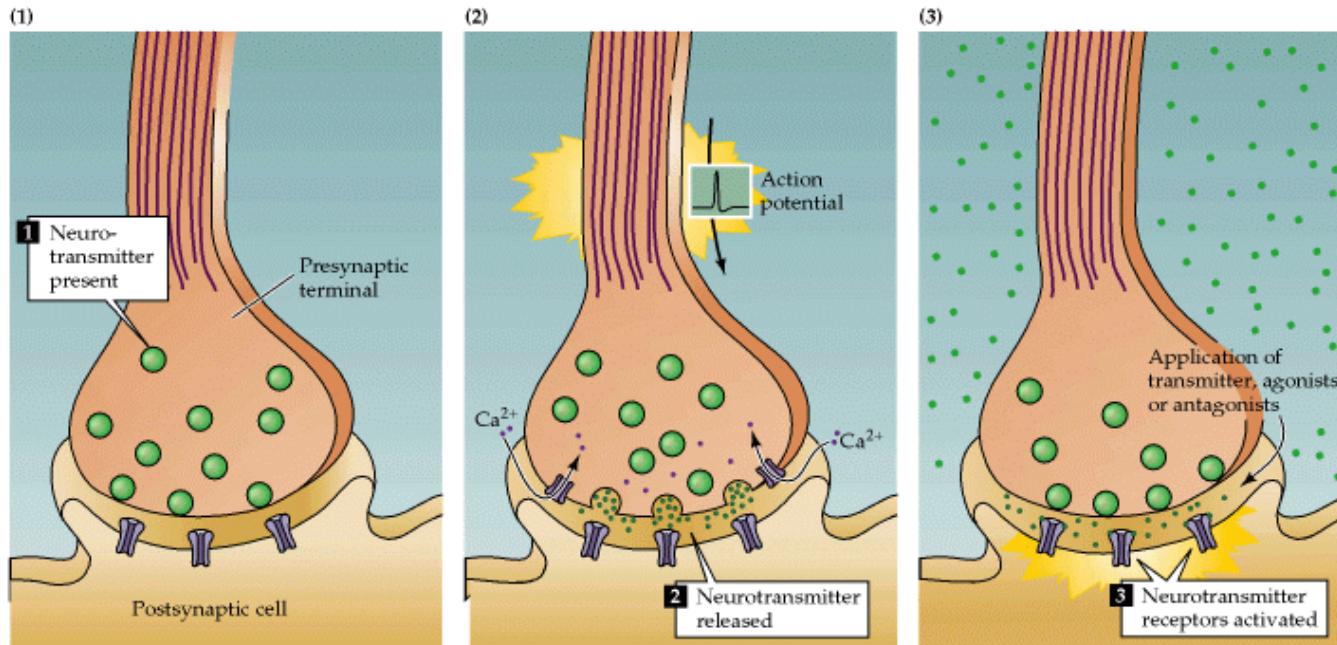

Neurotrasnsmiter

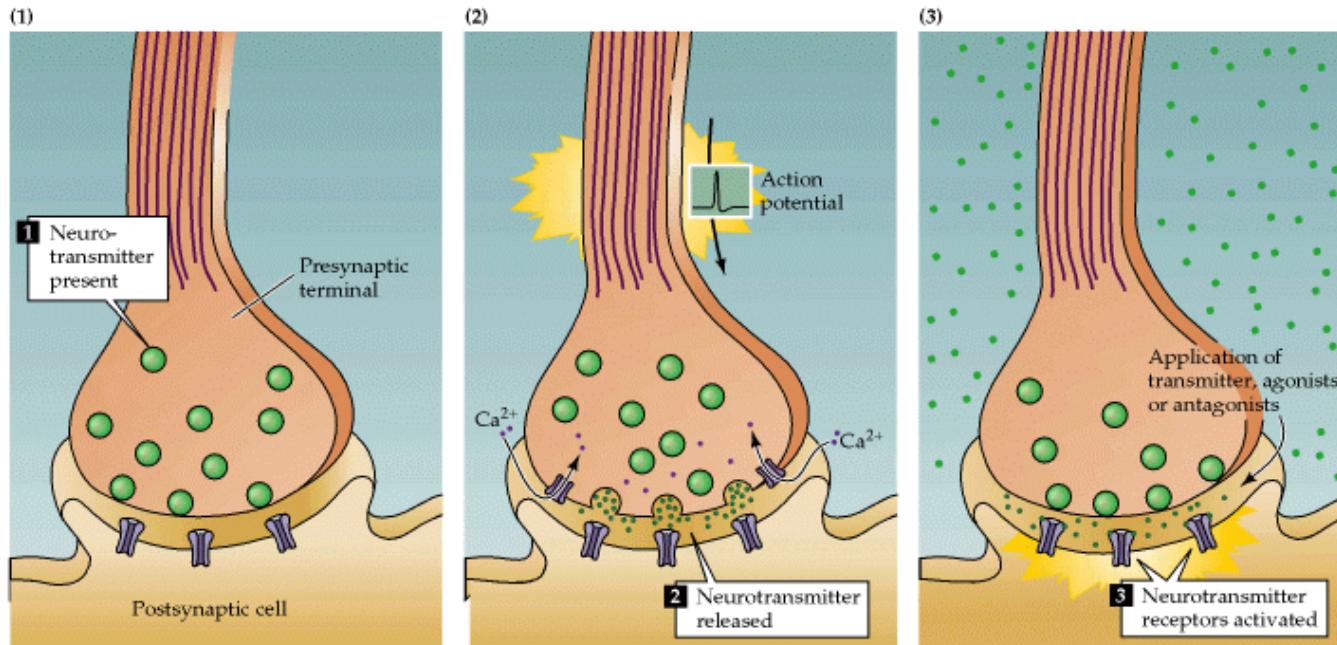

- Present in presinaptic neuron

Neurotrasnsmiter

