## Somatosensitivity, viscerosensititvity, proprioception and pain I

2 Somatosensitivity, viscerosensititvity, proprioception and pain I

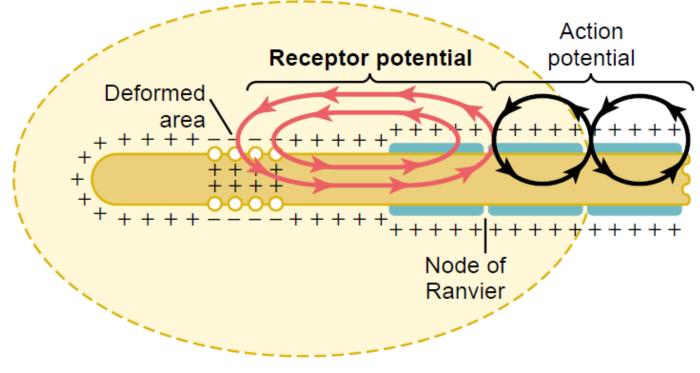

#### **Receptors/sensors**

- Energy convertor
  - Signal reception
  - Signal transformation
- Receptor potential
  - Generator potential
- Action potential

http://www.slideshare.net/CsillaEgri/presentations

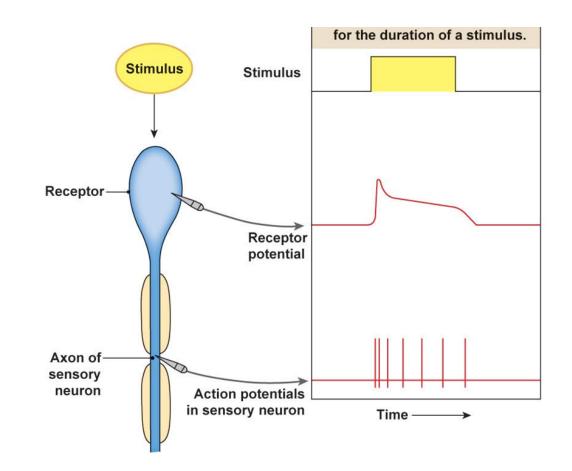

#### **Receptor/generator and action potential**

http://www.slideshare.net/drpsdeb/presentations

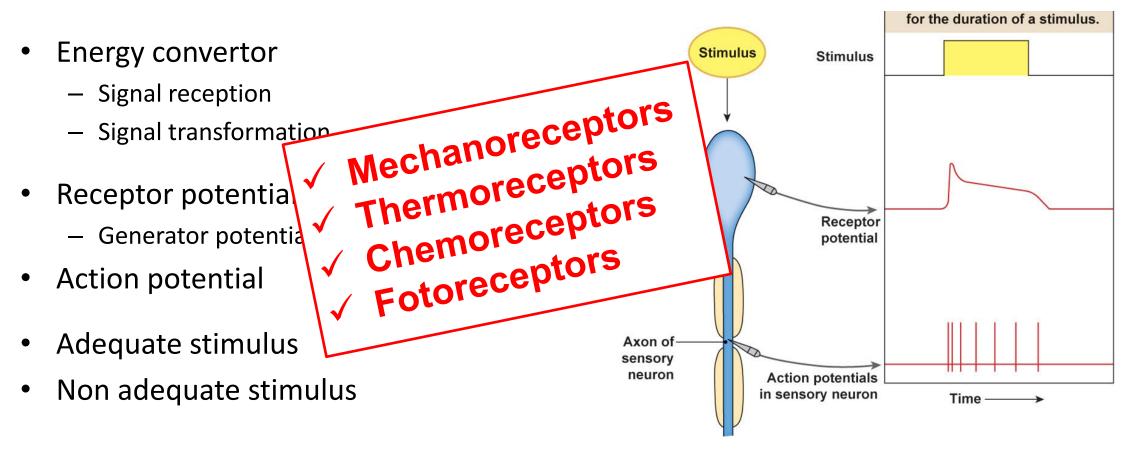

#### **Receptors/sensors**

- Energy convertor
  - Signal reception
  - Signal transformation
- Receptor potential
  - Generator potential
- Action potential
- Adequate stimulus
- Non adequate stimulus

