

# Adhesive cementation

# **ADHESIVE cementation**

- Fixed dentures can be fixed sing adhesive cementation.
- Adhesive dentures: veneers, inlays, onlays, partial crowns, adhesive bridges, conventional crowns and bridges can be also cemented using adhesive cementation.

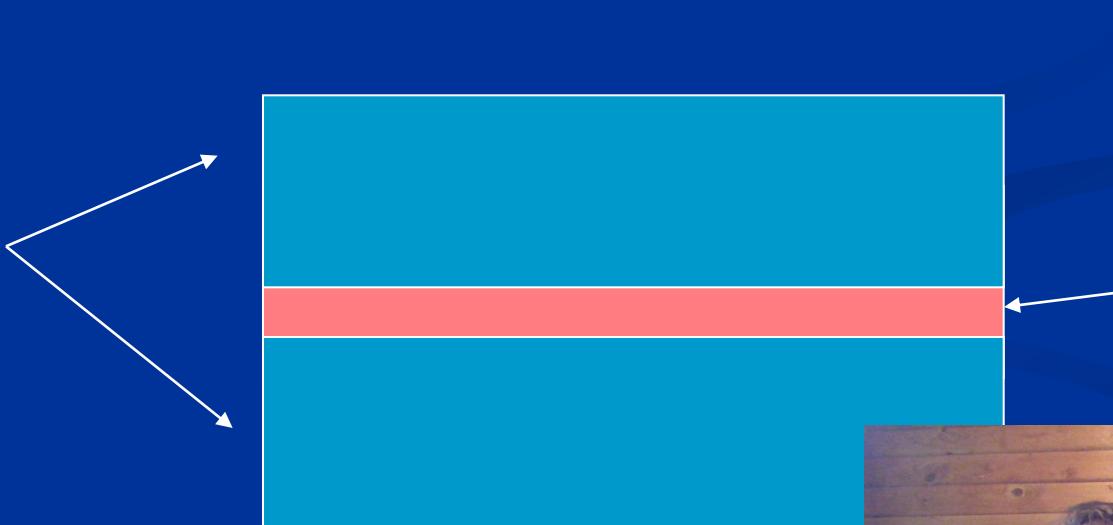

Material: Resin, ceramics, metal

# Adhesion

Ability of two materials to be connected  
(glue)

