AUTHORS AND CONTRIBUTORS

Principal authors

EDWARD L. QUEEN II directs the D. Abbott Turner Program in Ethics and Servant Leadership at the Center for Ethics at Emory University, where he also directs research activities for the university's Institute of Human Rights and serves on the faculty of the Departments of Religion and Jewish Studies.

STEPHEN PROTHERO, chairman of the Department of Religion at Boston University, is the author of *Religious Literacy: What Every American Needs to Know—And Doesn't*.

GARDINER SHATTUCK, a priest of the Episcopal Diocese of Rhode Island, is a lecturer in the history of Christianity at Andover Newton Theological School of Massachusetts.

Contributors

TONY FELS is an associate professor of history at the University of San Francisco in San Francisco, California.

MATTHEW GLASS a freelance writer and researcher, teaches in the Religion and Culture

Department at Wilfrid Laurier University in Waterloo, Ontario, Canada.

LAURIE F. MAFFLY-KIPP is an associate professor of religious studies at the University of North Carolina at Chapel Hill, North Carolina.

TINA PIPPIN is a professor in the Department of Religious Studies at Agnes Scott College in Decatur, Georgia.

RICHARD H. SEAGER is a professor in the Department of Religious Studies at Hamilton College in Clinton, New York.

ROBERT H. STOCKMAN is the coordinator of the Institute for Bahá'í Studies in Wilmette, Illinois.

BRON R. TAYLOR is the Oshkosh Foundation Professor of Religion and Social Ethics and director of environmental studies at the University of Wisconsin, Oshkosh.

ANDREW WALSH is associate director of the Leonard C. Greenberg Center for the Study of Religion in Public Life at Trinity College in Hartford, Connecticut.

FOREWORD TO THE SECOND EDITION

One of the coeditors of this encyclopedia used to hear me urge graduate students to pay attention to an observation by Eugen Rosenstock-Huussy. That European scholar observed that one book is about one thing, at least the good ones are. We were to carry that observation over to course papers, articles for learned journals, dissertations that were to become books, and, of course, books themselves.

Well and good, one would hear from time to time in response: That works for short papers or books with narrow themes. Write on "Roofing Technology among Folk Architects in Southwest Virginia, 1878–1881" and there will be no mistaking the "one book, one thing," theme. What about comprehensive works that include disparate materials? What about, for instance, the *Sears, Roebuck* catalog, the register of students in their dormitories, or, of course, the phone book? Easy: Mention them; think about them; it is simple to grasp what is the "one thing" that these "many-thinged" inclusive works were about.

What is complex about such works for anyone who wants to remain clear about the plot of each is their pattern of organization. This encyclopedia, like most others, is alphabetically ordered. What does that pattern do to reality? I had a colleague who was more at home with what that year was being considered representative of the postmodern. He thought that I, who found the postmodern a less congenial concept, was resisting it. That concept, as he would explain it, rendered

everything arbitrary, disconnected, remote from reality as a person using common sense would grasp it.

One day I mentioned having dealt with the yellow pages of the Chicago phone book. Now, "religion" and "religious institutions" are a significant part of the reality that surrounds us. How does religion make its presence felt? First of all, it appeared in that case in a book called *Chicago Consumer Yellow Pages*. Not all religious people like to think of their commitment as representing "consumption." (Let it be said that some schools of thought do think that all religious participation represents "rational choice" among faiths as market options, but that is a different topic for a different day.)

Next, a section called "Churches" follows "Chiropractors" and antecedes "Cigars." That ought to suggest something arbitrary and disconnected. Continuing along that line, we note that "Churches—Islamic" has to be a less-than-congenial category for Muslims, who see "Churches" to be a specifically Christian classification. And, I had finally noted, alphabetization formed and forced strange company. Think of what gets clustered under the letter *u*:

- Ukrainian Catholic
- Ukrainian Orthodox
- Unitarian Universalist
- United Church of Christ
- United Holy Church of America

United Methodist
United Pentecostal
United Protestant
Unity School of Christianity
Universal Fellowship of Metropolitan Community Churches
Universal Life
Unification Church

This sequence led to the observation that here were mainly black, mainly white, liberal and conservative, straight and gay (MCC), Christian and non-Christian, held together by nothing except names that begin with the letter *u*. "Gotcha, Marty," pounced the colleague; "we catch you here in a postmodern moment!"

Agreed. Ways of organizing reality do seem arbitrary, unconnected. One could as well learn about the religion of a city by driving along its avenues and noting the names on church signs in front of edifices. Or by knocking on doors and asking about the religious choice of consumers beyond them. Or by turning on tape recorders and listening to what people have to say about their faiths or non-faiths. Little of what they say might match what the signs in front of church buildings say. Still, the alphabet helps one make sense of the sets of realities that confront observers. On such terms, *Encyclopedia of American Religious History* has a secure and helpful place. "Consumers" who buy or borrow and use it will not have access to all the ways of learning about American religion, but they will be better off by far than those who have no way of satisfying curiosity or gaining access to information they need.

The yellow pages, however, deal only with present-day representations of religious realities. How did they come to their present-day situations? Historian R. H. Tawney provided an autobiographical explanation of what motivated his life work: He found the world to be so odd, and wanted to know how it got that way. All those different ways of looking

at this world and, perhaps, worlds beyond it, ways typed in one illustration by organizations that begin naming with a "U," look odd to those who belong to other organizations. They may even look odd to those affiliated with them today. Why do Unitarian Universalists think of "God" and "Jesus" so differently than do United Pentecostals? Answer: because they have different pasts, different histories. That's it: The curious, the information seekers, whether they think of themselves as historically minded or not, need and welcome historical information of the sort this book provides.

Having pointed to the obvious in two of its forms, there remains a third kind of obviousness that needs pointing out, one that this encyclopedia so well exemplifies. The code name for that is not "alphabet" or "history" but "pluralism." This revised edition of *Encyclopedia of American Religious History* is in its own way a celebration of an ever-richer pluralism. The publishers and editors, having asked me to reread many of the updated articles to serve as one more checker of accuracies or blocker of inaccuracies, also included dozens of entirely new entries to appraise. Some of them represented catch-up work. All revising editors revisit the original material to see what they might have slighted or missed completely in an earlier edition. But in the present case they also included phenomena or personalities who had not been on the scene, had not yet made a name for themselves, had not roused curiosity way back in 1996, the time of the first edition.

With the publication of the second edition, I must note that there is more of everything going on in religion, and that this expansion led to an expansion of the number of entries in the new edition. There is never going to be a moment in dynamic America when everything is in place, settled, historically located, completely comprehended. There will always be more, but each generation can only reckon with what is presently before it.

To say that such an encyclopedia as this suggests ever-expanding pluralism is not to exhaust what goes on between these covers. It is, after all, not very interesting to talk about “mere” pluralism. Let an encyclopedist say that there are 1,200 or 1,500 organized, visible denominations and new religious movements in the United States and you have not served the hearers well. Will they be more impressed if they hear that there are 12,000 or 15,000? Once a chronicler or encyclopedist gets past a dozen or a score, the sight of what we are calling “mere” pluralism would overwhelm.

What citizens do about the welter of religious movements is what is interesting and worthy of remarking and referencing. How are they searching for and holding to truth among these options? How are they keeping from engaging in holy wars of the sort many religious societies pursue? What inspires measures of tolerance, civility, cooperation, ecumenism, and interfaith dialogue in our culture? The reader cannot get answers to all that by reading a single entry. But the more one consults this work, the more she or he

will learn about the shapers and dissenters, the healers and the wounders, the dominators and the victims, who have contributed in positive and negative ways to the shaping of today’s pluralism.

One way to test this observation (call it a thesis) is to start sampling. Turn to any letter of the alphabet and read five articles in a row. You will have been launched on a pilgrimage that will help explain the oddness of “religious America” in a time that was supposed by many to have been “merely” secular, nonreligious, profane. And you will have met characters from the past or movements shaped long ago, and found reference points and landmarks that will help you make sense of the odd reality around you, be it organized on classic or modern or postmodern lines. You will find yourself more informed as you make connections between them or make more sense of the disconnections. In either case, welcome to the endlessly fascinating American religious scene, approached on these pages in accurate and lively ways.

—Martin E. Marty

INTRODUCTION

Slightly over a decade ago, the first edition of this encyclopedia appeared. It was recognized by the New York Public Library as one of the top 100 reference books of the year and also chosen by the History Book Club and the Reader's selection as monthly choices. The book clearly filled an obvious need and since that time has provided innumerable readers with the information they needed in a timely fashion.

Since the encyclopedia's initial publication, information about religion in America has become even more central to understanding politics, society, and culture. This growing importance is reflected in the expansion of the encyclopedia to three volumes and the inclusion of a short history of religion in America. Religion, a phenomenon that social scientists of the 1950s and 1960s declared was disappearing and becoming increasingly irrelevant, now seems central to much that occurs not only in the United States but in the world. During the presidential campaigns for the 2008 election, candidates' religious views (or lack thereof) dominated much of the coverage, whether it was Mitt Romney's Mormonism, Mike Huckabee's career as a minister, or Barack Obama's connections with Islam. This encyclopedia is designed to provide the thoughtful and questioning individual with information about important topics, events, and individuals in American religious history. It seeks to provide the users with important information to help them make sense of

what they read in the newspaper, to grasp an individual's significance, and often to make sense of contemporary events, whether the ongoing fights over evolution, the conflict with the Branch Davidians, or contemporary American Islam.

As historians, we do not have particular strengths in prognosticating the future. We do have, we believe, a good sense of the way religion has interacted with the wider themes of U.S. history and world history. With any luck, we have identified trends and provided the information a concerned reader might need in order to understand the historical background of a current trend. Part of this has been a desire to ensure that the encyclopedia provide the information its users require and need. Part of it also involves self-protection. We know that many users will come to the encyclopedia in order to understand something that is happening at the moment. If the information is not there, one can well imagine the response: "What kind of encyclopedia is this, it does not even have. . . ."

The latter part, however, also speaks to a different issue. While the volume needs to be useful, it cannot be rooted solely in the present. Even if one were to assume a new edition every five years or so, a lot can happen in that span of time. Issues or movements that seemed of overwhelming importance at one time (think Promise Keepers) fade in importance to be overtaken by new concerns. The encyclopedia's authors, therefore, have orga-

nized some of the articles around themes of importance in American religious history. Church-state, religion and science, and education are just a few of the topics that have been perennial in American religious history and undoubtedly will continue to be so (at least that is what the editors believe). If we cannot conceive of all possible permutations of these topics (who, other than a very few research scientists, was focused on stem cell research when the first edition of this volume was published), we hope to give the reader a context in which to place new issues as they emerge.

A new and valuable element of this edition of the encyclopedia is the inclusion of a short history of religion in America. It does not purport to exhaust the events in that history. It highlights the themes within it. This history also provides an opportunity to provide information that fits neither within the encyclopedia's entries nor lends itself to a topical entry. Rather than exhausting the reader with a recitation of significant events and individuals, it attempts to capture the dominant ethos of religion in a particular period while locating it within the swirl of historical events. The history provides the opportunity for the reader to grasp more fully how movements, ideas, and individuals

that seemingly have little to do with religion greatly affect it.

Religion in the United States does not operate in a vacuum. It is immersed in the general flow of American history and culture, indeed of world history. Events throughout the world act upon and are acted upon by religions in America. From the rise of Islamist movements to the trafficking of people, there are implications both for America, for American religion, and for religious Americans. This encyclopedia tries both to capture that reality and to explain it to the reader.

Space and imagination mean that some things are not included. Some may disagree with our selections, while others may challenge our emphases or even our interpretations. We hope that such individuals will respond charitably, judge the volumes based on the whole, and overlook minor omissions and errors.

As always, we thank those who helped to bring the encyclopedia into being initially and have helped to see it through its now third edition. Preeminently, we acknowledge Marie Cantlon's dedicated work throughout the nearly two decades that have passed since Edward Queen drafted the proposal for the first edition.

—Edward L. Queen II

A SHORT HISTORY OF RELIGION IN AMERICA

Any attempt to write a succinct and coherent history of religions in America first must find some narrative threads to weave that history together. Failure to do so results in a narrative that reflects the infamous, albeit wrongheaded, description of history as simply, “One damned thing after another.” That is not history but chronicle. And while chronicle has its place, history struggles with explanation and understanding. It attempts to answer the question of how did the present, given all the possible options, come to be the way it is. This question is particularly powerful regarding the history of religions in America, because the contemporary reality of the country—the most religious of all the developed nations, the most religiously diverse, the country with the greatest amount of religious freedom, the marked absence of violent religious conflict—needs to be explained. While one could write the history of religion in America by focusing on the conflicts caused by difference (and there have been such conflicts: Quakers hanged on Boston Commons, the Mormon Wars, the Ku Klux Klan), the interesting point is that not only have such conflicts not been the norm, they always have been subsumed into a much larger story of religious acceptance. Admittedly, this acceptance sometimes has been grudging at best, but one must acknowledge that it is better than ongoing violence and unceasing animosity.

To make sense of this history, one must consider the following facts. As each religious

tradition found its way to what is America, it did so in the absence of a centralized authority that would undertake the (re)creation of religious necessities here. No government was building churches, synagogues, temples, or mosques. No state was hiring and paying religious leaders. No governmental body ruled on who could (or could not be) a religious leader. While this reality changed somewhat in several colonies during the 17th and 18th centuries, after 1830 it was the reality for all. And even in those colonies that had governmental support of religion for a period of time, in the initial phase religion was a “do-it-yourself” affair. When they arrived at Plymouth, the PILGRIMS not only had to decide to build a meetinghouse, they actually had to build it. Commitment to religious worship was necessary for there to be such worship. This pattern would be repeated by all who arrived on these shores, whether Baptists or Methodists, Jews or Hindus, Muslims or Sikhs. There would be no churches, mosques, temples, synagogues, or gurdwaras, no religious buildings of any kind, unless people chose to take on the tasks of building them, paying for them, and maintaining them.

This brings us to a second reality that marks American religion. Groups of individuals who chose to create a religious life in this country looked around at what was successful and mimicked those successes. Some have described this by saying that everyone in America is a “protestant,” meaning that

religions in America have taken on the character of low-church, nonsacramental Protestantism. They all are, at some functional level, congregationally based and dependent on the individual commitment of their members. Religion in the United States runs on the voluntary principle (see VOLUNTARISM).

To a great extent, this is explained by the fact that no religion in the country operates with state-sanctioned authority. Religions lack the coercive power to enforce their decisions and must, on some real level, rely on persuasion. Ultimately, they cannot afford to alienate their members, because the members themselves are freely able to exercise their choices and leave. There always is another congregation, another denomination, and even another religion that is more compelling, convincing, or comfortable.

This environmental background is the canvas onto which each religion coming to the United States must paint itself and is strengthened by the legal realities. The constitutional limits (see CONSTITUTION) on legal establishment and protections of free exercise provide a significant background of the canvas. This background provides boundaries on religions, preeminently eliminating their ability to rely on the government's police or taxing powers to further their goals. It also provides them with tremendous freedom. The government's police powers do not extend to exercising judgments on beliefs, internal governance, or membership. In fact, the default option for the United States is that something that calls itself a religion actually is a religion and entitled to those protections, absent compelling evidence to the contrary.

The "novelty" of America, however, is only part of the story, albeit a most important one. Novelty speaks both to the reality under which religions operate in America and the new religions and new forms of old religions created in America. Religions arrived in America with histories of belief and practice. Many also arrived immersed in particular cul-

tures and languages. Religions, therefore, not only had to find ways to establish their familiar structures and institutions, many had to struggle to maintain cultural and linguistic traditions. Religions required places where the traditions could be taught and practiced. The different environment of America forced new thinking about the format and content of instruction. The lack, throughout most of American history, of a situation where culture mutually reinforced a particular religion further highlighted the issue of choice. Just as individuals or groups who arrived in America had to choose to (re)create their religious lives in the United States physically, they also were faced with the issue of having to choose what distinctive elements of their religions needed to be taught, communicated, and replicated. These issues included questions of language, cultural history, and, often, practices. The challenges of these particularities powerfully challenged "universal" religions. For these traditions, local practices and variations in traditions presented numerous challenges. The Catholic Church (see ROMAN CATHOLICISM) in America struggled with this issue for decades. In Europe, Italian and German Catholics had little occasion to interact or know of the other's distinct practices. In the United States, Irish, French, Italian, German, and Hispanic Catholics (to name just a few) looked at each other and saw the practices of their ostensible coreligionists as alien and their languages unintelligible. In response, they demanded parishes that presented Catholicism in a way that looked familiar to them. (see CAHENSLEYISM) Such demands, however, ran counter to the idea of the Church as universal. The hierarchy's response was to impose uniformity on the American church, even to the point of alienating large numbers of Eastern Rite Catholics. (see ORTHODOX CHRISTIANITY) Such a decision never would have had to have been made in France or Italy. Those differences did not exist. ISLAM in the United States also has struggled with this issue, as Muslims

from Malaysia, India, Pakistan, and the Arab countries (again to name a few), along with African Americans, encountered each other in ways unknown in their countries of origin. In the United States, every tradition that arrived on these shores has been forced not only to construct the physical reality of religion but also the tradition itself. They have, in fact, had to construct American versions of their traditions. In doing so, they have been forced to decide what mattered and what did not. They have been forced to choose. Choice means that every tradition that has found its way to the United States has had to undergo the process of modernization. Even those versions of religious groups that consider themselves to be most “traditional” are modern creations. The act of choosing to be a certain way, in fact even the option of choice, is not a significant reality for traditional societies. It is the mark of modernity. The realities of America have made every tradition become modern.

How this happened is the story of religion in the United States. It was neither what those Europeans who first settled the Western Hemisphere had known nor what they desired to establish in what they saw as a new land. In fact, they desired the opposite. The Europeans wanted to reconstruct in their American colonies the world they knew. They wanted the order, structure, and religious uniformity of the various European regimes imposed upon the Americas as well. Europeans steadfastly struggled to re-create in the Americas the world they had known in Europe and their understandings of that world (see *NEW FRANCE*; *NEW SPAIN*).

THE EUROPEAN BACKGROUND

The year 1492, therefore, looms large in the history of the United States. In that year, CHRISTOPHER COLUMBUS departed on the voyage that led to the settling of the Western Hemisphere by Europeans and the eventual founding of the United States; it also was the

year that the Jews were expelled from Spain, an event that eventually led to the United States becoming one of the most religiously diverse countries in the world.

Columbus’s departure in 1492 must be seen in its religious context in order to understand the realities of early European settlement in the Americas. It is illustrative that when Columbus departed from Spain, he actually had to leave from the port of Palos instead of the main port of Cádiz because the former was filled with ships transporting the expelled Jews from Spain. In 1492, the Reformation still lay 33 years in the future, Copernicus had yet to publish his claim that Earth revolved around the Sun, and the European world had barely begun to incorporate the learnings of the Renaissance.

The world of the late 15th century was dramatically separated from us intellectually and politically. It also was a world that created the environment in which the Western Hemisphere was settled and bequeathed an understanding of religion and religious matters that set the stage for religious conflict and intolerance in the New World. The greatest source of that conflict would be the collapse of the unity of western European Christianity created by the REFORMATION. The division between Catholic and Protestant Christianity that emerged in the 16th century had a major affect on the United States well into the 19th century and, in some ways, through most of the 20th. It is to that break we now turn.

Many date the beginning of the Reformation to October 31, 1517. On that day a young monk named Martin Luther posted on the door of Wittenberg’s Castle Church (Schlosskirche) his Ninety-five Theses calling for significant changes in the Catholic Church. The Reformation, however, owed its emergence (and its eventual success) to a wide set of sources—intellectual, cultural, political, and social. Preeminently, the Reformation emerged from European humanism, an intellectual movement that affected all of the

leading religious thinkers of the time, regardless of whether they became Protestant or remained Catholic. Humanism brought a new ethos of questioning and a growth of knowledge to Europe. Corruption in the church led to regular and ongoing calls for renewal and reform. The emergence of proto-national identities led to resentment against foreign monarchs, and even the Catholic Church, because, in places like Germany and England, it was viewed as composed of foreign meddlers.

Historians usually speak of four different Reformations. While connected, they were intellectually and structurally distinct. These are the Lutheran Reformation (see LUTHERANISM), the Calvinist Reformation (see REFORMED TRADITION, THE), the English Reformation, and the Radical Reformation (see ANABAPTISTS). The last three had the greatest effect on what became the United States, although in some regions of the United States, particularly the Upper Midwest, Lutheranism would exert a marked influence both religiously and culturally.

In the early years, the English and Calvinist Reformations had the most import and the greatest influence, particularly as those who emphasized Calvinist (see CALVINISM) thought increasingly became embroiled in conflict within the Church of England over its beliefs and structures. While Luther created the spark that ignited the Reformation, for the United States the flames spreading from John Calvin's Geneva, John Knox's Scotland, and Elizabeth I's England were much more important for American history.

The various strands of the Reformation differed markedly in their emphases and in the manner in which they took effect in the various regimes. Additionally, they varied in their views of government, church organization, and doctrine. These elements occasionally put them as at odds with each other as with the Catholics.

Despite important differences, certain shared elements among the major Protestant groups can be identified. First, all rejected the

claim that the bishop of Rome, the pope, was the head of the church. Additionally, they tended to disregard traditional understandings of church leadership. Although some of the reformers retained bishops, most notably the Church of England and Lutheranism, the position lost much of its religious and, more important, secular authority. While bishops in England retained some secular authority—they continue to sit as members of the House of Lords—the power they had prior to the Reformation was lost following the expropriation of church lands by Henry VIII and the fact that they owed their positions to royal appointment.

Theologically, the reformers emphasized the priority of scripture over tradition and argued that the Bible should be available to the common people. In fact, translating the Bible into the vernacular was one of the most important undertakings of the reformers. Luther's translation not only gave the common people the scripture in their language, it also served to create the modern German language. In the English-speaking world, the King James Version of the Bible proved nearly as important (see BIBLICAL INTERPRETATION).

Most of the early reformers denied that individuals could do anything to effect their salvation. With varying degrees of emphasis, they insisted that salvation was a gift from God that no individual merited but which God passed along solely as a manifestation of God's mercy. John Calvin articulated the strongest view of this doctrine, known popularly as predestination. Calvin claimed that God had chosen whom to save and whom to damn before the creation of the world.

While the groups of the Radical Reformation shared many of these views, with the possible exception of the last, they also differed markedly from other reformers. Preeminently, much of the Radical Reformation opposed state control of religion and committed itself to nonviolence. (There were, however, some exceptions to this rule.)

While the churches of the Radical Reformation, with the exception of the Quakers in colonial Pennsylvania (see FRIENDS, RELIGIOUS SOCIETY OF; PENNSYLVANIA [COLONY]), had little direct influence on political life in what would become the United States, they did exert some indirect influences, mostly on the early BAPTISTS in the colonies and through their vision of the noncoercibility of conscience. Also, their presence and growth in the English colonies and later in the United States both reflected and expanded the levels of toleration in the United States. Although persecuted to near extinction by both Catholics and Protestants on the European continent, they thrived in the United States, and the AMISH and MENNONITES, as the largest representatives, continue today.

The Radical Reformers' general opposition to political engagement separated them from the developments in much of Europe during that time, except as victims. The growth of the Protestant forces and the adoption of Protestantism by numerous rulers in the German states, the Swiss cantons, other regions of the continent, by Henry VIII in England led to numerous religious wars and much violence. On the European continent, the Thirty Years' War (1618–1648) devastated the German states, killing nearly 30 percent of the population. In England, Protestantism under Henry VIII and his immediate successor led to violence against those who opposed Henry's reforms and to increasing antagonism between England and Spain. With the ascendance to the throne of Mary, Catholicism once more became the favored religion, and Mary's persecution of Protestants created what would become the basis for long-term ANTI-CATHOLICISM in the English colonies and later the United States. The torments suffered by Protestants persecuted by Mary led to the writing of one of the most important books in the English language for decades, *Foxe's Book of Martyrs*. The memory of those martyrs that the book seared into the imaginations of its

readers played a major role in anti-Catholicism in the English colonies.

Another factor that strengthened anti-Catholicism among the English colonists was the increasing equation of Catholic with treason. While the rivalry and conflict between England and Spain (and later France) had multiple sources, religion became the basis for articulating the nature of the conflict. To be a Catholic in England during the reign of Elizabeth (and even later) placed one under suspicion of being a foreign agent, if not a traitor.

Europeans brought these conflicts and hostilities with them to the New World. The first permanent European settlement in the United States, St. Augustine, in modern-day Florida, was founded in 1565, 48 years after the start of the Reformation. Shortly afterward, the Spanish commander Pedro Menéndez de Avilés attacked a settlement of French Protestants (HUGUENOTS) near the mouth of the Saint Johns River in Florida. Slaughtering the inhabitants after their surrender, he later excused his actions saying he did it "not as to Frenchmen, but as to Lutherans."

This act, later revenged by the French, who had taken it as a national assault, not a religious one, reflects the violence that the Europeans knew on the Continent and in England and the mindset they brought to the New World. Violence and intolerance on a religious basis was the norm and could be used to mask all manner of cruelties and crimes, from piracy to enslavement. While some may be surprised to find religion and piracy linked, it was quite common in the 16th century for English pirates to defend their attacks on Spanish shipping from the New World as part of the fight against Spain and Catholicism. John Hawkins, Francis Drake, and others well represented this tendency. Drake in particular saw his piracy (or privateering) as religiously driven. He carried copies of *Foxe's Book of Martyrs* aboard his ship and is reported to have spent his free time coloring the woodcuts of his personal copy.

Europeans attempted to import this understanding of religion and society into the New World. While the violence of Europe was never matched in the New World, the mental universe of the age played a major role in the way in which laws were drawn and societies organized, as well as the way individuals viewed those who differed religiously.

Knowing that the United States began amid such hostility and violence makes the story of American religion all the more amazing. In the United States, religious tolerance did not advance with a decline in religion. It has marched on with its growth in numbers, variety, and vitality. The advance has not been easy or direct. There have been detours, defeats, and declines. New ideas, immigrants, and insights have provided distinctive challenges and confusions. The path never has been clear. At the time of this writing, ever more questions exist. Challenges are presented by religious violence and the growth of religious movements violently opposed to toleration and democracy. Confusion swirls over scientific teachings that seemingly underlie religious doctrine. And concerns remain about how to incorporate more seemingly new and exotic religious traditions. These volumes should help the reader place these contemporary issues within the wider historical context, recognize that they really are not new problems, and, then, draw on the historical knowledge to formulate answers to contemporary concerns or at least understand them better (see *NATIVE AMERICAN RELIGIONS*).

When the European's first found their way to the Western Hemisphere, they discovered peoples already living here. These peoples, who became known as "Indians," varied greatly in their religious, social, and cultural organization. Some were exceedingly simple in terms of social structures and technology, such as those living in the Great Basin area of the United States (see *NATIVE AMERICAN RELIGIONS [INTERMONTANE/CALIFORNIA]*). Others, such as the Aztec and Inca Empires,

had established complex social, technological, and cultural orders. They were among the few indigenous peoples to have developed a written script. The absence of writing among many of the Indian peoples means that much of our knowledge of their precontact social organizations and religious practices comes from archaeology, oral histories of the Native peoples, and reports from early European explorers and colonizers.

Given the absence of a written record, our knowledge remains imperfect, and our understandings limited and too often colored by people's projections and political ideologies. This knowledge improves only slightly with the arrival of the first Europeans. Most not only were unconcerned about the cultures of the peoples who lived in the Western Hemisphere, they were actively hostile. This hostility had both religious and practical roots. Religiously, the Europeans looked upon the Native peoples of the Western Hemisphere as pagans at best, servants of the devil at worst. Most lacked both interest and concern for the peoples who lived in the New World. Although there would be some notable exceptions, most explorers and colonists viewed the Native peoples as obstacles to be removed or resources to be exploited. One, therefore, must read accounts of the religious practices written by early Europeans with some suspicion, although recent archaeological discoveries tend to support many of the written accounts.

This hostility proved most unfortunate for the indigenous peoples of the Western Hemisphere. It led to the murder of individuals and the destruction of cultures that had arrived nearly 17,000 years earlier. Scholars generally accept that the first peoples to arrive in the Western Hemisphere crossed from Siberia over the Bering land bridge. Over the course of time, their descendants spread over the entire region from the farthest reaches of northern Canada to Tierra del Fuego in the south. Their religions and social organizations manifested nearly as much variety as their locations.

Indian peoples had numerous religious forms, varying from shamanism to animism. Still others had complex religious hierarchies and physical structures, including elaborate temple mound complexes. While the native peoples in what is now the United States organized no vast and elaborate empires such as the Spaniards found among the Aztec and Inca, there did exist several complex and elaborate cultures. In the American Southwest, the Pueblo people as well as the Zuni and Hopi had developed complex settled cultures (the oldest continuously inhabited city in the United States is Taos Pueblo) with elaborate religious systems (see NATIVE AMERICAN RELIGIONS [SOUTHWEST]). The Pueblo, in particular, had religious practices that struck the earliest Spanish explorers as similar to their own, with a ritual calendar, altars, and priests.

Although the largest Mound Builder culture, the Hopewellian, had disappeared before European exploration, the Mississippian culture, while declining, continued among the Natchez. The Natchez, as well the Indian peoples of the northern Pacific coast and the American Southwest, developed cultures with settled villages and hierarchical societies. The Mississippians, like the Hopewellians before them, were capable of organizing people to develop public projects involving the construction of immense effigy and temple mounds. As the naturalist William Bartram, who visited the area in 1775, wrote, "It is altogether unknown to us what could have induced the Indians to raise such a heap of earth in this place . . . It is reasonable to suppose, however, that they were to serve some important purpose in those days, as they were public works, and would have required the united labour and attention of a whole nation."

Research since Bartram's time has given us a much better sense of what induced them "to raise such a heap of earth." The Mississippian cultures were sedentary and agricultural, ruled by an extensive hierarchy of priest-chiefs. Their towns were laid out around a

central plaza and the main mound, which was the residence of the main chief. Lesser chiefs resided on smaller mounds, and, among the general populace, social status was reflected in the proximity of one's house to the main plaza. The Natchez, located primarily in the vicinity of the modern-day Mississippi city of that name, maintained an elaborate and complex religious and social structure into the historical period, up until their defeat by the French in a series of wars in the 1730s.

At the top of the hierarchy was the Great Sun, who ruled the tribe as an absolute monarch and, apparently, a representative of the divine on Earth. The Great Sun was never allowed to touch the ground. He was carried about in a litter, and, when he walked, mats were spread before him. Along with the Great Sun were lesser "suns" composed of his immediate family. Below the suns was a class of "nobles," and then an intermediate class known as the "honored." The lowest (and most numerous) class known as *miche-miche-quipy* (literally, "those who smell different") in the Natchez language, which has been translated into English "stinkards."

Religion among American Indians, in the pre-Columbian period, just as among the Europeans, not only functioned as a vehicle to worship the divine, but often became a source for creating and establishing complex social hierarchies, mandating human sacrifice, and increasing one group's power over another. Illustrations of the last could be multiplied significantly. At the same time, religion, through stories of the creation of the world and of people, often provided the basis for explaining differences between peoples and for creating social identities. Most Indian peoples referred to themselves by names that, in their language, meant either the "people" or the "true people," with the implication that others lacked such a prestigious identity and were, therefore, somewhat less than completely human. Others were devoid of the special creation that marked the "true people."

While Indian peoples seemingly did not undertake “religious wars” as were common in the Christian and Muslim world, the perception of inferiority made it easier to rationalize intertribal warfare, particularly since most the conflicts consisted of raids designed to obtain supplies, women, slaves, and, after European settlement, horses. Clear evidence from the historical period shows that certain Indian peoples understood religious power as a useful tool in their conflicts with other tribes (see ASSIMILATION AND RESISTANCE, NATIVE AMERICAN).

One of the earliest Catholic missionaries in the modern United States, Fray Juan de Padilla, who had visited the area of modern-day Kansas with the Spanish conquistador Francisco Vázquez de Coronado, returned to the place where he had once erected a cross as a missionary to the Wichita. Feeling that God had called him to serve all the Indian peoples, he also attempted to take Christianity to the neighboring peoples, the Kansa. The Wichita, who viewed Fray Padilla as a source of magic and religious power, opposed this desire, and, when he insisted on aiding their enemies, they stoned him to death. In 1544, Fray Padilla became the first Christian martyr in the United States.

There are other examples of certain tribes viewing religion as a major source of power in their wars. One of the best-known examples was the efforts of the Salish-Kootenai (Flatheads) to obtain Jesuit priests, whom they believed would provide them with religious power against their opponents, the Blackfoot. To accomplish this, they sent a series of delegations from modern-day Montana to St. Louis, Missouri, requesting “Blackrobes,” Jesuits. The request was granted in 1840, and Father Pierre de Smet and several companions traveled to the Bitterroot Valley, establishing several missions there.

At the time of European exploration, religion played a major role as an impetus for colonization and settlement. The Europeans

arrived in the New World with a series of complex motives, seeking the wealth of the Indies, expanding power, and conversion of souls. With the emergence of the Reformation, all of these rationales combined with the issue of which religion would dominate, as Europeans brought to the Americas their religious conflicts and antagonisms. Exploration and settlement took on an even larger religious component, as each Protestant colony was viewed as a blow against Catholicism, and vice versa.

But even before Europeans brought their religious wars to the Western Hemisphere, religion played a role in conflicts between Europeans and Indian peoples. While the Europeans perpetrated most of the religiously based violence, the Indian peoples resisted the attacks and challenges to their traditional beliefs and practices, and many missionaries met violent and cruel deaths as they attempted to bring the Christian religion and European culture to the indigenous peoples living in what became the United States (see ASSIMILATION AND RESISTANCE, NATIVE AMERICAN).

As exploration moved into colonization, the Americas became part of the wider conflict within Europe over religion and between the various European powers. To a great extent, these conflicts are inseparable, and the settlement of what eventually would become the United States must be understood within that context.

Many of the early attempts to settle North America were both short lived and designed more as military outposts rather than full settlements. Additionally, some settlements, such as the one by French Huguenots at Fort Caroline (near today’s Jacksonville, Florida), were destroyed as part of the wider European conflict. Although the Spanish commander who sacked the settlement proclaimed that he did it not to the victims as Frenchmen but as to infidels and Lutherans, the French found this rationale singularly unconvincing. In their retaliatory raid against the Spanish settlement

in 1565, the commander proclaimed that he did it, not to Catholics or Spaniards, but to dogs and swine. Violent conflict and fear of it marked the period of North American settlement. This conflict would not only be fought between the European settlers but also between the Europeans and the Native peoples who fought not only for their own reasons but also served as proxies in the European-based conflicts. This should provide a caution as one details and analyzes the colonial era. While religion played a major role in these conflicts, and religious intolerance was rampant, conflicts often had multiple causes, including great-power rivalry and imperial ambition on the macro level and class conflict, envy, and revenge on a personal level. More important for future developments in the United States, the massive scale of North America made it difficult to enforce legally prescribed religious uniformity, although many colonial governments strove mightily to do so.

As the European powers began the process of settling what would become the United States, Europe found itself in the midst of massive social, political, and religious upheavals. Intellectually, it slowly was internalizing the learnings and developments of the Renaissance, including the very nature of the solar system. Nicolaus Copernicus had published his arguments for a heliocentric (Sun-centered) solar system in 1543 and was followed by Galileo's *Dialogue Concerning the Chief Two World Systems* (1632). As is well known, Galileo later was condemned by the Catholic Church for teaching this view and would spend the last years of his life under house arrest. Opposition was not limited to Catholics, however. Martin Luther, the Protestant reformer, when he heard of Copernicus's publication, is reported to have said, "There is talk of a new astrologer who wants to prove that the Earth moves and goes around instead of the sky, the Sun, the Moon, just as if somebody were moving in a carriage or ship might hold that he was sit-

ting still and at rest while the Earth and the trees walked and moved. . . . The fool wants to turn the whole art of astronomy upside-down. However, as Holy Scripture tells us, so did Joshua bid the Sun to stand still and not the Earth." Even greater changes were in the offing. Machiavelli published *The Prince* in 1515. Only in 1628 would William Harvey announce his discovery of the circulation of blood. Isaac Newton would publish his *Philosophiæ Naturalis Principia Mathematica* laying out the theory of gravity only in 1687, less than a century before the signing of the Declaration of Independence.

Intellectually, the period was one of great ferment, and innumerable ideas were challenging traditional beliefs about the universe, government, and even the economy. Despite the tremendous movements during the 16th and 17th centuries toward creating the mental universe of the modern world, the overwhelming majority of the people were basically pre-modern. Demons were real, and while it might be convenient to view the native inhabitants of the Americas as heathens and children of Satan the better to despoil them of their land and riches, it also was honestly believed by many, just as many believed in the reality of witchcraft and readily accepted the biblical injunction that, "Thou shall not suffer a witch to live" (Exodus 22:17).

The centuries from Columbus's landing in the Western Hemisphere to the Declaration of Independence, not only saw tremendous intellectual ferment, they also experienced intense religious ferment. The Protestant Reformation broke the religious unity of western Europe. With this break, there came about an abundance of new religious groups, many of a radical stripe, and religious conflict in Europe was not solely that of Catholic versus Protestant but even various Protestants against each other and, although to a lesser extent, Catholics against Catholics.

With the Protestant Reformation came a sundering of many political connections as

well. In fact, religious conflict and political conflict often were inseparable. Catholics in Protestant realms, particularly in England, were suspect. Many feared that they not only desired to return the country to the Catholic fold but also were agents of Catholic Spain or France. Similar views of Protestants marked the Catholic kingdoms and principalities. In such an environment, religious difference easily became equated with disloyalty, if not outright treason.

These fears were not necessarily unfounded. In 1569, during the reign of Queen Elizabeth I, England experienced the Northern Uprising. This rebellion in the north of England had as its goal the restoration of Catholicism and the release of the imprisoned Mary, Queen of Scots. English Catholics viewed this Catholic cousin of Elizabeth as the legitimate heir to the English throne. In 1570, Pope Pius V excommunicated Elizabeth and issued a papal decree releasing her subjects from their allegiance to her. This decree, which clearly was a call for an uprising against the English monarch, only strengthened the connection between Catholicism and treason in the mind of English Protestants and greatly increased the regime's suspicion of all English Catholics.

In response, Parliament passed numerous laws against Catholics and the practice of Catholicism. In 1581, Parliament declared it treason to reconcile with (return to) the Catholic Church and in 1585 declared any Catholic priest in England guilty of treason and made it a capital offense for anyone to shelter or assist a Catholic priest.

For English Protestants the clearest proof that the pope and Catholic Spain had combined to conquer Protestant England was the expedition of the Spanish Armada in 1588. The armada carried an army, whose goal was the invasion of England, the overthrow of Elizabeth I, and the restoration of Catholicism. The lighter and more maneuverable English ships, led by Sir John Hawkins and Sir Francis Drake, and a timely storm that scattered the

Spanish fleet (and which the English viewed as proof of divine favor) effectively ended the invasion plans. It also served to strengthen English anti-Catholicism and led to greater enforcement of the anti-Catholic laws and surveillance of suspected "Catholic agents."

Under Elizabeth's successor, James I of England (James VI of Scotland), the flames of anti-Catholicism were fueled by the discovery of the Gunpowder Plot in 1605. This was a conspiracy by several Catholics, of whom Guy Fawkes is the best known, to blow up the Houses of Parliament during their opening session. At the time, not only would all the parliamentarians be in attendance, but so would the king and the royal family. A successful attack would have killed most of the kingdom's Protestant leadership, opening the way for a Catholic restoration. Thwarted shortly before it took place, the plot led to the execution of most of the conspirators and increased persecution of Catholics. For centuries afterward the English would commemorate Guy Fawkes Day as a celebration of Protestantism and anti-Catholicism, during which effigies of Guy Fawkes are burned in massive bonfires.

In Catholic Spain, the most Catholic monarchs, Ferdinand and Isabella, aggressively had begun enforcing religious uniformity in the late 15th century. Their policies continued throughout the kingdom during the following centuries and were extended to the colonies with the establishment of the Spanish Inquisition in New Spain and Cuba.

As in England, Spain fused religion and loyalty to the regime. Spain, however, started this process much earlier, beginning in 1492 with the expulsion of the Jews and increasing legal pressures on Muslims, culminating in the 1502 edict demanding conversion or exile and the 1610 decree that expelled everyone suspected of harboring hidden Islamic practices.

In such an environment, Protestantism made little headway. While one of the leaders of the so-called Radical Reformation, Michael

Servetus, was a Spaniard by birth, he preached and taught mostly in France and then, after his escape from Lyon, in Geneva. There, after having escaped execution in Lyon (where he was burnt in effigy), he was burned in the flesh, executed by the city-state's Protestant government. Some small Protestant groups were located in Spanish towns, where they were uncovered by the Inquisition and their members executed or imprisoned. Even one Spanish archbishop was caught in the Inquisition's net at this time and accused of Protestant tendencies. Spain also enforced this religious uniformity within its New World colonies. It forbade the immigration of Protestants, Jews, Muslims, and New Christians (Jewish and Muslim converts to the fourth generation, under the laws of *limpieza de sangre*, or purity of blood) into the colony. Spain attempted to enforce these laws as strongly in the colonies as they were in Spain itself.

Given the liabilities under which the descendants of Jews and Muslims labored in the Iberian Peninsula, it should come as no surprise that many attempted to settle in the new colonies (see JUDAISM; ISLAM). This often could be accomplished readily by bribing a governmental official, ship's captain, or even a sympathetic sailor.

As early as 1508, bishops in Havana and Puerto Rico complained that the New World was being filled with *hebreo cristianos* (Hebrew Christians), *nuevo cristianos* (New Christians), *conversos* (converts), *Moriscos* (Moors), and heretics. Following the Protestant Reformation, Protestants themselves occasionally found their way to Spain's colonies and often into the hands of the Inquisition.

Although the first auto-da-fé in New Spain occurred in 1528 when two men were burned at the stake in Mexico City for being *judiazantes*, or Judaizers, the Inquisition was not established formally in Spain's New World colonies until 1569. In that year, King Philip II issued a decree establishing tribunals in New Spain (Mexico and those parts of the modern

United States then under Spanish control) and Peru. In New Spain, the Inquisition directed much of its activity at those believed to be crypto-Jews, the descendants of converts from Judaism who continued to practice their Jewish faith in secret. During the 16th and 17th centuries, roughly 1,500 people in Spain's American colonies were accused of Judaizing, and more than 100 were executed. An additional 200 or so died in prison. Undoubtedly many of these convictions resulted from false confessions extracted under torture. Contemporary research in the United States, however, has led to the discovery that numerous families retained their crypto-Judaism up to the present. Numerous descendants of these "hidden Jews" have been "uncovered" in the American Southwest, particularly New Mexico. The families of these hidden Jews seemingly conformed outwardly to Catholic and Spanish practices while retaining in private elements of Judaism, including lighting candles before sundown on Fridays (the beginning of the Jewish Sabbath), refraining from eating pork, and even avoiding participation in Mass by feigning (or inducing) illness. In the modern United States, many of the descendants of these "crypto-Jews" have felt secure enough for the first time to seek out the details of their families' histories and return to Judaism. This powerfully illustrates not only the complex religious reality in the United States bequeathed to it by its history but also the living reality of that history within the country even today.

While the "crypto-Judaizers" came to colonial America with the hope of escaping some of the vigilance in Europe, others intentionally came to bring that violence (and to get rich in the process). British sailors, who under the guise of defending Protestantism from Spanish Catholic attacks, preyed on Spanish shipping, particularly gold ships from New Spain and Peru, also ran afoul of the Inquisition in New Spain. Although individuals such as Sir Francis Drake were viewed

as heroes in England, the Spaniards saw them as pirates and heretics. Those shipwrecked or captured in Spain's New World colonies found little sympathy. In 1657, the privateer John Hawkins, forced by the loss of several ships and lack of provisions, abandoned most of his crew ashore on the Mexican coast. Many of these individuals fell into the hands of the Inquisition as "Lutherans," the generic term for Protestants at that time. At least four were sent to Spain, where they were burned as heretics, and another three were sent to the stake in Mexico itself. Nearly 100 were tried and sentenced as galley slaves, with some of the younger boys being sent to monasteries.

France during the early years of colonization also was a kingdom divided along religious lines. The French Protestants, the Huguenots, were well represented in the aristocracy, including the House of Bourbon. On the Catholic side was the Catholic League led, by the House of Guises, and composed of numerous Catholic princes supported by the king of Spain and the papacy. During the 1560s, France was embroiled in an on-again-off-again war between its Catholics and Protestants. Nearly all these conflicts ended in negotiated settlements, allowing some religious freedoms to the Huguenots and guaranteeing them royal protection from Catholic mobs. Such protection was rarely long lived, and the Huguenots often found themselves under attack. Fearing the growing power of the Huguenots, Catherine de' Medici, the mother of King Charles IX, plotted the assassination of the Huguenot leader, Admiral de Coligny. When the attempt failed, Charles, convinced by his mother that the Protestants would seek revenge, authorized a concerted attack on French Protestants. The result, known as the St. Bartholomew's Day Massacre, began in Paris on August 24, 1572. The massacre was a combination of a planned attack by the king's guard and the army and mob violence. Over the course of a few weeks, thousands of Huguenots were slaughtered. Modern historians claim

that the number killed in Paris alone was about 3,000, with an additional 10,000 to 20,000 deaths throughout the rest of the country. Protestant commentators of the time, however, spoke of more than 100,000 Protestants "martyred" by the Catholics. The slaughter purportedly was so great that no one ate fish for weeks because the rivers were clogged with corpses. This event, known to history as the St. Bartholomew's Day Massacre, soon entered the realm of Protestant mythology as a preeminent example of Catholic perfidy and violence and strengthened anti-Catholicism throughout the Protestant realms of Europe and in British North America.

The massacres did not end France's internal conflicts, however, and in 1598 the Edict of Nantes granted the Huguenots numerous religious privileges (and physical safety), although it retained Catholicism as the religion of the kingdom and forbade practices that might offend Catholics. While the edict was a shining example of religious tolerance at its time, the privileges held by the Huguenots progressively diminished during the 17th century as the French monarchy consolidated its power. King Louis XIV revoked the agreement in 1685, and shortly afterward a royal decree outlawed Protestantism in the kingdom. Tens of thousands of French Protestants left the kingdom; many would settle in British North America.

While most of the other kingdoms and principalities of the European continent played insignificant roles in the early colonization of the modern United States, events in eastern and central Europe during this time eventually affected the settlement and development of England's American colonies. Just as in England, Spain, and France, many of these events involved religious conflict between Catholic and Protestant. The major example was the Thirty Years' War (1618-48), which engulfed most of the continent, and the Spanish wars in the Netherlands. Less familiar, but no less significant, were the conflicts among

the various Protestant groups (although these mostly were polemical not physical) and the persecution of and attacks on radical reformers by both the dominant Protestant groups and Catholics.

The radical reformers are best represented in the United States by the Quakers and Anabaptist groups such as the Mennonites and Amish. Less directly, the Unitarians also have their roots in the Radical Reformation, tracing their historical lineage back to Michael Servetus and Faustus Socinus, both of whom rejected the teaching that Jesus was himself God. Throughout the European continent and in the British Isles, followers of Servetus and Socinus (Socinians) were persecuted for denying Jesus' divinity. Anabaptists and Quakers were oppressed because they rejected the union of religion and state power, as well as most forms of inherited authority, the very bases of aristocratic society. Nearly hunted to extinction on the continent and, in the case of the Quakers, severely persecuted in England, both groups eventually found havens in one or more of the colonies of British North America, most notably in Pennsylvania.

In middle Europe, victories by Catholic armies in Bohemia (the modern-day Czech Republic) during the Thirty Years' War and the success of the Catholic Reformation resulted in the Catholic Church retaining or reclaiming much of the region, including several of the German states, Croatia, and modern-day Austria. In the Baltics, the conversion of the Teutonic Knights to Protestantism resulted in the dominance of Lutheranism in what would become modern-day Latvia and Estonia. Despite its later reputation as a major source of religious intolerance, particularly against Jews, Poland during the 16th and early 17th centuries was a center of enlightenment and tolerance on the Continent. When the Polish king Zygmunt August was pushed to impose religious uniformity on his realm, he replied, "I am the King of the people, not the judge of their consciences." This period of tolerance

collapsed during the next two centuries, as Poland found itself weakened by internal conflicts and foreign wars. The most devastating of these events, both because it weakened Poland—leading to its partition in the 18th century by Russia, Prussia, and the Austro-Hungarian Empire—and created Poland's reputation as an intolerant and violently anti-Semitic country (see ANTI-SEMITISM), was the Chmielnicki revolt or uprising of 1648–49, also known as the Chmielnicki massacre.

The uprising began when the hetman (leader) of the Ukrainian Cossacks, Bohdan Chmielnicki (Bohdan Khmelnytsky), with the support of the Tatar khan of Crimea, gathered Cossacks and the Orthodox Ukrainian peasants against the Poles and the spread of Catholicism (see ORTHODOX CHRISTIANITY). The revolt soon took a viciously anti-Semitic direction, as the peasants directed much of their ire at Poland's Jewish population, who they viewed as allies of the Polish Crown. The Chmielnicki revolt devastated the Jewish population. Estimates of the number of murdered Jews range as high as 200,000, and many of those who survived fled Poland, leaving their possessions and lands to the fury of the mobs. These impoverished Jews soon found themselves in the Russian Empire, where they experienced increasing religious and social persecution over the next two centuries. This persecution would provide the impetus for much of Jewish immigration to the United States in the 19th and early 20th centuries.

As Prussia, Austria, and Russia carved up Poland between 1772 and 1795, the country increasingly viewed itself as a Catholic island in an Orthodox sea. Poles became increasingly hostile to non-Catholics and people other than Poles. Anti-Semitism grew dramatically, and Poland's anti-Semitism would lead many of its Jews to immigrate to the United States during the 19th century, while its poverty brought Polish Catholics here as well.

Southeastern Europe, dominated by the Ottoman Empire, retained its allegiance to

Orthodox Christianity, although with large Muslim populations. Farther east, by the mid-16th century, what would become modern-day Russia began, under the rule of Ivan IV the Terrible, to emerge from its dominance by the Muslim Mongols-Tatars (the Golden Horde). Ivan strengthened the power of the czar and expanded Russian control. During this period of centralization, the power of the Russian Orthodox Church also increased, and, in at least two instances, the head of the Russian Church exercised royal power as well.

The centralization of political power in Russia was matched by a growing process of centralizing religious authority in the patriarch of Moscow. During the mid-17th century, Patriarch Nikon strove to bring the practices of the Russian Orthodox Church into greater conformity with those of the Greek Orthodox Church. Among the (seemingly) minor changes was his insistence that Russian Christians cross themselves with three fingers rather than two. These changes met with tremendous resistance among many believers, who viewed them as heretical. Opponents of these changes, known as "Old Believers," suffered extensive persecution over the next three centuries, from torture and execution to double taxation and a "beard tax." Many immigrated to some of Russia's more remote areas, where they continued their existence until the 20th century. In the modern-day United States, for example, the town of Nikolaevsk, Alaska, is inhabited primarily by Old Believers.

By the late 18th century, Russia began a process of Westernization under the leadership of Peter the Great that also created serious religious conflicts. His adoption of the Julian calendar led to another schism in the Russian Orthodox Church ("Old Calendrists"). Additionally, Peter's refusal to acknowledge a replacement for the metropolitan (patriarch) of Moscow led to further religious conflicts. While Russia placed a few settlements in Alaska, converted some of the Native Alaskans (see NATIVE AMERICAN RELIGIONS [NORTHWEST]), and devel-

oped a lucrative trade in furs extending south to California, it exercised no long-term control over significant parts of the population. The historical conflicts within the Russian Orthodox Church, including those created by the communist revolution in 1917, however, followed the church to the United States's shores and led to innumerable internal tensions and battles. Additionally, throughout the 19th century, as Russia increasingly centralized governmental and religious power through violence and oppression, numerous religious outsiders, particularly Jews, immigrated to the United States in search of economic, political, and religious freedom, while Orthodox Russians came seeking relief from the poverty and oppression that they suffered as well.

Unfortunately, many histories of the United States disregard the Ottoman Empire as a powerful force in the minds of Europeans during the period of colonization. This lapse not only distorts the perspectives of those Europeans who colonized the Americas, it also ignores the awareness that Europeans and Americans had of the "Turks" (Muslims) both during the period of colonization and the early republic.

The Ottoman Empire and the presence of Muslims on the European continent were very real in the 17th century. In 1607, the year when the British established Jamestown, their first permanent settlement in the modern-day United States (see VIRGINIA [COLONY]), the Ottoman Empire controlled huge sections of eastern and middle Europe, including all (or nearly all) of modern-day Bosnia-Herzegovina, Macedonia, Serbia, Albania, Romania, Greece, and Bulgaria. It also controlled much of Hungary, Armenia, Croatia, and parts of Poland and Russia. In 1683 Ottoman armies besieged Vienna, and the Ottoman Empire continued to play a major role in European history and politics until the end of World War I.

Beyond Europe, the Ottoman Empire ruled North Africa and most of the Middle East. Although dominated by Islam, the Otto-

man Empire, for most of its history, was much more tolerant of religious minorities than most of Europe. Despite this relatively better situation, non-Muslims (*dhimmis*) were subordinate subjects, operating under various constraints. They were forbidden to bear arms, could not be witnesses against Muslims in courts, and often were forced to wear identifying clothes or symbols. They suffered serious limits on their ability to build or repair places of worship, and Christians could not ring church bells. Finally, all *dhimmis* had to pay a head-tax, or *jizya*.

This complex European background explains much about the United States's development over the centuries. Immigration was driven extensively by the hard realities of Europe's political, economic, and religious realities. These realities were in many ways inseparable. The poverty under which most eastern European Jews suffered in the 19th century and which helped drive them to immigrate to America, derived primarily from religious persecution.

Europe in the 16th and 17th centuries clearly was a place where religious tolerance was neither valued nor the norm. Religious uniformity was viewed as necessary for social peace. Conflicts between and among religions were part of the wider struggle between countries. European colonizers brought those experiences with them when they arrived on the shores of what eventually would become the United States, and, initially, most colonies attempted to impose a religious uniformity at least as rigid as that in the home countries. Despite this history of religious conflict and enforced religious uniformity and the desire among both the various European regimes and most of the early colonizers to reproduce it, the settlement of the United States led to radically different result.

COLONIZATION

The areas of Spanish and French colonization in the modern-day United States, while geo-

graphically immense, lacked extensive immigration. Both kingdoms attempted to ensure that the religious uniformity they struggled to impose at home also was imposed in their North American colonies. French colonization, however, initially reflected the indeterminate nature of the French religious situation in the 17th century. The first French colony on what is now United States soil, Fort Caroline, in what became South Carolina, was established in June 1564 by a group of about 250 French Huguenots. Destroyed the following year by Spaniards from St. Augustine, the colony was never rebuilt. French colonization moved west and north, primarily along the Mississippi River and its tributaries. This happened because New France drew most of its economic power from the fur trade, and access to navigable rivers was essential to the transport of goods and their traders. Its settlements in the modern-day United States were mostly small and existed to serve the trading nature of French colonization.

While French missionary priests, particularly the JESUITS, undertook heroic acts to convert the Indian peoples to Christianity and to minister to the scattered French population, outside of New Orleans there was relatively little organized and sustained religious activity. Seriously outnumbered by the population of British North America and defeated in its religio-imperial wars with the Netherlands and Britain, the French colonial enterprise suffered a major setback in 1763 when France was forced to cede Canada to Britain and Louisiana to Spain. Although France regained Louisiana Territory in the Treaty of Paris that ended the AMERICAN REVOLUTION, Napoleon's sale of the Louisiana Territory to the United States in 1803 virtually ended France's colonial activity in North America.

New Spain, including La Florida, had a much more regularized administrative and legal system, including laws affecting religion and religious practices. As discussed above, the Spanish Crown attempted to export the

laws of Spain to its New World country. As part of that attempt, the Spanish Crown also continued its struggle against the descendants of converted Jews and Muslims, whom it suspected of harboring Jewish or Muslim tendencies, almost turning religion into a racial category by forbidding the descendants of "New Christians" from immigrating to its New World colonies through four generations.

The presence of the Inquisition in Spain's American colonies and its vigilance in Spain did much to prevent public manifestations of religion other than Catholicism. The one exception was among the Native inhabitants. Although there were attempts to coerce the Indians into Catholic practices, these were relatively unsuccessful, except in those few places with a significant military and colonial presence. Throughout much of Spain's New World colonies, a process of syncretism developed in which Indian religious practices and beliefs fused with Catholic ones. Religious and civil authorities responded to this syncretism in varying ways. Some opposed it vigorously. Others took a more sympathetic view, hoping that it could facilitate the Indians in their adoption of Christianity.

In the larger settlements in Mexico and South America, the Spanish colonizers managed to produce a fairly settled and extensive Catholic presence. Such, however, proved to be less of the case in its colonies in what would become the United States. While the Spanish presence in California and other parts of the Southwest left an indelible impression on the culture and architecture of that region, the influence was less powerful in Florida. The dearth of large-scale settlement throughout Spain's colonies in the modern-day United States meant that its long-term influence on the region's religious development was relatively small, although probably greater than traditionally thought.

The settlement of and developments in the British colonies that eventually would become the United States traditionally have received

the greatest attention in elaborating its religious history. While some of this attention has led to an unfortunate disregard of much that occurred in the French and Spanish settlements, overall it has been appropriate. The colonies of British North America eventually exerted the greatest influence on the religious development of the United States, although much of that development would have been opposed by the earliest British colonists.

The first permanent English colony in what became the United States was Jamestown, in Virginia (May 14, 1607). Although earlier settlements had been attempted, most famously Roanoke in North Carolina, these foundered from lack of planning and support. Roanoke, settled in 1585, would become the source of much legend and mystery. The home of the first English child born in America, Virginia Dare, the colony suffered from a dearth of supplies during its first year. When its founder returned to England to obtain supplies for the colony, the outbreak of war with Spain prevented his return for three years. When the English returned in 1590, they found the colony deserted and the single word *Croatan* carved in a tree. Although what happened to the colonists never was determined, legends grew up about their merger with local Indians (either the modern-day Lumbees or Melungeons) and stories of "Christian" Indians living in the swamps of North Carolina.

All the early English colonies had a strong religious component and mission. Additionally, most imposed some standard of uniformity on their inhabitants. The impetus for much of the colonization initially came from the desire to limit the power and expansion of Catholic Spain and France.

Religion in many ways was foremost on the minds of these colonists and their patrons. Captain John Smith, in his written advice for establishing a successful colony, concluded by claiming, "the way to prosper and achieve good success is to make yourselves all of one mind of the good of your country and your

own, and to serve and fear God the Giver of all Goodness, for every plantation which our Heavenly Father has not planted shall be rooted out.

Additionally, the charter of the Virginia Company, granting it permission to establish a plantation, proclaimed that one of its goals was to help bring the Native peoples from darkness and ignorance to the "truth, and knowledge and worship of God." Despite Jamestown's struggles in its early days, worship according to the Church of England was held regularly. Following the colony's reorganization, its new regulations, drafted by Governor Sir Thomas Gates in 1612, contained explicit laws regarding religious people's religious obligations. Their significance makes them worth quoting at length here.

- 2 That no man speake impiouly or maliciously, against the holy and blessed Trinitie, or any of the three persons, that is to say, against God the Father, God the Son, and God the holy Ghost, or against the knowne Articles of the Christian faith, vpon paine of death.
- 3 That no man blaspheme Gods holy name vpon paine of death, or use vnlawful oathes, taking the name of God in vaine, curse, or banne, vpon paine of seuerer punishment for the first offence so committed, and for the second, to haue a bodkin thrust through his tongue, and if he continue the blasphemeing of Gods holy name, for the third time so offending, he shall be brought to a martiall court, and there receiue censure of death for his offense.
- 4 . . .
- 5 . . . Nor shall any man vnworthily demeane himselfe vnto any Preacher, or Minister of the same, but generally hold them in all reuerent regard, and duti-

ful intreatie, otherwise be the offender shall openly be whipt three times, and ask publike forgiueness in the assembly of the congregation three seueral Saboth daies.

- 6 Euerie man and woman duly twice a day vpon the first towling of the Bell shall vpon working daies repair vnto the Church, to hear deuine Service vpon pain of losing his or her dayes allowance for the first omission, for the second to be whipt, and for the third to be condemned to the Gallies for six Moneths. . . .

While many tend to associate such laws more with MASSACHUSETTS BAY COLONY and Puritan New England (see PURITANISM), it is important to note that they were indeed the laws of the Virginia colony. Despite easing of the most draconian penalties in later years, colonial Virginia always had an established church, and its restrictions on those not of the Church of England (see ANGLICANISM) were great, although more easily enforced in its towns than among the plantations and on the frontier.

Religious uniformity and a state church (the Church of England) were or became the norm in all the southern colonies. One initial exception was North Carolina. The political philosopher John Locke actually drafted the colony's original basic law, which did not provide for an established church. Residence in the colony, however, was limited to those who believed in God and did not deny the Trinity. Unlike New England, however, the dispersed nature of southern settlement made it much more difficult to enforce uniformity, and the backwoods of Virginia, North Carolina, and even South Carolina became populated with Presbyterians (see PRESBYTERIANISM, METHODISTS, BAPTISTS, and MORAVIANS.)

Adding to the complex religious mix of the British colonies were the Africans forcibly

brought there. Although the first Africans were brought to Virginia in 1619 as indentured servants (as were most whites), slavery based on color soon developed (see AFRICAN-AMERICAN RELIGION; SLAVERY). It was strengthened when the Virginia House of Burgesses adopted a law declaring that conversion to Christianity did not affect an individual's condition of servitude. Slave owners also tried to deny Africans their religious heritages. While identifiable elements of indigenous African religions and Islam were retained, mostly in those regions, particularly the indigo and sugar plantations of South Carolina and Louisiana, where high mortality rates led to ongoing importation of enslaved Africans, most of these elements would be incorporated into the Christianity that most enslaved Africans eventually adopted (see AFRICAN-AMERICAN RELIGION; SLAVERY).

In New England, there early developed a much more structured pattern of settlement. Most of the early New England colonies also had much more focused religious goals. While many of the early settlements consisted of individuals with shared religious views, they also included individuals who had a financial stake in their success. These competing interests often made it difficult to maintain as much religious or social order as many desired.

The first colony in New England, Plymouth Plantation (1620), was settled by the Pilgrims. The Pilgrims had come to the New World to escape persecution in England and to establish an ordered (and orderly) community in the New World. To this end, they joined themselves together in a social contract, the Mayflower Compact, and demonstrated their complete independence (and their anti-Catholicism) from all "popish" festivals by beginning construction of a common house on Christmas Day.

The Pilgrims worked hard to maintain their community's unity but had to struggle against those who did not share their religious

beliefs. Many of the non-Pilgrims sent to increase the colony's population often threatened its practice. Among these was Thomas Morton, who sold guns to the Indians, held orgies at his settlement of Merrymount several miles from Plymouth, and encouraged servants to leave their masters. Even many of the Pilgrims' early ministers proved a threat. John Lyford had lied about his ordination and was a convicted adulterer and fornicator. The Pilgrims, incensed, ran him out of the colony. The small size of Plymouth, however, made its actions relatively unimportant compared to its much larger neighbor, the Massachusetts Bay Colony, established during 1629 and 1630.

Much larger than Plymouth and with much more at stake, Puritan Massachusetts and its sister colony, Connecticut, had greater impetus to enforce religious uniformity. The Separatists at Plymouth had no fears about their removal to the New World, but the Puritans, who desired to win England to their views, had much incentive to ensure that their colonies served as models for the old country. The practical realities were enhanced by their theological views of the need for an ordered society, consonant with the will of God.

The first governor of the colony, JOHN WINTHROP, made this explicit in the sermon he penned in 1630 while still aboard their ship, the *Arbella*. Entitled "A Modell of Christian Charity," the sermon not only clearly articulated the Puritans' view of how society should operate. It also contains one of the most famous lines in American history. For the colony to succeed, Winthrop stated that all its members

must be knitt together, in this worke, as one man. Wee must entertaine each other in brotherly affection. Wee must be willing to abridge ourselves of our superfluties, for the supply of other's necessities. Wee must uphold a familiar commerce together in all meekeness, gentlenes, patience and liberality. Wee must delight in eache other;

make other's conditions our oune; reioice together, mourne together, labour and suffer together, allwayes haueing before our eyes our commission and community in the worke, as members of the same body. Soe shall wee *keepe the unitie of the spirit in the bond of peace*. The Lord will be our God, and delight to dwell among us, as his oune people, and will command a blessing upon us in all our wayes. Soe that wee shall see much more of his wisdome, power, goodness and truthe, than formerly wee haue been acquainted with. Wee shall finde that the God of Israell is among us, when ten of us shall be able to resist a thousand of our enemies; when hee shall make us a prayse and glory that men shall say of succeeding plantations, 'the Lord make it likely that of *New England*.' For wee must consider that wee shall be as a citty upon a hill. The eies of all people are uppon us. Soe that if wee shall deale falsely with our God in this worke wee haue undertaken, and soe cause him to withdrawe his present help from us, wee shall be made a story and a by-word through the world. Wee shall open the mouthes of enemies to speake evill of the wayes of God, and all professors for God's sake. Wee shall shame the faces of many of God's worthy servants, and cause their prayers to be turned into curses upon us till wee be consumed out of the good land whither wee are a going.

This society was not, however, the theocracy that many have claimed it to be. Ministers in the Massachusetts Bay Colony had less formal power than anywhere in Europe and did not constitute a recognized class with special privileges. This absence of inherited privileges was a significant factor in the life of the colony. Although the Puritans firmly believed that there were greater and lesser people (and titles such as goodwife, mistress, and master constantly affirmed these divisions), the range was much less than in England. Sumptuary laws

governed the nature of individual dress, limiting the colors, amount of gold, and jewelry a person could wear. These laws both affirmed social distinctions and limited ostentatious displays of wealth and power. When combined with the Puritan doctrine of human sin and human equality before God, they resulted in much less overt social differences in Massachusetts Bay than in the home country.

The desire to maintain harmony, stability, and social order was great. The magistrates enforced laws against blasphemy and punished those who failed to attend church services. The settlement patterns enforced in Puritan New England also served to strengthen social stability and cohesion. Land was allocated to each colonist for farming, but people lived in towns, traveling out to their farms each morning and returning in the evening. Towns centered on the meetinghouse, the church building, which functioned as the center of the community's social and political as well as religious life. The independent settler separated from the community that is the American stereotype was not acceptable in Massachusetts Bay. Such a settler, loosed from the bonds of family, church, community, and government, was bound to lapse into barbaric and irreligious behavior. The godly life could be lived only with others.

Conflicts over the nature of that life, however, were such that the harmony desired by the colony's political elite was never realized. These conflicts emerged early in the colony's life. The first of these was the so-called ANTI-NOMIAN CONTROVERSY. Occasioned by the religious instruction that ANNE HUTCHINSON provided in her home and involving conflicts between the growing merchant class and the colony's political and religious elite, the Antinomian Controversy was typically Puritan in that it was fought over theology and the role of social harmony in theology.

Similarly, the expulsion of ROGER WILLIAMS from the colony was a response to theological differences, the implications of which were

seen as inherently destabilizing. Williams's belief that the government had no right to enforce the first half of the Decalogue—the first four of the Ten Commandments dealing with worship—was seen as an assault upon the social stability of the colony. Indeed, many viewed any failure of the state to enforce these laws as an invitation to divine destruction. To outlaw blasphemy was not only an act of religious faith but also helped ensure social survival.

The Puritans had their conflicts with other “socially disruptive” groups, such as Baptists, Quakers, and witches (see SALEM WITCHCRAFT TRIALS), who were punished for violating the order of the community. Baptists and Quakers were whipped, and Quakers were even hanged. Witches were punished severely, and in the one significant outbreak of witch-hunting, the Salem witchcraft trials, 19 individuals were executed and nearly 150 imprisoned.

For those who found such views incompatible either with their view of religion or society, other options presented themselves. For those opposed to social order in general, the backcountry—the frontier—offered a refuge, and some took advantage of that opportunity. Still others eventually founded their own colonies, several of which offered less restrictive religious environments. Even in New England by the 18th century, other forces had begun to push against the breadth of the Puritan establishment.

Perhaps the most notorious of these colonies, at least to the Puritans of New England, was Rhode Island. After his expulsion from Massachusetts Bay Colony in 1635, Roger Williams spent a period of time residing with the Narragansett Indians. From them, he purchased land and began his own settlement. This settlement, Providence, grew quickly as individuals at odds with the standing order in Massachusetts and Connecticut found their way there, and in 1643 Williams traveled to England to obtain official recognition for the colony. He received a charter from Parliament

the following year. The first compact of Providence Plantation expressly stated that, “We . . . do promise to submit ourselves, in active or passive obedience, to all such orders or agreements as shall be made for public good by the body in an orderly way, by the major consent of the inhabitants . . . only in civil things.” This exercise in religious freedom was extended when Rhode Island received a royal charter in 1663.

Rhode Island quickly became a refuge for malcontents and exiles from Massachusetts Bay, including the followers of Anne Hutchinson, who founded Portsmouth. This “Rogues Island,” as Bay Colony leaders were wont to call it, received much abuse and hostility from its larger neighbor. Trade between the colonies was limited; Rhode Island was refused membership in the New England Confederation, and at one point Massachusetts Bay adopted an ordinance forbidding residents of Rhode Island who had criticized the government of Massachusetts Bay from entering that colony.

The hostility did not limit immigration. Rhode Island soon found among its inhabitants Baptists, Quakers, numerous Non-conformists without labels, Catholics, and as early as the 1650s Jews. For the last, Rhode Island was the only colony where they could openly and legally practice their religion. This openness to varied groups and to their freedom of practice and conscience did not mean, however, that Williams or other founders of Rhode Island felt that such differences were irrelevant. Williams vocally opposed Catholicism and Quakerism, maintaining that they were completely wrong. As a convinced Separatist, he refused to have communion or social interactions with those whom he felt were in religious error, a group that often even included his wife.