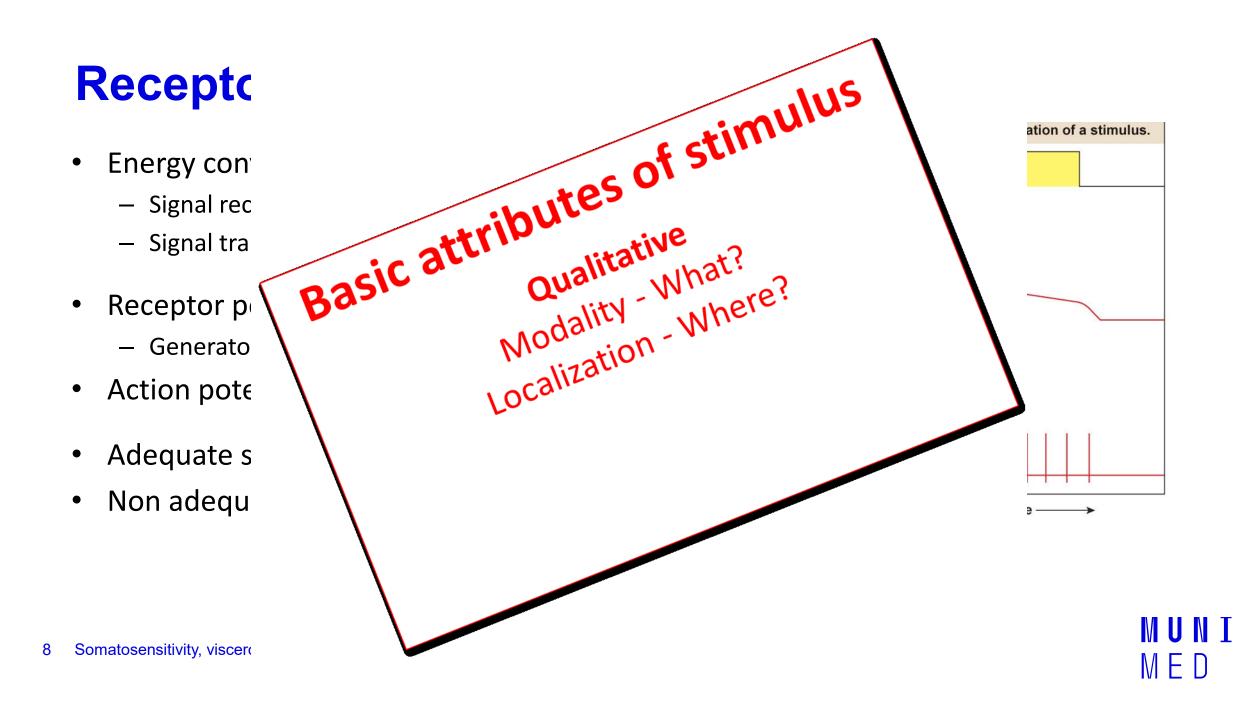

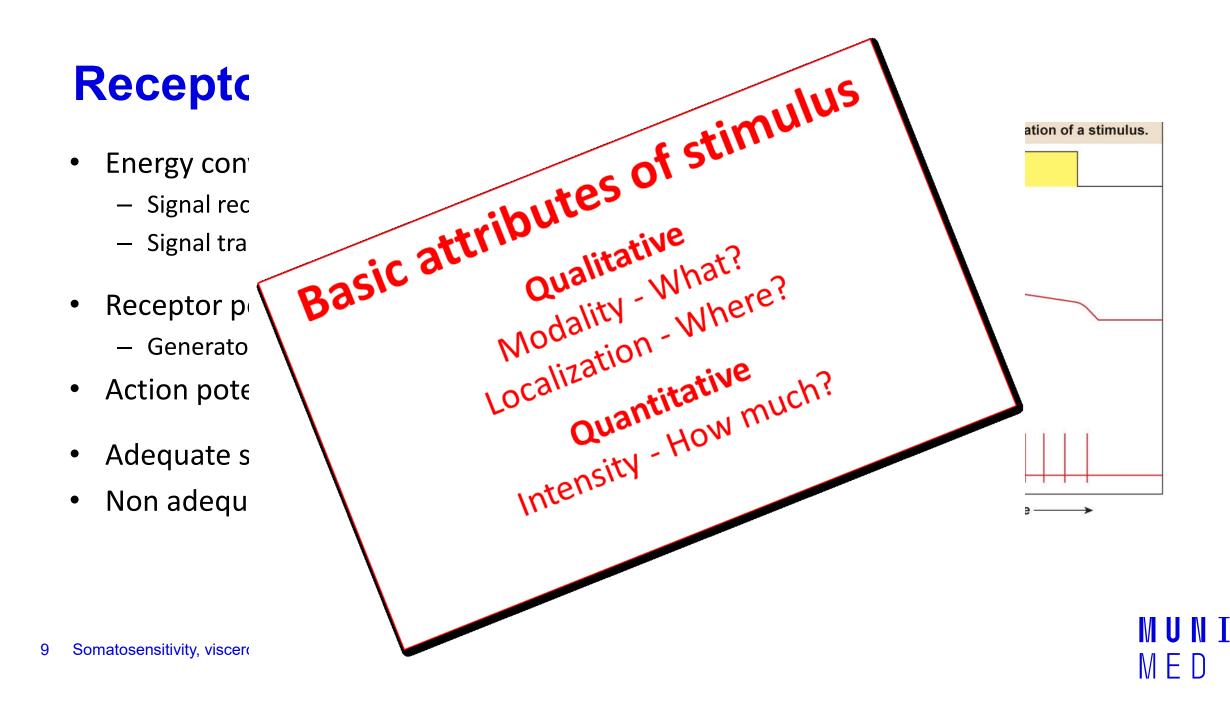

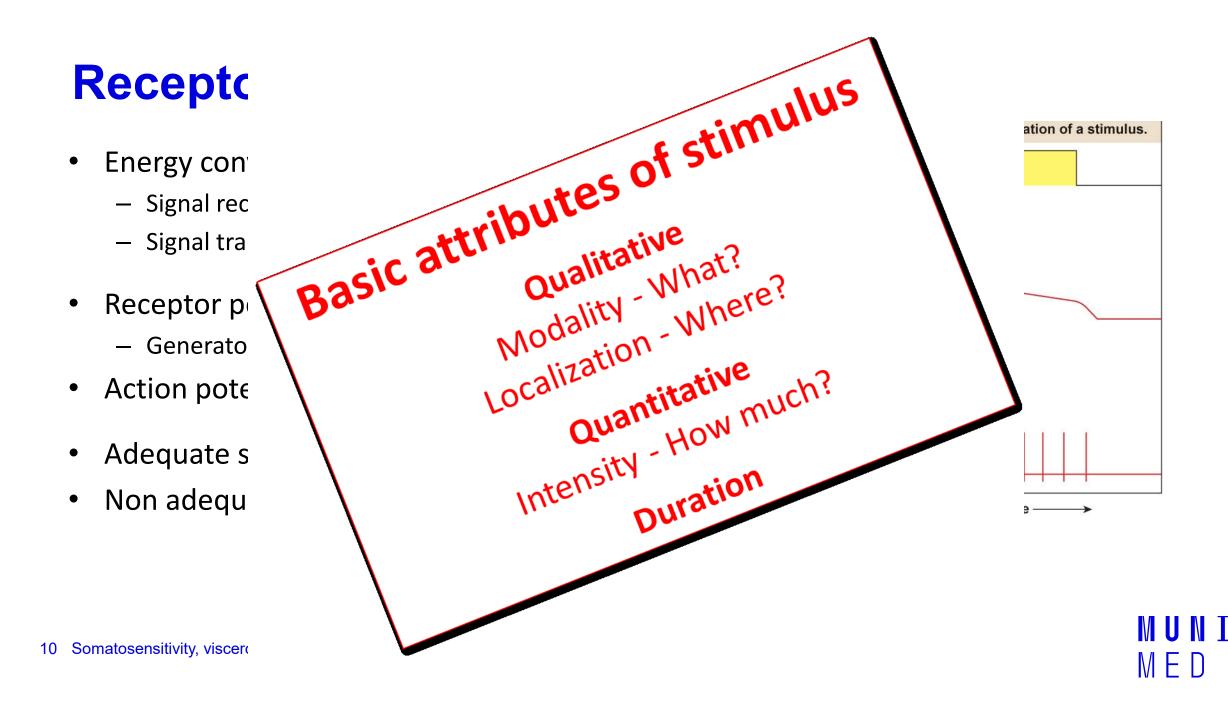

#### **Receptors/sensors**

http://www.slideshare.net/CsillaEgri/presentations

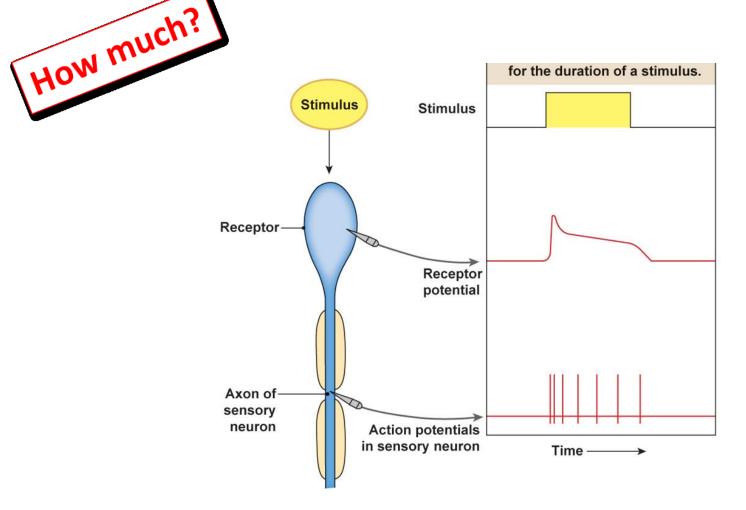

#### **Intensity coding**

 Amplitude of receptor potential is transtucted into the frequency of AP