➤ Adhesive

➤ Adherend

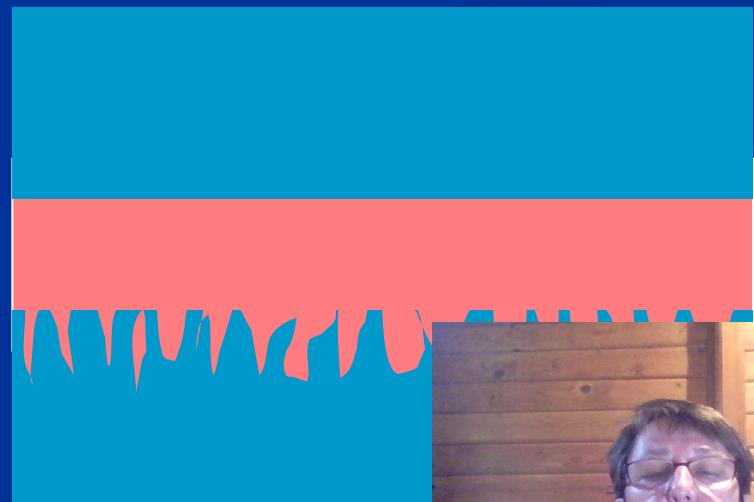

# Adhesion

# Adhesion

- Mechanic  
*Is based on the roughness of the surface*

# Adhesion

➤ Specific

Fysical  
Chemical

# Adhesion

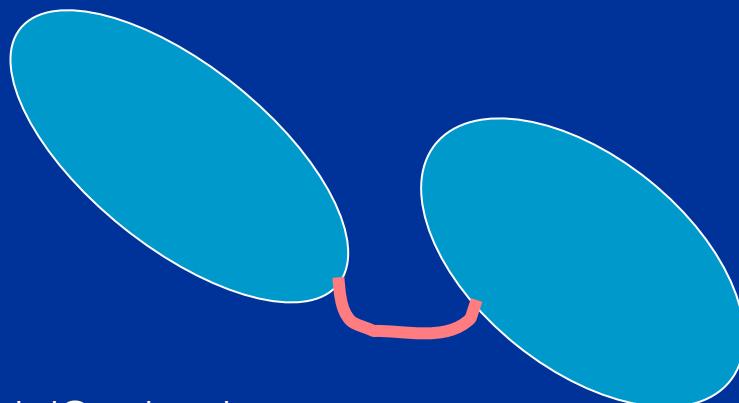

➤ Specific

Fysical – intermolecular forces

Van der Waals

H- bridges

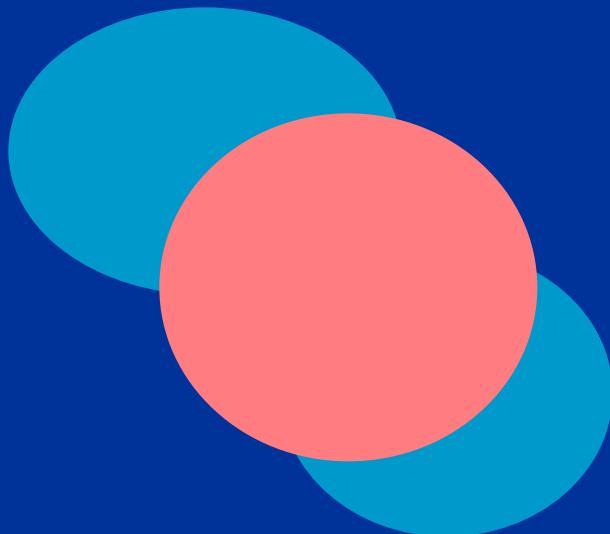

Elektrostatic

# Adhesion

➤ Specific

Chemical binding  
covalent  
ion  
metal

# Adhesive treatment in dentistry

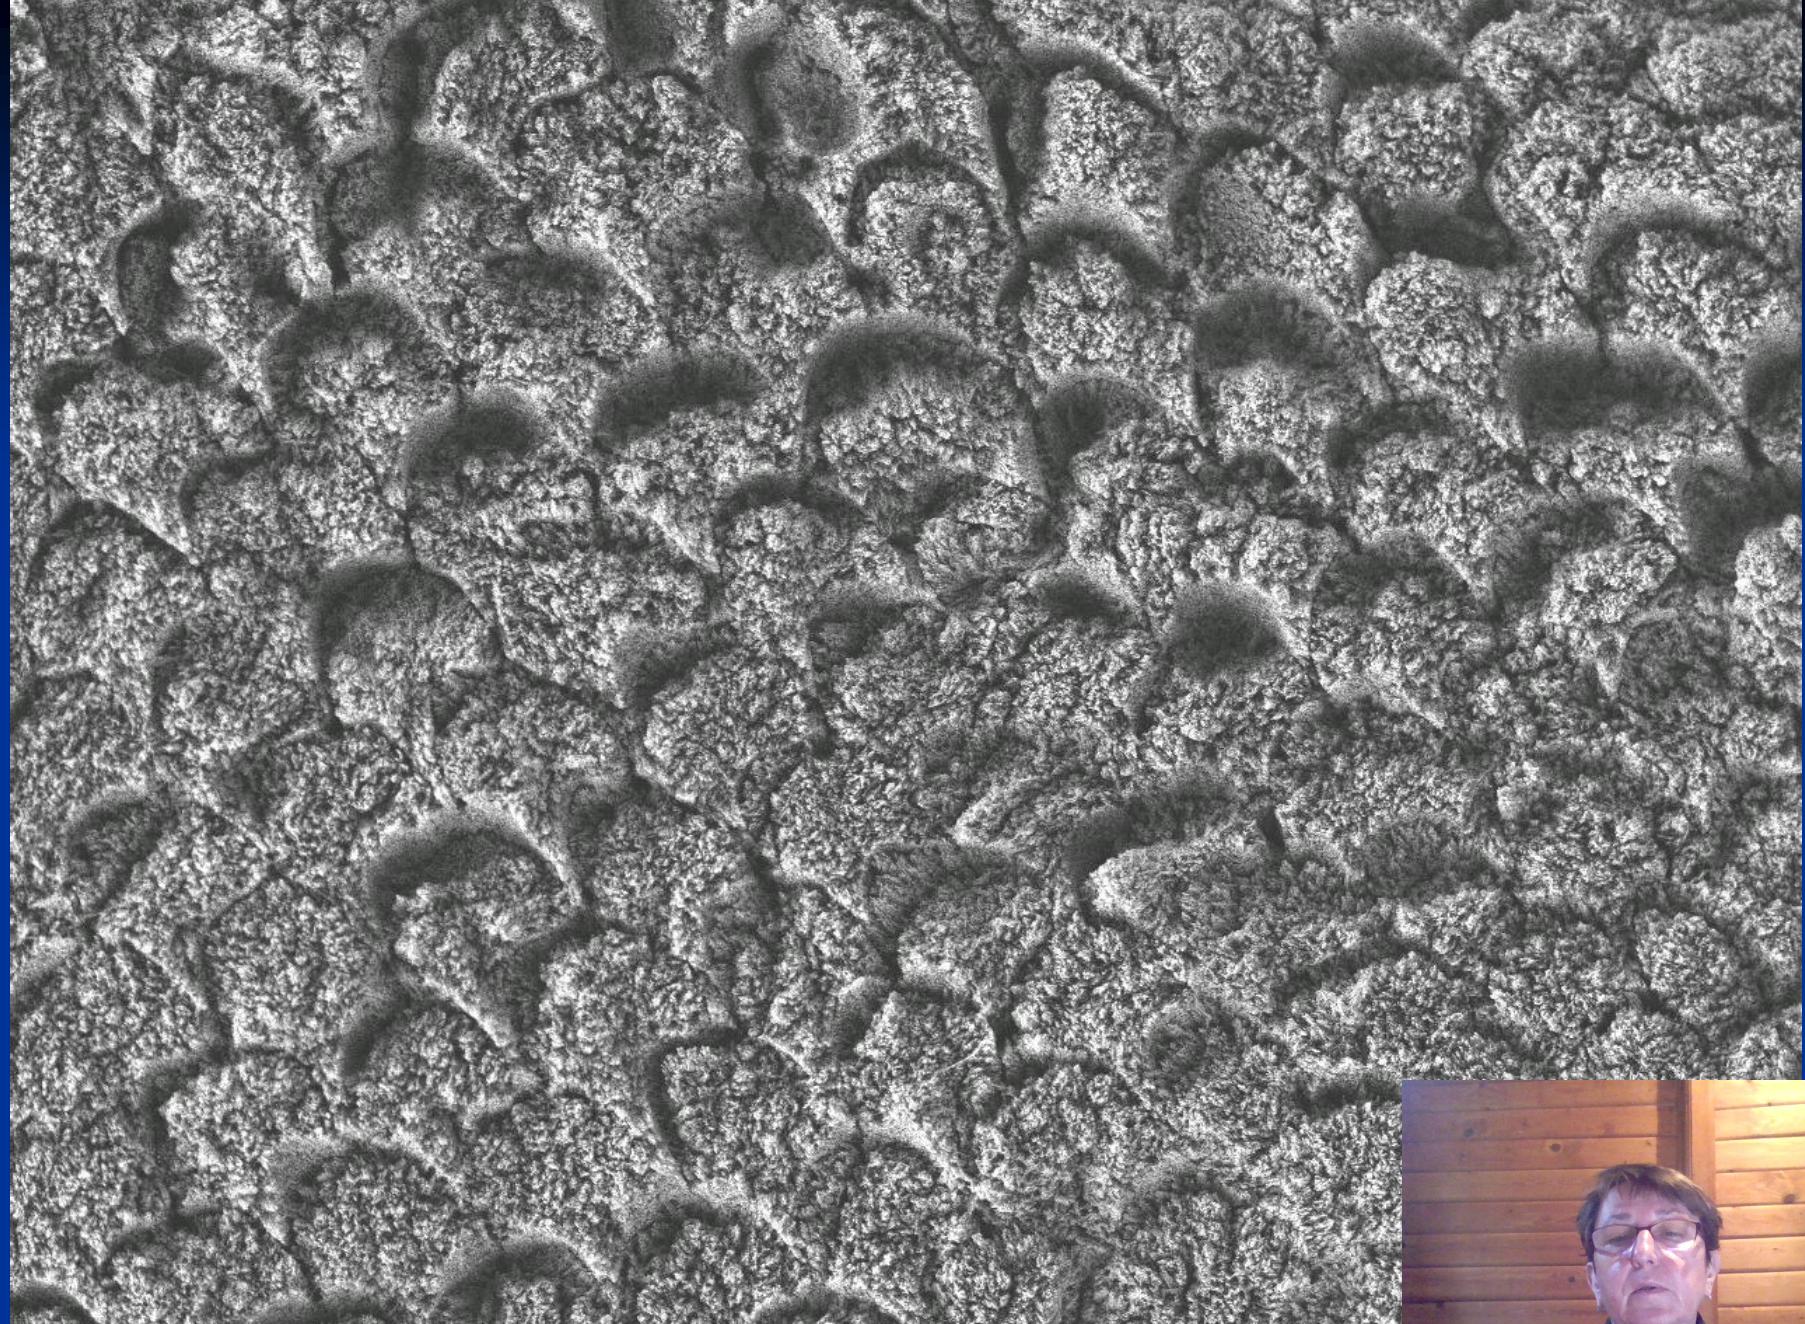

- Sandblasting
- Acid etching
- Elektrolytic treatment
- Laser
- Plasma coating
- Silanization

# Adhesive treatment of surfaces in dentistry

- Creates irregularities of the surface (roughness)
- Increases surface energy
- Increases wettability
- Combination

# Adhesion - importance

- Making fillings
- Cementation
- Other (making dentures)

# Composite cements

- Composite materials
- Lower viscosity
- Selfcuring, dual curing. In special cases also light curing only.