This model of religious interaction, of rejecting the government's right to interfere in matters of conscience while maintaining a critical and even condemnatory view of religious

views one felt to be in error, remains one of the leading models in the United States to this time. It presents an important understanding of tolerance—that religious beliefs and (most) practices are not subject to coercion, but that those practices are always subject to criticism, condemnation, and dismissal. The development of Rhode Island also demonstrates how the size of North America (especially absent a central authority) created a space in which those seeking an alternative model of religion or society readily could carve one out.

This was different from the models adopted in Pennsylvania and Maryland (see MARYLAND [COLONY]), the other two colonies in which religious tolerance was part of the founding. For Pennsylvania, at least in the mind of its founder and lord proprietor, WILLIAM PENN, conscience not only ought not to be coerced, but one should be fairly disinterested in the beliefs and practices of one's neighbors, as long as they were not disruptive of good order.

Founded in 1681 by William Penn as a haven for Quakers, Pennsylvania quickly became a model for both religious tolerance and commercial success. Although Quakers were the majority in the colony and predominated in its political and economic systems, Pennsylvania soon contained within its borders the most diverse array of religion in the colonies. In Pennsylvania, European Christianity and the faiths of the Native Americans lived together in relative harmony. Additionally, different types of Christians who were slaughtering each other in Europe lived peacefully in the Quaker commonwealth. Presbyterians, Baptists, and Roman Catholics lived and worshipped alongside Quakers, Mennonites, Amish, Schwenkfelders, and the Moravian Brethren. Lutherans (see LUTHERANISM) and the German Reformed Church also found a home in Pennsylvania. Bound by commercial success, these groups managed to live peaceably together, mostly through ignoring their differences as each struggled to organize their churches absent governmental support.

If Pennsylvania found a way to create civil peace by allowing a variety of practices and encouraging commerce, Maryland took a different route, expressly forbidding the giving of offense. Founded as a refuge for English Catholics, Maryland's status and governance remained tentative, given the level of English anti-Catholicism and the fact that Protestants always outnumbered Catholics in the colony.

The first settlers arrived in March 1634 with two priests, 20 mostly Roman Catholic gentleman, and 200 mostly Protestant laborers and artisans. In order to preserve the peace, complete religious freedom was allowed to all Christians, and Catholics were warned against antagonizing their fellow colonists and practicing their religion too publicly. As the article on the colony makes clear, hostility toward the Catholics and the Catholic proprietor generated much conflict within the colony. To minimize these conflicts, the Protestant governor, William Stone, convinced the colonial assembly to pass an "Act Concerning Religion" (Act of Toleration of 1649). This act allowed religious freedom for all those not denying the Trinity and made it illegal to disparage anyone's religion. It was unsuccessful, and in 1654 an uprising overthrew the government and proceeded to outlaw "popery, prelacy, and licentiousness." Although the Calverts were restored as rulers in 1658, another rebellion in 1688 following the "Glorious Revolution" in England led to a revocation of the Calverts' charter, the imposition of Protestant rule, and a series of laws strictly limiting Catholics' rights.

By the beginning of the 18th century, British North America was a religiously mixed bag. Although many laws reflected the views that the European colonists had brought with them, including a dismissiveness of the religious practices of the indigenous peoples, the reality of the variety of practices in the colonies, the presence of an ungoverned frontier, and the differences in colonial governance made it exceedingly difficult to enforce the

laws completely. Alongside these facts that presented a different reality than that in Europe, there was a powerful intellectual current flowing into the New World. With it would come demands for independence and self-government and the creation of a radically different legal relationship between religion and the government. The ENLIGHTENMENT would give birth to the United States, and both would produce the first modern state with religious liberty enshrined in its basic law.

THE EMERGENCE OF AN AMERICAN IDENTITY

By the 1760s, the thirteen colonies of British North America had been radically transformed by numerous events. Britain's victory in its wars with France had added the province of Canada to its North American empire. The wars also had forced representatives of the various colonies to soldier and work together in order to meet the challenges presented by the wars. The Puritan Revolution (or the English Civil Wars, 1642–51) and the Restoration that followed it had created a situation in which England was forced to concede greater tolerance to nonconforming Protestant groups. As a result, the American colonies, particularly in New England, came under similar pressures. The numerical growth within and geographical expansion of the colonies also weakened the ability of the magistrates to enforce social and religious conformity. While many declaimed against these changes, they reflected the reality of an expanding society no longer circumscribed by the act of choosing to enter into a special covenanted community. One story, probably apocryphal although often reported, illustrates this. A Massachusetts minister out for a Sunday afternoon walk happened upon one of his church members unloading a catch of fish. The minister chastised the man for laboring on the Lord's Day, reminding him that his forebears had come

to the colony to serve God. The man replied, "My grandfather may have come for God, I came for cod."

One of the major changes in the life of the colonies was the increasing influence of the intellectual currents of the Enlightenment. These eventually altered the thirteen colonies' views both of the nature of government and the understandings of religion. This combination of intellectual changes and material facts played a major role in the eventual shaping of the relationship between government and religion in the United States and introduced an entirely new understanding of citizenship.

Four historical events played major roles in the transformation of the American colonists' functional experiences of religious tolerance. These were (1) the growth, expansion, and diversity of the colonial population; (2) the English Civil War, the Restoration, and the Glorious Revolution; (3) the connection created by the French wars; and (4) the influence of the Enlightenment on colonial elites.

As mentioned earlier, one of the major differences between Britain's American colonies and the reality of Europe was the openness of space and the ability to settle pretty much anywhere one desired. Some colonies were aggressive in recruiting colonists from throughout Europe, regardless of their religious affiliations; others opened their borders to whoever desired to come, placing no or few limitations on their settlers. Still others simply found it difficult, if not impossible, to police their borders. Many of the boundaries between the colonies were undemarcated and unsettled. The vast wilderness also made travel and supervision difficult. Small groups, not to mention individuals, could live unmolested. The colonies that did not hinder settlement for religious reasons served as a window for those living in colonies more restrictive of their inhabitants' religious practices. By the time of the American Revolution, the religious reality of British North America increasingly had begun to resemble a stew in which it was

impossible to isolate and separate the various parts. As much as they might have desired and attempted to enforce uniformity, the magistrates were hindered by the sheer numbers of differing religious groups and the ease with which they could enter a colony.

One additional point must be made, namely that by 1700, magistrates had come to deal fairly leniently with the violators of their religious laws. Although Massachusetts had laws allowing for the execution of Quakers, it executed only four, and one of these, Mary Dyer, only after she continued to reenter the colony after repeatedly being arrested and expelled and previously having received one reprieve from the gallows. In 1661, under pressure from the government of England, Massachusetts was forced to suspend the use of corporal punishment against Quakers.

Even the Salem witchcraft trials, which universally are held up as an example of the religious intolerance of the Massachusetts Bay Colony and resulted in the egregiously unjust execution of 20 individuals, were condemned by the colony. In 1697, only five years after they took place, the Massachusetts General Court expressed its official repentance for the executions, and Samuel Sewall, one of the judges at the trials (and later the author of the first printed antislavery pamphlet in the Americas), issued a public statement of guilt and repentance. (For the remainder of his life, he set aside one day each year for fasting and prayer to atone for his guilt in the trials.)

Serious changes in the mental outlook of the colonists were under way. These changes came from numerous sources. As suggested above, some of these changes emerged from the growing reality of having to live alongside others of different religious views. Others emerged from historical developments in England. The first of these was the English Civil Wars (or Puritan Revolution). The English Civil Wars, including the execution of the king, the creation of the Commonwealth,

and then the restoration of the monarchy (1660), were additional key events.

In many ways, the English Civil Wars were the culmination of the events that had led to the establishment of the Puritan colonies and Separatist colonies such as Plymouth. The conflict with the English monarchs and the hierarchy of the Church of England over the nature and form of the church, including the issue of bishops, had serious political implications. James I had seen these readily when he stated, "No bishops, no crown." In fact, one of the reasons that James commissioned the Bible translation that bears his name, The King James Version, was his discomfort with the 1599 Geneva Bible used by the Puritans and nonconforming Protestants in place of the then authorized Bishop's Bible. James was particularly displeased with the fact that the translation used the word *tyrant* or *tyranny* more than 400 times, usually negatively.

Additionally, the emphasis on religious and political equality that permeated the text and that many Puritans internalized (albeit partially), witness the granting of the franchise to all adult male members of Massachusetts Bay Colony immediately upon its establishment in the New World, disturbed both James and his successor, Charles II. For them, religion was designed to reinforce the political hierarchy, at whose apex they sat. The Puritan understandings of society as ordered liberty eventually would play a major role in the creation of the United States, but more important its practices played a major role in the development of the habits that made America's transition to self-government relatively smooth.

The limits of that order were being reset constantly during the colonial period. One area in which it constantly was reset was that of religion. Interestingly, attempts by the British monarchs to exert their authority in England or to weaken political independence in the American colonies and limit the power of the Puritans, particularly in New England,

invariably had results markedly different from what they intended.

The greatest effect was presented by the English Civil Wars and their aftermath. While initially the English Civil Wars were a major victory for the Puritans, the struggle against the monarch and his presumed Catholic leanings resulted in a general grouping of all Protestant believers collectively. Allies on the battlefield in England with Baptists, Separatists, and other Nonconformists, the Puritans had a difficult time withholding equal religious protections, particularly given the strength of Baptists and Separatists in Oliver Cromwell's New Model Army. These attitudes also played a role in the shifting of perceptions in the New World. An antipathy to Catholicism and a shared struggle against an absolutizing monarchy played a role in causing Americans to view other Protestants more positively.

More amazingly, following the restoration of the monarchy in 1681, the desire of James II to weaken Puritan power and the desire of monarchs from William and Mary on to weaken the independence of the colonies led them to make a series of decisions that forced greater religious tolerance on the colonies. During his short reign, James II attempted to deprive the colonies of their independence. He appointed a royal governor for all the colonies, Edmund Andros, who abolished the colonial legislatures. In Massachusetts he undertook to force the Church of England on the Puritans, expropriating the Old South Meeting House and turning it into an Anglican Church. Such policies galvanized colonial opinion, particularly in New England, against Andros and his policies. In an attempt to further his fellow Catholics' legal standing in England, James issued the Declaration of Indulgence in 1687, granting religious tolerance to Catholics and nonconforming Protestants.

James II's Catholicism proved his undoing. In 1688, he was deposed and replaced the following year by William and Mary as king and queen of England. While their accession

was greeted as a great Protestant victory, the new monarchs continued their predecessor's policy of weakening local, colonial government, including imposing royal governance on New York. Over the next several decades, this was seen in numerous ways. Several colonies made the Church of England the established church: Maryland (1702), South Carolina (1706). Puritans and others who once found themselves at odds with each other, now found themselves united against a common enemy, the Church of England and its symbol as a model of British power over the colonies. On the other hand, upon their succession William and Mary signed the Bill of Rights Act of 1689, which rejected the power of the monarch to abrogate the laws of Parliament and affirmed numerous rights and liberties of Englishmen, including Parliament's power to impose taxes (no taxation without representation). As the United States moved toward revolution in the 1700s, the appeal to the rights enumerated in this document played a major role.

One additional factor in the movement toward political unity and a growing acceptance of religious difference was the shared experiences of the various wars against France and Spain and their Native American allies. The North American theater of these wars—Queen Anne's War (1702–13, known in Europe as the War of the Spanish Succession), the War of Jenkins' Ear (1739–42), the War of the Austrian Succession (1740–48), and the French and Indian War (1754–63, Seven Years' War)—brought Americans of all stripes together in the various colonial militias and served to create a realization that, despite religious differences, it was possible to live and work together.

Most important, however, were the mental changes that formed the basis for social tolerance and legal equality among religions. These mental changes occurred from two directions. The first was the growth of a form of religious thought that rejected the claim that government could coerce the human conscience. This

view, early articulated by Roger Williams, led to the conclusion that the government had no legitimate reason for enforcing religious laws, the so-called first tablet of the Decalogue, the Ten Commandments. The second intellectual development was the Enlightenment. The Enlightenment had a major influence on those individuals most instrumental in establishing both America's independence and the legal bases for the new republic, the U.S. Constitution (see CHURCH AND STATE, RELATIONSHIP BETWEEN; CONSTITUTION, U.S.).

Perhaps the most important concept that eventually drove the United States toward its model of religious tolerance and even religious liberty was the growth of the idea of the "freedom of conscience." This view, which had been incipient in much of Christianity's history, increasingly came to the fore during the Reformation. Both Martin Luther and John Calvin (the latter playing a major role in American religious thought) had emphasized the issue of conscience and the inability of the government to make and enforce binding laws "concerning religion and the worship of God," as Calvin wrote. For Calvin, as for the early Puritans, this did not mean that the government could not enforce laws designed to protect the social order, including public offenses against religion. As a principle, however, it introduced the question of what was the legitimate role of the government in enforcing religious practices.

These views became increasingly stronger among Puritans as they faced the challenges of responding to authoritarian monarchs and to monarchs who imposed false (in their minds) religion on their subjects. As the Puritans found themselves increasingly harassed and persecuted by the British monarchy, they began to adopt views about resistance to authority that eventually led them to support rebellion and revolution. This also included the incorporation of the doctrine that the government had no power over the conscience of human beings. While it might be able to force

certain practices or behaviors, it had no legitimate right to force an individual to make a particular religious formulation. No human law, the Puritan theologians declared, could bind the individual conscience.

While the Puritans were slow to move from these understandings to a complete view of separation of religion and government, other religious denominations in the United States did so more quickly. Among the most articulate and aggressive in doing so were Baptists. Preeminent among these was JOHN LELAND (1754–1841). Although Leland's life mostly postdates the American Revolution, he well represents those who made the religious argument for religious liberty. At the time of its adoption, the First Amendment to the Constitution applied only to the federal government, not the states. Several states retained their religious establishments, and Leland was active in leading two states, Virginia and Massachusetts, to end their religious establishments. He also was a staunch advocate for the Constitution and played a major role in its adoption in Virginia. Beyond his personal role, Leland was representative of the understanding of the relationship between religion and government that eventually predominated among many Protestants, particularly Quakers, Baptists, and Methodists, but also among Presbyterians and other groups.

Leland's opposition to government support for religion emerged completely and directly from his religious views, his reading of the Bible. The religious nature of this is clearly obvious when he wrote, "Had a system of religion been essential to salvation, or even to the happiness of the saints, would not Jesus, . . . have left us one? If he has, it is accessible to all. If he has not, why should a man be called a heretick because he cannot believe what he cannot believe, though he believes the Bible with all his heart. Confessions of faith often check any pursuit of truth, confine the mind in a particular way of thinking, and give rise to frequent separation."

True religious knowledge, Leland argued (drawing from the well of the Reformation), is available to all. Given in the Bible and by Jesus (as Leland believed as a Christian), this knowledge needs no enforcement and is not improved upon by human creeds and confessions. In fact, to force someone to state a belief in a doctrine of which that individual is not convinced is to force that person into sin. Even if a creed were true, Leland argued, "should I subscribe to it before a magistrate, in order to get indulgence, preferment, or even protection—I should be guilty of a species of idolatry by acknowledging a power, that the Head of Church, Jesus Christ, never appointed." Religious coercion, Leland claimed, rather than serving the divine will, actually thwarts it. It does not put God first, but the government, with all its coercive mechanisms. It is idolatry, the most grievous of sins.

Government, for Leland, should have nothing to do with religion, except to protect someone from abuse for his beliefs. "Government," he wrote, "has no more to do with the religious opinions of men than it has with the principles of mathematics." "Let every man . . . worship according to his own faith, either one God, three Gods, no God, or 20 Gods; and let the government protect him in so doing."

In fact, the latter alone is the prerogative of the government, not the judging of human hearts and beliefs, but only their actions. "The legitimate powers of government," in Leland's view, "extend only to punish men for working ill to their neighbors, and no way affects the right of conscience." Government's power does not even extend to the right to grant tolerance to religious belief and worship. Government should actively protect everyone in their thinking and speaking. Leland calls for liberty, not tolerance. "The very idea of toleration, is despicable; it supposes that some have a pre-eminence above the rest, to grant indulgence; whereas all should be equally free, Jews, Turks, Pagans and Christians."

Such views played a major role in the eventual ratification of the U.S. Constitution and the Bill of Rights. They also were a significant factor in the decisions by the various new states to dismantle their religious establishments. Such views did not stand alone. Any understanding of the conceptual shift in the United States regarding the relationship between religion and government and the history of religious intolerance and tolerance, requires a grasp of the Enlightenment and the role it played in shaping the worldview of those who drafted the Constitution.

Neither the United States as we know it nor the nature of religion itself in the country would exist without the Enlightenment. The United States was the first to have a government organized according to Enlightenment principles, and the Enlightenment played a major role in constructing the understandings of human being and religion that made modern-day religious freedom not only possible but the norm. One could argue that the Enlightenment, despite its suspicion of, if not hostility to, organized religion led the United States to become the most religious of the leading industrialized countries.

John Locke's writings can serve as representative of the ideas that led to the American approach to the relationship between religion and the state, as well as the general social attitudes that have dominated throughout U.S. history. These views are seen most clearly in his *Letter Concerning Toleration*, published in Holland in 1690.

Locke's view of religious tolerance rested on many elements in his thought. Preeminently, however, it emerged from his view of the creation of the state. Locke, like Thomas Hobbes, reasoned that the state emerged from the need for human beings to attain some level of security. Absent some level of security, life was, as Hobbes described it in his book *Leviathan*, "nasty, brutish, mean, and short." To attain the necessary level of security to live a productive life and, eventually, an ordered common-

wealth, human beings gave up, in Locke's view, the minimum amount of power necessary for the protection of their life, liberty, and property. Since the state only has the power given to it by the people, it does not, as Locke stated in *Two Treatises on Government*, have the authority to undertake an activity or require anything that individuals could not delegate to it.

For Locke, individuals clearly lacked the authority to give the power of determining religious truth to others. God had not, in Locke's view, granted any person the authority to coerce others in religious matters. The state, therefore, never could have any legitimate right to exercise such coercion. Whence would come that authority? The state, deriving its just powers from the consent of the governed, obtains no power from any individual to coerce others religiously, for no individual can give that power. The power individuals relinquished to the state were the minimum necessary for the protection of their life, liberty, and property. In order to protect these things, there is no need to force a particular set of religious beliefs on others. As THOMAS JEFFERSON later wrote in his *Notes on Virginia* (1784), "The legitimate powers of government extend to such acts only as are injurious to others. But it does me no injury for my neighbor to say there are twenty gods, or no God. It neither picks my pocket nor breaks my leg.

Even if an individual desired to delegate her or his own personal religious choices to the state, such an undertaking would make no logical sense. How could one grant another the power to make one believe what one did not believe? Even the idea of simply coercing outward behavior instead of internal belief presented some problems. Why should an individual grant to the state the right to make that individual into a hypocrite and a liar? If I say or pretend to believe things I do not believe, then I am both of those. Such a position makes no sense and is wrong, achieving exactly the opposite goals from those they are designed to achieve. Any action contrary

to conscience is, in Locke's words, "neither well in itself, nor can it be acceptable to God. To impose such things, therefore, upon any people, contrary to their own judgment, is, in effect, to command them to offend God."

From these starting positions, Locke derived the conclusion that governments lacked legitimate authority to coerce individuals in matters of conscience. Religion was a matter of inward conscience, and true religion emerged only from the free acquiescence of the individual to the religious truths of which she or he were convinced. Religious tolerance (and eventually religious liberty) derived from liberty of conscience. Religion exists in its own sphere, protected from the state's coercive reach. Liberty of conscience, for Locke, seemingly had even greater privileges than the rights to life, liberty, and property.

Since the state had no legitimate authority to coerce in matters of religion, then religious tolerance, if not religious liberty, was demanded. All religious beliefs and practices must be allowed to the extent that they do not threaten public order or peace or harm the rights and privileges of others.

While Locke laid out what would become the basis for American understanding of religious liberty, even he recognized two challenges that needed to be overcome both intellectually and in practice. Interestingly, both of these challenges would continue to emerge throughout U.S. history and, in various formulations still operate even today.

While Locke's view led him to the conclusion that all religious practices and views should be tolerated, to the extent that they did not threaten peace and security or hinder the rights of others, what of those whose religions by their very nature seemed to present such a threat? In his time, Locke was convinced that all Protestants and even Jews should be tolerated and extended the right of religious liberty. For Locke, however, a greater challenge was presented by Catholics, Muslims, and atheists (see ATHEISM).

Locke, given his level of knowledge (and the realities of the times), felt that religious tolerance need not be extended to Catholics because they owed political allegiance to a foreign ruler, the pope. Since no state was under any obligation to tolerate those who owed their loyalties to foreign power, Catholics legitimately could be denied such protection. (The issue of Catholics owing loyalty to a foreign potentate emerged repeatedly in American history, extending even into the 20th century when it came up as late as the presidential candidacy of John Kennedy.) Locke reached the same conclusion regarding Muslims, since, in his limited understanding and knowledge, they owed their allegiance to the caliph or sultan of the Ottoman Empire. It is important to note that Locke argued for denying protection to the practitioners of these religions, not because of their religion, but on political grounds.

Atheists also threatened the stability of the state, but for different reasons. For Locke and for many others, atheists were suspect because they were untrustworthy. Since atheists lacked any fear of future punishment, their behavior and their word always were open to suspicion and doubt. This was particularly true in the taking of oaths, whether in swearing loyalty to the state or in serving as witnesses (to offer two examples). This view remained vestigial in the United States for decades, if not centuries, as many states continued to require religious oaths for witnesses at trials. Only in the 20th century did courts finally declare that such a legal requirement was unconstitutional. People were, however, aware of the problem it presented. Jefferson, as noted above, pointedly included atheists in his declaration of those who presented no threats to the government. Addressing the issue of atheists and oaths, he wrote: "If it be said, his testimony in a court of justice cannot be relied on, reject it then, and be the stigma on him. Constraint may make him worse by making him a hypocrite, but it will never make him a truer man."

More broadly, the Enlightenment presented a radically different way of thinking both about the world and about the role of the human being within it. Developments in science, including the writings of Isaac Newton, increasingly presented the world as an orderly and structured place that human beings could comprehend and did not require miracles and the ongoing intervention of God. These views also had their effect on religion. Certain branches of Anglicanism increasingly emphasized the reasonableness of their faith, using the ambiguity of the Anglican creed to support their views. Other denominations were also affected. One can see these effects on the writings on John Leland and his discussion of conscience. The Enlightenment entered Presbyterianism through the College of New Jersey (Princeton University) with the presidency of the Scots clergyman JOHN WITHERSPOON.

The influence of the Enlightenment on religions in the United States would have a powerful effect on the development of those ideas here and on the long-term relationship between religion and democracy. Unlike Europe, where religion would be viewed as allied with monarchy and tyranny, in the United States religion usually (although not uniformly) would move readily and smoothly with the democratic ethos and the resulting growth of the country.

In the United States, therefore, there was not the growth of the radicalism of some Enlightenment thinkers on the European continent. Denis Diderot exemplified this radical perspective with his statement that, "Men will never be free until the last king is strangled with the entrails of the last priest." Such views never had significant supporters in the United States. In America, religion seemed to be a source of freedom and democracy, not its opponent. This is not to say that individuals holding such views were unknown in the United States. Ethan Allen of the Green Mountain Boys and a hero of the American Revolution wrote the first

atheistic book in America, *Reason the Only Oracle of Man* (1784), and Thomas Paine published the *Age of Reason* (1794–96). Such views rarely found congenial hearers in the United States because the positions they espoused appeared so contrary to observed reality.

If the anticlericalism of the European Enlightenment found few supporters in the United States, a more moderate version of Enlightenment thinking about religion did play a major role in the American colonies and the early republic. This was deism. Deists extended the Enlightenment view that the universe was orderly and rational to their understanding of God. This universe had been set in motion by a rational God who did not intervene in its day-to-day workings. In fact, God was bound as well by this rationality and morality. Religion was valuable because it strengthened morality and made good people. Religious founders, particularly Jesus, were viewed as moral exemplars rather than divine messengers.

Deism in British North America played a major role in the development of the views that gave rise to the American Revolution and to the content of the U.S. Constitution. The deists' belief in human rationality, human improvement (if not perfectibility), and universal moral standards (including natural law and natural rights) that were applicable to all people at all times deeply influenced American views of constitutional government and of religious tolerance and liberty. The influence of these deistic views is obvious in the language of the Declaration of Independence (of its 56 signers, 52 were deists). Deists also predominated in the Continental Congress and among the generals in the Continental Army.

THE AMERICAN REVOLUTION AND THE EARLY REPUBLIC

At the beginning of the American Revolution, the country was in tremendous ferment about the very nature of government and

government's relationship to religion and the individual. The ideas of the Enlightenment, the conflict between established religions and nonconforming religions, and the conflict about increasing encroachments by Parliament on the natural rights of Englishmen (particularly relating to taxation) served to establish a rough consensus regarding the role of the relationship between the state and religion. The consensus was that coercion was wrong, but questions regarding establishment and government-supported religion remained quite unsettled. Additionally, the extent to which tolerance should be extended to Catholics remained open for debate. The tensions regarding Catholics and their loyalty were only intensified by the French and Indian War. Overall, however, by 1775 the British colonies in America had moved far from their initial settlements, and the Revolution provided the occasion for a dramatic restructuring of the relationship between government and religion that came to fruition in the drafting of the U.S. Constitution and the First Amendment.

The American Revolution and the support for the cause of independence among all religious communities in the colonies, from Congregationalists (see CONGREGATIONALISM) to Jews, Catholics to Baptists did a great deal to minimize interreligious hostility and suspicion. Charles Carroll of Carrollton, the wealthiest man in the colonies and a signer of the Declaration of Independence, was a Catholic, and Haym Salomon, a Jew, provided more than \$200,000 for the war effort. Additionally, the support of Catholic France for the cause of independence also played a role in minimizing anti-Catholic views. In September 1774, several members of the Continental Congress, including John Adams and George Washington, attended a Catholic mass, and George Washington forbade any celebrations of Guy Fawkes Day, the traditional English anti-Catholic event, in the Continental army.

The defeat of the British at the Battle of Yorktown and the Treaty of Paris that recognized the thirteen colonies' independence led to a period of transition, as the new country sought the appropriate balance between the new states and a more centralized government. The initial organizational scheme, the Articles of Confederation, proved inadequate to the needs of the new country, and many called for their revision. A meeting of delegates from throughout the colonies was set for summer 1787, with the goal of revising the Articles of Confederation and correcting its major flaws.

Shortly after the delegates arrived, this initial goal changed, and the delegates moved toward a completely new document. This document eventually became the U.S. Constitution. James Madison, later the fourth president of the United States, was the guiding figure behind the document, and it reflected his concern with establishing a central government sufficiently strong to effect its ends yet with sufficient constraints to minimize the likelihood of it becoming oppressive.

The body of the Constitution mentions religion only in one place, but what it says about the relationship between religion and the new state is very important. It announces a radically new approach to religion in governmental life. Article VI declares "no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States." In this simple announcement, the Constitution undid centuries of European thought (and that of much of the world). It rejected the view that loyalty to the state depended on shared religion. With one simple phrase, the Constitution made every citizen politically equal and, structurally at least, proclaimed that no one religion had more value than any other religion.

For many, however, this was not enough. The Constitution did not prevent the national government from establishing a religion. Some viewed this as a major flaw in the document,

and many opposed ratification of the Constitution absent greater protection of this and other liberties. These individuals demanded the inclusion of a "bill of rights." These individuals won the day, and the first 10 amendments to the Constitution, the Bill of Rights, were adopted, including, after numerous revisions, the First Amendment to the U.S. Constitution. Regarding religion, the First Amendment states: "Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof . . ." With its ratification, the United States became the first nation in recorded history to prevent itself from establishing religion or from acting to constrain the religious beliefs of its residents. By doing so, the national government of the United States established what would become the norm for religion and governmental relations in the modern world.

The Constitution, however, applied only to the federal government. The various states were left free to construct their relationship to religion in any number of ways. The same intellectual ethos and cultural realities that led to the adoption of the First Amendment affected the political lives of many of the states. Following the Revolution and beginning with Virginia, the states had begun to remove their varying levels of religious establishment. The last state to repeal the last vestiges of an establishment was Massachusetts, which finally did so in 1830. No state admitted to the Union after the original 13 ever had a religious establishment.

The establishment of the American republic presented a blank canvas upon which the citizens of the new United States could paint. Its governmental system and its new approach to religion (at least at the level of the federal government) as well as its openness to new social forms and to immigrants, along with its vast western frontier, seemed to hold limitless possibilities. The question remained as to what would fill in the canvas? How would it look and what themes would dominate?

These questions consumed 19th-century America until the Civil War. The first half of that century saw the emergence of new religions, perfectionist movements, and innumerable efforts at reform, of which abolitionism is only the most familiar. It was, in the title of Alice Felt Tyler's book, a period of "freedom's ferment." Not only were most of these movements driven by religious motivations, the nation itself would soon be in conflict over its religious nature.

While the First Amendment may have answered that question legally on the federal level, it did not answer it at the state level, nor did it answer it socially. As the states adapted to the new emphasis on voluntarism in religion, slowly removing the last vestiges of their religious establishments from Virginia in 1786 to Massachusetts in 1830, the country also experienced a revitalization of religious feeling. This revitalization was driven by a new form of democratized Protestantism. This Protestantism dispensed with the old predestinarianism of traditional Calvinism, whereby the individual could do nothing to effect her or his salvation, and replaced it with ARMINIANISM. In the Arminian view, God offers salvation freely to all. One only has to accept it. Human action could bring about salvation, a view that would have been anathema to the early Puritan settlers of New England, the Presbyterians of the southern mountains, and most early English Protestants. Not only could individuals work to effect their salvation, they also could work toward the perfection of both their individual lives and of the social and political world. These ideas were spread by what is known as the SECOND GREAT AWAKENING, which ran roughly from 1790 to 1830 and played a major role in the developments of American life in that period. These ideas also played a major role in the struggle over the role and nature of religion in American life. If disestablishment provided the opportunity for the creation of new religious forms and increased religious experimenta-

tion, the creation of a democracy also raised challenges about how to maintain it. For many individuals, democracy depended on this new form of Protestantism. The argument was made that Protestantism was the source of the values of democracy and civilization. While these individuals tended to see their approach to religion as nonsectarian (since it was not a particular form of Protestantism), others, particularly Catholics, saw it for what it was, Protestantism, and resisted its imposition on them. At the same time, some of these Protestants saw Catholicism and immigrants (and particularly Catholic immigrants) as a threat to democracy. These new immigrants, reared amidst monarchs and into a religion that opposed freedom and democracy, brought with them undemocratic views. As Catholics, they owed allegiance (so these Protestants thought) to a foreign monarch, the pope, who not only was the head of the Catholic Church but also was a secular ruler over a large swath of modern-day Italy until 1867. Such individuals were a threat to democratic values. As a result, the 19th century saw the emergence of a form of anti-Catholicism that surfaced periodically throughout American history even into the 21st century (see NATIVISM).

The religious ferment of the time also gave rise to new religions, such as Mormons (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS) and the Oneida Community (see COMMUNITARIANISM), as well as a revitalization of others such as the SHAKERS. Many of these new religions developed very different forms of social arrangements and even marital and sexual arrangements (see SEXUALITY) than those familiar to most Americans. How and to what extent should these be tolerated? When do religious practices become a threat to society? When can they be outlawed by the state? These issues would be struggled with until well into the 21st century. While a partial answer would be that the government cannot outlaw practices because they are part of a particular religion, it can adopt generally

applicable laws that may outlaw certain religious practices. This answer lay in the future, and, even if it had existed, it did little to stem the extralegal if not illegal attacks and harassment inflicted by groups of individuals.

Finally, the move toward PERFECTIONISM gave rise to innumerable reform movements, including anti-dueling, women's rights, temperance, and abolition (see WOMEN, RELIGION AND; ABOLITIONISM). Nearly all of these movements had deep religious roots and invariably were articulated in religious language. Many of them, particularly abolition, met with resistance and even violence. Supporters of these movements would be attacked, beaten, jailed, and even murdered.

The first half of the 19th century saw a proliferation of responses to the new realities created by the United States, both legally and socially. The absence of an established religion and the vast open space of the country, particularly after the Louisiana Purchase in 1808, as well as the very nature of its democracy led to a freedom to adapt, modify, and alter existing religious forms and practices as well as to create totally new forms.

Additionally, following the emergence of the Napoleonic empire and its replacement by a restored monarchy in France, concerns over the how to maintain the American republic and its purity increasingly came to fore. Many came to view this new form of Protestantism as the source of that maintenance.

The creation of the United States and the adoption of the Constitution and the Bill of Rights did not completely address the nature of the country or the role of religion in it. As mentioned above, several states retained their religious establishments (although it must be admitted that they were minimal). Additionally, many saw the expansion of deism and particularly the developments from the French Revolution as clear indicators of the spread of infidelity. Some fear religion itself was under attack and soon would be undermined by atheists and infidels. This was par-

ticularly true on the frontier, which lacked a settled town life and suffered from a dearth of ministers and churches. One traveler commented on this state of affairs by noting that on the Kentucky frontier one was more likely to come upon a cabin with a copy of Thomas Paine's *The Age of Reason* than one with a copy of the Bible.

These concerns and fears were exacerbated by the French Revolution. The French Revolution heightened the political conflicts within the United States, with the Federalist Party, primarily controlled by New Englanders and descendants of the Puritans, viewing the Democratic-Republican Party, headed by Thomas Jefferson, as an American version of the French Jacobins, who had violently attacked traditional religion and directed the Reign of Terror. During the closing years of the 18th century as the United States and France moved toward war, the Federalist-dominated U.S. Congress passed the Alien and Sedition Acts in 1798. These laws were directed against immigrants (primarily French), who were viewed as hostile aliens, and the Democratic-Republicans, whose support for the French Revolution was viewed as seditious. Behind the laws lay the suspicion that there was a vast conspiracy to undermine the existing government. The view that there exists a conspiracy driven by some secretive group bent on world domination has driven much of the religious and social intolerance in the United States, whether directed at Catholics, Jews, or communists. The fear of some unknown and unseen force determined to crush true religion and democracy remains a periodic and regular theme in the history of religious intolerance in the United States.

The first major "conspiracy" identified in the history of the United States involved none of those groups, but was directed at the source of infidelity and atheism in the United States. The existence of this insidious threat to the new country was proclaimed on May 9, 1798. On that day, Jedidiah Morse told his congregants at

New North Church, Boston, that he possessed documents that demonstrated the existence of an international conspiracy to overthrow the government of the United States.

This conspiracy was directed by a secret cabal known as the “Bavarian Illuminati,” and its goal was the destruction of Christianity, morality, and private property. This group had fomented the French Revolution and now focused on the United States. These charges were picked up by the Congregationalist and Presbyterian clergy in New England, including the president of Yale University, Timothy Dwight, who railed against those who spread the “malice of atheism and the sin of the enemies of Christ.” While these charges eventually were drowned by mockery from the Jeffersonian newspapers and then swamped by the Jeffersonian electoral sweep in 1800, the episode illustrates a response to new and alien ideas (and individuals) that has popped up with some regularity in U.S. history. It also illustrates the intensity of the conflict over the nature of the new United States, a conflict that dominated American politics through most of the 19th century.

BUILDING THE RIGHTEOUS EMPIRE

The concern over religion was addressed to some extent by the emergence of the Second Great Awakening. The awakening started as a mild form of religious refreshing in New England in the late 1790s. Led by TIMOTHY DWIGHT as part of his attack on freethinking and infidelity, LYMAN BEECHER, and NATHANIEL WILLIAM TAYLOR, the early stages of the Second Great Awakening were staid and serious events emphasizing that success depended on God’s grace, not the work of human beings. The results, however, would be greater religious seriousness and a reformation of morals.

Such was not the case as revivals moved out into the western frontier, at this time upstate New York, Ohio, and Kentucky. There

they became much more emotional affairs accompanied by what many viewed as aberrant behaviors, such as fainting, weeping, and shouting. Many dismissed such occurrences and roundly condemned them. They criticized the overemphasis on the spirit and the excessive demonstration of religious fervor. These criticisms could be quite pointed. Regarding the CANE RIDGE REVIVAL in 1801, which brought more than 10,000 people together for days of preaching and worship, a critic claimed that more souls were conceived than saved during the time.

This emotionalism and the democratizing ethos that dominated the latter half of the Second Great Awakening were packaged by CHARLES GRANDISON FINNEY. His approach to revivalism played a major role in the development of much of American Protestantism. For Finney, a revival was a process of bringing an individual to an awareness of her or his need for conversion, then presenting the opportunity to experience that conversion. God’s grace, Finney argued, always was there and available, one simply needed to bring people to an acceptance of it, to convince them to choose it.

For Finney and those influenced by him, however, the choice not only was about accepting God’s grace but also about how one lived. Both individual and social perfection were possible. The movement, known as Perfectionism, grew out of several strands, but its main source was the Methodist tradition. John Wesley, the founder of Methodism, had taught that it was possible for Christians to reach a point in their individual lives at which they received sanctification from God and were free from all intentional sins. The process of sanctification could purify their motives to the point where they could become as “perfect as our Father in heaven is perfect.”

Spread in the United States by Finney, PHOEBE WORRALL PALMER, and ASA MAHAN, a follower of Finney’s who wrote *The Scripture Doctrine of Perfection* (1839), Perfectionism

soon had a major foothold not only in Methodism but also among Baptists, Presbyterians, and Quakers. This emphasis on perfectionism soon moved from the individual level to the social as well. A perfected society could be established by perfected individuals through the processes of moral suasion and, possibly, through the political process. It, therefore, was a duty of Christians to work to end the evils that existed in society, whether drunkenness, dueling, or slavery.

By aggressively working to improve society, Christians could help usher in the millennium, the thousand year reign of Christ. These views played a major role in the formation of the innumerable reform societies that marked much of the 19th century. The growth of missionary work, both in the United States and internationally, the TEMPERANCE, antislavery, education (see EDUCATION, PUBLIC SCHOOL), and other movements emerged from this impulse and blended with other early strands of social improvement. The role of religion in driving social reform dominated American public life to such an extent that when he visited the United States in 1835, Alexis de Tocqueville would remark that in the United States religion was "the foremost of the political institutions." As the United States moved westward and its goods and people moved out into the wider world, they saw themselves as establishing a "benevolent empire" that would bring the gifts of democracy, civilization, and education to all. This benevolent empire perceived itself as Protestant and democratic. For many, the terms were almost inseparable. Protestantism (or, as many in the 19th century would have said, Christianity, for to them Protestantism was true Christianity), in their minds, had given the world freedom and democracy, and both would expand together.

There remained one major concern, however, the antidemocratic and obscurantist force of Catholicism. For many 19th-century American Protestants, Catholicism remained a reli-

gion that stood in opposition to free thought and free men. Anti-Catholicism was not new to America. It had arrived with the first British settlers, and part of the British colonial project was the creation of a Protestant bulwark against French and Spanish Catholics on the continent. This anti-Catholicism ebbed and flowed until the election of John Kennedy as president in 1960 brought an end to socially acceptable and overt anti-Catholicism.

The anti-Catholicism the first English colonists to North America brought with them was part of the political and social environment in England. Once established, most colonies enacted into law the anti-Catholic statutes of their homeland. Among no group of colonists was anti-Catholic sentiment more complete than the group of Puritans who founded the Massachusetts Bay Colony. For them, anti-Catholicism was a mission. Religiously one of their main goals was to purify the Church of England of its remaining "popish" elements. The colony outlawed public performance of the Mass and expelled priests and Jesuits found in the colony. Those who dared return faced the death penalty. Most other colonies placed similar limits on Catholics, denying them the right to vote and to hold public office. In fact, New Jersey limited Catholics' right to any state office until 1844 and New Hampshire until 1876.

This anti-Catholicism weakened somewhat during the American Revolution due to American Catholic support for the Revolution and the military and economic assistance of Catholic France. This tolerance continued into the post-Revolutionary War period. The new U.S. Constitution prohibited any religious test for national political office, and the First Amendment to the Constitution allowed for the free exercise of religion and forbade the national government from creating any religious establishment. Despite this new-found tolerance, however, suspicions of Catholicism based on political and social reasons did not disappear. Few feared the native

American Catholics, whose spiritual leader, Bishop JOHN CARROLL was as committed to the republic as to his faith. The fear was of foreign Catholic immigrants who, raised among princes and prelates, came to the new country with no knowledge of republican government or independent thought. Many argued that such immigration must be ended to avoid the destruction of the republic.

The immigrants to whom the anti-Catholics of the 1830s objected were overwhelmingly Irish. By that decade, the development of what has been called the "Protestant (or Benevolent) Empire" in America had begun. Into this land of "pure" religion and republican virtue poured a seemingly vulgar, superstitious "horde" from Ireland. These individuals, many Protestant Americans believed, arrived ignorant of democratic culture, unfamiliar with republicanism, and unschooled in independent thought. They also, in the minds of many American Protestants, owed their allegiance to a foreign potentate, the pope. These Protestants feared that this allegiance would result in their voting being dictated by the church and soon would destroy American freedom and democracy.

Finally, there was a long history of suspicion of Catholic immorality and debauchery in convents and monasteries. Nuns were suspected of being at the mercy of licentious priests, and Protestants viewed celibacy as an insult to the natural order. Catholic immorality did not stop there, in the eyes of many Protestants. Catholicism itself was viewed as being in opposition to the reforming ethos of the time. Catholicism seemed to be opposed to temperance, sabbatarianism, women's rights, anti-slavery, and all the other objects of reforming zeal. Additionally, on the European continent, the church consistently allied itself with reactionary and antidemocratic forces and stood opposed to the values of democracy, freedom of speech, and religious liberty.

To counter the growing influence of Catholicism and to warn Americans of its

threats, there appeared many popular newspapers and journals whose purpose was "to inculcate Gospel doctrines against Romish corruptions . . ." Among these papers were the *Protestant*, the *Anti-Romanist*, *Priestcraft Unmasked*, and *Priestcraft Exposed*. Public lectures and meetings on such topics as "Is Popery Compatible with Civil Liberty?" drew large and enthusiastic crowds.

The anti-Catholicism of the 1830s was strengthened by three key events. The first was the publication of LYMAN BEECHER's *Plea for the West*. In this pamphlet, Beecher called for an organized attempt to convert the Mississippi Valley region to Protestantism in order to prevent the realization of a papal conspiracy to conquer the region for the Catholic Church. Such stories soon raised suspicions of Catholics everywhere. One result was an 1834 anti-Catholic riot in Charlestown, Massachusetts. A mob, spurred by rumors of immoral convent activities and inflammatory sermons by Protestant ministers, including the visiting Lyman Beecher, attacked the town's Irish quarter, sacking and burning the Ursuline Convent and its girls school.

The 1830s also saw the beginning of an indigenous anti-convent literature; previous examples had been brought in from England or the Continent. The 1835 publication of Rebecca Reed's rather tame *Six Months in a Convent* was followed by the salacious *Awful Disclosures of Maria Monk* in 1836. The latter volume repeated every centuries-old rumor of sex, sadism, and murdered babies behind convent walls. These books reignited the nativist fires that had been dampened by the shock at the destruction of the Ursuline convent.

Despite the virulence of the ANTI-CATHOLICISM of the 1830s, the movement did not receive an organized form until 1841. In that year, the American Republican Party was founded on an anti-Catholic, anti-immigrant basis. Although short-lived (it disbanded in 1846), the American Republican Party had a major impact

during those five years and played a leading role in the Philadelphia "Bible riots."

One of the major reform movements of the early 19th century focused on education. Convinced that a republic required an educated electorate to survive, many individuals focused on increasing the number and quality of common schools. While educational reformers such as HORACE MANN felt that education should be nonsectarian, they did not think it should be devoid of religious content. As a result, the Bible and other religious texts often constituted a significant portion of the curriculum. What these reformers saw as nonsectarianism, however, Catholics saw as Protestantism. The use of the King James Version of the Bible and the Lord's Prayer in its Protestant version made it clear to many Catholics that this indeed was Protestant instruction.

When Catholics demanded either the use of their version of the Bible and Lord's Prayer or excusing Catholic children from such religious instruction, violence often erupted. Anti-Catholic groups in Philadelphia charged Catholics with trying to ban the Bible from public schools. The American Republic Party and others organized a series of public meetings and demonstrations that led to massive rioting throughout the city. The fighting lasted from May 4 to July 7, 1844. Gunfire and artillery duels rocked the city, eventually leading to the imposition of martial law. Churches and schools were burned, shops looted, and hundreds injured. At least 30 people were killed in the violence. Only after the governor sent in a militia force of more than 5,000 was the rioting finally quelled. In New York City, similar anti-Catholic agitation by the party brought the threat from Archbishop John Hughes that "If a single Catholic Church is burned [here]," the entire city will be torched.

These developments did not end immigration, however. In fact, as the situation in Ireland deteriorated, immigration actually increased during the mid-1840s and into the 1850s. The Irish potato famine between 1845

and 1851 was the driving force in this increased immigration. New anti-Catholic organizations arose to replace the earlier ones. Charles B. Allen founded the Organization of the Star Spangled Banner in 1849 as an anti-Catholic and anti-immigrant organization. Reorganized by James W. Barker in 1852, it soon became the leading nativist and anti-Catholic society in the country. Members pledged never to vote for a foreign-born or Catholic candidate. Wealthier and more powerful members of a community were placed under the obligation to work to remove aliens and Catholics from positions of authority and to deny them jobs and public office.

Dedicated to secrecy, the organization was dubbed the Know Nothings. By 1854, the political branch of the movement, the American Party, dominated state politics in Massachusetts and New York. But the chaos of American politics during the antebellum period attracted voters as much as opposition to foreigners and Catholics. Following the 1856 presidential election, the American Party, unable to deal with the issues of slavery and union, found anti-Catholicism an insufficient unifying issue and disbanded.

While the Civil War gave Americans more immediate concerns than fear of a Catholic takeover, it provided other reasons for anti-Catholicism. Traditional Irish-Catholic support for the Democratic Party, Pope Pius IX's rumored support for the Confederacy, and the silence of the bishops on slavery made Catholicism suspect to many Republicans. In the late 19th century, the Democratic Party was labeled the party of "Rum, Romanism, and Rebellion." This slogan served Republicans as a vote-getting appeal until 1932.

Immigrants and Catholics were not the only sources of concern during the 1800s. The variety of religious experimentation, from Perfectionism within the mainstream denominations to completely new religious movements, such as the Mormons and the Oneida Community with its adoption of "plural mar-

riage," challenged many traditional views and approaches, as did the enormity and variety of the social reform movements. Many of these developments met with opposition, hostility, and, occasionally, violence.

Among the most controversial were new religious movements, many of which not only made novel religious claims but also altered traditional understandings of property, sex, and gender relations. The Shakers, Oneida Community, and Mormons are perhaps only the best known of these movements, but there were many others. These ranged from the failed Transcendentalist experiments at Fruitlands, established by Bronson Alcott in 1843, and the slightly longer-lived Brook Farm to the Amana Colonies in Iowa established in 1855 by the Community of True Inspiration, which lasted in their communal form until 1930.

Brook Farm, established in 1841 by GEORGE RIPLEY, near present-day West Roxbury, Massachusetts, included among its members Nathaniel Hawthorne (see LITERATURE AND RELIGION) ISAAC HECKER, and Charles Dana. Regular visitors were RALPH WALDO EMERSON, WILLIAM ELLERY CHANNING, MARGARET FULLER, BRONSON ALCOTT, THEODORE PARKER, Horace Greeley, and ORESTES BROWNSON. Although the schools run by the community were moderately successful, its agricultural and industrial enterprises were not. A reorganization of the community as a Fourierist phalanx (see UTOPIANISM) failed to improve its finances, and when its main building was destroyed by fire in 1846, the community disbanded. Hawthorne based his novel *The Blithedale Romance* on his time at Brook Farm.

While Fruitlands and Brook Farm were subject to little more than ridicule in some of the newspapers and in the writings of former residents (Louisa May Alcott described her time at Fruitlands in *Transcendental Wild Oats*) and the Amana Colonies were widely admired for their plain living and industrial enterprises, including their appliances, other new movements received much more hostile

responses. These more hostile responses met the Oneida Community.

The Oneida Community was established by JOHN HUMPHREY NOYES, a young biblical scholar and graduate of Andover and Yale. Deeply affected by the Second Great Awakening and its perfectionist elements, Noyes developed a distinct reading of scripture. His studies convinced him that Christ's second coming already had occurred. It was exemplified by the destruction of the Second Jewish Temple by the Romans in 70 C.E. This return meant that the prophecies of perfection that had been foretold by Jesus during his earthly ministry, including the communion of goods and Jesus' declaration that in heaven they are neither given nor give in marriage, were to be realized. In 1845, Noyes established his first community at Putney, Vermont. Local hostility and demonstrations forced him to relocate the community to Oneida, New York, two years later. In what was then a fairly frontier area, Noyes developed his community around the principles of communal property, "complex marriage," male continence, and mutual criticism. The members of Oneida also lived fairly simple lives. Their diet was primarily vegetarian, and alcohol, tobacco, and profanity were forbidden. The community also accepted the equality of men and women, and female members wore a distinctive costume consisting of a short skirt over pantlets that made movement and work easier.

Financially, the community was successful given its commitment to hard work and celebration of labor. They founded the Oneida Steel Company and made most of their money manufacturing traps, although it would expand into other forms of metalwork. Renamed the Oneida Company, it manufactured tableware.

While their discipline and hard work gained them a grudging acceptance, their views of sex and marriage led to hostility and attacks. This view, which Noyes called "complex marriage" accepted seriously the

biblical injunction cited above, that when the Son of Man came again, there would be no marriage. Unlike Mother Ann Lee, who had interpreted the injunction to mean there would be no sex, Noyes interpreted it literally, namely that there was no longer any marriage in the traditional sense. In fact, all members of the community were married to each other. Men and women therefore were permitted intercourse with all other communal members of the opposite sex. Exclusive sexual and romantic attachments were discouraged and subject to much rebuke during criticism sessions. Unwanted pregnancies were minimized through training young men to use a form of *coitus interruptus* to avoid ejaculating. They were educated into this practice by post-menopausal female members of the community, who also were to serve as spiritual advisors to the younger men. For Noyes, sex primarily served spiritual ends. It was one way to move to perfection. Since Noyes believed that perfection was a steady process, those who had been undertaking it longer than others, older people, spiritually were superior to those younger. In order to improve oneself spiritually, one should limit sexual encounters to those spiritually superior through a process known as "ascending fellowship." One did this until one had reached a level of spiritual perfection, at which time one's obligation was to become a source of spiritual education for others. In this process, "descending fellowship," one's sexual partners were those striving to improve their spiritual development.

While criticized for immorality and "free love," life in the Oneida community, including sexuality, was quite regularized and controlled. Noyes himself vigorously condemned "free love," claiming that it led to anarchy and chaos. The community itself also practiced a form of eugenics, known as stirpiculture, where certain couples were approved to have intercourse with the goal of producing a child.

The Oneida Community managed to exist for many years relatively free from conflict with its neighbors. By the 1870s, however, it found itself under increasing pressures. Part of this resulted from the increasing visibility of the women's rights movement and the advocacy of free love among some of its supporters, particularly Victoria Woodhull (see HENRY WARD BEECHER), and other Perfectionists. As a result, Oneida found itself tarred with the brush of free love and immorality. Under increasing legal and social pressures, the community ended the practice of complex marriage, while continuing to affirm its biblical sanction, and its communal property holdings, in 1876.

If Oneida suffered from legal threats and protests, the Mormons would suffer from physical violence and murder. Mormonism, or to use its formal name, the Church of Jesus Christ of Latter-day Saints, appeared publicly in 1830 when JOSEPH SMITH published the BOOK OF MORMON and established the first congregation. Smith had come into possession of the book during the 1820s after the angel Moroni appeared to him and directed Smith to the golden tablets on which the book was inscribed. The tablets, located on Hill Cumorah near Manchester, New York, were written in unknown hieroglyphics but were buried with the Urim and Thummim (the prophesy stones from the Jewish high priest's breastplate), which gave Smith the power to translate the unknown language. Smith began the translation in 1827 and worked on it for three years before publishing it in English.

Throughout the 1830s Smith received additional revelations and began to develop Mormonism into a separate and exclusivist movement. Increasingly, the revelations seemed to suggest that Mormonism was to be modeled on the lives of the ancient Israelites. Smith directed that all Mormons gather in a single community, initially in Kirtland, Ohio, and dedicated there a "temple" that incorporated many elements from the Jewish temple

ritual. Additionally, Smith soon introduced “plural marriage,” polygamy, into the Mormon doctrines.

These developments, as well as other distinctive doctrines, including the corporeality of God, ongoing revelation, baptism of the dead, and eternal marriage, increasingly separated Mormonism from other forms of Christianity. Smith’s personality and teachings led to numerous conflicts with non-Mormons, and he experienced several attacks in Ohio, including being tarred and feathered in 1832. He also was arrested several times.

In 1837, Smith decided to move the Ohio colony westward to join another Mormon community already established in Missouri, perhaps not realizing that the Missouri Mormons faced even greater hostility than their Ohio brethren. In fact, of the governor of Missouri, Lillburn Boggs, had just issued his so-called “Extermination Order.” In this document the governor declared the Mormons to be “in the attitude of an open and avowed defiance of the laws, and of having made open war upon the people of this state. . . . The Mormons must be treated as enemies, and must be exterminated or driven from the state, if necessary, for the public good. Their outrages are beyond all description.”

Shortly after the governor issued this order, a mob led by a renegade Missouri militia colonel attacked and slaughtered 19 Mormon men and boys, including a nine-year-old who was murdered in cold blood after he had been found hiding under the bellows of a blacksmith’s shop. This event, known as the Haun’s Mill Massacre, would enter Mormon history as one of innumerable instances where Mormon faithful were “martyred” for their beliefs.

Smith further inflamed the tensions in a public speech promising vengeance against Mormonism’s oppressors. Leaving Missouri, roughly 5,000 Mormons moved again, eastward this time, as they crossed back over the Mississippi in winter 1838–39 and settled in

southern Illinois. They called their new home settlement Nauvoo—an anglicized spelling of a Hebrew word purportedly meaning “to be beautiful.”

At first, things went well for the Mormons in Nauvoo. Whigs and Democrats vied for the 15,000 Mormon votes in the election of 1840, and political connections helped Smith secure a charter for Nauvoo that essentially made it autonomous. The city soon became perhaps the largest, and certainly the fastest-growing, in Illinois. It boasted its own militia, the Nauvoo Legion, and a 165-foot-high temple, built at a cost of roughly 1 million dollars. But the Mormons’ growth, and the religious government of the Nauvoo community, alarmed their neighbors, whose republican ideology recoiled from Nauvoo’s hierarchical government, collectivism, and authoritarianism. Smith had long sought to control every aspect of his followers’ lives, and at Nauvoo he seemed to grow increasingly despotic. For many outsiders, the centrality of the Church of Jesus Christ of Latter-day Saints in the governance of the city was the biggest source of fear and hostility. The community was essentially a theocracy, with religious leaders, particularly Smith, controlling civil affairs.

This may have been enough to cause some persecution, but outsiders feared the Mormons for even deeper reasons. Not only did Joseph Smith declare himself King of the Kingdom of God and announce his candidacy for president in the election of 1844, but disaffected Mormons spread the word that Smith intended to establish the “political kingdom of God.” While Mormons believe that this kingdom must be established to prepare the way for Christ’s return and for the establishment of his apocalyptic world government, Mormon theology decreed that they establish the kingdom through peaceful, legal means. Worldly governments would be allowed to collapse under the weight of their own corruption. But since this doctrine was cloaked in such secrecy (as were many elements of

Mormon doctrine), fine points were lost (or intentionally disregarded) by outsiders, who already suspected the church because of rumors of "plural marriage," or polygamy.

Apostates from the church and outside critics circulated rumors that Smith was plotting to overthrow the U.S. government and replace it with a kingdom ruled by a mysterious "Council of Fifty." Smith lent credence to the rumors when he ordered the destruction of a Nauvoo newspaper office run by an ex-Mormon. This seeming display of Mormon tyranny (despite the fact that attacks on newspapers were not unheard of throughout the country at that time), added to the tales of polygamy and corruption and led some of the Mormons' neighbors to take violent action.

The Illinois militia marched on Nauvoo, forcing Joseph Smith and his brother Hyrum to surrender to authorities. Their arrest was insufficient for the Mormons' enemies, and on June 27, 1844, a mob dragged the Smiths from the jail in Carthage and lynched them. Additional murders on both sides of the conflict followed, and in September 1846, the Mormons engaged their enemies in the full-fledged Battle of Nauvoo. Seeing no chance for peace in the region, Smith's successor, a former Vermont Methodist named BRIGHAM YOUNG, prepared the community for another westward migration, first to a staging area in Iowa and then across the continent to the Great Salt Lake.

There, in relative isolation, the Mormons once again would strive to realize their vision of a godly community. The state of Deseret became the central locus of Mormon life, and with Smith's successor Brigham Young serving as territorial governor, the new community prospered. While outside attacks continued and the federal government outlawed polygamy in the territories in 1862, political chaos as the country moved toward the CIVIL WAR and the Mormon's geographic isolation limited their contact with non-Mormons and minimized

conflicts until the 1870s, at which time almost open warfare between the Mormons and the federal government broke out.

Given the violence that conflicts over gender, sexuality, and marriage created during the first half of the 19th century, other developments of that time, such as the increasing use of women as public speakers, may not seem overly controversial. In the 1830s, however, they were novel for most churches (and for society as a whole) and appeared to violate biblical injunctions against women teaching in public. When ANGELINA and SARAH GRIMKÉ addressed a "mixed" audience in Boston in 1837, the Congregationalist ministers of Massachusetts issued a pastoral letter condemning females "who so far forget themselves as to itinerate in the character of public lecturers and teachers." In May the following year at the Anti-Slavery Convention of American Women, the Grimké sisters and other female abolitionists were taunted and jeered by a mob that eventually set fire to the hall housing the convention.

Abolition, the opposition to slavery and the call for its immediate end, generated the greatest amount of hostility and violence. American abolitionism had its roots in religion, with Quakers, Baptists, and Methodists all opposing it during the 18th century. John Wesley had condemned slavery as the sum of all villainies. While Methodists and Baptists eventually made temporary peace with slavery, this peace was challenged by the growth of abolitionism, and both denominations, as well as the Presbyterians, eventually split over the issue (see PROSLAVERY THOUGHT; CIVIL WAR).

If American abolitionism as a movement had a beginning, it can be said to be 1831, when William Lloyd Garrison began publishing *The Liberator*. Garrison and his followers demanded immediate abolition of slavery and the equal treatment of freed slaves. Garrison, in addition to THEODORE DWIGHT WELD, the Grimké sisters (one of whom, Angelina, was married to Weld), and FREDERICK DOUGLASS

decried slavery as a moral evil and offense to God. Slaveholders exercised an evil control over human beings, and the fact of slavery gave rise to even more evils. The Grimké sisters, who came from a slave-holding South Carolina family, were particularly powerful spokeswomen for the cause because they knew the evils of slavery intimately.

But calls for abolition and black equality met with tremendous hostility. In most southern states it was illegal to send *The Liberator* through the mails, and Garrison himself was a wanted man. Crowds regularly attacked abolitionist speakers. In Alton, Illinois, the Presbyterian minister and newspaperman Elijah P. Lovejoy was such a vociferous critic of slavery that a mob attacked his home and printing establishment, destroying the equipment and savagely murdering him.

This violence called forth divine vengeance in the person of JOHN BROWN. Brown, who had a history of opposition to slavery, while attending a memorial service for Lovejoy, purportedly stood up and proclaimed, "Here before God, in the presence of these witnesses, I consecrate my life to the destruction of slavery." Brown condemned slavery as an offense against God and declared that slave masters were destined to be punished for their sins against God and humanity. Brown eventually came to view himself as the instrument of God's vengeance on those who enslaved their fellow human beings. He would enact this vengeance in Kansas during that territory's vicious battles between pro and antislavery forces and eventually led an attack on the federal armory at Harper's Ferry, Virginia (now Harpers Ferry, West Virginia) with the hope of inspiring a massive slave rebellion that would end the evil of slavery once and for all.

This did not happen, and Brown was captured, tried, and executed on December 2, 1859. The manner in which many interpreted the religious dimensions of Brown's actions can be seen readily in the words penned by

HENRY DAVID THOREAU the day of Brown's execution. "Some 1800 years ago, Christ was crucified. This morning, Captain Brown was hung. He is not Old Brown any longer; he is an angel of light." Sixteen months later, the Civil War would begin, and Union soldiers would march to battle singing about John Brown's body mouldering in the grave.

From real battles fought over the Bible to the most destructive war in American history, the early 19th century was marked by intense religious conflicts. These conflicts went to the very heart of what America would be and who truly could claim to be an American. These conflicts provided no clear answers. Anti-Catholicism would wane, only to reemerge several more times. Anti-immigration agitation would diminish for a few decades only to reappear and become much more successful in the late 19th and early 20th centuries. Slavery would be abolished, but white Americans failed to accept African Americans as their equals, and many would struggle to return them to a state close to slavery. Yet the Perfectionist impulse that emerged during this period, with its emphasis on social reform and social movements, created a reality that many came to view as distinctly American. It would continue to agitate Americans, usually from a religious base, to realize the country's unfulfilled goals of equality, tolerance, and freedom. This realization would take more time and more effort and would meet with many obstacles and always would seem just out of reach.

The 1860 election of ABRAHAM LINCOLN as president of the United States brought to a head all the religious, social, and political conflicts that had agitated the country for the previous four decades. The division in the country resulting from this election had been prefigured by the splits in several denominations—the Baptists and Methodists in 1845 and the Presbyterians (over numerous issues including abolitionism) in 1837 and yet again in 1861. One's position on slav-

ery had become determinative for much of one's loyalties, religious and political. As the country split and a shooting war replaced the culture wars of the previous decades, other concerns receded into the background.

THE CIVIL WAR

For both sides, the Civil War soon took on the ethos of a religious crusade, one in which both sides invested both Christian (primarily) symbolism and the symbols of CIVIL RELIGION. On the Union side, the words of Abraham Lincoln's first inaugural address reflect a deep understanding of this civil religion. "The mystic chords of memory, stretching from every battlefield and patriot grave to every living heart and hearthstone all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature." While JULIA WARD HOWE's words for the "Battle Hymn of the Republic" reminded everyone of the reasons for the war and its deeply religious, indeed Christian, aim. This is seen most clearly in two of its verses, one of that is rarely sung today and another that has been changed in most contemporary renditions.

*I have read a fiery Gospel writ in burnished
rows of steel;
As ye deal with My contemners, so with you My
grace shall deal";
Let the Hero, born of woman, crush the serpent
with His heel,
Since God is marching on.*

...

*In the beauty of the lilies Christ was born across
the sea,
With a glory in His bosom that transfigures you
and me:
As He died to make men holy, let us die to
make men free;
While God is marching on.*

In his inaugural as president of the Confederate States of America, Jefferson Davis made a not dissimilar appeal, proclaiming that: "The impartial and enlightened verdict of mankind will vindicate the rectitude of our conduct, and He who knows the hearts of men will judge of the sincerity with which we labored to preserve the Government of our fathers in its spirit."

Both sides claimed to be upholding the true American spirit and undertaking, with reluctance, an armed conflict that pitted the forces of right, reason, and religion against chaos and tyranny. For the Union, the war often was framed as a contest between those committed to tyrannizing their fellow humans and to destroying the country. Among the Confederacy, the war was viewed as a conflict against an alien invader whose very form of life was committed to destroying all that was noble, virtuous, and true. The grasping nature of capitalism in the North was, it was argued, antithetical to true humanity and religion. This view would be extended greatly after the Civil War into the "Myth of the Lost Cause" (see LOST CAUSE, MYTH) as the South struggled with giving meaning to its catastrophic defeat. This defeat lay in the future, however, and the two sides entered the Civil War convinced of three things: the rightness of their cause, their certain victory, and that the war would be short-lived. These certainties would be tested for the North and destroyed for the South through four long, hard years of war. Casualties were immense, more than 600,000 dead. Some one-day battles, such as Antietam and Shiloh, saw casualty figures in excess of 20,000.

The pain and horror of the war had a marked effect on the soldiers. Religious organizations were active in responding to their needs by caring for the disease, stress, and loneliness facing the soldiers. Numerous denominations and other organizations engaged in an ongoing process to serve the soldiers of the Union and Confederate armies.

These organizations focused primarily on providing medical and nursing care; maintaining morals, morale, and sanitation; and assisting liberated or runaway slaves. The United States Sanitary Commission, a private organization despite its name, while nominally nonsectarian, had a prominent Unitarian minister, the Reverend Henry W. Bellows, as its chairman and formal representation from a variety of religious leaders on its board.

Roman Catholic nuns played a major role in providing nursing care among the soldiers. Nuns made up nearly 30 percent of the women who served as volunteer nurses. These women, although looked upon with suspicion by some reformers such as the Quaker Dorothea Dix, were particularly welcomed by the soldiers and the medical corps.

The Christian Commission, comprised of more evangelically oriented Christians than the United States Sanitary Commission, distributed religious tracts and Bibles to the soldiers, as well as offering religious services. It also collected and distributed medical supplies, clothing, food, and other personal items for soldiers. Organized in November of 1861 during a meeting of YMCA (see *YOUNG MEN'S CHRISTIAN ASSOCIATION*) representatives, the Christian Commission's mission was to promote "the spiritual good of the soldiers in the army, and incidentally their intellectual improvement and social and physical comfort." The commission's board members included four bishops (two Methodists and two Episcopalians). One of the Methodist bishops, Matthew Simpson, was reported to be President Lincoln's favorite preacher and was a close personal friend of Secretary of War Stanton and Treasury Secretary Salmon P. Chase. Another commissioner, the Reverend Herman Dyer, had been a college mate of Secretary Stanton. The Speaker of the House of Representatives, Schuyler Colfax, also served on the commission's board. Its annual meetings were held in the House wing of the Capitol and attended by the president, the chief justice, cabinet secre-

taries, senators and representatives, and senior members of the army and navy.

Such connections gave the Christian Commission ready access to the troops. In the camps, the Christian Commission delivered food, clothing, and "wholesome" reading materials. Members of the Christian Commission viewed the concrete aid and support to individual soldiers as the essence of true Christianity. Such actions demonstrated what Christianity was about. "Soldiers," one field member wrote,

could not oppose a Christianity that manifested such concern for their bodily comfort. Farina, oranges, lemons, onions, pickles, comfort-bags, shirts, towels given and distributed in the name of Jesus, though designed for the body, gave strength to the soul. To the quickened senses of a wounded soldier parched with fever, far from home and friends, an onion was a stronger argument for the religion which bestowed it than the subtle reasoning of Renan, and a pickle sharper than the keenest logic of Colenso!

In the field hospitals, the Christian Commission members served as nurses, aides, and orderlies. They provided bandages and other medical supplies, along with food and companionship.

Religion not only was a source of material support for the soldiers, it also was a source of internal and emotional support. Major religious revivals took place in both armies, with estimations of total conversions reaching nearly 300,000 soldiers. Many of these conversions were the fruit of seeds planted among the soldiers in their youths, particularly by their mothers. Contemporary accounts tell of many such stories. Following his conversion, one soldier was heard to say, "O that my mother were here!" When bystanders inquired as to why, he answered, "Because she has so long been praying for me, and now I

have found the Saviour." Another soldier suffering from serious wounds directed a friend to, "Tell my mother that I read my Testament and put all my trust in the Lord. . . . I am not afraid to die."

As the Union army advanced into the Confederacy, the numbers of refugees, contrabands (slaves liberated during the Union advance), and, later, the freedmen provided the Union army and the federal government with an immense challenge. The responsibility to care for these individuals fell to the army, and it had to find some way to meet their needs. Although commanders employed various methods to respond to this issue, most turned to religious organizations for help.

In no area was this more expansive than in the provision of aid to the freedmen. This work began in September 1861 when the American Missionary Society sent a group to work with freed slaves housed near Fort Monroe in South Carolina. This work continued through the war and at its conclusion became formalized with the creation of the Freedmen's Bureau under the direction of Major General Oliver Otis Howard. A man of staunch piety, he was known as the "Christian Soldier," Howard was committed to educating and aiding the recently freed slaves. A circular issued over his name in 1865 (although drafted by LYMAN ABBOTT, his assistant and a minister) declared, "The utmost facility will be afforded to benevolent and religious organizations in the maintenance of good schools for refugees and freedmen until a system of free schools can be supported by recognized local governments."

To achieve this end, the Bureau was to cooperate with,

private benevolent associations of citizens to aid the freedmen, and with agents and teachers, duly accredited and appointed by them, . . . hire or provide by lease buildings for purposes of education whenever such associations shall, without cost to the

government, provide suitable teachers and means of instruction and . . . furnish such protection as may be required for safe conduct of such schools.

By the end of its existence, the Freedmen's Bureau had paid nearly \$6 million to private benevolent organizations, mostly the American Missionary Association and the American Freedmen's Union Commission, for educational work among the freedmen.

Both of these organizations had express religious commitments. The AMA demanded a fervent piety of its teachers and felt that it would be "suicidal to subject our missionaries and teachers (both in one) to any body of men not of a religious character; and we cannot separate the educational from the religious element." Less expressly sectarian, the AFUC also required that its teachers demonstrate a genuine spirit of love for God and man and, like the AMA, refused to hire Roman Catholics.

