Learning outcomes

TBL Lesson: 03 Mercy Juma – Infections with Fever [Ondřej Zahradníček]

Upon completion of this learning unit, students will be able to:

- list the most typical infections accompanied by fever
- organize the process of differential diagnosis for these infections
- choose the most useful diagnostic methods for their diagnosis
- interpret the most typical results of these diagnostic methods
- analyze a simple case defined by medical history, examination, and laboratory findings
- decide on recommended treatment in the most typical cases
- outline the most common complications of these diseases
- demonstrate potential solutions for these complications
- recognize typical errors that may occur during the treatment of these infections
