Somatosensitivity, viscerosensititvity, proprioception and pain I

2 Somatosensitivity, viscerosensititvity, proprioception and pain I

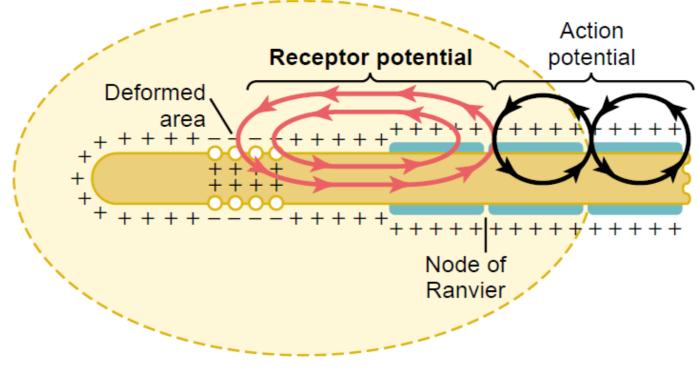

Receptors/sensors

- Energy convertor
 - Signal reception
 - Signal transformation
- Receptor potential
 - Generator potential
- Action potential

http://www.slideshare.net/CsillaEgri/presentations

Receptor/generator and action potential

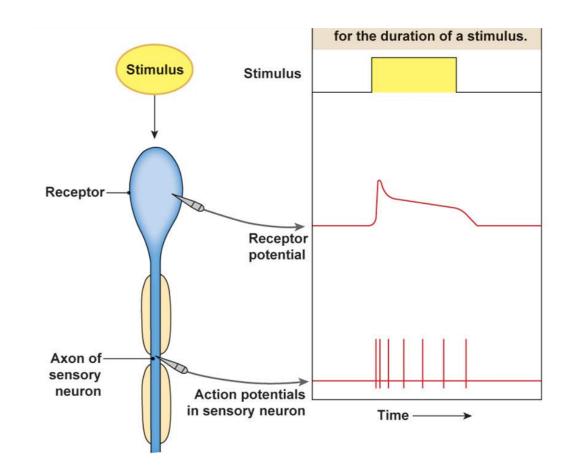

MUNI

MED

http://www.slideshare.net/drpsdeb/presentations

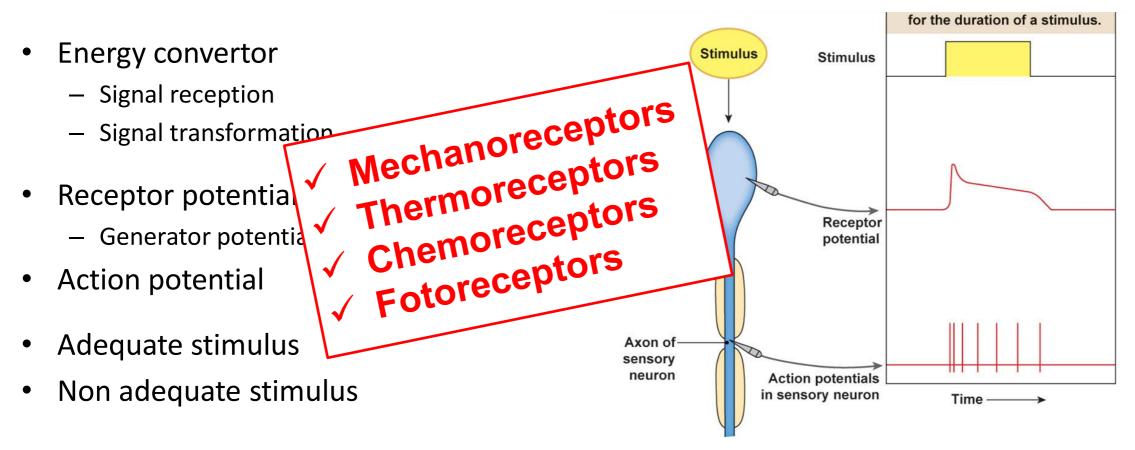

Receptors/sensors

- Energy convertor
 - Signal reception
 - Signal transformation
- Receptor potential
 - Generator potential
- Action potential
- Adequate stimulus
- Non adequate stimulus