# Bonding to hard dental tissues (enamel and dentin)

- Miromechanically
  - Acid etching
  - Selfetching adhesive systems
  - Selfetsching (selfasdhessive cements)

# Preparation of surfaces before adhesive cementation

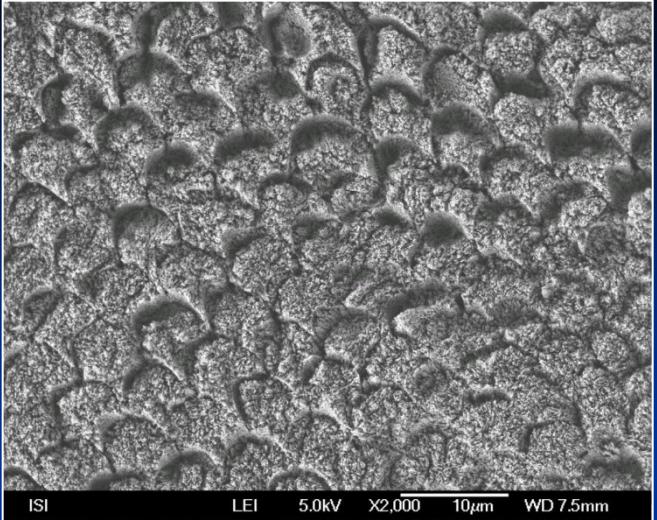

- Enamel
- Dentin
- Ceramic materials
- Composite materials
- Metal alloys

# Retentive pattern

- Periprismatic  
(Interprismatic)
- Intraprismatic
- Aprizmatic