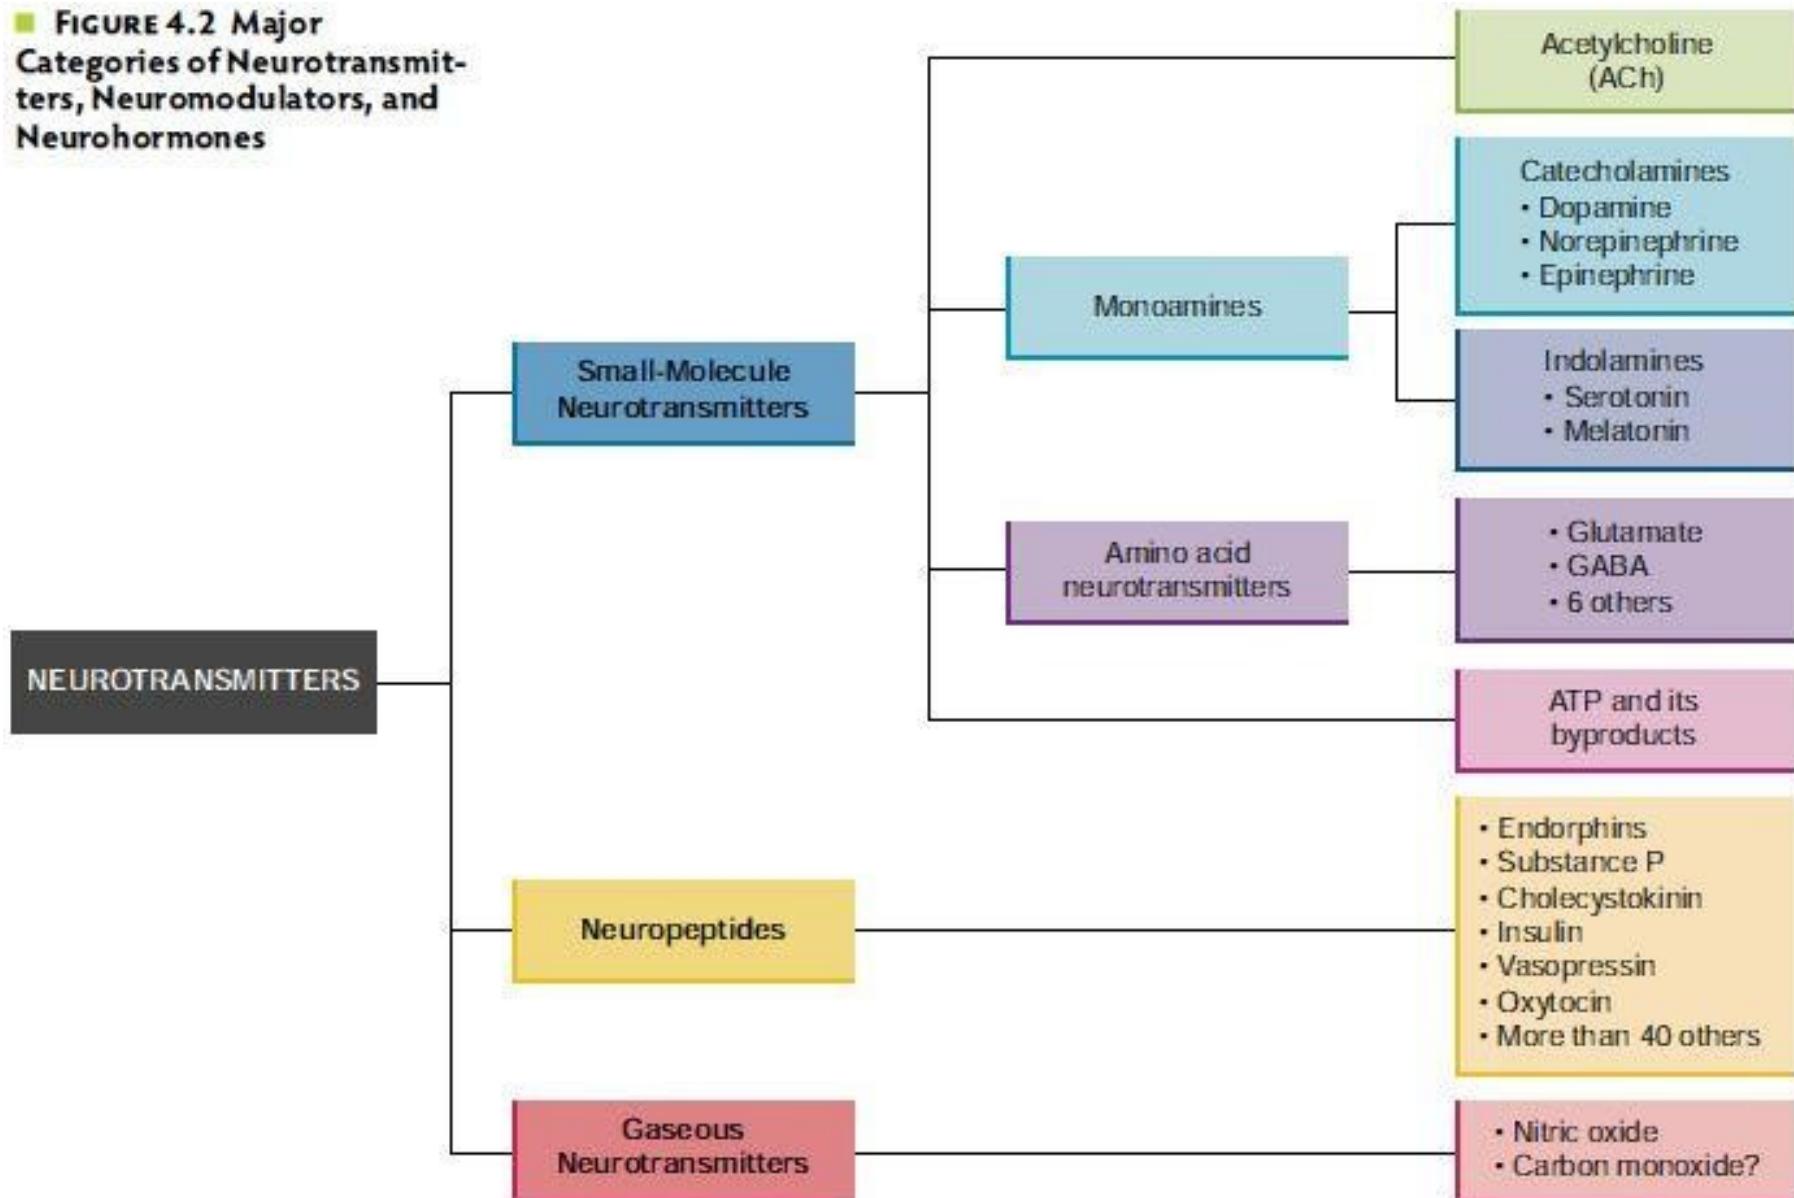

- Present in presinaptic neuron
- Released into the synaptic cleft due to depolarization of presynaptic neuron (Ca²⁺ dependent mechanism)

