

# Otázky k praktické státní zkoušce konané v předmětu ZL-KZL094c

## simulovaná výuka

1. Caries lesion on mesial surface of maxillary molar **16 nebo 26**, crista obliqua is affected. Preparation for composite, making filling.
2. Caries lesion on distal surface of maxillary molar **16 nebo 26**, crista obliqua is affected. Preparation for composite, making filling.
3. Caries lesion on mesial and distal surface of maxillary molar **16 nebo 26**, crista obliqua is intact. Preparation for composite, making filling.
4. Caries lesion on mesial and distal surface of maxillary molar **16 nebo 26**, crista obliqua is affected. Preparation for composite, making filling.
5. Caries lesion on distal surface of mandibular molar **36 or 46**, dental caries is also on the occlusal surface. Preparation for composite, making filling.
6. Caries lesion on mesial surface of mandibular molar **36 or 46**, dental caries is also on the occlusal surface. Preparation for composite, making filling.
7. Caries lesion on mesial and distal surface of mandibular molar **36 or 46**, fissures are intact (no lesion on occlusal surface). Preparation for composite, making filling.
8. Caries lesion on mesial and distal surface of mandibular premolar **35 or 45**, dental caries is also on the occlusal surface. Preparation for composite, making filling.
9. Caries lesion on mesial and distal surface of maxillary premolar **15 or 25**, dental caries is also on the occlusal surface. Preparation for composite, making filling.
10. Caries lesion on central maxillary incisor **11 or 21**, on mesial and distal surface, the incisal edge on distal side is affected. Preparation and making composite filling.
11. Caries lesion on central maxillary incisor **11 or 21**, one mesial and distal side, incisal edge is not affected. There is also cervical lesion in enamel. Suggestion of suitable materials, preparation and filling.
12. Caries lesion on central maxillary incisor **11 or 21**, on mesial surface, the incisal edge is affected.
13. Caries lesion on distal surface of maxillary molar **16 nebo 26**, crista obliqua is intact. There is also cervical caries out of enamel. Suggestion of suitable materials, preparation and filling.
14. Caries lesion on distal surface of maxillary molar **16 nebo 26**, crista obliqua is intact. There is also cervical caries in enamel. Suggestion of suitable materials, preparation and filling.
15. Caries lesion on distal surface of maxillary molar **16 nebo 26**, crista obliqua is intact. There is also a small lesion in mesial part of occlusal surface. Preparation for composite, making filling.
16. Caries lesion on mesial surface of mandibular premolar **35 or 45**, there is also v-shaped defect. Suggestion of suitable materials, preparation and filling.
17. Traumatic defect on central maxillary incisor **11 or 21**, incisal edge and 1/3 of the crown are lost. Preparation and making composite reconstruction.
18. Caries lesion on the mesial surface of central maxillary incisor **11 or 21**. There is also cervical lesion located partly in enamel, partly in cementum. Suggestion of suitable materials, preparation and filling.
19. Caries lesion on mesial and distal surface of maxillary premolar **14 or 24**, dental caries is also on the occlusal surface. Preparation for composite, making filling.
20. Caries lesion on mesial and distal surface of maxillary premolar **15 or 25**, there is no caries on occlusal surface. Preparation for composite, making filling.
