

1. Name the layers of the epidermis. In which layers do cells mitotically divide?
2. What cell types are found in the epidermis? Which ones can be observed in slides stained with HE?
3. What is the difference between eccrine and apocrine sweat glands?
4. Where do apocrine sweat glands occur?
5. How would you characterize the sebaceous glands (according to the structure and mechanism of releasing the secretion)? Where do they usually open? Are there exceptions?
6. Describe the hair follicle.
7. Are all the components of the hair and its follicle of ectodermal origin?
8. What is lanugo, which hair types replace it?
9. What is a mammary line?

Slides:

69. Skin from tip of finger

70. Skin from axilla

71. Skin with hair

72. Nail

73. Mamma non lactans

74. Mamma lactans