If the war saw Americans of all religions killed together, some prejudices did not fall away quickly. While proximity minimized many of these prejudices, they would continue to haunt the country for another century. The Civil War also produced a in the person of the president of the United States, Abraham Lincoln, one of its deepest religious thinkers ever and one of its most reflective exponents of PUBLIC RELIGION. Lincoln, although deeply committed to the war and the ends for which it was fought, was not inclined to believe that he knew clearly the mind of God. When a group of ministers arrived in the White House to meet with Lincoln to inform him that they knew God's will for the nation, Lincoln is reported to have quipped that since he was the president, it might have been better for God to have informed him.

Lincoln also refused to claim that God solely was on the side of the Union. The depth of his thought regarding both the war and America's purpose in the world can be seen

in many places, including the Gettysburg Address. But it probably is best seen in his Second Inaugural Address. There Lincoln, like so few, saw the terrible complexities of war and national interest when he said:

“Both sides [North and South] read the same Bible, and pray to the same God; and each invokes His aid against the other. It may seem strange that any men should dare to ask a just God’s assistance in wringing their bread from the sweat of other men’s faces; but let us judge not that we be not judged. The prayers of both could not be answered; that of neither has been answered fully. The Almighty has His own purposes.”

One of the few American political leaders with a sense of the tragic in history, Lincoln would reflect critically on the events that had given rise to the war. Reflecting on the possibility that it indeed might be divine punishment for the evils of slavery, Lincoln would state in the Second Inaugural:

“If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him? Fondly do we hope, fervently do we pray, that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondsman’s two hundred and fifty years of unrequited toil shall be sunk, and until every drop of blood drawn with the lash shall be paid by another drawn with the sword, as was said three thousand years ago, so still it must be said ‘the judg-

ments of the Lord are true and righteous altogether.’”

The devastation wrought by the Civil War may seem to have borne out Lincoln’s fear. In its effects on the South, it could be said that the wealth piled by slavery was indeed sunk. One-half of the South’s farm machinery and one-third of its farm animals were destroyed in the war. The currency of the country was declared void and unredeemable. Its social and political structures were torn asunder. The elite of the country was disenfranchised, many were deprived of their citizenship or imprisoned. Combined with this, was the loss of those killed in the war (at least 250,000 or about 9 percent of the white male population), and those who emigrated after it, unable to face the prospect of life in a defeated country.

While the number and length of imprisonments were relatively short, Jefferson Davis, the longest imprisoned, served 18 months, the number disenfranchised and killed was enormous. Some of the Confederate high command, like Robert E. Lee, never regained the rights of citizenship while alive. Others, like Judah P. Benjamin, the Confederacy’s secretary of state, and John C. Breckinridge, its secretary of war, emigrated to Europe. Six thousand Confederates went to Brazil, 2,000 to Mexico, and others to Venezuela and British Honduras.

The states of the former Confederacy were a conquered nation, unwilling hosts to an army of occupation. The unthinkable had happened. The cause was lost indeed, and the “infidel Yankee” and the formerly enslaved blacks were in the ascendant. The clouds no longer loomed on the horizon, the whirlwind had arrived.

White southerners were forced to make sense of how this could have transpired. What forces led to the defeat? Unable to accept that their cause had been wrong, southerners turned to theological interpretations. These interpretations became the core of the Lost

Cause Myth. Like much of American religion, this myth had both a Christian and “civil religion” element. In the more explicitly Christian elements, the myth saw the South’s defeat as part of God’s plan for the United States. Recognizing that the South remained the locus of true religion in the country, it had to be prevented from seceding so that the South and its citizens could be the source of religious revival for the wider United States. God had an important purpose for the Southern people and had to chastise them for their sins—like the Israelites of old—so that they could better serve God’s will. Does not God chastise and test those whom God loves? Certainly! The South, therefore, had to remain in the Union in order that its pure orthodox religion could be used as an antidote to the theological liberalism, modernism, and unbelief rampant in the North.

RELIGION IN THE GILDED AGE

America in the Gilded Age definitely could have used some sort of antidote, although the one the South offered was no cure for the real ills. Between the end of the Civil War and WORLD WAR I, several major movements affected the United States and played major roles in its development. Preeminent among these was the massive influx of immigrants into the country. Between 1865 and 1918, almost 30 million people immigrated to the United States. These immigrants—Polish and Italian Catholics, Norwegian Lutherans, Russian Jews, Greek Orthodox, Bohemian freethinkers, Chinese Confucianists—would transform the American religious and cultural landscape. From New York City to Chicago, from the prairies of the Upper Midwest to the Pacific coast, these immigrants came with their religious, linguistic, and cultural traditions. These immigrants increased and expanded the religious diversity. In doing so, they faced a dual struggle. They had to find their place in the United States and had to

find a place for the United States and its radically different social and political structure in their traditions.

In post-bellum America, these challenges were particularly acute for Roman Catholics. The Civil War had ended the anti-Catholic political movements of the antebellum era and the shared experience of fighting alongside each other had minimized the power of anti-Catholicism in general. When the Second Plenary Council of the Roman Catholic Church in the United States convened in Baltimore in 1866, President Andrew Johnson and other political notables attended its closing assembly.

Developments across the Atlantic in the Catholic Church, however, were moving in directions that would increase the suspicion that Catholicism was incompatible with republicanism and democracy. These movements from a Catholic Church that increasingly found itself both intellectually and physically under attack would show, to many at least, that the church was a vigorous opponent of freedom. Individuals could draw this conclusion from such official pronouncements as the *Syllabus of Errors* a papal encyclical issued in 1864. The following views were among those condemned by the *Syllabus*.

- Every man is free to embrace and profess that religion which, guided by the light of reason, he shall consider true.
- The Church has not the power of using force, nor has she any temporal power, direct or indirect.
- The Church ought to be separated from the State, and the State from the Church.
- In the present day it is no longer expedient that the Catholic religion should be held as the only religion of the State, to the exclusion of all other forms of worship.
- Moreover, it is false that the civil liberty of every form of worship, and the

full power, given to all, of overtly and publicly manifesting any opinions whatsoever and thoughts, conduce more easily to corrupt the morals and minds of the people, and to propagate the pest of indifferentism.

This encyclical was followed in 1868 by the convening of the First Vatican Council (see VATICAN COUNCIL I). This council had a major focus on strengthening the authority of the church and the papacy. It succeeded by approving the document *Pastor Aeternus* promulgating the doctrine of papal infallibility. The combination of that doctrine with the pope's continued assertion of his right to temporal authority and, indeed, that the Church's authority supersedes that of the state, would provide ammunition for anti-Catholics in their attacks on the church.

While the church would have its share of external challenges in the coming decades, larger challenges came from inside the church. Unlike other countries, the United States was the only place where large numbers of Catholics from different cultures actively interacted with one another. Different traditions, emphases, and languages struggled for control in Catholic parishes. The dominance of Irish Catholics among the bishops generated a great deal of suspicion. Germans, Italians, and others charged discrimination based on real and perceived affronts. These charges often brought in their fellow countrymen from Europe and, given the church's suspicion of the social and political environment in the United States and even the American Church hierarchy, complaints from Europe often received undeserved attention. One result was the struggle over what was known as CAHENSLYISM.

The American bishops generally supported the centralizing tendency in the church, feeling it aided them in organizing the complexities of the American situation. They differed with their European colleagues, however, in

their view of the relationship of the church to the non-Catholic world.

This led to what is known as the "Americanist Crisis" in the church (see AMERICANISM). Led by Archbishop JOHN IRELAND and supported by the leading prelate of the American Church, JAMES GIBBONS, they believed that while all Catholics in the United States should conform to a single Catholic culture, this culture should be open to the possibilities and promises of the country. This singular culture would be both American and Catholic.

The Americanists, as they were known, also seemed to have the support of Pope Leo XIII (r. 1878–1903). By the mid-1890s this support began to dissipate. The papal encyclical *LONGINQUA OCEANI* (January 6, 1895) stated that, despite the church's growth in the United States, the church would be in a better position if it received legal and financial support from the government.

In January 1899 the pope officially condemned the "Americanist heresy," which purportedly taught that the Catholic Church should adjust its teachings to accommodate the modern world and to become more democratic. Fear of alienating the church's hierarchy led to a retrenchment by the American Church that resulted in over 50 years of intellectual and cultural insularity. If Catholics in the United States had to adjust culturally, linguistically, and religiously to the realities of this country while constantly looking over their shoulders at the European hierarchy, other immigrants shared many of the same difficulties. In the period following the Civil War, Orthodox Christians and Jews shared the same difficulties (absent centralized control) but with the added challenge of being very distinctive Christians or non-Christians in a demographically overwhelming Protestant Christian country.

Orthodox Christianity first made its way into what would become the United States as a result of Russian economic and imperial expansion into Alaska and, to a lesser extent,

America's Pacific coast. Russian Orthodox missionaries gained numerous converts among Eskimos and Aleuts, but the expansion stopped there. Only with the tremendous expansion of immigration in the 19th century did Orthodox Christianity begin to grow substantially in the United States. Despite the fact that there were more than 5 million Orthodox Christians in the United States by 2007, American Orthodoxy has not received much attention by scholars. This is unfortunate because it represents a richly textured history and, along with the ANCIENT EASTERN CHURCHES, an American connection to the oldest churches in Christian history.

The richness of this history and texture, however, also makes it difficult to write a coherent history of the Orthodoxy in the United States. Unlike the Catholic Church, there is no central hierarchy. While the Orthodox patriarch in Constantinople (now Istanbul) is the titular head of Orthodox Christianity, the various churches themselves are autocephalous ("self-headed," or self-governed). Currently, the recognized autocephalous Orthodox Churches include the Greek Orthodox Church (in various patriarchates, including Constantinople); the historical patriarchates of Alexandria, Antioch, and Jerusalem; the national churches in Russia, Serbia, Romania, Bulgaria, Georgia, Albania, Cyprus, Poland; and the Church of the Czech Lands and Slovakia. The Russian Orthodox Church recognizes the ORTHODOX CHURCH IN AMERICA as autocephalous, although the ecumenical patriarchate does not. Additionally, several churches, including the Macedonian and Montenegrin Orthodox, have declared themselves autocephalous but are not recognized as such by the other churches.

These developments, however, lay in the future. For in 1865 most of Orthodox Christianity found itself under the control of the Ottoman Empire, with the major exceptions being the Russian and Georgian Churches (which after 1811 had come under control

of the Russian Church) and the independent part of Greece. (The Polish as well as the Czech and Slovak Churches have been numerically small.) Nearly all were under the control of the ecumenical patriarch in Constantinople. (The Serbian Church regained its autocephalous status only in 1879, the Romanian Church in 1885.) During this time, most Orthodox Christians also found themselves living in a part of the world undergoing tremendous upheaval. Demands for freedom and independence among the peoples of the multinational empires of Austria-Hungary, Russia, and the Ottomans led to numerous uprisings and rebellions. Beginning with the Greek rebellion in 1821 and ending with the collapse of all three empires as a result of World War I, central, eastern, and southern Europe experienced nearly a century of wars and conflicts. The borders of these empires constantly were in flux. Some of these areas, particularly in Greece, Serbia, Romania, and Montenegro, achieved independence through combinations of local uprisings and support by external powers, often the Russian Empire, which increasingly defended its aggressive foreign policy by claiming to be the protector of Orthodox Christians. This chaos led many individuals to immigrate to the United States—Greeks, Serbs, Russians, and Romanians from Europe, Syrians and Lebanese from the Middle East. They brought their Orthodoxy with them. Even more than Catholics, however, for many of these individuals, religious identity was intimately linked with ethnic identity, with language and culture. This sense of identity hindered attempts to create a unified Orthodoxy in America. Another hindrance emerged from the continuing power of political conflicts in the home countries. Greeks in the United States would split between monarchists and anti-monarchists. Macedonians split between Bulgarian and Serbian sympathizers. And many would look suspiciously upon the actions of the Russians.

The Russians, however, had an advantage in developing Orthodoxy in the United States. Russia was the one international power where Orthodoxy was the state religion, and the Russian Church had the resources to support Orthodox Christianity throughout the world. Such support meshed with the ideology of pan-Slavism, which increasingly dominated the Russian royal court and included not only support for Orthodox Christianity but also provided a rationale for Russian incursion into Ottoman territories.

The Russian Orthodox Church initially had some success with these endeavors. Although opposed by the Greek community, it did manage to incorporate Slavic, Syrian, and Georgian Orthodox communities into ethnic parishes within Russian-dominated archdiocese. Money from the czar also helped to build churches in the United States, including one of most beautiful churches in the country, the Louis Sullivan designed Holy Trinity Cathedral in Chicago (consecrated in 1903).

This movement toward a consolidated Orthodox Church in the United States under the control of Russians collapsed from two causes. First, as countries in eastern Europe began to achieve their political independence—Serbia, Romania, and Bulgaria—resistance to religious subjugation, whether of Greeks or Russians, became part of their nationalist project. The Serbian Orthodox Church was seen as an integral part of Serbian identity. The same was true for the other churches. As they obtained (or regained) their autocephalous status in their newly independent countries, it seemed unreasonable for them to be subject to other churches in the United States. These churches increasingly separated from Russian control and organized in specific archdiocese, usually under the authority of the national church.

More devastating, however, was the Russian Revolution of 1917 and the Communist dictatorship that followed (see COMMUNISM). The replacement of the Orthodox Christian

Russian Empire with an expressly atheistic regime ended financial support for Orthodoxy abroad and cut American Russian Orthodoxy off from the homeland. It also led to divisions in Russian Orthodoxy in the United States. Three separate entities emerged. One small group continued its ties to the Moscow patriarchate, isolated and persecuted by the Communist government. A second group affiliated with the Russian Orthodox Church Outside Russia. The largest group, however, affiliated with the “free” Russian Orthodox Church. In 1920, the patriarch of Moscow, Tikhon (who previously had served as bishop of the Russian Orthodox Church’s North American Diocese and had consecrated Holy Trinity in Chicago), issued a decree authorizing dioceses outside what had become the Soviet Union to organize themselves autonomously until they could resume normal communications and relations with the church in Russia (see ORTHODOX CHURCH IN AMERICA). Shortly thereafter, a council of hierarchs, clergy, and parish delegates from the United States and Canada decided that the church in North America was unable to maintain administrative ties with the church in Russia and created the Russian Orthodox Greek Catholic Church in America (the Metropolia). By that time, Patriarch Tikhon had been arrested by the Communist government. Stripped of his position by the Communists in 1923, he continued to serve until his death in 1925. In 1981, Patriarch Tikhon was glorified as a saint by the Russian Orthodox Church Outside of Russia as part of the “Great Glorification of the New Martyrs and Confessors of the Soviet Yoke.” This was recognized in 1989 by the Russian Orthodox Church in Russia.

Following World War I and the reshuffling of national boundaries that followed, orthodoxy in the United States also went through a period of reorganization. The weakness of the Russian Church—the (re)emergence of national churches—led to the development of ethnic dioceses and archdioceses. Also, the

effective end of immigration from central, eastern, and southern Europe in 1924 led to a process of consolidation and organization. Local parishes increasingly focused on education, striving to ensure that youth received not only religious instruction but also language and cultural training they felt was central to maintaining identity and religion in a country where, despite being part of the Christian majority, their practices and traditions often were viewed as alien.

The struggle to find a way as a member of “different” religious tradition played a major role in the history of Jews and Judaism in the United States. Like Slavs, Italians, Norwegians, and others, Jews immigrated in droves to the United States following the American Civil War. Between 1880 and 1920, the Jewish population in the United States grew from 250,000 to nearly 3.5 million. These immigrants overwhelmingly came from eastern Europe and differed greatly from the Sephardic and German Jews who had predominated in America. Like Catholics, Jews had to deal with cultural and linguistic variations that were relatively unknown in their countries of origin. Unlike Catholics, they had no central source of authority, and synagogues and organizations began to divide by region, variations in practice, and even over the very nature of Judaism. By 1888, Judaism in the United States had become separated into the branches of Orthodox, Conservative, and Reform that exist today (see CONSERVATIVE JUDAISM; ORTHODOX JUDAISM; REFORM JUDAISM).

Eastern European Jews came to the United States not only with the tradition of Orthodox religion, but a large minority came with a background in radical politics. Increasing political and economic pressures on the eastern European Jewish community had transformed large segments of that community into urban industrial workers. This not only weakened religious practice but pushed many into the various socialist movements of eastern Europe. Simultaneously, increasing

anti-Semitism drove many toward nationalistic expressions, preeminently to ZIONISM—the movement for the establishment of a Jewish national homeland in Palestine.

Both of these strains were viewed with suspicion by the older members of the Jewish community in the United States. They feared that the apparent radicalism of these immigrants would damage the standing of the community, especially at a time when America was experiencing its first true manifestations of anti-Semitism, driven by the emergence of “scientific racism” and the class politics of America’s Gilded Age.

Additionally, the Zionist inclinations of some of these new immigrants flew directly in the face of what the American Reform movement stood for, having renounced the desire for the restoration of a Jewish state in Palestine. In 1897, the CENTRAL CONFERENCE OF AMERICAN RABBIS, the organization of Reform rabbis, adopted a resolution officially condemning Zionism.

These eastern European Jews not only transformed American Judaism, they were themselves transformed by America. Orthodoxy itself, one might argue, is an American phenomenon. Previously, there was only Judaism. Orthodoxy as a self-conscious position became necessary only when other options (other than conversion) emerged. And in America there were options. Religiously, the result of the immigration was not only an expansion in the number of Orthodox congregations in the United States but also growth in the numbers of Conservative and Reformed, as the immigrants, or their children, moved into these less restrictive environments.

There was also a massive increase in the numbers of religiously unaffiliated Jews. The breakdown of traditional community structures caused by immigration and the absence of a legally defined status for the Jews in the United States was disruptive for many immigrants. The maintenance of the Jewish dietary laws, religious practice, avoidance of work on

the Sabbath (Saturday) slid away as one tried to “fit in” to American society. For example, a 1935 survey of New York City youth between the ages of 15 and 25 discovered that 72 percent of Jewish males and 78 percent of Jewish females had not attended a religious service in the past year.

A small number of Jews arrived at this position via the route of classical Reform. Having stripped away from Judaism nearly all of its traditional religious elements, some found only emptiness and wandered off in other directions. FELIX ADLER founded the Ethical Culture Society (see ETHICAL CULTURE) on just such a basis.

A larger number came to that position through radical politics and secular Zionism. These people did not, however, leave their Jewishness. In fact, the latter movement was deeply connected with the affirmation of Jewish culture and Jewish identity. Zionism revived Hebrew as a spoken language, revitalized the study of Jewish history (albeit with an ideological intent), and emphasized pride in Jewish cultural identity.

Socialism also could be fused with a sense of Jewish identity, as the number of Yiddish worker’s circles and the *Jewish Daily Forward* (a Yiddish-language socialist paper) attest. Both Zionism and socialism could be fused in movements such as Ha Shomer Hatzair, which, while committed to a militantly secular version of Zionism, strongly affirmed connections with Jewish history and identity.

Most immigrants, or their children, who drifted into irreligion did so for none of these reasons. They did so because it was easy. In America, where no one imposed any practices and where other options existed for affirming one’s Jewish identity, religion seemed much less relevant, especially when following the religious laws seemed to limit social advancement.

Despite these pressures, the various branches of Judaism in the United States achieved significant success in establishing and developing the organizational and insti-

tutional structures necessary to sustain Judaism as a religion. Reform Judaism was by far the most active and successful in this regard. Much more attuned to the contemporary situation and dominated by ISAAC MAYER WISE, Reform Judaism had established the three main pillars of the denomination by 1890. These were the Union of American Hebrew Congregations (UAHC) in 1875, Hebrew Union College (HUC) in 1877, and the Central Conference of American Rabbis in 1889.

Conservative Judaism lagged slightly behind Reform. To some extent this lag was due to the expressed goal that the UAHC and the HUC would not be denomination specific. Variations in practice, however, between Reform Judaism and more traditional Jews ended that, and in 1887 a group of more traditional Jews opened Jewish Theological Seminary in New York City to train rabbis. Graduates of this school formed an alumni association in 1901 that in 1913 became the Rabbinical Association of America. Not until 1913 did this movement receive an institutional form, with the creation of the United Synagogue of America. Designed to serve as an umbrella for all congregations, it eventually became viewed as simply another denomination within Judaism, a fact which it finally acknowledged in 1990 by renaming itself the UNITED SYNAGOGUE OF CONSERVATIVE JUDAISM.

Orthodox Judaism, however, had a much more difficult time organizing modern institutional structures in the United States. Much of this difficulty resulted from the reluctance of more traditional Jews from eastern Europe to adopt new models. Any alteration in “tradition” invariably was viewed with suspicion. Additionally, internal conflicts and disagreements thwarted attempts in various cities to appoint a chief rabbi along the European model. These conflicts were sufficiently overcome in 1897 to establish a rabbinical training academy in New York City, the Rabbi Isaac Elchanan Theological Seminary, although the school struggled for years. The leading association of Orthodox

Jewish synagogues was created in 1898, as the Union of Orthodox Jewish Congregations of America (now known as the Orthodox Union). They also established the Union of Orthodox Rabbis in 1901.

Judaism in the United States, until the effective end of immigration in 1924, remained in a constant state of flux. Hundreds of thousands of immigrants poured into the country requiring housing, jobs, and education. The more established Jewish communities struggled to assist them in meeting those needs and adjusting to the American context, which differed radically from the Russian "Pale of Settlement," whence many of these immigrants came. The dynamic nature of the community, as it became 14 times its previous size, overwhelmed existing structures, while new organizational forms would be constantly struggling to keep up. Despite this struggle, however, the period between the Civil War and World War I demonstrated at least the ability of the United States to absorb those whose religious and cultural traditions were outside the American mainstream.

While the United States had the ability to incorporate peoples from a wide variety of traditions, that ability was not always acted upon. If one were to turn one's attention to the western coast of the United States and the immigration from Asia, the refusal to do so becomes quite visible, as the resistance to immigrants from China, Japan, and India often manifested itself with express racism and violence.

When most people think of 19th-century immigration to the United States, images of Ellis Island teeming with eastern, central, and southern European immigrants come to mind. Most think of Italians, Poles, Jews, and Greeks settling in America's growing cities or Norwegians and Danes in the Upper Midwest. It is easy to forget that during the 19th century, the United States saw a very different process of immigration from Asia, including from China, Japan, Korea, and India. These

immigrants also settled in this country and brought with them their religious and cultural traditions. In doing so they met with even greater hostility, resentment, and violence than European immigrants and were the subject of legal attempts to prevent their entry into the country.

While stories abound of Chinese admirals, Muslim sailors, and even Japanese reaching America centuries before Columbus, and some immigrants from Asia arrived throughout the period of colonization, most Asian immigrants, like those from central, eastern, and southern Europe, began coming in the mid-19th century. The first wave of these immigrants, mostly Chinese but Japanese and Koreans as well, came with the discovery of gold in California (1848). Successive waves following the Civil War came to serve as laborers on the railroad and moved on to work the regions fruit and vegetable farms.

As did all other immigrants, they brought with them their cultural and religious traditions, establishing temples, cultural associations, and businesses serving the community. Given their status as recent arrivals, they also tended to move into businesses underserved by the wider community. Their successes in these enterprises often created jealousy and hostility, which was exacerbated by racism and religious hostility.

In the years before the Civil War, the American Party had gained prominence for its opposition to immigration, primarily from Catholic Europe. Although hostility towards Catholic immigration persisted throughout the 19th century and into the 20th, nativists on the West Coast saw greater menace in immigration from Asia.

While one could argue that Catholic immigrants at least seemed to share a common European, Christian culture with Protestant, white Americans, Asian immigrants seemingly had little in common, either culturally or religiously. These religious and cultural elements formed a large part of their collective

identity, and, as was true for most all other immigrants, they had little desire to sacrifice this heritage as they brought their BUDDHISM, Confucianism, and TAOISM with them. For those Americans who understood the United States to be a Christian country, the arrival of such a large number of non-Christian immigrants was troubling. The appearance of Buddhist and Confucian temples and shrines gave the impression that alien religions were taking over the country.

The 1868 Burlingame Treaty between China and the United States guaranteed Chinese the right to open, voluntary immigration; immigration opponents quickly moved to oppose it. Although these immigrants could not become citizens because the Naturalization Act of 1790 and its successor of 1795 limited naturalization to whites, their children born in the United States were citizens under the FOURTEENTH AMENDMENT (ratified 1868). The increasing numbers of immigrants led to growing hostility, and the 1870s saw the formation of numerous "anti-coolie clubs," boycotts of Chinese-American businesses, and state anti-immigration laws. In 1879, the California Constitution called for the creation of Chinese ghettos and denied Chinese Americans equal protection and the right to vote, the latter in contravention of the Fourteenth Amendment. That same year, a referendum revealed that 94 percent of the state's residents opposed Chinese immigration. Hostility to Chinese, as well as other Asian immigrants to the United States, was driven primarily by the fact that they were not white and not Christians. They seemed to be foreigners of the most disturbing type, worshipping strange gods in strange ways, and many American communities, particularly in the West, wanted them gone.

The history of the violence directed against Asian, particularly Chinese, immigrants in the 19th century deserves attention because it illustrates the destructive power of religious violence, from which the United

States mostly has been spared. Some might ask whether religious or racial hostility drove this violence. To a great extent this question is unanswerable. Asian immigrants were targeted because of who they were and, to a great extent, because they were, in the eyes of most Americans, not Christians but pagans, heathens, and idolaters.

Early Chinese immigrants sought work primarily in mining and railroad construction. The opposition and discrimination they encountered in these fields, and the desire to establish their own businesses, however, led them to move into other areas. Many turned to laundry work, to obtain their livelihoods. Laundries had low start-up costs and little contact with whites. By 1900, roughly one in four employed Chinese-American males worked in, or owned, a laundry. Initially, Chinese Americans faced little competition in household industries, since white men viewed such labor as demeaning "women's work." But as these Chinese laundries prospered, whites grew resentful. Not content to establish their own businesses, they also sought to drive out the Chinese.

The Anti-Chinese and Workingmen's Protective Laundry Association was one of several groups that arose in late 19th-century America designed to limit the economic opportunities of Chinese immigrants. Incorporated in San Jose, California, in 1876, the Association sought to drive Chinese workers from one of the few sectors of the economy open to them. In doing so, it used economic motives to play on fears of Chinese immigrants rooted in racial, cultural, and religious prejudices.

The association's mission was "to carry on the laundry business in all of its branches, in opposition to the Chinese laundry men and wash houses of the City of San Jose and vicinity, and in the employment of white men and women in the said business, and the accumulation of property and capital for the purpose of carrying the business on successfully to the exclusion of Mongolian labor under the

articles of this incorporation." While not the first attempt to restrict Chinese-Americans' economic opportunities, it dramatically escalated earlier attempts and soon forced many Chinese-American laundries in San Jose and the surrounding areas out of business. Boycotts became a popular weapon and reached as far east as Wichita, Kansas, where an 1886 boycott of Chinese-American laundries drove most of them from the city.

San Francisco, which often served as the epicenter of anti-Asian sentiment in the United States, passed a series of laundry ordinances requiring laundries owned by Chinese Americans to pay higher taxes than their competitors and restricting the types of buildings used as laundries. These ordinances were just a few of many discriminatory laws passed by the city in the early 1870s. Others regulated the size of housing in which immigrants lived and worked, while the "Sidewalk Ordinance" even forbade the use of poles, a common Chinese technique for carrying heavy loads, on sidewalks.

The association and its sympathizers did not limit themselves to advocating for discriminatory laws and boycotts. In San Francisco in 1877, a mob destroyed several Chinese-American laundries during a three-day rampage. The riots and physical attacks on Chinese increased in virulence throughout the 1880s, despite the passage of the Chinese Exclusion Act in 1882, which prohibited the immigration of Chinese laborers into the United States. Chinese communities were harassed, attacked, and even expelled throughout the West, destroying millions of dollars of Chinese-American property. California, Washington, Nevada, Wyoming, and Colorado were among the states that saw attacks on settled Chinese communities. One of the most violent attacks occurred in Rock Springs, Wyoming Territory, when an attack by 150 armed white men against Chinese miners left 28 dead and hundreds of Chinese driven out of town.

The Rock Springs riot catalyzed further anti-Chinese violence. In October of that year, Seattle's Chinatown was burned. The next month a mob in the hundreds led by the mayor, the sheriff, the head of the Young Men's Christian Association, and other notables expelled the Chinese from Tacoma and then moved on to force similar expulsions in smaller towns. One eyewitness wrote with glee that "Tacoma will be sans Chinese, sans pig-tails, sans moon-eye, sans wash-house, sans joss-house, sans everything Mongolian. . . ." The violence became so great that President Grover Cleveland sent the army to Seattle and Tacoma to suppress the riots.

Apologies to the Chinese emperor followed, and reparations eventually were paid to the Chinese government for the property destroyed, although individuals did not receive the money. Most interestingly, Chinese Americans responded to the discriminatory acts with a series of lawsuits, particularly against the discriminatory ordinances in San Francisco. The most prominent case involved Yick Wo, a laundryman who refused to pay a fine assessed against him for operating a laundry in a wooden building. In its decision (*Yick Wo v. Hopkins* [1886]) the U.S. Supreme Court ruled for the first time that a law neutral on its face when applied in a discriminatory manner violated the equal protection clause of the Fourteenth Amendment. Eventually, lawsuits filed by Chinese Americans and their allies succeeded in overturning all but the Sidewalk Ordinance.

While the Chinese Exclusion Act managed to curtail drastically the number of Chinese immigrating to the United States, other Asians continued their immigration, in fact began it. Only in 1884, when an agreement was signed between the Japanese government and Hawaiian sugar growers, were Japanese laborers legally allowed to leave the country. A similar agreement was signed by the Korean and United States governments in 1882. While the initial waves of immigrants from

both countries landed in Hawaii, some eventually made their way to the mainland United States, and immigration increased throughout the rest of the century and into the 20th. The result was similar to that experienced by the Chinese. The combination of racial and religious prejudice and economic fear led to demands for limits on immigration and the creation of organizations, led primarily by labor unions, designed to achieve that goal. One such organization, the Asiatic Exclusion League, also known as the Japanese and Korean Exclusion League, was established by a series of West Coast trade union representatives in 1905.

The Asiatic Exclusion League's immediate goals were to spread anti-Asian propaganda and to lobby for legislation limiting Asian immigration. Many Americans shared these aims, and within three years of the league's founding, it reported 231 affiliated organizations, almost 200 of which were labor unions.

One of its first campaigns agitated for the segregation of all Asians in San Francisco's public schools. Success in this effort emboldened it to lobby for more restrictive legislation against Asians and to publish a newsletter. The league suffered a major setback when reports of the harassment and discrimination against Japanese Americans in San Francisco appeared in the Tokyo press. When reports made their way to Washington, President Theodore Roosevelt, who personally opposed such discrimination, authorized the army to protect Japanese Americans and threatened a federal lawsuit against the San Francisco school board. Despite this setback, the league continued to enjoy broad public support, although its strength was in organized labor.

The Asiatic Exclusion League expressed the racism and xenophobia prominent in both Canada and the United States during the latter part of the 19th century. Anti-Asian sentiment led to discriminatory laws and immigration policies, to harassment, and violence.

Such xenophobia found widespread expression in popular media. In late March, 1910, *Collier's National Weekly*, one of the most respected and widely read periodicals in the United States, published an article entitled "Hindu Invasion." Tucked between articles on current events and politics, the piece sounded a dire warning about the dangers of immigration from India. "Hindu Invasion" was just one of many similar articles that appeared throughout the late 19th and early 20th centuries. These articles warned that the "Hindus" threatened America's national identity because of their inability, and unwillingness, to assimilate. Their culture, habits, and, above all, their religion, such articles argued, made them too different ever to be real Americans.

The "Hindu Invasion" followed an announcement by the Asiatic Exclusion League that the Hindu population of California had reached 10,000 and was growing rapidly. During one week in February alone, the league declared, 327 "turbaned immigrants" had arrived from India. The league demanded "relief from this Hindu invasion, which is beginning to assume alarming proportions." The article's author, certain that most Californians endorsed such a move, acknowledged that fear of economic competition played a large role in opposition to immigrants. Although it declared that the Hindus were "indifferent laborers," their willingness to work for low wages—a practice that undercut the wages white workers demanded—made them popular with employers. The article speculated that employers, particularly on the railroads, were importing the immigrants in order to circumvent labor laws.

Economics was not the biggest concern, however. Far more was endangered by the "Hindu invasion." The article implied that California, and eventually the entire nation, would soon be swamped. It declared that Indians outnumbered all other Asian immigrants and that "Hindu towns" were popping up

across San Francisco. A photograph of several turbaned men in San Francisco accompanied the article. The caption claimed that while a few years ago the sight of a turban would have drawn a crowd, it had become commonplace. The article also quoted an immigrant who, when asked where he was from, replied, "I am Indiaman," adding ominously, "By and by you see plenty more."

The numbers alarmed the author of "Hindu Invasion" because of their character and their religious practices. He quoted crews on the ships transporting the immigrants to America as calling them an "unmitigated nuisance." They came from a variety of different castes and religions, each with its own intricate rules and customs to which they rigorously adhered. For religious reasons, primarily the limits on social interactions between castes and with non-Hindus, many refused to eat the food aboard ship and insisted on preparing their own meals. If denied this option, they would choose to starve rather than break caste. The author interpreted this, not as a sign of religious devotion, but rather as a mark of stubbornness, complaining that the Indians "make no effort to adapt themselves to their surroundings." The caption of an additional photograph accompanying the article, showing a group of turbaned immigrants aboard ship summarized the nativist argument: "They manifest no interest in the country or its customs . . . [they are] sullen and uncompromising in adhering to their habits." The Hindus, the article strongly implied, never would adapt to the United States and its traditions, but would, by sheer numbers, force America to adapt to them.

Warning against America being transformed by strange peoples with odd (if not outright dangerous) beliefs and religions has been a constant refrain of nativists from the beginning of the republic. While absurd, it does point out a very real fear of changes in an idealized picture of the way the "world always has been," despite the fact that from colonial

times America always has been changing and adapting to new arrivals and new ideas.

Following the Civil War, the United States experienced innumerable new ideas and radical social changes. Religiously one of the most significant of these events was the WORLD'S PARLIAMENT OF RELIGIONS, which was held September 1893 in Chicago, Illinois, in conjunction with the Columbian Exposition. It is no exaggeration to state that it was the broadest gathering of religious leaders in the world's history up to that time, exceeding even the religious disputations organized by the great khans. Representatives from the United States included JOHN CARDINAL GIBBONS, KAUFMANN KOHLER, Lyman Abbot, Julia Ward Howe, Frederick Douglass, PHILIP SCHAFF, and the United States' first documented convert to ISLAM, MUHAMMAD ALEXANDER RUSSEL WEBB. Delegates from across the globe included representatives of Orthodox Christianity, the BAHÁ'Í FAITH, Zoroastrianism, Islam, Shinto, TAOISM, BUDDHISM, HINDUISM, and the Confucian tradition. Several of the Buddhist and Hindu representatives would prove to have a major influence on the United States. Among the Buddhist representatives were ANAGARIKA DHARMAPALA and the ZEN master Stoyen Shaku, who, following his return to Japan, would send his student D. T. SUZUKI to the United States to continue his work. The Hindu representatives included SWAMI VIVIKENANDA. Dharmapala, Suzuki, and Vivikenanda all played a major role in introducing Asian religions into the United States.

While these missionaries achieved only modest success in terms of converts, they had a notable influence on American intellectual life and built on a cultural current that reached back at least to the transcendentalists (see TRANSCENDENTALISM). This influence found a visible religious presence in the emergence of THEOSOPHY. The encounter with these religions on an intimate basis also affected many Protestant missionaries (see MISSIONS, FOREIGN). Some Protestants increasingly accepted the religious legitimacy of these traditions

and challenged the emphasis on conversion within the mission enterprise. This debate soon split the Protestant missionary movement, with many asking whether there might not be elements of truth in Asian religions and whether collaboration might not be more appropriate than conversion.

In 1925, E. S. Jones, a Methodist missionary who had gone to India in 1907, published *The Christ of the Indian Road*, in which he argued that Christians could learn a great deal from Hinduism. Those seeking a new approach to foreign missions embraced Jones and others like him, but many others denounced them vociferously. In 1912, Mabel Potter Daggett staked out the reactionary position with her article "The Heathen Invasion of America." Daggett argued that Hinduism was anti-woman and claimed that swamis were robbing unsuspecting American women of their money, sanity, and, sometimes, even their virginity. The fear that exotic religions threatened American womanhood was a familiar theme in American religious literature. Throughout the 19th century, critics had claimed that Catholics imprisoned women in convents; they denounced Mormon polygamy as unjust to women; and they worried that new sects exercised hypnotic power over feeble female minds.

Critics leveled the same charges against Asian religions with similar success. Just as Maria Monk had spawned a host of "convent tales" with her "exposé" of Catholic iniquity, Daggett inspired a series of imitators, most notably Katherine Mayo, whose 1927 work *Mother India* attacked Hinduism for its perceived offenses against women.

Mersene Sloan's *The Indian Menace* undoubtedly was the most influential of these books. Sloan had harsh words for Hinduism, describing it as "superstitious bondage to forms of idol-worship" and calling for laws barring swamis from entering the country. Like Daggett and Mayo, he also described incidents of yogis swindling wealthy women and blamed

"eastern cults" for "the prevalence of present-day sex debauchery." Sloan saved his sharpest criticism, however, for his fellow Protestants. "It is amazing," Sloan wrote, "how people who profess to follow Jesus Christ as the only and sufficient world-saviour look to and welcome, even run after, the 'Light of Asia' as the world's hope." He argued that openness to Asian religions threatened the foundation of Christian faith, for it implied "a failure of the New Testament to completely meet human needs." Sloan denounced interreligious gatherings such as the Parliament of Religions at which "high-brows from modern colleges" and "mollycoddle jellyfish" modernists asserted the equal validity of all religions. "All roads do not lead to Heaven. Christ is *the* door, not just one of a number," he insisted.

The Indian Menace was part of the long-standing fight to define the religious character of America. Sloan's book, although focused on a different subject, echoed earlier fears of "exotic" religions. His book also anticipated arguments that reemerged in the 1970s, when many critics would accuse Asian "cults" such as the Hare Krishna movement (see INTERNATIONAL SOCIETY OF KRISHNA CONSCIOUSNESS), of brainwashing unsuspecting Americans. Perhaps even more important, however, he reflected a growing rift in American Protestantism between those who understood Christianity as one world religion among many and those who maintained its exclusive claim to truth and salvation. Finally, Sloan also articulated a rear-guard (and eventually losing) conception of religious freedom when he wrote, "The men who established our institutions knew nothing of the diabolical things parading under the guise of religion. Provision for free exercise of religion did not anticipate such hideous perversions as are now so active." Throughout the remainder of the 20th century, the courts would articulate a radically different view of "free exercise," making it increasingly clear that the government had no role in determining what constituted

a “true” religion, despite the growing presence of religious traditions and practices that many viewed, not only as alien, but also harmful and destructive (see ANTI-CULT MOVEMENT).

The prototype of the successful Hindu missionary or “swami” that Sloan would have banned from the United States was Swami Vivekananda, who had come to address the World’s Parliament of Religions in Chicago as an ambassador for the Ramakrishna movement. His subsequent nationwide tour made him an instant celebrity and helped make Hinduism more than an alien exotic in the United States.

Vivekananda was a crowd favorite in Chicago. One convert testified to his charisma, characterizing him as a “forceful, virile figure.” Another witness described the effect of his speeches, declaring that the, “silver-tongued Swami served for Hindustan in the capacity of John the Baptist, and his proved to be the voice of one crying in the wilderness.”

Vivekananda toured the United States after the parliament, giving public lectures and talks. During an 1894 stop in New York City, he established the Vedanta Society, the first Hindu organization specifically designed to attract Americans of European descent, in part by training them as Hindu missionaries and teachers.

The following year, he led the first yoga class ever held in the United States. His fame eventually became so great that he became the subject of a Broadway play. Vivekananda returned to India after several years, but the Vedanta Society continued in his absence.

As a member of the first generation of Asian missionaries to America, Vivekananda represented a turning point in American religious history. The United States was no longer an exporter of religion, namely Christianity, but an importer. Vivekananda’s reception, along with the entire World’s Parliament, revealed both Americans’ openness to other religions and their lingering suspicions and prejudices. In his speeches to the parliament,

Vivekananda explicitly criticized Christian missionaries for misrepresenting Hinduism to Americans and felt compelled to defend Hinduism from charges of polytheism and idolatry.

The Vedanta Society drew people who had long been attracted to Asian beliefs, particularly adherents of NEW THOUGHT, Theosophy, and Unitarianism. It also encountered numerous critics who denounced the “Asian menace.” Many criticisms consisted of innuendoes that pointed out that Vivekananda’s converts were overwhelmingly female and often quite wealthy. The insinuations behind this observation were clear and would be repeated over the coming decades.

An Indian journalist and activist, Krishnalal Shridharani, blamed the problems on Americans themselves, arguing that in their ignorance Americans stereotyped all Asians as contemplatives and so fell for every spiritual scam. Not all Indians, he pointed out, were swamis or yogis. Like people everywhere, they were composed of individuals of different character. Not all were completely otherworldly, but lived in the same material world as Americans, with physical desires, personal weaknesses, and political views.

Immigrants to the United States not only tended to bring their religions and cultures with them, they also brought their political views and positions. These views often had importance in American domestic politics. Throughout the 19th century, the conflict in Ireland played a major role in American foreign policy. When Asian immigrants arrived in the United States, they also brought their political struggles with them. Americans’ ignorance of the world hindered their ability to understand these struggles and even the participants. A powerful example of this was the emergence of the Ghadar Party. Established in June 1913, the Ghadar Party was an anti-British political movement of Indian immigrants living on the west coast of the United States and Canada. The movement,

also known as the Hindi Association of the Pacific Coast, took its name from an Urdu and Punjabi word meaning “mutiny” or “revolt,” and it sought the overthrow of British rule in India. The party published its weekly paper, *The Ghadar*, in San Francisco.

The overwhelming majority of its membership came from the Punjab, and most were Sikhs (see SIKHISM). Despite this Sikh dominance, the party was strongly secular and inclusive. Religion, however, did play an indirect role in the party’s origins. American observers were generally oblivious to the Indians’ identities and often labeled the party a collection of “Hindoos,” despite the predominance of Sikhs. This ignorance, along with discrimination against Indian immigrants, largely rooted in religious prejudice and fears that they would corrupt Christian America, prepared the ground in which the party’s nationalist propaganda took root. Many Indians linked the oppression they encountered in the United States and Canada to British control of India.

The Ghadar movement received a huge boost following the *Komagata Maru* incident in 1914. The *Komagata Maru*, a Japanese steamer, arrived in British Columbia carrying 376 Punjabi immigrants. When Canadian authorities refused to allow the Indians to land, citing exclusion laws meant to limit Asian immigration, a standoff ensued. This prompted Indians in Canada and the United States to organize demonstrations against this treatment. When Canadian officials moved against the ship, violence broke out, with the Indians hurling coal and bricks at the police. The *Komagata Maru* eventually was forced to return to India with most of the would-be immigrants. When it arrived in Calcutta, British authorities put the passengers under armed guard, prompting further violence that left 20 passengers dead.

In response, 60 members of the Ghadar Party in the United States sailed from San Francisco in hopes of initiating a rebellion in India. British spies were among the hundreds

who joined in the attempt, and authorities arrested nearly all the Ghadarists the moment they arrived in India. Despite this setback, between 1913 and 1917, the party launched a wave of bombings and assassinations against British institutions and officials in India. Although grandiose plans for a revolutionary army never materialized, the party established branches throughout Asia, Africa, and the Americas from which it spread its message.

During World War I German agents, keenly aware of Indian nationalist societies like the Ghadar Party, were eager to help them subvert the British Empire. Germany funded the party and encouraged its militancy. The British repeatedly demanded that the U.S. government suppress the party’s activities, arguing that the United States violated its neutrality by allowing Germany to conspire with the Indians on American soil.

By the time of the U.S. entry into the war in 1917, fear of German subversion combined with hostility towards immigrants and radicals changed the government’s view of the party’s efforts, and authorities undertook to arrest several Indian nationalists. Eventually more than 100 were taken into custody, and 25 were eventually tried for conspiracy, including nine Germans, nine Americans, and 17 Indians. The “Hindu Conspiracy Trial,” as it became known, captivated the public. Many sympathized with the defendants, who compared their struggle with the American Revolution. The defendants produced articles from the *The Ghadar* quoting Patrick Henry, Abraham Lincoln, and Woodrow Wilson. Following a trial lasting five months, the defendants were found guilty of violating America’s neutrality. Much to the displeasure of the British, however, the Indian defendants were not deported, but rather sentenced to short prison terms. Although the party would continue in existence until 1947 in various forms, it never regained its pre-World War I strength. While it existed, however, it both helped to spread the nationalist sentiment that contributed to

India's independence and served an important function for expatriate Indians by offering them a way of strengthening their identities and resisting the hostility and prejudice they faced in the United States.

These conflicting views of Asian religions and Asian immigrants themselves reflects the divided consciousness of America's Gilded Age. The growth of industry and the transformation of American cities as a result of the influx of individuals moving from America's rural areas and owing to foreign immigration well represented the flux in which the country found itself. During this time, Andrew Carnegie, John D. Rockefeller, Cornelius Vanderbilt, and others who have since become known as "robber barons" amassed vast fortunes. American workers and farmers increasingly overwhelmed by economic forces over which they had little control began to agitate for unionization and for more aggressive governmental responses.

While many of these movements were influenced by European radicalism with its antireligious bias, other movements, such as the Populists and the wing of the Democratic Party led by WILLIAM JENNINGS BRYAN, had a strong religious component. Bryan's rhetoric was filled with Christian imagery as witnessed by what is arguably one of the most famous speeches in American history, Bryan's "Cross of Gold" speech from the 1896 Democratic Party convention. There, Bryan declared, "we shall fight them to the uttermost, having behind us the producing masses of the nation and the world. Having behind us the commercial interests and the laboring interests and all the toiling masses, we shall answer their demands for a gold standard by saying to them, you shall not press down upon the brow of labor this crown of thorns. You shall not crucify mankind upon a cross of gold."

Within organized religion the split also was visible. On one hand there were those such as RUSSELL CONWELL, the founder of Temple University and a Baptist minister. Best known

for his "Acres of Diamonds" lecture in which he said to his audience, "you ought to get rich, and it is our duty to get rich. How many of my pious brethren say to me, 'Do you, a Christian minister, spend your time going up and down the country advising young people to get rich, to get money?' 'Yes, of course I do.' They say, 'Isn't that awful! Why don't you preach the gospel instead of preaching about man's making money?' 'Because to make money honestly is to preach the gospel.'"

Although the main thrust of Conwell's argument was that success depended less upon what one had and where one went than upon the application of oneself and one's skills to the current situation, the lecture has been remembered more for statements such as:

"Money is power, and you ought to be reasonably ambitious to have it. You ought because you can do more good with it than you could without it. Money printed your Bible, money builds your churches, money sends your missionaries, and money pays your preachers, and you would not have many of them, either, if you did not pay them. I am always willing that my church should raise my salary, because the church that pays the largest salary always raises it the easiest. You never knew an exception to it in your life. The man who gets the largest salary can do the most good with the power that is furnished to him. Of course he can if his spirit be right to use it for what it is given to him. I say, then, you ought to have money. If you can honestly attain unto riches in Philadelphia, it is our Christian and godly duty to do so."

For many, such claims seemed to be nothing more than a Christian baptism of the excesses of the Gilded Age. Despite Conwell's insistence on money honestly gotten and his opposition to inherited wealth, the message that many took away was that wealth was proof of godliness and poverty. A listener

could hardly think otherwise when Conwell declared:

Some men say, 'Don't you sympathize with the poor people?' of course I do, or else I would not have been lecturing these years. I won't give in but what I sympathize with the poor, but the number of poor who are to be sympathized with is very small. To sympathize with a man whom God has punished for his sins, thus to help him when God would still continue a just punishment, is to do wrong, no doubt about it, and we do that more than we help those who are deserving. While we should sympathize with God's poor—that is, those who cannot help themselves—let us remember that there is not a poor person in the United States who was not made poor by his own shortcomings, or by the shortcomings of some one else. It is all wrong to be poor, anyhow.

At the other end of the religious response to poverty and the social dislocation of the Gilded Age was the emergence of the Christian movement known as the SOCIAL GOSPEL. Having its origins in the teachings of SOLOMON WASHINGTON GLADDEN, a Congregational minister in Columbus, Ohio, the Social Gospel believed that the teachings of Christianity could be applied to the social problems faced by the United States in the late 19th and early 20th centuries. Other influential leaders of the movement included JOSIAH STRONG and CHARLES M. SHELDON, the author of *In His Steps*. The individual most associated with the Social Gospel, however, was WALTER RAUSCHENBUSCH.

A Baptist minister in the Hell's Kitchen area of New York City, Rauschenbusch was deeply challenged by the poverty he saw around him. The suffering of the residents forced him to ask what was the role of Christianity in responding to poverty and degradation? In books such as *Christianity and the*

Social Crisis (1907) and *A Theology for the Social Gospel* (1917), Rauschenbusch argued that the power of Christianity is not solely about saving individuals from sin but is about a radical transformation of the individual and of the world. In *Christianity and the Social Crisis* he would write, "no man shares his life with God whose religion does not flow out, naturally and without effort, into all relations of his life and reconstructs everything that it touches. Whoever uncouples the religious and the social life has not understood Jesus. Whoever sets any bounds for the reconstructive power of the religious life over the social relations and institutions of men, to that extent denies the faith of the Master."

Sin was more than just the immoral actions of an individual. It was a power that acted within history and distorted not only individual behavior but corrupted the entire social order. The Christian message was not merely about individual salvation, it was about defeating those powers and principalities that prevented human beings from realizing God's kingdom on Earth. Christians had a duty to ensure that the social and economic systems served to further the realization of that kingdom of which Jesus spoke in the Lord's Prayer when he asked, "Thy will be done on Earth as it is in heaven." This kingdom had as its goals the realization of "justice, freedom, fraternity, labor, joy."

The message of the Social Gospel received a widespread audience through popular books like Sheldon's *In His Steps* and *If Christ Came to Chicago: A Plea for the Union of All Who Love in the Service of All Who Suffer*, written by the British journalist William T. Stead. Stead, who had been influenced deeply by William Booth, the founder of the SALVATION ARMY, visited Chicago during the Columbian Exposition of 1896 and was appalled by the city's political corruption and its underground economy of brothels, saloons, and gambling dens. The book, which sold 70,000 copies on its first day, combined a deep religious con-

cern with detailed social analysis, including a color-coded map detailing the locations of illegal establishments and an appendix with the names and addresses of proprietors and owners of these establishments.

Even more important due to the challenge it presented to its readers was Charles Sheldon's *In His Steps* (1896). This novel is ostensibly the story of a series of individuals in the city of Raymond, including its minister, who have been challenged to live their lives by answering the question, "What would Jesus do?" Rather than focusing on small personal actions it challenges a newspaper editor to question the types of stories his newspaper runs and the advertisements it accepts. A wealthy heiress struggles with the realization that the nature of impoverishment she sees daily cannot be what Jesus would allow to happen. What then should she do with her fortune her, her wealth? What would Jesus do? As she proclaims to another character, ". . . what does this contrast in [social and economic] conditions mean to you as you ask this question of what Jesus would do? It maddens me to think that the society in which I was brought up . . . is satisfied year after year to go on dressing and eating and having a good time, . . . spending its money on houses and luxuries and, occasionally, to ease its conscience, donating, without any personal sacrifice, a little money to charity. . . . I can gratify almost any want or desire, yet when I honestly try to imagine Jesus living the life I have lived, . . . and doing for the rest of my life what I am doing, what thousands of other rich people do, I am under condemnation for being one of the most wicked, selfish, useless creatures in all the world. I have not looked out of this window for weeks without a feeling of horror toward myself as I see the humanity that passes by this house." The implication of all of these books was that the current social situation is not consonant with true Christianity and that true Christians should not be contented to hand the social and economic

spheres over to demonic forces but should work to Christianize the social order. They should do this not only, or perhaps even primarily, by saving the individual soul through the process of conversion, instead, they should strive to ensure that the society in which they lived was one that reflected God's will and served to build the kingdom of God on Earth.

In the Gilded Age, the question of what that kingdom should be and who it included was most complicated. Immigration from all corners of the globe, the rise of industry to an extent previously unseen, cities growing to unheard of magnitude—the physical world seemed so new and different from what people previously had known, and the challenge of what it all meant and how individuals should act was great. Beyond these social changes, the world was confronted with tremendous intellectual changes as well. The preeminent challenge was presented by the publication of Charles Darwin's *On the Origin of the Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life* (1859).

If industrialization made religious individuals unsure of their place in the social and economic world, *The Origin of the Species* (the title was changed for subsequent editions) carried the potential of unsettling humanity's place in a divinely created universe (see EVOLUTION). (It eventually would be a source of regular religious conflict in the United States well into the 21st century.) Initially, much of the response among religious, primarily Christian, leaders in the United States was muted. For many, evolution was seen simply as "God's way of doing things." Others simply rejected or ignored the new claims (and many others probably never heard of them). Evolution increasingly became dominant in the scientific world, and its popularizers, such as Thomas Huxley, known as Darwin's bulldog, used it as part of a wider attack on religion. Huxley debated the merits of evolution against Samuel Wilberforce, the lord bishop of Oxford (1860). The tendency of some popularizers not

only to use the doctrine of natural selection to dismiss the biblical story of creation but also the qualitatively distinctive nature of human being served to increase the suspicion of and hostility to evolution. It no longer was a scientific theory that one could ignore or mock, it looked like an enemy to true religion.

The nature of this enemy became increasingly manifest with the development of the doctrine of Social Darwinism and the emergence of what is known as "scientific racism." Social Darwinism took Darwin's understanding of natural selection as it applied to speciation and turned it into a social theory. Not only was nature bloody in tooth and claw, so was the social world of human beings. Those who proved successful in the great economic conflicts deserved their successes and should be rewarded, while those who failed should not be helped. Failures demonstrated their evolutionary unsuitability, and to aid them only would serve to weaken the human stock.

Such views owed much more to Herbert Spencer, Thomas Malthus, and Ernst Haeckel than Darwin, who believed that the moral sense also evolved as a part of natural selection. (Darwin believed this development was so important that he argued that societies in which moral sentiments were developed highly would overrun those in which social solidarity was less developed.) Social Darwinism also had its roots in the writings of Darwin's cousin Francis Galton, in his *Hereditary Genius*, and preeminently by Arthur de Gobineau, in *An Essay on the Inequality of the Human Races* (1855).

In Galton's view, since intelligence and talent were inherited, careful attention to human breeding was socially necessary. Care, therefore, should be taken in order to ensure that less fit individuals did not out produce those who were more fit. Social institutions such as welfare and mental institutions increased the survivability of "inferior" humans and increased the risk that society soon would be overwhelmed by their numbers.

What Galton argued for in terms of individuals, Gobineau made into a racial doctrine. For Gobineau, the three races of the world, which he referred to as black, white, and yellow, were distinct and separate. The white race, for Gobineau, was inherently superior, but it was at risk through a process of racial mixing, which only produced "degenerates." In fact, there was a need to undertake a concerted effort to save the white race, which already had degenerated severely with Spain, Switzerland, Austria, northern Italy, most of France, Germany and Britain consisting of a degraded mixed race.

In the United States the influence of Social Darwinism was quite diffuse; strains of it did play a role in arguments over imperialism as Spain's defeat in the Spanish-American War left the United States in control of the Philippines, Puerto Rico, and Cuba. Interestingly, the racist element played a role for some antiimperialists who, following Gobineau, argued that imperialism increased racial mixing and led to degeneration. While those who emphasized the struggle element within Social Darwinism argued for increased American expansion. Perhaps one of the clearest examples of such a view was Senator Albert Beveridge's "In Support of an American Empire" speech delivered to the Senate in 1900. There, Senator Beveridge declared, "We will not repudiate our duty in the archipelago [the Philippines]. We will not abandon our opportunity in the Orient. We will not renounce our part in the mission of our race, trustee, under God, of the civilization of the world. And we will move forward to our work, not howling out regrets like slaves whipped to their burdens but with gratitude for a task worthy of our strength and thanksgiving to Almighty God that He has marked us as His chosen people, henceforth to lead in the regeneration of the world."

The explicit racialism of a Gobineau did find its way into certain circles in the United States and would pave the way for eugenics as public policy in the 1920s and 1930s. The

leading popularizer of this racist view of Social Darwinism in the United States and, interestingly, one of its leading conservationists, was Madison Grant. In his *Passing of the Great Race* (1916), Grant not only spoke of the three distinct races but also subdivided the Caucasian (white) race into three subgroups: Nordics, Alpines, and Mediterraneans. Of these three, the Nordics were overall superior. While the Mediterraneans may have had superiority in intellect and definitely in artistic capacity, the Nordics were “a race of soldiers, sailors, adventurers, and explorers, but above all, of rulers, organizers . . .” The Nordics were natural rulers and would do so if they would eliminate their racial degradation through racial mixing, miscegenation.

Additionally, there was a wider need to improve the race’s hygiene through careful attention to the consequences of public policies that encouraged the increase in inferior and weak individuals. As Grant wrote in the *Passing of the Great Race*, “A rigid system of selection through the elimination of those who are weak or unfit—in other words social failures—would solve the whole question in one hundred years, as well as enable us to get rid of the undesirables who crowd our jails, hospitals, and insane asylums. The individual himself can be nourished, educated and protected by the community during his lifetime, but the state through sterilization must see to it that his line stops with him, or else future generations will be cursed with an ever increasing load of misguided sentimentalism. This is a practical, merciful, and inevitable solution of the whole problem, and can be applied to an ever widening circle of social discards, beginning always with the criminal, the diseased, and the insane, and extending gradually to types which may be called weaklings rather than defectives, and perhaps ultimately to worthless race types.”

Such views increasingly became part of the cultural currency of the late 19th century, even if they did not gain predominance.

There existed many powerful counterviews. The leading opposition voice included the antiimperialist league to which Mark Twain lent his powerful pen, including an essay entitled “To the Person Sitting in Darkness” (1901). There, Twain wrote, “Extending the Blessings of Civilization to our Brother who Sits in Darkness has been a good trade and has paid well, on the whole; and there is money in it yet, if carefully worked—but not enough, in my judgement, to make any considerable risk advisable. The People that Sit in Darkness are getting to be too scarce—too scarce and too shy. And such darkness as is now left is really but of an indifferent quality, and not dark enough for the game. The most of those People that Sit in Darkness have been furnished with more light than was good for them or profitable for us. We have been injudicious.”

Others who often are considered in the popular mind as being “Social Darwinists,” such as Andrew Carnegie, supported numerous policies that ran counter to such views. Carnegie was a vocal antiimperialist and a pacifist. Additionally, in his view, quality was a factor of effort and talent, not genetics, and Carnegie’s PHILANTHROPY focused on enabling those with such talent to improve themselves and rise from any unfortunate situation that may have resulted from birth. While some have likened Carnegie’s emphasis on human effort to a Darwinian struggle, a survival of the fittest, Carnegie did not believe that struggle to be against others. In fact, for him, successful individuals had an obligation to improve the social order. His opposition to a genetic model also can be seen in his opposition to inherited wealth. As he wrote several years before his retirement, “Let us cast aside business forever, except for others. We can settle in London and I can [take] part in public matters, especially those connected with education and improvement of the poorer classes. . . . Man must have an idol and the amassing of wealth is one of the worst spe-

cies of idolatry! No idol is more debasing than the worship of money! Whatever I engage in I must push inordinately; therefore should I be careful to choose that life which will be the most elevating in its character."

One of the predominant objects of Carnegie's philanthropy was Tuskegee Institute, one of the leading educational institutions for African Americans in the United States. Led by BOOKER T. WASHINGTON, Tuskegee played a major role in struggling to improve the lives of those who had been freed following the Civil War and their descendants. In the late 19th century, African Americans were in great need of support and assistance.

Following the end of the Civil War and slavery, there was an initial flurry of activity to aid the "freedmen." The states of the former Confederacy were occupied and began the period known as Reconstruction, which lasted until 1877. The Constitution was amended to prohibit slavery (Thirteenth Amendment), make all individuals born in the United States citizens and require their equal protection (Fourteenth AMENDMENT), and eliminate race, color, or previous servitude as a barrier to voting (Fifteenth Amendment). The Department of War established the Bureau of Refugees, Freedmen, and Abandoned Lands, the Freedmen's Bureau, on March 1865 to oversee all relief and educational activities relating to refugees and freedmen, including provision of food, clothing, and medicine. The bureau also assumed custody of confiscated lands or property in the former Confederate states, the border states, District of Columbia, and Indian Territory.

Many of the former Confederate states passed legislation designed to relegate the former slaves to permanent second-class citizenship. These actions, including repeated acts of violence against freed blacks, convinced many in the North that southerners were unwilling to govern appropriately and led to an increasing application of direct federal control over the former states in rebellion. Military gover-

nors were appointed with the responsibility of overseeing voting registration and equitable application of the laws while federal troops provided security.

The end of slavery and federal protection allowed blacks in the South the freedom to pursue education and to worship absent white control. Schools for blacks run by the Freedmen's Bureau, Northern missionaries, and even some of the historically black denominations such as the AFRICAN METHODIST EPISCOPAL CHURCH sprung up throughout the South. Colleges were established many run by denominations and others with a significant religious component, such as Tuskegee Institute. Blacks also left white-dominated denominations, creating the Colored Methodist Episcopal Church (see CHRISTIAN METHODIST EPISCOPAL CHURCH) and the NATIONAL BAPTIST CONVENTION. Under the protection of federal bayonets, African Americans made extensive progress during Reconstruction, actively participating in the political process.

The drawn-out process of Reconstruction, the ongoing hostility of white Southerners to political equality for African Americans, and the social upheavals of the Gilded Age progressively weakened both the support for Reconstruction and black political equality. The increasing acceptance of scientific racism, such as articulated by Madison Grant, meant that many were inclined to accept that certain races were inherently inferior and should be dominated by superior races. As some northerners struggled with the challenges presented by immigration from central, eastern, and southern Europe, and many sought ways to limit it, they increasingly sympathized with the desire of white southerners to subjugate African Americans. Additionally, exhaustion with the lengthiness of Reconstruction and its cost, as well as political conflicts, weakened the support for it. Finally, in 1877, the last federal troops were removed from the South, and

the Democratic Party, primarily representing the planter class, strove to reestablish its control, including disenfranchising African Americans and increasingly segregating them. They were supported in these efforts by the U.S. Supreme Court in a series of rulings that weakened many of the Civil Rights laws passed by Congress. The final blow came with the Court's 1896 decision in *Plessy v. Ferguson*, in which it ruled that legally mandated racial segregation in public accommodations, specifically railway cars in the *Plessy* case, was not unconstitutional so long as the accommodations were equal. This "separate but equal" doctrine would dominate the legal status of race relations in the United States until the Supreme Court's decision in *Brown v. Board of Education* (1954). It also opened up a new era of racial discrimination and inequality that would haunt the United States for nearly a century, only to be undone with the successes of the CIVIL RIGHTS MOVEMENT during the 1960s and 1970s.

As the United States moved into the 20th century, it was a country experiencing massive transformations and pulled in numerous directions. Increasing economic and social opportunities abounded. Immigrants from Europe found a level of religious and personal freedom inconceivable in their homelands. They also found economic opportunity. Simultaneously there were many who looked askance at these strange people and their unfamiliar religions. Race increasingly dominated American discourse. The growth in science challenged traditional beliefs, and the accumulation of foreign territories following the Spanish-American War dramatically altered America's self-understanding.

Such was the situation when the European nations found themselves in the midst of a massive war into which the United States eventually would be drawn. From this war, the United States would emerge as a world power and be forced to address numerous social and religious challenges.

WORLD WAR I

World War I saw a burst of religious activity designed to aid the soldiers serving in Europe. As had happened during the Civil War, a coordinating body was established to oversee this work, and it included members from numerous denominations and even different religions. The Roman Catholic Church, which for theological reasons could not join, organized its efforts through the National Catholic Warfare Council and engaged in service activities among Catholic soldiers. In doing so, it also worked productively and successfully with the U.S. military and with the other religious organizations, including the YMCA and the Salvation Army. On an individual level, the soldiers themselves developed a level of solidarity and camaraderie that overcame many of their suspicions and ignorance of other religions.

President Woodrow Wilson had declared that the war was being fought to "make the world safe for democracy." With the end of the war and the beginning of peace negotiations, Wilson had pushed for an agreement that would achieve these ends. For Wilson such a peace would have removed the various colonies from their current masters and set them on the road to full and free independence. It also would have freed those individuals living in multinational empires, whether Ottoman, Austro-Hungarian, or Russian, to create their own independent states. Finally, Wilson stated that a general "association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike." This league of nations would be essential for the maintenance of world peace and would prevent future wars.

This vision of President Wilson's, however, would not be realized. It would be crushed by a series of domestic and international events. Central to its failure, however would be the ethos of isolationism that emerged as a result

of the war and the merging of the scientific racism of the late 19th century with traditional forms of nativism. The resurgence of nativism resulted from a sense of fear that ran through much of the American populace of the time. These ranged from a fear of political radicals, anarchists and communists—to the fear that the vast numbers of immigrants who had entered the United States in the later 19th century would undermine its distinctive character. Other fears resulted from the transformation of American society brought about by industrialization and urbanization. Modern ideas and modern thoughts, from evolution to biblical criticism, seemed to be destroying the world in which many Americans had grown up and with which they were comfortable. Additionally, the agricultural depression that hit the United States in the early 1920s, well before the so-called Great Depression of 1929, placed large numbers of Americans at risk. Overwhelmed by debt, crushed by vast unknown forces, these Americans looked for the sources of their misery and found them in alien and unseen powers, which, they felt, had undermined their traditional lives and their means of livelihood. In such an environment, preachers of religious intolerance found an eager audience. Individuals eager to find the causes of their misery, their poverty, the war, and the loss of their traditional understandings of the world readily were convinced that they were caused by alien and foreign forces. As a result, this period saw a massive resurgence of the Ku Klux Klan, opposition to ideas such as evolution and other intellectual movements that seemed to undermine traditional religion, and, as the depression deepened and expanded, a growth in movements that blamed the economic collapse on Jews and others.

Political radicals were the first group to feel these attacks. These individuals wanted to overthrow the political and economic system, destroy religion, and undermine traditional morality, including marriage. The growth of

radical movements in the late 19th and early 20th century, often led by immigrants, in response to the inequities and oppressions of early industrialization had created an air of fear and tension. The outbreak of World War I only increased these tensions. The radicals felt that the war had been created by munitions manufacturers and capitalists. Poor working people had no stake in the war. In fact, workers simply were pawns in the hands of plutocrats who were sending them to their deaths in order to line the capitalists' pockets.

The radicals were not merely protesters but also believed in using violence to overthrow the political system. The late 19th century had seen numerous attacks on individuals, including the assassination of President McKinley by the anarchist son of Polish immigrants. The violence continued into the 20th century. In 1914 and 1915, the United States experienced numerous bombings directed at public buildings, including courthouses and police stations. Even churches and individual homes were attacked. In 1915, President Wilson responded to these attacks by condemning "hyphenated Americans who have poured the poison of disloyalty into the very arteries of our national life." He continued, "Such creatures of passion, disloyalty and anarchy must be crushed out."

The bombings did not stop. Following America's entry into the war, they increased dramatically. In 1917, one of the leading anarchist groups staged a series of bomb attacks throughout numerous American cities. The Russian Revolution gave added impetus to these attacks, as the radicals felt that it signaled the beginning of a worldwide revolution. They saw themselves as bringing that revolution to the United States.

Congress responded with a series of laws designed to stop the bombings and to prevent individuals from undermining the war effort. Several leading anarchist organizations were raided. Yet the bombs continued. On June 2, 1919, numerous bomb attacks took place in

cities throughout the United States. Several of these were in Washington, D.C., including an attack on the house of the Attorney General A. Mitchell Palmer. These coordinated attacks were an express declaration of war on the government. A note found on the body of one of the bombers (who had been killed when his bomb detonated prematurely) declared, "War, Class war, and you were the first to wage it under the cover of the powerful institutions you call order, in the darkness of your laws. There will have to be bloodshed; we will not dodge; there will have to be murder: we will kill, because it is necessary; there will have to be destruction; we will destroy to rid the world of your tyrannical institutions."

In response to the public clamor that the government do something about these attacks, Congress and President Wilson authorized Palmer to act. Palmer, who already had survived two assassination attempts by this time, directed the Bureau of Investigation (the precursor to the FBI) to plan a series of raids against known radicals. Known as the Palmer Raids, these took place throughout the next year, and thousands of anarchists and communists were arrested. On one night alone, more than 4,000 were taken into custody. Some were tried and convicted of crimes. Many, however, were immigrants to the United States, and they simply were deported. In December 1919, for example, nearly 250 of the leading radicals in the United States of Russian origin, including Emma Goldman, were deported to the Soviet Union.

While the Palmer Raids would later be described as an extreme response to a minimal threat, at the time they were almost universally welcomed. Most Americans saw them as necessary to protect America from foreign-born radicals intent on destroying the American way of life. They viewed these individuals as threats to American institutions, including religion, which the radicals derided as a human creation designed to keep the poor from demanding their rights. The radicals

also opposed much of traditional morality, including marriage. As a result, they generated significant hostility from many Americans. Finally, the fact that many of them were foreign-born was emphasized by many Americans. These foreign radicals were viewed as intent on destroying everything about the United States. Many Americans began to look for some way to defend and support "true" American values of morality and Protestant Christianity in order to combat these foreign views. For many, the defense of these views would fall to the revived, or second, Ku Klux Klan.

BETWEEN THE WARS

The second Ku Klux Klan emerged during the years following 1915 and was brought into existence by a series of events and grew in response to the dramatic social and cultural changes of the 1920s. The revived Ku Klux Klan owes its existence to two events, a violent rape and murder, which led to the lynching of an innocent Jewish man, and a movie, *The Birth of a Nation*.

