

1. Basic principles of preparation are:

2. Explain following terms:

Extention for prevention

Retention

Resistance

3. Classification of dental caries acc. to its history

4. Classification of dental caries acc. to Black:

5. Which components does rubberdam consist of?

6. Describe the structure of enamel and dentin (histology)

7. Temporary fillnig materials are:

8. Composition of
- Amalgam

- Composite filling materials

- Glassionomers

9. When and why do we make a base? Which material do we use for making base?

10. Principle of setting of

- Amalgam
- Glassionomers
- Composites

11. Principle of connection with hard dental tissues

- Amalgam
- Glassionomers
- Composites

12. What does it mean access to the cavity? How can we arrange it?

13. What is matrix and in which cases do we use it?

14. Classification of composite material acc. to mode of curing

15. Which factors are necessary for the origin of dental caries?

16. How many roots are in first maxillary molar? Name them.

17. Caries lesion on proximal surfaces of incisors and canines is class..... acc. to Black.

18. What is biofilm?

19. Explain origin of dental caries