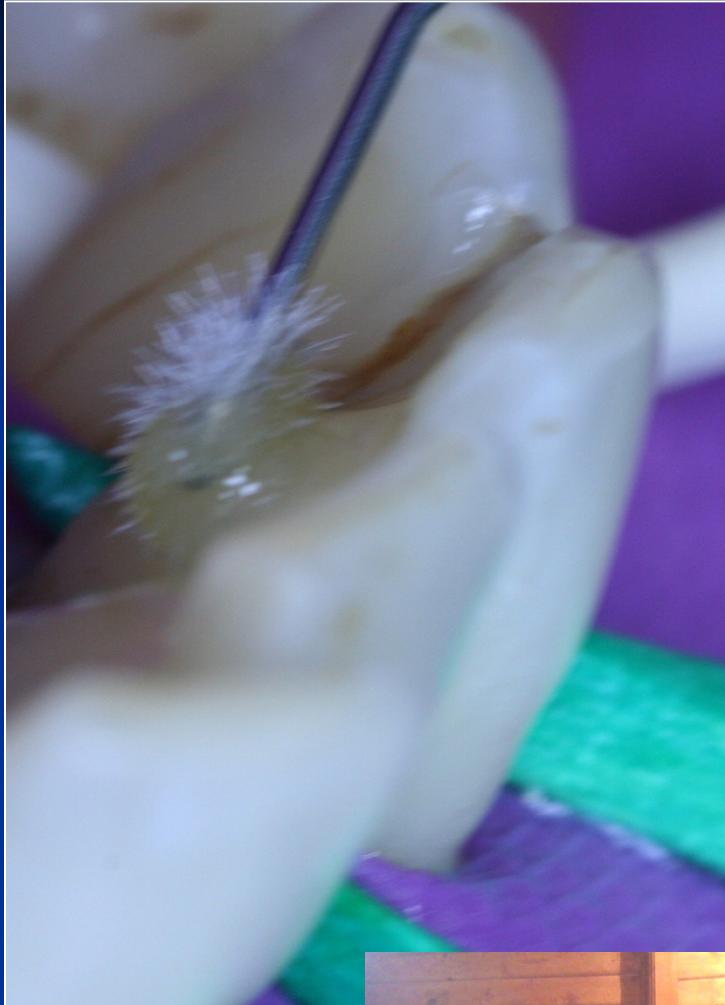

TE

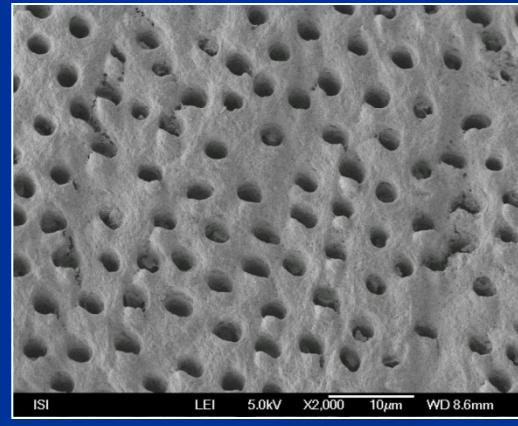

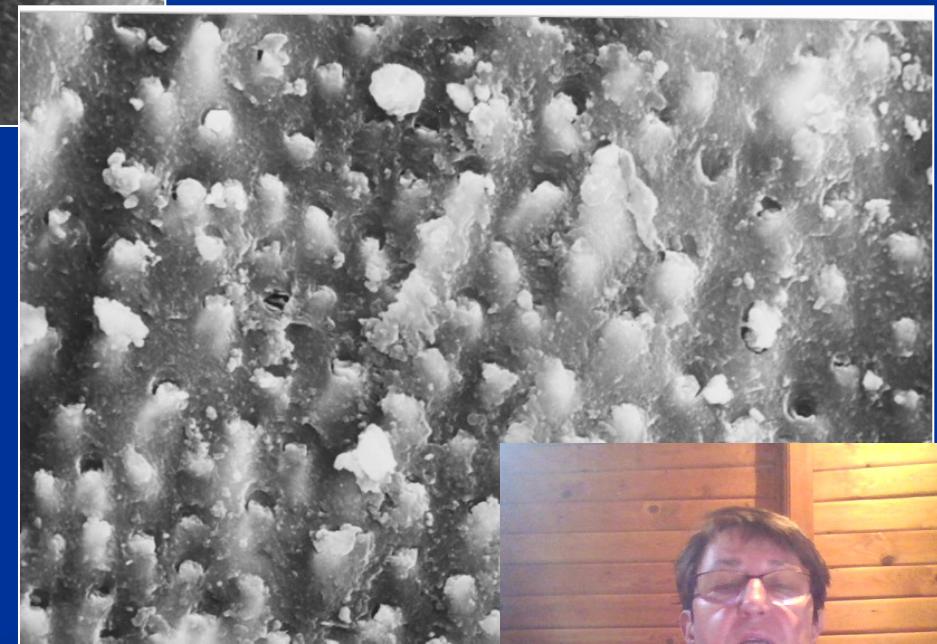

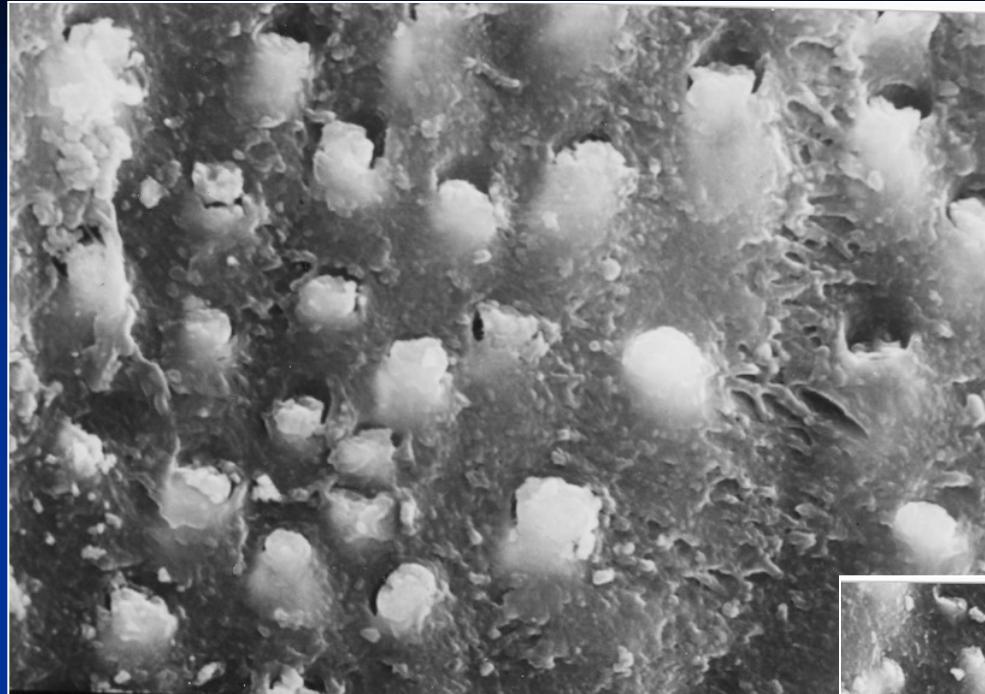

SE

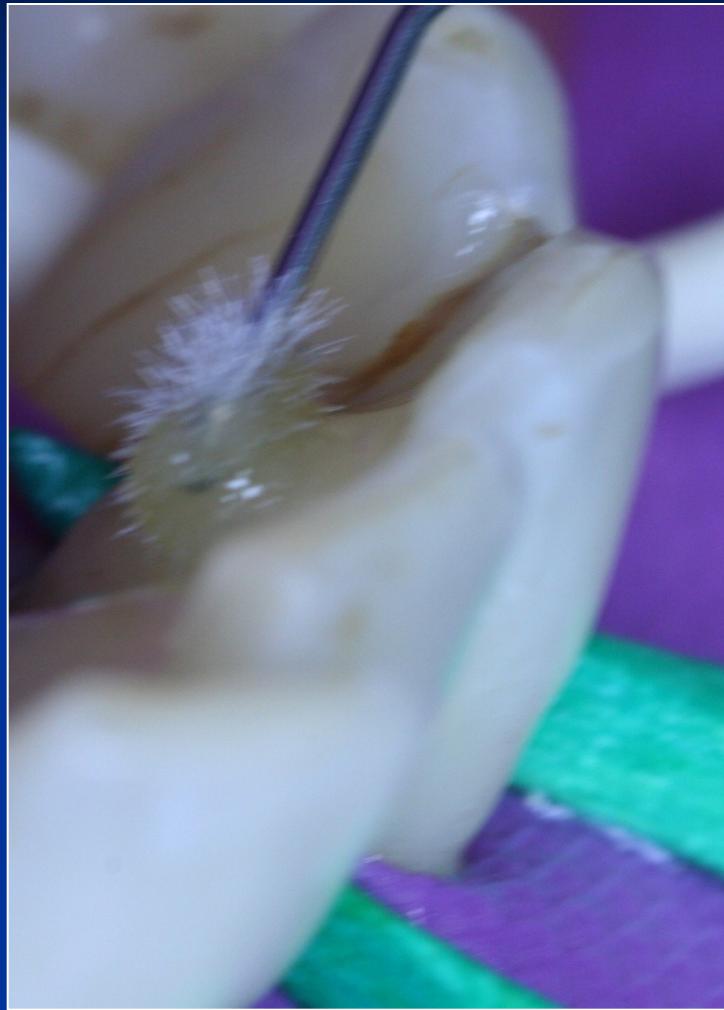

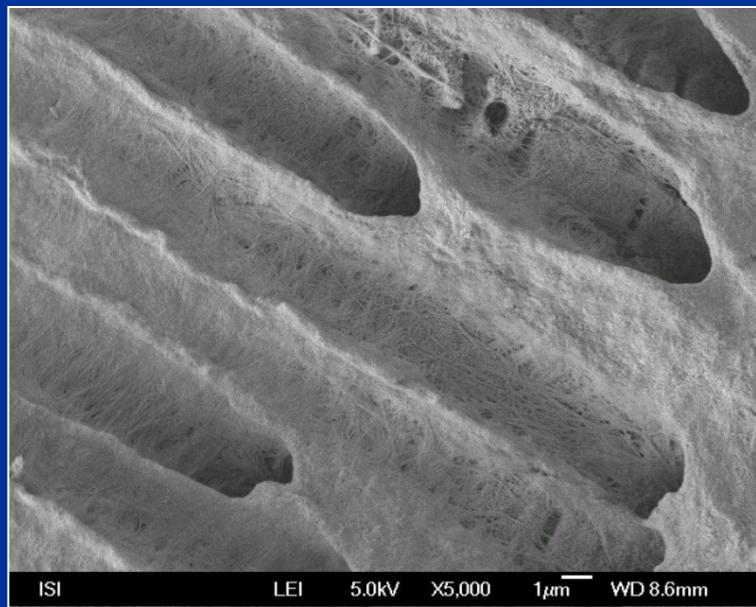

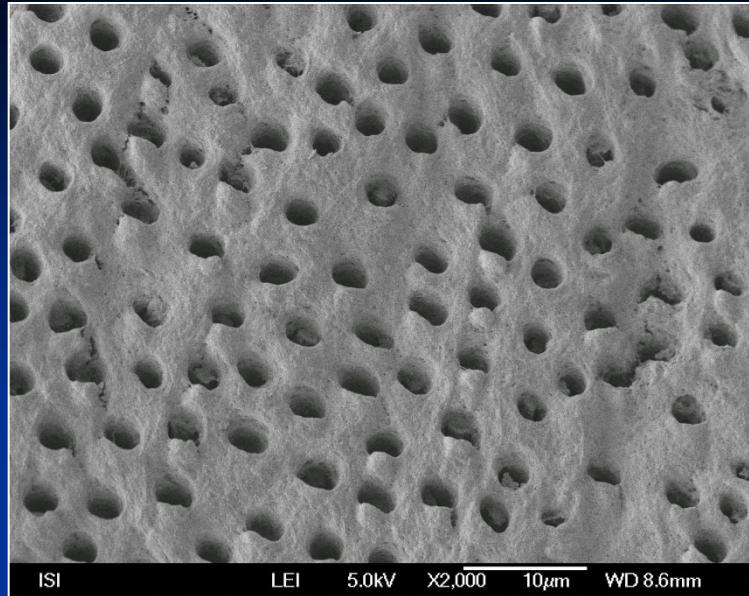

# Retentive surface of dentin

- Smear layer is removed (modified)
- Open dentin tubules
- Decalcified collagen network

