

Priniatikos Pyrgos a Oxa (Kréta): 5000 let sídlení

vera.klontza@gmail.com

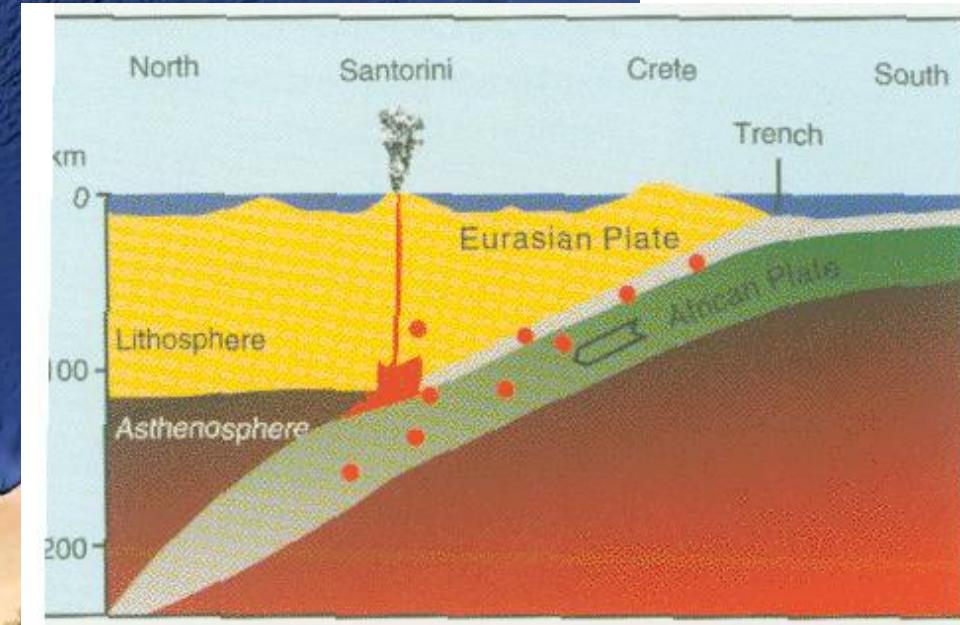

www.priniatikos.net

- Klasická archeologie si klade stejné otázky jako prehistorická nebo středověká archeologie.
- Jejím cílem **NENÍ** získávat umělecké předměty a studovat jejich styl.
- Nebylo tomu tak vždy.
- Dnes jsou v Egeidě aplikovány dva způsoby exkavace:
 - Postup po mechanických vrstvách kombinovaných s daty čtenými na kontrolních profilech (americké a německé výzkumy)
 - Kontextuální archeologie (britské výzkumy)

Na našich projektech postupujeme kontextuálně.

- Východiskem výzkumů je přírodní prostředí.
- V Egeidě vycházíme z geologické situace.

Základní příručka pro egejskou archeo-enviromentalistiku:

Team approach

New methods

New archaeological generation

Field school

- Priniatikos Pyrgos je polykulturní lokalita s téměř kontinuálním osídlením od pozdního neolitu:

- pozdní neolit
- raná doba bronzová – Early Minoan
- střední doba bronzová – Middle Minoan I – II (Protopalatial)
- pozdní doba bronzová – Late Minoan IA (Neopalatial)
 - LM IB – LM IIIC – chybí
- Doba železná – Orientalizující období – archaické
- Klasické a helénistické období
 - Doba římská – chybí
- Byzantská perioda konec 6. – 9. století, 11. – poč. 13. století
- Benátské období (poč. 13. – pol. 17. stol.)
- Osmanské období (pol. 17. – konec 19. stol.)
- Současnost