Neurotrasnsmiter

- Present in presinaptic neuron
- Released into the synaptic cleft due to depolarization of presynaptic neuron (Ca^{2+} dependent mechanism)
- Specific receptor has to be present in postsynaptical membrane

FIGURE 4.2 Major Categories of Neurotransmitters, Neuromodulators, and Neurohormones

THE STRUCTURES OF NEUROTRANSMITTERS

STRUCTURE KEY: ● Carbon atom ○ Hydrogen atom ○ Oxygen atom N Nitrogen atom R Rest of molecule

ADRENALINE

Fight or flight neurotransmitter

Produced in stressful or exciting situations. Increases heart rate & blood flow, leading to a physical boost & heightened awareness.

NORADRENALINE

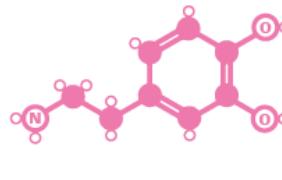

Concentration neurotransmitter

Affects attention & responding actions in the brain, & involved in fight or flight response. Contracts blood vessels, increasing blood flow.

DOPAMINE

Pleasure neurotransmitter

Feelings of pleasure, and also addiction, movement, and motivation. People repeat behaviours that lead to dopamine release.

SEROTONIN

Mood neurotransmitter

Contributes to well-being & happiness; helps sleep cycle & digestive system regulation. Affected by exercise & light exposure.

GABA

Calming neurotransmitter

Calms firing nerves in CNS. High levels improve focus; low levels cause anxiety. Also contributes to motor control & vision.

ACETYLCHOLINE

Learning neurotransmitter

Involved in thought, learning, & memory. Activates muscle action in the body. Also associated with attention and awakening.

GLUTAMATE

Memory neurotransmitter

Most common brain neurotransmitter. Involved in learning & memory, regulates development & creation of nerve contacts.

ENDORPHINS

Euphoria neurotransmitters

Released during exercise, excitement, & sex, producing well-being & euphoria, reducing pain. Biologically active section shown.

