

Project-based learning (PBL) in the primary education

And its importance in the curriculum
of the pregradual programme of the
teachers' training for primary
education

THE SUBJECT IS COMPULSORY AND
IT TAKES PLACE IN THE SPRING
SEMESTER OF 4TH SEMESTER
CRITERIA FOR COMPLETION:
WRITTEN PREPARATION OF THE
PROJECT AND ITS REFLECTION

OPENING SEMINARS ARE BASED ON
THEORY, ESPECIALLY ON DEFINING
THE TERMS „PROJECT-BASED
LEARNING“ AND „INTEGRATED
THEMATIC LEARNING“

PREPARATION AND REALIZATION
OF THE PROJECTS
STUDENTS CAN USE IT IN THE
CONTINUOUS TEACHING PRACTICES

STUDENTS REFLECT THEIR
PROJECTS IN THE FINAL SEMINARS

Reasons for project-based learning in the primary education

National curriculum (The General Educational Programme) For basic schools (1st – 9th degree) – since 9/1/2007

New strategies of education are oriented to the „near-life-situations“

Individualization, differentiation, a palette of different methods and forms of work, optional subjects, disposable lessons, evaluation and self-evaluation and other student-teachers vocational training in the framework of the pregradual study

A natural support of students' curiosity and activity that are natural sources of learning.

On the project- based learning, generally

This learning method maybe seems to be new although its base has been constructed a long time ago. We speak about methods inspired by the work of John Dewey and William Kilpatrick (early 20th century).

PBL implements a complex of methods that develop a good working clima in a class and help pupils to develop key competencies.

PBL focuses on methods that change the role of teacher and apply personal developing and interactive learning model.

The Project

Komplex, real a meaningful problem, theme and objective

Student identifies himself/herself with the project and takes all responsibility for it.

Student acquires **theoretical** knowledges and **practical** experiences during the work on the project

Combination of knowledge and abilities in **different fields** and areas

The achievement is concrete **output, product**

Project as a Heart of the Project-based Learning

Organized system of **student's and teacher's acts**. The emphasis is on the **domain role of student's learning activities and teacher's facilitating and guiding role**; these two roles together fulfill the goals and sense of the project.

The complexity of acts demands using many different learning methods and forms of work.

For example: Kašová, Maňák, Václavík, Průcha, Kratochvílová aj.

Project-based Learning Objectives

Form student's personality in all ways equally.

Lead students to be independent, creative and active.

Teacher should define targets of the project and its benefits in the domains of ability, knowledge and attitudes.

Role of the teacher

Teacher as a facilitator, guide, companion, „non-executive“ supervisor, adviser, helper, moderator, consultant.

Teacher pays attention to create a suitable climate in class that is an indispensable condition for successful realization of the project

Project offers a wider space for pedagogical communication.

- Project also allows teacher and student to recognize not only what child/student do and know but also **how he/she perceives, how he/she learns, how he/she thinks, how he/she understands and how he/she communicates.**

Integrated Thematic Learning (ITL)

Integrated Thematic Learning is related to the term *integration* – as a **content of teaching**.

L. Podroužek speaks defines ITL: „a ***synthesis** of the curriculum of particular subjects or cognitive near domains into a single unit with an emphasis on complexity and global aspects of recognition, where the inter-subject relationships“*. are applied.

Activity in ITL is gravitated around the core (theme).

Each theme in ITL is to be considered carefully, so the proposed content creates a certain system of findings, that are important, motivating and useful for students.

Integrated Thematic Learning (ITL)

The integration of curriculum in the form of theme is the core of the ITL concept by American teacher **Susan Kovalik**

Integration of the subject matter content is the core of the (ITL) by American teacher Susan Kovalik. It is based on new memes for the education for 21st century, that are based on brain researches and developmental psychology.

All the process of ITL therefore depends on an year-round theme, that has to fulfill certain conditions and is divided into several (mostly) monthly themes.

The year-round theme is the connecting bridge between particular subthemes. The subthemes can be structured in further thematic parts (for example realized weekly).

Integrated Thematic Learning (ITL)

ITL DEMANDS A LOT OF TIME

ITL REPRESENTS THE CHOICE OF THE KEY CURRICULUM AND APPLICATION TASKS BASED ON ACTIVITIES THAT LEAD PUPILS TO USE ACQUIRED KNOWLEDGE AND ABILITIES

THEMATIC PARTS ARE STEP-BY-STEP IMPLEMENTED INTO PARTICULAR LESSONS AND TEACHING ACTS. ORDERING LESSONS TO THE THEMATIC FRAMEWORKS AND LEARNING ACTIVITIES LEADS (AGAIN STEP BY STEP) TO ACHIEVE THE LONG-TERMS GOALS.