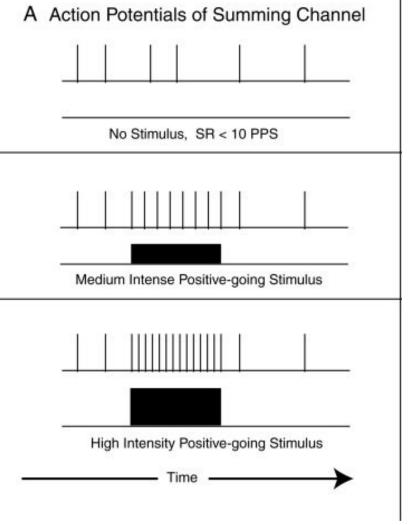

http://www.slideshare.net/CsillaEgri/presentations

#### **Intensity coding**

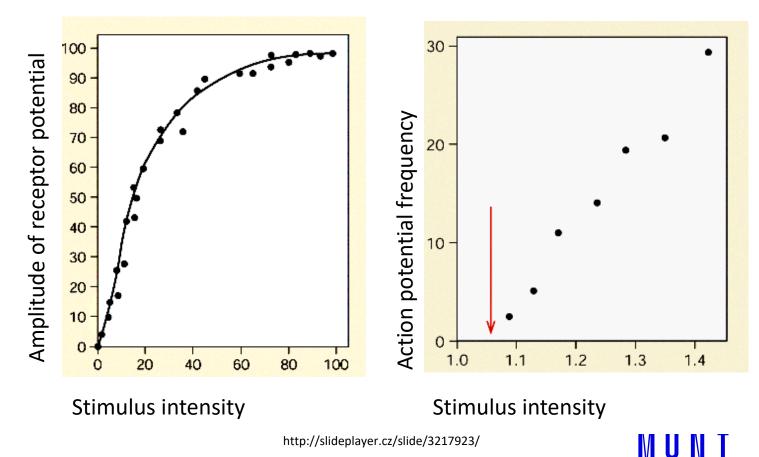

- In the other words: an increased intensity is associated with increase in frequency of AP
- A high-intensity stimulus may also activate more receptors