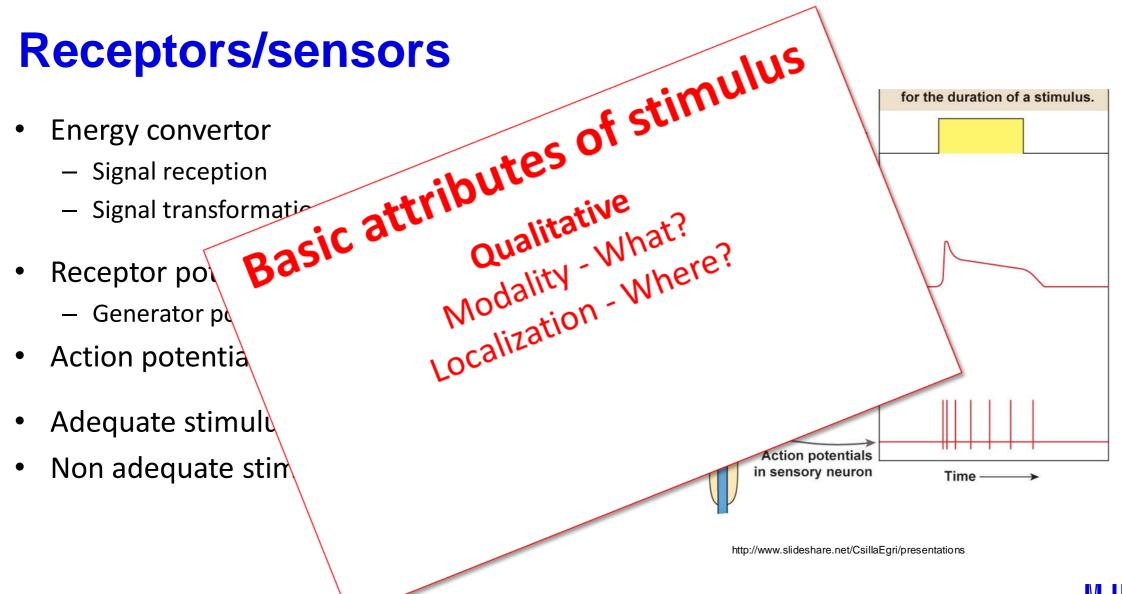

http://www.slideshare.net/CsillaEgri/presentations

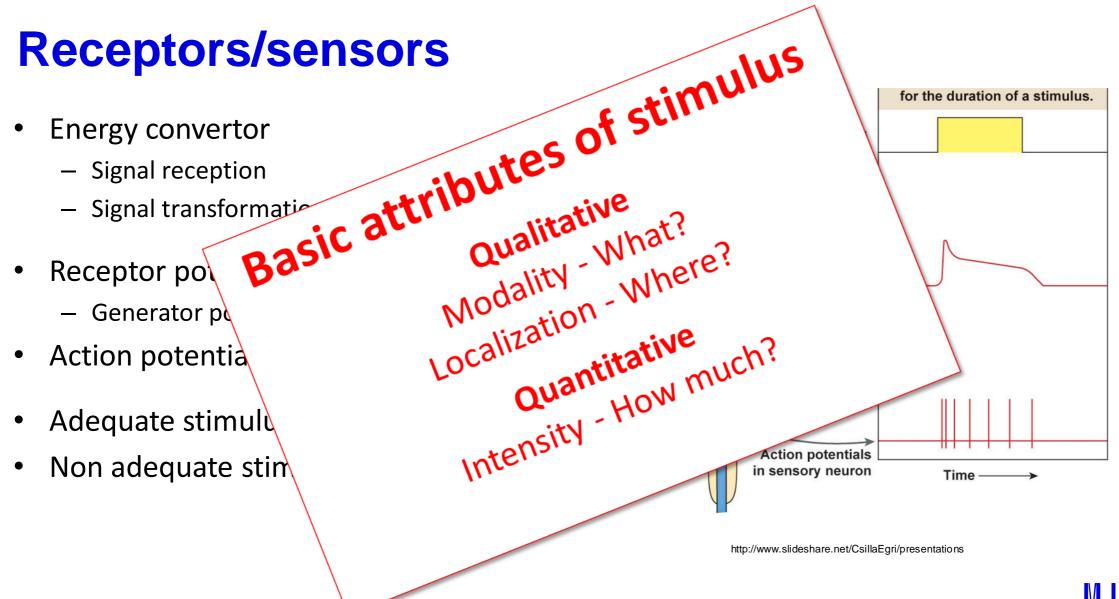

Receptors/sensors

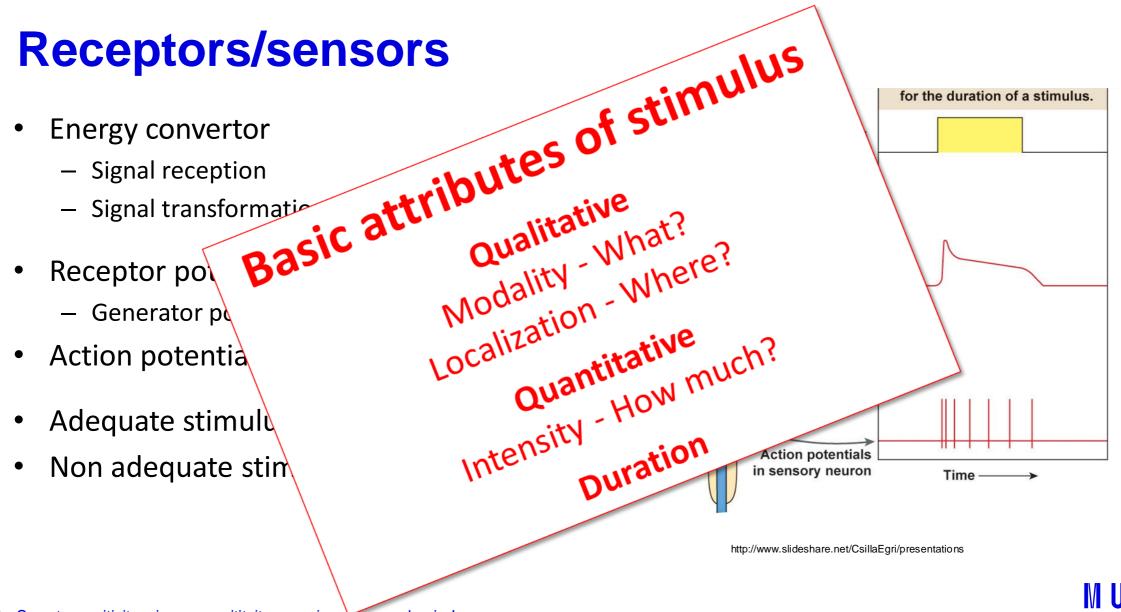

http://www.slideshare.net/CsillaEgri/presentations

8 Somatosensitivity, viscerosensititvity, proprioception and pain I

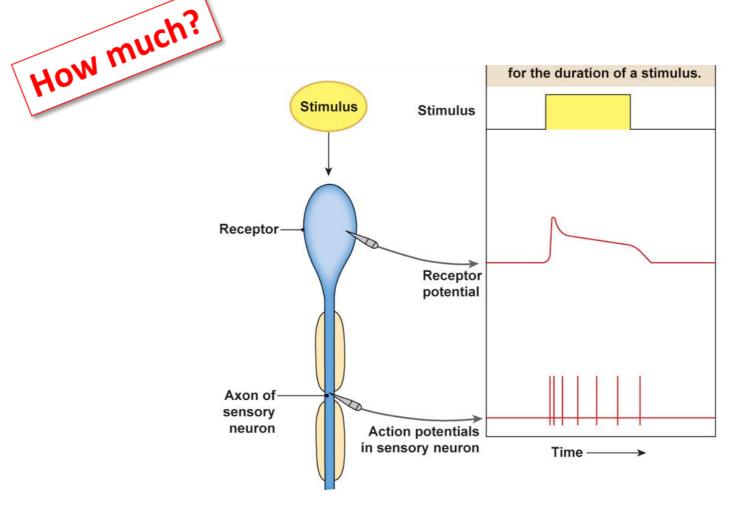

9 Somatosensitivity, viscerosensititvity, proprioception and pain I

10 Somatosensitivity, viscerosensititvity, proprioception and pain I

Intensity coding

 Amplitude of receptor potential is transtucted into the frequency of AP