Integration in Nursery School

There is something called *integrated blocks*. It is a form of education that slowly settles in the Czech nursery schools. Particular themes have to be presented to children in context. For example **Easter egg**.

We can begin with an appearance of the egg. Is it possible to stay on the spike? What is its color, shape and surface? What can we do with an egg? Trundling? Throwing? Can we break it? Can we blow the yolk out of the egg? And what happens if we perforate the yolk? We can dip the egg into the glass of vinegar and observe what happens for few days. We can boil or fry the egg – and look at the great meal! And we can bear the shell back to chicken in the farm. And if we are lucky we will see young just hatched chicken.

And after all children recognize what an egg really is. Not by teacher's description and presentation. **Children experience it!** And – immediately – we have the theme of birth of a new life, theme of Easter, theme of happiness – so let's dance and sing: we can learn an Easter carol too. So that is an egg – the symbol of Easter. Can you already tell why we decorate the Easter eggs?

(Eva Šurová, absolventka specializačního studia pro koordinátory EVVO v MŠ, realizováno SEV Toulcův dvůr Praha, 2010–2011, Ekoškola Rozárka, Praha)

Project vs. thematic learning

PROJECT LEARNING

- solving a task or problem
- purpose, meaning and goal: formulated by the teacher
- outcome: product, known since the begin
- intrinsic motivation
- activities are not planned in detail, depend on student's incentives and experiences of students
- teacher is in the background
- independence, creativity, activity
- supportive, safe and cooperative climate
- the preparation is less difficult, no details
- teacher's flexibility is necessary
- managing the lesson is not difficult

THEMATIC LEARNING

- solving the theme/topic
- purpose, meaning and goal: formulated by the teacher
- outcome: to learn the theme, only smaller products sometimes
- extrinsic motivation in the begin, however intrinsic motivation is a requirement for success in the further stages
- activities are planned to details and connect schools with outer reality as well as PL
- teacher manages students' activities and their progress, however he/she plays a role of a facilitator as well
- students are less independent and creative, although they have to be active
- supportive, safe and cooperative climate
- preparation is difficult and detailed
- managing the lesson is difficult průběh, less demands on teacher's flexibility

Choosing the project topic with brainstorming

- *What are you interest in?*

- *What problem do you want to solve?*

- *What do you want to change in your class or enviroment?*

- *What do you want to organize?*

- *Why or how does anything work?*

It is acceptable to convey the proposal verbally, however the written form is recommended – for example: flipchart or flashcards – students can look at them and manipulate with them anytime.

Children in the 3th grade or younger mostly demand leading: verbal brainstorming (questions like why? how?...) The older children are able to write down their questions on the paper more independently. We recommend to write down just one question on every single piece of paper because of easier voting later in the group project.

Subsequently, we recommend to read the ideas together again, to classify them, to scrap the dubbed ones, and to explain their **meaning and purpose** and to convey – immediately in the begin – what is **the outcome of the project**.

Setting the purpose

Purpose of the project is the answer on the question „**Why should we realize the project?**“

We recommend to construct it on two levels:

Students' level – Is the answer to the question „why to realize the project?“ and it helps with the definition of the outcome. It is the space for raising students' motivation.

Teachers' level – A place for teacher's analysis of the project. The analysis should be based on teacher's experiences to develop students' personality on the **cognitive, psychomotor and affective** level. Teacher should realize which outcomes of curriculum and key competencies the project develops.

Outcomes

Even the problem itself is a meaningful **outcome**. The problem should be interesting and should arise from the needs of **participants (pupils), who would make decision about the project together**. Participants can apply their invention and originality.

Think about the question: „*What is my role now?*“

Teacher can play a role of the person who looks after the choice of the **suitable and feasible outcomes**.

Is possible to realize projects in the 1st grade?

There is no clear answer. It depends on our ability to prepare the class for a project and to choose the adequate type of project. It is important to realize that you should lead children to some competencies for successful completion of the project.

Anyway, you can see some examples of good projects in the table above.

Choosing the participants of the project

It is necessary to decide who will participate on the project and to give roles during the planning of the activities.

The decision should be made by pupils themselves.

Mostly, pupils actively take the roles they want, so groups of the similar roles are often created naturally – and that is the natural way to arise the cooperative learning.

Schedule of the project

Think about (together with pupils):

- the **time** schedule
- the **subjects** the project will be implemented in
- if is the best to realize the project in one just block as a short term action, or is it better be realized within subsequent events in some intervals

Where? Environment of the project

1) **Interior:** Think up all possibilities you can use: corridors, library, computers, laboratories, hall...