#### **Intensity coding**

• Relation between receptor and action potential is logarithmic

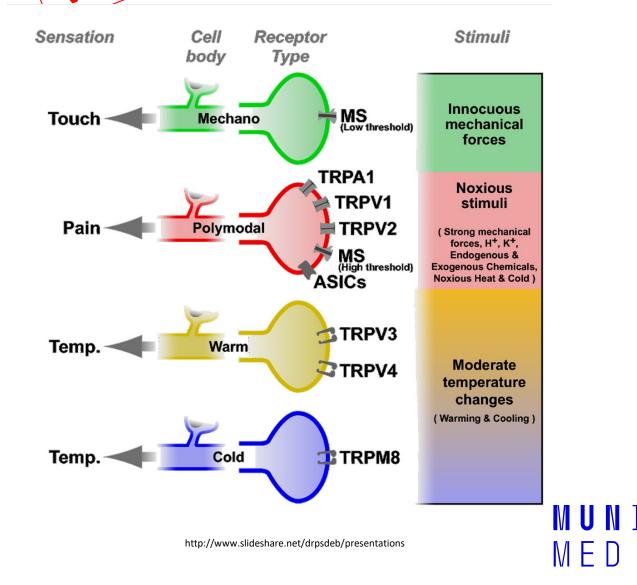

### Qualitative information What?

• The law of specific nerve energies:

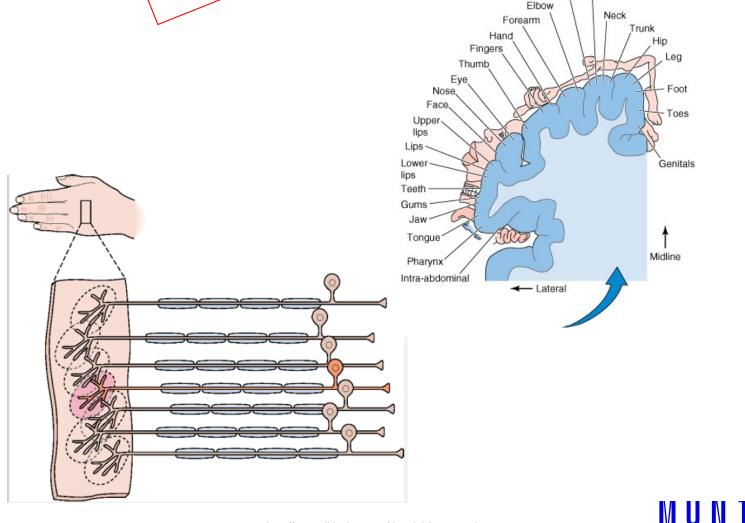

The nature of perception is defined by the pathway over which the sensory information is carried

 Labeled line coding define the information about quality

### Qualitative information What?

- Labeled line coding
- Receptive field
- Nerve stimulation mimics receptor stimulation

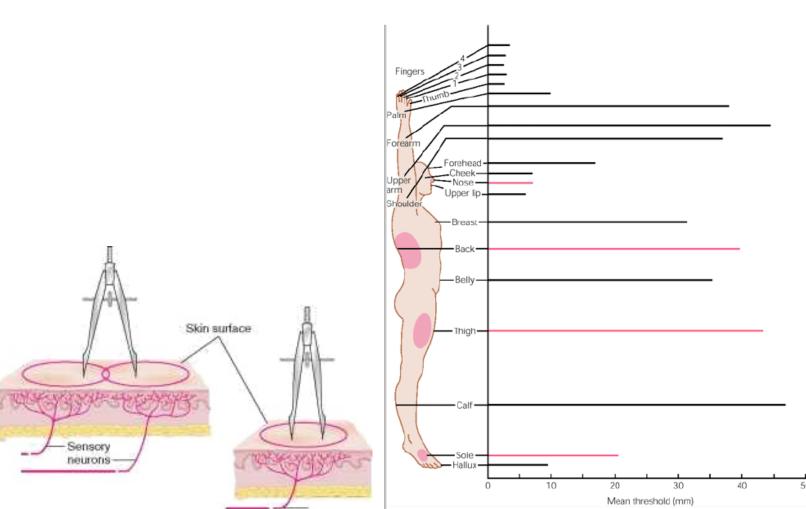

A SOMATOSENSORY

Arm Head

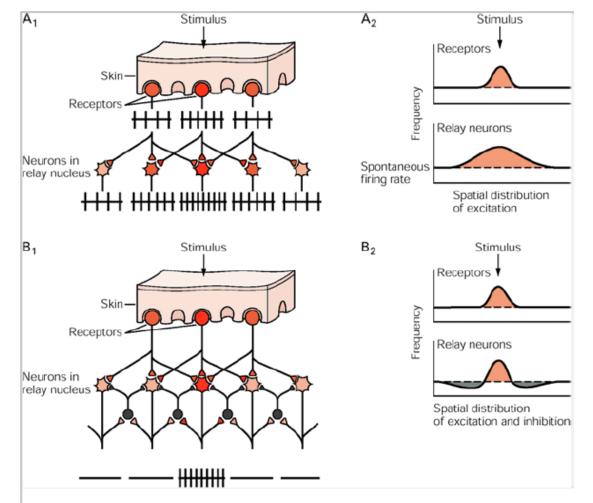

#### **Receptive fields**

- Various size and overaly
- Small receptive field high resolution
- Spatial resolving power increased by lateral inhibition

http://www.slideshare.net/drpsdeb/presentations

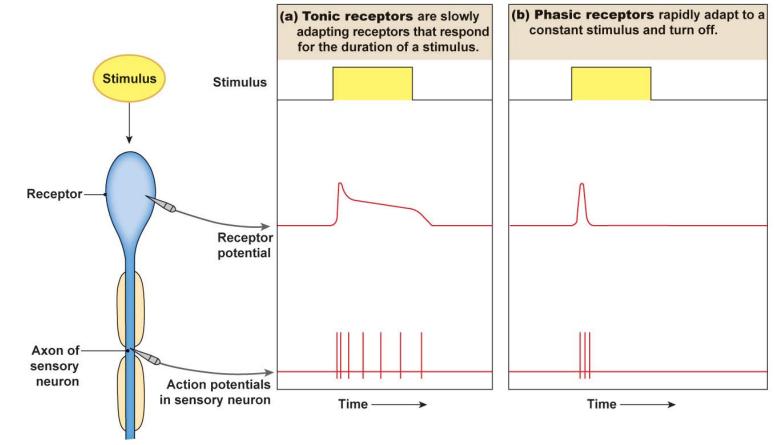

#### **Lateral inhibition**

http://www.slideshare.net/drpsdeb/presentations

#### **Receptor adaptation**

- The decline of receptor responses in spite of stimulus presence
- Tonic receptors slow adaptation – presence of stimulus, position
- Phasic receptors rapid adaptation – change of stimulus