In 1913, a young factory worker, Mary Phagan, was found murdered in the basement of the factory in Marietta, Georgia, where she worked. Although significant evidence pointed to the factory's janitor, the police fixated upon Leo Frank, the plant's manager. Frank, who was Jewish, had recently come to the Atlanta area from New York to manage the plant for his uncle. Frank's Jewishness became a major element in his prosecution, and the investigation and trial were tainted with prejudice and anti-Semitism. A local Baptist minister declared, "My feelings, upon the arrest of the old negro watchman, were to the effect that this one old negro would be poor atonement for the life of this innocent girl. But, when on the next day, the police arrested a Jew, and a Yankee Jew at that, all of the inborn prejudice against Jews rose up in a feeling of satisfaction, that here would be a victim wor-

thy to pay for the crime." In his newspaper, *The Jeffersonian*, Tom Watson, a former Populist turned virulent racist and anti-Semite, railed against Frank. Convicted at trial and sentenced to death, Frank had his sentence commuted by Georgia's governor, John M. Slaton, who declared that he would rather live in "obscurity the rest of my days, . . . than to feel that I had that blood on my hands."

The commutation led to a major uproar. Tom Watson wrote, "Our grand old Empire State HAS BEEN RAPED! . . . Jew money has debased us, bought us, and sold us—and laughs at us . . . Hereafter, let no man reproach the South with lynch law: let him remember the unendurable provocation; and let him say whether lynch law is *not better than no law at all.*" A group of prominent individuals from Marietta, Georgia, created the Knights of Mary Phagan and plotted to kidnap Frank from the state prison farm and murder him. The Knights of Mary Phagan struck on August 17, 1915. Armed, they forced their way into the prison and drove Frank to Frey's Gin, where the local sheriff had prepared the site. There, they viciously lynched Frank.

This savage murder led to a major response by America's Jewish community, leading to the formation of the Anti-Defamation League with the goal of stopping, "by appeals to reason and conscience and, if necessary, by appeals to law, the defamation of the Jewish people. Its ultimate purpose is to secure justice and fair treatment to all citizens alike and to put an end forever to unjust and unfair discrimination against and ridicule of any sect or body of citizens."

The lynch mob, however, saw itself as the heir to the original Ku Klux Klan as it was portrayed in the recently released movie, *The Birth of a Nation*. Produced and directed by D. W. Griffith and based on a novel, *The Leopard's Spots*, by Thomas Dixon, the movie portrayed the post-Civil War Klan as a noble organization that served to protect and defend white civilization in the South after the Civil War.

In the movie, the Klan was seen as an upright Protestant organization that restored order and good governance and eliminated the corruption and depravity brought about by Reconstruction. The movie also established the model for the costumes of the revived Klan and for the practice of cross-burning.

The revived Klan of the 1920s emphasized not only its commitment to maintaining the second class status of African Americans but also was anti-Catholic, anti-Semitic, and nativist. The Klan expanded throughout the United States during this time, reaching a peak membership of more than 4 million, primarily in the Midwest, but also with significant inroads into the Northeast. Despite its racial and nativist components, in some areas the Klan also supported progressive politicians. In Alabama, the Klan-supported governor Bibb Graves led one of the most socially active administrations in the state's history, expanding education, roads, and supporting organized labor. This political power, however, led the Klan to even greater excesses, as it attempted to enforce morality by destroying brothels, reporting youths found making out in cars, and flogging men and women for immoral behavior. In many ways, the Klan acted like the Saudi morals police of its time. These excesses increased criticism and opposition. In Alabama, the editor of the *Montgomery Herald* published a series of exposés on the Klan that led to a Pulitzer Prize. The Klan increasingly became a criminal band, using extortion and force to make money and protect its membership. When the leader of the Midwestern Klan, David Stephenson, was indicted for rape and murder in Indiana, the entire edifice collapsed, leaving a legacy of violence and hatred that continues to this day.

These forces affected public policy. In 1924, Congress passed legislation effectively ending immigration to the United States. The horrors of World War I moved Americans into a period of isolationism that reflected their hostility to immigrants and aliens. The

war also led to a major reaction against the unquestioning support most American religious leaders had provided for it. Pacifism became the dominant force in American religion and would seriously hinder the ability of many to understand the rise of fascism in Italy and Nazism in Germany as evils that needed to be resisted (see PEACE REFORM).

The currents of critical biblical scholarship and evolution that had begun during the 19th century became increasingly dominant in religious battles between Modernists (see MODERNISM) and Fundamentalists (see FUNDAMENTALISM [PROTESTANT]) during the 1920s. Fundamentalists fought against what they saw as a diminution of traditional Christian doctrines. Opposed to biblical criticism and any concession to evolution, they fought to remove their opponents from seminary faculty and denominational leadership. During this time, Christian fundamentalism as a religious phenomenon developed the characteristics that presently identify it, primarily a belief in the inerrancy of scripture, dispensationalism, and a refusal to collaborate with those not in complete agreement with their beliefs.

In the 1920s, the Christian fundamentalist attempt to eliminate modernist influence in the Protestant denominations failed. Both the Northern and Southern Baptist Conventions, the Presbyterians, and the Disciples of Christ rebuffed the attempts. On the wider national stage, the Scopes "Monkey Trial" would hold fundamentalism up to mockery, which would send the majority of the movement and its leaders into a form of self-imposed exile and a reluctance to engage the wider world that lasted until the 1970s.

In May 1925, John Scopes, a high school science teacher in Dayton, Tennessee, was charged with violating a recently adopted state law that made it "unlawful for any teacher in any of the Universities, Normals and all other public schools of the State which are supported in whole or in part by the public school funds of the State, to teach any theory

that denies the story of the Divine Creation of man as taught in the Bible, and to teach instead that man has descended from a lower order of animals."

The AMERICAN CIVIL LIBERTIES UNION (ACLU) had offered to pay for the defense of any individual willing to challenge the law. A group of Dayton, Tennessee, businessmen, sensing that the notoriety surrounding such a trial would give the town a boost, convinced Scopes, a local high school coach and substitute science teacher, to challenge the law. Following Scopes's indictment, the case quickly expanded into a battle between evolution and its opponents. William Jennings Bryan was called in to serve as a special prosecutor, and the defense team included the ACLU's lead attorney, a former State Department counsel during Bryan's tenure as secretary of state, and America's leading criminal lawyer, Clarence Darrow.

Although Scopes was convicted (later overturned on a technicality), the real loser at the trial was fundamentalism and the anti-evolutionists. The acerbic pen of one of America's leading journalists, H. L. Mencken, was mostly responsible for that. In a series of vitriolic articles posted from the trial, Mencken did his utmost to portray antievolutionists and fundamentalists more generally as ignorant buffoons. Perhaps nothing illustrated this more than his article "Homo Neanderthalensis," which appeared in Mencken's paper, *The Baltimore Evening Sun*, on June 29, 1925.

Such obscenities as the forthcoming trial of the Tennessee evolutionist, if they serve no other purpose, at least call attention dramatically to the fact that enlightenment, among mankind, is very narrowly dispersed. It is common to assume that human progress affects everyone—that even the dullest man, in these bright days, knows more than any man of, say, the Eighteenth Century, and is far more civilized. This assumption is quite erroneous. The

men of the educated minority, no doubt, know more than their predecessors, and of some of them, perhaps, it may be said that they are more civilized—though I should not like to be put to giving names—but the great masses of men, even in this inspired republic, are precisely where the mob was at the dawn of history. They are ignorant, they are dishonest, they are cowardly, they are ignoble. They know little if anything that is worth knowing, and there is not the slightest sign of a natural desire among them to increase their knowledge.

. . .

On the contrary, he is generally against [this increase in knowledge], and sometimes with immense violence. Every step in human progress, from the first feeble stirrings in the abyss of time, has been opposed by the great majority of men. Every valuable thing that has been added to the store of man's possessions has been derided by them when it was new, and destroyed by them when they had the power. They have fought every new truth ever heard of, and they have killed every truth-seeker who got into their hands.

Mencken had even more pointed words for Bryan himself.

This old buzzard, having failed to raise the mob against its rulers [speaking of Bryan's presidential races], now prepares to raise it against its teachers. He can never be the peasants' President, but there is still a chance to be the peasants' Pope. He leads a new crusade, his bald head glistening, his face streaming with sweat, his chest heaving beneath his ruffled alpaca coat. One somehow pities him, despite his so palpable imbecilities. It is a tragedy, indeed, to begin life as a hero and to end it as a buffoon. But let no one, laughing at him,

underestimate the magic that lies in his black, malignant eye, his frayed but still eloquent voice. He can shake and inflame these poor ignoramuses as no other man among us can shake and inflame them, and he is desperately eager to order the charge.

Despite Mencken's fears, the Scopes trial not only held fundamentalism up to exceeding ridicule it also left Bryan a broken man. After undergoing a withering cross-examination from Darrow during the trial, Bryan left Dayton to continue his writing and lecturing only to collapse and die on July 26, 1925, five days after the conclusion of the trial.

Fundamentalism was on the defensive, and the ridicule from the Scopes trial and its defeat in denominational battles resulted in a self-conscious retreat from political affairs. Although most of this retreat was intentional, part of it was forced by the onset of the Great Depression, which plunged the United States into years of economic chaos and social despair. As it was followed quickly by World War II, the result was nearly two decades of threats to the very existence of the United States.

The response to the Great Depression by American religious institutions was quite weak and disorganized. The breadth of the depression meant that there were few unaffected individuals, and the finances of religious organizations were also hit hard. Despite this, some individuals used their religious positions to condemn the social structures that had led to the depression and to demand greater governmental involvement.

In the 1920s and 1930s, liberal democracy was on the defensive. In Japan, Germany, and Italy strong centralized governments ruled with force and a rhetorical (if not realized) commitment to social solidarity, often based on racialist or ethnic lines. In eastern Europe, most of the fledgling post-World War I democracies had collapsed into authoritarian regimes. While even further east, the Soviet Union had risen from the collapse of the czarist regime in

Russia and presented yet another version of an authoritarian alternative to democracy.

Such models had their temptations even in the United States. Many American intellectuals and artists had their sympathetic views of the Soviet Union or Mussolini's Italy, while more popular leaders, such as Louisiana's Huey P. Long, declared their commitment to a social order where everyone was guaranteed a sufficiency and where rich plutocrats did not control everything: "God told you what the trouble was. The philosophers told you what the trouble was; and when you have a country where one man owns more than 100,000 people, or a million people, and when you have a country where there are four men, as in America, that have got more control over things than all the 120,000,000 people together, you know what the trouble is."

For Long, as for many others, the need was to redistribute the wealth, to give it to those who earned it and to do so regardless of niceties and legal order. Although felled by an assassin in 1935 at the height of his power and looming as a challenger to President Franklin Roosevelt, others echoed Long's declarations.

Preeminent among these was Father CHARLES E. COUGHLIN, who from this parish outside of Detroit commanded a radio audience that was said to exceed 40 million weekly. Originally a supporter of President Roosevelt, during the 1930s Coughlin voiced increasing sympathy with Mussolini and even Hitler, as his radio speeches became filled with screeds against Jewish bankers. When the candidate of the Union Party was soundly defeated in the 1936 presidential election, Coughlin left the air for several weeks only to return with even more virulent anti-Semitic and anti-Roosevelt speeches. He particularly criticized what he identified as a British-Jewish-Roosevelt conspiracy to draw the United States into a war.

That war, which eventually would engulf nearly all the world, would become WORLD WAR II. The war and its aftermath would have a marked affect on American religion. Many of

these changes lay in the postwar era, however. The most important consequence of the lead-up to the war was the challenge it presented to the mood of pacifism that had dominated religion in the United States since World War I. This break was symbolized by the departure of REINHOLD NIEBUHR in April 1941 from the leading protestant journal, *The Christian Century*, because of its pacifist position to join with others in establishing *Christianity and Crisis* with the goal of arguing for American support for those engaged in the war against the Axis Powers of Germany, Italy, and Japan (see NEOORTHODOXY).

From World War II to the Present

The United States ushered in the year 1941 under ominous clouds. The depression had begun to ease, and Americans were experiencing greater confidence in the economy, yet in Europe and Asia, German, Italian, and Japanese expansion and militarism threatened millions. Many wondered whether the United States would be able to remain free of these conflicts and, if not, what the consequences would be. Others felt strongly that the United States had a moral obligation to enter those conflicts and to stem the seemingly endless advance of what they viewed as threats to all of civilization. Still others, much fewer in number, saw these governments as the wave of the future. They were convinced that they soon would sweep away the decadent and weak values of liberal democracy and replace them with driving, progressive, and powerful politics that focused on the group and not the individual.

By the end of the year, and with the Japanese attack on Pearl Harbor, the United States would be plunged into two-front war. Issues, not of identity, but of existence, would be foremost on most people's minds. Amid the chaos, demands, and fears caused by the war in Europe and the Pacific, the United States would begin moving through a series of events that radically transformed the social and legal landscape.

These events eventually transformed the American religious landscape.

As the United States slowly recovered from the depression, it also began to move toward a nearly four-year total war in which nearly 300,000 Americans would die; it also entered a period when the entire concept of American religious identity would be transformed radically. This was not, however, obvious at the year's beginning. Nor would the developments follow a straight and clear trajectory. The movement had begun. Three main factors drove this movement. The first involved the U.S. Supreme Court and the development of what is known as the "incorporation doctrine." The second was World War II itself. The combination of social factors that it set into motion and the fight against the racist ideology of Nazism led to greater introspection and reflection on America's own practices. Finally, the Civil Rights movement and its demand that the United States actualize its claims of democracy, freedom, and equality for all forced greater attention on unequal treatment, both legally and socially, of minority groups, including minority religious groups.

This movement was set in motion by a decision of the U.S. Supreme Court in 1940. This decision in the case of *Cantwell v. State of Connecticut* (310 U.S. 296 [1940]) enunciated one of the two principles that led to the plethora of church-state cases that the Court would hear over the next few decades and which would increase the right to practice religion free from governmental interference and eliminate practices that constituted an establishment of religion. The case involved Jesse Cantwell and his son.

These individuals were JEHOVAH'S WITNESSES who had been going door-to-door distributing religious literature in a predominantly Catholic neighborhood in New Haven, Connecticut. They also approached passers-by on the street, asking them if they would be willing to hear their message. Two passers-by, after having

agreed to do so, listened to a record entitled "Enemies" played on the Cantwells' portable phonograph. The record was an attack on the Catholic Church as an un-Christian and dangerous institution. The passers-by, both of whom were Catholic, became angry and threatened to strike the Cantwells if they did not leave. The Cantwells promptly packed up their materials and departed. They later were arrested for violating a local ordinance that required all solicitors to obtain a permit and for inciting a breach of the peace.

In its decision the Supreme Court declared that "The fundamental concept of liberty embodied in the Fourteenth Amendment embraces the liberties guaranteed by the First Amendment." The First Amendment declares that "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof." The adoption of the Fourteenth Amendment meant that state legislatures, just as much as Congress, are forbidden to enact such laws. The Court continued by pointing out that the constitutional limits on such legislation has two parts. Most directly it forbids legal compulsion of the acceptance of any set of beliefs. Second, it means that individuals cannot be forced into the practice of any form of worship. "Freedom of conscience and freedom to adhere to such religious organization or form of worship as the individual may choose cannot be restricted by law." Additionally, the Constitution "safeguards the free exercise of the chosen form of religion. Thus the Amendment embraces two concepts, freedom to believe and freedom to act." While the freedom to act on one's religious beliefs cannot be absolute, "Conduct remains subject to regulation for the protection of society." Such regulations must not unduly burden the freedom to act. States must be limited in their power to regulate. Governments' exercise of their regulatory power must not unduly infringe on a protected freedom in the service of the legitimate goal of protecting society. Governments by general and nondiscrimina-

tory legislation regulate the times, the places, and the manner of soliciting upon its streets, and of holding meetings thereon; and they may in other respects safeguard the peace, good order and comfort of the community, without unconstitutionally invading the liberties protected by the Fourteenth Amendment. In doing so they may not sit in judgment on the religious nature of organizations nor may they institute blanket bans that unnecessarily limit the free exercise of individuals' religious practices.

In deciding *Cantwell*, the Supreme Court, for the first time, expressly made the free exercise clause of the First Amendment binding on the states. Additionally, it clearly stated that any law that required a governmental official to determine whether an activity or organization were "religious" or not before allowing people to undertake that activity or act on behalf of that organization clearly violated the free exercise clause of the U.S. Constitution. This decision combined with the Supreme Court's later decision in *Everson v. Board of Education* (1947), which incorporated the "establishment clause" of the First Amendment into the concept of liberty in the Fourteenth Amendment, would force major reconsiderations of the practices of many states and lead to some of the Supreme Court's most controversial decisions of the 20th century (see CHURCH AND STATE, RELATIONSHIP BETWEEN).

While the decision in *Cantwell* made the free exercise clause of the First Amendment to the Constitution binding on the states, it did not establish a firm line about what constituted the boundary of the peace, safety, and good order of the state. Where did governments legitimate interests lie?

This question had been implicit in the ongoing conflicts in the United States regarding whether the country's republican democracy required a particular form of religious belief, even if it were not held explicitly. Unity, identity, and connection to the values of the United States were considered by many

as essential if the country were to continue to exist. Acts that hindered that unity and identity or rejection of those values by a significant number of individuals residing in the United States could be understood as threats to the social order, in fact to the United States itself. To ask the question directly, What should the various governments of the United States do when faced with individuals whose religious practices seemed to undermine the very identity, unity, and values of the country?

For many, this was the question posed by the case of *Minersville School District v. Gobitis* (1940). This case involved two schoolchildren, Lillian and William Gobitis, who had been expelled from their public schools in Minersville, Pennsylvania, for refusing to salute the flag as part of the Pledge of Allegiance at the beginning of the school day. The Gobitis children were Jehovah's Witnesses. For them, offering such a salute constituted idolatry because it suggested that there were powers other than God deserving of allegiance.

Their failure to participate in this act, required of all students and teachers by state law, led to their expulsion from school. Their parents sued the school district on the grounds that the law violated the free exercise clause of the First Amendment as applied to the states by the Fourteenth Amendment. The parents won their case in both lower courts but, to the surprise of many, the Supreme Court, by an 8-1 vote, overturned the lower courts' rulings and sided with the government. The decision, written by Justice Felix Frankfurter, the Court's only Jewish member, focused primarily on the issue of national identity and security. Religious beliefs and practices could not be allowed to threaten that security, for only that security made possible the religious liberty for which these people strove. In his majority opinion, Justice Frankfurter wrote "We are dealing with an interest inferior to none in the hierarchy of legal values. National unity is the basis of national security. To deny the legislature the right to select appropriate

means for its attainment presents a totally different order of problem from that of the propriety of subordinating the possible ugliness of littered streets to the free expression of opinion through distribution of handbills."

For Justice Frankfurter the *Gobitis* case involved issues far beyond those typically addressed by legislatures. It did not involve a law designed to protect the family, promote health, provide for the common defense, or levy taxes. The law did something that made all of those activities, which presuppose the existence of an organized political society, possible. The mandatory flag salute was designed to assist in binding the individuals of the country into an organized, political society by creating a sense of identity and connection. As Frankfurter wrote, "The ultimate foundation of a free society is the binding tie of cohesive sentiment. Such a sentiment is fostered by all those agencies of the mind and spirit which may serve to gather up the traditions of a people, transmit them from generation to generation, and thereby create that continuity of a treasured common life which constitutes a civilization." For him without that sense of identity nothing could be done. While it might be unfortunate that in the midst of this need some individuals are forced to undertake activities which they find offensive, without that sense of common life, society collapses.

The consequences of *Gobitis* were significant. Many states enacted laws requiring students to say the Pledge of Allegiance and salute the flag at the beginning of the school day. In West Virginia, students refusing to do so could be expelled and were subject to being treated as delinquent and sent to reformatories as though they had committed a crime. Jehovah's Witnesses, always a despised minority, found themselves subject to numerous physical attacks. The U.S. Department of Justice found itself flooded with reports of such attacks. The attacks reached a point that many patriotic organizations, such as the

American Legion, suggested making the flag salute voluntary.

In response, another suit was filed by the Jehovah's Witnesses parents of several schoolchildren in West Virginia. In its decision in *West Virginia State Board of Education v. Barnette*, 319 U.S. 624 (1943), the Supreme Court, by a 6-3 vote, overturned its decision in *Gobitis*. Writing for the majority, Justice Robert H. Jackson stated:

we apply the limitations of the Constitution with no fear that freedom to be intellectually and spiritually diverse or even contrary will disintegrate the social organization. To believe that patriotism will not flourish if patriotic ceremonies are voluntary and spontaneous instead of a compulsory routine is to make an unflattering estimate of the appeal of our institutions to free minds. We can have intellectual individualism and the rich cultural diversities that we owe to exceptional minds only at the price of occasional eccentricity and abnormal attitudes. When they are so harmless to others or to the State as those we deal with here, the price is not too great. But freedom to differ is not limited to things that do not matter much. That would be a mere shadow of freedom. The test of its substance is the right to differ as to things that touch the heart of the existing order.

If there is any fixed star in our constitutional constellation, it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein. If there are any circumstances which permit an exception, they do not now occur to us.

This understanding of the Constitution and of the right to go against the predominant religious norms would be the basis for

the deepening of religious tolerance through the 20th century.

While *Cantwell* and *Barnette* were focused, to a great extent, on the free exercise of religion (although *Barnette* was decided on free speech grounds as well), some of the most high-profile cases of the 20th century involved what are known as “establishment clause” cases. With the Supreme Court’s decision in *Everson*, the establishment clause also was applied to the states through the Fourteenth Amendment. This decision would have remarkable consequences for many state practices, particularly practices in public schools.

Historically, public schools often proved to be major areas of contention over issues related to religion. Throughout much of the 19th century, there were conflicts over the Protestant ethos in the public schools, particularly over the use of the Protestant version of the Bible and the Lord’s Prayer. Catholics felt that this was unfair and resisted their use. When unable to achieve their goals, they often left to create their own schools. Catholics, however, resented this alienation from the public schools for which they also paid taxes and often clamored for public support for their schools. The demands led to conflicts over funding “sectarian” institutions and the adoption by many states of laws and even state constitutional amendments prohibiting the use of state funds for such institutions.

Public schools always had come under local control. With the incorporation of the establishment clause, however, their practices regarding religion also came under scrutiny. Through the 1950s and 1960s a series of Supreme Court decisions declared numerous practices unconstitutional and, in doing so, served to make America’s public schools less hostile to religious minorities, including atheists.

Decided between 1962 and 1963, these decisions struck down a New York law requiring that students recite a prayer written by the State Board of Regents (*Engle v. Vitale*,

1962), a Pennsylvania statute requiring that each school day begin with the reading of 10 verses from the Bible (*Abington Township School District v. Schempp*, 1963), and a Maryland requirement that each school day begin with a recitation of the Lord’s Prayer (*Murray v. Curlett*, 1963 [consolidated with *Schempp*]; see MADALYN MURRAY O’HAIR) such decisions increasingly eliminated the last vestiges of the 19th century’s “Protestant Empire.” Minority religious members no longer were made to feel as though they were interlopers and outsiders. The public schools became less hostile to these individuals and increased their identity with country and sense of belonging. The decisions, however, antagonized numerous individuals, who began to feel as though their religion was under attack. These feelings would increase over the years, as massive cultural upheavals seemed to undermine all that these individuals believed in.

The legal decisions that furthered this process of integration were aided by major social and intellectual changes brought about by World War II and its consequences. The war’s affect on American society was immense. To begin with, World War II brought together huge numbers of Americans from vastly different economic, religious, and social groups. Descendants of Polish Catholics, German Lutherans, and Russian Jews fought side-by-side with Southern Baptists, Unitarians, and atheists. Engaged together in this great national endeavor, many individuals became comrades and friends with other people with whom they otherwise never would have come into contact. Religious differences had been exacerbated by residential patterns that separated individuals physically and minimized their likelihood of social interaction.

These physical separations also would be overcome by changes wrought by World War II, but that lay in the future. Perhaps the greatest change generated by the war resulted from the experience of fighting against Nazism and its racist doctrines. The struggle to define

what it meant to be fighting for democracy also played a major role. As the United States and its citizens increasingly became aware of the consequences of the Nazis racialist and discriminatory policies, the slaughter of those who differed from its ideology, such as Jehovah's Witnesses, and racially from the "Aryan" norm, such as Jews (against whom most of the ideology was directed), attitudes and practices in the United States that emphasized difference increasingly were viewed as suspect. If Nazism was wrong and its ideology was wrong, then part of the war against Nazism involved a struggle against that ideology. Defeating that ideology also involved a serious process of introspection about where the United States had failed to live up to its own highest values of democracy, equality, and religious tolerance. Such a process would play a major role in the growth of the Civil Rights movement as it gained momentum in the 1950s and 1960s. Religious tolerance also expanded because of this process of reflection on how to treat minorities and others who differed.

This was the background from which people were acting as they returned home from the war and began to undergo one of the most significant social changes in American history. The economic growth of the fifties, fueled by pent-up demand from the war years, the need for housing for the returning soldiers and their families, and the burgeoning automobile industry, which itself was driven by the growth of the suburbs to where these families moved, would transform American life. All of these changes were funded, to a great extent, by governmental benefits aimed at aiding the returning military men and women. These benefits were available to all who served, and as they took the benefits offered by the "G.I. Bill" to attend college or to buy a home in the new suburbs that were springing up across America, these men and women also found themselves in new social territory. Unlike the urban neighborhoods in

which many of these individuals had grown up, the new suburbs usually lacked religious and ethnic homogeneity. (The one exception was the near-absence of African Americans, who continued to suffer from the effects of both legal and social segregation.) Where one may have grown up before the war in a neighborhood that was overwhelmingly Irish or Polish Catholic or Jewish, in the suburbs one's neighbors were a varied lot, just as one had experienced in the military. In fact, one shared this connection with one's neighbors. The shared war experience played a major role in minimizing, if not overcoming, the suspicions and hostilities with which an individual may have grown up.

The 1950s, as Will Herberg would write in his book of that name, became a time when Protestant, Catholic, and Jew defined what it meant to be American and when America consisted of those identities. Anti-Catholicism in particular decreased dramatically during this time, and many Catholic priests became leading public figures. In fact, one of the leading television personalities was a FULTON J. SHEEN, a Catholic bishop whose television program was watched by Americans of all stripes as he addressed religious, social, political, and, pre-eminently, personal questions of how to live.

The 1950s were not, however, without their own problems. The defeat of Nazism, fascism, and Japanese militarism also led to the encroachment of communism into eastern Europe and Asia. The Soviet army occupied all of Europe east of the Elba and south to the Greek border. The Chinese Communists were posed to take over that country. Once again the United States seemed threatened by a foreign and alien ideology. As revelations of "Communists" in high government posts became increasingly commonplace, one of the greatest losers were the traditional American elites, since most of these individuals were Ivy League-educated individuals from the northeastern states. Catholics, however, gained greatly from their committed and

consistent anticommunism. For regardless of what else one might have suspected them of, their opposition to communism and its atheistic ideology was obvious. This fact was made even clearer as one heard the news of the oppression experienced by the church's leaders in Poland and elsewhere in Europe.

The 1950s presented marked challenges for American Jews, however. While, overall, anti-Semitism decreased, the prevalence of Jews in the American Communist Party and in many progressive movements that some suspected of being Communist front organizations led some to equate "Jew" with "Communist." These Jews were immigrants or descendants of immigrants from eastern Europe. Invariably, they were secular Jews who had gravitated toward progressive politics because, historically, it offered the greatest promise for lifting the oppression under which Jews had lived in Poland, Russia, Lithuania, and elsewhere. Religiously observant Jews in the United States, on the other hand, struggled mightily against the anti-Semitism, which continued to bedevil their coreligionists in eastern Europe who had survived the Holocaust, as well as the anti-Semitic attacks orchestrated by the Soviet Communist Party. This was less clear to the American population that saw the predominance of Jews in the leadership of the Communist Party U.S.A.

The greatest challenge, however, was presented by the trial of Julius and Ethel Rosenberg for espionage. In January 1950, American authorities discovered that Klaus Fuchs, a German refugee theoretical physicist who worked on the Manhattan Project (the U.S. atomic bomb project) during the war, had provided the Soviet Union with top secret information during the war. Fuchs's confession led U.S. and British intelligence agents to his courier, Harry Gold. Gold, in turn, fingered a former machinist at the top-secret Los Alamos laboratory, Sgt. David Greenglass, who also confessed to passing secret information to the Soviets. Gold claimed that he had been

recruited by his brother-in-law, Julius Rosenberg, who, he claimed, also had passed information to the Soviet Union. Julius Rosenberg and his wife, Ethel, were arrested in the summer of 1950. Indicted on espionage charges in January of the following year, the Rosenbergs went on trial in March 1951.

While the government went out of its way to ensure that the trial had no hint of anti-Semitism, both the judge and prosecutor were Jewish; an anti-Jewish and anti-Semitic undercurrent ran through much of the protests about the trial. The trial took place amid fears of Soviet expansionism and the outbreak of the Korean War. While the evidence against Ethel was weak and came about only as a result of the testimony of her own brother, Greenglass, who reported that Ethel had typed up the secret documents that later were passed on to the Soviets, both she and Julius were convicted of violating the Espionage Act on March 29, 1951. On April 5 of that year, Judge Irving Kaufman sentenced them to death. The Rosenbergs denied the espionage charges even as they faced the electric chair.

In imposing the death penalty, Judge Kaufman noted that he held them responsible not only for espionage but also for the deaths of the Korean War:

I consider your crime worse than murder . . . I believe your conduct in putting into the hands of the Russians the A-Bomb years before our best scientists predicted Russia would perfect the bomb has already caused, in my opinion, the Communist aggression in Korea, with the resultant casualties exceeding 50,000 and who knows but that millions more of innocent people may pay the price of your treason. Indeed, by your betrayal you undoubtedly have altered the course of history to the disadvantage of our country. No one can say that we do not live in a constant state of tension. We have evidence of your treachery all around us every day for the civilian defense activities

throughout the nation are aimed at preparing us for an atom bomb attack.”

The Rosenbergs would be the only civilians executed for espionage-related activity during the cold war. The fact that of all those accused of espionage the only two individuals executed were Jewish would linger for decades in the minds of many American Jews. This raised ongoing and nagging suspicions that on some level, anti-Semitism was at work and that the Rosenbergs had been killed because they were Jewish, not because of their activities. In fact, it became so engrained in the minds of one segment of American Jewry that even the clear evidence of Julius Rosenberg’s guilt that became evident following the collapse of the Soviet Union could not weaken this conviction.

Fears of communism played a major role in the 1950s. Many discussions of these years have focused on the “Red Scare” of the time. While overblown, the fear of communism gave rise to numerous movements that opposed communism, immigrants, and others who varied from their view of what constituted a “good” American. Organizations such as the John Birch Society, the Minutemen, and others generated a version of Americanism that reflected many of the elements of traditional nativism minus, for some, at least, the anti-Catholicism. Others, such as the fundamentalist Carl McIntyre, would spend their time preaching an all-American crusade against communism, liberals, and all who did not share his vision of Christianity.

Even so, the 1950s were a period of intellectual and artistic ferment that began the social transformation that would extend through the 1960s and early 1970s. Many of these cultural shifts would play a major role in the religious life of the United States. Beat Poets (see BEAT MOVEMENT) such as Jack Kerouac and Gary Snyder introduced several generations of American readers to Zen Buddhism. A diverse group of writers and performers from the Bea-

ties to Richard Alpert (RAM DASS) would bring Hinduism to a greater familiarity among large numbers of Americans. The 1960s saw a proliferation of gurus and growing interest in Asian religions. Some of this interest was merely superficial, as individuals picked up the language and form of Buddhism, particularly Zen, but other forms of Asian religions as well, including Tibetan Buddhism, Hinduism, and even SUIFISM.

The growth of these “alien” religions, particularly in forms that seemed to demand a complete transformation of individual’s lives and the adoption of radically different lifestyles, such as among the Hare Krishna movement, or even ostensibly Christian movements such as the Korean originated UNIFICATION CHURCH, generated much controversy and animosity. In fact, the proliferation of innumerable New Religious Movements that did not resemble what many saw as “real” religion generated a significant backlash. Charges of brainwashing, kidnapping, and abuse by these “cults” led to the creation of an anti-cult movement, designed to combat the spread of these religions and to “save” those who had fallen under their nefarious influences. Acting on behalf of family and friends, these individuals would “rescue” individuals who had become members of these “cults.” They then would proceed to “deprogram” the individual with the goal of freeing him or her from the “cult’s” control.

Many of these fears were overblown, and numerous individuals were taken from religious groups that they had joined quite freely. Also, some deprogrammers developed a reputation for violence and abuse that discredited the entire movement. This happened despite the fact that some of these religious movements were indeed abusive and even violent. The mass murder/suicides at Jonestown, Guyana, by members of the People’s Temple (see JAMES WARREN [JIM] JONES) in 1978 and among the followers of HEAVEN’S GATE in 1997, as well as the deadly conflict between federal agents

and members of the Branch Davidians (see WACO) in 1993, proves that at least suspicions of some of the groups was not unwarranted.

Despite these few bad examples, the entire period saw an expansion of what was considered acceptable in the religious realm. The entire series of cultural changes that marked this period, beginning with the 1960s and continuing throughout the century, progressively shifted social norms. Unmarried couples living together, gays and lesbians, and individuals with religious practices outside of the traditional norms soon became familiar in neighborhoods everywhere. Progressive acceptance became the norm of behavior.

One of the most important manifestations of this process of growing acceptance was the election of the United States's first Roman Catholic president in 1960. Roman Catholicism intermittently had been the target of suspicion, abuse, and even violence in the United States. In 1928, Al Smith, had been the first Catholic nominated for the presidency. Smith suffered a tremendous defeat in that election, part of which was explained by his religion. As a Democrat, he was still susceptible to the charges of representing the party that brought about the Civil War, and, as an opponent of Prohibition, he also bore the stigma of being in favor of alcohol. Smith, in fact, epitomized the long-standing Republican charge against Democrats that they represented the party of "Rum, Romanism, and Rebellion."

By the end of the 1950s, much had changed. Catholics were viewed as one of the staunchest opponents of communism; the postwar era had brought Catholics and non-Catholics increasingly into social contact in neighborhoods and business; and many individuals had gotten to know Catholics on a personal level during their military service in World War II. While Catholicism may have remained a mysterious edifice to many Americans, Catholics no longer were strangers. And John F. Kennedy was very different from Al Smith. A war hero, handsome, dash-

ing, and young, Kennedy did not look like the New York City political boss that Smith was. Neither was Kennedy beholden to a region accused of secessionism, and Prohibition was simply a historical footnote.

Despite all these changes, Kennedy received a tremendous amount of scrutiny because of his Catholicism. Kennedy addressed this issue straight on in several speeches. One of the most important was his speech before the Ministerial Association of Houston, Texas, in September 1960. In it, Kennedy went on the offensive. Addressing the overwhelmingly Baptist organization, Kennedy declared:

"But because I am a Catholic, and no Catholic has ever been elected President, the real issues in this campaign have been obscured—perhaps deliberately, in some quarters less responsible than this. So it is apparently necessary for me to state once again—not what kind of church I believe in, for that should be important only to me—but what kind of America I believe in.

I believe in an America where the separation of church and state is absolute—where no Catholic prelate would tell the President (should he be Catholic) how to act, and no Protestant minister would tell his parishioners for whom to vote—where no church or church school is granted any public funds or political preference—and where no man is denied public office merely because his religion differs from the President who might appoint him or the people who might elect him.

I believe in an America that is officially neither Catholic, Protestant nor Jewish—where no public official either requests or accepts instructions on public policy from the Pope, the National Council of Churches or any other ecclesiastical source—where no religious body seeks to impose its will directly or indirectly upon the general populace or the public acts of its officials—and where religious liberty is so indivisible that

an act against one church is treated as an act against all.

For while this year it may be a Catholic against whom the finger of suspicion is pointed, in other years it has been, and may someday be again, a Jew—or a Quaker—or a Unitarian—or a Baptist. It was Virginia's harassment of Baptist preachers, for example, that helped lead to Jefferson's statute of religious freedom. Today I may be the victim—but tomorrow it may be you—until the whole fabric of our harmonious society is ripped at a time of great national peril.

Finally, I believe in an America where religious intolerance will someday end—where all men and all churches are treated as equal—where every man has the same right to attend or not attend the church of his choice—where there is no Catholic vote, no anti-Catholic vote, no bloc voting of any kind—and where Catholics, Protestants and Jews, at both the lay and pastoral level, will refrain from those attitudes of disdain and division which have so often marred their works in the past, and promote instead the American ideal of brotherhood."

Kennedy's election would be a watershed in American politics, and from then on the Catholicism of any presidential and vice presidential candidates did not matter. Anti-Catholicism also would be diminished by an event that happened across the Atlantic Ocean in the very center of Catholicism, the Vatican. The Second Vatican Council (see VATICAN COUNCIL II) (1962–65) radically transformed the church and eliminated most of the intellectual opposition to Catholicism. Two documents issued by the Council were of the utmost importance in this regard, and both were adopted due to the leadership of the American bishops. With the Declaration on the Relationship of the Church to Non-Christian Religions (*Nostra Aetate*) and the Declaration on Religious Freedom (*Dignitatis Humanae*), the Roman Catho-

lic Church altered its traditional relationship to other religious traditions and its historical opposition to religious liberty and church-state separation. Both were major statements on Catholic doctrine and dispensed with the dogmatic claim that there was no salvation outside of the Roman Catholic Church. *Nostra Aetate* also explicitly condemned anti-Semitism and implicitly recognized the role of Catholic doctrine in promoting it. More positively, the documents opened the way for discussions between Catholics and Protestants and Catholics and non-Christians. The Declaration on Religious Liberty also dispelled any lingering suspicions of Catholicism as a religion committed to religious coercion.

On many levels, the United States was moving toward greater tolerance. There were, however, ongoing challenges to that tolerance, and movements in that direction continued to generate reactions and even violence.

Perhaps the most significant example of this was the CIVIL RIGHTS MOVEMENT. In many ways the conditions that gave rise to the Civil Rights movement contained elements directly related to the traditional elements generating religious intolerance in the United States: ethnic and racial difference. The Civil Rights movement of the 1950s–1970s emerged from the African-American Church. While many of its earlier leaders, such as W. E. B. DuBOIS, A. Philip Randolph, and Walter F. White, had a more secular bent, as the Civil Rights movement developed under MARTIN LUTHER KING, JR., its leadership and strength came from the African American Church and other religious leaders. Much violence, therefore, was directed at religious leaders and religious buildings. Undoubtedly, one of the most infamous terrorist attacks in U.S. history was the bombing of the Sixteenth Street Baptist Church in Birmingham, Alabama, on September 15, 1963. On that Sunday morning, as 80 children studied their Sunday school lessons in the church's basement, a bomb ripped through the building, killing four young Afri-

can-American girls. This murderous terrorist attack was emblematic of many such attacks from the 1950s through the 1960s. Innumerable churches were bombed, as were the homes of their ministers. The home of the Reverend Fred Shuttlesworth, the pastor of Sixteenth Street Baptist, had been destroyed by a bomb blast the preceding Christmas Day. Martin Luther King, Jr., when he was a pastor in Montgomery, Alabama, during the 1950s, had seen both his house and church attacked by racist terrorists. These attacks were directed against people attempting to live out their religious commitments. They opposed a racist, unequal, and violent system because their religion told them that it was wrong, that it was a sin against both God and humanity. The buildings and individuals attacked were Jewish (The Temple, Atlanta's largest Reform Jewish congregation, bombed in October 1958 because of its support for civil rights), Catholic (Viola Liuzzo, gunned down in 1965 as she was returning from a voting rights rally), and Episcopalian (the Reverend Jonathan Daniels, murdered by a part-time deputy sheriff in Lowndes County, Alabama, because of his support for African-American civil rights). Many, many others were killed, beaten, threatened, and fired from their jobs.

While it might be comforting to blame this violence on those who held particularly virulent and distorted views of Christianity (many of the murderers were indeed members of the Ku Klux Klan and other racist groups with quasi-religious overtones), the responsibility is much wider than that. For while such individuals may have committed the crimes, they were abetted by a social system that derided and opposed any forms of difference. The trials of many of those guilty of these horrid crimes became farces due to the refusal of many citizens to acknowledge that those who differed from them were still worthy of life and respect. They rejected the idea that equality of such individuals should not be denied, and they rejected their common humanity.

In doing this, they created the atmosphere in which intolerance and even murder could thrive. As much as the "law-abiding" citizens may have deplored the bombings and shootings, they hated the victims even more. The result was an environment in which such actions were encouraged.

Others, however, were appalled by such tactics and by the immorality and violence of segregation and racism in general and increasingly supported the aims of the Civil Rights movement. The passage of the Civil Rights Act of 1964 signified a major milestone in this regard. It also played a major role in minimizing religious intolerance in the United States because it forbade discrimination on the basis of race, religion, sex, or national origin. No longer could employers refuse to hire individuals because they were Jewish, Catholic, or Hindu. Additionally, employers must provide reasonable accommodation to employees' religious practices and ensure that the work environment is not hostile to an individual because of her or his religious beliefs. The result was a marked decline in overt discrimination against individuals on religious grounds and, resultantly, a greater integration of individuals into wider American society.

The Civil Rights movement had other influences on the expansion of religious tolerance in the United States. By showing how organizations could mobilize political support for their causes and could gain recognition of their rights through combining social mobilization with legal and political action, the Civil Rights movement provided a model for others. It became the model for women, gays and lesbians, and religious groups. On the political front, religious groups traditionally have been fairly successful in obtaining the passage of antidiscriminatory legislation, since no one ever wants to appear to be against religion.

From the close of World War II through the 1990s, the United States saw a progressive and marked growth in religious tolerance. A

combination of Supreme Court decisions, antidiscrimination laws, social and cultural changes, and increased advocacy among religious groups served to bring this about. Laws designed to prevent certain manifestations of intolerance, discrimination in employment or in housing, for example, and social changes that made expressions of intolerance unacceptable, radically transformed American society.

Not everyone approved of such changes, however. Many more traditional Protestants in particular felt that they had been left behind by these changes. Their views and understandings of the world and of society had been transformed radically. Their practices of Bible reading and school prayer had been declared unconstitutional. Their moral values were pushed aside amid rapid cultural change. For many of them, it seemed as though every group mattered and deserved respect except for them.

These individuals also began a process of mobilization and advocacy. This began with the creation of the MORAL MAJORITY by the Reverend JERRY FALWELL in 1979 and followed with the creation of other groups, such as the Christian Coalition, in 1989. While the organizations focused most directly on moral issues, such as opposing abortion, HOMOSEXUALITY, and the maintenance of what they claimed to be the traditional family, their overt promotion of evangelical and fundamentalist Protestantism and their vocal support for more explicit religiosity, and particularly their form of Christianity, in public life led to many to accuse them of being religiously intolerant and of wanting to impose religious uniformity on America (see RELIGIOUS RIGHT).

For many people, the emergence of the Christian Right in the last quarter of the 20th century came as a marked surprise. In several ways, however, it reflected the history of American experience, where periods of religious growth and expansion eventuate into political movements. This happened during the Second

Great Awakening and also following the Civil War, World War I, and World War II.

The surprise came less from this being a novel experience in American religious history and more from the presumption that social and cultural changes in the second half of the 20th century had made such developments obsolete, if not impossible. Additionally, the dominance of the secularization thesis in the social sciences, which argued that as modernization and technology increased, religious belief and practice would decrease (see SECULARISM), had proven not to be the case. In fact, during the last quarter of the 20th century, the significance of religion, both in the lives of individuals and in politics, seemed to grow dramatically.

The so-called Christian Right in the United States exemplified this growth. It has its roots in many different strands of American history. To some extent, it has its roots in the conflict between fundamentalists and modernists in the early part of the 20th century. It also owes its emergence to the tremendous social and cultural upheavals that marked the 1960s and 1970s. Many individuals saw the changes in American society and its attitudes as both an attack on traditional morality as well as on their religion. These Christians felt marginalized and abused. For them, the seeming growth of tolerance in American society looked more like an assault on traditional Christianity. Cultural messages seemed to hold their moral beliefs up for ridicule and mockery. The decision by the Supreme Court in *Roe v. Wade* striking down most laws limiting abortion exemplified for many of these individuals the moral corruption that was destroying the country.

The rise of the Christian Right can be said to have two starting points, one intellectual and one practical. Intellectually, one can legitimately trace it to the work of Francis Schaeffer and the 1981 publication of his book *A Christian Manifesto*. While the book's date, after the election of Ronald Reagan in 1980,

may seem to make it a late entry for such a claim, the book gave many evangelical Protestants the rationale for actively engaging politically and even, in the case of the anti-abortion movement, undertaking direct action to prevent what they saw as the perpetration of evil. Schaeffer's book made abortion a Protestant cause in the United States. In doing so, it also articulated a Protestant doctrine of resistance to immoral policies in a democracy.

Practically, the rise of the Christian Right, as people now know it, can be traced back to the "Listen America" rallies that Jerry Falwell conducted during the United States's bicentennial in 1976. Driven by concerns over what he and others understood as growing immorality, anti-Americanism, and attacks on traditional Christianity, Falwell led in the creation of the Moral Majority political organization in 1979. While the Moral Majority may have played a role in the election of Ronald Reagan as president in 1980, Falwell disbanded the Moral Majority in 1989, declaring that it had achieved its goals. To a great extent, he may have been correct. The Moral Majority created the importance of values voting for Americans with a more traditional understanding of morality and patriotism. Many of these values voters constituted the so-called Reagan Democrats, whose votes brought both Reagan and George H. Bush into the White House, although many returned to the Democratic Party under Clinton.

While most values voters responded to part of the message of the Moral Majority and similar political movements, others were far more committed. Primarily fundamentalist and conservative evangelical Protestants, these individuals eventually became the base of the Republican Party during the 1990s and the first decade of the 21st century. The standard-bearers of this movement were PAT ROBERTSON, Ralph Reed, and Richard Viguerie, and the leading organizations would be Robertson's Christian Broadcasting Network and Reed's Christian Coalition.

In 2000, the Christian Right helped elect the first candidate who expressly seemed to concur with them both politically and religiously, George W. Bush. Bush unabashedly acknowledged that his conversion to Christianity had transformed his life and spoke readily about his religious beliefs. Additionally, he vocally opposed abortion and spoke in glowing terms about the positive role that religion and religious organizations should play in American life, including the establishment of a White House Office of Faith-Based and Community Initiatives (see FAITH-BASED INITIATIVES, CHARITABLE CHOICE, PHILANTHROPY).

While some may point to Bush's judicial appointees as a victory for the Christian Right, during his terms in office, key policies of the Christian Right fared little better than they had under his father or under Ronald Reagan. Congress refused to vote in favor of a constitutional amendment banning abortion; organized prayer did not return to the public schools; and the antievolution movement hit a massive barrier when a federal judge ruled that intelligent design was religion not science (see EVOLUTION, SCIENCE AND RELIGION). One evangelically inspired initiative did seem to have some success during the Bush presidency; this was greater attention to the issue of sexual trafficking. In a different vein, the highly visible role that the Christian Right and President Bush himself played in the Terri Schiavo case proved to be a significant political liability (see MEDICINE; SCIENCE AND RELIGION).

In 1990, Schiavo, then 26, collapsed at her home and was admitted to the hospital with extensive brain damage leading to a persistent vegetative state. For 15 years, she survived on life support, apparently with no hope of improvement and seemingly no mental or physical awareness or feeling. Numerous court cases, usually pitting her husband (later ex-husband) against her parents, were fought over her treatment, her diagnosis, and prognosis. When her ex-husband filed suit in 1998

to have her feeding tube removed, the legal conflict with her parents intensified and soon became a major religious and political issue.

The legal fight dragged on for years, and by 2003, Schiavo's parents had made the issue a part of the wider right-to-life debate, gaining the support of anti-abortion leaders such as Randall Terry. The intense publicity and the political divisions eventually led to interventions both by the Florida legislature and governor, as well as by the U.S. Congress. All these strategies failed in the face of the decisions by the Florida Supreme Court and the federal courts. The feeding tube eventually was removed, and Terri Schiavo died on March 31, 2005. While many may have been troubled by the removal of Schiavo's feeding tube, a far greater number were bothered by the use of this complex tragedy for what seemed to be political purposes and the fear that politicians might do the same thing in their lives and the lives of their families. This attitude was exacerbated when evidence emerged that the Florida Republican Party had expressly identified Schiavo's case as "a great political issue."

Bush's presidency may, in fact, prove to be the high-water mark of the importance of the Christian Right as a major political force. Dissatisfaction with the war in Iraq, worries about the economy, and a growing concern among many evangelicals with issues beyond abortion, evolution, and homosexuality weakened the seemingly monolithic nature of the Christian Right and evangelicals' political commitment to the Republican Party. During the early months of the race to be the 2008 Republican presidential nominee, numerous candidates vied for the evangelical vote. Despite this scramble, the eventual Republican nominee, John McCain, had long been opposed by the Christian Right.

While they may have had a desire to recover their lost authority in American life, ostensibly at the expense of others who had been aided by increased tolerance and greater legal pro-

tections, in one area these groups have played a notable role in extending religious tolerance in the United States. While most of the leading Supreme Court cases addressing religious issues had focused on establishment clause issues, particularly those relating to Bible reading and school prayer, from the 1980s on there was an increase in the number of free exercise cases. Many of these were brought by organizations affiliated with conservative Protestants or traditionalist Catholics. Much of this litigation was premised on the claim that in attempts to be "tolerant," schools, businesses, and governments had begun to constrain the religious practice of conservative Christians. As a result, they established a series of organizations to support such individuals in litigation. However, in order to expand the definition of free exercise, these organizations often found themselves advocating for individuals and causes not connected with Christianity at all, including a case involving a group of high schoolers expelled for unfurling a sign that read "Bong hits for Jesus."

While these conservative Protestants, often joined by traditionalist Catholics and Jews, fought their battles at the ballot box and in the courts, others fought with more violent means. While pushed underground yet again following the Civil Rights movement, nativist and white supremacist movements continued to live in the dark shadows of American life. Increasingly connected by religious claims known as Christian Identity (see IDENTITY MOVEMENT), these individuals believe that white northern Europeans are the true descendants of the biblical Jews and that blacks, Asians, Jews, and other peoples are inherently inferior. They also believe that the other peoples are under the control of the Jews, who have a conspiracy to undermine true Christian civilization.

Organizations such as the Aryan Nations; Church of Jesus Christ, Christian; and Kingdom Identity Missions, as well as more secretive groups such as the Order and Covenant,

Sword, and Arm of the Lord (C.S.A.) believe that the United States currently is controlled by this conspiracy. They refer to it as Z.O.G., the Zionist Occupied Government. They also are committed to an apocalyptic vision of the future awaiting a final battle between the forces of good, white Christians and those of evil (see RELIGIOUS VIOLENCE). This Racial Holy War (RaHoWa), as they call it, already has started, and God demands violent attacks against those who resist his will. Identity followers have attacked blacks and Jews, interracial couples, and Asians. The Olympic Park bomber, Eric Robert Rudolph, had connections with the Identity movement as did Timothy McVeigh and Terry Nichols, the men responsible for the terrorist bombing of the Alfred P. Murrah Federal Building in Oklahoma City on April 19, 1995, in which 168 people were murdered. Unlike their nativist and Klan predecessors, however, McVeigh and Nichols received no support from the community, and both were convicted of the crime. Nichols was sentenced to life imprisonment and McVeigh to be executed, which he was on June 11, 2001.

Despite the continuing existence of racist, intolerant, and virulently nativist individuals and organizations in the United States, the overall movement since the end of World War II has been toward greater tolerance and social interaction. The repeal in 1964 of the draconian immigration laws of the 1920s that severely curtailed the number of Asians allowed into the United States has increased the number of Indians, Pakistanis, Chinese, Arabs, and other groups. These individuals have brought their religions with them. By living and working in the United States, they have provided a human face to religions that previously may have seemed alien and hostile. Changes in Catholicism and in American attitudes to Catholics greatly diminished traditional anti-Catholic sentiment, and both Catholics and Jews moved into the American mainstream in the second half of the 20th

century. While pockets of gross intolerance and even hatred remained and many people continued to harbor ingrained prejudices and suspicions, by the close of the 20th century, the United States arguably was the most religiously tolerant and pluralistic society in the history of the world. None suffered any legal limitations because of their religious beliefs; religious discrimination was outlawed; and most people interacted positively with others of different religious views and even no religion. Threats loomed on the horizon. As people demanded greater latitude for the free exercise of their faith, the question of where the line should be drawn became more important, as did the issue of teaching about religions, particularly when scholarly evidence told a story radically different from religious teachings. Additionally, Islamist movements opposed to democratic freedoms and Western social norms also began to emerge as challenges to the American model of religious freedom and tolerance (see ISLAMISM). Many of these threats to the hard-won tolerance of the late 20th century would emerge dramatically following the attacks of September 11, 2001.

RELIGION AFTER SEPTEMBER 11, 2001

Just before 9:00 A.M. on September 11, 2001, a commercial jetliner flew into one of the twin towers of the World Trade Center in New York City (see SEPTEMBER 11, 2001, RELIGIOUS SIGNIFICANCE). Shortly afterward, a second plane struck the other tower. Minutes later, as people streamed from the buildings and as bystanders and thousands of people viewing television watched in horror, the south tower began to collapse, one floor dropping on the one below. The north tower's collapse soon followed. Amid this chaos, another jet dove into the Pentagon, tearing a huge chunk into the wall of that massive edifice, the central command system of the U.S. military.

Rumors flowed, fear grew, and anger mounted. Planes were ordered out of the air. Amid this chaos, a fourth jet, its departure time delayed, also had been commandeered by terrorists. Yet the delay made all the difference. The passengers on this plane, United Flight 93 flying from Boston to Los Angeles, alerted by cell phone conversations with family and friends, realized that their plane also was being directed to a major public building. The Capitol? The White House? No one knew, yet several passengers realized that something needed to be done. Supported by those with whom they spoke, they agreed to attempt to retake the plane. With the words "God bless you" ringing in their ears and deeply heartfelt prayers and a final "Let's roll," from one of the planners, the courageous individuals mounted an assault on the cockpit, bursting in and wrestling with the hijackers for control of the airplane. The assault was only partially successful. They did prevent the hijackers from achieving their goal of flying the plane into its intended target, but only at the sacrifice of their own lives, as the plane crashed into a field in Pennsylvania.

During these hours and the days that followed, fear and concern gripped much of the U.S. population. It soon became clear that the terrorist attacks were planned and carried out by a group of radical Islamists under the direction of al-Qaeda, a radical Muslim organization directed by Osama bin Laden, a Saudi national living in Afghanistan, where he was protected by the country's Islamist government led by the Taliban.

A palpable fear gripped the country. Were other attacks in the offing? How secure was America? Was there a concerted conspiracy by an Islamic movement to destroy the country? If so, was this conspiracy supported by American Muslims? And even if not, had the country been infiltrated by radical Muslims who were biding their time to be activated and begin their own attacks? How were they funded? Who aided them? And, perhaps, more impor-

tant, what had driven these individuals from solidly middle-class families in Saudi Arabia, many of whom had been educated in Europe, to undertake such a heinous crime? Was the source Islam itself or a distortion of Islam? If the latter, how had the version of Islam with which they were indoctrinated led to such violence, and how widespread was that version?

These would be some of the questions that dominated issues related to religion during the first decade of the 21st century. These would not be the only issues, however. Among the pressing concerns would be the relationship between government and religiously based organizations delivering social and human services. Evolution also would reemerge as a major issue. Concern over immigration would, in many ways, also carry some challenges to religious tolerance, because some Americans felt that immigrants came to this country with the "wrong" kind of religion. Just as in the past, opposition to immigrants also included a fear that their religions would destroy the "good" religious fabric of the United States. In the 19th century, the fear was that the challenges would be from Catholicism, which would pollute the "pure" Protestant Christianity that flourished in the United States. Later, it was the fear that an influx of Jews, Chinese, Indians, and Japanese would end the United States as a "Christian" nation. This latter fear, combined with a resurgence of opposition to Catholicism (or at least the variant brought by immigrants from Mexico and Central and South America), constituted the major religious element of the opposition to immigration during the 21st century.

The events of 9/11 and the responses to it raised the specter that the progressive unfolding of religious tolerance in the United States may have been interrupted. It also placed in strong relief some of the issues that lay in the background about groups such as the Identity movement, primarily what is an appropriate response to religious movements that not only

preach intolerance but also act on it? This latter point involves the form of Islam that motivated the 9/11 terrorists.

One of the biggest obstacles facing most Americans individually and collectively is their relative ignorance of Islam. Much of what most Americans know came from news of attacks on Americans, Europeans, and Israelis by extremist groups. These include the takeover of the American embassy in Iran following the Islamic revolution, attacks on the American embassy and French and American peacekeepers in Lebanon, the kidnapping of numerous Americans and Europeans in Lebanon, and a series of terrorist attacks on Israel and Israelis. Additionally, many Americans also associate Islam with the NATION OF ISLAM, a radical black separatist movement that has few connections with orthodox Islam. Few Americans associate Islam with their work colleagues, their neighbors, or their classmates.

Islam, however, is the second-largest religion in the world. It predominates in the Arab world, but most Muslims are not Arabs. In fact, only 15–20 percent of the Muslim population is Arab. The overwhelming majority are Indonesians, Malaysians, and South Asians from India, Pakistan, and Bangladesh. Iranians and the Turanic peoples also represent a significant proportion of the Muslim world. Islam had its start in 610 C.E. when Muhammad, an Arab merchant living in Mecca, began to receive a series of revelations from God (Allah, in Arabic). These revelations spoke of the one true God, who had revealed himself through history to numerous prophets, including Moses (Mussa) and Jesus (Issa), but these revelations had been incomplete or distorted. The revelations which were being given to Muhammad were the ultimate and final revelation. These revelations informed Muhammad that there was one true God and that God was one. The revelations, compiled into what is known as the Qur'an, also revealed that the true path of religion consisted of acknowledging and proclaiming the oneness of the true God and

the finality of his revelation in Muhammad, praying five times daily, giving alms (*zakat*) to appropriate recipients, fasting from sunrise to sundown during the month of Ramadan, and making a pilgrimage to Mecca if one's finances and health allowed.

By the time of Muhammad's death, Islam had gained control of most of the Arabian Peninsula and had begun to expand. By the eighth century, Muslim rulers controlled much of modern-day Spain and Portugal and besieged southern France. At its greatest expanse, the Muslim world would extend from Malaysia and Indonesia in the east, through most of sub-Saharan Africa in the south and west, north into Russia, and to Kazakhstan and much of the Balkans.

Given this expansion, Muslims had numerous occasions to interact with Christians and Jews. Many lived under Muslim rule, and as Islam expanded, it often came into conflict with Christian kingdoms, preeminently the Byzantine Empire, which after centuries of onslaught fell to Muslim armies in 1453. Only in 1683, when a Muslim attack on Vienna was thrown back by a combined army of European kingdoms, was the westward expansion of Islam in Europe stopped.

During these centuries, Islamic regimes had incorporated large numbers of non-Muslims into their kingdoms. Christians and Jews made up the majority of these non-Muslims. Under some rulers and in some historical periods, such as in al-Andalus (Andalusia in modern-day Spain), the interactions generally were positive and resulted in a tremendous flowering of cultural and social interaction. Overall, however, Christians and Jews were relegated to a second-class social status. Known as *dhimmis*, they often were subjected to humiliating obligations, forced to wear distinguishing clothing, forbidden to ride horseback, denied equal status in the law courts, and subject to additional taxes. At times they were subject also to lawless attacks and massacres, with hundreds killed at a time. While

overall non-Muslims fared better in Islamic lands than non-Christians did in Europe, their lives were marked by oppression and uncertainty.

With the collapse of the Ottoman Empire following World War I and the assumption of power in its former colonies by European countries, preeminently Britain and France, the Muslim world faced the reality of having its heartland controlled by non-Muslims. This fact, or, more precisely, the way it was interpreted by certain Muslim thinkers, played a major role in the rise of Islamism, the theological movement that would inspire the terrorists who perpetrated the attacks on the Twin Trade Towers and the Pentagon on September 11, 2001.

Islamism describes a form of Sunni Islam adhered to by a variety of self-proclaimed Islamic revival or restorationist movements that believe all social and political problems can be solved by creating a society that upholds their particular understanding of Islam. While there are significant differences among these groups, several doctrines tend to be held in common and separate their adherents from even the most traditional Muslims.

Like all orthodox Muslims, Islamists believe in the divine revelation of the Qur'an and in the behavior of the prophet Muhammad as the basis for structuring one's life. Islamists go further and maintain that the way in which the prophet Muhammad and his early followers lived and organized society should be the model for an Islamic society. Islamists claim that the failure to create such a society accounts for the problems in Muslim societies today. They emphasize, therefore, the need to adopt Islamic law, *sharia*, as a major first step in the development of an authentic Islamic society.

Islamists, however, disagree as to whether this change should take place through preaching and service or through violence. Those advocating violence are distinguished by three claims. The first is that they emphasize jihad

as a violent armed struggle. Jihad traditionally has had two distinct meanings, only one of which means armed struggle, "holy war," to use the common translation, against the enemies of Islam. A story about the Prophet, however, has him referring to that form of jihad as the lesser jihad. The greater jihad is the internal struggle of the believer against immorality and toward a stronger and deeper religiosity.

Radical Islamists declare that jihad as armed struggle is the primary jihad. Not only is it primary, but those Muslims who fail to undertake or to support jihad have aligned themselves the enemies of God. Any Muslim whose beliefs vary from their interpretations becomes guilty of unbelief. The person is *kufri*, an apostate whom it is legitimate to kill.

This act of *takfiri*, proclaiming others guilty of *kufri*, separates radical Islamists from other Muslims. It also separates them from Muslim tradition that has viewed *fitna* (dissension, division) as one of the most egregious sins. Historically, even the most qualified Muslim scholars have been reluctant to declare individuals apostates, as long as they did not declare themselves to be such or did not manifest expressly un-Islamic behavior. This is particularly true of rulers. As long as a ruler prayed and did not restrict the practice of Islam, there would be no proclamation against him. This reflected the Muslim community's opposition to dissensions, conflict, and rebellion. *Takfiris*, on the other hand, believe that any nominally Muslim ruler who fails to institute and implement Islamic law and create an Islamic state is *kufri*, and jihad should be waged against that ruler. Radical Islamist groups in Egypt, Algeria, and elsewhere often directed their attacks against the governments of those countries, including the 1981 assassination of Egyptian president Anwar el-Sadat.

The tendency of radical Islamist groups to divide the world also is reflected in the third element separating them from other Islamists and Muslims in general. While historically

Islam has viewed the world as divided between the *dar al-Islam* (the abode of Islam [peace]) and the *dar al-harb* (the abode of war), radical Islamists go even further and declare that the entire world (except where they are in control) is in a state of *jahiliyya* (pre-Islamic ignorance and darkness). This is as true for so-called Muslim countries as for non-Muslim ones. True Muslims, therefore, are under an obligation to fight against this un-Islamic world just as the Prophet himself fought against it during his lifetime.

The al-Qaeda terrorist organization is a radical Islamist organization. Osama bin Laden was a student of some of the dominant Islamist thinkers, and he was born and raised in one of the most conservative areas of Saudi Arabia and Yemen. Additionally, the 9/11 hijackers themselves were mostly Saudis and had been educated in the most extreme forms of Islamist doctrine. Several had undergone training in Afghanistan, which, since 1980 and the Soviet invasion of the country, had served as a nursery for Islamists. They arrived in the United States hostile to its culture and to everything about it. They were intolerant of its different religions, its loose morals, and the mixing of the sexes. This intolerance erupted in violence and the deaths of more than 3000 people, a list of which would illustrate the variety and multiplicity of American society and religions. One of the greatest slaughters of innocent civilians in American history came about because of religious hatred.

While not all Islamists believe violence is necessary for achieving an Islamic society, even they use a language of separation and condemnation of everything that is "un-Islamic" in a way that suggests an intolerance and hostility toward others. This has created some problems for Muslims in the United States. The oil wealth of Saudi Arabia has enabled its government and many individuals to promote the form of Islam practiced by the Saudi royal family. This form often is referred to as WAH-

HABISM (from the teachings of Muhammad ibn Abd al Wahhab, 1703–92).

Wahhabism focuses on a strict and literal interpretation of the Qur'an, opposes any innovation in religion, and rejects any beliefs or practices that suggest anything or anyone other than God deserving of veneration. This has placed Wahhabists in conflict with many traditional forms of Islam, including Sufism, and with traditional practices in North Africa, Turkey, and the Balkans.

While Wahhabist doctrine does not, by itself, proclaim the obligation of violence, its radical separation between true religion and others presents several problems for religion and Islam in the United States. Given the extensive funding of Muslim scholars and of religious institutions—mosques, schools, youth organizations—in the United States by the Saudi government and individual Saudis, including the royal family, Wahhabism has a marked influence in American Islam. Many Saudi-published books and pronouncements by Saudi religious scholars virulently oppose Muslim interaction with non-Muslims. Media reports about the presence of these publications in American mosques and American Muslim schools also increased the suspicion of Muslims in the United States in light of the September 11, 2001, terrorist attacks. Such texts include one in a Saudi-published book for 10th graders used in some American Islamic schools that contains statements such as "Residing among the unbelievers continuously is also forbidden because it is dangerous for the belief of the Muslim. That is why Allah made it obligatory to emigrate from the land of disbelief to the land of Islam." Still others claim, "To be dissociated from the infidels is to hate them for their religion, to leave them, never to rely on them for support, not to admire them, to be on one's guard against them, never to imitate them, and to always oppose them in every way according to Islamic law." Even basic neighborliness is challenged as one book declares, "It is forbidden for a

Muslim to be first in greeting an unbeliever, even if he [the unbeliever] has a prestigious position." Such teachings raised serious questions about the willingness and ability of Wahhabi-influenced Muslims to integrate into American culture and political society.

While the majority of American Muslims oppose such teachings (consider the consistently ignored document issued by the Saudi Embassy to the United States stating that Muslims should not wear graduation gowns and caps), the very existence of such documents have led to greater suspicion of Muslims and provided much ammunition for anti-Islamic propaganda and voices.

This anti-Islamic attitude has numerous roots. As might be expected, much of it emerged from anger and hostility generated by violent attacks on Americans perpetrated by radical Islamists. Like earlier nativist movements, such as anti-Catholic and anti-Chinese agitation, negative actions by any member of a group have been attributed to all members. Additionally, some in the United States view Islam as a foreign religion brought to these shores by aliens. Some see it the way anti-Catholics viewed Catholicism in the 19th century. Such individuals argue that Islam and, by extension those who practice it, are too alien to be integrated into American society. They view the values and beliefs of Islam as too different and too antithetical to American values for there to be a productive fit and connection.

There also is the fact that Islam not only is not Christianity, it also is a religion that historically has been in conflict with Christianity. Many, therefore, see it as a threat to their understanding of the United States as a Christian (or Judeo-Christian) country. Additionally, many religious and cultural practices in Islam strike some as contrary to the norms of American society. While many of these practices do not vary from those of many conservative Protestants and Orthodox Jews, they seem alien to many. Also, many Americans base their judgments on stories of Mus-

lim practices from centuries ago or from the most extreme Islamists. These practices bear little resemblance to the lived reality of most American Muslims. Finally, for some, hostility to Islam is nothing more than another manifestation of deep-seated racism and hatred of individuals with darker skin and who are not of European descent.

There is another strand of anti-Islamic attitudes that attempts to cloak its perspective in an intellectual cover. For those who present such views, the disagreement is not with Muslims but with Islam. These individuals claim that Islam (like Catholicism in the 19th century) is incompatible with modern, liberal democracy. Many go further, arguing that Islam itself is essentially an intolerant and violent religion that cannot live comfortably alongside other religions and peoples as an equal partner, let alone as a minority faith. In this view, Islam inherently is imperialist and will seek unceasingly to impose itself on others. Islam, therefore, must be opposed on an intellectual level, and no concessions made to its claims. While Muslims should not be constrained in their individual or even group practices religiously, individuals holding these views argue Islam also should not be granted a level of legitimacy in terms of the country's civic culture. They oppose those who speak of the United States as a Judeo-Christian-Islamic country. Such individuals also are vocal in their demands that American Muslims and organizations representing them, such as the COUNCIL ON AMERICAN ISLAMIC RELATIONS (CAIR), the ISLAMIC SOCIETY OF NORTH AMERICA (ISNA), and the MUSLIM PUBLIC AFFAIRS COUNCIL (MPAC), take a much more aggressive role in condemning violence and terrorism.

The administration of President George W. Bush actively moved to distinguish between radical Islamists and the vast majority of Muslims. In the national memorial service for the victims of 9/11, Muslim leaders and clerics were visibly present, and President Bush has invited numerous Muslim leaders to the White

House. He continued the tradition, begun under President Clinton, of celebrating Eid al Fitr, the celebration commemorating the end of the fast of Ramadan, at the White House. Additionally, at the risk of antagonizing his conservative Christian base of supporters, he President Bush declared that Christians, Jews, and Muslims all worship the same God.

While the administration struggled to make it clear that the United States's responses to 9/11 and Islamic terrorists were not attacks on Islam or Muslims, many have continued to view them as such. Part of this resulted from the administration's clumsiness, including the positive use of the word "crusade" in President Bush's 2002 State of the Union Address, which was used by many Muslims as proof that there was indeed a war against Islam.

The aggressive movement against suspected terrorists and immigration policies directed at males from predominantly Islamic countries also exacerbated this tendency. The roundup of more than 1,000 immigrants shortly after the 9/11 attacks on minor immigration charges and the failure to ensure that they received adequate representation and treatment made many Muslims feel as though they were being targeted. The requirement that males from numerous countries, most of which were predominantly Muslim, register with the immigration service annually (later repealed) also gave the impression that Muslims were being singled out and discriminated against. The passage of the USA PATRIOT Act as a tool against terrorism also was interpreted by many Muslims as being directed expressly at them.