2) **Exterior:** Consider the best place to visit: city hall, city library, dog pound... You can cooperate with after-school club, parents, NGOs...

**What we
need?**

**Appropriate
material aids.**

Appropriate conditions for project means material aids too.

If is the project meaningful for the children and becomes popular in class they will bring their own materials and parents maybe will help with material background too.

How to evaluate the project?

It is necessary to provide the objectives (outcomes, key competencies) you want to achieve and what are the **requirements for process and outcomes of the project.**

Requirements for finishing the project mostly contains:

Presentation of the project outcomes and its results and assessment of the all process of the project

Examples of some project titles of projects:

Is It Always Female Who Gives the Birth?

What Do I Know about the River in My Neighbourhood?

Our Class or Our Way to Shool

Pet Adoption

Should My Class Look Better?

An Insect Hotel

What is Goin' on in the Clay?

I'd Like to Be a Singer

Life in the Grass or Who Does Run Just Under Your Feets?

Why Don't ~~You~~ Take a Drug

Example of a project: Animals (mammals, birds, reptile, amhibian, fish and insect)

Motivation: A scene

A visitor in ZOO is bored of seeing still the same animals. So the director decides to purchase some new animals. Now he needs to find a seller.

The sellers were children. Their role was to make an advertisement poster to attract the director's attention on their animal.

The poster had to be colourful with pictures and texts.

There had been the criteria created by the children written down on the blackboard.

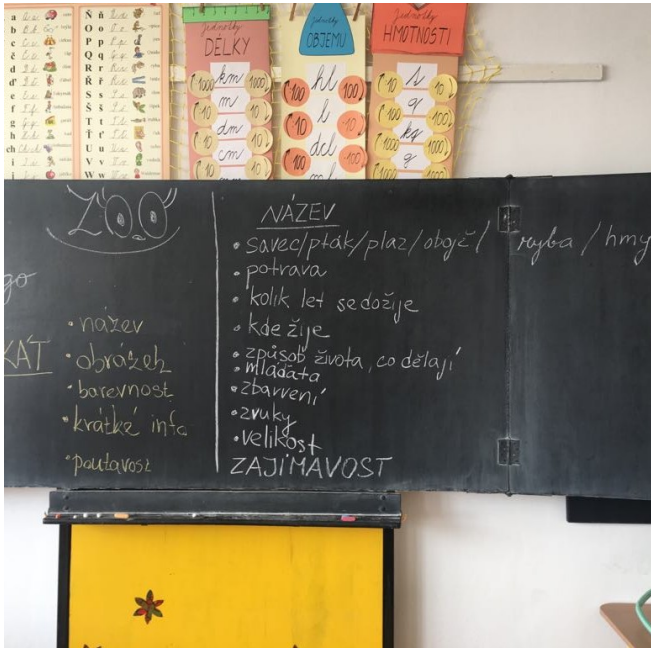

Triple member groups.

Children had to bring a book or a magazine to find some informations about their animals. Children were supposed to lend their books and magazines to each other.

Then the children drawn a card with an animal and – for the better orientation – we gave them a paper with the basic informations about the animal.

Every group could use two wild cards to find an information on the internet.

Self-reflection (brief): We worked 2 hours today. I seemed everyone participated. Just one group was little problematic but even they have something made. The other groups worked well. They were trying to find some informations in books. We had told them to choose a leader, everything else was made by themselves. They have to present their project shortly to attract our attention on Wednesday and Thursday . In the end they have to evaluate their work in group.

Karta 1

Koníček mořský

Skupina 4

ŘAD: alúčkožábří ČELED: Koníčkovití ROD & DRUH: Hippocampus

Důležité

- Tělesné rozměry:** Délka: od 2,5 cm do 15 cm, koničků, kteří žijí v zářivém světle, až po 2 m dlouhý malajský koníček.
- Rozmnožování:** Doba rozmnožování je v chladnějších vodách a v létě, k páření dochází za úplňku.
- Lihnutí mláďat:** podle teploty vody.
- Počet mláďat:** u jednotlivých druhů od 1 do 1000.
- Způsob života:** Chování: společníci.
- Potrava:** plancton, drobné ryбки, měkkýši, živočichové.
- Délka života:** od 1 do 10 let.
- Příbuzné druhy:** Nejblížejší příbuzní jsou jehly a luňáci.

Vzhled koníčků

Koníček mořský, příbuzný mořských jehel, vypadá jako šachová figurka. Plave ve vzpřímené poloze a uniká pozornosti nepřátel tak, že se svým zbarvením přizpůsobuje vodním rostlinám.