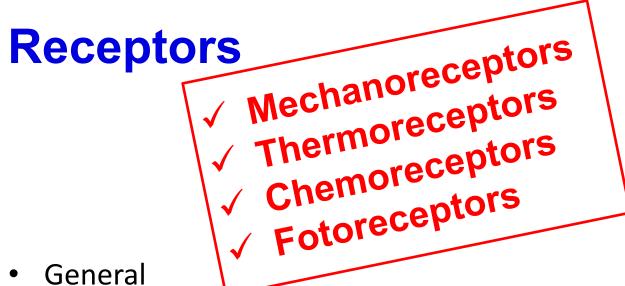

http://www.slideshare.net/CsillaEgri/presentations

MFN

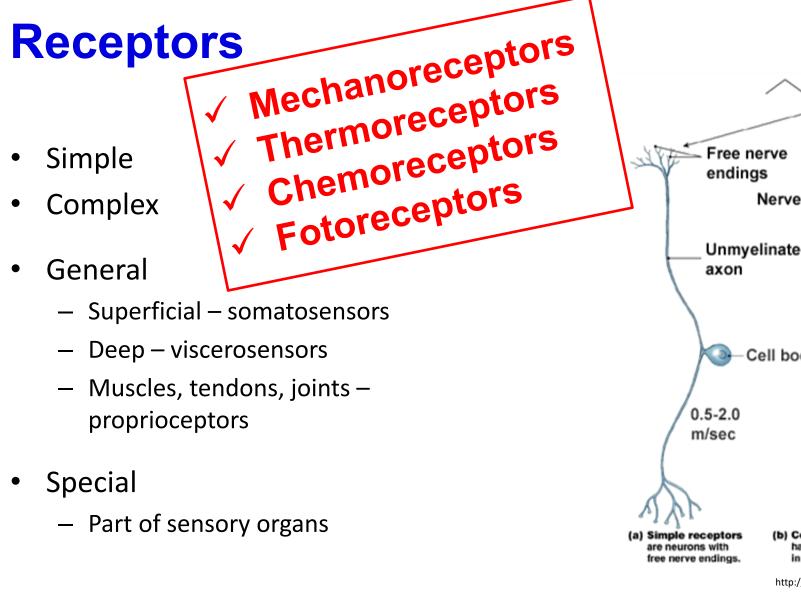

#### **Receptors**

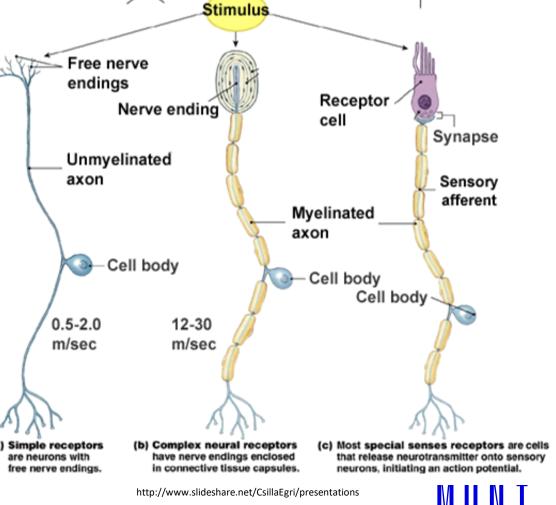

- General
  - Superficial somatosensors
  - Deep viscerosensors
  - Muscles, tendons, joints proprioceptors
- Special
  - Part of sensory organs

MUNI

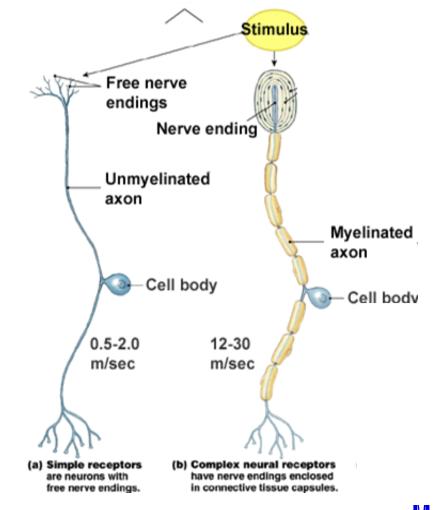

- - Superficial somatosensors
  - Deep viscerosensors —
  - Muscles, tendons, joints proprioceptors
- **Special** 
  - Part of sensory organs