These feelings were compounded by the wars in Afghanistan and Iraq, as well as by reports of abuse of Iraqis held prisoner by Americans. Similarly, the imprisonment of numerous suspected al-Qaeda members at the U.S. military base in Guantánamo Bay, Cuba, in a seeming legal limbo also made many Muslims feel that they were being victimized. All these facts lent themselves to manipulation by

radical Muslim clerics and Islamists and also created an environment in which blatant falsehoods could be believed. To a great extent, these combined to generate within the American Muslim community a sense of fear, separation, and persecution. Stories of attacks on individual Muslims either physical or verbal, harassment of women wearing the *hijab* (the head scarf), and awareness of individuals held indefinitely for minor immigration violations intensified this sense of intolerance. High-profile stories such as of a Sikh man murdered in 2001 because his killer thought he looked Middle Eastern, and of Waqar Hasan, murdered four days after the 9/11 attacks, only heightened these fears. Hasan, a convenience-store clerk, was murdered by an avowed white supremacist, Mark Anthony Stroman. Stroman later was convicted of murder and sentenced to death by a jury in Texas.

Despite such events, Muslim fears come mostly from perception not reality. In its 2006 report, CAIR documented 1,972 anti-Muslim events, ranging from physical attacks to profiling to business and employment discrimination, 300 of which involved religious accommodation complaints. Assuming all these complaints were both legitimate and intentional, even increasing the numbers tenfold (that is, assuming the complaints represent only a tenth of the anti-Muslim events in the United States) and taking the low estimate of 2 million individuals of Muslim descent in the United States, that means fewer than 1 percent of Muslims had a personal experience of any form of discrimination because they were Muslim. (If one were to take the high estimate of 7,000,000 Muslims in the United States, this would mean fewer than 0.2 percent of them had experienced any anti-Muslim event.) Still, the perception of hostility has played a major role in the lives of many Muslims and made many of them fearful and suspicious.

While the question of Islam as an intolerant religion and perceived intolerance of Islam in the United States dominated since the

September 11, 2001, attacks, there have been other concerns as well. These have involved the perennial issue of the teaching of evolution in public schools and government financing of faith-based social and human service organizations.

The conflict over the teaching of evolution in public schools continues to be one of those ongoing religious issues that emerges in the United States. Whenever it appears that it has been finally solved, it pops-up in yet another guise. Some may wonder whether it actually constitutes an issue of religious tolerance, yet it can be framed that way by both sides. For many who oppose the teaching of evolution, from large numbers of conservative Protestant Christians, to many Orthodox Jews and devout Muslims, the issue can be framed very directly. For them, the teaching of evolution is an assault upon their religious beliefs. It denies the validity of what they are teaching their children and forces them to fund and support doctrines they reject. For them, the teaching of evolution manifests itself as the secular worldview's assault upon religion and religious believers. It proves the intolerance which the materialist, secular world has for religion and believers, who are derided as ignorant and backward.

For those individuals who support the teaching of evolution, the argument appears to be very different. They feel that those who oppose the teaching of evolution are committed to forcing others to accept a particular religious teaching. This has particular salience because the most vocal opponents of teaching evolution are conservative Protestants, and their emphasis historically has been on a distinctive alternative to Darwinian evolution. When attempts to end the teaching of evolution failed miserably in the courts during the 1960s and 1970s, they moved to alternative tactics designed primarily to impugn the validity of evolutionary theory and to turn their understanding of creation into a legitimate scientific view.

Opponents of evolution strove to accomplish the former through many of their traditional tactics, first by pointing to the gaps in the fossil record and highlighting what, in their minds, evolution could not explain. A second tactic was to hammer on the position of evolution as a "mere theory." In this tactic they relied on the popular meaning of the word *theory*, which was at odds with the traditional scientific understanding. To the minds of many, theory is simply a thought, an unproven idea about how something works or happened. If evolution were a "mere theory" (and the word *mere* had particular power in their arguments), then it had no more claim to be accepted than other understanding of the creation of the world, animals, and human beings. An example of this was the decision by Cobb County, Georgia, to have a sticker affixed to the biology textbooks used in its public schools. The stickers stated that: "This textbook contains material on evolution. Evolution is a theory, not a fact, regarding the origin of living things. This material should be approached with an open mind, studied carefully, and critically considered." After three years of controversy and litigation, during which time a court declared the use of the stickers an unconstitutional endorsement of religion, the school board finally agreed to remove the stickers and to pay the legal fees of their opponents.

Despite yet another loss in the courts (following on decades of similar defeats), antievolutionists continued to try and diminish the explanatory power of evolution and hinder its teaching. As suggested above, some evolutionists attempted to manipulate conflicts within contemporary biology to prove that disagreements between scientists over evolution's specifics demonstrated its weakness as science. Other opponents focused on what Darwinian evolution seemingly could not yet explain. From this, they proceeded to criticize all of evolution. This has been the tactic taken by advocates of "intelligent design."

Intelligent design is based on two claims. The first states that certain complex phenomena within the natural world, and particularly within human beings, cannot be explained through the process of random adaptation or mutation central to Darwinian evolution. The second claim is that the discovery of similar complexity in any other arena of human life would be attributed to a designer. Just as when we locate a statue in an archaeological dig we do not presume it has the same source as a boulder but attribute it to a designer, such is the case with complex design in natural systems. In the words of one of intelligent design's leading proponents, "there are natural systems that cannot be adequately explained in terms of undirected natural forces and that exhibit features which in any other circumstance we would attribute to intelligence."

In court, however, Intelligent Design has fared no better than "Scientific Creationism." In the one case that has gone to court, a federal district judge in Pennsylvania ruled that a school board's requirement that Intelligent Design be taught clearly constituted a government endorsement of religion, and that despite attempts to hide it, Intelligent Design had creationist intent. The school board attempted to sneak religion into the curriculum by masquerading it as science. The uproar over the introduction of Intelligent Design into the local curriculum led to electoral defeat of all the school board members who supported it.

There is a fear that these and other conflicts will only increase in the future. As society has become increasingly aware of distortions and discrimination in many areas of education and social life, including religion, greater attention (rightly) has been spent in trying to remove them from textbooks and educational materials. There is a great deal of concern about how such determinations are made. Does a religious community get to make those decisions? Should they have veto power over what is written and taught about them? Does the failure to provide a story of

which they approve an example of religious intolerance? These have become particularly pressing issues, particularly in California, where textbook wars have emerged regarding the presentation of Hinduism and Sikhism. Several Hindu organizations affiliated with the Hindutva movement in India and the ultra-nationalist and Hindu-centric Bharatiya Janata Party in India complained about the way Hinduism was presented in the revised textbooks. While a few complaints, such as opposition to describing the Vedas as poems and hymns rather than sacred texts, had legitimacy, others, such as their opposition to the widely held scholarly view of Aryan migration into India with the resulting establishment of the caste system and development of Hinduism following that migration, were problematic. They claimed the right to create a textbook version of Hinduism freed from any ambiguous or critical elements. When this attempt was opposed by several scholars, they became targets for innumerable attacks on their character and even recipients of death threats. This has been a growing concern among scholars of Hinduism, as many have become the objects of vicious attacks including death threats, in certain segments of the Indian press and throughout the Internet.

While the objections presented by Sikhs were less controversial (and apparently less violent), they do highlight the complexities of being fair and intellectually honest in an environment where different religious groups feel comfortable making demands on the public sphere. The Sikhs primarily objected to the use of a particular painting of Sikhism's founder Guru Nanak, claiming that the cropped beard made him look like a Muslim and that the finery he wore, including a crown, was antithetical to their teachings of Guru Nanak as a modest and humble man. When the textbook publishers offered a separate picture, the Sikhs rejected it, claiming that it was too Hindu in style. The Sikhs preferred a picture that showed him dressed like contemporary

Sikh. The publisher objected, stating that it was their policy only to use historical pictures in historical texts. The eventual decision was to remove the picture entirely.

The increasing aggressiveness of some practitioners of religion, and particularly the implicit or explicit violence within some religious movements, led to a reaction during the first decade of the 21st century. The most visible were the best-selling books published by Sam Harris (*The End of Faith*), Christopher Hitchens (*God Is Not Great*), and the evolutionary biologist Richard Dawkins (*The God Delusion*). To a great extent, these volumes were occasioned by the conflicts and violence. This fact, and the notoriety that the books quickly obtained through their unremitting and seemingly gleeful attacks on religion itself, guaranteed them a wide audience and public attention.

These very public attacks on religion have greatly increased the discussion of atheistic and agnostic views in America. Greater attention has been given to traditional atheistic and secularist organizations, such as the Freedom from Religion Foundation and the American Humanist Association. It has also given rise to new movements. The philosopher Daniel Dennett led in the creation of one such movement known as the Brights. This movement opposes all forms of supernaturalism and its effects on individual and social behavior. A Bright is, in their words, a person whose worldview is naturalistic, free of supernatural and mystical elements, and whose ethics and actions are based on that naturalistic worldview. The Brights have received a fair amount of publicity, given their association with Dennett and Dawkins, as well as James "the Amazing" Randi, a magician and illusionist who made his career by unmasking claims of paranormal and parapsychological powers. It is, however, hard to tell whether this movement

will prove transformational or, like so many others, simply become yet another party to the long American debate about religions and their roles in society and their relationships to each other.

As such, the apparent increase in interest in free-thought or atheism simply blends into the ongoing challenges about the nature of religious tolerance and intolerance. Is it intolerant to write or state something about a tradition that a tradition opposes? Must religious traditions accept the publication and dissemination of statements and artistic renderings of items they find offensive or contrary to their teachings about themselves or their founding, or even contrary to their beliefs? Inevitably, in a pluralistic society, conflicting claims must emerge. If my religion tells me that your religion is wrong, then preventing me from stating that to avoid offending you is an offense to me. The ultimate question is, does the rejection of the claims of another tradition constitute intolerance? This, in fact, will be the greatest challenge to the United States's tradition of tolerance in the future. As new religious groups become more integrated into society and more comfortable with their location, and as traditional religious groups begin to lose power and feel marginalized, all will claim greater protection from slights and insults. They will claim a right to be free of all opposition and of any ideas contrary to their beliefs and claims, whether evolution, Aryan migration, or historical changes in religious doctrine. Religions, in the name of tolerance, will themselves demand intolerance against all that offends them. America's challenge for the 21st century is how to increase religious tolerance without destroying the other liberties and freedoms that define the country.

Abbott, Lyman (1835–1922) Lyman Abbott was a Congregational clergyman and successor of HENRY WARD BEECHER as minister at the fashionable Plymouth Church in Brooklyn, New York. Editor for many years of the *Outlook*, a weekly journal of modernist theological opinion, Abbott was one of the foremost popularizers of Christian evolutionary (see EVOLUTION) thought in late 19th-century America.

Abbott was born in Roxbury, Massachusetts, on December 18, 1835. He graduated from New York University in 1853 and, after a short career as a lawyer, was ordained to the Congregational ministry at Farmington, Maine, in 1860. During the CIVIL WAR, Abbott served in a church in Terre Haute, Indiana. His concern for relating religion to questions of moral and social reform, however, led him to return east in 1865 to accept the executive secretary's position of the newly created American Freedmen's Union Commission (AFUC) in New York City. During the four years he held that position, the AFUC was an important voluntary agency overseeing educational work among former slaves in the South.

From 1869 to 1871, Abbott contributed articles to *Harper's Weekly* and the *Independent*. He edited the *Illustrated Christian Weekly* between 1871 and 1876 and, in 1876, assumed editorship of the *Christian Union* (renamed *Outlook* in 1893). Although Abbott replaced Beecher as pastor of the Plymouth Church in

1888, his talents were those of an editor and writer rather than of a preacher, and in 1899 he resigned his ministerial position to concentrate fully on journalism. Under Abbott's guidance, the *Outlook* was enormously successful. Its circulation soared from 15,000 to more than 100,000 subscribers by the end of the century.

During the 1890s, Abbott published a half-dozen books on evolution and on the Bible. In *The Evolution of Christianity* (1892) and *The Theology of an Evolutionist* (1897), for example, he applied principles of biological evolution to the development of the Christian faith. Celebrating the idea of humankind's inevitable upward ascent to God, these books displayed what biographer Ira Brown has called Abbott's greatest talent: the ability to bring together "the aristocracy of the mind and the thought of the masses." Thus, while Abbott was neither a sophisticated theologian nor a true scientist, he managed to touch a large audience of ordinary people interested in the relationship between SCIENCE AND RELIGION. And despite only modest sales for his publications, Abbott's frequent lectures and public addresses reached thousands of curious middle-class Americans.

Abbott continued to be active as the editor of the *Outlook* and as a liberal Protestant opinion-maker well into the 20th century. He died in New York City on October 22, 1922.

Abernathy, Ralph (1926–1990) One of the most important leaders of the CIVIL RIGHTS MOVEMENT of the 1950s and 1960s, Ralph Abernathy was born on March 11, 1926, in Hopewell, Alabama, the 10th child of Louivery and W. L. Abernathy. At his birth, his maternal grandmother, who was the community midwife, predicted that he would “be known throughout the world.” Originally given the name David, he became Ralph only later when an older sister tagged him with it, after one of her teachers.

Abernathy’s childhood was different from most African Americans growing up in rural Alabama and from the middle-class urban life that his colleague and friend MARTIN LUTHER KING, JR. knew growing up in Atlanta. His father was a moderately successful farmer who owned several hundred acres and whose attention to religion, duty, and family earned him the respect and admiration of his fellow blacks in Hopewell as well as that of most whites. Although Abernathy grew up in a segregated society, the grudging respect that whites granted his father along with his family’s hard-earned economic self-sufficiency protected him from many of its humiliations.

Abernathy’s parents were committed to religion and education. David attended both the Hopewell Baptist Church and the segregated black elementary school. Later he attended the private black high school organized by the black Baptist churches of the county, the state of Alabama not having seen fit to provide a public one for its black citizens.

His plans to attend college were interrupted by World War II, and Abernathy enlisted in 1944. After basic training, during which time he had been promoted to platoon sergeant, Abernathy was sent to Europe as the war neared its close. A case of rheumatic

fever prevented him from being shipped to the Pacific with the rest of his company and probably saved his life. The company was ambushed on an island in the Pacific, and all but one man were killed.

After the war, Abernathy used his G.I. benefits to enter Alabama State University. Following graduation, he attended Atlanta University for a year, doing graduate work in sociology before returning to Alabama State as dean of men. During this time, he began to preach in several rural churches and was eventually called to be the pastor of First Baptist Church of Montgomery, Alabama, in the spring of 1952. This was a major challenge for someone as young as Abernathy, and he accepted with some reluctance. During this time, he married Juanita Odessa Jones.

Shortly after his wedding, Abernathy became pastor of First Baptist. The other leading black Baptist church in Montgomery also called a new minister. This call, issued to Martin Luther King, Jr., would have momentous repercussions for the future. The young couples soon became close friends, and King and Abernathy began to discuss how to introduce social and political issues into their ministries, which, given their youth and recent arrival, they felt had to be postponed for several years.

The arrest of Rosa Parks in 1955 for refusing to surrender her seat on a city bus to a white man shredded this timetable. King and Abernathy became the leaders of the Montgomery Improvement Association, designed to end unequal treatment on the city’s buses. This was a successful endeavor but took a major toll on both the pastors and their families. Not only were their homes bombed, but Abernathy’s church, a historic building, was nearly destroyed by a bombing attack.

The work in Montgomery led to the formation of the SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE (SCLC), with King and Abernathy as its primary leaders. By this time, King had moved to Atlanta, where he had become

an assistant to his father at Ebenezer Baptist Church. He tried to convince Abernathy to join him in that city. When West Hunter Baptist Church in Atlanta offered Abernathy the pastorate, he accepted, albeit with much hesitation and regret.

After moving to Atlanta in November 1962, Abernathy's time was increasingly spent on work for the SCLC. He and King led the struggle for civil rights in Albany, Georgia, Birmingham, Alabama, St. Augustine, Florida, and Selma, Alabama. Abernathy also was instrumental in helping to organize the 1963 March on Washington. More comfortable with rural and working-class people than King, Abernathy was a significant part of the movement. He also was an able leader and administrator. The emotion that King engendered with his sermons was put into action by Abernathy.

Following King's assassination in 1968, Abernathy became the head of the SCLC and continued to lead it for the next several years. During this time, changes in the country began to affect its work, and many people increasingly challenged the idea of nonviolence. The war in Vietnam, campus unrest, and increasing militancy among many blacks presented severe challenges to the SCLC's message. Additionally, the SCLC's increasing emphasis on economic issues and its opposition to the war alienated and confused some of its earlier supporters.

Abernathy was a victim of these changes and, despite having led the organization through difficult times, found himself under pressure to resign as president of the SCLC in 1976. He did so, using his campaign for Andrew Young's recently vacated congressional seat as the reason. He came in third in an eight-person race.

Abernathy's public commitments eased after this period, and he engaged more directly with his church work and with black economic development. This concern led him to endorse Ronald Reagan for the presidency in 1980, but when the Republican Party's

promises of assistance failed to materialize, Abernathy returned to the Democratic Party, supporting Jesse Jackson in the 1984 and 1988 Democratic primaries.

Heart problems increasingly dogged Abernathy in the mid-1980s, and he suffered several strokes. Despite these health problems, he continued his pastoral work until April 17, 1990, when he died of a heart attack.

abolitionism The movement to abolish SLAVERY was one of many reforming (see SOCIAL GOSPEL) efforts that arose in American religious circles in the 1820s and 1830s. The antislavery impulse was rooted first in the confidence nurtured by 17th-century Puritanism that the world could (and should) be reformed in accordance with God's law. The revivalism of the SECOND GREAT AWAKENING intensified this view and helped produce a vision of America as an ideal Christian republic. The revolutionary era's belief in natural rights, the enlightened rationalism of leaders like Thomas Jefferson, and the emphasis on human perfectibility in Unitarianism further bolstered the abolitionist movement in the early 19th century.

Although Quakers and Methodists had taken antislavery positions in the late 18th century, the expansion of slavery (especially

after the Missouri Compromise of 1820) and the South's increasing dependence on the slave system muted opposition to the institution in the early days of the republic. The founding of the American Colonization Society in 1817, organized to raise funds to remunerate slave owners and repatriate ex-slaves to Africa, actually diverted antislavery opinion. Accepting the notion of black inferiority, this movement sought to rid the country altogether of a freed black population. But beginning in 1831 with the publication of William Lloyd Garrison's radical newspaper, *The Liberator*, which advocated immediate emancipation, abolitionist voices in the North became increasingly militant.

Several prominent northern Protestants were in the forefront of the antislavery movement. The publication of revivalist THEODORE DWIGHT WELD's anonymous tracts, *The Bible Against Slavery* (1837) and *American Slavery as It Is* (1839), widely influenced religious opinion against slavery. Presbyterian clergyman Elijah P. Lovejoy argued that slaves were human beings who possessed natural and inalienable rights given them by God, who was the sole true master of human beings. Calling slavery a moral evil for its usurpation of those rights, Lovejoy so inflamed his fellow citizens in Alton, Illinois, that in November 1837 he was murdered for his views.

Garrison and other abolitionists, however, accused the majority of Christian leaders of impeding, rather than aiding, the cause of freedom. Former slave Frederick Douglass, the most famous African-American spokesman of his day, declared in his 1845 autobiography that the slaveholding religion of the United States bore no relation to the faith of Jesus Christ and ought not be labeled *Christianity* at all. "Revivals of religion and revivals in the slave-trade," he said, always went "hand in hand together."

The antislavery movement occasioned the publication of perhaps the most influential American novel. HARRIET BEECHER STOWE,

The antislavery movement zealously spread the message of abolitionism through such publications as the *Anti-Slavery Almanac*. (Billy Graham Center Museum)

daughter of a well-known Congregational minister and wife of a seminary professor, probed the moral conscience of the nation in *Uncle Tom's Cabin* (1852), which vividly described the terrible cruelties of slave life in the South. Stowe's story electrified readers throughout the North. Stowe herself claimed that she was not the author of the novel but merely a medium recording God's words of condemnation against slavery.

In the decades preceding the coming of the CIVIL WAR, the three largest American

denominations split over the issue of slavery. The effects of abolitionism on the institutional life of the churches was first evident in 1837, when the Presbyterians divided into New School and Old School, a theological controversy exacerbated by the rise of the antislavery movement. While the New School Presbyterians favored both revivalistic methods of evangelism and political reform, the Old School insisted on conservatism in matters of doctrine, worship, and politics.

At the Methodist General Conference of 1844, the northern section of the church adopted an antislavery position, forcing the departure of southerners and the formation of the Methodist Episcopal Church, South in 1845. Between 1839 and 1842, isolated groups of Methodists in New England, New York, and Ohio also withdrew from the main church, organizing the Wesleyan Methodist Church in 1843 on a platform of Christian perfection that included abolition.

Finally, a firm stand by northern Baptists against appointing slaveholders as missionaries aroused the anger of the South. The Virginia Baptist Foreign Mission Society issued a call for a consultative convention of southern members of the church, and in Augusta, Georgia, in May 1845 the Southern Baptist Convention was organized.

To the young American abolitionists who rose to prominence in the early 1830s, slavery was the greatest of all their nation's sins. Often more focused on the power of ideas than on actions or planning, the abolitionists focused on whether the United States could continue to accommodate itself to a social system of organized violence and abuse. What the times required, they believed, was the creation of a new moral perspective and an awakening of public opinion that would force politicians to work out the practical details of emancipation. By the mid-1840s, however, there was a distinct movement in the North away from mere rhetorical agitation toward the attainment of concrete goals. The birth of the Liberty Party

in 1839, the formulation of the Free Soil platform in 1848, and the rise of the Republican Party in 1854 demonstrated that the older religious ideal, recast into a different mold, had entered the political mainstream.

Uncle Tom's Cabin concluded with the plea that North and South together repent of their slavery-related sins and thereby preserve the Union and spare themselves a visitation of God's wrath. American Christians proved unwilling to follow Stowe's advice. Religiously motivated arguments concerning the injustice of slavery were critical factors in leading the United States, first, into the political divisions of the 1840s and 1850s and, later, into the military struggle of 1861–65.

academic study of religion The academic study of religion has been a major component of American higher education since the founding of the first university in what would become the United States, Harvard, in 1636 (see RELIGIOUS EDUCATION). In fact, most of the early institutions of higher education had

their impetus in the desire to ensure the existence of an educated ministry. Since that time, the nature of the academic study of religion has changed dramatically, with many in the field questioning whether ministerial study qualifies as coming under the academic study of religion.

In these schools—Harvard, Yale, Princeton, William and Mary—curricula tended to be fairly rigid and straightforward. It consisted of language study (Greek and Hebrew at a minimum), biblical exegesis, theology, ethics, and religious history that invariably emphasized the development of the Christian denomination (and these schools originally were all Christian) with which the school was affiliated. While relatively uncritical of the validity of basic Christian doctrines, the coursework was rigorous and graduates' understanding and knowledge quite high.

The fact that religion was studied in an academic context, however, does not mean that this was the same as the academic study of religion as scholars use the term today. Many academics doubt whether such study can take place in a confessional context. For them, the academic study of religion demands a level of critical analysis and evenhandedness that is difficult, if not impossible, in a school committed to furthering a particular form of religion.

The academic study of religion goes by other names as well: religious studies, comparative religion, the science of religion (a literal translation from its nomenclature in many European languages such as French, *Sciences de la Religion*, and German, *Religionswissenschaft*), and occasionally in the United States, particularly among those influenced by the work of Mircea Eliade, the history of religions. Most of these names capture only part of the overall scope of the academic study of religion, whereby religion is taken as a subject for critical analysis little (if at all) different from other academic subjects. If there is any difference, it is that religion lends itself to

be analyzed from a variety of methodological and disciplinary perspectives—historical, anthropological, literary, sociological, and psychological, to name a few.

The view that the study of religion requires no special status be granted to subject matter and that all religions are to be studied in the same manner often has led believers to attack its findings. The earliest examples of this in the United States emerged from conflicts over the Bible. The emergence of critical biblical study, associated primarily with the research of Julius Wellhausen in Germany, where the use of literary, historical, and archaeological methods led many scholars to challenge the claim that the extant biblical texts were given by God to Moses at Sinai or revealed to the early Christian evangelists (see BIBLICAL INTERPRETATION; FUNDAMENTALISM [PROTESTANT]; MODERNISM [PROTESTANT]).

One of the leading events in the development of the academic study of religion was the 1902 Gifford Lectures by WILLIAM JAMES. These lectures, published as *The Varieties of Religious Experience*, demonstrated the analytical rigor, methodological complexity, and breadth of subject matter that became the hallmark of the academic study of religion.

While the attempt to study religion from a critical and analytical perspective has a long history dating as far back as Hecataeus of Miletus (c. 550 B.C.E.–c. 476 B.C.E.), who wrote two works that described the histories, customs, and religions of people in the known world. Like Herodotus (c. 484 B.C.E.–425 B.C.E.) in the *Histories*, Hecataeus was struck by the antiquity and depth of Egyptian culture and how much Greek religious beliefs and practices seemed to derive from them. This experience provided a critical edge to both of their works that distinguished them from their contemporaries and successors.

Their work was picked up by Islamic scholars who studied Persian, Jewish, Christian, and Hindu beliefs and practices. The Muslim scholar Muhammad al-Shahrastani,

writing during the Middle Ages, produced the first comprehensive history of religion, the *Treatise on the Religious and Philosophical Sects* (1127). The Catholic scholar Peter the Venerable (1092–1156) studied Islam and began work on a Latin translation of the Qur'an.

Despite the work of these individuals and their successors, the academic study of religion did not become a field of study until the late 19th century. Among the leaders in the field's development, Max Müller, appointed Oxford's first chair in comparative religion, stated that it was "the duty of those who have devoted their life to the study of the principal religions of the world in their original documents, and who value and reverence it in whatever form it may present itself, to take possession of this new territory in the name of true science."

While such an approach to religion slowly began to win acceptance in the United States during the 20th century, only since the 1960s has it become the dominant force in college and university departments. This shift was reflected in the name changes such departments underwent between the late 1960s and 1980s, moving from being departments of religion or even departments of theology (often including biblical studies) to religious studies departments.

Such shifts often met with resistance, if not outright hostility. Many individuals rejected the critical approach to religious study and the treatment of all religions in the same manner. These conflicts were particularly intense in religiously affiliated colleges and universities as they struggled with the competing demands of their obligations to scholarship and the academy and to their denominations. Among scholars themselves, these shifts generated conflicts, particularly within the American Academy of Religion. Not only did it raise questions about the legitimacy of the scholarship of those who were deeply committed to a particular religious tradition, but the annual meetings of the academy often were venues for small but vocal protests.

While scholars of religion have not been free from criticism, controversy, or even threats (see "DEATH OF GOD" THEOLOGY), the late 1990s and early 2000s saw a major shift particularly directed at scholars of HINDUISM. Many of these scholars, including Wendy Doniger, Paul Courtright, and David White, found themselves the objects of vicious attacks in certain segments of the Indian press and throughout the internet. All received death threats. The most serious attack occurred not in the United States but in India in January 2004. A mob of right-wing Hindus offended by a book written by the American scholar James Laine attacked the Bhandarkar Oriental Research Institute in Pune, vandalizing the building and damaging around 18,000 books and 30,000 rare manuscripts.

Most religious studies scholars have not generated that level of hostility and violence. They often, however, have been fired or hounded from denominational schools and seminaries as a result of their work. Religious historians such as Ronald Numbers and Bill Leonard have been pressured to leave denominational schools (Loma Linda University [SEVENTH-DAY ADVENTIST CHURCH] and Southern Baptist Theological Seminary, respectively) because their work did not comport with the official narrative. While not necessarily hostile to religion, many of these scholars are convinced believers, their sense of duty to the data and the obligations of scholarship drive them to report conscientiously and honestly what their research shows. This often puts them at odds with those who are committed to a particular version of a religion. One result has been an ongoing tension between many religious traditions and the academic study of religion.

Adler, Cyrus (1863–1940) Perhaps no single individual did as much to ensure the success of CONSERVATIVE JUDAISM as Cyrus Adler. His organizational and administrative abilities helped create or sustain the institutions designed to preserve traditional Jewish learning in the United States. This is all the more significant when one considers that Adler was not a rabbi and lacked the religious authority that such a position would have entailed.

Although born in Van Buren, Arkansas, on September 13, 1863, Adler's life was centered primarily in Philadelphia. There, in an uncle's home, he absorbed the Jewish faith and traditions as well as a penchant for learning. After graduating from the University of Pennsylvania (1883), he attended Johns Hopkins University, from which, in 1887, he received the first Ph.D. in Semitics granted in the United States. After six years of teaching, he joined the Smithsonian Institution as librarian, later rising to assistant secretary of that organization. He left in 1908 to become president of Dropsie College in Philadelphia, which he built into one of the most significant Semitic language schools in the country. He served as president of Dropsie College and, after 1924, as president of Jewish Theological Seminary as well until his death on April 7, 1940.

Such a brief outline tells little about Adler's true accomplishments in American JUDAISM. An early member of the so-called Historical School, Adler was concerned with maintaining traditional Judaism while simultaneously making it responsive to new intellectual and social developments. He deplored the radical alterations in Judaism (see REFORM JUDAISM) undertaken by such men as ISAAC MAYER WISE and DAVID EINHORN but equally had little patience for the Yiddish-speaking eastern European Jews

Cyrus Adler, educator and professor of Semitic languages, founded the Jewish Publication Society (1888) and the Jewish Historical Society (1892).

and what he saw as their parochial Orthodoxy (see ORTHODOX JUDAISM).

Adler's qualities emerged early. At the age of 23, he helped create Jewish Theological Seminary in New York and the Jewish Publication Society in Philadelphia. His expertise in Semitic languages served him well as he supervised the translation of the *Tanakh*, the Hebrew Bible (known to Christians as the Old Testament), into English between 1892 and 1917. Adler also was instrumental in founding the American Jewish Historical Society in 1892.

Although involved in the formation of the Union of Orthodox Jewish Congregations (1898), Adler, along with the other members of the Historical School, left to found the United Synagogue of America in 1913. This

organization, of which Adler served numerous terms as vice president, became the institutional center of Conservative Judaism in the United States.

Adler's greatest accomplishment, however, lay in "saving" Jewish Theological Seminary. Following the death of its first president in 1897, the seminary entered a period of decline and by 1901 was in danger of closing. Adler managed a successful fundraising campaign that put the school on a sound financial footing. He then convinced the noted rabbinical scholar SOLOMON SCHECHTER to come from England to assume its presidency. Following Schechter's death in 1915, Adler became acting president of the seminary, a position he held until 1924, when, despite his lack of rabbinical credentials, he was appointed president. During those years, despite the many demands on his time, Adler's leadership solidified the position of Conservative Judaism in the United States and provided it with the institutional base it eventually would use to build itself into the largest branch of American Judaism, a position Conservative Judaism held until the late 1990s.

Adler, Felix (1851–1933) Founder of the ETHICAL CULTURE Society, Felix Adler took REFORM JUDAISM to its most radical conclusion. Adler believed that religious particularism slowed spiritual development and that it was necessary to distill religion down to its true core, a core comprised of ethical action and inner purity. For Adler, this essential religion, or "ethical culture," was to be real-

ized through philanthropic and educational activities designed to extend and deepen the relationships between the individual and the wider society.

Born in Alzey, Germany, on August 13, 1851, Adler came to the United States when his father accepted the position as rabbi of Temple Emanuel in New York City. Groomed to succeed his father, Adler was educated at Columbia University and the University of Heidelberg. His studies in biblical criticism at Heidelberg fused with the extreme rationalism of Reform Judaism and caused a crisis of conscience. Adler questioned whether he could in good conscience recite the traditional prayers or read from the Torah believing the statements were untrue. As Adler described it in his autobiography, "Was I to act a lie in order to teach the truth? . . . Was I to repeat these words? It was impossible. It was certain they would stick in my throat. On these grounds the separation was decided by me." After one year as rabbi at Temple Emanuel (1873–74), Adler left to become professor of Hebrew literature at Cornell University.

In 1876, Adler founded the Ethical Culture Society, which became the central activity of his life. The entire thrust of Ethical Culture was to strip away the religious particularities that separated people and to concentrate on the moral good within human nature. This moral good, or ethical reality, took on an almost supernatural cast for Adler. Individuals were to mold their lives and behaviors to this reality. In fact, for Adler, through moral actions one brought one's life into accord with this ethical reality.

As a result, Adler involved himself and the Ethical Culture Society in numerous political and social activities. These included support for the rights of labor, medical care for the poor, child welfare legislation, and political reform. Adler had a particular interest in education and instituted free kindergartens and vocational training schools. His ethical theories and involvement in social reform led to

his appointment as professor of political and social ethics at Columbia University in 1902, a position he held until his death on April 24, 1933.

Although Ethical Culture never became a mass movement, Adler's ideas touched many people. He attempted to maintain the religious or spiritual impulse of religion while avoiding any particular confession or even an appeal to a supernatural deity. He envisioned a shared ethical ideal designed to bring people together while they attempted to realize their moral nature through doing good.

African-American religion The religions of African Americans have had a powerful effect on the religious life of the United States. The adoption and adaptation of Christianity to their own distinctive circumstances and its location as a bulwark against racism and oppression strengthened American Christianity, just as the development of indigenous religious forms and the adoption of Islam deepened the country's religious texture.

The earliest Africans arrived in the Americas in the service of the Spanish invaders as commanders, soldiers, interpreters, and slaves. They were Catholic, as the laws of the Kingdoms of Aragon and Castile demanded, although as Spain began to import large numbers of African slaves into its colonies this Catholicism often

became nominal at best. Spanish and Portuguese priests baptized hundreds of enslaved Africans as they passed into the holds of ships bound for the Americas (see NEW SPAIN).

The first blacks to arrive in British North America came under different circumstances. They arrived at Jamestown, VIRGINIA (COLONY), in 1619 aboard a Dutch ship of mysterious provenance. Accepted into the colony as indentured servants, they were no different from most English arrivals who were expected to work for several years to pay their passage and board, after which time they would be freed and allowed to go on their way.

These Africans arrived in a region with a fluid economic and social situation. The need for labor was high, and the colonists struggled to ensure a constant supply. Indians were enslaved. Paupers, rogues, and ne'er-do-wells from England and Ireland were brought over as indentured servants. None of these provided a sufficiently stable work force. Africans seemed to offer a suitable alternative. Despite how resistant they were, they were thousands of miles from home, without family or friends to succor them. They did not blend in with the population, and they were not Christian. As a result, they seemed to be perfect candidates for enslavement. Christianization was a problem, however. It generally was understood that British law forbade the enslavement of Christians, and the possibility of being forced to free slaves if they converted to Christianity was a concern.

This issue became moot in 1667. In that year, the Virginia House of Burgesses passed a law declaring that "the conferring of baptism doth not alter the condition of the person as to his bondage or freedom." With this law, the codification of black slavery begun in the 1620s became complete. The importation of Africans into the British colonies increased dramatically. By 1776, there were 50,000 Africans in the thirteen colonies. This number would grow to 4 million by the time of the Civil War.

Religion has been a primary source of independence for African Americans, producing such dynamic leaders as Mary McLeod Bethune, shown attending Sunday chapel service at Bethune-Cookman College. (*Library of Congress*)

Religiously, the lives of these slaves were quite varied. Torn from their roots, separated from family and society, many found it impossible to retain their traditional religion. This was all the more true given that slave owners, to aid in “breaking” and controlling the slaves, attempted to eliminate all African traditions. Ironically, in those regions where the labor was most difficult and mortality the highest, the rice and indigo plantations of South Carolina and the sugar plantations of Louisiana, African traditions remained strongest. In those areas, the high mortality rate required a continuous supply of newly imported blacks,

who brought African beliefs and practices with them. In these regions, blacks had less contact with whites and were less affected by white institutions and beliefs. While African religiosity rarely survived intact in the United States, cultural elements from Africa did remain and shaped how slaves interpreted and presented the Christian message.

The conversion of Africans to Christianity proceeded slowly in the 17th and 18th centuries. In the early decades, both Africans and whites resisted it. Africans struggling to retain their cultural identities rejected the alien religion. Slave owners feared that Christianity

would ruin their slaves, making them impudent and assertive. Christianity also made blacks too much like whites and raised troubling questions of conscience.

Some were not satisfied with the situation, and in 1701, the Society for the Propagation of the Gospel in Foreign Parts (SPG) was organized in England to provide missionary work in the English colonies. Part of this work was to be among the slaves, especially in the southern colonies, where there was an Anglican establishment (see SOUTH; EPISCOPAL CHURCH). The missionaries needed to convince slave owners to allow slaves to receive religious instruction. While compelled to tell slave owners that it was a duty to provide religious instruction, more successful was the argument that Christianity, rather than ruining slaves, made them better workers. If slaves understood Christianity aright, they would do their masters' bidding out of a sense of duty rather than compulsion, or so the missionaries argued. In this regard, the epistles of Paul were particularly useful, for example, Ephesians 6:5: "Servants be obedient to them that are your masters."

Convincing the slave owners was only part of the problem. Insufficient missionaries, slave resistance, and the catechetical process of the Church of England also hampered the society's work. African-born slaves were written off completely, as the few missionaries concentrated on those born in America.

Not until the SECOND GREAT AWAKENING (1797–1820) would blacks convert to Christianity in significant numbers. BAPTISTS and METHODISTS proved most successful at converting slaves and freed blacks to Christianity, since their requirements for both the ministry and conversion were simpler.

The Baptist ministry was open to anyone (male) who had a call to preach. The Methodist system of circuit riders provided a method for allowing one minister to cover vast distances. Baptists and Methodists converted the slaves because they were there and because

conversion depended not on what one knew but only on the experience of God's grace.

Cultural attitudes also played a major role in African acceptance of Baptist and Methodist forms of Christianity. The more emotional worship that produced dramatic physical responses had correlations in African traditional religion. Christianity in its Baptist and Methodist forms looked like religion in a way that Anglicanism and PRESBYTERIANISM did not.

Theologically, these denominations had a greater appreciation for the equality of all believers under God's rule. Chafing under Anglican domination in the South and Puritan control in New England, the Baptists and Methodists preached against those in power who oppressed the weak and the poor. Such seeds did not fall on stony soil when sown among the slaves and freed blacks. This vision of the equality of all believers had practical effects as well, especially in Baptist churches, where enslaved blacks worshipped with whites on close-to-equal terms.

Even within these denominations, however, blacks suffered, as whites refused to accept them as equals. Blacks often left white churches and formed their own congregations. At the Methodist church in Philadelphia, the attempt to force black members to sit in the balcony led to an exodus and the formation of the first black Methodist congregation in the United States, Bethel, in 1794 (See AFRICAN-METHODIST EPISCOPAL CHURCH; ALLEN, RICHARD). It also led to the formation in 1794 of the first black Episcopal congregation, St. Thomas, under ABSALOM JONES. Conflicts among Presbyterians in that city also led to a schism and the formation of a black Presbyterian congregation (1807).

In the South, slaves under watchful eyes found their actions more constrained. Even there, black congregations, such as the First African Baptist Church of Charleston, flourished. Founded in 1788, African Baptist grew to more than 2,400 members by 1830. Although these African congregations were

rare (most blacks attended churches with whites until after the Civil War), they did provide a social space absent of direct white control and oversight.

Such absence was difficult to achieve. While missionaries argued that Christianity would produce a more docile and obedient slave, this was not necessarily the case. Whites preached "Servants be obedient to your masters"; slaves heard "Let my people go." Not being stupid, the slaves realized that white preachers and authorities emphasized only part of the story. They slipped away to worship on their own. Throughout the South, blacks gathered to sing, dance, and pray far from the prying eyes of white overseers, masters, and mistresses. Here the cultural traditions from Africa became the medium for expressing a new religion in a new world. Here story and song brought the age-old message of redemption from sin, of freedom from slavery to sin (and from the sin of slavery) to a poor, oppressed, and illiterate people.

Many of the 200 plus slave rebellions in the United States had their roots in religion. The thwarted Charleston, South Carolina, rebellion of 1822 led by DENMARK VESEY combined Christian and African religious motifs as well as appeals to the rights of men. Other, lesser uprisings had their motivating force in the vision of God freeing the Hebrew children from Egyptian slavery and destroying Pharaoh and his army.

The most famous of these slave rebellions was the NAT TURNER rebellion of August 1831. Turner understood himself to be chosen by God to "fight against the Serpent, for the time was fast approaching when the first should be last and the last should be first." The rebellion struck terror into the whites of Virginia and North Carolina before it was suppressed with the slaughter of many innocent blacks.

Slave revolts and abolitionist (see ABOLITIONISM) attacks on slavery as an immoral and un-Christian institution prompted a white southern response. Some of these responses

were legal—increased limits on black mobility, prohibition of unsupervised black meetings, and laws against black literacy. Another response was increased religious teaching among the slaves; the so-called mission to the slaves was designed to ensure that blacks did not continue to interpret the biblical stories erroneously and to prove to the abolitionists that slavery was a positive good because it led to the Christianization of these "heathens." While the mission did not stop the slaves from interpreting and manifesting Christianity in their own way, it did bring larger numbers of blacks into contact with Christianity.

The Civil War ended the system of slavery that had been the social norm of the antebellum South. During the period of relative social and political equality of Reconstruction, blacks moved from integrated white-dominated churches to black churches. Although the white denominations struggled to keep them, primarily as part of their struggle to re-create the system of inequality and control that had marked the period before the war, the freed slaves, aided by northern missionaries both black and white, formed their own congregations and denominations. This led to rapid growth of both the African Methodist Episcopal Church and AFRICAN METHODIST EPISCOPAL ZION CHURCH, and to the formation of the Colored Methodist Episcopal Church (see CHRISTIAN METHODIST EPISCOPAL CHURCH). Other separate black denominations included the Colored Primitive Baptists and the Colored Cumberland Presbyterian Church.

The biggest growth, however, was among the Baptist churches that soon dominated the black religious landscape. Not until 1895 did they combine into an organized denomination, NATIONAL BAPTIST CONVENTION, U.S.A., INC. Although rent by conflicts over politics, theology, and personalities into three separate organizations, it remains the largest black denomination in the United States.

With the collapse of Reconstruction and the smothering of black hopes for freedom

and political rights, the black church in the southern United States became a locus for black self-determination. In the churches, blacks could maintain their dignity and independence. There generations of black leaders would be reared, and there blacks would try to make sense of the oppression they suffered.

While the church may have provided blacks with solace from the racism experienced in their daily lives and may even have provided a theological understanding of it, the church rarely advocated acceptance. The dawning of the 20th century saw several responses to this racism and oppression couched in religious language.

Although not expressly identified with religion, W. E. B. DuBois articulated the significance of black religion most eloquently in his book *The Souls of Black Folk*. DuBois, a founder of the NAACP, argued vigorously for the attainment of black political and legal rights. Recognizing that the problem of the 20th century would be the "problem of the color line," he saw within black religion a reflection of the power and dignity of African Americans. He also saw there a spiritual power that could transform America by demonstrating the true power of Christianity.

This idea of black dignity was reflected in the views of several black leaders. Many were ministers who saw within the black religious experience the possibility for the realization of true Christianity. The darker races were to show the Europeans and Americans a Christianity freed of racism, hatred, and violence. Others saw a need for a return to Africa as the only escape from American racism. While such voices were a minority, they touched responsive chords in the lives of many blacks.

The onset of World War I saw wide-scale black migration from the rural South to northern and western urban centers. In these unfamiliar environs, religion provided blacks with security and familiarity, just as it did for millions of European immigrants who flocked to America's shores. Many urban black churches

were no more than storefronts holding a couple of dozen people. Others, such as Olivet Baptist in Chicago, were tremendous institutions providing not only religious activities but housing and employment assistance, day care services, and educational opportunities.

The most distinctive response to this urban environment was the emergence of the so-called black cults. These varied tremendously in their goals and methods, from the Peace Mission Movement of FATHER DIVINE to the racially separatist NATION OF ISLAM. What these movements shared was the presence of a charismatic and powerful individual leader, a black man or woman unafraid of existing power structures both white and black, who articulated a message of individual, social, and economic improvement that appealed to poorer blacks.

Many, such as the Peace Mission Movement, the United House of Prayer for all People (see GRACE, SWEET DADDY), and Ida Robinson's Mt. Sinai Holy Church, emerged out of the HOLINESS MOVEMENT OR PENTECOSTALISM. Both demanded strict moral behavior, often determining most aspects of members' lives, including where they lived and who they married. Their emphasis on healing and personal transformation carried through many levels, giving their members a sense of identity, self-worth, and pride despite poverty and racism.

Radically different in their intent were the black nationalist movements. These movements preached a message of African-American pride, independence, and self-reliance. Although some were predominantly secular, such as the Universal Negro Improvement Association (UNIA) of MARCUS GARVEY, others, such as the Nation of Islam and the BLACK JEWS were religious. Significantly, none were Christian, which was identified as the religion of the oppressors, but adapted a different religious tradition to create not only a message of black self-worth but of black (moral) superiority. In doing so, they spurned the color-

blindness of a Father Divine, affirming black distinctiveness and separatism.

The most significant of these movements was the Nation of Islam (NOI). Although Garvey's UNIA numbered its members in the tens of thousands at its height in 1925, it collapsed following Garvey's conviction for fraud in connection with his Black Star shipping lines. The Nation of Islam has been much longer lived and despite its insularity has played a role greater than its size would suggest.

Begun in Detroit in 1931 by W. D. FARD, who preached a message of black superiority, a rejection of Christianity, and a system of rigid moral and individual discipline, the Nation of Islam made slow but steady inroads among the black underclass of that city. Following Fard's disappearance in 1934, a power struggle broke out, resulting in the removal of numerous members to Chicago. There, under the leadership of ELIJAH MUHAMMAD, the Nation of Islam (Black Muslims) emerged as a significant force in the African-American community and eventually American society.

The Black Muslims were proud, self-disciplined, self-sufficient, and determined. They had no qualms about using any means necessary to defend themselves. The Black Muslims completely rejected white society. They did not want a place at the American banquet table, they wanted their own table and were determined to get it. Achieving a high degree of visibility through the work of its National Representative, MALCOLM X, the Nation of Islam articulated a radical vision of black independence, going so far as to demand that white America should give blacks several states in "reparations" for the wealth that whites stole from blacks.

In this respect, the NOI differed greatly from the CIVIL RIGHTS MOVEMENT of the 1950s and 1960s. If anything attests to the vitality and strength of African-American life and religion, it is the "Movement." Although the roots of the civil rights struggles of the third quarter

of the 20th century lay with men of a secular bent, such as W. E. B. DuBois, A. Philip Randolph, and Roy Wilkins, as a movement with a religious drive and fervor it transformed a nation. The Civil Rights movement drew its strength from the African-American church. The reasons for this are historical, sociological, and theological.

Historically and sociologically, the black church was the primary location of black independence and leadership. From the 18th century on, it had been active in fighting against the discrimination suffered by Africans in North America. Free of white control and involvement, the black church was the place where African Americans could attain positions of power and influence without competing with or risking humiliation from whites.

In some cities, the ministers of the leading black churches functioned as political leaders of the black community in its dealings with the white power structures. Not only were black ministers a black elite, they were also the only members of the black elite with regular and continual contact with the black masses. Therefore, it was through the churches that the movement for black civil rights could become a mass movement.

Although a movement of many paths and individuals, one person came to symbolize the fusion of the black church and civil rights. This was MARTIN LUTHER KING, JR. The son and grandson of ministers, whose father led one of the largest and most prestigious churches in Atlanta, Martin Luther King, Jr., grew up immersed in the black church that was the source of his vision and his moral power. King saw in African Americans the last true hope for America. Only through their willingness to suffer as innocents could the United States be transformed. Their refusal to accept the evil of racism could remove it from the soul of America. Opposition to racism became part of a process of national salvation, whereby the sins of a country would be washed away by the blood of innocents.

This religious dimension affected many whites as they heard King's speeches steeped in the language of the Bible. The sight of blacks attacked by police dogs in Birmingham in 1963 and clubbed by mounted state troopers in Selma in 1965 did much to garner white support for black demands for civil rights.

Many blacks disagreed with King's emphasis on nonviolence, feeling that it further served to demean black America. Frederick Douglas's dictum that "He who is beaten easiest is beaten oftenest" rang in their ears. This opposition came earliest from secular, non-Christian sources, the most vocal and visible of these being Malcolm X.

As white America proved increasingly intransigent, the voices against nonviolence increased, especially after King's assassination in 1968. Movements within black religion mirrored these developments. Amid growing demands for "Black Power" and black pride, many black church leaders within predominantly white denominations began organizing black caucuses. This movement became most visible to whites when, in 1968, James Forman strode into Riverside Church in New York City and on behalf of all African Americans demanded \$500 million in reparations for past white abuses. Forman and the Conference of Black Churchmen, which had formulated the demands, were derided by many whites. Others, challenged morally by Forman's call, agonized over their response. Dr. Joseph H. Jackson, the leading black Baptist, berated both Forman for the demands and the NATIONAL COUNCIL OF CHURCHES for organizing a black development corporation in response to them.

While solving little and in many ways exacerbating existing tensions, the "Black Manifesto" raised to bold relief the increasing polarization between white and black America. Such polarization emerged out of the radically different experiences of the two communities, and despite the universal elements they shared, the overcoming of these

different experiences would not and could not be easy, especially given the disparity of power between the two communities.

During this period, there also emerged a self-consciously African-American theology. Although African-American religious reflection had always been different, the black theology that emerged in the late 1960s and early 1970s was new in its awareness of that uniqueness and its intentional reflection on it. Religious thinkers such as James Cone also brought about more serious attention to traditional forms of African-American religiosity. The church music, preaching, and prayer, once derided by intellectuals and theologians as crude, were now viewed as vivid expressions of a people's lived experience, an expression that could not be judged by criteria external to that experience but analyzed only in light of it.

African-American religion, despite assaults by poverty, despair, secularization, and racism, remains a powerful force. Nearly 18 million blacks belong to one of the leading black Baptist, Methodist, or Holiness-Pentecostal denominations alone. This is not counting smaller denominations and non-Christian religions and is a phenomenal number out of a population of 28 million. Religious leadership remains the training ground for many black political leaders, from Jesse Jackson to LOUIS FARRAKHAN.

Surveys conducted in the 1990s suggest that black churches exert a much more powerful force on their members than do white churches. This is especially true for teens and young adults, who look to the churches as the location for their moral values and codes of behavior. That said, by the mid-1990s, many had begun to fear that African-American Christianity, at least, had become a "woman's" religion and that men were ceasing to attend church. This apparent fact along with the seeming decline in male role models for young African-American males led to a concerted effort to present a masculine face on religion. Many

congregations began to develop formal programs whereby adult male members worked with male children and youths, emphasizing responsibility, hard work, and religious values. One particularly visible example of this trend was the Million Man March in October 1995. Although organized by Louis Farrakhan of the Nation of Islam, the march was designed to bring to Washington, D.C., “a million sober, disciplined, committed, dedicated, inspired black men” to counteract negative images of African-American men and to have them dedicate themselves to rebuilding and improving their communities.

This commitment of strengthening their communities also led many African-American congregations to respond quickly to the increased opportunities to obtain federal funds to provide social services presented by welfare reform in 1996 under President Bill Clinton and then expanded under President George W. Bush. These FAITH-BASED INITIATIVES were designed to make use of local organizations and local knowledge as well as the strength of communities of faith to address the problems faced by impoverished individuals. They gained much of their impetus from the successful work undertaken by the Ten Point Coalition in Boston and the Reverend Eugene Rivers as well as other black religious organizations working in dramatically distressed communities.

In the 21st century, religion continues to be central to the black community in America. It does so by being preeminently theirs—true to their experiences, needs, and aspirations. It has been and remains the source of moral authority within the community, its gathering place and its refuge. The centrality of black religion to the black community was summed up best by the African-American theologian Kelly Miller Smith: “The line of demarcation between the black secular community and the black religious community, or the church, is at times invisible.”

African Methodist Episcopal Church The oldest African-American denomination in the United States, the African Methodist Episcopal (A.M.E.) Church has its roots in the white refusal to grant blacks equality in worship. Although not organized as a denomination until nearly three decades later, the A.M.E. Church traces its beginnings to 1787.

In that year, RICHARD ALLEN, ABSALOM JONES, and two other black worshippers were assaulted by white ushers at St. George’s Methodist Church in Philadelphia and forced

from their seats. Outraged by this treatment, they led a secession from the church, organizing the Free African Society. Dismayed by the society's increasingly Quaker orientation, Allen and Jones left to form another black church, St. Thomas's. Still smarting at the affront offered them by the Methodists of St. George's, a majority of St. Thomas's members voted to affiliate with the EPISCOPAL CHURCH. When the office of minister was offered to Allen, who, along with Absalom Jones, had voted for Methodist affiliation, he refused, telling them that he was a Methodist and "indebted to the Methodists for what little religion" he had.

Allen then organized Bethel Church along Methodist lines. Bethel grew steadily and by 1794 had completed its own church building, consecrated by the United States' first Methodist bishop, FRANCIS ASBURY. Increasing restiveness with white control led Allen to call a meeting in 1816 of leading black Methodists from churches in Pennsylvania, New Jersey, Delaware, and Maryland to discuss the formation of an African Methodist denomination. The suggestion met with general approval, and the representatives voted to organize the African Methodist Episcopal Church. Allen was chosen the first bishop and over a period of several days was ordained an elder and consecrated as bishop. Under Allen's leadership, the A.M.E. experienced a period of strong growth and activity, spreading throughout the Northeast and Midwest and even making some inroads in the South. There, however, its position as an independent black denomination and Allen's outspoken opposition to slavery aroused suspicion and legal difficulties.

Feeling a kinship with their ancestral homeland and with fellow blacks in this hemisphere, the A.M.E. early began a program of foreign missions, sending out its first missionary, Scipio Bean, to Haiti in 1827. Other missions followed to Liberia, southern Africa, and the Caribbean. Africa remained a cen-

ter of A.M.E. work, and in 1990, four of the A.M.E.'s 19 districts were located there.

The Civil War provided a significant impetus to growth of the A.M.E. Missionaries went South to aid the freed blacks. Although the staid church services of the A.M.E. alienated many southern blacks, others were impressed by its organization and independence. For these, the A.M.E. provided an alternative to the white-dominated Methodist churches.

The A.M.E. has been active in black education and social improvement from earliest times. Its book publishing concern was the first owned by blacks in America, and the *Christian Recorder* and the *A.M.E. Review* are the oldest black newspaper and magazine in the world, begun in 1841 and 1883, respectively. A.M.E. founded its first college, now Wilberforce University, in 1856 and now runs several colleges and seminaries, many founded by Daniel Payne, one of the A.M.E.'s leading missionaries to the South. In 2004, the African Methodist Episcopal Church had a membership of about 3.5 million in more than 8,000 churches, making it the third-largest historically black denomination in the United States.

African Methodist Episcopal Zion Church Like the AFRICAN METHODIST EPISCOPAL CHURCH (A.M.E.), the African Methodist Episcopal Zion Church has its origins in the failure of white American Methodists to treat their black coreligionists as equals. It dates back to 1796, when several black members of the John Street Church in New York met together in order to worship free from racism. Services conducted by black lay ministers were held in the shop of a black cabinet-maker. These services were so successful that the participants soon built their own chapel, completed in 1801 and incorporated as the African Methodist Episcopal Church (called Zion) of the City of New York.

The ordained minister of the church continued to be white until 1820 when, Zion Church and the Asbury African Methodist Episcopal Church, also in New York, decided to merge to form a separate denomination. Organized in October of that year as the African Methodist Episcopal Church, the new denomination quickly became embroiled in conflict with the older A.M.E. Church from Philadelphia under the leadership of RICHARD ALLEN. This conflict continued for decades, easing slightly with the addition of *Zion* to the denomination's name in 1848.

The church always has been politically active and included leading black abolitionists among its members, including HARRIETT TUBMAN, SOJOURNER TRUTH, and Frederick Douglass. This commitment to justice has continued up to the present, with the A.M.E. Zion Church being the first Methodist denomination (white or black) to ordain women.

Although growing slowly during its early years, the church experienced rapid growth following the Civil War and again in the early part of the 20th century. In 2006, the African Methodist Episcopal Zion Church had an

American membership of about 1.4 million members in more than 4,000 congregations.

Alcott, Amos Bronson (1799–1888) An influential educational, religious, and social reformer in 19th-century New England, Amos Bronson Alcott was at once brilliant and erratic. Best known for his attempts to combine antislavery activism with progressive and utopian social experiments, Alcott is also notable for the mystical bent of his commitment to TRANSCENDENTALISM.

The youngest of eight children, Alcott was born on a farm in Wolcott, Connecticut, and reared an Episcopalian. After traveling in Virginia and the Carolinas as a salesman in his youth, Bronson returned to New England and began his career as an educator. In 1830, he married Abigail May, by whom he had four children (among them the noted author Louisa May Alcott). That same year he published his first educational treatise, *Observations on the Principles and Methods of Infant Instruction*.

Alcott based his educational theories on his experiences as a teacher in Boston and Germantown, Pennsylvania, in the 1820s and 1830s, and later as the superintendent of public schools in Concord, Massachusetts, in the 1850s. In 1836, he published *Record of Conversations on the Gospels*, in which he summarized discussions among his students on moral and religious themes. His pedagogy, as outlined in this work and in his other educational treatises,

proved controversial, particularly his frank discussions of sexuality with a “mixed” class of children.

At the same time, Alcott was also influenced by a mystical and Neoplatonic strain of transcendentalism, and he surrounded himself with fellow members of the Transcendentalist Club. Never able to attain financial stability through his work, Alcott periodically relied on financial assistance from RALPH WALDO EMERSON and later from the royalties his daughter Louisa garnered from the success of *Little Women*. Emerson paid for a trip to Europe in 1832, where Alcott met Charles Lane, a fellow reformer who was to become his partner in the establishment of Fruitlands, a transcendentalist communal experiment in Harvard, Massachusetts. In 1834, Lane and Alcott organized the community, consisting of Alcott’s family, Lane and his son, and a few other friends. Although the experiment lasted only seven months, it demonstrated the practical social commitments of some transcendentalists.

At Fruitlands, Alcott insisted upon a strict and somewhat idiosyncratic physical and social regimen: He banned the consumption of meat, alcohol, tea, coffee, milk, and even carrots (because they developed away from the sun). In keeping with his advocacy of the antislavery cause, he forbade the wearing of cotton as a protest of the slave system and even prohibited the use of wool clothing because it represented the enslavement of sheep. He required his followers to take cold water baths for their health. Finally, Charles Lane tried to institute a standard of celibacy. But that regulation, along with the general agricultural and financial failure of the enterprise, spelled the end of the social experiment at Fruitlands.

Although neither his utopian dreams nor his educational philosophies captured the public imagination, Alcott’s ideas and his example were influential among his circle of New England acquaintances and fellow philosophical idealists. He left a rich written record

of his many interests, including *The Doctrine and Discipline of Human Culture* (1836), *Concord Days* (1872), and *Ralph Waldo Emerson: An Estimate of His Character and Genius* (1882).

Allen, Richard (1760–1831) The man who established the first black denomination in the United States, Richard Allen was born a slave on February 14, 1760, in Philadelphia. With his parents and siblings, Allen was sold in 1867 and taken to Dover, Delaware. There he was converted by a Methodist minister and soon took up preaching the gospel. Among those he turned to the Methodist path was his owner, who allowed Allen and his brother to purchase their freedom around 1781 (see **METHODISM**).

Allen returned to Philadelphia, where he became a businessman and lay preacher. Attending the first general conference of the Methodist Episcopal Church in the United States in Baltimore in 1784, he was accepted as a “minister of promise.” At the conference, the United States’ first Methodist Bishop, FRANCIS ASBURY, reportedly asked Allen to accompany him on his preaching trips to the South on the condition that Allen not associate with slaves. Allen refused and returned to Philadelphia, where he worked as a Methodist teacher among freed blacks.

Despite his position as a respected member of the congregation of St. George’s Methodist Episcopal Church, Allen, along with the other black members, experienced much discrimination at the hands of his white coreligionists. The breaking point was reached in

1787 when Allen, ABSALOM JONES, and William White were assaulted by a church usher while praying. Angered by such treatment, they withdrew from the church and founded the Free African Society on April 12, 1787.

The society grew away from its founders, however, and, displeased with its increasing Quaker (see FRIENDS, RELIGIOUS SOCIETY OF) orientation, Allen and Jones left to found a new church, St. Thomas. When this congregation affiliated with the new Episcopal Church, Allen organized a black Methodist church, Bethel, in 1794. The church and Allen's influence grew steadily. In 1799, Bishop Asbury himself ordained Allen a deacon. Then in 1816, Bethel hosted a meeting of 16 black Methodist congregations. On April 9 of that year, these churches joined together to form the AFRICAN METHODIST EPISCOPAL CHURCH (A.M.E.). Two days later, Allen was consecrated its bishop.

Allen was committed to the moral, educational, and political development of America's blacks as well as their spiritual development. Bethel organized a day school in 1795, and in 1804, Allen founded the Society of Free People of Colour for Promoting the Instruction and School Education of Children of African Descent. An active abolitionist, he led petition drives demanding the abolition of slavery in Pennsylvania (1799 and 1800) and in the United States (1800). He vociferously opposed the American Colonization Society, fearing, as did many free blacks, that it would result in forced colonization. Allen also organized the "colored conventions," whose purpose was to organize blacks politically to oppose the injustices they suffered.

Allen's drive and personality often led him into conflicts with his colleagues, many of whom felt that he was more interested in consolidating his own power than aiding black Methodism. The result was that several black Methodist churches split from the A.M.E. Church or refused to join the denomination.

Richard Allen, the first bishop of the African Methodist Episcopal Church, founded in Philadelphia in 1816.

Despite these conflicts, Allen created the basis for independent black churches and independent black political organizations in the United States. The A.M.E. grew dramatically under his leadership until by the time of Allen's death on March 26, 1831, the African Methodist Episcopal Church had more than 7,000 members in the United States and missions in Canada, Haiti, and West Africa.

American Baptist Churches in the U.S.A.

The American Baptist Churches in the U.S.A. is the fourth-largest group of BAPTISTS in the United States today. The most theologically liberal of the Baptist denominations, it is a federated body of churches that share two principal beliefs: the BAPTISM of adult believers by immersion and the independence of the local congregation (see CONGREGATIONALISM).

Baptists originally appeared on the radical fringes of the English Puritan movement in the 1630s. Although they agreed with orthodox Puritans that church membership should be limited to those who could testify to an experience of divine grace, Baptists contended that no one, including the children of church members, ought to be baptized until that person had made a personal confession of faith. Baptists also opposed religious establishments in all forms and believed that the church should maintain itself solely by voluntary (see VOLUNTARYISM), not by state-supported, means. When they arrived in America during the "Great Migration" of Puritans from England to Massachusetts between 1620 and 1640, their theological principles quickly brought them into conflict with the colony's leadership. ROGER WILLIAMS, a Puritan minister banished from Massachusetts in 1635 for advocating the separation of church and state, founded the first Baptist church in America at Providence, Rhode Island.

Baptists found a more favorable atmosphere in the middle colonies of New Jersey, Pennsylvania, and Delaware, where they enjoyed religious toleration. In 1707, five congregations in those colonies united to form the Philadelphia Association, the first Baptist organization in America. Each local congregation was said to receive its authority directly from Jesus Christ, so the association could

hold no binding power over the individual churches. Nonetheless, it facilitated interaction among them, especially in channeling their efforts in evangelism. The association also adopted a common confessional statement that provided some theological unity among the congregations.

The GREAT AWAKENING of the mid-18th century represented a critical turning point for the Baptist movement in America. The revivals of the awakening inspired many to separate from the denominations in which they had been raised. In New England, many revival-oriented New Light (see NEW LIGHTS/OLD LIGHTS) Congregationalists challenged the parish system in Massachusetts and Connecticut and became Separate Baptists. Chief among this group was ISAAC BACKUS, who organized a Baptist church in Middleborough, Massachusetts, in 1756. Baptists generally adapted well to the changing religious climate in America, for their institutions embodied the most significant features of the awakening: lay leadership, local autonomy, and the ready acceptance of a voluntary system of church support. These emphases fit the country's democratic mood in the second half of the 18th century, and Baptist congregations increased dramatically in that period.

As the 19th century began, the renewed religious excitement brought by the SECOND GREAT AWAKENING further aided Baptist growth. Beginning in 1802, New England Baptists organized a series of benevolent societies to advance their denominational interests. These societies allowed congregations to maintain their nominal independence while combining resources for evangelistic, missionary, publishing, and educational endeavors. The General Missionary Convention (later called the Triennial Convention, because it met every three years) became the first national Baptist body. It was founded in 1814 to support the work of Baptist missionaries ADONIRAM JUDSON and Luther Rice.

Although the Triennial Convention intended at first to promote all sorts of benevo-

lent activity, it later decided to limit its role to foreign missions. Other societies were soon formed to meet the convention's original aims. The Baptist General Tract Society was organized in 1824, and the American Baptist Home Mission Society came into being in 1832.

As their denomination grew, Baptists also saw the need for educational institutions that would train church leaders. The earliest Baptist college, Rhode Island College (now Brown University), had been organized in 1764. In the early 19th century, the Baptists founded many other colleges that hold national stature today. These schools include Colby College and Bates College in Maine and Hamilton College, Colgate College, and the University of Rochester in New York.

The movement to abolish slavery and the coming of the Civil War permanently divided Baptists in the North from their fellow church members in the South. During the 1830s, it became increasingly clear that the Triennial Convention and the Home Missionary Society reflected the interests of the northerners who ran them. A firm stand against appointing slaveholders as missionaries drove Baptists in the South to action. A call was issued for a consultative convention to meet in May 1845, and the SOUTHERN BAPTIST CONVENTION was officially organized, distinct from the churches in the North. Although northern Baptists at first insisted that their southern brethren were not truly separated from them, the Civil War effectively sealed the division, and Baptists in the South henceforth went their separate way.

After the war, northern Baptists formed new missionary and educational organizations to increase their influence throughout the nation. Women's home and foreign missionary societies were chartered in the 1870s, and separate church conferences for German, Swedish, Danish, and other ethnic groups were also started. Overlapping programs and fund-raising drives, however, coupled with the jealous guarding of local church

autonomy, threatened the financial stability of many church agencies. As a result, the various Baptist societies sought to coordinate their efforts by coming together in 1907 in a single, 1-million-member structure, the Northern Baptist Convention. The convention engaged ecumenically (see ECUMENICAL MOVEMENT) with other denominations and in 1911 became a charter member of the Federal Council of Churches. The majority of Free Will Baptists in the North, moreover, remnants of an 18th-century schism over the question of the freedom of the human will to choose salvation, also merged with the convention in 1911.

During the late 19th and early 20th century, northern Baptists established themselves as participants in the great theological debates of the day. Some of the premier American intellectual figures of the time taught at Baptist seminaries: William Newton Clarke at Colgate, Augustus Hopkins Strong at Rochester, and William Rainey Harper and Shailer Mathews at Chicago. Most influential of all was theologian and seminary professor WALTER RAUSCHENBUSCH. Rauschenbusch's SOCIAL GOSPEL theology confronted Baptists and other Christians with the challenge of integrating their religious faith with a practical commitment to working for the establishment of God's kingdom on earth.

By the 1920s, the Northern Baptist Convention, like some other Protestant evangelical denominations in the North, found itself embroiled in internal controversies between fundamentalists and modernists over the proper interpretation of the Bible. Baptist clergyman HARRY EMERSON FOSDICK, who served a church in New York City, protested sharply in his 1922 sermon "Shall the Fundamentalists Win?" against the growing spirit of exclusivity among conservatives. He pled for mutual forbearance between the contending parties not only within his denomination, but also within Protestantism generally. But Fosdick's advice went unheeded. Conservative congregations left the

convention and formed two new denominations: the General Association of Regular Baptist Churches and the Conservative Baptist Association. The northern Baptists as a whole adopted a moderate position about the role of Scripture in the church's life. The convention affirmed that the New Testament was simply the "all sufficient ground" of Christian belief and practice.

The main northern Baptist denomination has changed its name twice since WORLD WAR II. It renamed itself the American Baptist Convention in 1950 in order to stress its national character in the heady period of postwar church growth. An open invitation was then extended to other Baptist bodies to unite with the convention. While many congregations in the African-American Baptist tradition entered into dual membership with the American Baptists and with one of the black Baptist conventions, no full-scale, organic union of denominations took place. In 1972, a second major revision occurred, and a more connec-tional, less centralized polity was formalized in the renamed American Baptist Churches in the U.S.A. In the new denominational structure, a greater share of authority—true to long-standing Baptist tradition—was given to local churches and regional bodies.

The membership figures of the American Baptists have remained fairly stable since 1925. Although the 1950s was a period of general growth within churches in the United States, the American Baptists have lost almost as many members as they have gained over the past 50 years. For example, various European ethnic groups, among whom Baptists once concentrated their missionary work, formed their own independent denominations. And the espousal of social and theological stances that some conservative congregations deemed too liberal caused a loss of membership as well. In 2008, the American Baptist Churches reported approximately 1,500,000 members in more than 5,800 congregations.

American Civil Liberties Union The American Civil Liberties Union (ACLU) is one of the United States' leading litigation and advocacy groups on behalf of those freedoms guaranteed to all Americans by the CONSTITUTION, including the free exercise of religion, and against any governmental establishment of religion (see FIRST AMENDMENT; FOURTEENTH AMENDMENT; CHURCH AND STATE, RELATIONSHIP BETWEEN). Founded in 1920 in response to the Palmer Raids (see NATIVISM), the ACLU initially focused on governmental attacks on individuals holding unpopular political positions, particularly pacifists and conscientious objectors as well as communists and anarchists (see COMMUNISM; PEACE REFORM). Its original leadership consisted of numerous individuals who had opposed the U.S. entry into World War I, including Roger Baldwin, the ACLU's long-term head, and Jeannette Rankin, the first woman elected to the House of Representatives.