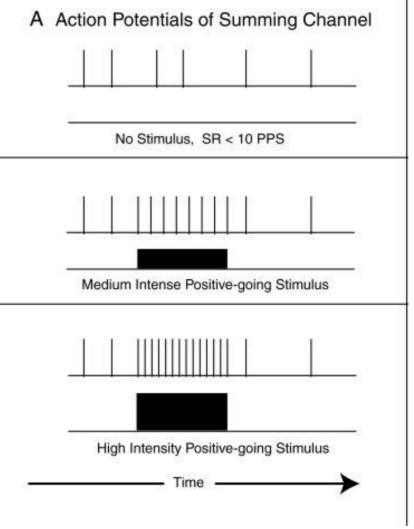

http://www.slideshare.net/CsillaEgri/presentations

MUNT

Intensity coding

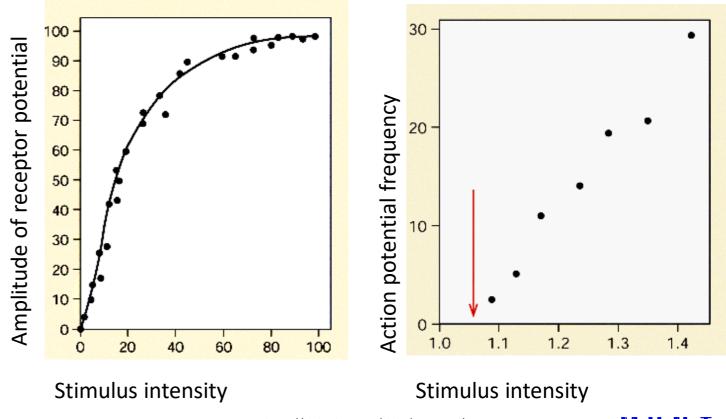

- In the other words: an increased intensity is associated with increase in frequency of AP
- A high-intensity stimulus may also activate more receptors

Intensity coding

• Relation between receptor and action potential is logarithmic

http://slideplayer.cz/slide/3217923/

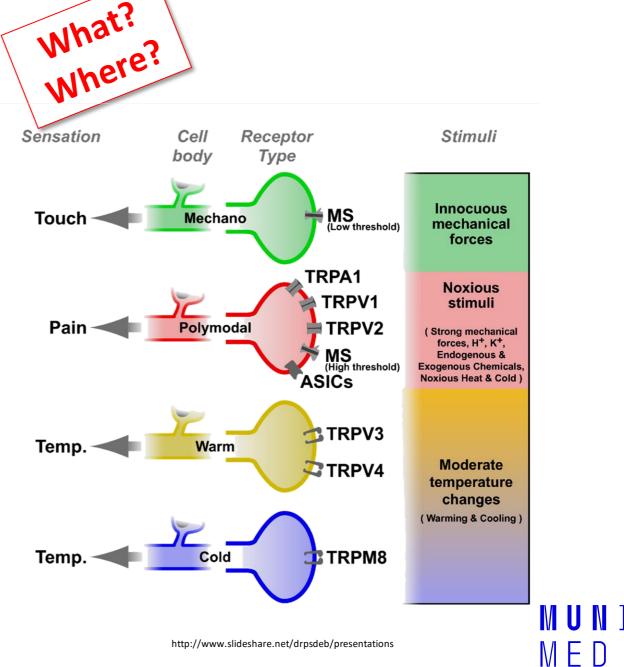

13 Somatosensitivity, viscerosensititvity, proprioception and pain I

Qualitative information

• The law of specific nerve energies:

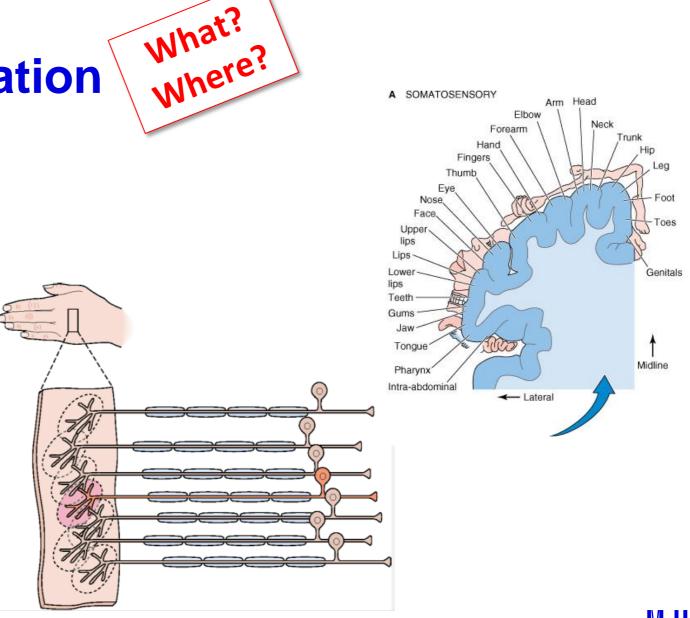

The nature of perception is defined by the pathway over which the sensory information is carried

 Labeled line coding define the information about quality

Qualitative information

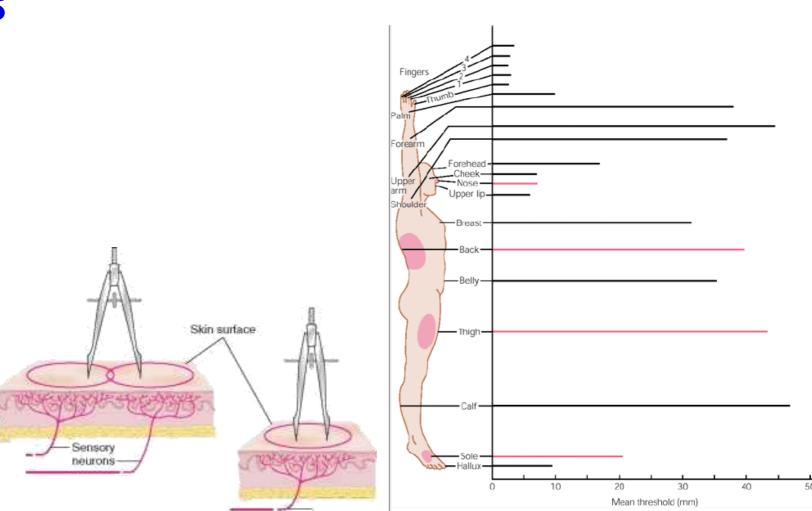

- Labeled line coding \bullet
- Receptive field
- Nerve stimulation • mimics receptor stimulation

A SOMATOSENSORY

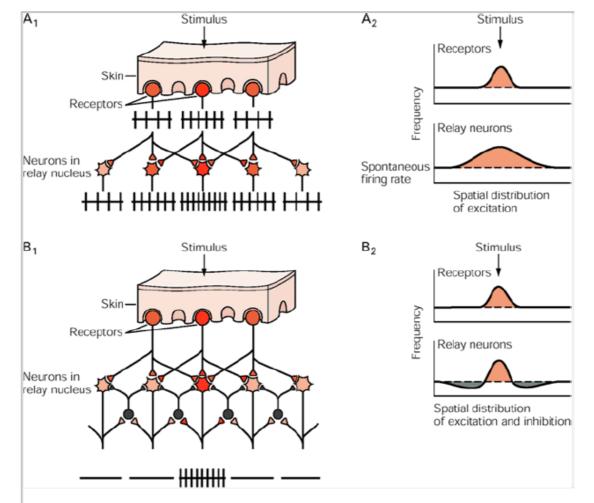

Receptive fields

- Various size and overaly
- Small receptive field high resolution
- Spatial resolving power increased by lateral inhibition

http://www.slideshare.net/drpsdeb/presentations

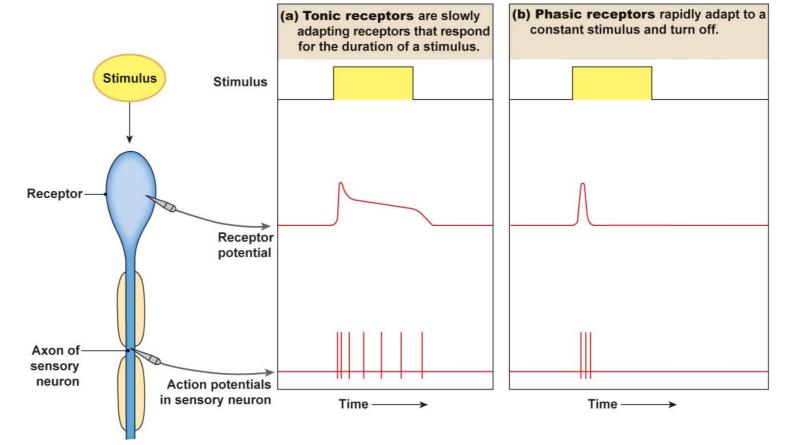

Lateral inhibition

http://www.slideshare.net/drpsdeb/presentations

Receptor adaptation

- The decline of receptor responses in spite of stimulus presence
- Tonic receptors slow adaptation – presence of stimulus, position
- Phasic receptors rapid adaptation – change of stimulus