#### Somato/viscero/ proprio

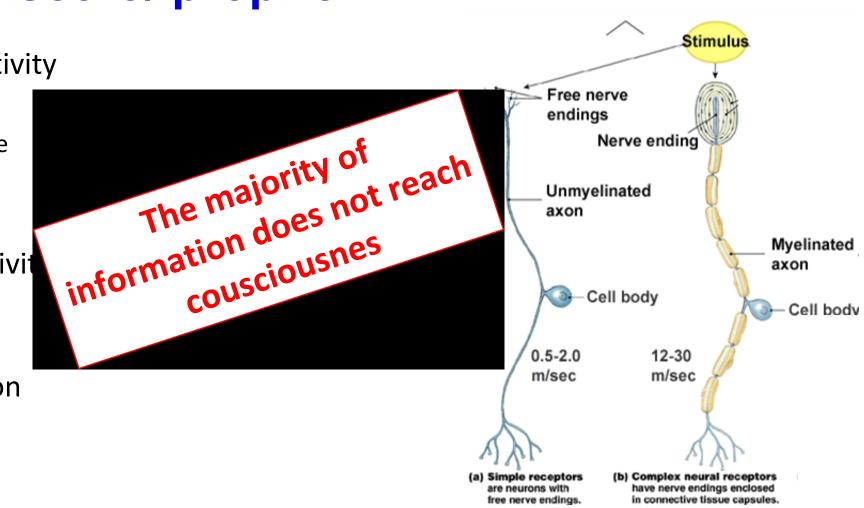

- Somatosensitivity
  - Pain
  - Temperature
  - Touch
- Viscerosensitivity
  - Pain
- Proprioception
  - Position
  - Movement

http://www.slideshare.net/CsillaEgri/presentations

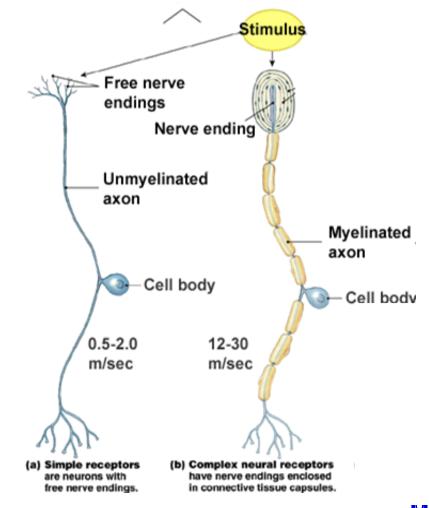

#### Somato/viscero/ proprio

- Somatosensitivity
  - Pain
  - Temperature
  - Touch
- Viscerosensitivit
  - Pain
- Proprioception
  - Position
  - Movement

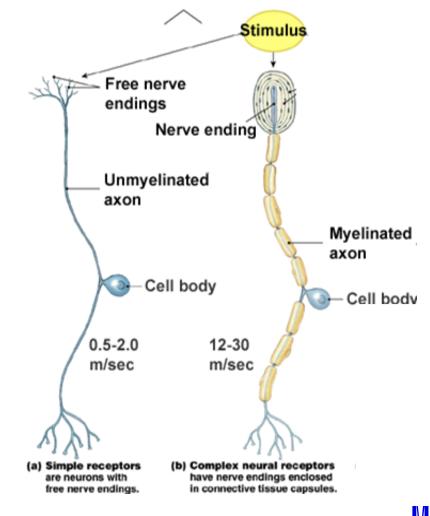

http://www.slideshare.net/CsillaEgri/presentations

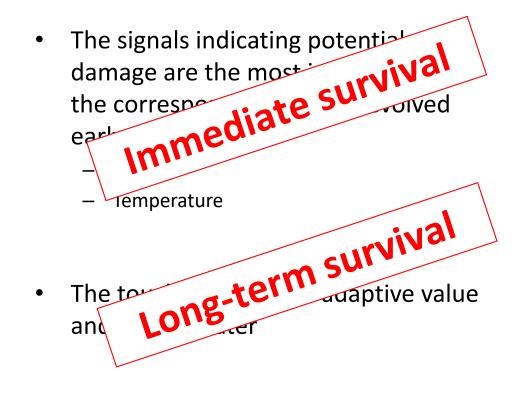

- The signals indicating potential damage are the most important and the corresponding systems evolved early
  - Pain
  - Temperature

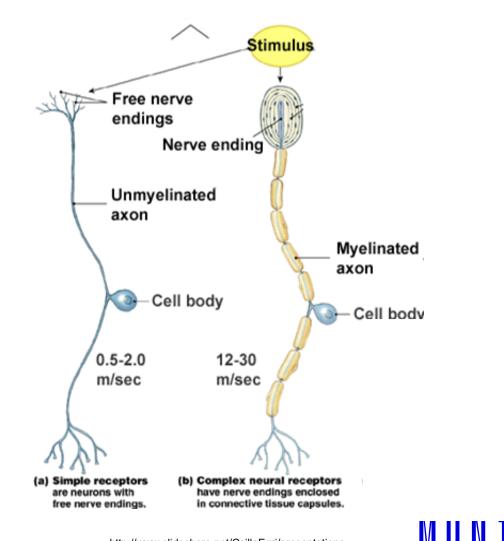

MUNI Med

- The signals indicating potential damage are the most important and the corresponding systems evolved early
  - Pain
  - Temperature
- The touch signals have adaptive value and evolved later