# Ceramic materials

## Silicate ceramics - etchable

- Feldspatic
- Leucit
- Alumina
- Lithiumdisilicate

Less than 15% silicate matrix is not silicate ceramics

## Non silicate ceramics - non etchable

- Vysoce denzní alumina
- Zirkonosxde
- Highly dense zirkonia (yttrium stabilized)
- Pressed or layered CAD/CAM ceramics

# Ceramic materials

## Silicate ceramics

- Crystals in glass matrix

## Oxide ceramics

- Highly dense material

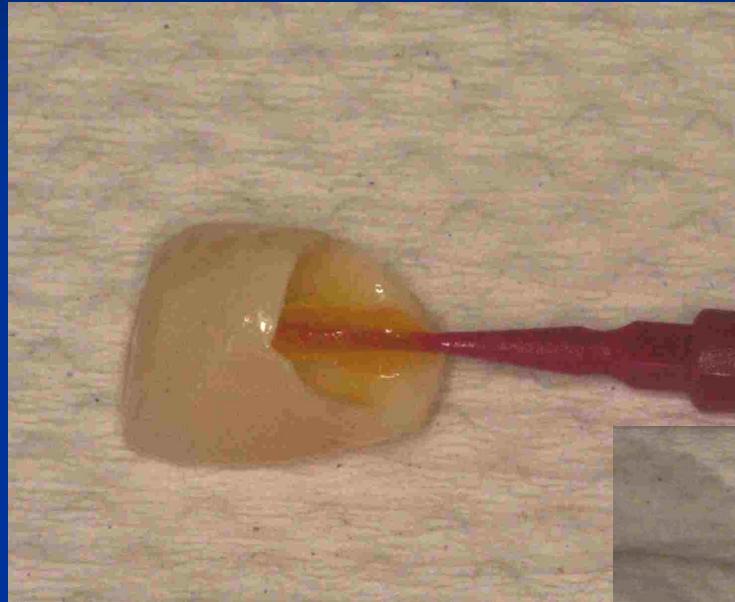

- Etching HF

- Sandblasting A

