What next ???

- Rhetorics ?
- Elocution ?

NO !!!

Instead, by studying the
PERCEPTIONS
of non-native pronunciation of
English, to find out which aspects
of pronunciation are vital for
positive/negative personality
perception.

THE CORPUS

- 15 non-native speakers of English
- Texts for them to read; a question to answer
- Recordings
- 5+1 assessors, native speakers of English
- Questionnaires

EVALUATION

- **Phonetic assessment**
 - based on the system devised in 1996.
- **Sociolinguistic assessment** based on Questionnaires; criteria: intelligibility, confidence speaking English, elligibility for a childminding job, appropriateness of speech behaviour. Other criteria (secondary) not fully used.
- **Correlations between them**

CORRELATIONS

- The group of 4 best speakers by phonetic criteria remained unchanged.
- Two shifts occurred between the 5 average speakers and 6 inferior speakers. Speakers 11 and 3 obtained much better results by perception than by phonetic criteria.

COMMON FEATURES

- Their speech is appropriately loud.
- Their speech is appropriately slow.
- In other words, their loudness is sufficient for being comfortably heard,
- and their tempo is sufficiently moderate for their pronunciation mistakes to be decoded.