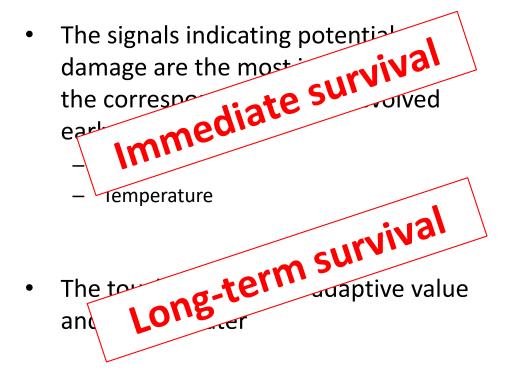

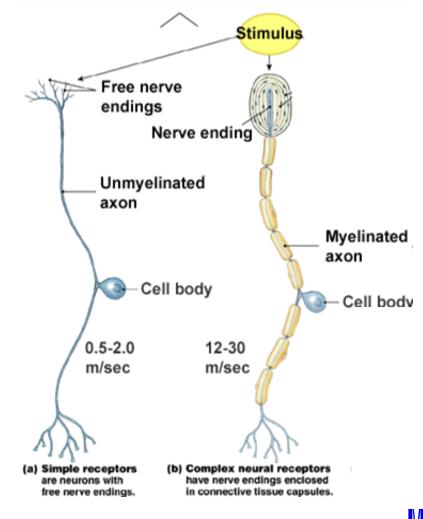

26

http://www.slideshare.net/CsillaEgri/presentations

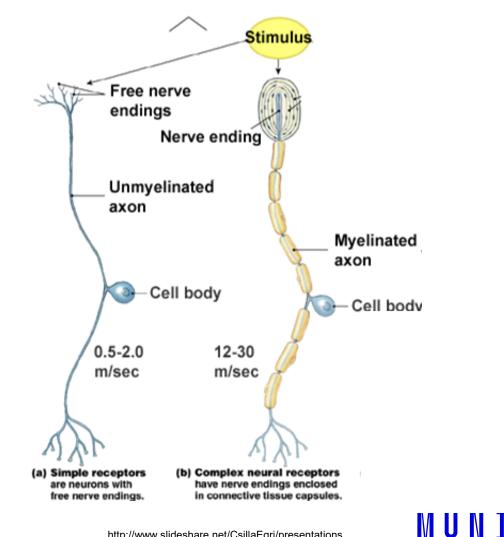

• The structure of the receptor, nerve fibers and pathways reflects the evolution

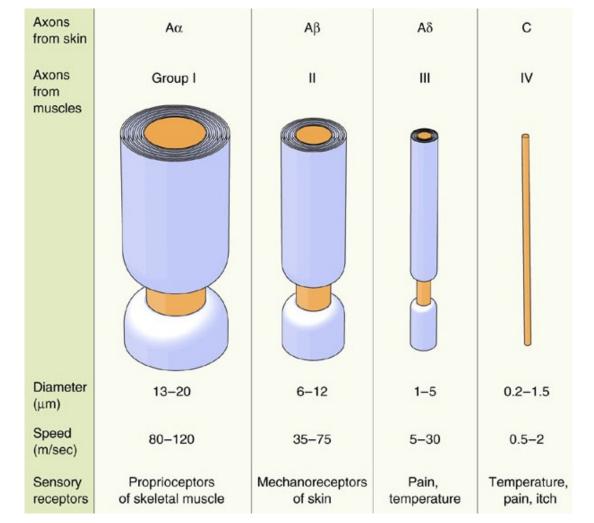

#### **Free nerve endindgs**

- Non-specialized nerve • endings
- Polymodal •
  - Nociception
  - Termoreception
  - Mechanoreception
- A delta fibres
- C fibres •

http://www.slideshare.net/CsillaEgri/presentations

#### **Nerve fibres**

29 Somatosensitivity, viscerosensititvity, proprioception and pain I

http://www.slideshare.net/CsillaEgri/presentations

#### **Nociceptors**

- Free nerve endings responding to high-intensiti stimuli
- Stimulus
  - Mechanical
    - ✓ High pressure
    - ✓ Sharp object
  - Thermal
    - ✓ Above aprox. 45°C
    - ✓ Low treshold variable
  - Chemical
    - √ рН
    - $\checkmark$  Mediators of inflammation and so on

**A delta fibers** – sharp, localised pain **C fibers** - dull, difuse pain

MUNI

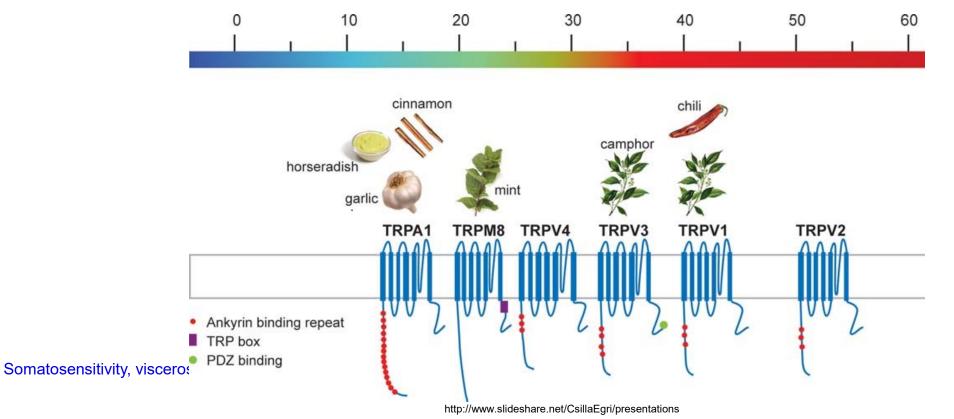

#### **Thermoreceptors**

- Free nerve endings receptive to thermal stimuli
- TRP (transient receptor potential) channels

31

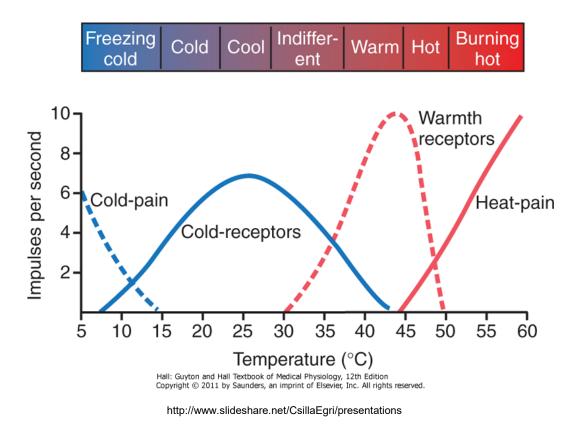

- Polymodal recetor (chemoreception, thermoreception)
- Present also in many cells (including neurons, keratinocytes, mechanoreceptros)