# Etching

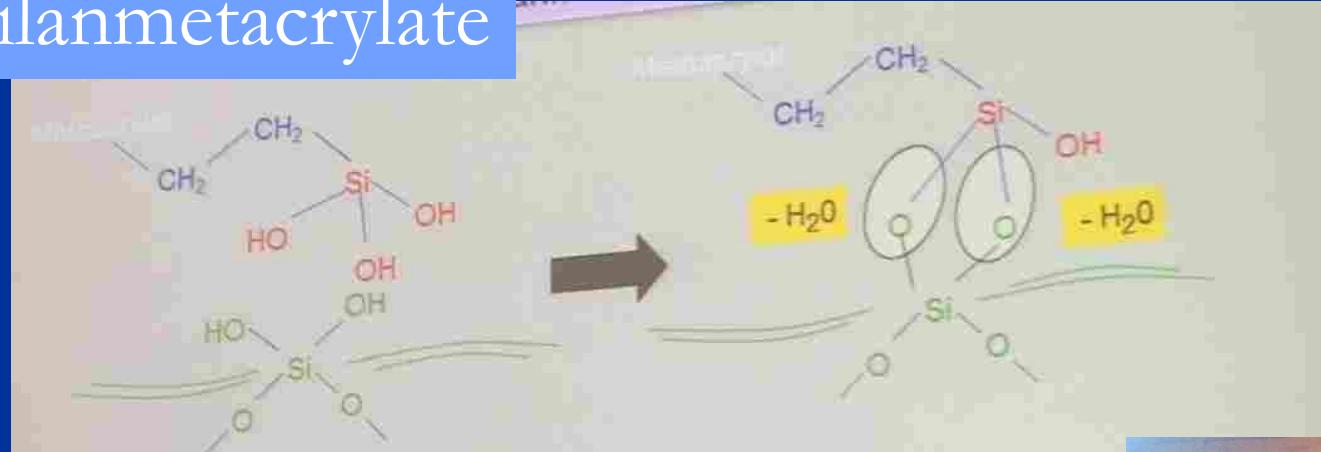

# Composite and metal surfaces

- Sandblasting

# Chemical adhesive treatment: ceramics, composite

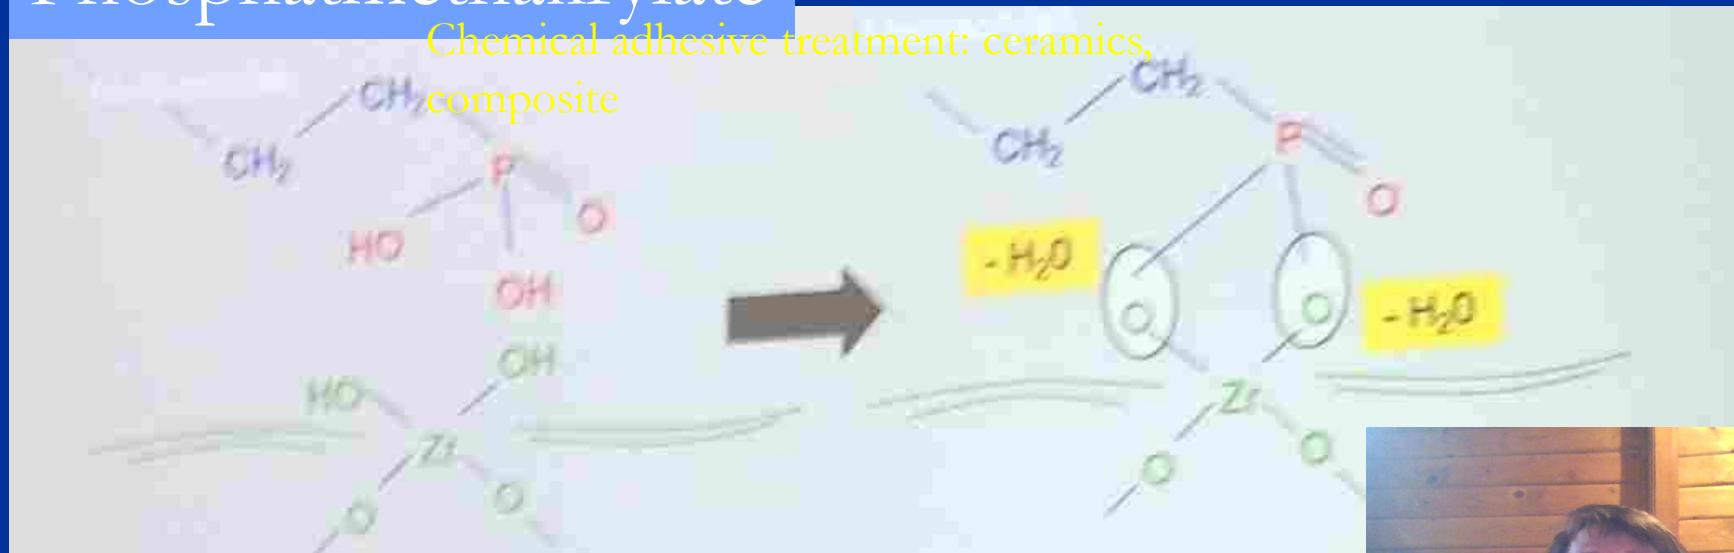

Silanmetacrylate

# Chemical adhesive treatment: metal zirconia

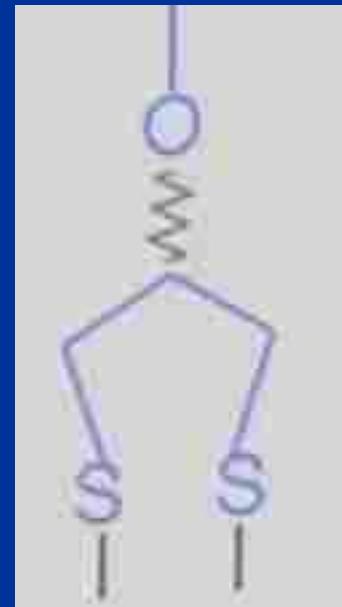

Phosphatmethakrylate

Chemical adhesive treatment: ceramics,  
composite

# Chemical adhesive treatment: golden alloys

Sulfidmethacrylate

# Comprehension

## Sandblasting plus silane

- Metal
- Metalceramic (metal)
- Zirconia
- Composite