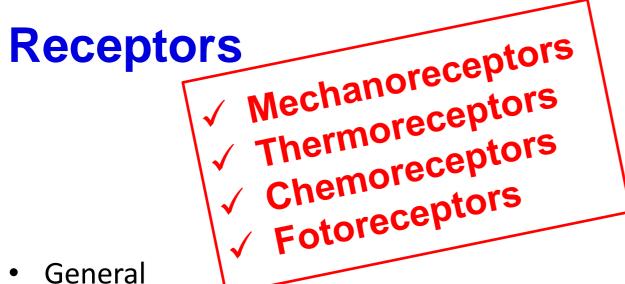

http://www.slideshare.net/CsillaEgri/presentations

 $M \vdash D$

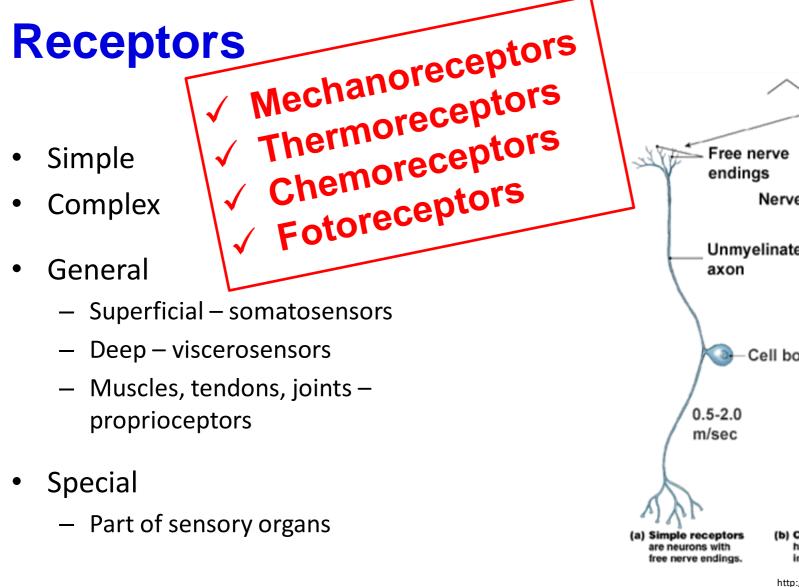

Receptors

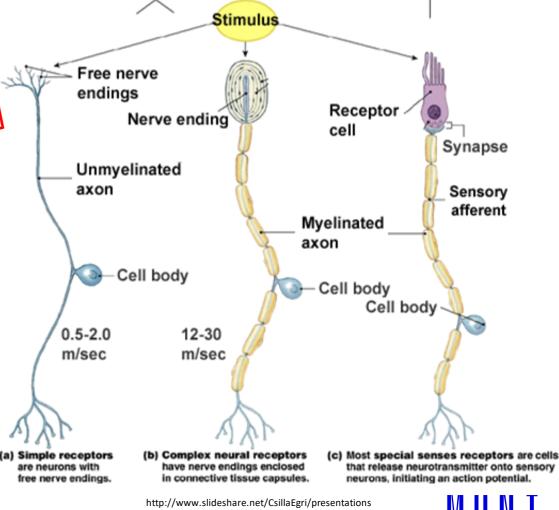

- General
 - Superficial somatosensors
 - Deep viscerosensors
 - Muscles, tendons, joints proprioceptors
- Special
 - Part of sensory organs

MUNI

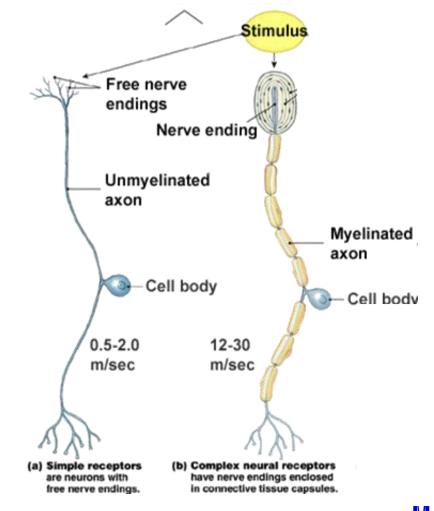

- - Superficial somatosensors
 - Deep viscerosensors —
 - Muscles, tendons, joints proprioceptors
- Special \bullet
 - Part of sensory organs