 $M \vdash D$ 

#### **Thermoreceptors**

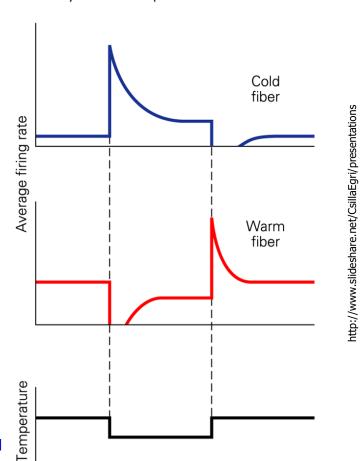

• Perceived temperature is determined by relative activity of cold and warm receptors

#### **Thermoreceptors**

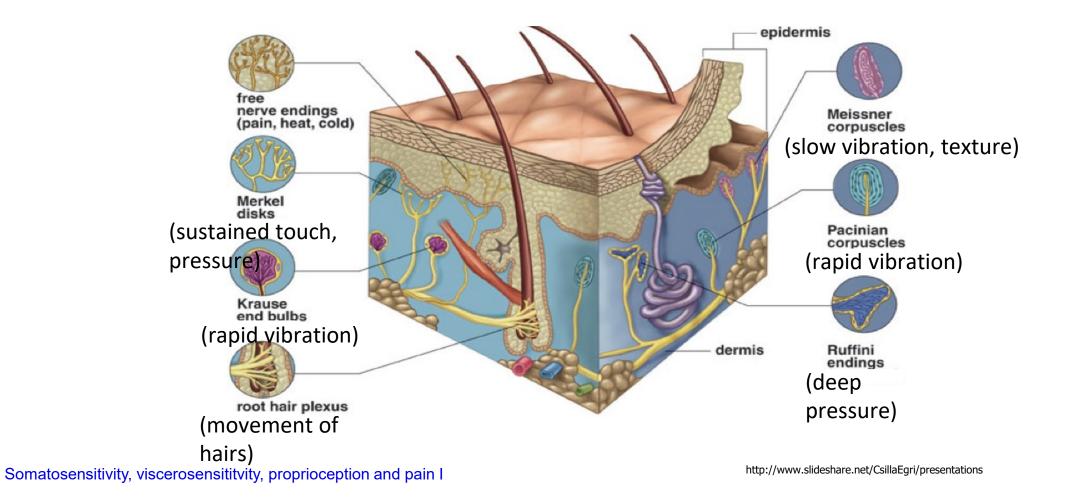

#### • Mostly phasic response

B Dynamic temperature

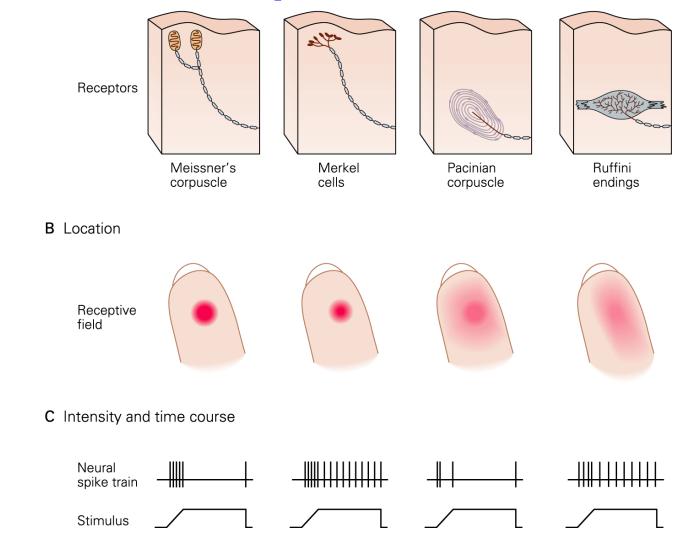

#### The receptors of the skin

• Simple versus complex

34

#### The receptors of the skin

35 Somatosensitivity, viscerosensititvity, proprioception and pain I

http://www.slideshare.net/CsillaEgri/presentations

MUNI Med

#### The receptors of the skin

Receptor	Туре	Sensation	Signals	Adaptation
Meissner corpuscle	Encapsulated & layered	Touch: Flutter & Movement	Frequency/Velocity & Direction	Rapid
Pacinian corpuscle	Encapsulated & layered	Touch: Vibration	Frequency: 100-300 Hz	Rapid
Ruffini corpuscle	Encapsulated collagen	Touch: Skin Stretch	Direction & Force	Slow
Hair follicle	Unencapsulated	Touch: Movement	Direction & Velocity	Rapid
Merkel complex	Specialized epithelial cell	Touch, Pressure, Form	Location & Magnitude	Slow
Free Nerve Ending	Unencapsulated	Pain, Touch, or Temperature	Tissue damage, Contact, or Temperature change	Depends on information carried

MUNI

### MUNI MED

### 72. Receptors, receptor potential vs. action potential, receptive field

- ✓ Receptor definition (energy converter)
- ✓ Receptor potential vs. Action potential
  - RP analogue (amplitude), AP digital (frequency)
  - RP various ionic mechansims, AP Na-K based
- ✓ Basic attributes of stimulus
  - Modality, localization, intensity, duration
  - The law of specific nerve energies (labeled line coding)
- ✓ Receptive field
- 37 Somatosensitivity, viscerosensititvity, proprioception and pain I

- Definition
- Examples of large and small receptive fields, association with resolution
- Lateral inhibition
- Receptor adaptation (tonic and phasic response)
- ✓ Various classifications of receptors
  - Brief overview of the skin receptors