Neuromuscular junction

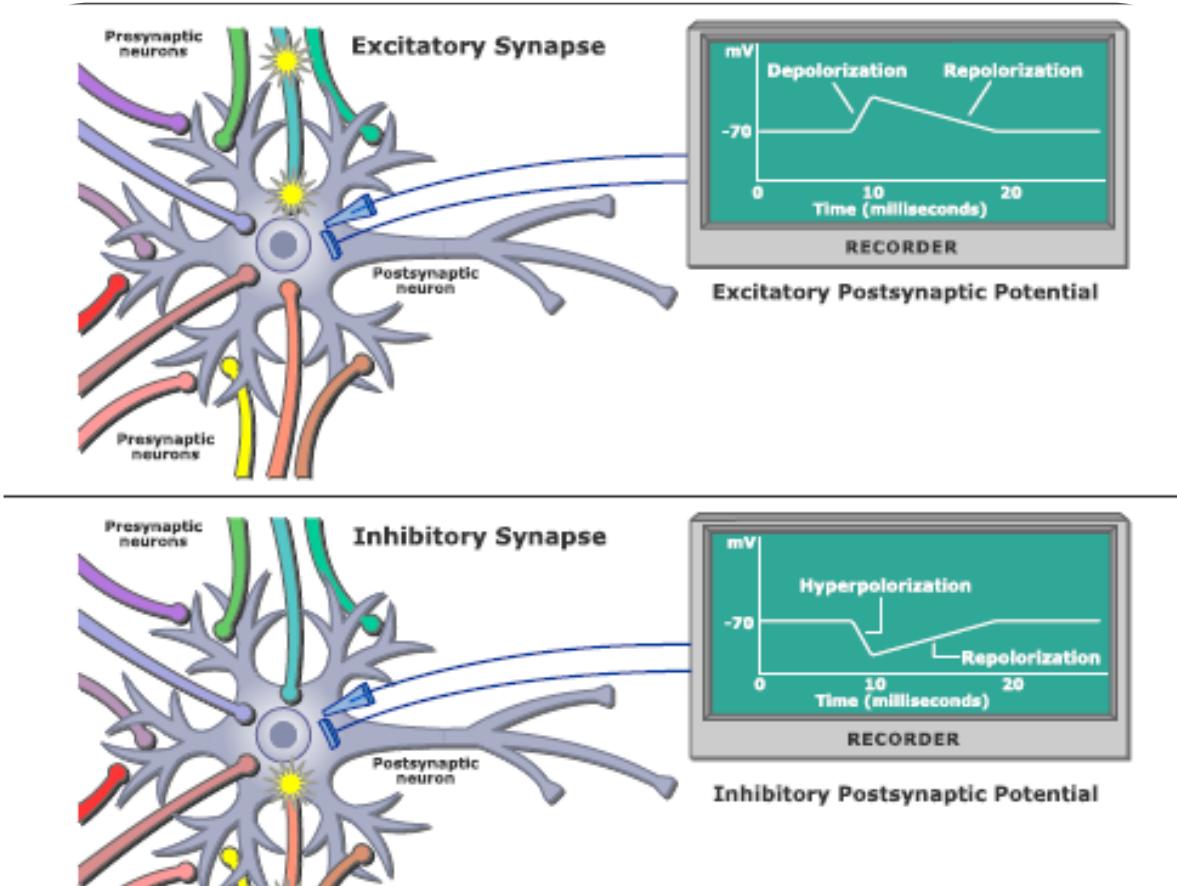

Excitatory/inhibitory postsynaptic potential

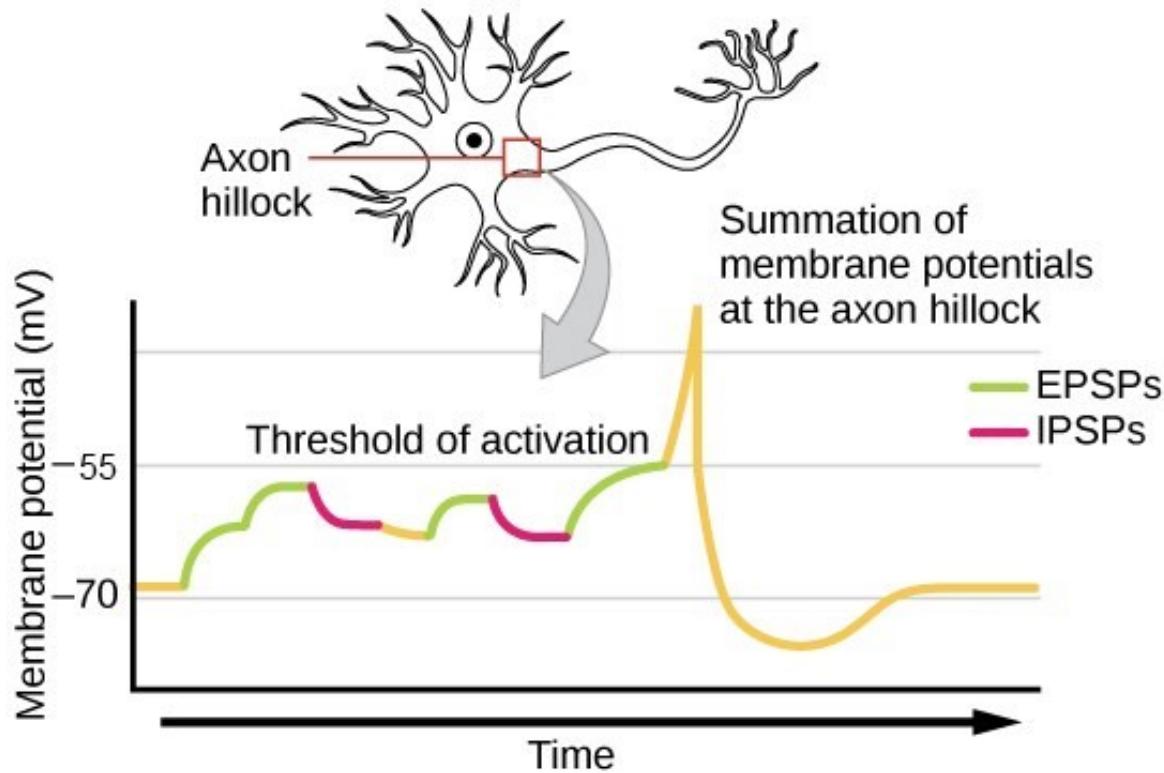

Signal summation

- Temporal
- Spatial

Signal summation

Synaptic convergence

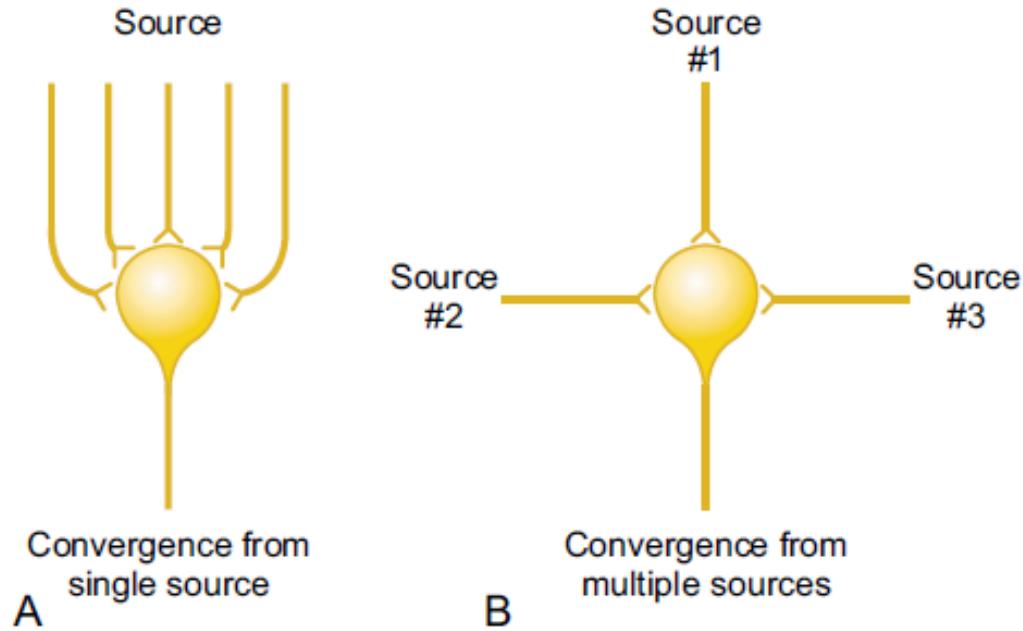

Figure 46-12

"Convergence" of multiple input fibers onto a single neuron.
A, Multiple input fibers from a single source. B, Input fibers from multiple separate sources.