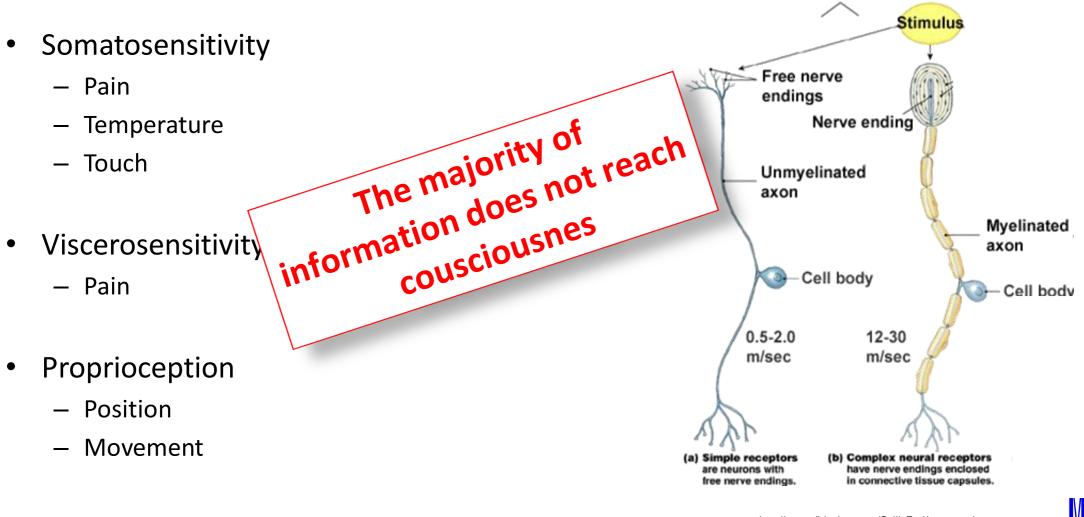

Somato/viscero/ proprio

- Somatosensitivity
 - Pain
 - Temperature
 - Touch
- Viscerosensitivity
 - Pain
- Proprioception
 - Position
 - Movement

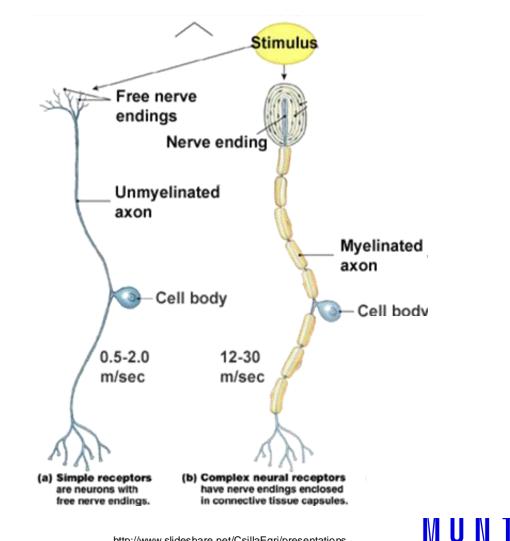

Somato/viscero/ proprio

http://www.slideshare.net/CsillaEgri/presentations

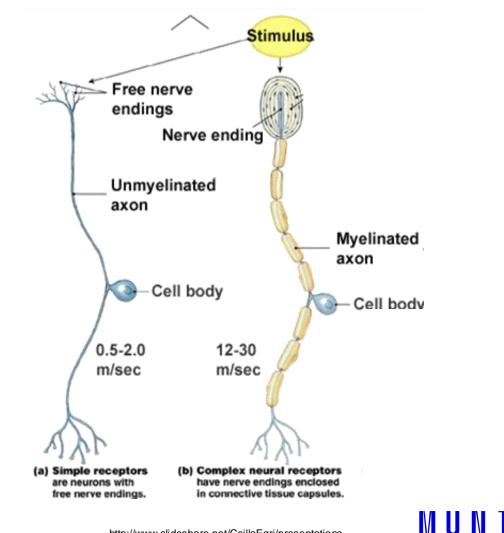

MUNT MED

- The signals indicating potential damage are the most important and the corresponding systems evolved early
 - Pain
 - Temperature

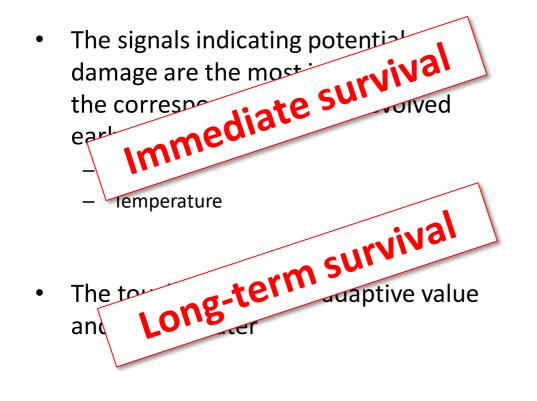

http://www.slideshare.net/CsillaEgri/presentations

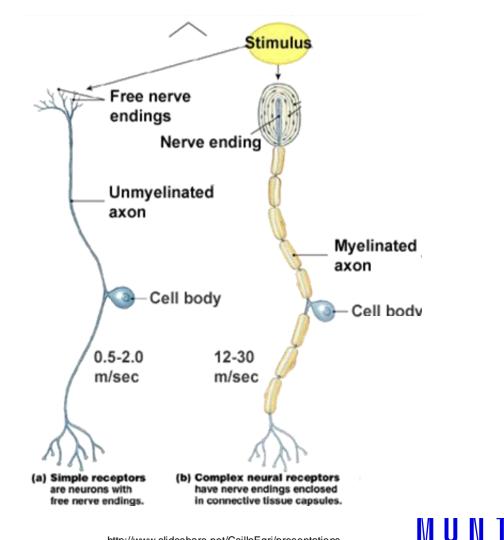

- The signals indicating potential damage are the most important and the corresponding systems evolved early
 - Pain
 - Temperature
- The touch signals have adaptive value and evolved later