The ACLU, however, also has been active in many of the leading legal cases involving religion and state in the United States. In the 1920s, the ACLU was involved in persuading John T. Scopes to present a test case to Tennessee's statute prohibiting the teaching of evolution in public schools (see BRYAN, WILLIAM JENNINGS; CREATIONISM; EVOLUTION), and Scopes's legal team was led by Clarence Darrow, who served on the ACLU's national committee.

In the 1980s, the ACLU once again returned to the issue of evolution, filing a suit challenging an Arkansas law that required the teaching of creationism as a scientific alternative to evolution. The law eventually was declared unconstitutional by the federal district court. The ACLU also was actively involved in the Pennsylvania case regarding teaching intelligent design and the Cobb County, Georgia, school textbook case. In the latter, the school board had required the posting of stickers on biology texts stating that "This textbook contains material on evolution. Evolution is a theory, not a fact, regarding the origin of living things. This material should be approached with an open mind, studied carefully and critically considered."

Since the Supreme Court's decisions that found the religion clauses of the First Amendment to apply to the states through the Fourteenth Amendment, much of the religious litigation of the ACLU, both the national organization and its state chapters, has involved religious displays on public property, school or other governmentally sponsored prayers, and discrimination against minority religious organizations. Additionally, the ACLU has been one of the most vocal critics of many faith-based initiatives and the allocation of governmental monies to religiously motivated social and human services organizations.

During the 1990s and early 2000s, the ACLU was involved in a series of cases involving the display of the Ten Commandments on public property (see TEN COMMANDMENTS CONTROVERSY). These controversies have involved the states of Georgia, Indiana, Texas, Kentucky, Tennessee, and Alabama. In several cases, following the ACLU's court victories, the organization was awarded attorneys fees, as allowed by federal law in civil rights cases. In an attempt to punish the organization, several Republican representatives in 2006 attempted to pass what was known as the Public Expressions of Religion Act. This bill would have prohibited

the awarding of damages or attorneys fees in cases brought under the Establishment Clause. The defeat of the Republican Party in the 2006 congressional elections removed the bill from serious consideration.

While many condemn the ACLU for waging a war on religion, given its position on governmentally sponsored or funded religious activities, the ACLU also actively pursues free exercise cases, guaranteeing that individuals are free to worship as they choose. A sampling of such cases include lawsuits against a Texas state law that prevented a church from running a residential ministry for individuals on probation, a suit designed to force the state of North Carolina to include all scriptures in the "Holy Books" upon which trial witnesses were required to swear, and a lawsuit against the city of Garden Grove, California, after it refused to approve a zoning variance for a Buddhist temple. Despite hostility and criticism, the ACLU plays an important and ongoing role in maintaining and strengthening the U.S. tradition of religious freedom.

American Humanist Association This organization, which has survived for more than 60 years, provides humanists with literature and a community in a cultural climate often hostile to their commitment to reason and their suspicion of organized religion.

Founded in 1941, the American Humanist Association (AHA) emerged out of a long tradition of religious and philosophical rationalism in the United States dating back to the ENLIGHTENMENT, but noticeable particularly in the rise of humanist organizations like the Society for Ethical Culture and the Free Religious Association in the late 19th century (see ETHICAL CULTURE; UNITARIAN UNIVERSALIST ASSOCIATION).

In the late 1920s, a variety of small, local humanist associations had been founded around the country. Humanists were often at odds with each other as much as with the religious establishment they rejected. In particular, some humanists wanted to maintain connections with the liberal religious effort to fill ordinary life with aesthetic and moral value. Others thought humanism required a radical rejection and critique of religion in any form. A third group, mostly literary scholars, were seen by other humanists as representing an elitist view of culture.

In 1941, John H. Dietrich, a Unitarian minister, brought together some of the fledgling groups to form the American Humanist Association. The organization underwrote the publishing of a journal, originally entitled *The New Humanist* but renamed *The Humanist* to differentiate the more political version of humanism from that of literary critics such as Irving Babbitt. Members of the new organization actively pressed issues of religious and intellectual freedom. Philosopher Corliss Lamont became involved in several civil liberties cases, including one leading to a 1963 Supreme Court ruling that prohibited government monitoring of mail. While many notable intellectuals, including psychologist Abraham Maslow and biologist Edward O. Wilson, have been members of the AHA, membership levels have remained low. In 2005, the group claimed 110 local chapters in the United States.

Attacked repeatedly during the 1980s and 1990s by religious conservatives who claimed

humanists were conspiring to promote a new religion of "SECULAR HUMANISM," association members continued at the century's end to press civil liberties issues, organize an annual Humanist Institute, and publish the magazines *Free Inquiry* and *The Humanist*. Those venues give voice to both secular and religious humanism.

American Indian Religious Freedom Act (AIRFA) Native Americans have endured a long history of persecution against their traditional religions, running from colonial times into the 21st century. But the story of Native-white religious interaction entered a new phase with the passage of AIRFA by Congress in 1978. During the 1980s, a number of cases testing AIRFA appeared in the nation's courts, in which native groups argued against various government policies on FIRST AMENDMENT grounds. However, in most instances the courts ruled that AIRFA did not provide cause for government agencies to seriously alter their practices affecting Native Americans, leading native groups and activists back to Washington. Their lobbying efforts resulted in significant legislative victories, with both Congress and President Clinton eventually supporting enactment of new laws.

CHRISTOPHER COLUMBUS suspected that the Arawak islanders he encountered had no religion, a mistake stemming from his equation of religious life with Christianity. In subsequent centuries, European colonists and their American descendants were often troubled by the religious beliefs and practices, or appar-

ent lack thereof, among America's indigenous peoples. Endeavoring to make up for this deficiency, colonizers sought to spread the Gospel among the Indians in conjunction with incorporating Indian fur trade networks or lands into the realm of the European mercantile economy (see *NEW FRANCE*; *NEW SPAIN*), often asserting a "right of discovery" to claim native land.

Apart from a number of French Jesuits who established missions to the Hurons and other tribes along Quebec's St. Lawrence River in the 1630s and 1640s, many missionaries assumed that native religious practices were demonic. Thus, JOHN ELIOT's "Praying Indians" among the Massachusetts were encouraged to abandon most aspects of their culture in order to become regenerated Protestants, and Franciscans ministering to the Pueblo prior to 1680 (see *NATIVE AMERICAN RELIGIONS: SOUTHWEST*) repeatedly raided and destroyed kivas, village ceremonial centers.

Colonial missions remained largely unsuccessful, perhaps because, as one Huron noted in the 1630s, "Death and the faith walk hand in hand." But in the early 19th century, as Congress gave monies set aside in its "civilization fund" to various denominational mission enterprises, Christians seeking to implant the Gospel were increasingly able to prohibit would-be Indian converts from practicing traditional ceremonies as they established mission schools among Cherokee, Muskogee (Creek), and other tribes in the Southeast.

The ideology of "civilization," equating Protestant Christian faith with Americanism, became particularly powerful in the years after the *CIVIL WAR*, when the country turned full attention to western expansion and pacification of intransigent western tribes. In 1882, Secretary of the Interior Henry M. Teller ordered an end to "heathenish dances," which he claimed were a "great hindrance to civilization." Government regulation increased with the subsequent establishment of a Court of Indian Offenses on numerous reservations in

1883, which prosecuted Indians found in violation of increasingly strict codes of behavior. Men were ordered to cut their braids. Ceremonies for public mourning such as the "give away," the Sun Dance, polygamy, and any religious practice that an agent might deem uncivilized were outlawed, violators being jailed and fined. In 1888, the agent in charge of the Kiowa, Comanche, and Wichita agency in Oklahoma issued regulations prohibiting the ingestion of peyote, a sacred hallucinogenic plant (see *NATIVE AMERICAN CHURCH*).

President Franklin Roosevelt's New Deal restructuring of the federal government finally curtailed legal means of religious persecution. John M. Collier, appointed commissioner on Indian affairs in 1932, reorganized tribal government and, being attracted to native art and religious mysticism, ordered the end of prohibitions against Indian religious practices. At the same time, prosecution of peyotists continued. The general impetus of the "termination" policy of the Eisenhower era, which relocated Indians to urban areas and abolished federal responsibility for several smaller tribes, such as the Klamath and Menominee, served to advance the cause of assimilation into the dominant society (see *ASSIMILATION AND RESISTANCE, NATIVE AMERICAN*).

In the 1960s, spurred on in part by the example of the *CIVIL RIGHTS MOVEMENT* and increasing public dissent, Indian people undertook a variety of campaigns to secure control over their lands and lives. Encouraged by President Nixon's approval of the return of Blue Lake to the Taos Pueblo in 1971, Indian activists began pushing western congressional leaders and others for legislation granting free exercise of religion to native people. Other victories, including a modification of the 1940 Bald and Golden Eagle Protection Act allowing Indians to capture eagles for ceremonial use, led in 1977 to Senator James Abourezk of South Dakota introducing the AIRFA bill that passed through both houses with a minimum of debate, apart from the assurance by

one cosponsor, Rep. Morris Udall of Arizona, that the bill “had no teeth.”

AIRFA contained an extensive prologue noting the disparity practiced by the government in relation to native religions, and the general failure of the First Amendment to cover infringements on Indian practices. The act resolved that “henceforth it shall be the policy of the United States to protect and preserve for American Indians their inherent right of freedom to believe, express and practice the traditional religions.” A final clause also called upon all federal agencies to evaluate the need for change in the implementation of any government policy that might affect Native Americans.

The act succeeded in addressing some complaints in the years after its passage. Particularly after the 1990 passage of the Native American Graves and Repatriation Act, numerous human remains in storage at the Smithsonian Institute and other museums were returned to various tribes. Museums also repatriated large numbers of Indian religious artifacts, including ceremonial pipes and kachinas that had been taken during the Indian wars, stolen, or purchased by unscrupulous collectors. Indian prisoners were granted the same rights to freedom of worship as other convicts.

But impediments to free religious exercise remained, particularly when Indian religious practices depended on a specific locale, as many do. Many western tribes regard particular lands as sacred, often places of the peoples’ origin (Blue Lake—Taos Pueblo), the home of supernatural beings (San Francisco Peaks—Navajos and Hopis), or places of revelation and inspiration (Bear Butte—Cheyennes and Lakotas). Native access to such sites, or preservation of their unsullied character, is difficult in view of the federal role in administering vast amounts of land in western states through agencies such as the Bureau of Land Management, the National Park Service, the National Forest Service, and the Department of Defense.

Powerful economic interests dependent upon public lands—ranching, timber, mining, and the federal bureaucracies themselves—have been adamantly opposed to arguments for greater access or special use by native peoples. Thus controversies over sacred sites took on some of the same zeal associated with the Indian wars of the last century.

Conflict was frequent in the 1980s and 1990s between native groups advancing claims over sacred sites and government agencies. In addition, representatives of the economic interests dependent upon western public lands expressed suspicion of native intentions. Former Utah governor Scott M. Matheson declared before Congress in 1993 that accommodating native religious needs would violate the First Amendment’s establishment clause. South Dakota governor William Janklow remarked publicly in 1995 that he feared a conspiracy by the Lakota Sioux to take back the Black Hills.

Landmark Supreme Court rulings in *Lyng v. Northwest Cemetery Protective Association* (1988) and *Employment Division v. Smith* (1990) revealed that AIRFA was nearly as powerless as Senator Udall had claimed. In those rulings, the Court held that the government had no obligation to modify its policies in order to protect Indian religious practices. In *Lyng* the Court reviewed an appeal favoring Forest Service plans to construct a marginally useful logging road in northern California through a sacred area that Yurok, Hoopa, and Tolowa tribal members showed was crucial to their cultural survival. In the majority opinion, Justice Sandra Day O’Connor maintained that even though the road would shatter the tribes’ religions, the Forest Service could build the road where it desired since the government is free to administer its own internal affairs as it sees fit.

In *Smith* Justice Antonin Scalia reversed a long-established First Amendment interpretation and upheld the state of Oregon’s denial of unemployment compensation to two Native

American Church members fired without pay for sacramentally ingesting peyote. Scalia argued that state laws intended for the public good were to be generally applicable, and that this outweighed any individual desire for exemption. The government has no obligation to shield minority religious practices from legitimate laws, he added, since the effort to accommodate diverse religious minorities "is a luxury that a democratic society cannot afford."

In the aftermath of these opinions, many nonnatives feared that the Court's reading of the First Amendment threatened the religious liberty of all Americans. In 1994, accordingly, Congress passed the Religious Freedom Restoration Act (RFRA). Indian religious practitioners sought redress in separate legislation, resulting in passage of the American Indian Religious Freedom Act Amendments of 1994. In this act, Congress finally closed the loopholes that had allowed 22 states to criminalize Indian sacramental peyote use in spite of an exemption in federal drug law dating from 1965.

In addition, in May 1996, President Clinton issued Executive Order 13007, which required federal land management agencies to "accommodate access to and ceremonial use of Indian sacred sites by Indian religious practitioners" and to "avoid adversely affecting the physical integrity of such sacred sites." At the same time, however, the order stated that it created no "right, benefit, or trust responsibility" that might be enforceable against the federal government.

Although guarantees of American Indian religious freedom seemed stronger by the end of the 20th century than they had been at the beginning, much remained insecure. Western economic interests are still inclined to view government protection of native religious practices as a threat. In 1999, a Wyoming lumber company took the National Forest Service to court over its efforts to accommodate native access to the Big Horn Medicine

Wheel. Additionally, conflicts have emerged between scholars and scientists over archaeological excavations and research on human remains. Many tribes have claimed relationship with all human remains found on their lands, even when they predate the arrival of particular tribes in the area. The tribes have argued that their religious traditions teach that they have lived on those lands forever, and, therefore, all human remains before European settlement are their ancestors. In such instances, the conflict between science and religion which emerges regularly in U.S. history (see SCIENCE AND RELIGION) appears in yet another context.

AIRFA has not solved these conflicts, nor could it. It and successive acts have, however, allowed Native Americans to engage the ongoing struggle over the balance between the practices of specific religious communities and generally applicable laws. This struggle between new practices and new claims must regularly be adjudicated, and as new questions emerge new answers must be demanded. Still, the courts and especially Congress have played a major role in recognizing Native Americans' religious practices and in striving to ensure that Indian peoples' beliefs and faiths are not dismissed and ignored.

Americanism The conflict over "Americanism" within the Roman Catholic Church (see ROMAN CATHOLICISM) in the United States, often referred to as the "Americanist Crisis," resulted from numerous threads woven into the tapestry of U.S. Catholic history. Personal, theological, and practical differences within the American church hierarchy became heresy when viewed from the perspective of Rome, although never was heresy so ambiguously defined or heretics so difficult to locate.

The source of the conflict was the church's relationship to American society and was occasioned by its ethnic mix. The United States presented a peculiar reality for the Roman Catholic Church in the West. Its commingling of numerous ethnic groups, each with its own spirituality, language, and customs, presented problems unknown in France, Germany, or Ireland.

The conflict surfaced over how the needs of these various groups should be met. One segment of the hierarchy, led by Archbishop JOHN IRELAND and supported by Cardinal JAMES GIBBONS, felt that all Catholics in the United States should conform to a single Catholic culture, a culture open to the possibilities and promises of the United States. This group, known as Americanists, believed that the failure to create such a culture threatened episcopal authority, endangered morals, and embarrassed the church within the wider society. This singular culture would be both American and Catholic. It would create a unified church, no longer foreign and alien, to be a beacon to America, its strength highlighting the weaknesses of divided Protestantism.

The opponents, primarily Bishops Michael Corrigan and Bernard McQuaid, believed, that any concession to the wider culture threatened Catholics and Catholicism. The world was hostile to everything Roman Catholics believed, and the greater the contact with it, the greater the threat of apostasy.

During the early years of the pontificate of Leo XIII (1878–1903), the Americanists' star rose. Leo's cautious openings to the modern world, exhibited in his encyclical *Rerum Novarum* (1891) and his call for French Catholics to support the Third Republic, coincided with the Americanists' attitude toward the modern world. The Americanists welcomed Leo's appointment of Archbishop Francesco Satolli as apostolic delegate to the United States (1889) and attempted to win him to their cause. At first, all seemed to go well. Accompanied by Archbishop Ireland, Satolli

urged those attending the 1893 Catholic Congress in Chicago to carry in one hand "the book of Christian truth and in the other the Constitution of the United States."

He responded less favorably to Catholic participation in the WORLD'S PARLIAMENT OF RELIGION held that same year, a criticism underscored by a papal letter condemning Catholic participation in interdenominational congresses. European events also endangered the Americanists' position. Catholic support for the French republic collapsed amid its anti-clericalism and the machinations of conservative French Catholics and monarchists. Intellectually, new ideas—evolution, biblical criticism—appeared to threaten Catholic dogma. The modern world seemed increasingly inhospitable to Catholic truth.

These events signaled the weakening of the Americanists, demonstrated unmistakably by the papal encyclical *LONGINQUA OCEANI* (January 6, 1895). Ostensibly a letter praising the strength and growth of the American church, its language unnerved the Americanists and provided ammunition for anti-Catholics over the next half century. "It would be very erroneous to draw the conclusion that in America is to be found the type of the most desirable status of the Church, or that it would be lawful or expedient for State and Church to be, as in America, dissevered and divorced." The encyclical acknowledged that the church had done well under this system, "but," it continued, "she would bring forth more abundant fruits, if, in addition to liberty, she enjoyed the favor of the laws and the patronage of public authority." For Rome, obviously, the United States was not the model for nations or the church to follow.

The final blow came from European rather than American events. Two talks by Americans at the International Catholic Congress in Fribourg (1897) drew European attention. One talk, by Denis O'Connell, who recently had been forced to resign as rector of the American College in Rome, argued in favor of the American system, which emphasized

inalienable, individual rights, in contrast to the Roman Empire, where the arbitrary will of the emperor was law. While not recommending it universally, he claimed it was at odds neither with faith nor with morals.

The second talk, on evolution, by Father John Zahm C.S.C, professor of biology at the University of Notre Dame, also antagonized the conservatives. For many Europeans, these talks proved that the American church was overrun with heresy and infidelity.

This was solidified with the appearance of the French edition of Walter Elliott's biography of ISAAC HECKER. Hecker's belief in democracy was too much for the French Catholics, who equated Catholicism with monarchy, and the book's preface by the liberal Abbé Felix Klein did much to tar it with the brush of European progressivism.

America's rapid defeat of Catholic Spain in the Spanish-American War, along with the near-universal support for the American cause by the Catholic hierarchy—Bishop JOHN SPALDING being the lone exception—conclusively demonstrated to the conservatives ascendant in Rome that Americanism was a danger to the Roman Catholic Church.

The Vatican's response to this danger was the encyclical *Testem Benevolentiae* (January 22, 1899), which explicitly condemned Americanism by name. Stating that the pope had heard that there were those in the American church who believed that the Roman Church should alter its essentials in order to adapt to the modern world and incorporate greater democracy in its structure, the letter condemned these doctrines and warned the bishops against them.

Responding for the bishops, Cardinal Gibbons assured the pope that no one among them held such views and affirmed the orthodoxy of all the bishops. The resulting fear that any new ideas would be labeled heretical led to a half century of cultural and intellectual isolation in the American church.

American Missionary Association The American Missionary Association (AMA) was the most prominent of the northern religious agencies that worked among African Americans following the CIVIL WAR. Formed in 1846 to protest the alleged complicity of the American Home Missionary Society with southern slaveholders, the AMA advocated abolitionist (see ABOLITIONISM) ideas and enabled New England Protestants to use the Christian Gospel as a weapon against slavery.

As the Civil War neared its end and the defeat of the Confederacy appeared inevitable, many northern Christians viewed the South as a vast missionary field, where the religious and political ideals they cherished might be planted for the first time. The leadership of the AMA believed that the legal emancipation of blacks should be merely a prelude to their social and educational emancipation. By 1865, more than 250 teachers and preachers employed by the AMA were at work throughout the southern states. They participated in the "ecclesiastical and Christian reconstruction" of the South—an action parallel to political Reconstruction. Hampton Normal and Agricultural Institute in Virginia, where the African-American leader BOOKER T. WASHINGTON studied, was one of several black colleges staffed and funded by the AMA during Reconstruction. Other prominent

schools opened by the AMA for African Americans included Atlanta University (1865), Fisk University in Nashville (1865), and Howard University in Washington, D.C. (1867).

After the abandonment of missionary work in the South when the Reconstruction era ended, the AMA turned its attention principally to home missions work with Native Americans. It published a monthly journal, *American Missionary*, and employed agents not only in the United States and Canada but also overseas. In the 20th century, the AMA lost its separate identity and was subsumed into the home missions department of what is now the UNITED CHURCH OF CHRIST.

American Revolution/Revolutionary War Americans drew upon religion to serve a number of tasks during the Revolutionary War (1775–83). In the process, they established a pattern for interpreting military conflict prominent throughout much of American history. Religion shaped the yearning for revolution and the language by which revolutionary hopes were expressed. In addition, church pulpits provided a ready forum for articulating revolutionary support or oppo-

sition. Many Americans also understood the Revolution itself, which drew upon the powerful themes of new birth and freedom from bondage, as a form of religious experience. Finally, the Revolution greatly influenced the development of American CIVIL RELIGION, as continuing generations have looked to their revolutionary birth as a source of national identity and purpose.

The yearning for revolution emerged out of two mainstreams of thought regarding social and political order: PURITANISM and the ENLIGHTENMENT views of liberals like John Locke and radical Whigs, who often combined Protestant dissent with republican political theory. Colonial Americans had come to think right political order was ordained by God, which allowed for the formation of critical views of political power: Power could be unjust. In the Calvinist (see CALVINISM) tradition prominent in 17th-century England, humans were not obligated to suffer unjust authority, but rather were capable of modifying existing institutions to make them accord more with the divine will.

The years prior to the Revolution were marked by dramatic events that many Americans regarded as signs of the imminent end of the world. The widespread religious revivals of the GREAT AWAKENING, a series of portentous earthquakes shaking the country in 1755, and the dramatic French and Indian Wars ending in 1763 all encouraged Americans to draw upon millennial language in order to understand their times and political conditions. While Puritans had often seen the Church of England (see ANGLICANISM) as the Antichrist depicted in the Bible, such language became explicitly political in 1774, when news of the Quebec Act, granting toleration to Catholicism in Canada, persuaded many colonists that the British Crown itself was an agent of Satan. Increasingly, preachers and popular writers spoke of bondage to the devilish English “tyrant” as damnation, and political liberty itself as salvation.

With the outbreak of armed resistance in 1775, American revolutionists continued to rely upon the Great Awakening (which helped to create a distinctive national consciousness among colonists) as a pattern for understanding their experience, speaking of the spreading revolutionary fervor in the same ways colonists had referred to the religious zeal of the 1730s and 1740s. A number of public rituals helped maintain the revivalistic climate. Some, such as the unruly processions marking Pope's Day, a traditional anti-Catholic holiday (see ANTI-CATHOLICISM) that provided the model for massive demonstrations against the Stamp Act, carried over from earlier years. In ordering regular days of public fasting and thanksgiving, the Continental Congress continued the old Puritan tradition of viewing the public welfare as attendant upon the repentance of sin. FREEMASONRY, the Enlightenment fraternity of many revolutionary leaders, contributed its own ritual forms, heightening the leaders' bonds of brotherhood through initiation ceremonies. Other rituals emerged out of the revolutionary process itself: civic funeral processions to eulogize the death of Liberty, hanging King George in effigy from the "Liberty Tree," the public reading of THOMAS JEFFERSON'S Declaration of Independence, and the 1778 establishment of July 4th to commemorate the nation's birth of freedom.

Churches, providing colonial Americans with an important gathering place, also mobilized opinion. Denominations naturally differed in their support for the revolt, and as many as one-third of the colonists opposed the war. Loyalists, supporters of the British Crown, were often Anglican, though southern Anglicans, such as George Washington, frequently favored the revolution, and METHODISTS. Presbyterians (see PRESBYTERIANISM), Congregationalists (see CONGREGATIONALISM), and BAPTISTS held the Loyalist position. Such Loyalist Anglican clergy as SAMUEL SEABURY argued that the revolt was bound to substitute mob rule for a divinely sanctioned monar-

chical system that provided great benefits to colonists. Many Anglicans were forced to flee the country.

Opposition to the war also stemmed from pacifist grounds (see PEACE REFORM). MENNONITES, MORAVIANS, and especially Quakers (see FRIENDS, RELIGIOUS SOCIETY OF), who abjured violence as contrary to the Christian faith, were likely to resist paying war taxes and forswear loyalty oaths, for which a number were imprisoned. Some pacifists, such as Quaker Anthony Benezet, spoke publicly against the war and urged other reforms, in particular the abolition of SLAVERY. Neutrality, rather than strict pacifism, gained a public voice from Lutheran leader HENRY MELCHIOR MUHLENBERG.

But if significant numbers of Americans found religious justification to oppose the war, the larger emphasis was on support, which also spread among particular denominations. As one Loyalist wrote, the Revolution was led by "Congregationalists, Presbyterians and Smugglers." And in truth, the inheritors of English Calvinism contributed the most vocal religious support to the war. Countless

The Boston Massacre in 1770 was the first battle in the armed war against England, which was fueled in part by Enlightenment ideals. (Engraving by Paul Revere, Boston Public Library)

clergy, including such luminaries as college presidents John Witherspoon and Ezra Stiles, were influential in spreading patriotic fervor from the pulpit. Perhaps even more important than the support of religious elites, however, was the fact that the basic millennial thrust of the struggle, the forces of God against those of Satan, encouraged a religious populism. This populism continued to affect public life during the SECOND GREAT AWAKENING, even while the political institutions created in the aftermath of revolution sought to erect barriers between the religious and the political.

The millennial hopes that inspired the Revolution have retained a significant power throughout American history, providing subsequent generations with the means for patterning public life and criticizing the failures of American society to uphold its ideals, even when shorn from their traditional Christian roots. In addition, the confluence of revolution and revival had a dramatic impact on the country's development during the Second Great Awakening, by elevating popular over elite control of religious institutions.

Ames, Edward Scribner (1870–1955)

One of the leading Christian modernists (see MODERNISM [PROTESTANT]) and an influential philosopher of religion, Edward Scribner Ames played a major role in both the academic study of religion and its popular understanding. Born on April 21, 1870, in Eau Claire, Wisconsin, where his father was

a Disciples of Christ minister (see CHRISTIAN CHURCH [DISCIPLES OF CHRIST]), Ames attended Drake University and Yale Divinity School. In 1895, he received the first Ph.D. in philosophy granted by the newly founded University of Chicago. With the exception of three years as professor of philosophy at Butler College, Ames was associated with the University of Chicago until his death on June 29, 1955.

Ames rejected the view that human beings could know God as an objective reality. Knowledge of God's presence, he argued, emerges only from the experience of the positive elements of human existence. The experiences of health, beauty, knowledge, justice, friendship, and hope demonstrate the reality of God. Religion is the human act of striving for improvement or advancement. Salvation, rather than being a supernatural act of God, is the struggle of human beings to realize the soul's natural powers, to actualize the ideal human achievement as seen in Christ. Heaven was the result, on Earth, of participation in that ideal, hell the failure to achieve that ideal. Ames's views left little room for such traditional doctrines as the Virgin birth, the Trinity, life after death, or the reality of miracles.

Despite the apparent radical nature of these views, Ames maintained that they were consistent with the tradition of his denomination, the Disciples of Christ. Ames understood his reinterpretation of Christianity in light of science and modern thought as nothing more than a continuation of the traditional Disciples' struggles against sectarianism and creedalism.

Along with his colleague SHAILER MATHEWS, Ames was one of the most important modernists in American Protestantism. This was due both to the quality of his thought and to the positions he held. A popular philosophical writer, his widely read books contributed to the spread of liberal theology in the United States. As professor of philosophy at the University of Chicago for 35 years (1900–35),

Ames influenced innumerable philosophers and theologians.

Ames's significance was greatest, however, within his denomination. As dean of Disciples Divinity House for 18 years (1927–45), Ames played a major role in the training of future ministers. His positions as minister at Hyde Park (now University) Church (1900–40) and editor of the denominational newspaper *The Scroll* (1925–51) enabled Ames to introduce modernist views within the mainstream of Disciples of Christ thought.

Amish Offshoots of the Mennonite tradition, the Amish are undoubtedly modern America's best-known antimoderns. They live in rural areas rather than cities, farm with horses rather than tractors, dress in simple clothing rather than up-to-date fashions, use biblical High German rather than English in their worship services, and opt for mutual aid for the elderly rather than Social Security. Their Old World style has made them a major attraction for nostalgia-starved Americans touring Amish strongholds such as Lancaster County, Pennsylvania.

Like the MENNONITES and the HUTTERITES, the Amish are products of the Anabaptist movement of the Radical Reformation in 16th-century Europe. But they did not emerge as a distinct Protestant sect until the last decade of the 17th century. In 1693, a Swiss Mennonite preacher from Berne named Jakob Ammann began to criticize fellow Mennonites for compromising their collective vow to withdraw from the corrupt world into a pure

community of visible Christian saints. He called upon his followers to live in accordance with the primitive patterns of the early church instead of the modern examples of European society, urging them to practice foot-washing during the Communion service and to simplify even more than the Mennonites their habits of dress and grooming. His most controversial innovation, however, was the practice of shunning. This practice dictated that community members who had deviated from the group's *Ordnung* ("order") be ostracized by other members, including family members and spouses of offenders.

Ammann attracted Mennonite followers in Switzerland, Holland, Alsace, south Germany, and Russia. In the 1720s, the first Amish immigrated to the United States. Like other German-speaking Anabaptist sectarians, they came largely to escape religious persecution, and they arrived for the most part in Pennsylvania. About 500 Amish immigrated to the United States in the 18th century. Some 3,000 more came by the end of the next century. Despite these meager numbers and their refusal to proselytize, Amish communities prospered. Thanks to high birthrates, low infant mortality, and high retention, there are now roughly 228,000 Amish living in the United States. The vast majority reside in Ohio, Pennsylvania, and Indiana.

The Amish are typically more antiworldly than their Mennonite kin. They eschew buttons as overly decorous, do not use electricity, and do not own telephones or cars. They often meet for worship services in homes rather than meetinghouses, and they have not founded ecclesiastical organizations or institutions of higher learning. Despite their refusal to use modern farming machines such as tractors, the hardworking Amish maintain highly productive farms.

The Amish typically do not vote or enlist in the military, but they do pay taxes. Women are not permitted to work outside the home or to use birth control. The Amish rarely marry

Amish horse-drawn buggy. (AFP/Getty)

outside the faith, and divorce is not allowed. They frown on higher education that is devoid of practical applications. In 1972, they earned the right not to send their children to public schools beyond the elementary level in a landmark Supreme Court case, *Wisconsin v. Yoder*. In American popular culture, the Amish tend to be highly romanticized and idealized, yet in local communities they often are opposed by their non-Amish neighbors. Individual Amish and Amish communities have made appearances in television and the movies, from the sit-com *Barney Miller* to the movie *Witness*. Documentary filmmakers also have been attracted to the Amish, as exemplified by the 2002 film *The Devil's Playground*, which examines the Amish tradition of *Rumspringa*, whereby Amish youth in their late teens are allowed a few years of freedom before decid-

ing whether to accept Amish baptism and the strict social and community control of Amish life. Reality television capitalized on this tradition in 2004 with its program "Amish in the City," installing several Amish and "English" teenagers in a house in the Hollywood Hills and detailing the Amish youths' struggle with new experiences, from sushi to swimming.

Not all views of the Amish are either so positive or lighthearted. The Amish occasionally encounter discrimination and hostility from their neighbors over issues such as the safety of horse-drawn buggies on the highways, waste from horse droppings on public thoroughfares, and farm prices. These conflicts often lead to random violence, particularly "claipping," the act of throwing rocks, bottles, or other objects at the Amish as they ride in their horse-drawn buggies. This sub-

ject also made it into popular culture with the 1988 made-for-TV movie *A Stoning in Fulham County*, based on an incident involving a six-month-old Amish girl who died after being struck by a rock from a passing car.

Like other American sects of German origin, the Amish have experienced schisms between ultraconservative and moderate factions. The most conservative group, the Old Order Amish Mennonite Church, is also the largest. In 2008 it had above 85,000 members. More moderate groups such as the Beachy Amish Mennonite Churches (named after their founder, Moses Beachy), had nearly 10,700 members in 2007 (a total that includes congregants in other countries). These groups have found a place in their congregational order for modern niceties such as automobiles, tractors, electricity, and trimmed beards. And, unlike their more conservative Amish kin, they maintain church buildings, run Sunday schools, and reach out to nonmembers through missions.

Anabaptists Anabaptists, those who “baptize again,” are a group of Christian movements and denominations that emerged during the 16th and 17th centuries from what historians call the Radical Reformation, or the “left wing” of the REFORMATION. In the contemporary United States, the Anabaptist tradition is widely represented by the AMISH, MENNONITES, HUTTERITES, CHURCH OF THE BRETHREN, and Brethren in Christ. Additionally, there are some historians who see the Quakers and cer-

tain historical strands within various Baptist denominations (see BAPTISTS) as having been informed by the Anabaptist tradition.

The Anabaptists’ name comes from their opposition to infant baptism. This opposition is based on the view that only those who can publicly and rationally acknowledge their belief in the saving power of Christ should be baptized. Known as “believer’s baptism,” this view required that all individuals who, when the Anabaptist movements first emerged, be baptized again, since the Catholic Church (see ROMAN CATHOLICISM) and the Reformation churches all insisted on infant baptism.

The prehistory as well as early history of the Anabaptists is essentially contested. Many have claimed that these movements are descendants of a series of Christian groups practicing adult baptism that held themselves separate from Catholic and Orthodox Churches since the time of Jesus’ apostles. Still others have argued that they emerged from a single movement that developed in Zurich, when in January 1521 Conrad Grebel, the leader of a movement known as the Swiss Brethren, rebaptized George Blaurock. Blaurock then proceeded to rebaptize the other followers. Finally, most historians believe that the Anabaptists drew their beliefs from many sources and emerged in several different places in the Swiss cantons, Germany (particularly the Rhineland), and the Netherlands. For these historians, even the most radical of the reformers, such as Thomas Müntzer, who galvanized the German peasants in a 1525 revolt known as the Peasants’ War, ought to be included under the Anabaptist label. This violent revolt, strongly condemned by the reformer Martin Luther, became a generalized rebellion against all forms of authority, driven by an amorphous vision of an idealized Christian community with equality of goods and an end of external law.

Similarly, a group of “radical reformers” eventually under the leadership of Jon Matthes and Jan of Leiden attempted in 1534

to establish a Christian kingdom in the city of Münster in Germany. After expelling the Catholic bishop and taking over the city and the surrounding areas, they imposed a community of goods, legalized polygamy, and planned a war against all the enemies of God. Besieged by numerous of these enemies, including Protestant and Catholic armies, which found a common enemy in the Anabaptists, the reformers were defeated, and the city fell in June 1535. There was a massacre of the inhabitants. The leaders, who were captured alive, were tortured and executed, their bodies then placed in cages that hung from the top of the cathedral. The bones eventually either were removed or fell from the cages, but the cages remain hanging from the cathedral today, the bones replaced with a single light sculpture designed, ostensibly, to show that thought and ideas can never be imprisoned.

The catastrophes created by violent resistance to existing churches and rulers provided the opportunity for the emergence of those who had developed a different view, the so-called nonresistant Anabaptists. These Anabaptists took literally Jesus' injunctions against violence and his claim that his followers should "render unto Caesar what is Caesar's and unto God that which is God's." This movement primarily fell under the leadership of Menno Simons (1496–1561), a Catholic priest, who, convinced of the correctness of Anabaptist beliefs, left the priesthood in 1536 and soon became a leader of the movement, for whom the Mennonites are named.

The most definitive early statement of what became Mennonite belief is the Schleitheim Confession. Although Mennonite and Amish theology has changed somewhat since its writing, it continues to represent the essential theology and religious practice, particularly of the more traditional groups.

The Schleitheim Confession was adopted by a group of Swiss Anabaptists who met in the town of Schleitheim, Switzerland, in February 1527. Those assembled agreed on six

major points, including believer's baptism, banning or shunning (excommunication) of members who do not refrain from sinning after being warned, separation from all non-believers and worldly activities, renunciation of violence, and the forbidding of oaths. These positions have remained central to most Anabaptist churches since that time.

Anabaptists suffered terribly in Europe between the 16th and 17th centuries. These persecutions are detailed in the *Martyr's Mirror* by Thieleman J. van Braght, a book that traditionally held a prominent place in most Anabaptist households and played a dominant role in Anabaptists' self-understanding as a persecuted group.

This persecution led many to emigrate to British North America and later to the United States. While many colonies looked upon these groups with suspicion, they were welcomed by others, particularly in Pennsylvania. The first organized Mennonite immigration to the United States took place in 1683–85. The first Amish families arrived in the 1730s, with increasing numbers in the 1770s. The 19th century saw growing numbers of both groups (as well as other traditions with Anabaptist roots) coming to the United States. These eventually spread throughout the country, with notable pockets of Mennonites and Amish in Pennsylvania, Indiana, Wisconsin, and Iowa. In fact, the Old Order Amish, the denomination most individuals associate with the word *Amish*, exist nowhere other than in the United States and Canada.

ancient Eastern churches The so-called ancient Eastern churches, also known as the Oriental Orthodox churches, “the Lesser Eastern churches,” “the non-Chalcedonian churches,” or “the pre-Chalcedonian churches,” are among the oldest in Christianity, although relative newcomers to the United States. The specific churches included in this group vary somewhat depending on whether one focuses on the historical churches or their current institutional formations. While in communion with each other, each is independent, has its own ecclesiastical hierarchy, and often vary markedly in their practices.

The traditional listings of the churches would include the Armenian Apostolic Church, the Coptic Orthodox Church, the Ethiopian Orthodox Church, and the Syriac Orthodox Church of Antioch. A more modern list would include the Malankara Orthodox Syrian Church (which has its roots in the Thomas Christians of India dating to the 1st century but in its present institutional form from the 20th century) and the Eritrean Orthodox Church that formally separated from the Ethiopian Church in 1993.

All these churches came into existence due to their rejection of the decisions of the Council of Chalcedon (451). The Council of Chalcedon responded to the questions presented by the Council of Nicaea’s proclamation of the dual nature of Jesus as the Christ. At Nicaea, the council had determined that there were two natures, wholly human and wholly divine. It did not, however, elaborate on the relationship between these natures. At Chalcedon, the council proclaimed that Christ was one person with two natures, undivided and unconfused, or in the words of the council itself, Christ has “two natures which undergo no confusion, no change, no division, no separation; at no point was the difference

between the natures taken away through the union, but rather the property of both natures is preserved and comes together into a single person and a single subsistent being; he is not parted or divided into two persons, but is one and the same . . .”

For many at the council, as well as for most of the Christians in the Byzantine Empire at the time, the claim that Christ had two natures created a duality within him and compromised his unity. These church leaders and theologians believed that Chalcedon slighted Christ’s divine nature and missed a key element of salvation. For them, the divine nature of Christ is what made salvation possible. They rejected the decisions of Chalcedon and eventually proceeded to establish churches independent of both the Roman Church and the Orthodox Church.

Because they denied Chalcedon’s definition of two natures in Christ, these Christians historically have been called “monophysites,” from the Greek word meaning “one nature.” This has been a source of conflict between these churches and the Orthodox and Roman Catholic Churches over the centuries. Beginning in the second half of the 20th century, conversations among the representatives of these churches, driven in part by the ECUMENICAL MOVEMENT and VATICAN COUNSEL II, have served to clarify the differences, making them seem somewhat less absolute. Historically, few individuals within the ancient Eastern churches adhered to the classical monophysite position of Eutyches, whose teachings led to the calling of the Council of Chalcedon and who held that Christ’s humanity was absorbed completely into his single divine nature. The theologians of these churches preferred the formula of St. Cyril of Alexandria, who spoke of “the one incarnate nature of the Word of God.” Contemporary discussions have decided that the differences are more a matter of emphasis and formulation and not substance, although the historical validity of this conclusion is questionable.

While the ancient Eastern churches have a shared theological lineage, they have distinct histories, practices, and identities. Additionally, they also vary widely in their establishment in the United States.

The Armenian Apostolic Church dates back to the fourth century, when Armenia became the first kingdom to adopt Christianity as its religion following the conversion of King Tiridates III by St. Gregory the Illuminator. A cathedral was soon built in the Armenian city of Etchmiadzin, and to this day that city remains the center of the Armenian Church. Tradition holds that a monk, St. Mesrob, created the Armenian alphabet in 404 and began the translation of the Bible into Armenian. Although no Armenian bishops attended the Council of Chalcedon, an Armenian synod meeting in 506 rejected its decisions, affirming instead their traditional understandings of Christ's nature.

The Armenian Apostolic Church, like the Armenian people, always has found itself compressed between multiple powers, both secular and religious. These have included the Byzantine, Persian, Ottoman, and Russian Empires and the Greek Orthodox, Russian Orthodox, and Roman Catholic Churches, as well as Islam. Throughout this history the church has been a bastion of Armenian nationhood and identity, a fact that became only stronger in the 20th century following the slaughter of thousands of Armenians by the Ottomans between 1915 and 1917 and remembered as the Armenian Genocide.

In the United States, the Armenian Apostolic Church exists in two forms, the Armenian Church of North America, under the direction of the patriarchate in Etchmiadzin, and the Armenian Prelacy of the Armenian Apostolic Church of America. The latter is affiliated with the Catholicosate of Cilicia, which, while owing titular allegiance to the church in Etchmiadzin, has its own administrative and spiritual independence. The Armenian Apostolic Church operates one seminary in the United

States, St. Nersess Seminary in New Rochelle, New York. In 2005, American membership in the Armenian Apostolic Church was 360,000 and the Armenia Apostolic Church of America roughly 20,000.

The Coptic Orthodox Church is the indigenous Christian church of Egypt. Its founding is associated with St. Mark, who, according to tradition, was martyred in Alexandria in 63. Egypt soon became a dominant force in the early church, with Alexandria as one of the major theological centers. Egypt also was the first major center of the Christian monastic tradition, with its roots among the "desert fathers."

The Egyptian Church, its hierarchy, and its people were among the most opposed to the Council of Chalcedon. Part of this opposition was distinctly theological, Alexandria being the center of the theology attacked at Chalcedon. It also was political, an Egyptian rejection of Byzantine power and domination. Attempts by the emperor and the Orthodox hierarchy to force acceptance only increased the resistance. Eventually, there emerged a separate "Coptic" (from the Arabic and Greek word for "Egyptian") Church with a distinctive theological and liturgical tradition and with the patriarch of the Coptic Church residing in the desert monastery of St. Macarius.

Following the Arab invasion in 641, the Copts declined as Islam grew, and by 850 they were a minority in Egypt. Islamic rule was marked by long periods of persecution but also by periods of relative freedom, during which the church flourished and produced outstanding theological and spiritual works in Arabic.

Copts currently are the largest Christian community in the Middle East, although for political reasons there are no firm numbers of how many live in Egypt. The church and its members have been threatened by the rise of Islamic fundamentalism (see ISLAM; WAHHABISM), resulting in a series of Muslim attacks on Coptic Christians throughout Egypt between the 1970s and the 1990s. In

1981, the Coptic patriarch, Pope Shenouda III, was placed under house arrest in one of the desert monasteries, where he remained until 1985. Both governmental interference and physical attacks by Islamic militants have unnerved the Coptic population of Egypt and led to an increase in Coptic emigration, a fact that has contributed to the church's growth in the United States.

In the United States, the Coptic Orthodox Church probably had few, if any, congregations until the 1940s, but with turmoil in Egypt following the revolution in 1952, the immigration of Copts to the United States accelerated. The numbers increase with every episode of political and religious turmoil in Egypt. In 2006, there were roughly 400,000 Copts in the United States and approximately 200 congregations.

Administratively, the Coptic Church has three dioceses in the United States, one for the western United States and one for the South; the remainder of the country is overseen by the bishop and exarch for the Diocese of North America and is based in New Jersey. The church also has two monasteries in the United States.

The Ethiopian Orthodox Church, the largest of the ancient Eastern churches, with roughly 35 million members worldwide, dates from the fourth century, when St. Frumentius converted the son of the Ethiopian emperor. This son, upon becoming Emperor Ezana, made Christianity the state religion in 330. Frumentius later was ordained a bishop in Alexandria (Egypt) by Athanasius and returned to Ethiopia to continue his work. The Ethiopian Church received its distinctive form beginning in the late fifth century, when the so-called Nine Saints arrived from their respective homelands—Rome, Constantinople, and Syria. All had left because of their opposition to the Council of Chalcedon. The Nine Saints played a major role in the church's development. Tradition credits them with eliminating the remnants of paganism in Ethiopia

and with introducing the monastic tradition. They also were responsible for translating the Bible and other religious works into Ge'ez. Given its location and its historical connections, the Ethiopian Church always has been closely affiliated with the Coptic Church, and the Ethiopian Church's ritual and liturgy are deeply influenced by Coptic traditions, with some Syriac influences. In fact, until 1929, all Ethiopian Church bishops were Egyptian Copts. The church achieved full independence from the Coptic Church in 1959 with the installation of the first patriarch of the Ethiopian Orthodox Church.

The Ethiopian Orthodox church in the United States numbers roughly 70,000 members. Its relationship to the church in Ethiopia has been difficult, owing mainly to conflicts over the legitimacy of one of the church's patriarch's elected during the period of Communist rule and his later "resignation" following the overthrow of the Communist regime.

The Eritrean Orthodox Church is the youngest of the ancient Eastern churches but shares the history, lineage, and ritual of the Ethiopian Church. Following Eritrea's independence from Ethiopia, negotiations began to grant the church in Eritrea autocephalous (self-headed) status. Representatives of the Ethiopian Church and the church in Eritrea reached an agreement on this in 1993, and the first bishops of the Eritrean Orthodox Church were ordained the following year. In 1998, the first patriarch of the Eritrean Orthodox Church was installed in Cairo by Pope Shenouda III of the Coptic Church. In the United States, the Eritrean Church has fewer than 20,000 members and in 2005 was supervised by an ethnic Eritrean bishop who was a member of the Coptic Holy Synod.

The Syriac Orthodox Church of Antioch traces its origins to the early Christian community at Antioch. This community, expressly mentioned in the biblical book Acts of the Apostles, was well established by 70. The Antiochian Church, like that of Alexandria,

was one of the great centers of early Christianity. The rulings of the Council of Chalcedon split the community, and while Byzantine officials attempted to enforce Chalcedon's teachings, they were fairly unsuccessful in doing so outside the cities.

This opposition to Chalcedon was aggressively fostered in the sixth century by the bishop of Edessa, Jacob Baradai. In order to support those who rejected Chalcedon and to increase the pressure on Byzantine authorities, Bishop Jacob ordained large numbers of non-Chalcedonian bishops and priests. Because of his work, the Syriac Church became known colloquially as the "Jacobite" church. It has its own distinctive liturgy (called "West Syrian" or "Antiochian") and worship traditions and uses the ancient Syriac language, a version of Aramaic, the language spoken by Jesus.

The conquest of the area by the Persians and later the Arabs ended Byzantine persecution and created conditions favoring development of the Syriac Church. There was a great revival of Syriac Orthodox scholarship in the Middle Ages. At its height, the church included 103 dioceses extending as far as Afghanistan. There is evidence of communities of Syriac Orthodox communities in Turkestan and Xinjiang (Sinkiang), China.

Although the Arab invasion ended Byzantine control, it placed the church under the political domination of Muslims, and pressures, both subtle and not, induced many to convert. Additionally, the Mongol invasion of Timur the Lame (Tamerlane) in the late 1300s saw massive destruction of church property and innumerable deaths. During the 20th century the church also suffered terribly, first under the Ottomans during World War I, when Syriac Christians in eastern Turkey suffered a fate similar to their Armenian sisters and brothers, then with the emergence of authoritarian regimes following the end of French and British colonialism. The civil war in Lebanon and the isolation of the Syrian

regime in Damascus also severely weakened the church.

In the United States, the Syriac Orthodox Church has about 150,000 members. It took on an institutional form as early as 1949 with the creation of the Syriac Orthodox Patriarchal Vicariate for the United States and Canada. The vicariate became an archdiocese in 1957, which in 1995 was further divided into three jurisdictions, two of which are in the United States. These are the Patriarchal Vicariate for the Eastern United States, with 18 parishes, and the Patriarchal Vicariate for the Western United States, with six parishes.

The Malankara Orthodox Syriac Church basically is the Indian version of the Syriac Church. The church traces its lineage to 52 and claims to have been founded by St. Thomas, one of Jesus' apostles, who traveled to Kerala, India, and, according to tradition, baptized thousands and founded churches throughout the subcontinent. These Indian Christians, known as St. Thomas Christians, or occasionally as Malabar Coast Christians, continue today in five distinct churches.

For centuries, many of the St. Thomas Christians were affiliated with the ASSYRIAN CHURCH OF THE EAST. Following the Portuguese colonization of Kerala, they experienced a period of forced latinization as the Portuguese attempted to make them conform to Roman Catholic (see ROMAN CATHOLICISM) doctrine and ritual. Opponents of this process attempted, unsuccessfully, to reestablish communion with the Assyrian Church of the East. In 1665, the Syrian patriarch agreed to send a bishop to head the community on the condition that it accept Syrian Christology and adopt the West Syrian rite. This church would become the modern-day Malankara Syriac Orthodox Church. In 2006, the church had nearly 3 million members in India, with some estimates as high as 8 million. In the United States, the church has about 30 congregations and a membership of 35,000.

The growth of all these churches in the United States attests to the increasing role of immigration in remaking the American religious landscape. With their elaborate rituals and liturgies, their dazzling religious artifacts, and their ancient languages—Coptic, Aramaic, Ge'ez—these churches present a new set of possibilities for religious practice within American Christianity, and many have seen a growing number of American converts.

Anglicanism Anglicanism is the religious tradition that arose out of the REFORMATION of the church in England during the 16th century. The term itself derives from the Latin word *Anglicanus*, meaning “English,” and its use was first popularized in John Jewel’s *Apology for the Anglican Church*, published in 1562. Although the Church of England retained the episcopal (see EPISCOPACY) polity and many of the theological beliefs and customs of medieval Christianity, it became independent of Roman Catholicism in 1534 when Henry VIII repudiated papal control over his kingdom. The EPISCOPAL CHURCH is the chief heir of the Anglican heritage in the United States today.

Unlike Martin Luther, John Calvin, and other early leaders of the Reformation, Henry VIII split with Roman Catholicism more for

personal and political than theological reasons. When Pope Clement VII refused to grant him a divorce from his first wife, Catherine of Aragon, Henry directed Parliament to declare that he, not the pope, was the head of the church in England. Henry’s Act of Supremacy of 1534, however, represented only a constitutional action, and the Church of England continued to affirm Catholic doctrines and worship practices. Only with the accession of Henry’s daughter, Elizabeth I, as queen in 1558 did Anglicanism begin to emerge in its present distinct form. In opposition both to Puritans (see PURITANISM), who desired the Church of England to be more fully Protestant, and to Catholic loyalists, who desired a return to papal supremacy, Anglicans sought what they called a *via media*, or “middle way.” They emphasized the liturgical uniformity that *The Book of Common Prayer* (the first edition appeared in 1549) provided, while relying on the interaction of biblical teaching, religious tradition, and human reason for a highly flexible approach to theological authority.

The English settlers who came to Virginia in 1607 brought Anglicanism to America. During the colonial period in American history, the Church of England was established by law as the official state church in Virginia, Maryland, North and South Carolina, Georgia, and the counties around New York City. Missionaries of the SOCIETY FOR THE PROPAGATION OF THE GOSPEL IN FOREIGN PARTS also helped found Anglican churches amid the hostile religious environment of Puritan New England in the mid-18th century. Because the War for Independence forced many Anglicans to flee the country and eventually led to the abolition of the church’s privileged position in the South, Anglicanism barely survived the AMERICAN REVOLUTION. However, with the organization of the Episcopal Church in 1789, an American denomination was created that was loyal to the Anglican theological tradition and free of British control.

GHS, Jr.

Bibliography: Stephen Neill, *Anglicanism*, 4th ed. (New York: Oxford University Press, 1978); Nancy L. Rhoden, *Revolutionary Anglicanism: The Colonial Church of England Clergy During the American Revolution* (New York: New York University Press, 1999).

Anglo-Catholicism Anglo-Catholics are adherents of the high-church party (those most oriented toward the practices and beliefs of Roman Catholicism) within ANGLICANISM. Anglo-Catholicism traces its roots to the Oxford Movement that arose in the Church of England in the 1830s. The Oxford Movement asserted the independence of the church from the English state and insisted on the importance of the apostolic succession of bishops from Jesus Christ to the present day. The emphasis of the Oxford Movement on piety and holiness of life led, moreover, to liturgical experimentation and to renewed interest in monasticism. By the end of the 19th century, forms of medieval ritualism also began to characterize high-church Anglicanism.

In the American EPISCOPAL CHURCH, interest in the Oxford Movement first appeared in the late 1830s in strongholds of the old high-church tradition, notably in the diocese of New York, where JOHN HENRY HOBART had earlier been bishop. The emergence of Anglo-Catholicism increased the already simmering rivalry between high-church and low-church Episcopalians, as those most comfortable with the dominant Protestant ethos (the low-church party) repeatedly challenged their Catholic-oriented colleagues. This high-church/low-church polarization had a number of ramifications, among them the harassment of three high-church bishops (Benjamin Tredwell Onderdonk of New York; his brother, Henry Ustick Onderdonk of Pennsylvania; and George Washington Doane of New Jersey) on morals charges. No less sensational was the conversion of Levi Silliman Ives, the Episcopal bishop of North Carolina, to Roman Catholicism in 1852.

Despite gaining grudging acceptance in the Episcopal Church over the course of the 19th century, Anglo-Catholicism has never been far from controversy. Because of the interest of high-church Anglicans in seeking organic unity with the Roman Catholic Church, the ordination of women to the Episcopal priesthood in the 1970s (an action officially unacceptable to Roman Catholicism) again strained relationships between Episcopalians. A significant number of Anglo-Catholics formed an organization known as the Episcopal Synod of America in 1989. The synod sought to preserve the tradition of an all-male ministry by continuing opposition to the ordination of women as priests and bishops.

Although it remains a minority position within the Episcopal Church, Anglo-Catholicism, through the richness of its rituals in worship and its commitment to ancient understandings of Christian belief, still influences American church life today. Its geographic strength lies principally in the upper Midwest, as well as in many urban areas and academic communities.

anti-Catholicism Anti-Catholicism arrived in North America with the first British settlers. Part of the British colonial project was the creation of a Protestant bulwark against French and Spanish Catholics on the continent (see ROMAN CATHOLICISM). In the course of America's history, anti-Catholicism ebbed and flowed until the election of John Kennedy as president in 1960 brought an end to socially acceptable and overt anti-Catholicism.

The first English colonists in North America brought with them the anti-Catholicism

that was part of the political and social environment in England. They quickly began to enact into colonial law the anti-Catholic statutes of their homeland.

Among no group of colonists was anti-Catholic sentiment more complete than the group of Puritans (see PURITANISM) who founded the MASSACHUSETTS BAY COLONY. For them, anti-Catholicism was a mission. Their goal was to purify the Church of England of its remaining “popish” elements. In Massachusetts Bay, public performance of the Mass was outlawed. Priests and Jesuits found in the colony were banished. For those who dared return, the penalty was death. Most other colonies placed similar limits on Catholics, denying them the right to vote or to hold public office. New Jersey limited Catholics’ right to any state office until 1844, and New Hampshire until 1876.

During the AMERICAN REVOLUTION, anti-Catholicism weakened somewhat due to American Catholic support for the Revolution and the military and the economic assistance of Catholic France. This tolerance continued into the postwar period. The new U.S. Constitution prohibited any religious test for national political office. Despite this newfound tolerance, suspicions of Catholicism based on political and social reasons did not disappear. Few feared native American Catholics, whose spiritual leader, Bishop JOHN CARROLL was as committed to the republic as to his faith. The fear was of foreign Catholic immigrants who, raised among princes and prelates, came to the new country with no knowledge of republican government or independent thought. Many argued that such immigration must be ended to avoid the destruction of the republic.

The immigrants to whom the anti-Catholics of the 1830s objected were the Irish (see NATIVISM). By that decade, the development of what has been called the “Protestant Empire” in America had begun. Into this land of “pure” religion and republican virtue poured a seem-

This cartoon of Pope Pius IX crumbling the Constitution captured the fears of American Protestants at the height of Irish immigration in the mid-19th century. (Library of Congress)

ingly vulgar, superstitious “horde” from Ireland. To counter this influx, there appeared many popular newspapers and journals whose purpose was “to inculcate Gospel doctrines against Romish corruptions. . . .” Among these were the mildly named *Protestant* and the more explicit *Anti-Romanist*, *Priestcraft Unmasked*, and *Priestcraft Exposed*. Public lectures and meetings on such topics as “Is Popery Compatible with Civil Liberty?” drew large and enthusiastic crowds.

The anti-Catholicism of the 1830s was strengthened by three key events. The first was the publication of LYMAN BEECHER's *Plea for the West*. In this pamphlet, he called for an organized attempt to convert the Mississippi Valley region to Protestantism to prevent a papal conspiracy designed to conquer the region for the Catholic Church. The second event was the burning of the Ursuline convent in Charlestown, Massachusetts. A mob, spurred by rumors of immoral convent activities and inflammatory sermons by Protestant ministers, including the visiting Lyman Beecher, attacked the town's Irish quarter, sacking and burning the Ursuline convent and its girls school.

The 1830s also saw the beginning of an indigenous anticonvent literature; previous examples had been brought from England or the Continent. The 1835 publication of Rebecca Reed's rather tame *Six Months in a Convent* was followed by the salacious *Awful Disclosures of Maria Monk* in 1836. The latter, a repetition of every centuries-old rumor of sex, sadism, and murdered babies behind convent walls, provided fuel for nativist fires and fanned the flames dampened by the shock at the destruction of the Ursuline convent.

Despite the virulence of 1830s anti-Catholicism, the movement did not receive an organized form until the 1841 founding of the American Republican Party on an anti-Catholic, anti-immigrant basis. Although dead as a political organization by 1846, it had a major impact in the intervening five years. In Philadelphia, a series of marches by the party in May and July 1844 resulted in pitched battles between "native Americans" and Irish Catholics. Churches and homes were burned. More than 30 people were killed, and hundreds were wounded. Gunfire and artillery duels rocked the city, and martial law was imposed. In New York City, similar anti-Catholic agitation by the party brought the threat from Archbishop John Hughes that "If a single Catholic Church is burned [here]," the entire city will be torched.

The famine in Ireland between 1845 and 1851 and the resulting increase in immigration gave birth to the next major wave of anti-Catholicism. The influx of immigrants generated anti-Catholic and anti-immigrant feelings. Charles B. Allen founded the Organization of the Star Spangled Banner in 1849 to address such concerns. Reorganized by James W. Barker in 1852, the organization became the leading nativist and anti-Catholic organization in the country. All members pledged never to vote for a foreign-born or Catholic candidate. Wealthier and more powerful members of a community worked for the removal of aliens and Catholics from positions of authority and to deny them jobs and public office.

Dedicated to secrecy, the organization was dubbed the "Know Nothings." By 1854, the political branch of the movement, the American Party, dominated state politics in Massachusetts and New York. But the chaos of American politics during the antebellum period attracted voters as much as opposition to foreigners and Catholics. Following the 1856 presidential election, the American Party, unable to deal with the issues of slavery and union, found anti-Catholicism an insufficient unifying issue and disbanded.

While the CIVIL WAR gave Americans more immediate concerns than fear of a Catholic takeover, it provided other reasons for anti-Catholicism. Traditional Irish Catholic support for the Democratic Party, Pope Pius IX's rumored support for the Confederacy, and the silence of the bishops on slavery made Catholicism suspect to the Republicans. The Democratic Party was tarred as the "Party of Rum, Romanism, and Rebellion." While this slogan cost Republicans the presidency in 1886, it served them well as a vote-getting appeal until 1932.

Increasing immigration after the Civil War along with attendant poverty, urban corruption, and rising crime gave birth to a renewed assault on immigrants in general and Catho-

lics in particular. Attempts to “clean up” urban politics included attacks on Catholics, whose religious views were seen to make them susceptible to manipulation and corruption. The American Protective Association (APA), formed by Henry Bowers in Clinton, Iowa, in 1887 to work for clean city government, exemplifies this movement. Members pledged never to vote for, hire, or strike with a Catholic. In 1893, William J. H. Traynor replaced Bowers as president, and, by blaming the depression of 1893 on the Catholics, he turned the APA into a mass movement. The APA was moderately successful and found a niche within the Republican Party. But in 1896, divided over William McKinley’s presidential candidacy and weakened by the arrest of the national paper’s editor for selling salacious literature (the convent literature again), the APA collapsed like its predecessors.

The collapse of the APA did not, however, end either anti-Catholicism or nativism. The waves of immigrants arriving in the United States, the fear of political radicalism following WORLD WAR I, and the rise of “scientific racism”—the notion that certain races were biologically superior to others—only strengthened the movement.

These elements became fused in a revived KU KLUX KLAN. Reorganized in 1915, the Klan grew slowly until the 1920s, when it burgeoned. By 1923, its membership was nearly 3 million. The new Klan opposed radicals, immigrants, Jews, and Catholics. In 1924, its opposition helped deny the Democratic presidential nomination to Al Smith, a Catholic. The eventual nominee, John W. Davis, repudiated the Klan, but the election was a foregone conclusion as Calvin Coolidge swept to a landslide victory. By 1928, the Klan was a shell of its former self, destroyed by the convictions of many leaders for murder, fraud, and corruption.

In 1928, Al Smith became the first Roman Catholic nominated for the nation’s highest

political office by a major party. Smith entered the campaign with much against him. That he was from New York and opposed Prohibition were as significant in his defeat as his Catholicism. His religion, however, did play a part. During the campaign, the liberal *Christian Century* claimed that Smith represented an “alien culture,” “an undemocratic hierarchy,” and a “foreign potentate.” Smith went down in defeat. Although he carried fewer states than Davis had in 1924, his popular vote was greater, and, despite his Catholicism, he maintained the Democratic hold on the deep South.

The defeat of Al Smith was the last gasp for organized anti-Catholicism in the United States. While organizations such as Protestants and Other Americans United for Separation of Church and State continued to look suspiciously at the Catholic Church over issues of church-state separation, anti-Catholicism decreased from the 1930s on. This was due to, among other factors, the assimilation of the earlier immigrants, WORLD WAR II, and the Roman Catholic Church’s outspoken anti-communism. In 1955, Will Herberg wrote *Protestant, Catholic, Jew*, arguing that these were America’s three faiths and that to the populace at large it did not matter which of the three one believed, just that one did.

The election of John F. Kennedy as president in 1960 finally ended anti-Catholicism as a movement with any respectability. While his religion was an issue and did cost him votes, Kennedy met the religious issue straightforwardly. He opposed federal aid to parochial schools and proclaimed his commitment to the separation of church and state. Kennedy’s presidency eased suspicions of Catholicism among average Protestants. These fears were further reduced by the radical transformations in the Roman Catholic Church following VATICAN COUNCIL II. By 1990, Catholicism had become part of mainstream American religion and American life. The magnitude of

this transformation is illustrated by the fact that between 1964 and 1988, five vice presidential nominees were Roman Catholic. At no time was the issue of religion ever raised against their candidacies. By 2000, the merest hint of anti-Catholicism could prove politically damaging. When George W. Bush, the leading Republican presidential candidate, spoke at Bob Jones University, he came under a storm of criticism, since the school views Catholicism as a dangerous cult. The controversy contributed to his defeat in the Michigan primary the following week and forced him to issue a public apology, acknowledging that he should have used his speech as an opportunity to condemn religious hostility and division.

On the other hand, there remains some truth to Father Andrew Greeley's quip that "anti-Catholicism is the anti-Semitism of the educated class." Opposition to the church's policies on abortion, homosexuality, and women's ordination manifested itself in forms bordering on the anti-Catholicism of the 19th century, with the disruption of services and disparagement of the church and its leaders. Additionally, the failure of the church aggressively to address the problem of the sexual abuse of children by priests also presented an occasion for many to attack the church as a whole, rather than its failures on this issue. This, however, has remained a fringe movement among small activist groups, and widespread manifestations of anti-Catholicism in the United States had become almost nonexistent by the end of the 20th century.

anticommunism See COMMUNISM.

anticult movement The term *anticult movement* refers to the organized opposition to a number of NEW RELIGIOUS MOVEMENTS active during recent decades.

America's long history of religious ferment has given rise to a wide variety of movements. Whether indigenous (such as Mormonism [see CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS]) or imported (see ROMAN CATHOLICISM), the spread of non-Protestant religions often challenged the existing social order. Such challenges in turn generated considerable hostility from those within the social mainstream. Consequently, a long history of religious persecution accompanied the growth of new American religions (see NATIVISM). Well into the 20th century, Mormons and JEHOVAH'S WITNESSES were subjected to the legislative harassment, inflammatory propaganda, and violence that originally greeted Catholic immigrants (see ANTI-CATHOLICISM). While religious PLURALISM has become a more accepted feature of the American cultural landscape during recent decades, voices echoing the themes of Protestant nativism have continued to see America's health threatened by the spread of new religious movements.

During the most recent spurt of religious creativity, growing out of the religious idealism of the COUNTERCULTURE, a number of groups emerged outside the lines of more traditional denominations. Many of these new movements, such as the INTERNATIONAL SOCIETY OF KRISHNA CONSCIOUSNESS and TRANSCENDENTAL MEDITATION, drew upon some form of Asian mysticism. Others, such as SCI-

ENTOLOGY, reinterpreted popular psychology. Many, including the JESUS MOVEMENT, were indigenous; but some, such as the UNIFICATION CHURCH, migrated from abroad, particularly Asia.

Social scientists disagree about the features constituting "cults," as well as the nature of their impact on society. Some refuse to use the term, claiming it is irredeemably polemic. Sociologists, anthropologists, and historians of religion often stressed commonalities between cults and more socially acceptable religious groups. By contrast, a number of psychologists viewed cult members as mentally unhealthy. Responding to the social turmoil of the 1960s (see VIETNAM WAR; CIVIL RIGHTS MOVEMENT), many Americans greeted the proliferation of new religions with fear and anxiety, particularly family members of the mostly young people who joined the movements and assorted churches. These two groups of opponents developed distinct approaches to dealing with cults.

Families of cult members began organizing local and regional groups in the early 1970s to provide each other with information and support as they dealt with the dissonance of values created by their children's participation in unconventional religious movements. By the late 1970s, these groups had coalesced into national organizations, such as the Massachusetts-based American Family Foundation, Inc., which were capable of exerting political pressure in a number of states to secure official investigations of cults and legislation to control the spread of "pseudo-religious" movements. Family groups were sometimes aided by "deprogrammers," such as Ted Patrick, coauthor of *Let Our Children Go!* (1976), who used blatantly illegal means, including kidnapping and prolonged restraint, to remove individuals from religious groups, claiming that the religious groups were "brainwashing" their converts. The deprogrammers contended that the only possible explanation for the conversion of

largely upper-middle-class youths to new ascetic movements lay in the coercive "mind-control" techniques developed by charismatic leaders. By invoking the supposed success of brainwashing practiced by North Koreans on American prisoners during the Korean War, deprogrammers and mental health professionals gave scientific, medical legitimacy to the fears of parents.

By contrast, more socially accepted denominations, particularly Protestant evangelicals (see EVANGELICALISM) and various Jewish groups, sought to combat the influence of new religions on a theological level. A large literature, produced both by evangelical and Jewish groups concerned over membership loss and by independents such as the Berkeley-based Spiritual Counterfeits Project, emphasized the threats cults posed to orthodox Christian or Jewish belief. The success of new religious groups was said to stem from the breakdown of social and family values, from the work of Satan, and especially from the failure of the churches themselves to spiritually undergird the American public.

While family groups, deprogrammers, and churches worked to foster the public's anticult sentiment, they were ultimately unsuccessful in their legislative goals. Nevertheless, they did create, particularly in the wake of the Jonestown massacre in 1978 (see JONES, JAMES WARREN), a national climate of suspicion regarding new religious movements.

Popular concerns about "cults" intensified when a seven-week standoff between residents of the heavily armed compound of the Branch Davidians near WACO, Texas, and officials of the Bureau of Alcohol, Tobacco and Firearms ended on April 19, 1993, in an inferno that killed self-styled messiah David Koresh and scores of his followers. While critics of Koresh denounced the Branch Davidian leader as a child molester and religious fanatic who, like Jim Jones, engineered a mass murder suicide among his followers in order to fulfill prophecies of an apocalyptic clash

between good and evil, critics of the federal agents, who first launched a failed attack on the compound and later battered it with armored vehicles and tear gas, charged that the tragedy, which left dozens of children dead, could have been averted had cooler heads prevailed. More specifically, the critics claimed that the perception of Koresh's Seventh-Day Adventism-influenced group as a dangerous "cult" created an atmosphere that led to the conflagration.

No such claims can be made about the suicides of the HEAVEN'S GATE followers in 1997. These individuals, who believed that the Hale-Bopp Comet hid a spaceship that would take them to a higher plane, committed suicide to remove themselves from their earthly level and move to a higher plane.

Such high-profile actions by recently emerged religious groups create an atmosphere of concern and fear among friends and relatives of those groups' followers. Even where the likelihood of violent death is minimal or nonexistent, family and friends often feel alienated and separated from those who join such groups. Some of this alienation comes from the new practices and beliefs that individuals adopt, while others may be an intentional act by a group's leaders to remove their followers from "hostile" and "suspicious" outsiders and "evil" influences.