Synaptic convergence

Average number of synapses in one neuronal cell in primates

- ✓ Primary visual cortex (area17)
 - aprox. 4 000

- ✓ Primary motor cortex (area4)
 - aprox. 60 000

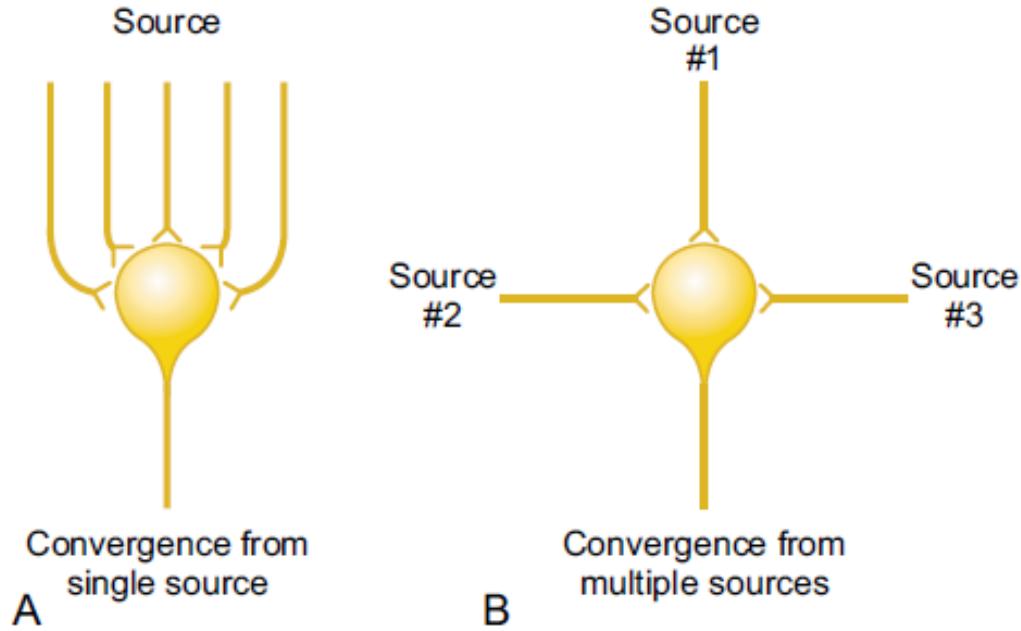

Figure 46-12

"Convergence" of multiple input fibers onto a single neuron.
A, Multiple input fibers from a single source. B, Input fibers from multiple separate sources.