http://www.slideshare.net/CsillaEgri/presentations

 $M \vdash I$

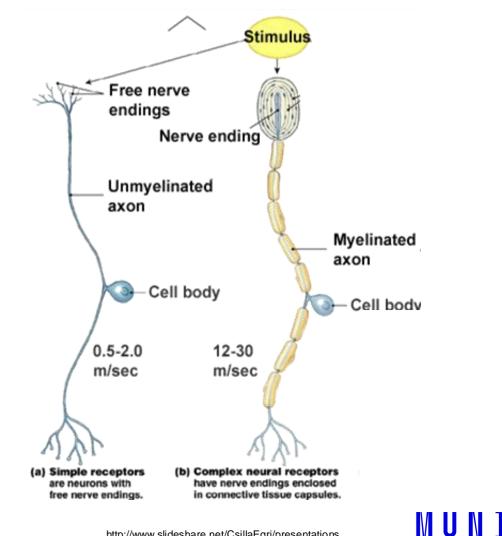

http://www.slideshare.net/CsillaEgri/presentations

- The signals indicating potential damage are the most inval the correspondence of the survival the correspondence of the survival of the correspondence of the corresp
- The structure of the receptor, nerve fibers and pathways reflects the evolution

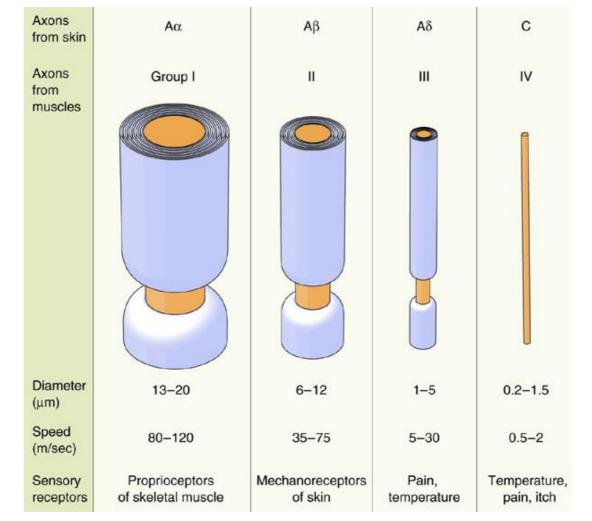

Free nerve endindgs

- Non-specialized nerve • endings
- Polymodal •
 - Nociception
 - Termoreception
 - Mechanoreception
- A delta fibres
- **C** fibres •

http://www.slideshare.net/CsillaEgri/presentations

Nerve fibres

29 Somatosensitivity, viscerosensititvity, proprioception and pain I

http://www.slideshare.net/CsillaEgri/presentations

Nociceptors

- Free nerve endings responding to high-intensiti stimuli
- Stimulus
 - Mechanical
 - ✓ High pressure
 - ✓ Sharp object
 - Thermal
 - ✓ Above aprox. 45°C
 - ✓ Low treshold variable
 - Chemical
 - √ рН
 - \checkmark Mediators of inflammation and so on

A delta fibers - sharp, localised pain **C fibers** - dull, difuse pain

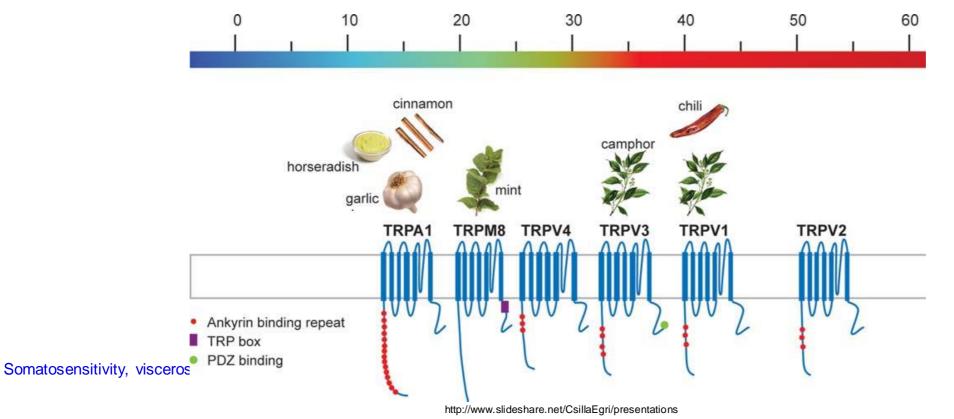

MUNI

Thermoreceptors

- Free nerve endings receptive to thermal stimuli
- TRP (transient receptor potential) channels

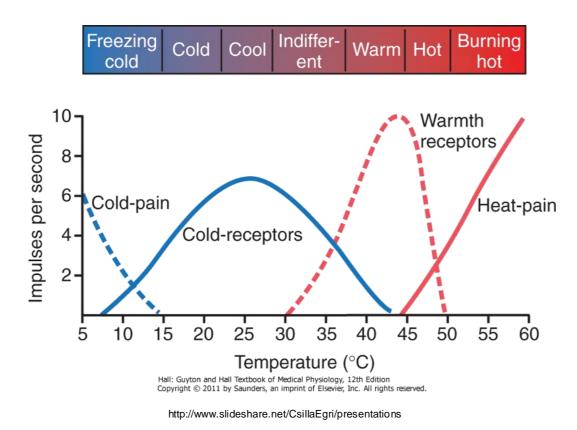

31

- Polymodal receptor (chemoreception, thermoreception)
- Present also in many cells (including neurons, keratinocytes, mechanoreceptros)