## Etching plus silan

- Silicate ceramics

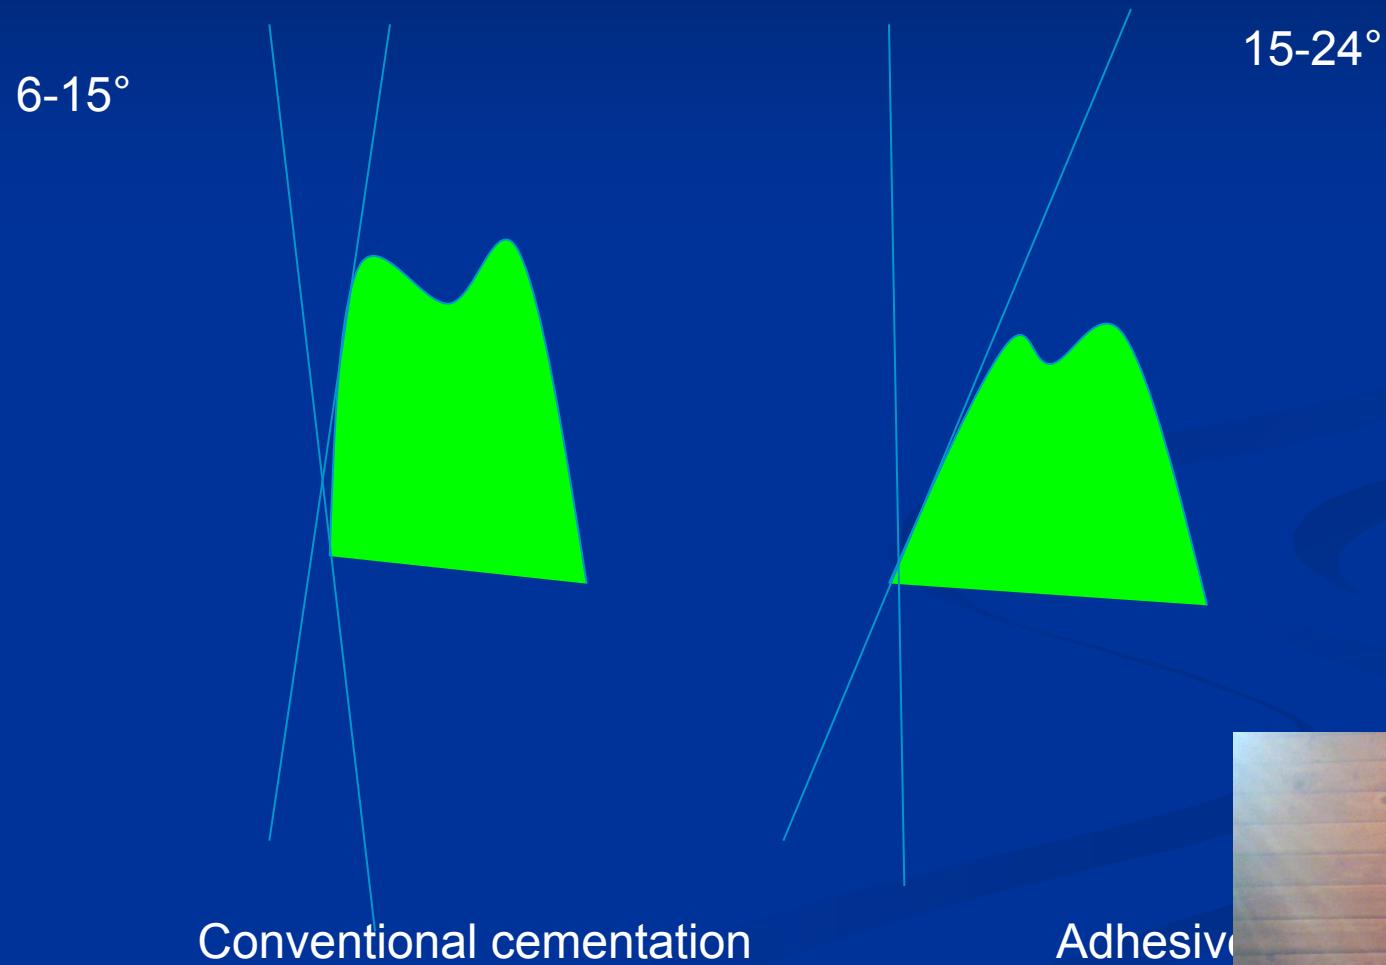

# When adhesive cementation

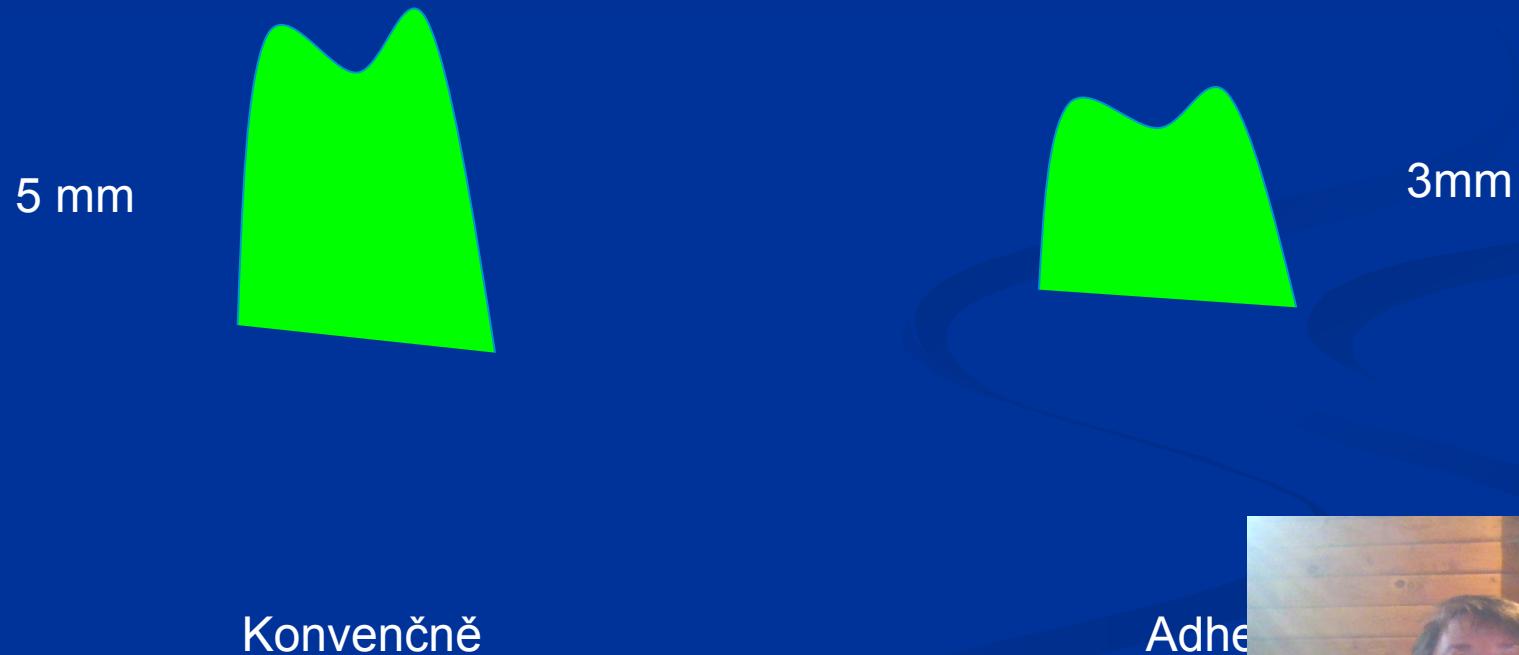

- Area of retention - size
- Geometry of preparation

# Angle of convergency

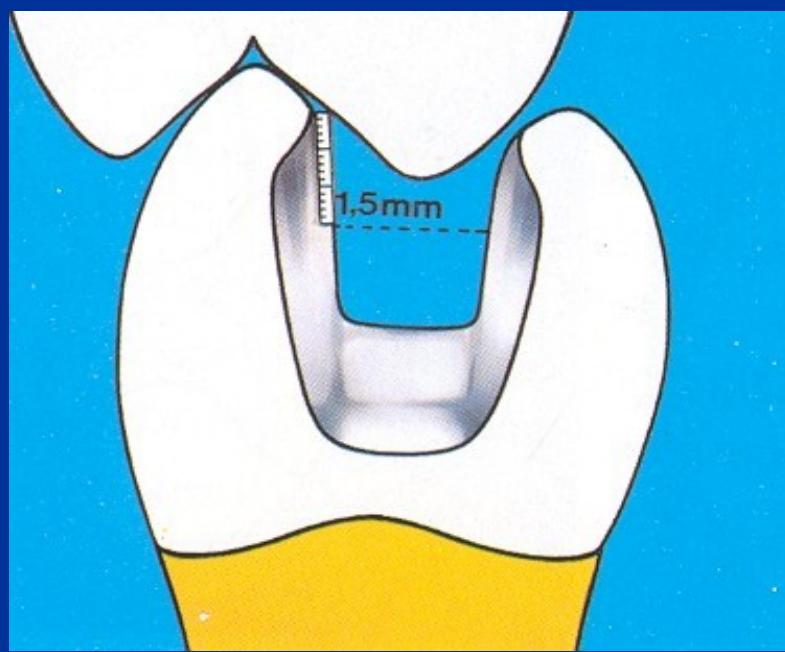

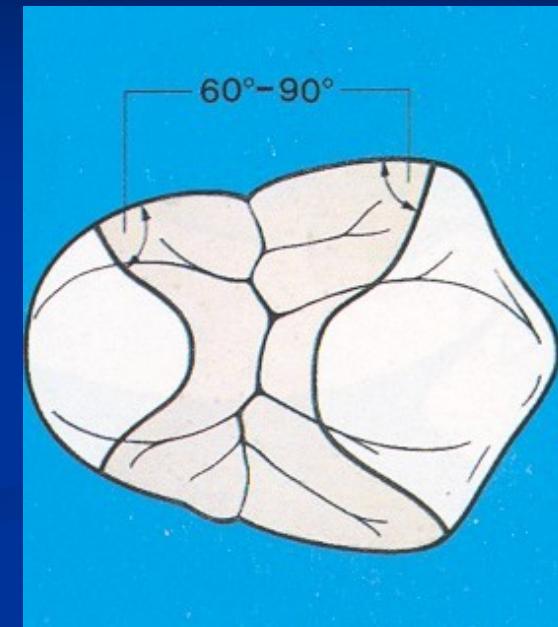

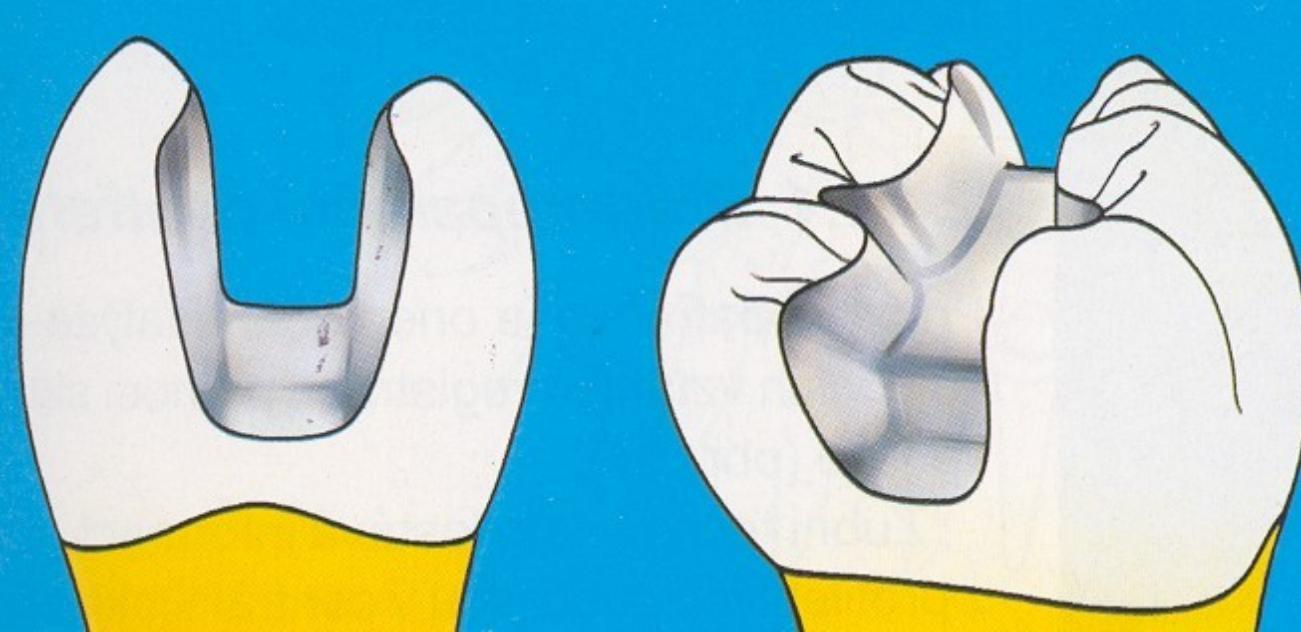

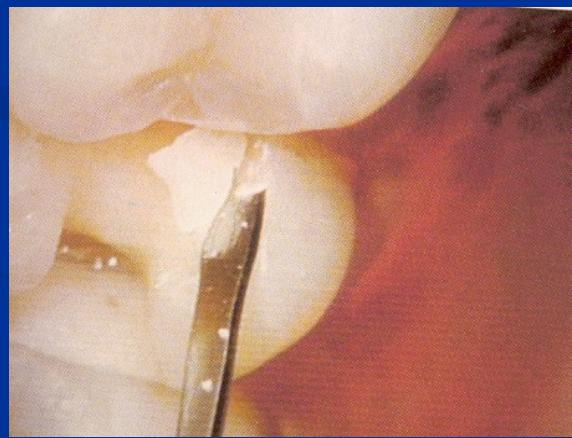

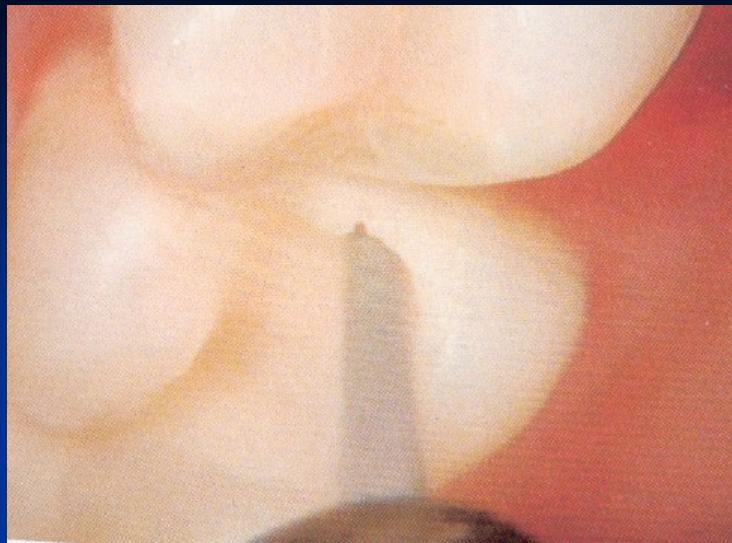

# Amount of hard dental tissue – how is the prepared tooth high

# Non metallic adhesive dentures

- Inlays, onlays