PŘEDKLADANÉ ČINNOSTI

- samostatně navrhnout vlastní třídu (60)
- vytvořit společně plánek s vlastními názory (10min)
- diskutovat na dané téma a stanovit si vlastní cíle pro vytvoření třídy (10min)
- vytvořit učební plánek třídy a vyhodnotit ho (10min)
- vytvořit učební plánek třídy (10min)
- diskutovat o své třídě (10)

Metody

- ▲ SLOVNÍ (monolog, dialog)
- ▲ PRAKTICKÉ (pracovní činnosti, grafika, a výkresy, činnosti)
- ▲ NÁBORNÉ DEKONSTRUKČNÍ (demonstrace, obratní směřování)

PRESENTACE

• Den otevřených dveří třídy III. pro třídu a rodiče

TAHLE TŘÍDA JE NÁŠE!

- * Třída: III.
- * Výsmp: Úprava třídy podle představ dětí!

COLE KOGNITIVNÍ

- děti navrhnou vlastní třídu
- Značkování třídy (pro třídu)
- Značkování třídy (pro třídu)
- Značkování třídy (pro třídu)

COLE PSYCHOMOTORNÍ

- děti navrhnou vlastní třídu (pro třídu)
- děti navrhnou vlastní třídu (pro třídu)
- děti navrhnou vlastní třídu (pro třídu)

COLE AFKKTIVNÍ

- děti vyjádří své názory
- děti vyjádří své názory
- děti vyjádří své názory

COLE SOCIÁLNÍ

- Společná práce a vyhodnocení
- děti respektují názory druhých
- děti vyjádří své názory

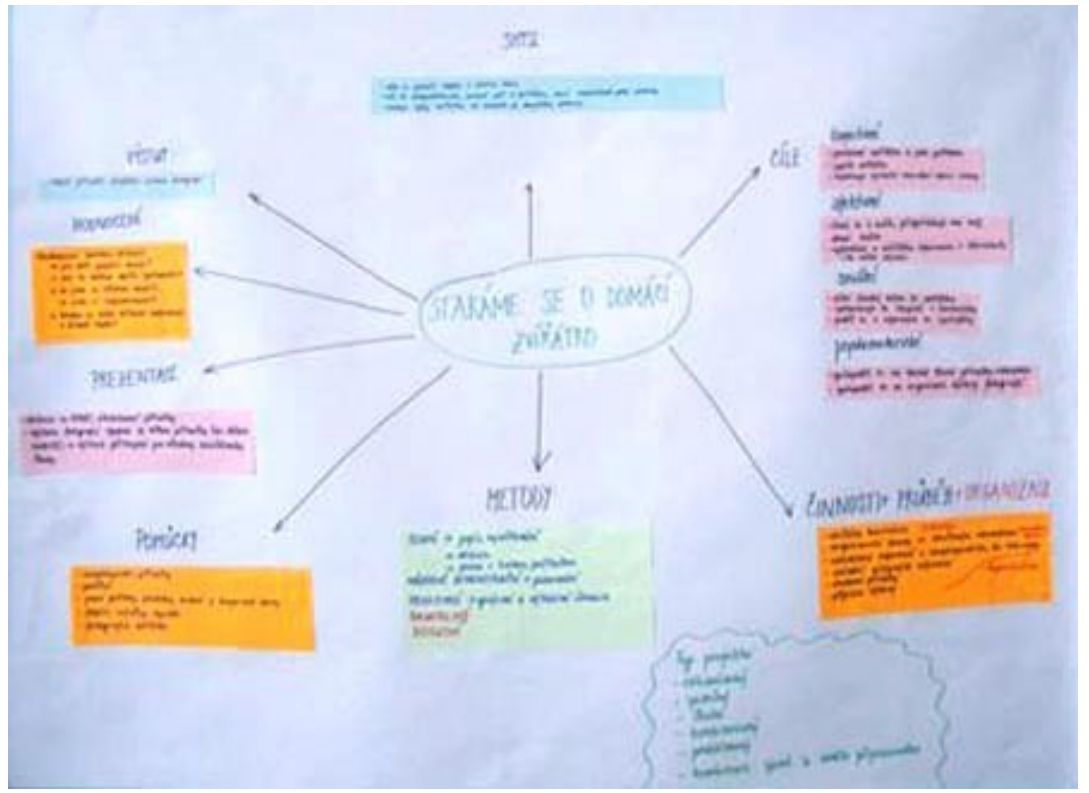

SMYSL-PROČ?

UČITEL

- děti dokážou realizovat své představy
- děti mohou odlišit věci kolem sebe

ZÁK

- Já chci si ve své třídě dobře
- Já chci si ve své třídě a starat se o ni

Thanks for your
attention.