Neopalatial period

Rebecca Megarry

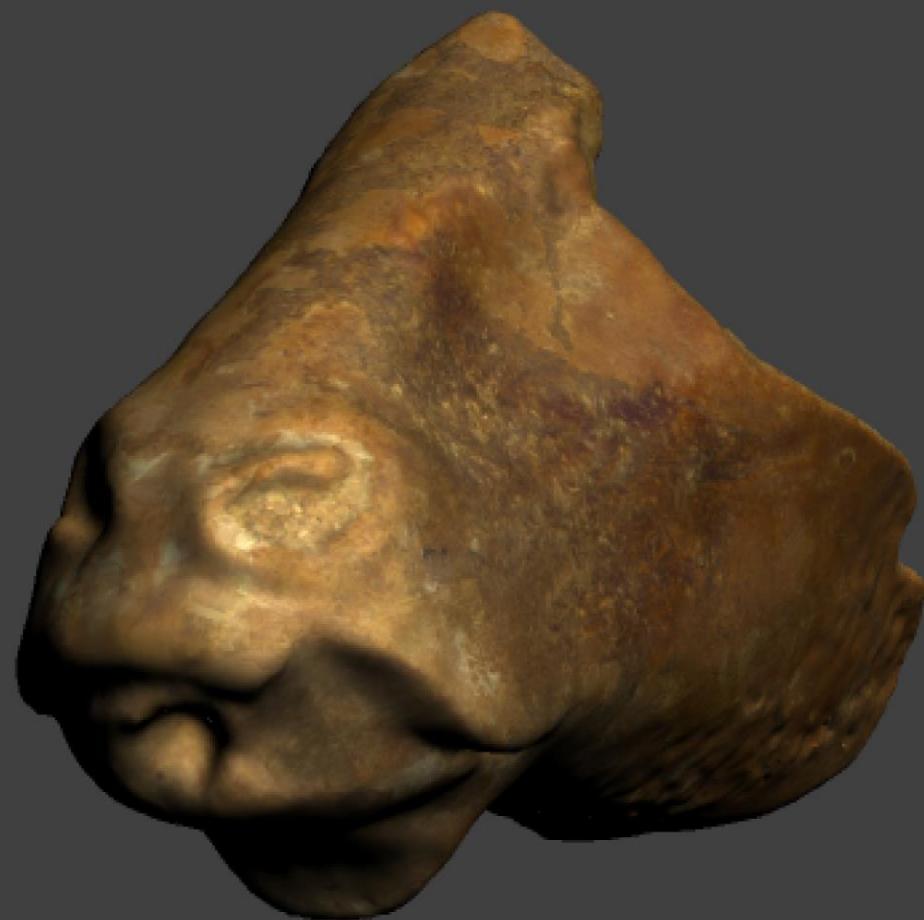

Nádvoří novopalácového víceprostorového domu byl překryt tzv. tsunami depozitem. V některých částech domu byl nalezen také popílek ze santorinské sopky, jejíž erupce přerušila osídlení na lokalitě.