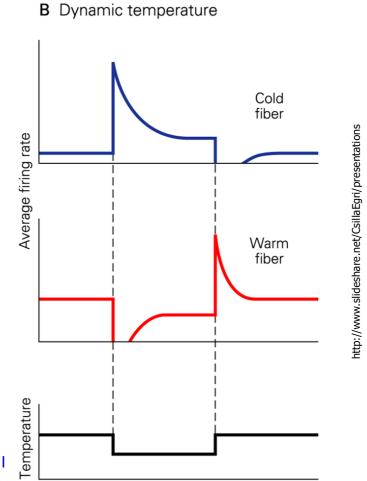

Thermoreceptors

• Perceived temperature is determined by relative activity of cold and warm receptors

Thermoreceptors

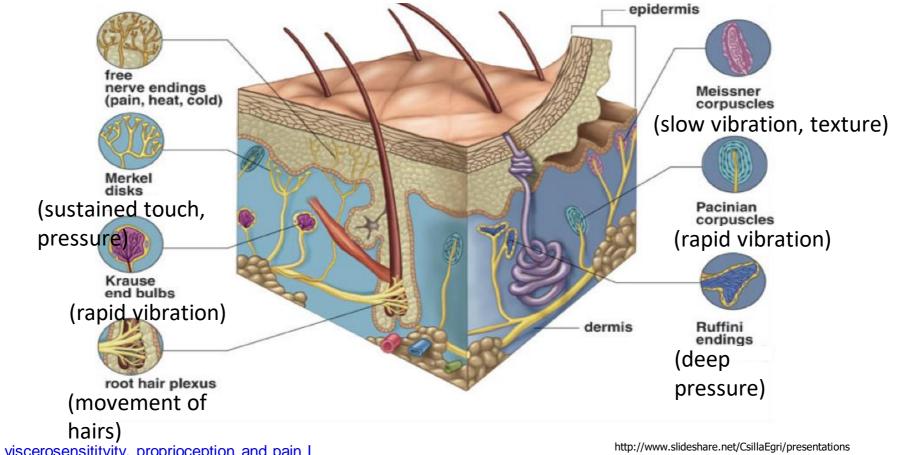

• Mostly phasic response

MUNI

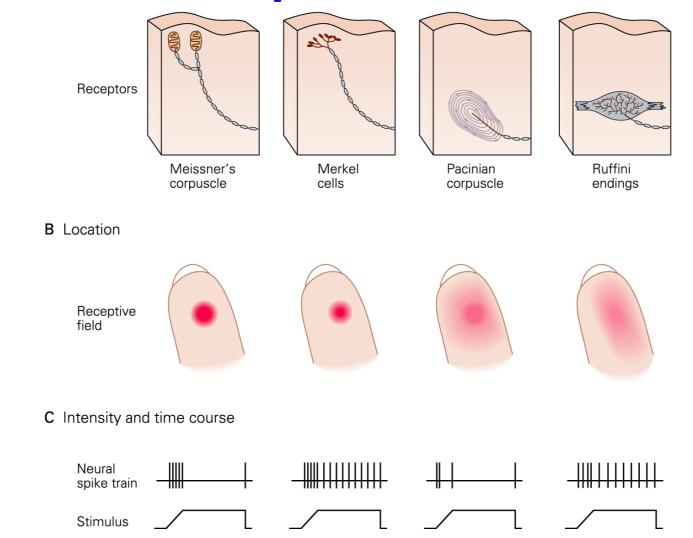

The receptors of the skin

• Simple versus complex

34 Somatosensitivity, viscerosensititvity, proprioception and pain I

The receptors of the skin

35 Somatosensitivity, viscerosensititvity, proprioception and pain I

http://www.slideshare.net/CsillaEgri/presentations

MUNI Med

The receptors of the skin

Receptor	Туре	Sensation	Signals	Adaptation
Meissner corpuscle	Encapsulated & layered	Touch: Flutter & Movement	Frequency/Velocity & Direction	Rapid
Pacinian corpuscle	Encapsulated & layered	Touch: Vibration	Frequency: 100-300 Hz	Rapid
Ruffini corpuscle	Encapsulated collagen	Touch: Skin Stretch	Direction & Force	Slow
Hair follicle	Unencapsulated	Touch: Movement	Direction & Velocity	Rapid
Merkel complex	Specialized epithelial cell	Touch, Pressure, Form	Location & Magnitude	Slow
Free Nerve Ending	Unencapsulated	Pain, Touch, or Temperature	Tissue damage, Contact, or Temperature change	Depends on information carried

MUNI MED

72. Receptors, receptor potential vs. action potential, receptive field

- ✓ Receptor definition (energy converter)
- ✓ Receptor potential vs. Action potential
 - RP analogue (amplitude), AP digital (frequency)
 - RP various ionic mechansims, AP Na-K based
- ✓ Basic attributes of stimulus
 - Modality, localization, intensity, duration
 - The law of specific nerve energies (labeled line coding)
- ✓ Receptive field
- 37 Somatosensitivity, viscerosensititvity, proprioception and pain I

- Definition
- Examples of large and small receptive fields, association with resolution
- Lateral inhibition
- Receptor adaptation (tonic and phasic response)
- ✓ Various classifications of receptors
 - Brief overview of the skin receptors