When this separation is accompanied by a secretiveness about an organization's beliefs and practices (and some of these new religious movements are fairly secretive), the fear and concern can reach extremes. This combination of fear and concern, often to which is added a real hostility to the religion itself, has given the anticult movement its impetus, and while real abuses in some new religious movements exacerbate the fear, personal and family concerns along with religious hostility have led to marked excesses within the anticult movement, including kidnapping and coerced "deprogramming."

Antimission Baptists See BAPTISTS.

Antinomian Controversy The Antinomian Controversy experienced by the MASSACHUSETTS BAY COLONY between 1636 and 1637 severely threatened the colony's stability. The controversy stemmed from disagreements over the implications of theological issues involving salvation, human freedom, and human action. These came to the fore due to the activities of ANNE HUTCHINSON and the perception by several of the colony's leaders that she and her followers believed that salvation freed one from obligations to follow the moral and civil law.

Hutchinson had a gifted theological mind and held religious discussions in her home. Originally small, these gatherings soon grew to 60 or 70 people, including both men and women. Like all Puritans, she believed human activity was unable to effect individual salvation. Unlike many of her contemporaries, however, Hutchinson rejected the claim that personal behavior was a clue to the presence of grace within a person, the doctrine of preparation. Hutchinson also had a strong sense of the Holy Spirit acting within the saved person. This was so strong that she seemed to imply that such an individual had an immediate knowledge of the will of God. This view threatened the Puritan belief in the Bible as the ultimate source of religious knowledge.

These ideas, or more precisely the application of these ideas, endangered the colony. To a great extent, the ideas themselves were within the acceptable range of Puritan theology. But the "antinomians" added the claim that they could recognize who was under the "covenant of grace" and attacked most of the colony's ministers. This challenged the ordered society the Puritans were attempting to create.

The conflicts were not limited to the theological and political. Hutchinson's position as a woman undermined the accepted idea of male dominance and power. The conflict also pitted Boston, where Hutchinson lived, against the rest of the colony. The antinomians' strength, while limited to Boston, was great there and included the colony's governor, Henry Vane, and seemingly the influential minister JOHN COTTON.

The existence of the conflict was obvious as early as October 1636, when some members of the Boston church recommended calling Hutchinson's brother-in-law, John Wheelwright, as a third minister. JOHN WINTHROP—already suspicious of the individuals involved—was able to prevent this, although it took the greater part of his skill and prestige. In consolation, Wheelwright was placed in charge of a new church in Wollaston, 10 miles outside of Boston. This compromise did not end the conflict, and tensions increased through the winter. A ministerial interrogation of Hutchinson in December accomplished nothing except to divide the parties further. By January 1637, hostilities had reached such proportions that the General Court ordered a day of fasting and prayer to mourn the division.

John Wheelwright took advantage of his fast-day sermon to attack his opponents. He criticized those who argued that sanctification (godly behavior) was proof of justification and claimed that the righteous would have to strike them down: "kill them with the word of the lord." Despite its figurative nature, this language smacked of rebellion, and in March

the General Court convicted him of sedition, postponing sentencing until its next meeting, which also was to be the occasion for elections to the court.

Many objected to Wheelwright's conviction and petitioned the General Court for a reversal. When the court met on May 17, Governor Henry Vane raised the issue of the petition; others insisted that the election be held first. This created a tumult, and violence was narrowly averted. The election was held, and the antinomians saw their supporters defeated, including Henry Vane, who was replaced as governor by John Winthrop.

The petition was dismissed, Wheelwright's sentencing was again postponed, and the court passed a law forbidding the colony's inhabitants to entertain newcomers for longer than three weeks without permission. This was directed at the antinomians, since rumor had it that many individuals attracted to Hutchinson's views were coming from England.

The antinomians were not the only problem facing the new government. The king, hearing rumors of conflict in the colony, sent commissioners to investigate, hoping to find some reason to repeal the colony's charter. The entire colony united against this outside threat, claiming unity and peace. The outbreak of an Indian war (the Pequot War) also distracted the government. This time, however, the response was anything but unified. The Boston church supplied neither money nor men for the war, further antagonizing the outlying towns.

Not until November 1637 was the situation sufficiently settled for the government to turn its attention to Anne Hutchinson and her supporters. In that month, the General Court moved against those who had signed the petition supporting Wheelwright. Nearly all were disfranchised and disarmed. Hutchinson was banished. This broke the back of the movement, ending this threat to the colony's peace.

The restoration of internal peace led to magnanimity toward the vanquished. The

desire to maintain order and unity had forced the colony's government to act. This same desire allowed the granting of reprieves, as early as 1637, to those who acknowledged their errors and asked forgiveness. In 1639, this was followed by a general amnesty for all "remaining among us, carrying themselves peacefully." As a result, no lingering hostilities remained within the colony, and social harmony was reestablished.

anti-Semitism Anti-Semitism, hostility toward or hatred of Jews, arrived in the New World with the Europeans. CHRISTOPHER COLUMBUS's first voyage to America coincided with the expulsion of the Jews from Spain by King Ferdinand I and Queen Isabella. Columbus, in fact, was forced to depart from a minor Spanish port because Cádiz was overflowing with ships transporting the expelled Jews. Christians lived in tension with the Jews, whom they held responsible for Jesus' crucifixion. Spain's expulsion of the Jews was not unique. England had expelled its Jews in 1290, and France in 1306 and again in 1394.

The Europeans brought these anti-Semitic attitudes to the New World. The Inquisition in NEW SPAIN was as active in hunting down Protestants and Jews as in old Spain. French Louisiana (see NEW FRANCE) forbade the practice of any religion other than Catholicism and specifically disallowed the immigration

of Jews. By 1758, however, Jews had settled permanently in New Orleans with the knowledge of the French governor.

The colonies of British North America also enforced religious uniformity. Although the English colonists were preeminently concerned with outlawing Catholicism, all dissenting religions suffered. Maryland (see MARYLAND [COLONY]), designed as a refuge for Catholics, limited civil rights to those who did not deny the Trinity, effectively excluding Jews, Muslims, and unitarians. Rhode Island, the most tolerant colony, allowed freedom of conscience but denied the vote to Catholics and Jews. Colonies that officially denied civil rights to Jews often bent or ignored the rules. South Carolina bestowed citizenship on Joseph Tobias in 1741, allowing him to delete all references to Christianity when taking the oath of citizenship. In 1658, Maryland tried Jacob Lumbrozo for blasphemy (the only Jew ever tried for that crime in the United States). The case ended with a hung jury, and a few years later Lumbrozo served as a juror, in violation of Maryland law limiting such service to Christians.

The ratification of the U.S. CONSTITUTION in 1788 abolished religious tests for national office. The ratification of the First Amendment in 1791 guaranteed the national government's neutrality in religion. Barriers to equal treatment remained at the state level, however. While most states acted to remove religious tests, some did so slowly. Laws in Maryland and Rhode Island limited the ability of Jews to hold state office until 1826 and 1842, respectively. The North Carolina Constitution barred non-Trinitarians from state office until 1868, although at least one Jew served as a state legislator in violation of the law. No state admitted after the original thirteen ever instituted a religious test for political office.

Unlike ANTI-CATHOLICISM, organized anti-Semitism in the United States as a mass movement has been rare and has never achieved the political acceptability anti-Catholicism

occasionally did. This, however, is not to deny its vicious reality. Anti-Semitism in the United States has been a constant cultural phenomenon that on occasion has burst into violence.

No act of anti-Semitism has attained the notoriety attendant upon the 1915 lynching of Leo Frank in Georgia. Frank, accused of raping and murdering a young factory girl in Atlanta, was convicted in an atmosphere of anti-Semitic hostility and intimidation. Following the commutation of his sentence, a mob dragged him from the state prison farm and hanged him on August 17, 1915. Although class and regional conflicts played a role in the lynching, Frank's Jewishness provided a convenient target for the hostility. Tom Watson, former Populist senator from Georgia, led the chorus against Frank. In his newspaper, *Jeffersonian*, Watson called for an example to be made of Frank and actively encouraged his murder. This event served as a precursor for the growth of anti-Semitism that emerged in the 1920s, including a resurgence of the Ku Klux Klan (see NATIVISM).

More discreet and less violent was the so-called genteel anti-Semitism that developed in the late 1800s and early 1900s. This anti-Semitism led to quotas on Jewish admissions to colleges and universities, halving the Jewish enrollment at Columbia and Harvard. As a result, many hotels, restaurants, and clubs refused service to Jews, and some employers refused to hire Jews, especially for management positions.

A series of anti-Semitic articles published by Henry Ford's newspaper the *Dearborn Independent* strengthened this anti-Semitism. These articles, drawn from the *Protocols of the Elders of Zion*, a spurious document alleging a Jewish conspiracy to dominate the world, claimed that Jews used both capitalism and communism to subvert Christian civilization. Among the many evils allegedly perpetrated by these elders was the fixing of the 1919 World Series.

The late 1960s and early 1970s saw growing anti-Semitism among American blacks. Jews and blacks, political allies against discrimination, began to draw apart due to different sets of interests over many issues. The Six-Day War of 1967 made many Jewish Americans fear for the state of Israel and strengthened their interest in it. At the same time, many African Americans identified their struggle for civil rights as part of a wider movement against European hegemony within the third world. They therefore tended increasingly to support the Palestinians and the Arab states in their conflicts with Israel.

Tensions between Jews and blacks were not eased by candidate Jesse Jackson's 1984 reference to New York City as a "hymie town," nor his association with LOUIS FARRAKHAN, the leader of the NATION OF ISLAM, who once referred to Judaism as a "gutter religion" and maintained contacts with the more extreme Arab leaders, including Muammar Qaddafi, the president of Libya. These conflicts were heightened by differences over the role of quotas in affirmative action placement and the diplomatic-military relationship between Israel and South Africa. In fact, survey research shows that, unlike the populace at large, anti-Semitism among blacks increases with the level of education.

In the United States, anti-Semitism as an active hostility toward Jews has decreased since WORLD WAR II. The horror created by the Nazi destruction of European Jews caused much reflection about anti-Semitism and moved active anti-Semitism into the fringes of American society, where it remained a constant among the small but occasionally violent Ku Klux Klan, neo-Nazis, and the IDENTITY MOVEMENT.

Anti-Semitism has decreased in the United States to the point that more Americans are willing to vote for a Jewish candidate for president than for an evangelical Christian. Other parts of the world have seen a marked growth in anti-Semitism. Through the 1990s, Europe,

particularly France and Russia, saw increasing manifestations of anti-Semitism, including physical attacks on Jews. Additionally, in the Arab world the worst stereotypes of anti-Semitism, including Arab-language versions of the *Protocols of the Elders of Zion*, regularly circulate, even in state run media.

Despite the overall decrease in anti-Semitism in the United States, some vestigial forms remain. Among certain Christians, the belief that Judaism is an insufficient religion remains. There also continues to be a level of cultural anti-Semitism. The English language itself carries this. People often speak of being “jewed down,” a continuation of the traditional anti-Semitic view of Jews as sharp traders. Hypocrisy and self-righteousness are referred to as “pharisaical,” from Jesus’ traditional opponents. Despite these vestiges, however, anti-Semitism has lessened, and the social and political structures of the United States have served to provide a safer haven for Jews than anywhere except perhaps Israel.

apocalypticism See ESCHATOLOGY.

architecture (religious) Religious architecture in the United States runs the gamut from San Xavier del Bac (which H. L. Mencken once described as a building too beautiful to be in America) to storefront *shtiebls* for daily Jewish prayers, from Hindu temples adorned with garlands and statues to the stark Mies van der Rohe–designed chapel on the campus of Illinois Institute of Technology known as the “God box.” This variety reflects America’s religious diversity, attitudes toward the purpose of religious architecture, and the exchange of cultural views. While one rarely would confuse a Protestant church with an Orthodox cathedral, designs and even buildings have changed religious hands. Black Baptist churches thrive in erstwhile synagogues. The oldest mosque in the United States started as a mosque, then became a Pentecostal church, and is now a mosque again. To a great extent, religious architecture reflects American practicality—any suitable place that works is fine. Religious architecture, on the other hand, also can reflect more than a place to meet and worship. It expresses religious beliefs and identity, and it also can express belonging and status. The ability to build and pay for a church, mosque, temple, or synagogue makes a statement about one’s presence in a community in America. Religious architecture can, in many instances, fulfill multiple purposes and does far more than merely provide a place for people to gather and worship. It says things about identity, status, beliefs, and permanence. It also explains why some of the world’s leading architects have designed religious buildings. This article focuses on the interaction between American culture and society and its effect on religious architecture and design and does not intend to describe or explain the structure of religious architecture.

The issue of architectural variety and how it reflects varied understandings of religion and worship can be seen even before the arrival of Europeans on this continent. Religious practices among Native Americans var-

Church at Taos Pueblo near Taos, New Mexico. (Aurora/Getty)

ied widely, as did their religious architecture. Hopi kivas, Natchez Temple Mounds, Iroquois longhouses, and Cheyenne sweat lodges illustrate only a fraction of the variations of religious buildings among the Indian peoples of North America. Some, such as the sweat lodge, were designed for a specific religious ritual. Others, such as the kivas, served as housing for the local gods and meeting places for those who served and worshipped them. Temple mounds served as visible statements of the power and authority of the hierarchical cultures that built them and of the divine or semidivine status of the ruler.

The importance of religious architecture also is reflected in the eagerness with which Europeans who settled in America turned to the construction of places of worship. The Spaniards set the tone as they began to estab-

lish mission churches in their efforts to Christianize the Indian peoples of NEW SPAIN. In California and the southwestern states, many of these missions gave their names to flourishing towns and cities: San Juan de Capistrano, San Diego, Santa Fe, and San Antonio, where the Alamo itself was built as Misi3n San Antonio de Valero. In building these mission churches, the Spanish friars and priests melded Spanish architectural designs and local materials to address real needs. In many instances, the missions not only had to serve as places for performing the Mass but also as fortresses against attacks. The walled courtyards, thick walls, and reinforced doors that mark many of these mission churches reflect the very real need for defense. The oldest extant church building in the United States, San Miguel Mission Church in Santa Fe

(1610), well reflects this combination of Spanish Catholic Christianity, local materials and building styles, and defense.

In NEW FRANCE, the Jesuits missionaries to the Indians often made do with simpler buildings, modeled on Native American styles. Later in the more settled towns, churches based on European models soon rose. In New Orleans, the original Cathedral of Saint Louis the King of France was completed in the 1720s, with its current building completed in 1850. Even the later version reflects the city's French Catholic heritage and French baroque aesthetic. In fact, the English-speaking Catholics actually worshipped in a separate church, St. Patrick's, built in 1833.

The experience of the separation of French and English Catholics in New Orleans reflected a very real problem in the American Catholic Church (see CAHENSLEYISM). While much of the controversy involved language and worship styles, religious architecture often became a source of cultural conflict. German, French, and Italian worship styles and architecture often rooted in the baroque and filled with elaborate ornamentation and relics often conflicted with the more austere architectural forms of Irish Catholics. While separation often came about due to differences in language and worship styles, the variations in architectural styles visibly reflected the difference and separation.

Architecture expressing difference is clearly seen in the majority of Orthodox and Eastern churches in the United States. These churches reflect the cultural traditions of Christianity in Greece, Russia, Egypt, and elsewhere. Onion domes, distinctive crosses, and elaborate iconostases reflect distinctive cultural histories and the sense of religious mystery that is Orthodox Christianity's genius. From the Kodiak Islands in Alaska, where the first Orthodox church in America was built in 1792, to New Kuban, New Jersey, where Cossacks exiled or escaped from the Soviet Union in the 1950s attempted to recreate a Russian village while awaiting their

return, islands of Orthodoxy pocket the United States. Whether Serbs or Macedonians, Romanians or Ukrainians, Greeks or Russians, their churches reflect both the distinctive religious sensibility of Orthodoxy and, usually, the particular national identity of the community. Serbian saints predominate among the icons at St. Sava's Serbian Orthodox Cathedral in Milwaukee, and Russia's imperial history is an integral part of the Cossack church in New Kuban. Even a modern take on Orthodox architecture, such as the Frank Lloyd Wright–designed Annunciation Greek Orthodox Church in Wauwatosa, Wisconsin, cannot escape the smooth, round exteriors and mysterious interiors of Orthodox tradition.

Protestants in the United States also used religious architecture to demonstrate their religious beliefs and a particular aesthetic. The earliest Anglican churches in the United States look like miniature versions of English Gothic churches. St. Luke's Church in Smithfield, Virginia, the oldest Protestant church building in the United States (1632), is a prime example. Like the mission churches of New Spain, it also was designed to serve as a fort if conditions demanded. The Anglican churches in the southern and middle colonies reflected the hope of many colonists (or at least their patrons in England) that settlement would replicate the British parish structure of small villages built around a church and a manor.

In the Puritan colonies of New England, a different form of religious architecture dominated (see PURITANISM). This form was designed to demonstrate clearly the Puritans' rejection of all vestiges of episcopacy and Rome. While few made this as clear as the PILGRIMS, who began building their "meetinghouse" on Christmas Day in order to demonstrate their freedom from popish customs, the Puritan "plain style" immediately communicates that one is not in an Anglican, Catholic, or Orthodox church. Additionally, the interior design facilitated the central component of Puritan, in fact of Protestant, worship in general, the

sermon. For Protestants, the proclamation of the word, rather than the performance of the Mass, constitutes the essence of worship. For that reason, churches are designed to draw one's attention to the preacher, to the individual who delivers the sermon. Distractions, traditionally, are minimized.

Like other religious groups, Protestants also carried with them their cultural heritages, and many Protestant churches remain rooted architecturally in British Gothic. On the other hand, the cultural disconnect resulting from the AMERICAN REVOLUTION opened up new possibilities for Protestant architecture in the United States. Following the Revolution, the fashion for Italianate styles and what would become known as the Federalist style was reflected in much Protestant architecture. Even today, these styles continue to be among the most common choices for Protestant churches.

Decorative motifs in Protestant churches also differ from those in Catholic churches. Other than the four evangelists and perhaps Paul, stained glass windows rarely depict Christian saints but biblical stories or occasionally events within the history of the denomination. Crosses, not crucifixes, adorn the walls.

Other religious immigrants also tended to bring with them their distinctive religious architecture. Buildings constructed as Jewish synagogues in the United States tended to mirror the traditions of the region whence the congregants came and the distinctive demands of Jewish religious practice. The latter statement also must be understood to refer to the variants within the Jewish denominations within the United States.

When the Jewish communities of the 19th and early 20th centuries could build a synagogue, the external designs tended to imitate the forms of the synagogues in the region of Europe from which the immigrants escaped. By the mid-20th century, however, the development of new congregations, the

move to the suburbs, and increasing financial stability provided the opportunity to experiment and expand architectural forms. Temple Emanu-El in New York (1929) presents an early example of this. Based on the form of a basilica and reflecting Byzantine and romanesque elements, the temple gives a sense of solidity and security. It seems to revel in its position in the city and in the country. (The temple in Atlanta, Georgia, reflects a similar attitude.) This is not the building of a despised and persecuted people, but of a proud and accepted segment of American society. Emanu-El also proclaims, architecturally, its grounding in REFORM JUDAISM. The *mehitzah*, the barrier that separates male and female worshippers in Orthodox congregations, is gone. Like most Protestant churches, the focus is on those leading the service and particularly the sermon. This also is different from Orthodox synagogues, where the architecture is more directed to the experience of communal prayers and the ritual obligations of Orthodoxy, including the *mehitzah*. Orthodox synagogues also have other sets of obligations: a kosher kitchen, and the ability to segregate utensils, cookware, and dishes used for meat from those used for dairy products. Additionally, many Orthodox synagogues incorporate a *mikveh*, or ritual bath. This incorporation also generates additional demands on design. Plans must be made to create spaces through which people can enter and leave, dressing rooms, and ways of ensuring privacy.

Despite these differences, there are marked similarities. The *aaron hakodesh*, the holy ark containing the Torah scrolls, invariably holds center place usually (in North America) along the eastern wall, directing prayers toward Jerusalem. The *ner tamid*, the eternal light, hangs over or near the ark, symbolizing God's eternal presence and immanence. Additionally, the decorative motifs in synagogues reflect the stories and experiences of the Jewish tradition. The symbols of the 12 tribes, the burning bush,

and the Jewish star fill synagogues across every denomination.

As mentioned above, small and newly established congregations of all types tend to begin by meeting in loaned or rented quarters. These may be school gymnasiums, houses, or even apartments. Congregations may even meet in other religions' houses of worship. Emerging Jewish congregations have been known to meet in churches (and vice versa), and even Muslim congregations have begun by meeting in synagogues.

Financial constraints often dictate the need to meet in unusual places. Attempts to convert these spaces often generate difficulties, as congregations' specific needs, traffic, and noise conflict with neighborhood demands for peace and quiet. When these congregations are less familiar whether, Pentecostal (see *PENTACOSTALISM*), *SANTERIA*, or Buddhist (see *BUDDHISM*), conflicts often become heightened. Ignorance and fear, along with incipient racial and religious animosities, can hinder the necessary adjustments or expansions. While the *RELIGIOUS LAND USE AND INSTITUTIONALIZED PERSONS ACT* may ease some of the practical results of this animosity, it cannot reach its sources. Many congregations struggle with how to meet their religious needs within the limits of local expectations and demands.

For most congregations, the goal is a dedicated building, ideally one built to meet their specific worship and institutional needs and desires. For many congregations, this goal means that there not only are financial difficulties to be overcome, but also zoning issues and, as mentioned above, resistance from current residents. Additionally, there is the reality that religious institutions invariably are exempt from property taxes, and some may resist the building out of fear of lost revenue. Finally, religious and racial prejudices may increase the difficulties faced by some congregations, particularly when their institutional or religious practices differ markedly from those to which most residents are accustomed.

Buddhist and Hindu temples, mosques, and other less familiar traditions suffer the most (although not exclusively or even universally) from such resistance. Muslim congregations have suffered from a heightened level of suspicion, if not hostility, since September 11, 2001, as people wonder whether the neighborhood mosque will become a source of Muslim extremism and terrorism.

For these congregations, however, building a mosque, temple, or synagogue demonstrates both their permanence and their belonging. A building visibly demonstrates that a religion truly has become part of the landscape of America. It also proves the success of the congregation. This is as true of Muslims and Hindus as it was of Baptists and Methodists when they joined the "big steeple" Episcopal and Presbyterian churches in a city's most prestigious area.

To the extent possible, the building must conform to tradition. A mosque must have a vast open space in which the congregation can pray. There must be a large open and carpeted space so that the worshippers may perform the required prostrations during the daily prayers. The building must be oriented towards Mecca, with a *mihrab*, a special marker or niche, showing the direction of that city. Ideally, it also should contain a *mimbar*, the pulpit from which a religious leader addresses the community, particularly during the Friday afternoon communal prayers.

Buddhist temples also must have the requisites for prayer, meditation, and ritual sacrifices, depending on the form of Buddhism and the cultural tradition. Most temples also have to include a monastery to house monks and, ideally, a place for spiritual retreats. While some Buddhist movements in the United States have intentionally incorporated more Western forms of worship, with worshippers sitting in pews through a set service (see *BUDDHIST CHURCHES OF AMERICA*), others have tried to retain much of their traditional forms of worship as possible. Since so much of this is

culturally bound (Sri Lankan Buddhism varies markedly from Burmese and Japanese forms), there has been little merging and blending of traditions such as one sees in many Hindu temples in the United States. Language also tends to divide these communities. Linguistic and cultural forms tend toward separateness, with the result that the Buddhist temples in the United States usually reflect specific architectural cultures: Chinese, Japanese, Lao, and so forth.

Hindu temples in the United States, while occasionally divided by region, particularly between north and south, typically are better at combining the various communities. Hinduism's tendency toward expansiveness and inclusiveness (although not a universal property of all its variants or practitioners) makes this much easier to accomplish. Still, Hindu temples must maintain the appropriate cultural and religious forms. There must be statues of the gods, and they must be presented in the traditional styles. The temple itself must reflect the ethos of a Hindu temple. The need for traditionalism in religion reflects people's need to feel that they are in a place where what they know as worship takes place.

For Hindu, Buddhist, and Muslim congregations, however, a building also means making adjustments to the realities of American religious life and local realities. In many instances, these realities may hinder building, since the varying countries of origin (for Buddhists and Muslims) or region within India (for Hindus) may mean that a consensus on style cannot be reached. When it can be reached, it often results in a distinctive American form. Unlike in India, where most Hindu temples are dedicated to one deity or to a particular form of worship (see HINDUISM), in the United States temples tend to be much more inclusive, with the goal of bringing most of the local Hindu community together. Other changes may involve adjustments to local sensibilities. While most mosques in the United States retain the minaret (the tall tower beside

a mosque) as a decorative form, for most of them it lacks any function. Muslim congregations typically forgo issuing the public call to prayer from the minaret in order to avoid antagonizing their neighbors.

Mosques and temples have made architectural adjustments to American realities in other ways. As Protestant churches did in the late 19th century and Catholics and Jews in the 20th, Muslim, Buddhist, and Hindu congregations have turned their places of worship into community centers. They are community gathering places as well as locations for religious education and often language instruction. Classrooms, kitchens, meeting rooms, and a social hall are needed and ideally will be included in the design for a new building. Finally, that most American requirement must be met: The building must have a parking lot.

Arminianism Arminianism is named for Jacobus Arminius, a Dutch theologian of the early 17th century, who modified the teachings of John Calvin (see CALVINISM) in order to affirm that human beings were actively

involved in the process of attaining salvation. Unlike Calvinism, which taught that God's elect (see **ELECTION**) are saved without regard to their own actions, Arminian theology stressed that salvation is a matter of choice. Arminianism appealed to the American desire for self-determination and became critical in the development of Protestant thought in the United States, especially within the revival-oriented **WESLEYAN TRADITION**.

James Harmens (in Latin, Jacobus Arminius) was born in Holland in 1560 and received part of his theological education in Calvin's Geneva. Although still a convinced Calvinist when he was called to minister in Amsterdam in 1587, Arminius gradually came to doubt the "high" Calvinist view on predestination: the belief that, from eternity, God has arbitrarily chosen to save some human beings and damn others. Arminius was formally charged with heresy but acquitted in 1603.

Controversy arose again, however, after Arminius's death, when a group of Dutch clergy became advocates of his views, setting forth their doctrines in the Remonstrance of 1610. Reacting against the deterministic logic of Calvinism, the Remonstrants argued that God foreknew, but did not foreordain, who would be saved and who would be damned. God, they said, gives all people the grace to accept eternal salvation. Orthodox Calvinists vigorously reacted against the Remonstrants' position and upheld God's absolute sovereignty over the fate of men and women. Assembled at the Synod of Dort in April 1619, the Dutch Reformed Church officially condemned Arminianism and asserted that human beings are wholly sinful and entirely incapable of saving themselves.

After Dort, many Arminians were banished from Holland, and Arminianism was not granted toleration there until 1795. In England, however, where those beliefs found acceptance as a liberalized version of Calvinist theology, Arminianism continued to be influential throughout the 17th century. While the

distinguishing mark of strict Calvinists was their emphasis on divine, not human, initiative in spiritual matters, Arminians stressed the need for piety and moral effort in living a Christian life.

By the mid-18th century in America, Arminianism became the principal theological force impelling two new religious movements that diverged from Calvinist orthodoxy. In its more liberal form, Arminianism influenced the development of Unitarianism (see **UNITARIAN CONTROVERSY**) out of the Congregational churches of New England. Congregational clergy **CHARLES CHAUNCY** and **JONATHAN MAYHEW** of Boston, for example, insisted that God was benevolent and had given Christians the ability to improve themselves morally and spiritually. A theologically conservative version of Arminianism also inspired the heartfelt piety of Methodist founder John Wesley. Wesley taught that Christians should strive for personal conversion and seek to lead lives of visible holiness.

As Arminianism found expression within Protestant **EVANGELICALISM** in the 19th century, its impact upon American religion proved to be tremendous. The Methodists quickly became the largest Protestant denomination in the United States. Arminianism, moreover, dominated the revivals of the **SECOND GREAT AWAKENING**, in which Methodist, Baptist, and even Presbyterian evangelists exhorted sinners to abandon evil and come to God. Consistent with the self-reliant spirit of the early republic, revival leaders assumed that individuals had the innate ability to reform themselves and attain moral perfection (see **PERFECTIONISM**) in the present life.

Ásatrú (Odinism) Ásatrú, or Odinism, is one of the forms of neopagan religions (see NEOPAGANISM) that reemerged or were revived in the United States (and elsewhere) during the second half of the 20th century. It also goes by the names of *heathenism* and *Wotanism*. Ásatrú is an Old Icelandic word that believers usually translate as “faith” or “those true to the gods.” They claim adherence to the Norse (or northern European more generally) pagan traditions. Initially revitalized in Iceland during the late 1960s and early 1970s, Ásatrú was recognized as an official religion by the governments of Iceland in 1973, Norway in 1994, and Denmark in 2003. In the United States, several Ásatrú organizations were granted nonprofit status under the category of religious groups as early as the 1970s.

Ásatrú and related groups emphasize that the religion is nothing more (or less) than the folk religion of the northern European (particularly the Germanic) peoples. As such, they claim, it deserves the same level of respect and appreciation as traditional Native American or African religions. To them, their indigenous tradition is one that was nearly destroyed by the Christianization of the Germanic tribes and of the Norse peoples. Since the most complete knowledge of this indigenous, northern European religion comes from the Norse traditions (Iceland did not begin to undergo the process of Christianization until the 11th century), most practitioners of the religion use Norse words for the gods and goddesses and derive much of their practices and stories from the Norse versions as well.

The gods venerated or worshiped by followers of Ásatrú are thus the ones known by many from Norse mythology. Odin, Frigga, Thor, Freya, and Tyr are only a few of these gods. While many practitioners of Ásatrú emphasize the freedom and vibrancy that they believe to be hallmarks of the tradition, Ásatrú comes to the modern world bound by the dark theology of the Norse myths. World stability is only temporary and, along with the

gods themselves, eventually will be destroyed at the great event of Ragnarok (doom of the gods, *Gotterdammerung*).

For many, Ragnarok epitomizes the pessimistic and gloomy side of Norse mythology. All the gods know the battle will end with the destruction of all worlds and their personal deaths. They even know the day and the hour, yet despite this knowledge they will appear for the battle in their appointed roles. While most Asatruar (the word practitioners use to refer to themselves) tend to minimize this aspect of the tradition, they recognize its reality. As the Ásatrú Folk Assembly (AFF) states in its declaration of purpose, they acknowledge “the eternal struggle and strife of life, the welcoming of that strife as a challenge, the living of life wholly and with joy, and the facing of eternity with courage.”

The affirmation of conflict and the relish with which Asatruars proclaim their connection with the Germanic and Norse tribes generates some concern about Ásatrú’s possible connections with neo-Nazi and white supremacist movements. While most mainstream Ásatrú movements deny any connection with such views, and some, such as the Troth, forbid discrimination on the bases of race, gender, or sexual orientation, there definitely are some within Ásatrú who see it as a “white man’s religion” for a “white man’s world.” Even a movement such as the AFF, which explicitly rejects supremacist positions, can make disturbing statements. Its “Declaration of Purpose” declares, we believe in “The preservation of the Peoples of the North (typified by the Scandinavian/Germanic and Celtic peoples), and the furtherance of their continued evolution.” Although accompanied by an explanatory disclaimer that such a view implies no sense of superiority, it nonetheless gives many pause. Additionally, many organizations that monitor neo-Nazi and other hate groups have expressed concern that the AFF and some of its members have a definite connection to white supremacist movements.

As Ásatrú has gained organizational forms, it also has begun to undertake some ministries to prisoners. This has made the issue of its possible racist connotations of an even greater concern, since many of the most violent white supremacist groups have found prisons to be most successful locations for recruiting converts. Even those individuals most suspicious of links between neo-Nazi or white supremacists and neopaganism believe that less than 20 percent of followers of Ásatrú or Odinism fit into that category.

Like other forms of neopaganism, adherence and practices within Ásatrú vary tremendously. Many individuals practice Ásatrú on their own, finding their connections through books or the internet. Still others participate in organized religious practices and rituals. Individuals organize in groups known as garths, steads, sippes, skeppslags, kindreds, or troths. Some rituals are led by individual members, while others have formally acknowledged priests or priestesses as ritual leaders. Both individuals and organized groupings have numerous larger associations with which they can affiliate, including the Asatru Folk Assembly, the Troth (which probably has the most formal clergy training program), and the Asatru Alliance. Like neopaganism in general, the number of adherents to Ásatrú is basically unknown, but at its greatest it has no more than 100,000 followers, including those who do little more than wear Axe of Thor necklaces as a way of expressing their interest in Ásatrú.

Asbury, Francis (1745–1816) Francis Asbury was the one of the first two superintendents of the Methodist Episcopal Church and the patriarch of American Methodism. An aggressive evangelist, he traveled almost incessantly preaching the Gospel and building up his denomination. Asbury became a model for the many intrepid circuit riders who later helped spread Methodism across the American FRONTIER.

Asbury was born at Hamstead Bridge (near Birmingham) in England on August 20, 1745. He received little formal education and was apprenticed to a blacksmith when he was 16 years old. Although raised an Anglican, Asbury experienced a religious conversion around 1763 and became a Methodist lay preacher. He served as an itinerant preacher in England until 1771, when he responded to John Wesley's (see WESLEYAN TRADITION) call for workers to aid the Methodist movement in America. Asbury arrived in Philadelphia in the fall of 1771 and continued his itinerancy in the New World.

Asbury stayed in America during the War for Independence, the only missionary appointed by Wesley to remain there throughout that critical period. Since Wesley himself opposed the American Revolution, Methodists were often suspected of Tory sympathies. Still, Asbury refused to return to England. When the war ended, he emerged as the acknowledged leader of the American movement and, with Thomas Coke, was appointed by Wesley as a superintendent of the Methodists in the newly independent United States.

In 1784, Coke, who had been ordained by Wesley in violation of Anglican practice, arrived from England with authority to ordain Asbury. Asbury insisted, however, that a gathering be held to discuss the implications of such an action. Now known as the "Christmas Conference," the meeting called by Asbury was convened in Baltimore on December 24, 1784. At that conference, the Methodist Episcopal Church was officially formed, separate

from the Episcopal Church, which at the same time was organizing itself apart from the Church of England. Asbury and Coke were unanimously elected superintendents, a title Asbury later changed to "bishop" contrary to Wesley's wishes. Coke and two other English Methodist ministers, in succession, ordained Asbury as deacon, elder, and superintendent.

Asbury used his position to foster church growth and build Methodism into the most vigorous American denomination of the early 19th century. He proved to be an indefatigable leader, crossing the Appalachian Mountains more than 60 times and helping establish Methodism in the upper South. Asbury recognized the value of "circulation," prodding Methodist clergy to reach out for converts in even the most remote locations. He was also an early advocate of camp meetings, which

Francis Asbury, the first bishop of the Methodist Episcopal Church. Asbury's support of circuit riders and camp meetings enabled Methodism to spread quickly into frontier country.

became the most important institution of Methodist outreach on the frontier. He supported these open-air revivals at which participants camped for several days on the site where religious exercises were held. Both circuit riding and camp meetings became keys to the Methodists' phenomenal success.

Asbury is estimated to have traveled 300,000 miles in the course of his ministerial career, delivering 16,500 sermons, ordaining 4,000 preachers, and presiding over more than 200 annual conferences. Although he accepted William McKendree to be his associate bishop in 1808, he remained active until the end of his life. Still functioning as a missionary, Asbury died at Spotsylvania, Virginia, on March 31, 1816.

Assemblies of God The Assemblies of God is the largest Pentecostal (see PENTECOSTALISM) denomination in the world and one of the fastest growing churches in the United States. It was organized in April 1914 when 300 leaders gathered in Hot Springs, Arkansas, and formed the General Council, which became the denomination's governing board. The Assemblies of God has traditionally asserted that speaking in tongues is evidence of a person's having been baptized by the Holy Spirit. The church also affirms the premillennial (see PREMILLENNIALISM) coming of Jesus Christ, a distinctive belief of modern American EVANGELICALISM.

The Pentecostal movement emerged out of American Protestantism in the early 20th century. The AZUSA STREET REVIVAL, a period of intense spiritual excitement at a storefront church in Los Angeles, sparked the growth of Pentecostalism after 1906. Pentecostals

united around one central conviction: Genuine conversion is represented by a miraculous experience known as the baptism of the Holy Spirit. The ability to speak in tongues, that is, uttering ecstatic languages claimed to be intelligible only to God (also called *glossolalia*), was generally considered evidence that a person had received Spirit baptism.

The Assemblies of God blended together members of several Pentecostal groups in the American Midwest and Southwest. The largest contingent came from followers of Charles F. Parham's Apostolic Faith movement in Texas. The tongues phenomenon had first appeared in 1901 at the Bible institute Parham founded in Topeka, Kansas. The Apostolic Faith missions spread, and several thousand people eventually espoused Parham's type of Pentecostalism. In 1905, he opened a school in Houston, Texas. That institution not only served as the center of Parham's movement in southeast Texas, it also trained William J. Seymour, the preacher who led the great revival in Los Angeles.

William Durham was the most significant figure in the shaping of the Assemblies of God. Durham had attended the Azusa revival, where in March 1907, he experienced Spirit baptism. He was responsible for bringing a distinctly non-Wesleyan view of SANCTIFICATION into the Pentecostal movement. His beliefs were far closer to Reformed theology, which understood holiness as a lifelong process that was not completed before death, than to the Wesleyan tradition, which emphasized the attainment of spiritual perfection in the present life. Durham feared that overemphasis on the Holy Spirit would overshadow Christ's redemption of the world on the cross, and he rejected the idea, common among Pentecostals, that human sin was eradicated when a believer experienced sanctification through Spirit baptism. Although Durham died in the summer of 1912, he helped articulate many key theological differences between the Assemblies of God and other Pentecostal denominations.

Those who founded the Assemblies of God initially disliked the idea of becoming an established denomination and preferred simply to remain a religious movement. They desired only a voluntary confederation of churches and rejected the idea of promulgating a common creed. They eventually realized, however, that an organization could provide needed discipline, guard against the growth of unorthodox theological views, and prevent Pentecostalism from falling prey to charlatans and fanatics. As a consequence, a Statement of Fundamental Truths was adopted in 1916, and the process of creating a formal structure was completed in 1927, when a constitution was ratified.

An early schism occurred after a dispute about baptism. Members of the church debated whether believers should be baptized in the name of the Trinity (Father, Son, and Holy Spirit), as the New Testament gospel of Matthew prescribed, or only in the name of Jesus, as the New Testament book of Acts suggested. Eventually, some denied belief in the traditional Christian doctrine of the threefold nature of God. They argued instead that there is but one person in the Godhead—Jesus Christ. This "Jesus only" faction (also known as the "Oneness Pentecostals") was expelled from the Assemblies of God in 1916. Many years later, that group organized themselves as the United Pentecostal Church, International.

The Assemblies of God expanded rapidly over the middle decades of the 20th century, and the denomination gradually entered the mainstream of American religious life. The church began with a membership of 6,000 in 1914. It numbered just under 50,000 in 1926 and nearly 300,000 at the end of World War II. This growth, and the accompanying upward social mobility of the denomination's membership, challenged the assumptions of an earlier era when Pentecostalism was considered an exclusively antiestablishment faith. Shortly before World War II, the Assemblies of God also affiliated with the NATIONAL

ASSOCIATION OF EVANGELICALS, an action that symbolized the denomination's thorough acculturation and identification with conservative American Protestantism. Moreover, the defrocking of scandalous televangelists Jim Bakker and Jimmy Swaggart in the 1980s reveals how much the Assemblies of God now wished to project a more moderate, less flamboyant public image.

That effort is being frustrated, however, by the success of one member church in Pensacola, Florida. Since the summer of 1995, the Brownsville Assembly of God Church has been the site of the controversial Brownsville Revival and a mecca of sorts for world Pentecostalism. Initially led by evangelist Steve Hill and Pastor John Kilpatrick and continued since 2003 by Pastors Rudy and Suzanne Feldschau, the Brownsville Revival draws thousands of attendees daily, many from overseas. According to church officials, millions of visitors have attended the church, and hundreds of thousands have responded to altar calls by accepting Jesus Christ as their savior. Those numbers may be inflated, but the outpouring is nonetheless one of America's most powerful revivals since the events on Azusa Street in 1906. Still, the Brownsville Revival has drawn criticisms from many quarters for the unusual manifestations that take place there. Those manifestations, which include uncontrollable shaking in addition to more standard Pentecostal fare such as speaking in tongues, are defended by Brownsville Revival partisans as manifestations of the return of "Pentecost" to modern-day Pentecostalism.

Like the Brownsville Revival, the Assemblies of God has seen tremendous recent growth. The denomination has benefited not only from support among its traditional constituency of European Americans but also from new Hispanic and Asian-American congregations. In 2006, the denomination reported more than 1.6 million full members and more than 2.8 million individuals affiliated with Assemblies of God congregations in

the United States. Membership was more than 30 million worldwide.

assimilation and resistance, Native American Native people faced what often seemed like two separate options in dealing with the Europeans and Americans: either adopt the ways of the newcomers or resist. Given the fluidity of culture, in practice these options frequently overlapped. Thus the long history of assimilation is also one of creative adaptation, as is the equally long history of resistance.

In the terms set by the myth of MANIFEST DESTINY, native peoples in the United States were expected to "pass away," as one 19th-century poet put it: "Like the fleeting years and days/Like all things that soon decay." This viewpoint shaped American perceptions of the Indians' only two options: either abandoning their cultures and learning the ways of the newcomers or dissolving in the ruins of disease, warfare, and degeneracy. American leaders often accepted the underlying assumption of both, that native people were passive beings, incapable of directing their own destinies. Thus the frequent portrayals of Indian defeat in American culture excited either justification or melancholy.

However, this viewpoint, shaping numerous portrayals of native life both past and present, obscures the creative strategies Native Americans have relied upon to cope with the changes stemming from the European colonial

movement into the Americas and makes the steady advance of colonial power seem far more inevitable in hindsight than it actually was. It also leaves inexplicable the dramatic population recovery and cultural/political resurgence achieved in the 20th century. From an all-time low of 250,000 in 1890, the 1990 census indicated nearly 2 million Native Americans, one-quarter still on reservations. But even in modern urban centers, native people have often exerted considerable energy on retaining or revamping tradition.

Assimilation refers to the various ways in which members of a subordinate group come to adopt the practices and views of a more dominant group. In American history, the campaign for assimilation rested on the assumption that "savages" would become "civilized" (see *MISSIONS, FOREIGN*). While rejecting the racism inherent in this idea, social scientists and historians have been concerned to understand the ways in which native people have adopted the ways of the dominant order. *Resistance*, conveying the image of "hostile" or "renegade" warriors, carries some of the same problems but also indicates ways in which subordinate groups might reject the values or modes of life held by the dominant culture. Distinct in theory, the two can be closely related in practice. Given that cultural and religious identity is always a fluid thing, the strong polarity suggested by the terms *assimilation* and *resistance* might be questioned.

Native people were encouraged, and sometimes forced, to accept various features of the European-American world. Through missions, it was hoped Indians would abandon tribal religions in favor of Christianity. But Christianity also went hand in hand with other parts of a colonizing culture. Eastern tribes, such as the Huron in the 1640s, received the gospel message along with the lure of the European fur market, which they often accepted in conjunction, even if French Jesuits themselves chose to distinguish between the fruits of

faith and those of wealth. Campaigning for the souls of individual Indians, missionaries often drove a wedge into native kinship networks. Quakers (see *FRIENDS, RELIGIOUS SOCIETY OF*) instructing the Seneca in European agriculture in the 1790s sought to replace Seneca family structure with their own.

In the years following the *CIVIL WAR*, the concerted effort to assimilate Indians relied heavily upon education. By 1889, every reservation in the country had a boarding school, often patterned on the Carlisle Industrial Training School, founded by retired Captain Richard Pratt in 1879. While many Indian children graduated from these schools, some to choose such prosperous careers as doctors, lawyers, and actors, many more returned home, "going back to the blanket," as Pratt called it, or were forced to accept menial work. The schools had a severe impact on children and on communal life. Support for a mission and a federal school at Oraibi by Hopi leaders in the early 1880s resulted in a split between the Bear and the Spider clans and the eventual breakup of the community as a whole.

While attendance at boarding school or acceptance of the new religion suggests the obliteration of older values and practices, certainly the frequently stated goal of educators and missionaries, this did not often happen in total. Students employed the powers of the weak to resist their teachers. Christianity rarely proved capable of erasing older religious worldviews. Rather, native members of a mission church took up the new faith selectively, quietly ignoring those ideas that made little sense, or reinterpreting them in light of traditional religious knowledge. Many significant popular movements, such as that begun by *HANDSOME LAKE*, or the more recent *NATIVE AMERICAN CHURCH*, combined Christian themes and traditional practices into new religions. In the *PLURALISM* of the 20th century, native Christians frequently demonstrated the power to influence Christian symbols, rituals, and institutions.

Some scholars distinguish movements like peyote religion, which often focus on individual redemption within the new social order of reservation life or urban America, from those that seek social transformation. The most extreme forms of resistance to Euro-American culture are the transformative movements leading to war and revolt. Revolts often emerged after a generation or two of contact had put the new colonial system in place. Forging pan-Indian alliances in the period immediately preceding the AMERICAN REVOLUTION and lasting into the 1820s, prophetic leaders among eastern tribes (see NATIVE AMERICAN RELIGIONS: EASTERN WOODLANDS) like the Seminole Osceola, the Delaware Neolin, the Shawnees Tenskwatawa and TECUMSEH, the Winnebago Wabokieshiek, and a group of Muskogee rallied large numbers of their people in armed opposition to colonial policies, land cessions, and the influence of white culture. Undergirding many of these movements were religious visions of a future in which Indian prosperity would be restored as a result of common participation in these inspired revolts.

The Plains Wars (see NATIVE AMERICAN RELIGIONS: PLAINS), during which members of numerous western tribes sought to halt western expansion in the post-Civil War years, are often portrayed as the last gasp of Native American resistance. However, throughout the 20th century, individuals, tribes, and increasing numbers of supratribal voluntary associations have worked both to resist the influence of the dominant society and to gain control of the resources necessary for tribes to exercise autonomy. Such efforts are visible at a number of levels in the years since WORLD WAR II. Newer organizations such as the National Indian Youth Council, the Native American Rights Fund, and the older National Congress of American Indians (established in 1944), drew upon growing pools of native people trained in law, the social sciences, or public administration, taking on the role of pursuing tribal needs directly in Congress, often

bypassing the United States government's Bureau of Indian Affairs.

In the years after John Collier lifted the official bans on native religion (see AMERICAN INDIAN RELIGIOUS FREEDOM ACT), traditional religious leaders reemerged from the relative seclusion into which they had been forced by assimilative administrators. These traditional leaders came to develop alliances with younger activists, seeking to avoid the bureaucratic entanglements of their seniors. Members of the American Indian Movement, formed in 1962 in Minneapolis, Minnesota, took a nationally prominent role in promoting an Indian form of activism, somewhat analogous to the CIVIL RIGHTS MOVEMENT. Undergirded by a pan-Indian spirituality derived in part from the influence of Lakota and Anishenabeg (Chippewa) members, AIM worked in cities to extract Indians from the confines of urban poverty and on reservations to restore tribal sovereignty. With a militant rhetoric derived from the Plains Wars, AIM forced a number of confrontations with authorities between 1968 and 1975, such as the long siege at Wounded Knee in 1973. AIM's dramatic flair insured it substantial media coverage, but also created lasting tensions among Native Americans of various ideological viewpoints, at times alienating the very traditionalists it claimed to represent.

In many ways, assimilation and resistance work together. Indian leaders have developed increased abilities to make use of dominant political institutions in order to achieve the goals of tribal autonomy and cultural resurgence advocated by AIM and others in the 1960s. Recent decades have also seen a renewed commitment among many Indians to preserve or rekindle important elements of traditional religious life while also promoting economic development and education.

Assyrian Church of the East Given its age and location, one might think that the Assyrian Church of the East should be included among the ANCIENT EASTERN CHURCHES. The main reason for its exclusion is that the Assyrian Church's Christology, rather than rejecting the Chalcedonian view that Christ had two natures, historically affirmed that position but in a way that suggested, at least to some, there were two persons, one the man Jesus and another the divine logos within him.

This position, known as Nestorianism, after the theologian and priest Nestorius (386–451), who was believed to teach this view, was strongly condemned at the Council of Ephesus in 431. The churches in Parthia (Iran and eastern Iraq) refused to accept the decisions of that council and separated themselves from the churches of the Eastern and Western Roman Empires. This eventually led to the establishment of the Holy Apostolic Catholic Assyrian Church of the East, to give the church its formal title.

The history of the Assyrian Church dates back to the second century, with the Christian communities in Assyria, Babylonia, and Persia. Historical evidence shows the convening of a council by these churches at Seleucia-Ctesiphon in the early fourth century. By 410, a council of the Christian communities in Mesopotamia declared their independence from Antioch and other "Western" bishops, with the Bishop of Seleucia-Ctesiphon assuming the rank of catholicos.

As mentioned above, the Assyrian Church separated from the Orthodox Church as a

result of the so-called Nestorian schism of 431. While the West always has referred to the Assyrian Church as Nestorian, the church rejects that label. However, it admittedly derives its Christological doctrine from Theodore of Mopsuestia (Nestorius's teacher). This doctrine was formalized for the church by its major reformer, Babai the Great (551–628). Babai taught that the two *qnome* (essences)—human and divine—are unmingled but everlastingly united in the one *parsopa* (personality) of Christ.

For centuries, the Saint Thomas Christians of India were in communion with the Assyrian Church. This connection was broken by the Portuguese colonizers of India, who attempted to force the Indian Christians into adopting Roman Catholic rituals and practices. When the Indians eventually resisted, some entered into communion with the Syriac Church, but others returned to their traditional affiliation with the Assyrian Church, leading to the creation of the Chaldean Syrian Church with its own bishop.

The Assyrian Church was incredibly expansionistic, reaching China and Mongolia by 635. Some evidence points to a strong Assyrian presence in Tibet during the seventh through ninth centuries as well. Relics and remains of the Assyrian Church can still be found in China. When the Emperor Tang Wu Zong (ruled 840–846), suppressed foreign religions, Christianity went into a decline, although it continued its existence in several regions. Marco Polo, in writing about his travels, comments on the presence of "Nestorian Christians" in the empire of the Great Khan. In 2003, an Assyrian congregation was discovered in China, a small group of adherents who had continued in existence with no contact with its coreligionists for centuries.

In its homeland and elsewhere, the Assyrian Church found itself on borders of conflicts between empires and religions, suffering numerous persecutions and oppressions. Dominated by Muslims for centuries,

slaughtered and pillaged during the conquests of Timur the Lame (Tamerlane), derided as heretics and schismatics by the Roman Catholic and Orthodox Churches, and severely oppressed and controlled by those regimes that assumed control of Iran and Iraq following the end of the colonial governments, the Assyrian Church often refers to itself as the “Martyr’s Church,” and also was proclaimed as such by Pope John Paul II. This “martyrdom” has continued into the 21st century. Members of the Assyrian Church in Iraq are targeted by Muslim extremists bent on driving out all infidels. In fact, conflicts in its homeland and the hostility toward Assyrians led to the removal of the patriarchate to the United States in 1976, following the election of the bishop of Tehran as the new patriarch, Mar Dinkha IV.

The patriarchate continues to be based in Chicago, Illinois. The American church has two bishops and 16 active parishes. In 2005, the Assyrian Church had about 150,000 members in the United States.

atheism Atheism, literally the absence of belief in God, has always been a minority viewpoint in American culture. Nevertheless, its influence can be seen throughout

American life. Free thinkers helped shape the Constitution’s general silence in regard to religious belief, insuring that religious groups would avoid contributing to conflict over the basic structure of American government. In the years after the CIVIL WAR, free thinkers were active in a number of social reform movements, and during the 20th and 21st centuries their organizations often pressured the courts to protect religious liberty and prevent the surreptitious growth of a religious establishment.

Atheism may well be possible in all times and places. But in Western culture, public acknowledgment of unbelief was quite rare until the ENLIGHTENMENT. Its growing acceptability in the ensuing centuries was due in part to the great cultural shifts that formed the basis of modern society: the Protestant Reformation and the rise of capitalism and modern science. The numerous reformers, scientists, revolutionaries, and entrepreneurs who gradually loosened the hold of the Catholic Church over the totality of European culture were certainly not themselves given to unbelief. Nevertheless, in seeking to make the public standards of political order, scientific truth, and even faith itself independent from the authority of a particular religion, they created the possibility of doubting the existence of God.

In America, unbelief took a different course than in Europe, where it was fueled by popular resentment over the Catholic Church, particularly, as in revolutionary France, over the church’s support of the *ancien régime*. The emergence of religious freedom in the United States (see ESTABLISHMENT, RELIGIOUS), while gradual, has meant that those who choose not to believe are free to live without religious interference. Consequently, unbelievers have been under no obligation to engage in religion, nor have they been compelled to organize their own institutions, rituals, or public forms of expression in order to counter religion.

Nevertheless, American free thinkers, a phrase that gained currency in the early 18th century among English dissenters and which was adopted by American deists, often found a need to create societies of their own. Some notable leaders in the postrevolutionary era, such as THOMAS JEFFERSON, Benjamin Franklin, and George Washington (see AMERICAN REVOLUTION), while intensely critical of religious orthodoxy, maintained nominal relations with various Protestant churches. Others, however, such as radical TOM PAINE and ex-Baptist Elihu Palmer, sought to organize fellow rationalists. Palmer, for instance, sought to form a "Druid" group and in the end drew limited support from a small number of ex-Masons (see FREEMASONRY). While free thought made little headway as a movement, revolutionary leaders drew upon the rationalistic, Enlightenment worldview itself in framing the Constitution, which avoided any reference to God as a founder of the new republic.

During the years prior to the Civil War, critiques of religious orthodoxy often came from movements that were themselves religious, such as TRANSCENDENTALISM, or alternative communitarian movements such as the SHAKERS and the MORMONS (see CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS; COMMUNITARIANISM). One such community, New Harmony, founded by socialist ROBERT DALE OWEN, explicitly opposed religion. Owen traveled widely, debating religious leaders, and in the process established a pattern of mutual dependence that characterized the continuing relations between the voices of belief and unbelief. Religious leaders debated free thinkers in public forums, each attracting attention to themselves by portraying the other as the enemy of civilization. As a consequence, while free thought produced little direct impact on public consciousness, many were made aware of the intellectual possibility of atheism by the churches themselves.

American culture took a secular turn following the Civil War (see SECULARISM). With

the creation of research universities such as Johns Hopkins, the growth of knowledge proceeded with little reference to the traditional religious outlooks undergirding the previously dominant church-supported colleges. Academic professionals saw their new careers as based on the unbiased search for truth, and in the post-Darwinian climate, science seemingly became the enemy of religion (see CREATIONISM; EVOLUTION; SCIENCE AND RELIGION). By the end of the century, universities, both state-supported and private, had secured organizational autonomy from religious bodies, and in the ensuing decades many on their faculties have retained a suspicion of religion.

In addition to the secular atmosphere of the university, Americans were exposed to free thought through a variety of public figures, such as Samuel Clemens (Mark Twain). ROBERT GREEN INGERSOLL and H. L. MENCKEN gained notoriety espousing the cause of free thought, debunking what they saw as the stifling, antiquated religious atmosphere of their times.

Free thinkers also began to organize somewhat more effectively in the late 19th century. Most enduring has been the ETHICAL CULTURE movement, organized by FELIX ADLER, a secular-leaning Reform rabbi, in 1876. Immigrants from Europe, themselves inheritors of the anti-religious, socialist impulse that swept Europe in the 1840s, often established their own centers for free thought. Thus Czechs, Germans, and Finns all created lodges in which free thought, radical social criticism, and ethnic culture could flourish in the new land. But the anticlericalism that sustained these groups in Europe had little power in America's climate of religious disestablishment. In addition, the growing American labor movement, to which many immigrants were attracted, did not depend on hostility toward religion, and the groups evaporated over time.

For the most part, the secularism of American institutions, though undergirded by what has become known as CIVIL RELIGION,

and the wide-ranging PLURALISM that characterizes American religious life in the 21st century, has meant that free thought has little to push against, little institutional resistance to confront. While groups such as the AMERICAN HUMANIST ASSOCIATION, the American Association for the Advancement of Atheism (founded in 1925), American Atheists (see O'HAIR, MADALYN MURRAY), and the Freedom from Religion Foundation have held on over the decades, they draw few members, likely numbering less than 10,000. By contrast, surveys indicate that the overwhelming majority of the American population continues to retain some kind of belief in a deity. A 2008 survey by the Pew Forum on Religion and Public Life found that while 16% of Americans describe themselves as religiously unaffiliated, only 1.6% of Americans identify as atheists.

Despite these small numbers, a flurry of expressly atheist and virulently anti-religious books hit the best-seller lists in the United States late in the first decade of the 21st century. Christopher Hitchens' *God is Not Great*, Daniel Dennett's, *The God Delusion*, Sam Harris's, *The End of Faith*, and Richard Dawkins', *The God Delusion* created a furious debate over religion. Much of the attention resulted from concerns over Islamist violence (see ISLAMISM), the role of religion in American political life during the 2008 presidential campaign, the books' incendiary tone, and, in Dawkins' case, his status as a well-known popularizer of evolution. This attention generated no mass conversions to atheism, although it may have led to greater attention to the issue of religion and its role in human life.

While atheism has perhaps remained most noticeable through its adherents' willingness to engage in public debate with religious figures, or as a foil for those religious groups seeking to reform the society, free thought has exerted enormous influence on American culture. The continued secularism of universities in a knowledge-dependent society insures that those educated in public

settings gain exposure to critical assumptions about the world inherited from the rationalist tradition espoused by free thinkers. It has frequently been the free thinker, such as the lawyer Clarence Darrow (see SCOPES TRIAL), who has fought to preserve religious liberty and prevent the de facto establishment of religion. In addition, numerous free thinkers, from Jefferson on down, have offered powerful arguments that the preservation of freedom and dignity in America is not dependent upon organized religion, which has a checkered record in that regard.

Azusa Street revival The Azusa Street revival, which began in April 1906 under the leadership of Holiness minister WILLIAM J. SEYMOUR, signaled the emergence of PENTECOSTALISM as an important force in American religion. The revival lasted three years and drew worshippers to a poor section of Los Angeles, where thousands were engulfed by a new form of religious enthusiasm.

Seymour, the son of freed slaves, was an itinerant preacher who espoused the doctrine of entire SANCTIFICATION, the belief that Christians could be set free from the power of sin and attain holiness in the present life. He attended Charles F. Parham's Bible institute in Houston, Texas, in 1905 and adopted Parham's Pentecostal views. Seymour accepted speaking in tongues as the definitive evidence that a person had been sanctified. He traveled to Los Angeles in January 1906. Three months later the group he led experienced its first outbreak of glossolalia, the ecstatic, incoherent speech that characterized the phenomenon of

"tongues." When the private home where religious services were held proved too small for the crowds flocking to the revival, Seymour moved the meetings to an old building at 312 Azusa Street, now considered the birthplace of the Pentecostal movement.

At the height of the revival excitement, worship at the Azusa Street Mission was held three times a day, beginning at midmorning and continuing past midnight. Miraculous healings and a general spiritual delirium marked the worship. The revival was also noted for its interracial makeup, a feature some observers saw as a special sign of divine favor.

Opinions about the revival were mixed, however, even among Pentecostals. Charles Parham, for example, described the meetings as "Holy Ghost Bedlam," in which worshippers "pulled all of the stunts common in old camp meetings among colored folks." On the other hand, Jennie Moore, the first woman to speak in tongues and later Seymour's wife, gave a positive report: "The power of God fell

and I was baptized in the Holy Ghost and fire. It seemed as if a vessel broke within me and water surged through my being, which when it reached my mouth came out in a torrent of speech."

The revival on Azusa Street continued unabated for three years, before fervor began to wane and Seymour himself lost influence. Seymour died in 1922, and although services took place at the mission until 1929, by that time the church's congregation had become exclusively black. The city of Los Angeles eventually condemned the building, and it was torn down in 1931.

Backus, Isaac (1724–1806) Isaac Backus was a Baptist (see BAPTISTS) minister and champion of the separation of church and state in the late 18th century. Converted during the GREAT AWAKENING, he concluded that his experience of divine grace required him to separate from the Congregational church to which he belonged. Backus was eventually rebaptized and formed a new Baptist congregation in Middleborough, Massachusetts. He spent the rest of his life trying to win freedom for his church from the legal constraints of the Massachusetts religious establishment.

Backus was born on a farm in Norwich, Connecticut, on January 9, 1724. He received no formal education. Although raised conventionally as a Congregationalist, Backus said that his dramatic conversion at age 17 enabled him to see clearly for the first time “the riches of God’s grace.” This experience soon brought him into conflict with his church. Since the passage of the HALF-WAY COVENANT of 1662, it had been the custom in New England to accept morally upright adults who had never undergone a conversion experience as partial members of congregations. They were allowed to come to worship and bring their children for baptism, but they did not receive Communion or enjoy voting privileges until they could testify that God had spiritually regenerated them. Backus became convinced that this practice was wrong and that only adults who had experienced the “divine light” could really be considered Christians.

As a consequence of their vocal opposition to the Half-way Covenant, Backus and others emerged as a party of “Separates.” Backus became an itinerant evangelist and formed a church of like-minded believers in Middleborough, Massachusetts, where he was ordained to the ministry in 1748. His study of the Bible and his beliefs about church membership, however, led him further outside the bounds of Congregationalism. Concluding that only the baptism of consenting adults by immersion could be considered a valid Christian rite, Backus openly adopted Baptist principles. In 1756, a small remnant of his congregation withdrew and organized a Baptist church in Middleborough.

Baptists had no legal place within the New England church establishment. At this time, town governments in Massachusetts assessed all taxpayers for support of a minister and maintenance of a church building. Not only were the separate Congregationalist and Baptist congregations unsupported by their town governments, their members were often forced to support financially churches they had repudiated. As the principal Baptist spokesman, Backus argued in various tracts and petitions that state-supported churches corrupted true Christianity. In his most famous work, *An Appeal to the Public for Religious Liberty Against the Oppression of the Present Day* (1773), Backus asked for the full separation of church and state. This idea became a reality on the national level in the adoption

of the FIRST AMENDMENT to the United States Constitution in 1791.

Since the state religious establishment in Massachusetts did not officially end until 1833, Backus continued to lobby indefatigably against the civil control of religion long after the American Revolution. He also served for 50 years as minister of the First Baptist Church in Middleborough. At the time of his death, Backus was recognized as one of the greatest advocates of American religious freedom. He died at Middleborough on November 20, 1806.

Baconianism See SCOTTISH COMMON SENSE REALISM.

Bahá'í Faith The Bahá'í Faith is a world religion founded in 1863 that teaches the oneness of God, the oneness of the world's major religions, and the oneness of humanity. It claims a new divine revelation that will provide the foundation for a world civilization. The Bahá'í religion was started by an Iranian named Mírzá Husayn 'Alí Bahá'u'lláh (1817–92), who claimed he was a messenger of God. This claim—blasphemy to most Muslims—led to his exile and imprisonment by the Ottoman Turkish government for 29 years. He wrote extensively; more than 15,000 of his works, primarily letters (though some are of book length), are extant. Together they constitute the central body of Bahá'í scripture.

Bahá'u'lláh's writings contain a detailed theology that describes the nature of God, messengers of God, humanity, the human soul, and the nature of the spiritual quest. An important aspect of his theology is the idea that God progressively reveals truth to humanity through a series of messengers, and that the existing world religions were all

founded by divine messengers. Bahá'u'lláh's writings include numerous prayers for Bahá'ís to say for their spiritual growth, for physical healing, for the development of their families, and for the improvement of society. They also describe basic Bahá'í religious practices similar to the five pillars of Islam, such as obligatory prayer, an annual period of fasting, pilgrimage, and contribution of a percentage of one's surplus income to the faith. The scriptures outline basic institutions for organizing the Bahá'í religion after Bahá'u'lláh's death. They specify an elaborate set of social reform teachings based on the principle of the oneness of humanity, such as racial and ethnic equality and integration, equality of the sexes, universal compulsory education, and creation of international political, economic, and legal systems that would prevent war and gradually eliminate the extremes of wealth and poverty.

After Bahá'u'lláh's death, his son 'Abdu'l-Bahá (1844–1921), whom he appointed to be his successor, elaborated on Bahá'u'lláh's teachings and offered authorized interpretations. 'Abdu'l-Bahá is not considered a messenger or prophet by Bahá'ís, but his writings (which are almost twice as extensive as Bahá'u'lláh's) are also considered a part of Bahá'í scripture. 'Abdu'l-Bahá appointed a successor, Shoghi Effendi (1897–1957), whose writings are also considered binding and authoritative. In 1963, the Universal House of Justice was first elected, as called for by Bahá'u'lláh. As head of the Bahá'í Faith, the House of Justice is empowered to legislate on matters not covered by the Bahá'í scriptures. The body's nine members, who reside in Haifa, Israel, are elected every five years by the members of the national spiritual assemblies (the national Bahá'í governing bodies).

Under Bahá'u'lláh, the Bahá'í religion spread beyond Shi'ite Islam, from which it arose, to include Sunni Muslims, Jews, Zoroastrians, Christians, and Buddhists. As a result of the migration of a Bahá'í of Leba-

nese Christian background to Chicago, the first Americans became converts in 1894; by 1899, Chicago had more than 700 Bahá'ís. From Chicago the Bahá'í religion spread to 24 states by 1900. Chicago has remained the center of Bahá'í activity in North America, where a House of Worship, begun in 1903 and completed in 1953, was built in the suburb of Wilmette. The headquarters of the Bahá'í Faith in the United States is also located in Wilmette.

Bahá'í growth in the United States has gone through several distinct phases. From 1894 to 1905, Bahá'í efforts to teach their religion to the public focused on the fulfillment of prophecy, because Bahá'ís venerate the Bible and view its prophecies as referring to the coming of Bahá'u'lláh. 'Abdu'l-Bahá's nine-month visit to the United States in 1912 shifted the emphasis to Bahá'u'lláh's social reform principles. The initial biblically centered message attracted disillusioned white evangelical Protestants to the religion; the latter approach brought in more Catholics, Jews, and black Protestants. Lack of organization, however, limited membership in the United States to about 1,500.

In 1922, Shoghi Effendi began his leadership of the Bahá'í Faith by inaugurating a new emphasis on local and national organization, an effort that in 10 years saw a doubling of the American Bahá'í community. Shoghi Effendi replaced the poor and occasionally confusing English translations of Bahá'í scriptures with new, improved translations and wrote numerous epistles clarifying basic Bahá'í teachings. He launched a series of international growth plans, for which the United States Bahá'í community was given the lion's share of the goals. By 1963, the United States had 10,000 Bahá'ís.

The late 1960s and early 1970s saw two important developments in the American Bahá'í community: outreach to America's youth counterculture and door-to-door teaching of the faith in the rural South. The former caused Bahá'í membership rolls to swell

The Bahá'í House of Worship in Wilmette, Illinois, is a national landmark. (Courtesy of the National Spiritual Assembly of the Bahá'ís of the United States)

in the years 1969 to 1974. The latter brought 10,000 African Americans into the Bahá'í Faith in South Carolina in two years. Probably another 5,000 blacks became Bahá'ís in other parts of the South. By 1974, the American Bahá'í community had 60,000 members.

The rest of the 1970s saw much slower growth and loss of some of the converts; by 1979, membership stood at 75,000. The 1980s saw relatively slow attraction of the middle class to the Bahá'í Faith in the United States, although Native Americans on reservations continued to become Bahá'ís, Hispanics were attracted in larger numbers, and rural blacks continued to join. Further diversifying the American Bahá'í community was the arrival of about 10,000 Iranian Bahá'í refugees, who fled persecution in their native land. Vietnamese, Cambodians, and Laotians who were Bahá'ís in their home country or converted in refugee camps also came to the United States by the thousands.

Since 1920, converts from the middle classes have come more from the secular-minded who are concerned about social issues, although seekers of various religious backgrounds remain significant. Since the turn of the century, American Bahá'ís have been very active in efforts to heal racism, and in this area they have had a modest impact on American

society. A smaller but growing focus of Bahá'í attention has been the peace movement.

There are 5 to 7 million Bahá'ís worldwide; the Bahá'í Faith may be the most geographically widespread religion in the world after Christianity. In 2006, estimates of the number of Bahá'ís in the United States ranged from 150,000 to 365,000.

Ballou, Hosea (1771–1852) One of the most prominent early leaders and ministers of UNIVERSALISM in New England, Hosea Ballou helped to popularize and systematize Universalist ideas in the late 18th and early 19th century. The youngest son of a Baptist farmer and preacher who espoused strict Calvinist beliefs, Ballou was born in Richmond, New Hampshire, in 1771 and studied briefly at local Quaker academies. Shortly after experiencing a conversion at age 19, he came under the influence of itinerant preachers of Universalism as well as the writings of Ethan Allen, the Revolutionary war hero and author of the first atheist book in the United States. Ballou began to preach Universalist principles in 1790 in Rhode Island, Massachusetts, and later in Vermont.

In 1805, he wrote one of the early declarations of liberal Protestantism and his most important work, *A Treatise on Atonement*. In that study, which formalized and popularized many Universalist tenets, Ballou emphasized

the importance of reason in religious faith; he rejected the concept of the Trinity; he stressed the benevolence of God and the innate goodness of humanity; and, most significantly, he reasoned that a loving and omnipotent God intended that all humanity would be saved from damnation. The publication of the book marked Ballou's emergence as a leader of the Universalist movement and a central promulgator of religious liberalism.

