DEPARTMENT OF GYNECOLOGY AND OBSTETRICS

Gynecology and Obstetrics State Examination (SRZ) - aVLPG11XX

Organizational instructions

Gynecology and Obstetrics State Examination (SRZ) consists of a practical part, a theoretical part and an online test. At the beginning, a proof of study is required (study "index" or ISIC card). Students will also need stationery and their own laptop or mobile device with Internet access.

Each student draws a combination of questions that is randomly generated by a computer. The practical part of the exam takes place without the need for preparation time and includes the answer to one practical question with an emphasis on the knowledge and skills acquired during internship at the department.

During the theoretical part of the exam, the student answers three questions from three areas: gynecology, obstetrics and gynecologic oncology. Before the exam, students have the opportunity for a short written preparation. It is recommended to prepare only a brief summary of each question, so that the student's own oral speech is factual and fluent. With students' borderline knowledge, the examiner has the opportunity to ask additional questions from the relevant subject area.

The online test is accessed via the is.muni.cz environment on individual laptops/mobile device with internet access and the potential to use hospital guest Wi-Fi. Exam contains 40 questions that are generated individually for each student. Only one answer is correct, and the time limit is 30 minutes. To successfully pass the examination, it is necessary to answer more than 67% of the questions correctly.

Questions - practical part

- 1. History taking in gynecology and obstetrics
- 2. Antenatal care obstetric examination, care schedule, obstetric examination record
- 3. Prenatal screening tests: non-invasive and invasive
- 4. Vaginal delivery and labor initial examination, mother and fetal monitoring, partogram use
- 5. Cardiotocography, ST analysis
- 6. Surgeries and instruments in pregnancy evacuation of the uterus, surgical abortion
- 7. Surgeries and instruments during labor- forceps, VEX, placenta manual extraction, analgesia
- 8. Pelvic examination in gynecology
- 9. Examination for genital infections, vaginal discharge, infections of the vulva and vagina

- 10. Urogynecology examination, surgeries in urogynecology
- 11. Investigation of the infertile couple, treatment plan, semen analysis
- 12. Pediatric gynecology examination, pubertal development, vaginal smear test
- 13. Gynecologic oncology ultrasound, clinical staging, breast cancer imaging
- 14. Pelvic ultrasound in gynecology
- 15. Ultrasound scans in pregnancy, dopplerometry
- 16. Cervical and vaginal cytology, HPV testing and vaccination
- 17. Colposcopy
- 18. Small gynecological surgeries and instruments -excision, biopsy, endometrial ablation, hysteroscopy
- 19. Laparoscopic gynecological surgeries and instruments
- 20. Abdominal gynecological surgeries and instruments

Questions –theoretical part

Area- gynecology

- 1. Therapeutic abortion (termination of pregnancy)
- 2. Ectopic pregnancy
- 3. Miscarriage, recurrent pregnancy loss
- 4. Contraception
- 5. Pediatric gynecology and disorders of sex development
- 6. Endocrine control of the menstrual cycle
- 7. Menstrual cycle disorders amenorrhoea, heavy menstrual bleeding, dysmenorrhea and premenstrual syndrome
- 8. Endocrine syndromes in gynecology
- 9. Female genital tract congenital malformations
- 10. Pelvic organ prolapse
- 11. Infections of the vulva and vagina
- 12. Pelvic inflammatory disease
- 13. Endometriosis
- 14. Uterine fibroids

- 15. Causes and investigation of infertility
- 16. Infertility and recurrent pregnancy loss
- 17. Assisted conception techniques
- 18. Female urinary incontinence
- 19. The menopause and hormone replacement therapy
- 20. Gynecological emergencies
- 21. Chronic pelvic pain

Area- obstetrics

- 1. Pregnancy diagnosis, signs and symptoms of pregnancy
- 2. Human embryology implantation, germ layers formation, organogenesis
- 3. Placenta, fetal membranes, amniotic fluid, umbilical cord, fetal circulation
- 4. Maternal physiological changes in pregnancy
- 5. Fetal lie, attitude, presentation, position and station, fetal malpresentation
- 6. Birth canal, pelvic planes, fetal head dimensions, powers of labor
- 7. The mechanism of labour, stages of labour, management of normal labour
- 8. Postnatal care, postnatal problems
- 9. Pre-term labour
- 10. Prolonged pregnancy
- 11. Alloimmunization in pregnancy
- 12. Hypertension in pregnancy
- 13. Pre-eclampsia
- 14. HELLP syndrome
- 15. Diabetes in pregnancy
- 16. Infections in pregnancy (syphilis, toxoplasmosis, rubella, CMV, HSV, varicella)
- 17. Prenatal diagnosis for congenital malformations
- 18. Fetal intrauterine growth restriction (IUGR)
- 19. Multiple pregnancy
- 20. Placental pathologies (abruption, abnormally invasive placenta)
- 21. Breech presentation, modes of delivery
- 22. Shoulder dystocia

- 23. Perineal and vaginal tears, uterine rupture
- 24. Peripartum hemorrhage
- 25. Induction of labour
- 26. Operative vaginal deliveries (VEX, forceps)
- 27. Cesarean section
- 28. Fetal monitoring fetal hypoxia
- 29. Intrauterine fetal death and stillbirth cause, diagnosis, management
- 30. Labour analgesia
- 31. Premature rupture of membranes

Area-gynecologic oncology

- 1. Vulvar and vaginal precancerous conditions
- 2. Vulvar and vaginal neoplasia
- 3. Uterine precancerous lesions cervical, endometrial
- 4. Cervical neoplasia
- 5. Uterine neoplasia
- 6. Ovarian carcinoma, primary tubal and peritoneal carcinoma
- 7. Non-epithelial ovarian neoplasms
- 8. Breast cancer
- 9. Pediatric gynecologic cancer
- 10. Gestational trophoblastic disease
- 11. Gynecologic cancer in pregnancy
- 12. Sentinel lymph node concept in gynecologic oncology
- 13. Fertility sparing treatments in gynecologic cancers
- 14. Surgical risks and complications in gynecologic oncology
- 15. Non-surgical treatment in gynecologic oncology (radiotherapy, chemotherapy , hormonal therapy)
- 16. Hereditary gynecologic cancer syndromes
