

Feedback on dental caries and preparation

1. Describe the origin and further development of dental caries, what a non-cavitated lesion (initial caries) and a cavitated lesion are.

2. Caries danger areas are:

3. Habitually clean areas are:

4. Classification of dental caries according to:
 - its location (Black)
 - history
 - depth

5. What is:
 - primary caries
 - secondary caries
 - recurrent caries

6. Explain the extension for prevention (one of the basic rules of the preparation)

7. Explain the rule of retention

8. Explain the rule of the resistance

9. Draw the cavosurface margin of the I. class cavity in:
 - Second mandibular molar
 - First mandibular molar
 - First mandibular premolar
 - First maxillary molar
 - First lower premolar

10. Describe the rule of the retention for amalgam in 1st.class acc. to Black

11. Describe the rule of the resistance for amalgam in 1st.class acc. to Black

12. Composition of the amalgam

- High copper (conventional)
- Low copper (non gamma 2)

13. Describe the mechanism of the setting of amalgam

14. Indication of amalgam

15. Contraindication of amalgam

16. Which temporary filling materials do you know?
