

Příkazy a jejich klávesové zkratky k použití při překladu a jeho editaci.

https://wiki.memsource.com/wiki/Memsource_Editor_User_Manual#Editor_Commands

Ve dvojicích si projděte jednotlivé příkazy. Žlutou zaznačte ty, které Vám přijdou důležité, šedou ty, kterým nerozumíte. Případně se kdykoli ptejte.

Keyboard Shortcuts

A complete list of keyboard shortcuts in Memsource Editor is available here: [Keyboard Shortcuts page](#)

Editor Commands

Editor commands can be launched either from the menu, quick access buttons at the top of the application or keyboard shortcuts.

Edit

✓ Confirm (Ctrl+Enter)

- Confirms segment as translated and saves it into TM

✗ Unconfirm (Ctrl+Shift+Enter)

- Unconfirms a segment

➡ Copy Source to Target (Ctrl+Insert or Cmd+Shift+I on Mac)

- Copies text in the source segment to the target segment and also works for any selection of the source text

⊖ Delete Target (Ctrl+D)

- Deletes text in target segment

↔ Insert Tag (F8)

- Insert tags; when inserting {1>paired tags<1}, first select the text to get enclosed in tags and only then hit the **Insert Tag** command. In this way both tags will be inserted at once around the selected text.

↔ Insert All Tags (Ctrl+Shift+F8)

- Insert all tags from the source segment at the cursor position in the target segment.

Create Custom Tag (Alt+F8)

- Creates an arbitrary unpaired tag in target (supported for XLIFF, HTML and XML source files), to edit press F2 first.

Create Custom Paired Tag (Alt+Shift+F8)

- Creates an arbitrary paired tag in target (supported for XLIFF, HTML and XML source files), to edit press F2 first.

Expand Tags (Ctrl+Shift+T)

- Expands tags and displays tag content (supported for XLIFF, HTML and XML source files)

Remove All Tags (Ctrl+F8)

- Remove all tags from the target

Toggle Case (Shift+F3)

- Toggles upper case to lower case and vice versa

Insert symbol

Insert Non-breaking Space (Ctrl+Shift+Space)

- Inserts a non-breaking space

Insert Non-breaking Hyphen

- Inserts a non-breaking Hyphen

Insert New Line (Shift+Enter)

- Inserts a line break

Undo (Ctrl+Z)

- Undo last action

Redo (Ctrl+Y)

- Redo last action

Split Segment (Ctrl+E)

- Splits a segment in two, the cursor has to be in the **source** segment to split

Join Segment (Ctrl+J)

- Joins the selected segment with the segment below

 **Lock/Unlock Segment (Ctrl+L)**

- Locks or unlocks the selected segment

Repetition Exception

- Marks a repetition as a [repetition exception](#)

Select All Segments (Ctrl+Shift+A)

- Selects all segments

 **CAT Results Move Up (Ctrl+ArrowUp or Cmd+Up on Mac)**

- Moves the cursor up to the next result in the CAT pane

 **CAT Results Move Down (Ctrl+ArrowDown or Cmd+Down on Mac)**

- Moves the cursor down to the next result in the CAT pane

 **CAT Results Insert (Ctrl+Space or Cmd+Ctrl+Space on Mac)**

- Inserts the selected TM or TB match in the appropriate segment

CAT Results Insert from

- E.g. Ctrl+1 to insert match no. 1 in the appropriate segment

Move to First Segment (Ctrl+Home)

- Moves the cursor to the first segment

Move to Last Segment (Ctrl+End)

- Moves the cursor to the last segment

 **Toggle Cursor Source/Target (Ctrl+Tab)**

- Moves cursor between source and target

Edit Source (F2)

- Press to edit the source text (e.g. where a typing error needs to be corrected)

Edit Comment (Ctrl+M)

- Press to edit comment

Tools