- Inlay bridges
- FRC posts

# Adhesive bridges

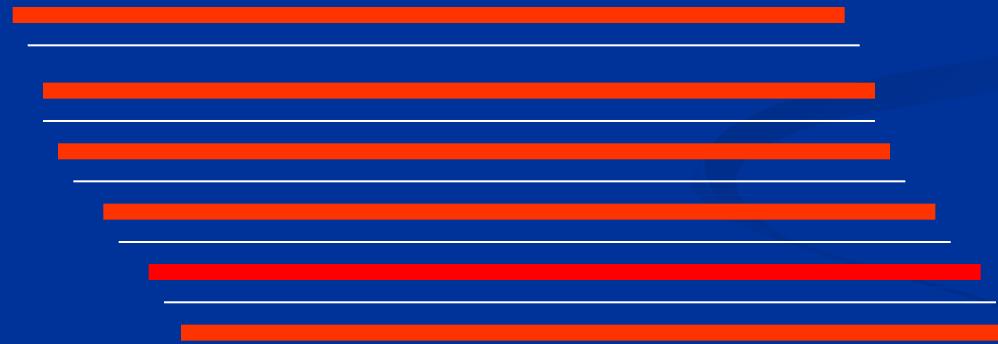

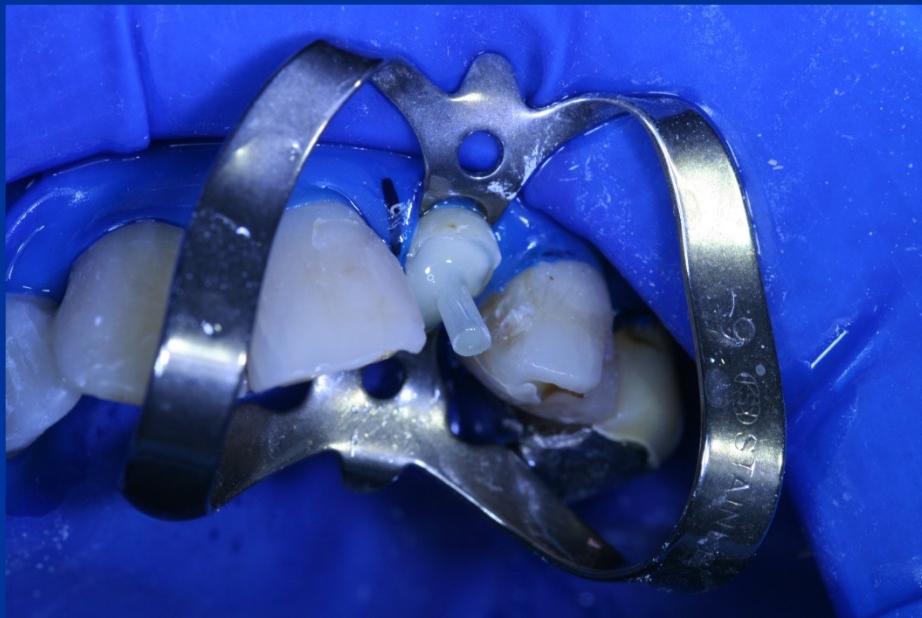

# FRC

## Filler - fibers

lenka.roubalikova@tiscali.cz

# FRC x PFC composites

Surface friction between  
matrix and filler –  
**reinforcement**

**Anisotropy**

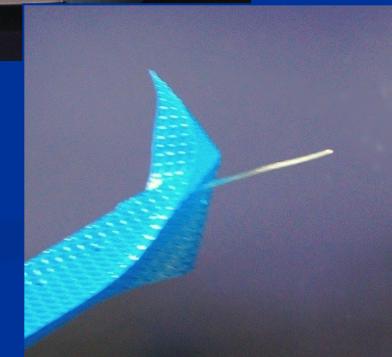

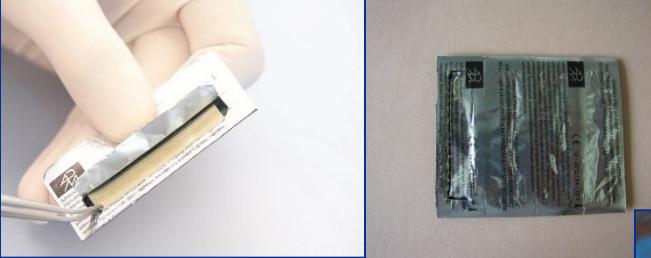

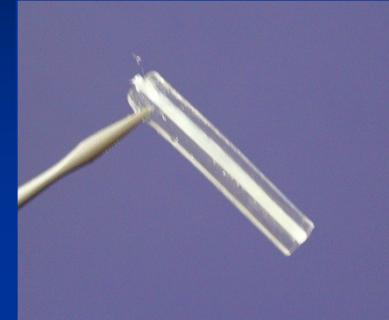

Surface friction is minima  
**Isotropy**

**Always combination**