Ivett Navratilova

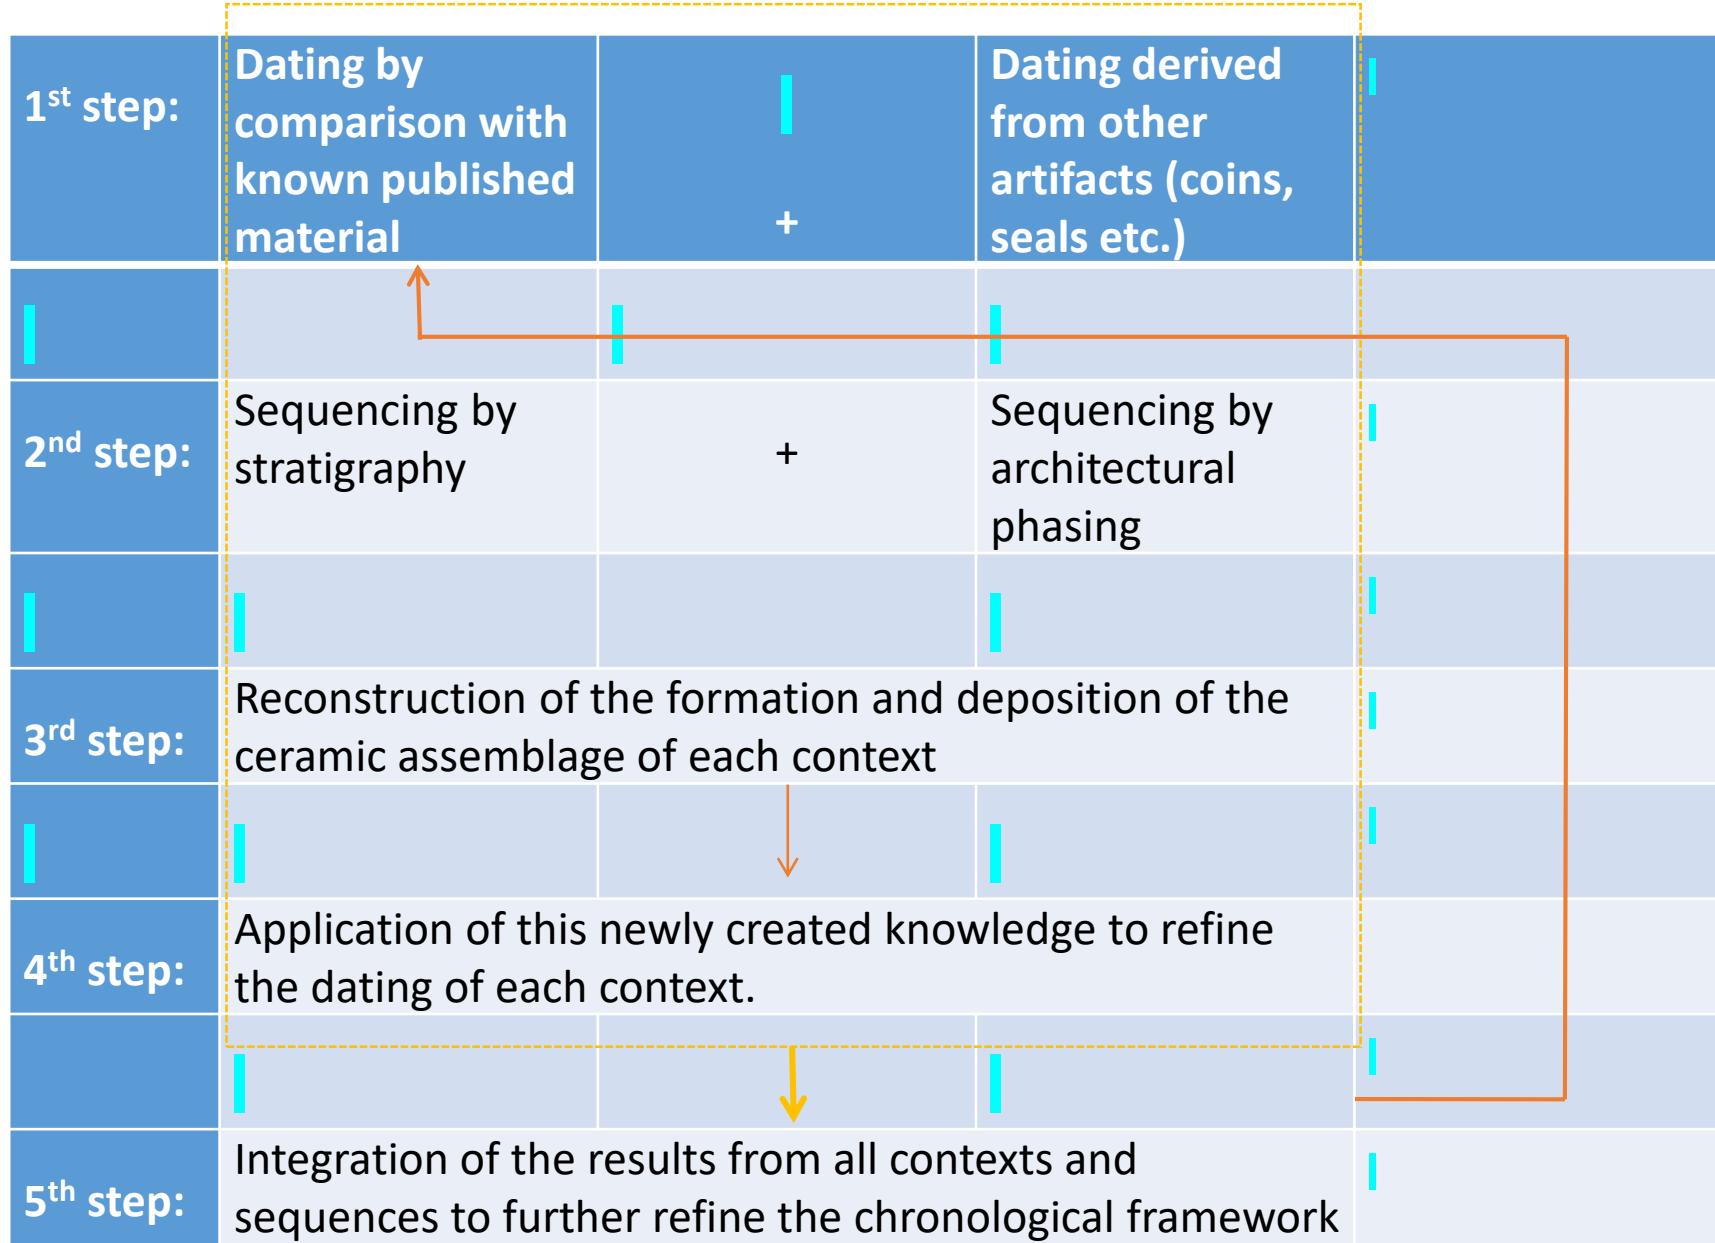

Raná byzantská perioda

- Priniatikos Pyrgos je jednou z nejdůležitějších byzantských lokalit na Krétě (vedle Gortýny, Itanu a Pseiry)

Byzantine archaeology

- The regional archaeology of the Byzantine period is a relatively new research field, at least by comparison with Aegean prehistory and Classical archaeology. Some archaeological studies were undertaken during the nineteenth and early twentieth centuries, but systematic excavation, study and publication of Byzantine remains in Crete effectively only began around 1980 (Gortyn, Eleftherna, Pseira, Chania).
- Even when major ecclesiastical structures (mainly Early Byzantine basilicas) were excavated on multi-period sites, the pottery and other finds were often neither studied nor mentioned in contemporary publications.