Synaptic divergence

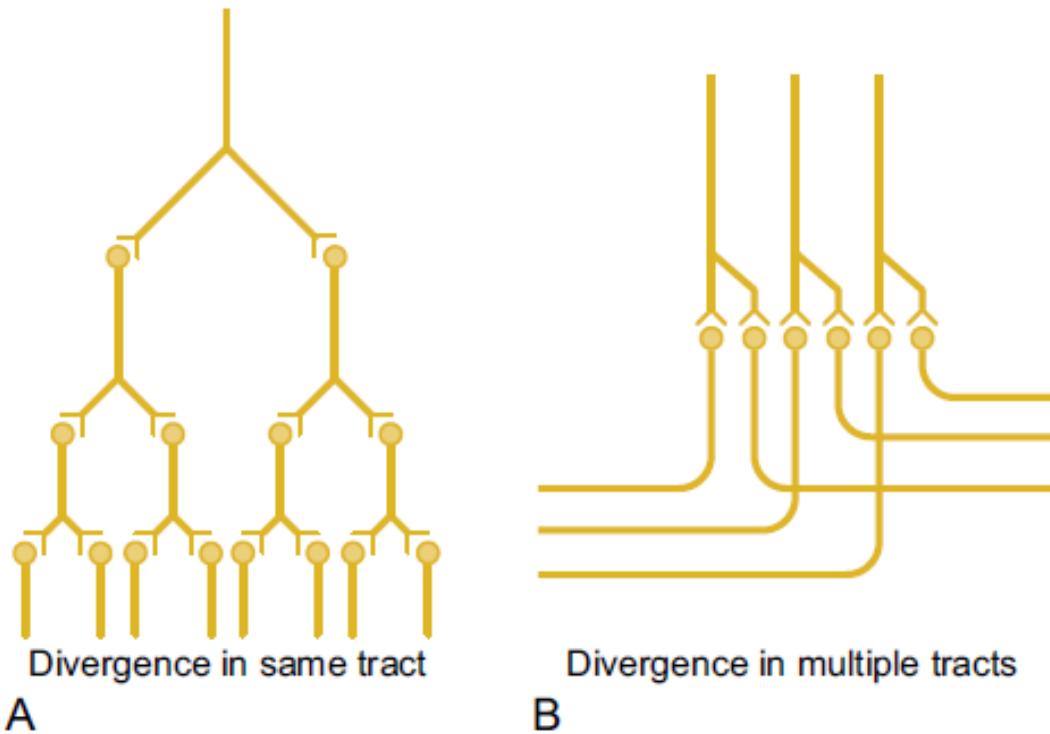

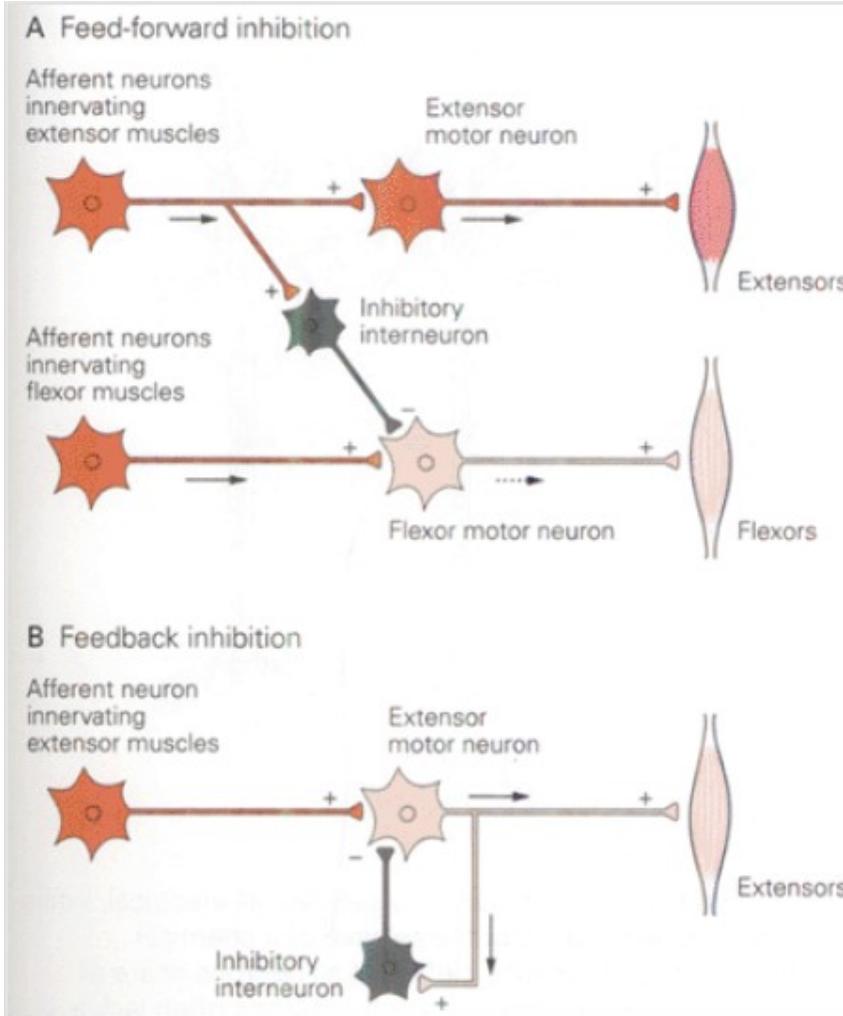

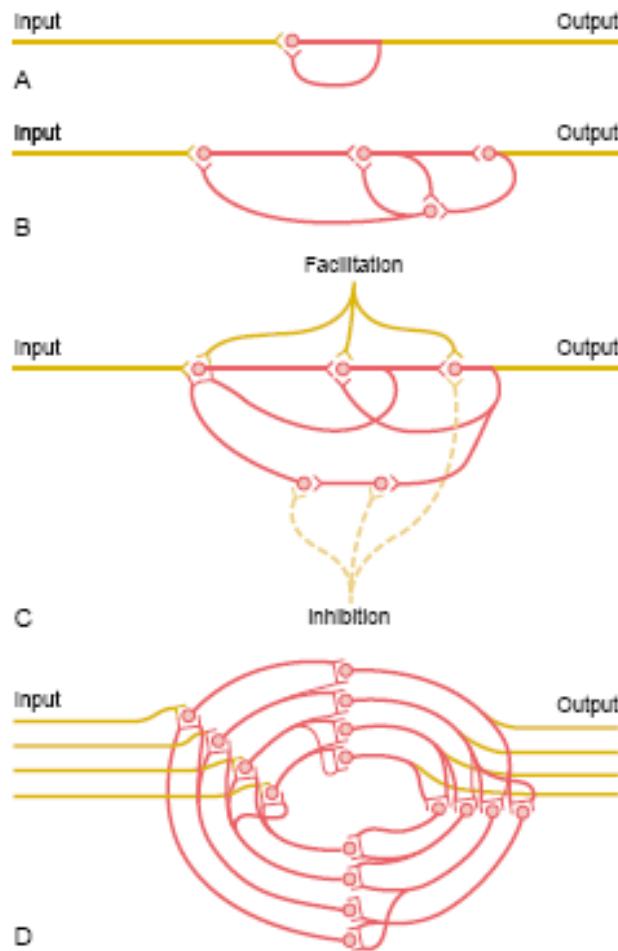

Figure 46–11

"Divergence" in neuronal pathways. *A*, Divergence within a pathway to cause "amplification" of the signal. *B*, Divergence into multiple tracts to transmit the signal to separate areas.

Networking

Networking

Neurotransmission vs. Neuromodulation

Neurotransmission vs. Neuromodulation

- Information transmission
- Regulation of NS activity

Neurotransmission vs. Neuromodulation

- Information transmission
- Specific
- Regulation of NS activity
- Difuse (volume transmission)

Neurotransmission vs. Neuromodulation

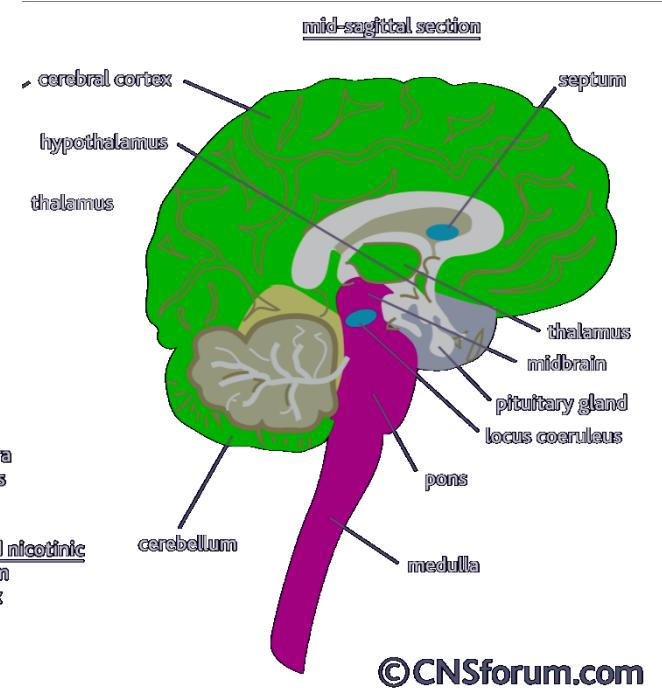

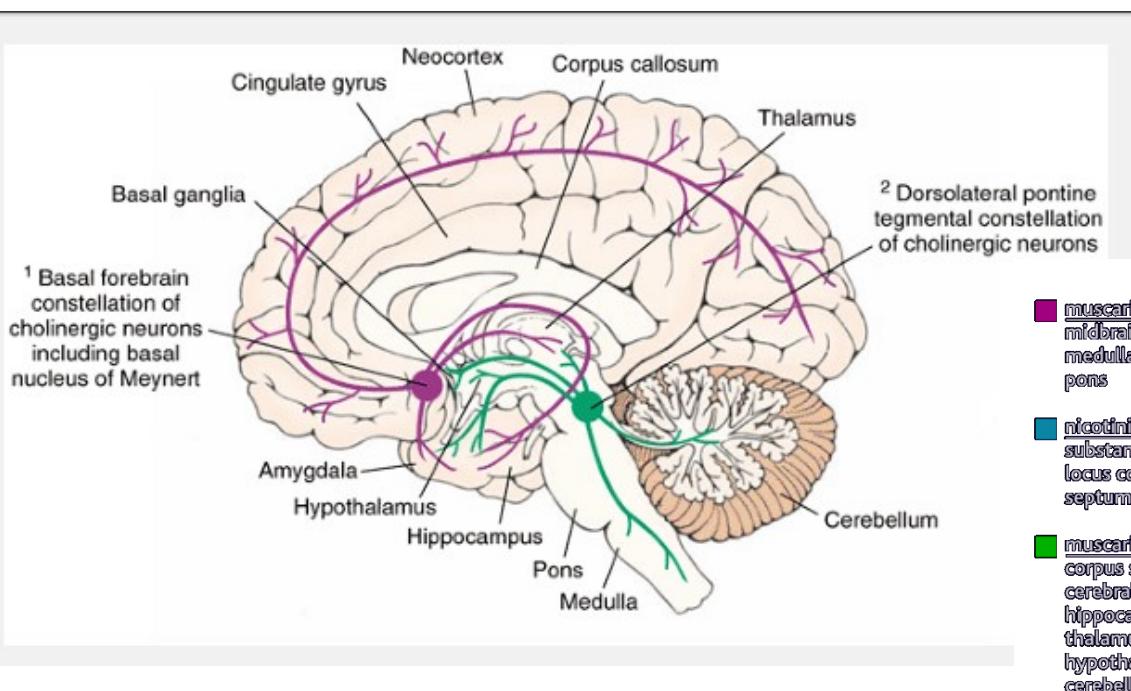

- Information transmission
- Specific
- Receptors – ion channels
- Regulation of NS activity
- Diffuse (volume transmission)
- Receptors – G-proteins

