limbs for 2 years now.

Ulcer on the lower limbs after radiotherapy.

Patient 4

42 y.o., female

Treated for thyreopathy

Mother: rheumatic arthritis

Th: oral hormonal contraception

Comes for finding a painless pale spot on the side of the thoracal area. The spot appears to be firm in the center more than around the edges. A simmilar spot is found in the lower back area.

Patient 5

38 y.o., female

Treated for *Chlamydia pneumoniae* (1 year ago), very tired since then, unable to work.

Allergies: fish, milk, nuts

Th: cetirizin

Comes for itchy skin, since 6 months ago there are several painful nodules appearing on her back and in the scalp. The nodules tend to open up after few days and release unusually looking liquid with „very strange white chunks“.

There are more appearing, Th not successful so far.