LOth – 12/13th C AD

Coastal settlements of Mirabello bay

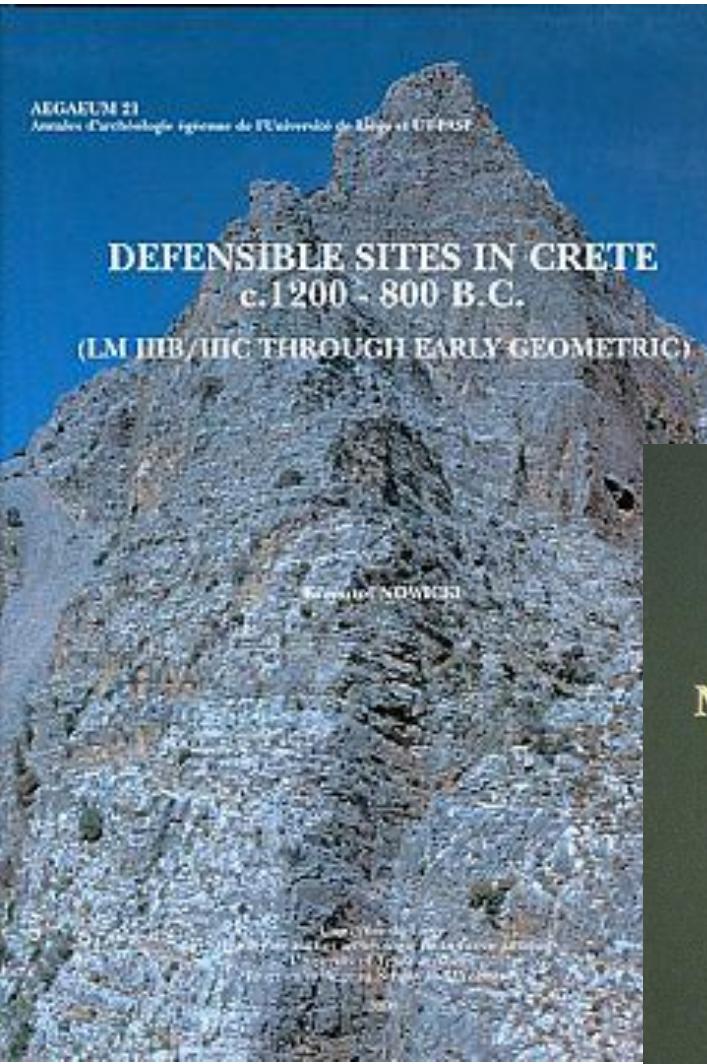

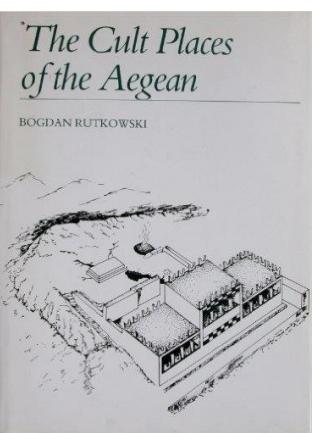

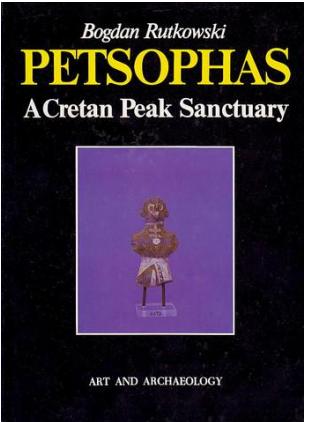

- traditionally dated up to mid 7th C AD

In general the written sources about Crete are very poor especially for the Early Byzantine period and the period of Arab conquest. Information about east Crete almost doesn't exist, although the previous periods offer a considerable amount of information.

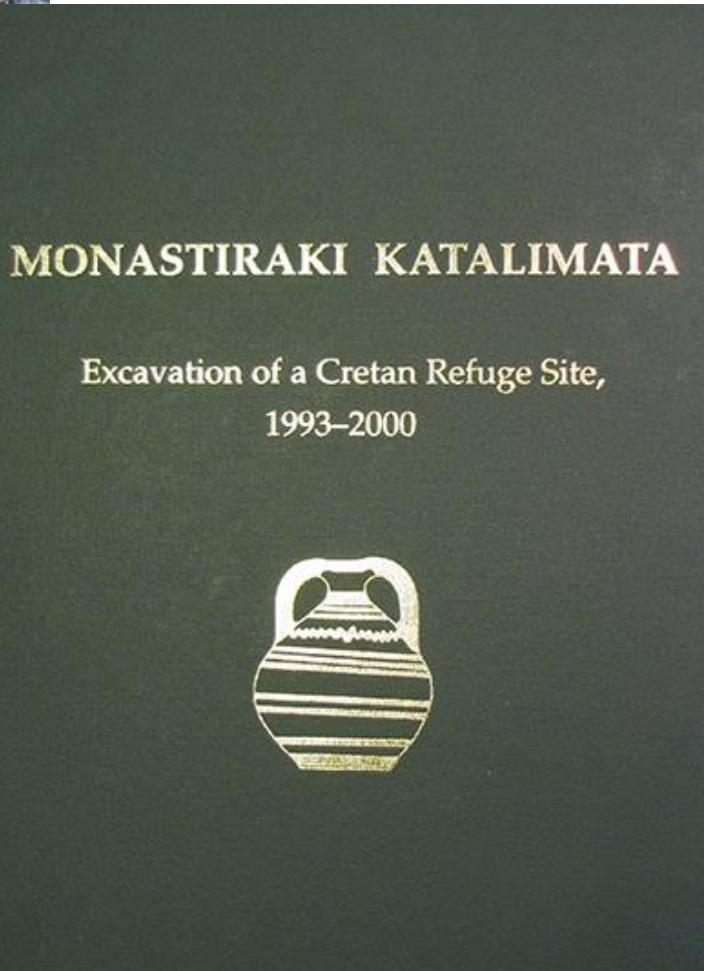

The 5th C AD marks the beginning of an era of “silence and obscurity”), which lasted until the beginning of 13th C AD.

The main source for this period – **Synekdemos** - written by Hierocles Grammaticos (535) describes Crete as a self-governing province, ruled by a governor, bearing the title Consularius. The administrative, military centre and the residence of the Cretan Church was Gortyn. Synekdemos mentioned 22 cities in Crete and whose location is impossible for majority of them.