Neurotransmission vs. Neuromodulation

- Information transmission
- Specific
- Receptors – ion channels
- Short duration
 - membrane potential changes
- Regulation of NS activity
- Diffuse (volume transmission)
- Receptors – G-proteins
- Longer duration
 - changes in synaptic properties

Acetylcholin

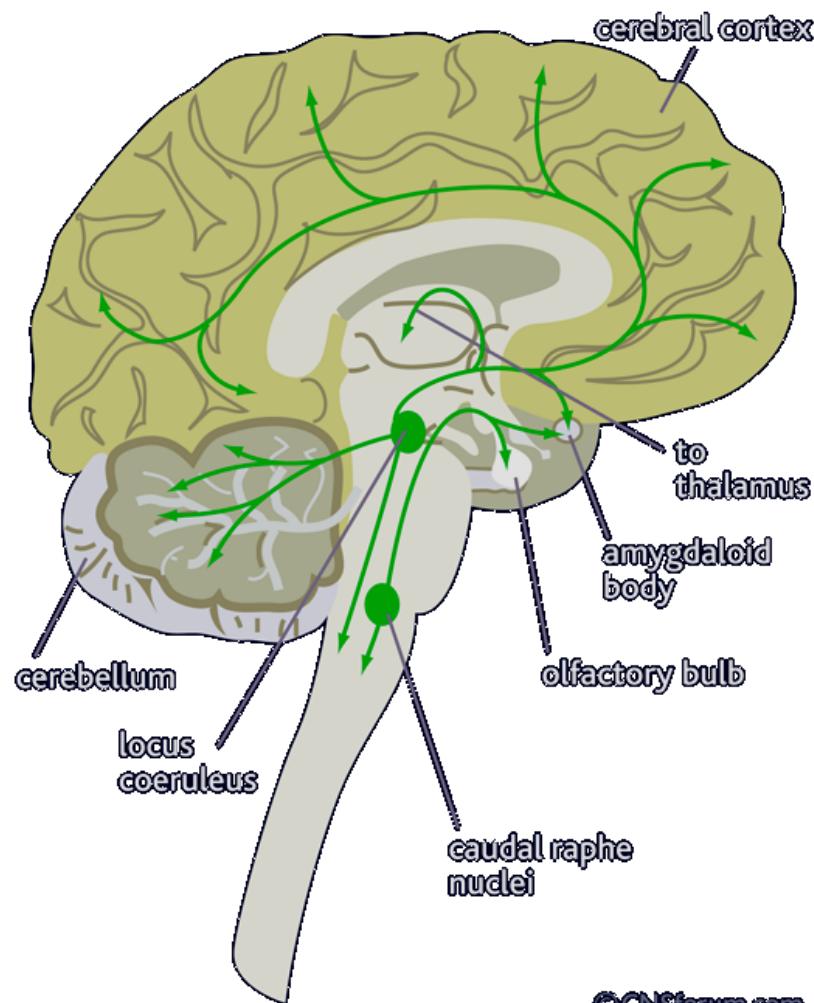

- Nucleus basalis (Meynerti) abd other nuclei
- Nicotin receptors
- Muscarin receptors
- Sleep/wake regulation
- Cognitive functions
- Behavior
- Emotions

©CNSforum.com

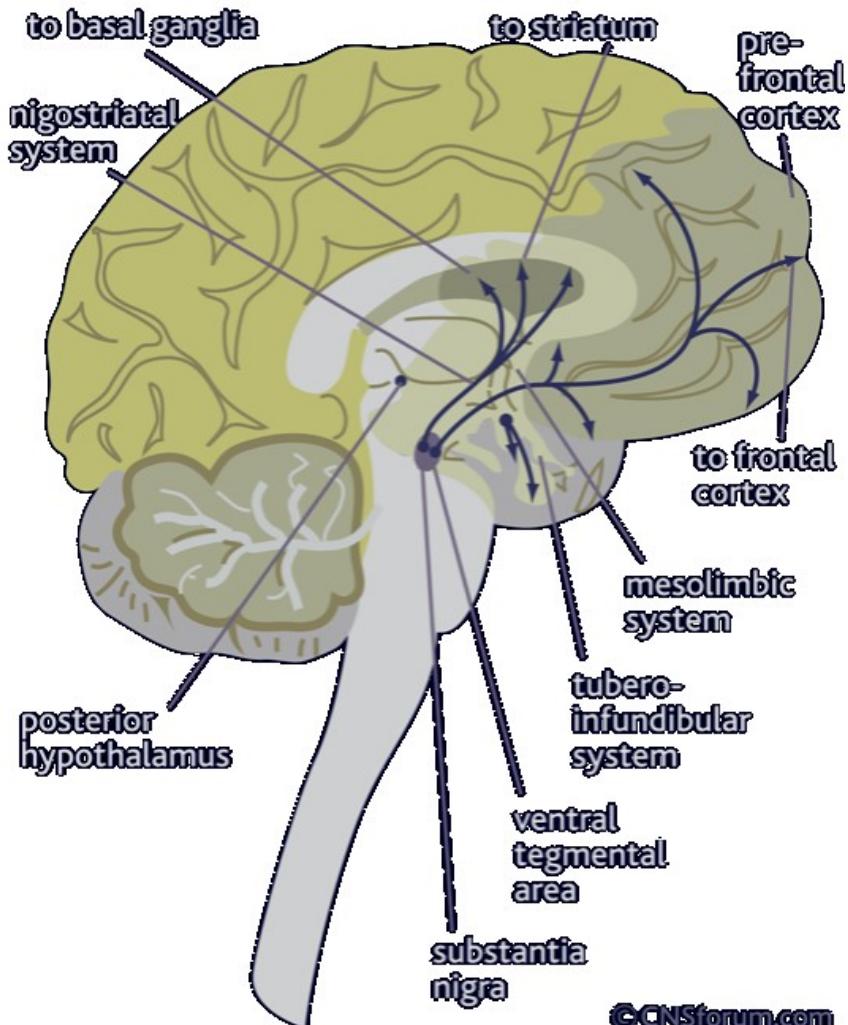

Noradrenalin

- Locus coeruleus
- Nuclei raphe caudalis
- Vigilance
- Responsiveness to unexpected stimuli
- Memory
- Learning