Krzysztof Nowicki

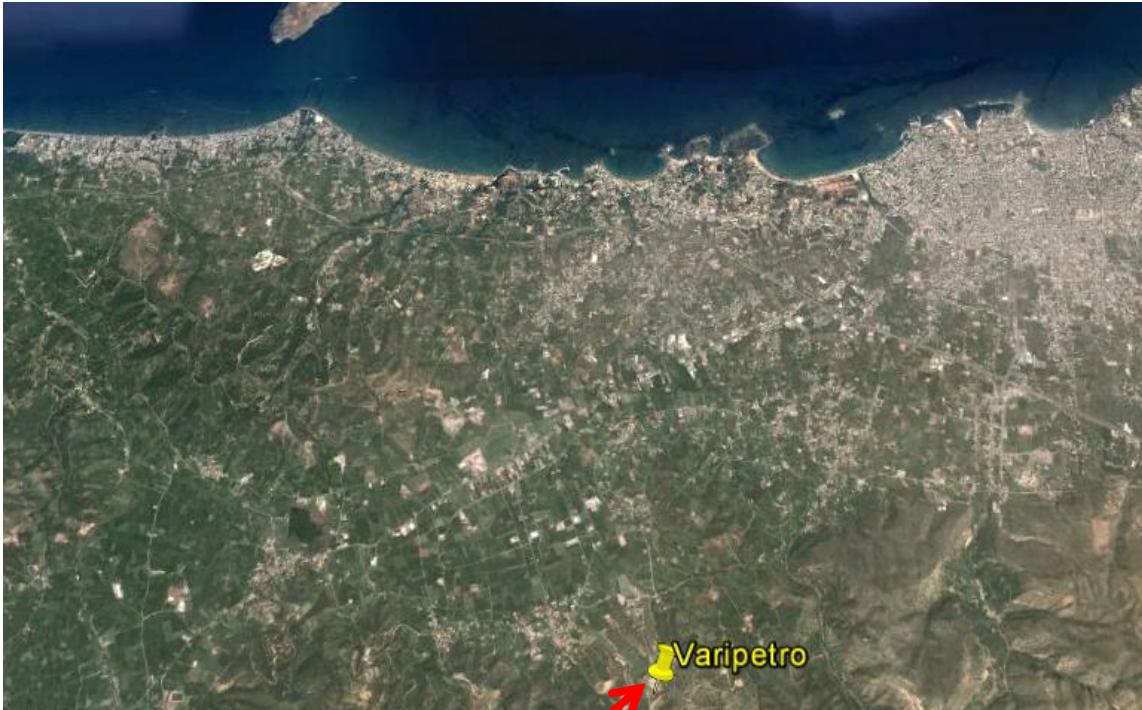

V LM IIIB se osídlení z pobřeží přesunulo do horských pásem. Předpokládáme podobný efekt i v 8. století n.l., v době ohrožení Kréty Araby.

Malathyros

Topographical criteria of the Byzantine forts

1. Extremely difficult access from the coast
2. Particularly good view to the coast: possibility to control large part of coast
3. Accessible agricultural background
4. Display of the own position

- Different situation was in central Crete (Chandax and Messara)

Oxa

Manolis Klontzas

Projekt OXA navazuje na Priniatikos Pyrgos.
OXA byla osídlena v těch obdobích, kdy
osídlení na PP chybí.

Conclusions:

- Is Oxa a typical site or an exception?
- When exactly was it founded?
- Who has initiated its foundation?
- What position had Oxa within the empire, or in Crete and in the above described process?
- How was it organized?
- How and why the function of the site was changing in the pass of time?
- It is clear that these and many others – both more detailed and more general – questions can be construed as evidence that archaeology is a crucial historical discipline in this case. Every human activity was historically conditioned and dependent. Garbage, plain pottery, small, non-elite, or nameless communities all played their role in the historical process. Their study is real contribution to general historical study.
- The study of the Byzantine archaeology of Crete is at a much earlier stage than that of Cretan prehistory, for which more than 100 years of intensive research, many excavated sites, publications, expertise and considerable financial investment successfully balances the lack of written information. Today we cannot conclude that the silence of literary sources excludes the possibility of further information and understanding. We face the challenge of investigating Late Roman and Byzantine Crete equipped with new methods, options and approaches.

Perspectives and goals for the further seasons

- Combination of different type of data:
 - Excavation of Priniatikos Pyrgos, Oxa
 - Survey in large region
 - Study of similar sites in other parts of East Mediterranean (Cyprus, SW Turkey)

Acknowledgment to both teams' members

Thank you for your kind attention!