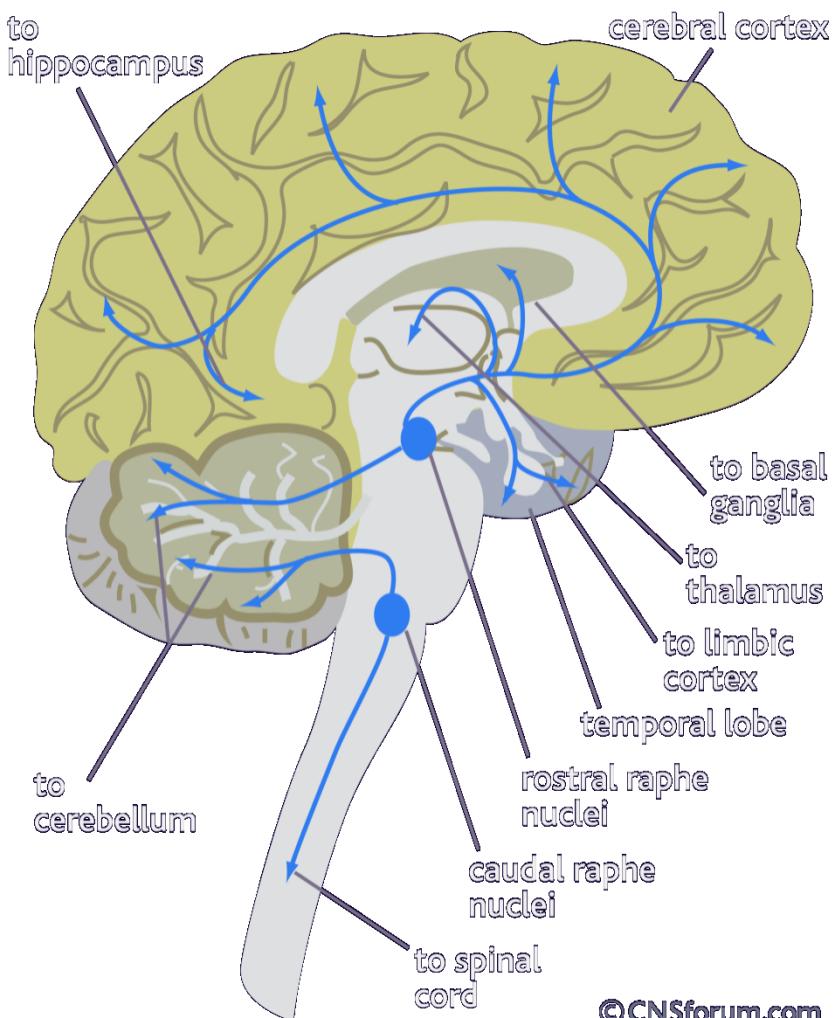

Dopamin

- Nigrostriatal system
 - Movement
 - Sensory stimuli
- Ventrotegmento-mesolimbic-frontal system
 - Reward
 - Cognitive function
 - Emotional behavior
- Tubero-infundibular system
 - Hypothalamic-pituitary regulation
- D1 receptors – excitatory
- D2 receptors - inhibitory

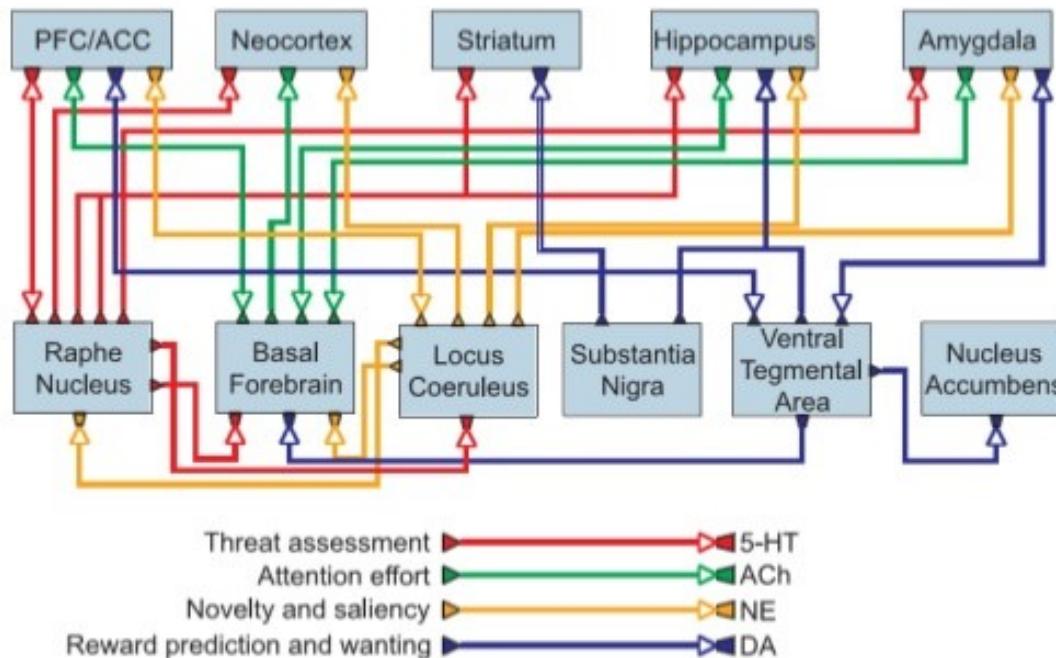

Serotonin

- Nuclei raphe rostralis
- Nuclei raphe caudalis
- Anxiety/relaxation
- Impulsive behavior
- Sleep