Ballou continued writing and preaching in Massachusetts from 1815 until his death. After several years in Salem, he assumed the pulpit of the Second Universalist Society in Boston, a post he held for 35 years. From there, he helped to organize both the theological and institutional foundations of the Universalist movement. In 1819, he became the first editor of the weekly *Universalist Magazine*, a publication that became the leading denominational newspaper. In 1830, he and his great-nephew, Hosea Ballou 2nd, founded the scholarly *Universalist Expositor*. His second major theological treatise, *An Examination of the Doctrine of Future Retribution*, appeared in 1834. His organizational abilities, keen intellect, and popular preaching style led him to be widely considered as the most creative thinker and the greatest theologian of Universalism.

Baltimore, Councils of Until the 20th century, the archdiocese of Baltimore was the center of Roman Catholic episcopal power

in the United States, with the archbishop of Baltimore functioning as the primate of the American church. From this position of authority, several of the archbishops convened councils to deal with pressing church matters. The first two were convoked by Bishop JOHN CARROLL himself, the first (1791) consisting of all American clergy and the second (1810) a meeting between Carroll and his several suffragan bishops.

The expansion of the United States church led to a change in the nature of these councils. Originally synods under Carroll, they soon expanded into provincial meetings as all the bishops in the province of Baltimore—which stretched from Vermont to Louisiana—convened on seven occasions between 1829 and 1849. During these meetings, the bishops were forced to respond to several vexing issues. Among the more important of these were conflicts over lay control of church property (see TRUSTEEISM), clergy discipline and training, and education.

With the division of the United States church into several provinces, the occasional meetings of the bishops became plenary councils and took on even greater importance. The first Plenary Council of Baltimore was convened in 1852, and although it passed no significant legislation, it did reaffirm episcopal control of church property and urged the establishment of parochial schools in all dioceses.

The second Plenary Council, held in 1866, was a much more active and significant affair. Presided over by Archbishop MARTIN JOHN SPALDING, it was attended by 45 bishops and archbishops and two abbots representing nearly 4 million Roman Catholic citizens, and its closing session was attended by President Andrew Johnson. Its decisions also suggested a maturing church. This council not only reaffirmed earlier teachings about discipline and practice, it took up doctrinal matters as well. The council issued statements on the Trinity, Marian devotion, and the author-

ity of the church, as well as the doctrines of creation and redemption. Although these statements closely followed contemporary pronouncements by Pope Pius IX, they steadfastly avoided his most notorious document, the "Syllabus of Errors," with its condemnation of freedom of the press, religion, and speech. Even more significantly, the American bishops affirmed the collegiality and shared responsibility of all bishops, while acknowledging the primacy of the pope. This view was to be undone in the coming years with the growing centralization of power in the papacy and the affirmation of papal infallibility at VATICAN COUNCIL I.

The third Plenary Council, held in 1884, was most significant in that its decrees so regularized the functioning of the American Roman Catholic Church that no general church council needed to be held for 30 years, when one was occasioned by the necessities of World War I. The third council again urged that parochial schools be established in every diocese, a plea that had become nearly formulaic, but this time truly began to take hold. The long-term crowning achievement of the third council was its authorization of the establishment of a Catholic university in America. Although the history of this school was marked by controversy and suspicion, the eventual establishment of the Catholic University of America in 1887 signified the growing institutional strength and maturity of ROMAN CATHOLICISM in the United States.

The third Plenary Council of Baltimore would be the last such meeting for the American church. The establishment of the NATIONAL CATHOLIC WELFARE CONFERENCE and later the NATIONAL CONFERENCE OF CATHOLIC BISHOPS would regularize episcopal meetings to an extent that such extraordinary meetings became unnecessary.

Baltimore Catechism *Baltimore Catechism* actually refers to a series of catechisms used in the U.S. Roman Catholic Church for more than 100 years. Recognizing the need for an English-language catechism directed to the American context, the American bishops at the first Plenary Council of Baltimore (see BALTIMORE, COUNCILS OF) in 1852 authorized the *General Catechism of the Christian Doctrine*. This was followed in 1884 with the third Plenary Council's *A Catechism of Christian Doctrine*. With some revisions, these documents were the major source of catechetical training for U.S. Catholics until the 1960s.

Both followed the traditional purpose and form of catechesis, the teaching of doctrines of the faith, directed primarily at children and the newly evangelized. The Baltimore catechisms used a simple question-and-answer format. Designed for use by those who were not yet spiritually mature, they emphasized memorization rather than explanation and understanding. The Catholic Church's transformation following VATICAN COUNCIL II necessitated radical revisions, and the Baltimore Catechisms were replaced by those more attuned to the changing times. The most significant of these was *Sharing the Light of Faith: National Catechetical Directory for Catholics of the United States*, issued by the American bishops in 1979.

A single catechism for the entire Roman Catholic Church was finally issued in Latin in 1992 and in a revised edition in 1997, followed by the publication of the first American edition in 1994 and the second in 2000. It instituted a new period of catechetical instruction. The depth and detail of this catechism, known simply as *Catechism of the Catholic Church*, moved away from the earlier question-and-answer format, seeking to provide students with greater understanding of doctrine rather than mere memorization. Although the source of much controversy prior to its publication, with numerous conflicts over gender-specific language and whether it was consistent with the spirit of Vatican II, the catechism has had

a major impact on Roman Catholic instruction in the United States.

baptism Baptism (from the Greek *baptizo*, meaning to "wash" or "dip") is the Christian rite of initiation in which participants are either immersed in water or have water poured upon their heads. It symbolizes not only admission into full participation in the church, but also the forgiveness of sins and the spiritual regeneration of the believer.

The practice of baptizing converts began in the period of the early church. It was instituted to commemorate Jesus' baptism in the Jordan River by John the Baptist, an event to which all four New Testament Gospels refer. According to Jesus' admonition at the conclusion of the Gospel according to Matthew, Christians are to "make disciples of all nations, baptizing them in the name of the Father and of the Son and of the Holy Spirit" (28:19). Although baptism of infants with the sprinkling of water over the forehead was introduced in the second century, adult baptism with complete immersion in a pool of water was the usual custom until the Middle Ages. Infant baptism eventually became normative, however, as Christian theologians emphasized the need to wash away "original sin" from the souls of newborn children. The Protestant reformers of the 16th century continued to baptize infants. They ada-

manly condemned the radical Anabaptists, who, demanding the baptism of adults only, sought to rebaptize those already baptized as children.

Baptism has been a subject of significant controversy on a number of occasions in American religious history. The first involved Puritan minister ROGER WILLIAMS, who emigrated to Massachusetts from England in 1631. Williams concluded that the Puritan idea about church membership, namely that true Christians should be able to testify to an experience of conversion, implied that only the baptism of adult believers was a valid sacramental rite. Most New England Puritans disagreed with Williams, however, and for this and other dissenting viewpoints he was eventually banished from the Massachusetts colony. Williams is credited with founding the first Baptist church in America, establishing it at Providence, Rhode Island, in 1639.

Another controversy over baptism arose in the 1650s. According to Puritan custom, only church members were allowed to have their children baptized. Yet as time passed, increasing numbers of those who had been baptized as infants, but failed to become full church members themselves, desired to have their children baptized. Although they attended church regularly, they had not undergone the transforming spiritual experience that qualified them to join the church. Puritan leaders were faced with a dilemma for, while they wished the church to be composed of genuine believers, they did not want to alienate morally upright, albeit technically unconverted, people. The problem was resolved in 1662 through the passage of what was known as the HALF-WAY COVENANT. The decision stipulated that even if they had not undergone a conversion experience, otherwise faithful churchgoers were accepted as "half-way" members of congregations and allowed to bring their children for baptism.

During the GREAT AWAKENING of the mid-18th century, the meaning of baptism again

became central to debates within the American churches. Religious life was so radically altered by the revivalism of the awakening that many churchgoers felt it necessary to separate from the denominations in which they had been raised and form new churches based upon Baptist principles. Chief among the "Separates" was New England Congregationalist ISAAC BACKUS, who reaffirmed the old Puritan view that only adults who had undergone an experience of spiritual regeneration could be considered Christian. He eventually concluded as well that only baptism by immersion was a valid rite of Christian initiation. In 1756, he organized a Baptist church in Middleborough, Massachusetts, one of more than 100 new Baptist churches formed in New England during the awakening.

The SECOND GREAT AWAKENING of the early 19th century helped arouse further disputes over baptismal practices. Presbyterian minister Barton Stone, for example, had organized

Creek baptism on Sunday in 1974 in eastern Tennessee by Rev. "Pappy" Beaver. (Eleanor Dickinson)

the spectacular, but controversial, revival at Cane Ridge, Kentucky, in 1801. In response to growing opposition within their denomination, Stone and his followers chose to abandon Presbyterianism and in 1804 began calling themselves simply "Christians." Attempting to restore (see RESTORATION MOVEMENT) the purity of New Testament times to American church life, they eschewed all creeds except the Bible and practiced adult baptism by immersion.

A related movement was led at the same time by Presbyterian Alexander Campbell, a minister noted for his detailed expositions of the structures and practices of primitive Christianity. Campbell maintained that Christians should attempt in all ways to reconstruct the first-century church. As a result, he became convinced in 1813 that believer's baptism was the only genuinely scriptural initiation rite. Appealing mainly to those who were already Baptists, Campbell formed groups called the "Disciples of Christ," a movement that emerged as one of the fastest-growing American religious organizations of the period.

The final historical controversy over baptism that divided American Christians was the so-called Landmark movement within the SOUTHERN BAPTIST CONVENTION in the mid-19th century. In 1848, JAMES R. GRAVES, pastor of a church in Nashville, Tennessee, began to publish articles defending what he regarded as the distinctive tenets of the Baptist faith. Although the term *landmark* was actually coined by another minister, Graves popularized its use among Southern Baptists: the belief that the baptism of adults by immersion was one of the indispensable trademarks of Christianity. There had been an unbroken line of Baptist churches observing this practice since apostolic times, Graves declared, and any deviation from it nullified a church's claim to being a "true church." Those congregations influenced by landmarkism also refused to accept members who had undergone "alien immersion," insisting on rebaptism.

Landmarkism became a highly potent force in the Southern Baptist Convention. It stimulated a heightened denominational self-consciousness and generally negated attempts at rapprochement with other southern Protestants throughout the rest of the century.

Since World War II, the heightened interest in ecumenism has led many American Christians to stress the similarities, rather than the differences, among their denominations. As a result, most Christians recognize that baptism contains both divine and human elements. Denominations that baptize infants (e.g., Roman Catholics and the Eastern Orthodox) have traditionally underscored the divine action (reception of the Holy Spirit and forgiveness of sins) that takes place in baptism. Churches that baptize older children and adults (e.g., Baptists), on the other hand, highlight the faithful human response to God's prior offer of grace.

Baptist General Conference See BAPTISTS.

Baptists Baptists are the largest Protestant denominational group in the United States. Although no official church structure or creed unites all Baptists, they do share two distinctive beliefs: the BAPTISM (from which their name derives) of adult believers by immersion, and the independence of each local congregation (see CONGREGATIONALISM). The first Baptists were found on the radical fringes of English PURITANISM among those who believed it was necessary to withdraw from the Church of England in order to preserve true Christianity.

A group under the leadership of John Smyth emigrated from England to Holland, where they came into contact with the Anabaptists (that is, rebaptizers), who rejected the validity of infant baptism. Smyth baptized himself and several others in 1609, thereby forming the first English Baptist church.

Baptists appeared again in England during the tumultuous Puritan interregnum of the mid-17th century. Baptists and orthodox Puritans both agreed that church membership should be limited to those who could testify to an experience of divine grace. Baptists, however, contended that no one, including the children of church members, ought to be baptized until that person had made a personal confession of faith. Baptists also opposed religious establishments in all forms. They believed that government, like the church, had been divinely instituted, but God intended the church to maintain itself by voluntary, not state-supported, means.

Baptists began to arrive in America as part of the Puritan migration from England to Massachusetts between 1620 and 1640. The Baptists' rejection of infant baptism, insistence on freedom from civil control, and emphasis on spiritual liberty quickly brought them into conflict with colonial leaders. ROGER WILLIAMS, a Puritan minister who was banished from Massachusetts for advocating the separation of church and state, founded the first Baptist church in America at Providence, Rhode Island, in 1639. A few years later, John Clarke, another Puritan dissenter, founded the second Baptist church at Newport, Rhode Island. Williams's colony, which obtained a royal charter in 1663, became a refuge for Baptists and others fleeing the Puritan establishments in Massachusetts and Connecticut. By 1671, a Seventh-day Baptist Church had also been established in Newport. Seventh-day Baptists celebrated Saturday (the "seventh day") rather than Sunday as their day of Sabbath rest.

Baptists found a more favorable atmosphere in the middle colonies of New Jer-

sey, Pennsylvania, and Delaware. There they enjoyed religious toleration and freedom from taxation in support of an established church. In 1707, five congregations united to form the Philadelphia Association, the first Baptist organization in America. While the association held no binding power over the individual churches, it facilitated interaction among them, especially their evangelistic efforts. The association also adopted a confessional statement, based on the Calvinist Westminster Confession of 1646, that provided some internal theological unity among the congregations.

The GREAT AWAKENING of the mid-18th century represented a critical turning point for the Baptist movement. During that period, Baptists were transformed from a collection of scattered churches into a major American religious force. The revivals of the awakening inspired many to separate from the denominations in which they had been raised and become Baptists. Chief among these "Separates" was ISAAC BACKUS. Backus came to the conclusion, first, that only adults who had undergone a conversion experience could be considered Christian and, later, that only baptism by immersion was a valid rite of Christian initiation. In 1756, he organized a Baptist church in Middleborough, Massachusetts, one of more than 100 new Separate Baptist churches formed by disaffected Congregationalists in New England during the Great Awakening.

Baptists adapted well to the post-awakening religious climate in America, for their institutions embodied the most significant features of the awakening: lay leadership, local autonomy, and the ready acceptance of a voluntary system of church support. These emphases fit the country's democratic mood in the second half of the 18th century, and Baptist congregations increased dramatically from slightly fewer than 500 in 1775 to more than 1,100 by 1797.

As the 19th century began, the new wave of revivals in the SECOND GREAT AWAKENING

further aided Baptist expansion. The Second Awakening is best remembered for the emotionalism of the western camp meetings, protracted religious assemblies at which thousands of Baptists, Presbyterians, and Methodists gathered to hear preaching. Less spectacular than the revivals but just as important for Baptist growth was the formation of mission-oriented societies. These societies allowed congregations to maintain their nominal independence yet combine resources to aid the task of evangelism.

The General Missionary Convention (later called the Triennial Convention because it met every three years) was the first national body of Baptists. It was founded in 1814 to support the work of missionaries Adoniram Judson and Luther Rice. Although Judson and Rice had been sent to India as missionaries of the Congregational American Board of Commissioners for Foreign Missions (see MISSIONS, FOREIGN), they decided en route that only adult believers should be baptized. After their arrival in India, they resigned from the Congregational board and gained the support of the Baptists instead.

Although the Triennial Convention intended at first to promote all kinds of missionary, educational, and publishing activities, it decided in 1826 to limit its role to foreign missions. Other societies were formed to meet the convention's original publishing and home missionary aims: the Baptist General Tract Society in 1824 and the American Baptist Home Mission Society in 1832.

As their numbers grew, Baptists saw the need for educational institutions that would train the church's leaders. Their earliest college, Rhode Island College (now Brown University), was organized in Portsmouth, Rhode Island, in 1764. Under the leadership of James Manning, that school strengthened the intellectual life of the Baptists in the period before the Revolution. Francis Wayland, who served as the fourth president of Brown University from 1827 to 1855, reorganized the college

curriculum and published works that became the standard college textbooks of his day. In the early 19th century, many other Baptist colleges were founded that hold national stature today: Colby College and Bates College in Maine; Hamilton College in New York; Furman University and Wake Forest University in North Carolina; Mercer University in Georgia; and Bucknell University in Pennsylvania.

While eastern Baptists centralized their educational and missionary activities, Baptists on the southern and western frontier reacted against this concern for greater organizational unity. A Primitive, or Antimission, Baptist movement arose in opposition to the missionary societies and reform agencies. Primitive Baptists argued that Baptist missionary efforts not only threatened the autonomy of local churches, but also undermined the traditional Calvinist emphasis on divine election, implying that persons could, if they wished, choose whether to accept or reject God's eternal decrees. The doctrinal strictness of the Primitive Baptists gave rise to the "hard shell" label that still describes a small, ultra-conservative segment of the Baptist population in the South.

A far more serious challenge to Baptist unity occurred in 1845, when the slavery controversy permanently divided Baptists in the South from their fellow church members in the North. During the 1830s, it became increasingly clear that the Triennial Convention and the American Baptist Home Mission Society reflected the interests of the northerners who ran them. Thus, southern leaders complained that the Home Missionary Society concentrated its work in areas of the West where antislavery Baptists from the North were settling. A firm stand by northerners against appointing slaveholders as missionaries soon aroused Baptists in the South to action. A call was issued for a consultative convention to meet at Augusta, Georgia, in May 1845. There the SOUTHERN BAPTIST CONVENTION (SBC) was officially organized. Although

Baptists in the North at first insisted that their southern brethren were not truly separated from them, the bloody CIVIL WAR effectively sealed the division 20 years later.

In the era after the Civil War, the SBC became one of the major institutional expressions of the South's cultural identity. Despite its regional base, the SBC also emerged as the largest Protestant denomination in the reunited nation. At the same time, a major separation took place within the church's ranks that, while limiting the size of an already extensive denomination, demonstrated the overall strength of the Baptist religious ethos throughout the southern United States.

Within a few years after the Civil War ended, nearly 1 million black Baptists in the South had left the white-dominated churches and formed their own congregations. The absence of formalism and the democratic spirit and polity of Baptist churches had always appealed to African-American Christians. Slave churches appeared on southern plantations as early as the mid-18th century. The first black Baptist church was organized near Augusta, Georgia, in 1773, and in 1821, members of the Richmond African Baptist Missionary Society became the first American missionaries to Africa. NAT TURNER, the leader of the great slave revolt of 1831, was also renowned as a Baptist preacher. It is hardly surprising, therefore, that freed slaves began to exit the white churches in large numbers following the Emancipation Proclamation in 1863.

The first African-American Baptist denomination, now known as the NATIONAL BAPTIST CONVENTION, U.S.A., INC. and still among the largest black denominations in the United States, was organized in 1895. This body divided in 1915 after a dispute over the control of property and ownership of its publishing board. Although its basic beliefs were identical to the parent denomination, a new church, calling itself the NATIONAL BAPTIST CONVENTION OF AMERICA, INC. was formed. Then, in 1961,

a debate over the election of officers in the National Baptist Convention of the U.S.A., Inc. led to a further schism and the formation of the PROGRESSIVE NATIONAL BAPTIST CONVENTION, INC. Again, the concerns that separated the two groups were bureaucratic rather than doctrinal. During the CIVIL RIGHTS MOVEMENT of the 1950s and 1960s, several African-American Baptist clergy from the South, most notably MARTIN LUTHER KING, JR., and JESSE JACKSON, rose to national political and religious leadership.

Baptist life became further diversified in the mid-19th century with the arrival of immigrants from northern Europe who adopted a Baptist polity in the churches they formed in America. Some immigrants were already Baptists and either joined existing Baptist institutions or founded their own ethnic congregations. The Baptist General Conference, for instance, had originated within Swedish Pietism, a movement that emphasized simple biblical faith and rejected religious formalism. The first Swedish Baptist congregation in America was founded in Rock Island, Illinois, in 1852, and the term *Swedish* was dropped from the Baptist General Conference's name in 1945. The Baptist General Conference, whose present-day conservatism still reflects its roots in Pietism, now contains about 145,000 members.

Native-born Baptists also directed their home missionary efforts at these immigrants from northern Europe and brought many who were unchurched or seeking another faith into Baptist churches. The North American Baptist Conference, a small denomination of German ethnic origins, is an example of the fruits of such missionary outreach. A general conference was organized in 1865 to unite German-speaking Baptist congregations scattered throughout the East and Midwest. August Rauschenbusch, father of the famed SOCIAL GOSPEL advocate WALTER RAUSCHENBUSCH and a member of the faculty at Rochester Theological Seminary, was a prominent member of this

denomination. The conference has outgrown its once exclusive German heritage and claims approximately 67,000 members today.

After the Civil War, northern Baptists reluctantly gave up their claims on their brethren in the South and instead formed mission and education societies to increase their influence in urban areas and in the West. By 1907, various Baptist societies in the North united and formed the Northern Baptist Convention, later known as the American Baptist Convention and now called the AMERICAN BAPTIST CHURCHES IN THE U.S.A. The majority of Free Will Baptists in the North, remnants of an 18th-century schism over the question of the freedom of the human will to choose salvation, also joined the merger in 1911. The American Baptists have consistently identified with MAIN-LINE PROTESTANTISM and engaged in ecumenical relations with other denominations, including participation in both the Federal Council of Churches and its successor, the NATIONAL COUNCIL OF CHURCHES.

In the early 20th century, Baptists in the North, like all the major Protestant denominations, found themselves embroiled in internal controversies between fundamentalists and modernists over the proper interpretation of the Bible. Baptist clergyman HARRY EMERSON FOSDICK, who served a church in New York City, protested in his 1922 sermon "Shall the Fundamentalists Win?" against a growing spirit of exclusivity among conservatives. He pleaded for mutual forbearance between contending parties within an already divided Protestantism. Fosdick's advice went unheeded, however, and two new conservative Baptist denominations were born out of the struggle among northern Baptists: the General Association of Regular Baptist Churches and the Conservative Baptist Association, which today have about 1,400 and 1,100 U.S. churches, respectively.

Despite its numerical strength and doctrinal conservatism, even the Southern Baptist Convention witnessed the schism of a doc-

trinally rigorist movement from its ranks early in the 20th century. JAMES ROBINSON GRAVES, a Tennessee preacher who died in 1893, argued that the true church of Jesus Christ had, in unbroken succession from apostolic times, upheld the "old landmarks," namely the baptism of adult believers and congregational polity. Graves feared that the purity of the Baptist faith would be violated if Southern Baptists sought to work with churches that did not practice adult baptism. Although most Southern Baptists were not strictly opposed to Graves's position, his theological emphases stimulated controversy. When the SBC attempted to carry out mission work through its own centralized bureaucracy rather than through the local churches, an "anticonvention" force was born. This resulted in the formation of the separate American Baptist Association in 1905, a "Landmark" denomination that today contains approximately 250,000 members.

Despite the Landmark schism, the SBC has maintained both a distinctive conservative identity and a pattern of membership growth over the past 100 years. The church's organizational structure is complex, balancing the principle of local autonomy with cooperation on a denominational level. The SBC gained national exposure in the 1970s through the activities of its two most prominent members: the election of lay leader Jimmy Carter as president of the United States, and the founding of the conservative MORAL MAJORITY by Lynchburg, Virginia, minister JERRY FALWELL. In recent years, fundamentalists have gained control of the denomination and asserted that the Bible must be interpreted literally. This dispute over the scriptures has led to a small schism in the church's ranks, as some theological moderates chose to withdraw from the SBC.

There are now approximately 37 million Baptists who belong to more than 50 separate denominations in the United States. Nearly half belong to the Southern Baptist Conven-

tion, the largest Protestant denomination in the United States, which contains 15 million members. Other leading Baptist denominations include the National Baptist Convention, U.S.A., Inc.; the National Baptist Convention of America, Inc.; the Progressive National Baptist Convention, Inc.; and the American Baptist Churches in the U.S.A.

Beat movement Though the Beat poets and novelists of the post–World War II era are typically revered (or reviled) for their contributions to American literature, they also contributed significantly to American religion. By struggling to find a place in the American imagination for Asian religious traditions such as BUDDHISM, the Beats both anticipated and prompted the celebrated eastward turn of the 1960s and beyond.

The Beat movement constituted a revolt against postwar norms in literature, culture, and religion. That revolt, however, was also a protest *for* something. According to Jack Kerouac, the Catholic-born author of *On the Road* (1957) and other Beat novels and poems, “Beat” stood not for “beat down” but for “beatific.” “I want to speak *for* things,” he explained. “For the crucifix I speak out, for the Star of Israel I speak out, for the divinest man who ever lived who was German (Bach) I speak out, for sweet Mohammed I speak out, for Buddha I speak out, for Lao-tse and Chuang-tse I speak out.” Echoing Kerouac, the Jewish-born Beat poet

Allen Ginsberg described his signature poem “Howl” (1956) not as the revolt against civilization that many critics discerned but as a “pro-attestation, that is testimony in favor of Value.” Like Kerouac, he used religious language to describe his protest. “‘Howl’ is an ‘Affirmation’ by individual experience of God, sex, drugs, absurdity. . . . The poems are religious and I meant them to be.”

Kerouac, Ginsberg, and other Beats were arguing not simply for new literary forms but also for new types of spiritual experience. They frequently found that experience not in the church or synagogue but on the road. From the perspective of comparative religions, therefore, the peripatetic Beats shared much with pilgrims making their way to sacred shrines. Like pilgrims to Mecca or Jerusalem, the Beats were liminal, or border-zone, figures who expressed their social marginality by living spontaneously, sharing their property, dressing like hoboes (or not dressing at all), celebrating sexuality, seeking mystical awareness through drugs and meditation, acting like “Zen lunatics,” and stressing the sacred interrelatedness of all human beings. What distinguished the Beats from other pilgrims, however, was their failure (or refusal) to arrive at some fixed sacred center. The Beats lived, in short, not to arrive but to travel. In their lives and their literature, they appear not simply as pilgrims but as heroes of quest tales, wandering monks on a spiritual quest.

The Beats diverged from other seekers of their time in their interest in Asian religious traditions. While other Americans took solace in the Jewish and Christian texts such as Rabbi Joshua Liebman’s *Peace of Mind* (1946), Monsignor Fulton J. Sheen’s *Peace of Soul* (1949), and the Reverend Billy Graham’s *Peace with God* (1953), the Beats were discovering ZEN koans and Mahayana Buddhist sutras. They were also forging a far more radical ecumenism than the Judeo-Christian alliances other Americans were building in the postwar period. They incorporated into their worldviews not

only the Catholic background of Kerouac and the Jewish background of Ginsberg but also the insights of Gnosticism, mysticism, Native American folklore, Aztec and Maya mythology, Buddhism, and HINDUISM.

Of all these traditions, however, the Beats were drawn most strongly to Buddhism. The Beats' Buddhist interests are evident, for example, in Kerouac's *Dharma Bums* (1958). In that novel, Ray Smith (who stands in for Kerouac himself), encounters Japhy Ryder (a thinly veiled version of poet Gary Snyder), who initiates him into, among other things, the vexing practice of solving Zen koans, or word puzzles.

Like the heroes of TRANSCENDENTALISM who inspired them, the Beats championed individual spiritual experience over what RALPH WALDO EMERSON denounced as "corpse-cold" orthodoxies and worked to weave the truths of Asian religious traditions into their lives as well as their literature. They stand alongside the transcendentalists as important culture brokers who facilitated the encounter of modern Americans with the ancient religions of the East. Although Kerouac and Ginsberg have passed away, the Beat tradition continues in poets like Snyder, whose work reflects both the insights of formal Zen training in Japan and a commitment to the environment forged during hikes in the American Northwest.

Beecher, Henry Ward (1813–1887) Congregational minister and spokesman for liberal Protestantism, Henry Ward Beecher was one of the most popular preachers of his day. Called in 1847 to be pastor of the newly formed Plymouth Church in the fashionable Brooklyn Heights section of Brooklyn, New

York, Beecher believed above all else that religious thought should be adapted to the culture and times in which Christians lived. Christianity, he said, was essentially "a natural experience, . . . something to be enjoyed."

Son of the great church leader LYMAN BEECHER, Henry Ward Beecher was born in Litchfield, Connecticut, on June 24, 1813. He was also the younger brother of novelist and abolitionist HARRIET BEECHER STOWE. After graduating from Amherst College in 1834 and from Lane Seminary in Cincinnati in 1837, Beecher was ordained and served as minister of Presbyterian churches in Indiana, at Lawrenceburg (1837–39) and at Indianapolis (1839–47), before coming to the Plymouth Church.

Beecher preached openly in favor of social reform in the years before the CIVIL WAR, supporting rights for women and an end to slavery. During the 1850s controversy over the admission of the Kansas territory to the Union, he raised money from his pulpit to provide rifles (called "Beecher's Bibles") for the protection of antislavery northern settlers moving into Kansas. Throughout the Civil War, he was an outspoken supporter of the northern war effort, and in February 1865 he delivered an address at the flag-raising in Fort Sumter in Charleston, South Carolina, that signaled the restoration of federal control over the rebellious South.

Beecher was a prolific writer, public speaker, and religious editor. From 1861 to 1863, he ran the prestigious interdenominational weekly the *Independent*, and from 1870 until 1881, he edited the *Christian Union*. Successive volumes of his Plymouth Church sermons reached a nationwide audience. He not only compiled *The Plymouth Collection of Hymns and Tunes* (1855), but he also composed a novel (*Norwood*, 1867) that examined changing social and religious mores in post-Civil War America.

Beecher's natural charm and deemphasis of doctrinal questions helped attract a

Henry Ward Beecher, the brother of Harriet Beecher Stowe and popular 19th-century liberal preacher at Pilgrim Church in Brooklyn Heights. (Engraving by George E. Perkins)

large, affluent congregation to the Plymouth Church. Typical of the emerging Protestant MODERNISM of the day, Beecher only asked the members of his church to pledge personal loyalty to the spirit of Jesus. His acceptance of evolutionary thought and rejection of many of the key theological points of Calvinism eventually led Beecher and his church to leave the Congregational denomination altogether. As he warned students at Yale Divinity School in 1872, God's providence was always rolling forward, and ministers could not afford to become apostles of "the dead past" or allow new truths to pass them by.

Beecher provoked another type of public attention when a sexual scandal erupted around him in the early 1870s. Theodore

Tilton, a member of the Plymouth Church, accused Beecher of seducing his wife, Josephine. The ensuing controversy was discussed on 105 occasions in the *New York Times* in 1874, 17 times on the newspaper's front page. When *Tilton v. Beecher* went to court, newspapers throughout the country openly took sides between the litigants, and for a period liberal American Protestantism itself seemed to be on trial. After a six-month trial and eight days of deliberation, the jury in the case was unable either to convict or to acquit Beecher, a decision satisfactory to no one.

Following the trial, most of Beecher's congregation continued to support its pastor. Sullied but unrepentant, he remained their minister for another decade. Certainly one factor in Beecher's ongoing popularity was his ability to combine theological liberalism with social conservatism, thus mirroring attitudes prevalent within white middle-class Protestant circles at the end of the 19th century. Beecher's life and thought were in many ways the quintessential religious expression of the Gilded Age era. He served as minister of the Plymouth Church for 40 years, and his death in Brooklyn on March 8, 1887, occasioned a huge outpouring of grief both in New York City and across the nation.

Beecher, Lyman (1775-1863) A minister of both the Congregational and Presbyterian denominations and arguably the most influential clergyman of his day, Lyman Beecher's life illustrates many crucial forces at work within American Protestantism during the first half of the 19th century.

Beecher was born in New Haven, Connecticut, on October 12, 1775. He entered Yale College in 1793, and while there was converted during a revival led by Timothy Dwight, the president of the college. After graduation in 1797, Beecher became pastor at the Presbyterian church in East Hampton, New York. He won a reputation as a social reformer, and following Aaron Burr's fatal wounding of Alexander Hamilton, he undertook a crusade against dueling. Next, Beecher accepted a call to the Congregational church in Litchfield, Connecticut, where he served between 1810 and 1826. During the Litchfield years, the temperance movement elicited his special attention, and he published his *Six Sermons on Intemperance* in 1826.

Beecher initially viewed the 1818 disestablishment of Congregationalism in Connecticut as a grave "injury" to the cause of Christ and reported being thoroughly depressed for a long time afterward. In many ways, disestablishment in Connecticut symbolized the end of New England Puritan culture and its replacement by the new ethos of Protestant EVANGELICALISM. Thus, when Beecher later reflected on the religious revolution that had occurred, he realized that Christianity actually gained more than it lost. Cut loose from state support and thrown entirely upon their own resources, the churches had learned to exert new forms of influence through voluntary societies and revivals rather than through the "queues and shoebuckles, and cocked hats, and gold-headed canes" of the old order.

Beecher moved to the Hanover Street Congregational Church in Boston in 1826, and there he launched campaigns against two novel (and opposite) theological adversaries: Unitarianism emerging out of the Congregational churches of eastern Massachusetts, and the "new measures" of revivalism adopted by Presbyterian minister CHARLES GRANDISON FINNEY. Both movements, he believed, compromised the traditional Calvinist emphases on divine sovereignty and human sinfulness.

Beecher's struggle against Finney's activist style and unconventional revivalistic methods was particularly dramatic. Meeting in New Lebanon, New York, in July 1827, Beecher and Finney sought to work out a compromise concerning their differences, but the conference only increased the animosity. Beecher allegedly said to Finney: "You mean to come into Connecticut, and carry a streak of fire to Boston. But if you attempt it . . . I'll meet you at the State line, and call out all the artillerymen, and fight every inch of the way to Boston." Still, despite his hostility toward Finney, Beecher eventually repented of his remarks and welcomed Finney to Boston to lead a revival.

In 1832, Beecher attained further prominence by accepting a call to become president of Lane Theological Seminary, a Presbyterian school recently founded in Cincinnati. Beecher believed that the West had tremendous importance for the future growth of the United States, and as he wrote in *Plea for the West* (1835), it has to be saved from Roman Catholicism. Originally an address to raise funds for Lane, his *Plea* exemplified some of the worst aspects of anti-Catholic (see ANTI-CATHOLICISM) and nativist sentiment that had begun to swell in the late 1820s. Beecher's *Plea* opened with a hymn of praise to the future destiny of the United States. Beecher discussed Jonathan Edwards's millennial beliefs, how the thousand-year reign of Christ was to be established through the reforming efforts of Protestants in America. Beecher then continued with lurid descriptions of attempts by the pope, reactionary kings of Europe, and immigrants to seize the Mississippi Valley. Protestants had to be on guard, he warned, lest Catholics thwart their efforts to build a truly Christian nation.

In Cincinnati, Beecher also served as pastor of the Second Presbyterian Church, where his ideas about the doctrine of sin underwent profound changes. Influenced by both the revivalism and VOLUNTARIANISM then so preva-

lent in American Protestantism, Beecher came to believe more and more in the possibility of human progress. As a result, charges of heresy were brought against him in 1835 for allegedly abandoning traditional Presbyterian standards of orthodoxy. Although Beecher was acquitted, his heresy trial was among the first of many similar affairs that disrupted American Presbyterian life in the 19th century. It foreshadowed as well the impending division between the reform-minded New School Presbyterian faction and the doctrinally conservative Old School Presbyterian party that occurred two years later (see *NEW SCHOOL/OLD SCHOOL*).

Beecher retired from church work in 1843 and from the presidency of Lane in 1850. He spent the last years of his life lecturing and writing. His three-volume *Works* were published in 1852–53, and a two-volume autobiography was compiled and published by his children following his death. He was married three times and had 11 children, several of whom—Catherine, Edward, Henry Ward (see *BEECHER, HENRY WARD*), and Harriet (see *STOWE, HARRIET BEECHER*)—were also important figures in American religious history. After 1856, Beecher lived at Henry Ward's home in Brooklyn, New York, where, after gradually slipping into senility, he died on January 10, 1863.

Belavin, Tikhon (1865–1925) Tikhon Belavin, Russian Orthodox archbishop of

the Aleutians and North America from 1898 to 1907, envisioned and almost succeeded in creating a multiethnic Orthodox Church in North America. He was elected patriarch of Moscow in 1917. His steadfast leadership during the first years of Soviet persecution was recognized in 1988, when he was canonized as St. Tikhon the Confessor.

The son of a priest, Basil Belavin was born near Pskov in 1865 and educated at the Pskov Seminary and the St. Petersburg Theological Academy. Ordained after taking the monastic name Tikhon, he taught in seminaries and was consecrated as a bishop at the age of 32. In 1898, he was sent to lead the Russian mission in America, then called the Diocese of the Aleutians and Alaska.

As the only Orthodox bishop on the continent, Tikhon sought to organize the thousands of Orthodox and Eastern Rite Catholic immigrants pouring into North America. He shifted the mission's focus away from the Pacific Coast and attempted to cultivate a pan-Orthodox community with an American identity.

Taking the first step in 1899, Tikhon won permission to rename his jurisdiction the Diocese of the Aleutians and North America. In 1903, he won the approval of the Russian Holy Synod for a sweeping reorganization of the diocese, and requested more priests to help him attract Eastern Rite Catholics into Orthodoxy.

His goal was a cosmopolitan and autonomous "Orthodox Church in America," a single, unified church with a flexible and representative structure that would attract believers from many ethnic groups. His plan called for a single church in the United States and Canada to be led by a Russian archbishop. A number of auxiliary bishops would supervise ethnic jurisdictions, or vicariates. This, Tikhon argued, would permit each ethnic group to perpetuate its own language, traditions, and communal identity, while maintaining fundamental Orthodox unity.

After gaining the approval of the Russian church, Tikhon moved his seat from San Francisco to New York and assigned a new auxiliary bishop to Alaska and the West Coast. He extended the Russian synod's offer to consecrate a Syrian Orthodox priest, Raphael Hawaweeny of Brooklyn, who then took charge of a vicariate for Syrian Orthodoxy.

Tikhon organized a Serbian vicariate in 1905 and then attempted, with very little success, to persuade Greek immigrants to join the Russian-sponsored archdiocese. He also founded several key institutions, including St. Tikhon's Monastery in South Canaan, Pennsylvania, and a seminary in Minneapolis.

Among the first modern Orthodox bishops to emphasize a style of leadership that involved consultation of the laity and the clergy, Tikhon summoned the first representative council held by an Orthodox body in America to Mayfield, Pennsylvania, in 1907. It approved the incorporation of the archdiocese as the "Russian Orthodox Greek Catholic Church of America."

Recalled to Russia in 1907, he was later enthroned as metropolitan of Moscow. Elected patriarch of Moscow by the famous "Sobor," or reforming council, in 1917, Tikhon's resistance to Communist terror made him a revered figure. Hundreds of thousands followed his cortege through the streets of Moscow in 1925.

The structure he fashioned for North American Orthodoxy did not survive the upheavals of World War I and the Russian Revolution. Separate ethnic jurisdictions emerged during the 1920s, and Orthodox union in America remains an unresolved issue.

Bellamy, Joseph (1719–1790) Joseph Bellamy was a Congregational minister, disciple of JONATHAN EDWARDS, and early leader of the NEW DIVINITY movement of the mid-18th century. Along with other New Divinity theologians, Bellamy helped adapt Calvinist teachings about sin to the rationalist intellectual trends of his day.

Bellamy was born in Cheshire, Connecticut, on February 20, 1719. He graduated from Yale College in 1735 and, as was customary for the time, trained for the ministry as part of Jonathan Edwards's household. Bellamy was ordained at Bethlehem, Connecticut, in 1738, and he remained as pastor of that church for the rest of his life. When a revival began in Bethlehem, Bellamy not only enthusiastically supported it, but also became known as an active New Light (see NEW LIGHTS/OLD LIGHTS) minister and defender of the GREAT AWAKENING generally. He sought to be a conscientious advocate of both the traditional CALVINISM and the experiential religious faith that Edwards himself so eloquently championed.

Despite his insistent orthodoxy, Bellamy introduced elements that moved away from Edwards's theological positions. These changes significantly influenced future developments in American Protestant thought. Seeking, for example, to justify the ways of God to philosophers and theologians shaped by the ENLIGHTENMENT, Bellamy exonerated the divine role in allowing sin. He emphasized instead how God's permission of evil became the means of achieving the greatest possible good for humankind. Most notable of all was Bellamy's reinterpretation of the doctrine of atonement. He represented the sacrifice of Christ not as a legal "satisfaction" for human wrongdoing or the appeasement of an angry deity (the traditional views) but as a working out of God's abundant love for the world.

Bellamy published two major theological works: *True Religion Delineated* (1750), a lengthy treatise in which genuine Christianity was defended against the extremes of both theological formalism and spiritual enthusiasm; and *The Wisdom of God in the Permission of Sins* (1758), which discussed the problem of evil. Bellamy died at Bethlehem on March 6, 1790.

Berrigan, Daniel (1921–) Daniel Berrigan, a Jesuit priest (see JESUITS), poet, and political activist, was born in Virginia, Minnesota, on May 9, 1921. Although his father, Thomas, left the Catholic Church during Daniel's youth, the young man remained a staunch Catholic and joined the Jesuits in 1939 after he graduated from high school. He was ordained in 1952 and served in various ministries, including time as a college professor at LeMoyne College.

He early developed a reputation as a poet, publishing his first collection that included *Time Without Number* (1957), an exploration of religion and introspection that has been compared to the devotional poems of John Donne. By the early 1960s, under the influence of his brother Philip (see BERRIGAN, PHILIP) and THOMAS MERTON, he had developed a strong opposition to the Vietnam War. Together they established an interfaith coalition against the war in Vietnam.

Initially, this organization advocated for a change in policy through public pronouncements, vigils, and letter writing. Eventually, the Berrigan brothers felt that more extreme actions had to be taken, and they joined

seven other activists to undertake a very public statement against the draft. On May 17, 1968, they entered the draft board in Catonsville, Maryland, and removed nearly 400 draft files, which they took outside and burned. The "Catonsville Nine," as they became known, issued a public statement condemning the war and the failure of the Catholic Church and other religions to condemn it.

Arrested and convicted for this act, Berrigan received a three-year prison sentence. Ordered to prison in April 1969, rather than surrender to authorities, he went underground. He managed to elude authorities for several months until he finally was apprehended by FBI agents in August. These events led to several writings, including *Block Island* (poems written while he was a fugitive), *Prison Poems*, and a play, *The Trial of the Catonsville Nine*.

Following his release from prison in 1972, he moved to France for a while. There he began a series of meetings with the Vietnamese Buddhist monk Thich Nhat Hanh, also a peace activist. These meetings and conversations led Berrigan to reflect on issues related to political activism and meditation, as well as the relationship between Buddhist and Catholic religiosity. In response to these conversations, Berrigan wrote *The Raft Is Not the*

Daniel Berrigan speaking at an anti-Vietnam War rally. (Getty)

Shore: Conversations Toward a Buddhist/Christian Awareness.

With the end of the Vietnam Wars, Berrigan and his brother turned their attention to issues of nuclear disarmament, forming what became known as the Plowshares Movement. Drawing from their actions against the war in Vietnam, they undertook a series of direct actions against military weapons, arguing that “swords shall be beaten into plowshares,” as the phrase has it in the biblical book of Isaiah. The most well-known was their initial action against a missile plant in King of Prussia, Pennsylvania where the Berrigans and six other acquaintances entered a missile plant and hammered on two nose cones, poured blood over company documents, and then offered a prayer for peace. Charged with more than 10 different crimes, the trials of the Plowshares Eight would go through more than nine years of retrials and appeals before they finally were convicted and sentenced to nearly two years in prison.

Daniel Berrigan views his opposition to war and violence through the lens of Catholicism’s doctrine of the seamless garment. This view sees all forms of violence and the taking of life as a whole. He therefore also is a vocal opponent of abortion and the death penalty. He understands both to be violence against human life and therefore inconsistent with the Catholic religion. For him, the call of Christ is to peace, justice, and equality. As a pastor, he is called to serve those in need and to ensure that the powers of this Earth do not act against the message of the Christ. This deep religious feeling comes across readily in his poetry. Critics tend to commend him as one of the rare poets who successfully incorporates political views into his work without grossly distorting their artistic merit. Daniel Berrigan currently serves as the poet in residence at Fordham University.

Bibliography: Daniel Berrigan, *Go From Here: A Prison Diary* (San Francisco: Open Space, 1968); ———, *No Bars to Manhood* (Garden City, N.Y.:

Doubleday, 1970); ———, *The Trial of the Catonsville Nine* (Boston: Beacon Press, 1970); ———, *Block Island* (Greensboro, N.C.: Unicorn Press, 1985); ———, *To Dwell in Peace: An Autobiography* (San Francisco: Harper & Row, 1987); Richard Curtis, *The Berrigan Brothers: The Story of Daniel and Philip Berrigan* (New York: Hawthorn Books, 1974).

Berrigan, Philip (1923–2002) Philip Berrigan, who, along with his brother Daniel, became one of the leading religious voices against the Vietnam War and nuclear weapons, was born on October 5, 1923, in Two Harbors, Minnesota. He was raised in Syracuse, New York, where he attended college for a semester before entering the army in 1943 and served during the Battle of the Bulge. Berrigan reported that his encounter with racism in the deep South during military training and his war experiences turned his thoughts to civil rights and pacifism.

Following the war, Berrigan attended Holy Cross College, graduating in 1950. He then attended a Josephite Seminary and was ordained in 1953. During the 1950s and 1960s, Berrigan was an active participant in civil rights marches and sit-ins.

Berrigan was increasingly drawn to oppose the VIETNAM WAR. His participation in an act of civil disobedience against the draft in 1967 as part of the “Baltimore Four” led him to become the first priest arrested for an act of politically motivated civil disobedience. For this participation, he was sentenced to six years in prison, although he was released after serving only one year.

Berrigan, his brother Daniel, and others almost immediately undertook a more dramatic protest in 1968 by burning draft files with a homemade version of napalm. This act also led to his arrest and imprisonment and to Daniel’s play entitled the *Trial of the Catonsville Nine*.

After leaving prison, Berrigan and several others founded Jonah House in Baltimore,

Maryland, in 1973. Dedicated to nonviolence, resistance, and community, Jonah House became the center of Berrigan's opposition to nuclear weapons, war, poverty, and what he saw as injustice. That same year, he married Elizabeth McCalister, a Roman Catholic nun, and the couple eventually would have three children. For this action, Philip was deprived of his right to perform priestly duties, and McCalister's religious orders were revoked.

From Jonah House, Berrigan, his brother, and McCalister coordinated the Plowshares Movement. Drawing from their actions against the war in Vietnam, the Plowshares Movement undertook a series of direct assaults on military weapons throughout the war, arguing that "swords shall be beaten into plowshares," in the phrase of the biblical book of Isaiah. The most well-known was their initial action against a missile plant in King of Prussia, Pennsylvania, where the Berrigans and six other acquaintances entered a missile plant and hammered on two nose cones, poured blood over company documents, and then offered a prayer for peace. Charged with more than 10 different crimes, the trials of the "Plowshares Eight" would go through more than nine years of retrials and appeals before they finally were convicted and sentenced to nearly two years in prison. Philip Berrigan continued these direct actions through 1999 and in the course of his life spent nearly 11 years in jail or prison.

In the 2000s, he continued his opposition to all forms of war and violence, speaking out against both Gulf Wars and against American and NATO intervention in Kosova. Increasingly weakened by cancer, he died on December 6, 2002. His brother Daniel performed the funeral, and Philip was buried on the grounds of Jonah House.

Common Courage Press, 1996); Richard Curtis, *The Berrigan Brothers: The Story of Daniel and Philip Berrigan* (New York: Hawthorn Books, 1974).

Besant, Annie Wood See THEOSOPHY.

Bible schools Bible schools were institutions founded by conservative Protestants in the late 19th and early 20th century to prepare men and women to be pastors, missionaries, and Sunday school teachers. The schools offered courses primarily in the interpretation of the Bible, religious pedagogy, and techniques of Christian evangelism (see EVANGELICALISM). As religious historian Ernest R. Sandeen once asserted, Bible schools served as the "headquarters" of American FUNDAMENTALISM.

At the end of the 19th century, several Protestant leaders turned their attention to forming schools for lay people. The earliest Bible school was the Baptist Missionary Training School for women, established in Chicago in 1881. The creation of similar institutions followed in rapid succession. A. B. Simpson, founder of the Christian and Missionary Alliance, opened the Missionary Training Institute in New York in 1882. Popular urban revivalist DWIGHT LYMAN MOODY raised \$250,000 in 1887 to develop the Chicago Evangelization Society. A formal, year-round school emerged out of that effort two years later, and renamed Moody Bible Institute in 1900 in memory of its founder. Baptist minister A. J. Gordon, who hoped to recruit a dedicated band of overseas missionaries, formed the Boston Missionary Training School in his church in 1889.

The Moody Bible Institute soon became the standard against which all other Bible schools were measured. Often called the "West Point of Fundamentalism," it was the largest and richest institution in the movement. Located in downtown Chicago, the Moody Bible Institute began as a three-story building, but by 1927 it owned 34 buildings and several

city blocks, valued at \$4.5 million. The area around the school was filled with students day and night. By the late 1920s, between 30 and 40 faculty members ran a two-year program that enrolled more than 1,000 students each term. Filled with knowledge of the Scriptures they gained at Moody, students were sent out together to convert Chicagoans to the Christian faith.

Most of the men and women who studied at the early Bible schools were relatively mature, usually in their mid-20s or older. Many had never pursued a formal education but had worked in blue- and white-collar jobs. Since at first there were no sleeping or eating accommodations for students, they commuted to school from their homes. These schools usually were oriented to educating laity, not clergy. As a consequence, women usually accounted for a larger portion of the student body. Uninhibited by usual educational conventions, the Bible schools attracted many people, especially women, who previously had little or no access to formal theological instruction.

The chief textbook of the institutes was, of course, the Bible. While Bible study in these schools was designed for conservative theological purposes, instructors often considered themselves reformers in scriptural analysis. Many teachers believed in mastering the original Hebrew and Greek texts of the Old and New Testaments to foster understanding of the Bible's true meaning. Like most American fundamentalists, Bible school teachers assumed that ordinary human beings were capable of gaining knowledge of the world through the use of their senses. Thus, students were taught to study the Scriptures through the "inductive method," that is, reading the Bible with a commitment to uncovering the "facts" it contained.

Focused on the Bible, an entire course of study took either one or two years and emphasized the practical application of the learning gained in the classroom. As Moody stated in

his institute's first prospectus, "study and work go hand in hand." A. B. Simpson, moreover, criticized the methods the mainline churches had used to educate their clergy. He argued that Christianity needed "practical men, men that are in touch with their fellowmen, . . . men that have been taught to go down into the depths and, hand to hand and heart to heart, pluck sinners as brands from the burning."

The heyday of the Bible schools ran, roughly, from 1885 to 1945. In that period, more than 100 schools were established in the United States. After the early 1940s, however, leaders in the older institutions became more concerned with academic standing than with providing the popular, practical education they once championed. This concern for academic respectability meant that the Bible schools generally moved away from their former distinctive status and closer to the American educational mainstream. A number of the largest Bible schools now subscribe to their own accrediting agency, the American Association of Bible Colleges. With their raised educational standards and increased liberal arts offerings, many of these institutions, for example, Gordon College in Wenham, Massachusetts, and Trinity College in Bannockburn, Illinois, today are indistinguishable from other Christian colleges and seminaries.

Bible societies Bible societies are religious organizations formed to publish and distribute copies of the Bible. Although the Bible is certainly not just a Protestant book, the Protestant reformers of the 16th century stressed that, as the word of God, the Bible was an accurate, self-interpreting book that even the simplest Christian could comprehend. As a consequence of that belief, the wide dissemination of the Scriptures always has been an

important concern of Protestants. The first major Bible publisher in the United States was the American Bible Society (ABS), founded in 1816, while the Gideons International, famed for the Bibles it places in hotel rooms, is the most widely known Bible society today.

In the mid-17th century, Puritan minister John Eliot learned the Massachusetts language and translated the Bible in order to aid in evangelizing Native Americans. The earliest Bible published in America in a European language was an edition of Martin Luther's German Bible, released in 1743. Prior to the American Revolution, the right to distribute the "authorized" English translation of the Old and New Testaments (the King James Version of 1611) belonged solely to the university presses of Oxford and Cambridge. When the War for Independence cut off communications between England and America, Robert Aitken of Philadelphia printed the first American editions of the King James Version: the New Testament in 1777, and the entire Bible in 1782. When the conflict ended, however, the American market was again opened to the British publishers, leaving Aitken with a large, unsold stock of books.

The Society for the Promotion of Christian Knowledge, established by the Church of England in 1698 to supply reading matter for clergy in British colonies, was a forerunner of the later Bible societies. The British and Foreign Bible Society, formed in London in 1804, provided the modern prototype. In the first two decades of the 19th century, more than 100 Bible societies based upon the English model were founded in America. Beginning in 1808 with the Philadelphia Bible Society, these were part of the grand Protestant missionary effort, often called the EVANGELICAL UNITED FRONT, that was inspired by the SECOND GREAT AWAKENING. Although some organizations were tiny operations that dispensed only a few hundred Bibles each year, together their reach extended throughout the young nation.

The most formidable organization was the American Bible Society. Formed originally in 1809 as the New York Bible Society, it was the strongest of the many local and state groups. In 1816, a convention of delegates representing various regional societies assembled in New York City and renamed the society, giving it a national scope. Although this idea was first opposed by some local societies, especially by the Philadelphia Bible Society, the organization was completed, and Presbyterian layman Elias Boudinot (the first president of the United States Congress) was chosen as chairman of the ABS board. Led principally by Protestant laymen, the ABS adopted the policy of the British and Foreign Bible Society, namely, to publish the Scriptures "without note or comment."

Within a year of the founding of the ABS, 41 other societies aligned themselves with it as auxiliaries. By 1818, it had begun to appoint agents to travel within the United States seeking donations and subscriptions. The early accomplishments of the ABS were astounding. It distributed nearly 100,000 Bibles in the first four years of operation. Between 1829 and 1831, the ABS printed and distributed more than 1 million copies of the Scriptures, at a time when the total population of the United States was only around 13 million. Still strong today, the ABS reported that in 2004 it distributed nearly 3.5 million Bibles and 3.5 million portions of the Scriptures yearly.

Another 19th-century Bible society emerged out of a controversy over the translation of a portion of the biblical text. A schism occurred in the ranks of the ABS in 1835, when Baptists protested that the Greek verb *baptizein*, translated as "baptize" in the King James Version, should read "immerse" instead. Since this dispute concerned the Baptist practice of baptizing candidates by full immersion, ABS members who were not Baptists refused to yield and alter the traditional English wording. As a result, Baptists withdrew and formed their

own organization, the American and Foreign Bible Society, in 1836. Further quarrels among the Baptists led to the creation of the American Bible Union, organized in 1850 with the financial backing of philanthropist William Colgate, for whom Colgate University is now named. However, following the Civil War, the rift between the ABS and American Bible Union was healed, and Baptists rejoined the larger organization.

Certainly the most visible Bible society in the present day is the Gideons International. Founded in 1899 as the Christian Commercial Travellers Association of America, the society contained a group of business and professional people who were committed to lay evangelism. The Gideons took its name from the Book of Judges, in which the victory of the Israelite leader Gideon over his pagan enemies is described. In 1908, the Gideons began their now-familiar task of distributing Bibles (mostly the King James Version in the United States) in hotels, hospitals, prisons, and schools. More than 250,000 members belong to the organization worldwide today, and Gideon workers annually distribute more than 63 million Bibles in 180 countries.

biblical interpretation The Bible (Hebrew Old Testament and Greek New Testament) has been regarded by most American Christians throughout the centuries as the principal source of religious authority. Since the Reformation of the 16th century, Protestants have stressed that the Bible is both normative for faith and practice and accessible to the average reader. The remark made in 1809 by Thomas Campbell, one of the founders of the Disciples of Christ, has certainly been typical of much American religious belief: "Where the Scrip-

tures speak, we speak; where the Scriptures are silent, we are silent."

The serious study and interpretation of the Bible in America began with the Puritan settlement of New England in the 17th century. Harvard College, founded in 1636, was named for the young Puritan minister who died in 1638 and left his library to the new school. Of the more than 300 volumes that John Harvard owned, more than half were biblical commentaries and similar works. Scriptural analysis, of course, was not an end in itself, but part of the process by which Christians gained an understanding of God's dealings with humankind. In the Bible, Puritans found teachings that applied not simply to the redemption of individuals but to the well-being of society as well.

Concern for the Bible remained strong during the 18th and early 19th century. In the GREAT AWAKENING, the period of intense spiritual excitement that swept through the colonies in the 1740s, Americans believed that the Scriptures contained the key to sin and salvation. In the War for Independence, Americans again looked closely at their Bibles, this time to find religious justification, usually in millennial (see POSTMILLENNIALISM) themes, for their revolt from Great Britain. And after the Revolution, Protestant leaders considered the possibility of placing a copy of the Scriptures in the hands of every American citizen. During the SECOND GREAT AWAKENING in the early 19th century, moreover, more than 100 BIBLE SOCIETIES were formed to meet the challenge of publishing and distributing the Scriptures. Those Bible societies were part of a grand, interdenominational missionary effort often called "the Benevolent Empire."

So strong was the belief in the importance of reading the Bible that Protestant leaders pressed it forcibly upon many who did not wish to receive it. As a system of public schools began to develop, for example, spokesmen for that movement envisioned the Bible, especially the King James Version (the

authorized translation for English-speaking Protestants), as an essential part of the standard curriculum. The growth of the Roman Catholic population of the United States in the mid-19th century, however, led to serious conflict over this issue.

Many Catholics either did not speak English or used an English version of the Bible different from the King James. They strongly opposed the Protestant standard. When Francis Patrick Kenrick, Roman Catholic bishop of Philadelphia, petitioned city officials to allow Catholic children to hear readings from the Catholic Douay translation instead of the King James Version, an outcry ensued. Protestant mobs, believing they were defending the Bible, formed anti-Catholic organizations and rioted outside Catholic churches in Philadelphia.

Rival interpretations of the Bible also provided a crucial focus for the controversy over slavery before the CIVIL WAR. For most defenders of the institution, the acceptance of slavery in biblical times seemed sufficient proof that God justified holding human beings in bondage. Relying on a literal reading of the Scriptures, proslavery advocates in the South noted how the patriarchs of the Old Testament had owned slaves. They also cited the apostle Paul's return of a runaway slave to his master Philemon. White southern Christians argued that slavery represented a God-given opportunity to present the Bible and teach the faith to unconverted Africans, thereby saving the souls of their fellow human beings and—they hoped—keeping them docile.

African Americans (see AFRICAN-AMERICAN RELIGION), of course, had their own interpretations of the Gospel their masters preached to them. While whites might emphasize passages in the Bible that seemed to justify slavery, blacks focused upon biblical promises of liberation for God's chosen, but oppressed, people. Old Testament narratives were especially meaningful: Moses leading the enslaved Israelites from Egypt, Daniel in the lion's den,

and the rescue of Shadrach, Meshach, and Abednego from the fiery furnace. In the New Testament, the promise of the book of Revelation that the rulers of this world would be destroyed in an approaching age of cataclysm inspired African Americans to dream of future vindication. And Jesus the suffering servant heartened many like slave preacher NAT TURNER, who before his hanging asked his captors if they knew that Christ, too, had been executed.

Among abolitionists in the North, the liberating principles of the Bible also held great weight. HARRIET BEECHER STOWE's novel *Uncle Tom's Cabin*, for instance, presented a Christ-like black hero whose death was intended to redeem white Americans from the sin of slavery. Another antislavery leader, Presbyterian minister Albert Barnes of Philadelphia, declared that "the principles laid down by the Saviour and his Apostles are . . . opposed to Slavery, and if carried out would secure its universal abolition." And the title of abolitionist THEODORE DWIGHT WELD's tract, *The Bible Against Slavery*, conveyed not only its author's belief that the Scriptures condemned human bondage, but also the convictions of a significant portion of the Protestant religious community in the North.

Despite disagreement about the Bible's teaching on slavery, most American Christians in the mid-19th century assumed that the Scriptures were infallible and divinely inspired. This trust in the essential veracity of the Bible depended upon a form of biblical interpretation based on SCOTTISH COMMON SENSE REALISM. A fundamentally optimistic philosophy, it allowed people to have great confidence in their own powers of reason. As a consequence of this emphasis on the certainty of human knowledge, Common Sense Realism led believers to assume that the words they read in the Bible were trustworthy. This philosophy provided the intellectual foundation for the doctrine of the INERRANCY of Scripture. As CHARLES HODGE, a professor at

Princeton Seminary, asserted, the Bible was a “store-house of facts,” truthful in every detail, whether scientific, historical, or doctrinal.

By the end of the 19th century, however, the “higher criticism” of the Bible began to appear in American academic circles. This approach, which originated in Germany, undermined commonly accepted beliefs about the Bible and called into question the concept of scriptural inerrancy. A host of questions about the authenticity and authorship of the Bible was raised, as the Bible’s text was examined for the first time in a critical light. Did Moses really write the first five books of the Old Testament? How could the story of creation that Genesis described be harmonized with the theory of EVOLUTION? How true were the stories of Noah and the flood or of Moses and the Red Sea?

The 1893 heresy trial of Presbyterian minister CHARLES AUGUSTUS BRIGGS of New York reveals the deep divisions within late 19th-century Protestantism over the Bible’s proper interpretation. Throughout the 1880s, Briggs had written extensively about the higher-critical method of scriptural analysis. After the publication of his book *Whither?*, in which he asserted that divine revelation evolves over time, he came under intense criticism from his church’s most conservative wing. In 1891, when Briggs contradicted orthodox Protestant belief and denied that every word of the Bible was inspired by God, he was brought to trial for heresy. Convicted for what was deemed false teaching, he eventually withdrew from the Presbyterian ministry.

Briggs’s battle with Presbyterians over the Bible was one of the opening rounds of a protracted struggle between theological liberals and theological conservatives that continued into the next century. A series of pamphlets entitled *The Fundamentals* (from which the term FUNDAMENTALISM derives) encapsulated conservative teaching about the Bible’s dependability. Composed of 12 volumes published between 1910 and 1915, *The Fundamentals*

dealt with a number of topics, but the interpretation of Scripture was a central concern. Approximately one-third of the articles dealt with the Bible and defended it against liberals who questioned the validity of portions of its text. Although each author carefully nuanced his position, all believed that biblical teachings were not only scientifically verifiable but also errorless.

The Fundamentals themselves did not immediately have a major effect either on the American churches or on American culture. A later controversy over the introduction of EVOLUTION into the curriculum of public schools, however, symbolized how far apart American Christians had grown. In the 1920s, several southern states passed laws forbidding instructors from mentioning any theory that denied the divine creation of humanity as taught in the Bible. John T. Scopes, a biology teacher in Dayton, Tennessee, challenged the law in 1925. He was brought to trial and convicted, but the verdict was later overturned by a higher court.

The SCOPES TRIAL became a forum for the now-famous debate between the great Christian statesman WILLIAM JENNINGS BRYAN and the agnostic trial lawyer Clarence Darrow. Their meeting was a study of contrasts: One side represented small-town America, poorly educated but militantly committed to the Bible; the other side saw itself as urbane and forward-looking in religious matters. When Bryan was called to testify on the veracity of the Bible, Darrow’s cross-examination ridiculed his opponent’s beliefs and made Bryan a laughingstock to the intellectually sophisticated. Although American Christians had earlier assumed that the Bible and the natural world fit harmoniously together, the Scopes trial revealed that the language of science and traditional religious language were no longer compatible in modern America.

Today the higher criticism of the Bible is generally accepted as the standard for interpretation in mainline Protestantism and in

Roman Catholicism. This approach encourages a somewhat skeptical, but still reverent, approach to the scriptural text. Although liberal Protestants and Roman Catholics believe the Bible contains God's word, not every word in the Bible must be believed as literally true.

Among evangelical Protestants and other moderately conservative Christians, the primacy of the Bible as the medium of divine revelation is emphasized more strongly than it is among theological liberals. Nevertheless, many evangelicals accept modern scriptural criticism as a tool for better understanding the Bible.

Fundamentalists today continue to insist on the infallibility of the Bible. While they are willing to concede that current editions may contain textual impurities, they also believe that the Bible's original text is without error. In recent decades, the Lutheran Church—Missouri Synod and the Southern Baptist Convention have experienced divisions between fundamentalists and evangelical moderates over the proper interpretation of the Bible. Despite protests from moderates, the fundamentalist position has been accepted as normative by the leadership of both denominations.

Black Jews The phrase *Black Jews*, or *Hebrews*, refers to several African-American religious movements that proclaim Judaism as the true religion of African Americans and claim a racial connection with the tribes of Israel either through descent from the Queen of Sheba and the Ethiopian Jews (Beta Israel) or the 10 lost tribes of Israel. The Judaism of these movements varies greatly, from the syncretistic mix of Christianity, Judaism, and black nationalism of the Church of God and Saints of Christ to the more orthodox Judaism of the Commandment Keepers Congregation of the Living God.

As early as the second decade of the 20th century, itinerant black preachers traveled the South declaring that blacks were descendants of the Jews and that Judaism was their true religion. William Crowdy organized the Church of God and Saints of Christ in Lawrence, Kansas, in 1896, moving the headquarters to Philadelphia four years later. In 1917, following Crowdy's death, the headquarters were moved to Belleville, Virginia, soon becoming the largest of the Black Jewish sects. It is also the least Judaic in its religious forms. The church teaches that blacks are the descendants of the lost tribes of Israel (the reason for its inclusion among the Black Jews), while its doctrine is a syncretistic mix of black nationalism, Judaism, and Christianity. It demands a confession in Jesus Christ, and has baptism by immersion, Communion with water and unleavened bread, feet-washing, and the holy kiss as sacraments.

Prophet F. S. Cherry founded the Church of God (Black Jews) in Philadelphia. A seaman and railway man for much of his life, Prophet Cherry was self-educated, picking up a good knowledge of both Yiddish and Hebrew. He claimed to have received a vision from God to return to America to preach the true religion

to his people: that the blacks are the true Jews, that Judaism is their natural religion, and that the world will not be improved until the Black Jews get into high places.

Even closer to traditional Judaism is the Commandment Keepers Congregation of the Living God. Centered in Harlem and primarily composed of West Indian immigrants, the Commandment Keepers Congregation was organized in 1919 by Wentworth Arthur Matthew (1892–1973). Born in Lagos in modern-day Nigeria in 1892, he arrived in Harlem via St. Kitts in 1911. There he fell under the influence of MARCUS GARVEY and A. J. Ford, music master of the Universal Negro Improvement Association (UNIA). Ford, occasionally confused by some with W. D. FARD, the founder of the NATION OF ISLAM, identified blacks with the Jews of the Hebrew Bible and taught that blacks were the descendants of the ancient Israelites who would be freed by God from racism and oppression.

Failing to convince Garvey to adopt Judaism as the religion of the UNIA, Ford organized the Beth B'nai Abraham in Harlem in 1924. During the 1920s, the rediscovery of the Ethiopian Jews (Beta Israel) provided support for Ford's views. In 1930, Ford left the United States for Ethiopia, handing leadership of the Beth B'nai Abraham to Matthew, who merged it with the Commandment Keepers. Matthew moved progressively toward Orthodox Judaism and increasingly identified African Americans with the Ethiopian Jews, arguing that blacks had to recover the nationality and religion that had been stolen by the whites who had enslaved them.

Perhaps the most familiar of all the Black Jews due to the difficulties in which they have found themselves is the Original Hebrew Israelite Nation, or Black Hebrews. Claiming descent from the 10 lost tribes, the Black Israelites attempt to follow Orthodox Judaism and a form of black nationalism. Believing that Israel is their true homeland, a contingent left Chicago to settle there in 1971. Although

most of these returned to the United States after the Israeli rabbinate refused to recognize their claim to be Jews by birth, a large number remained, eeking out an existence in a settlement in the Negev. Since many of them had renounced their American citizenship and were refused Israeli citizenship, they lived as stateless persons for more than two decades. In the early 1990s, the Israeli government agreed to grant them citizenship in return for formal conversions. Although some accepted the offer, others refused, and in 2004, the Israeli government granted them permanent residency status and also exempted them from mandatory military service.

Most of the members live communally near the Israeli city of Dimona in a former immigrant absorption center. They are vegans and abstain from alcohol, other than wine that they make themselves, and both illegal and pharmaceutical drugs. The members are renowned for their health and vigor.

Theologically, they reject the oral Torah and the orthodox view that Jewish membership is passed through a person's mother. They refuse to acknowledge modern-day Jews as the descendants of the original Twelve Tribes of Israel and maintain that white Jews have stolen the religion, language, and culture of the "true Jews," a position that readily brings them into conflict both with the Israeli rabbinate and the Israeli government.

One of the most controversial of all the movements is the Nation of Yahweh. An offshoot of the Black Hebrews, the Nation of Yahweh was formed in the late 1970s by Hulon Mitchell, Jr., who declared himself Yahweh ben Yahweh. Based primarily in the Miami-Dade County area, the Nation of Yahweh became known both for its social and philanthropic activities as well as for its assertion of black supremacy and separatism. Yahweh ben Yahweh ruled the movement with near absolute control and seemingly was willing to use violence and even murder against those who opposed him. In May 1992, Mitchell was

convicted of conspiracy in ordering the murders of several opponents. He was sentenced to 18 years of imprisonment but was released on parole in 2001. Following his release from prison, he and several of his followers moved to Canada, where he has attempted to reorganize his ministry. Other members remain in Miami, although that group has struggled to distance itself from Yahweh ben Yahweh and the traditional teachings of racial separatism.

The various Black Hebrew movements had their strongest growth during the 1970s. At that time, their beliefs, a mixture of black pride and black identity, found a ready hearing among urban blacks. With growth, however, came division and turmoil. By the end of the 1990s, most groups had shrunk to only a few hundred members. Strongest in Chicago, they also could be found in Newark, New York, Philadelphia, and a few other major cities.

Blavatsky, Helena Petrovna (1831–1891)

Helena Petrovna Blavatsky is renowned as a cofounder of the Theosophical Society (see THEOSOPHY) and one of America's most controversial mediums, yet relatively little is known about her life. After Blavatsky's death in London in 1891, HENRY STEEL OLCOTT, her closest friend and Theosophical collaborator, admitted that she remained even to him "an insoluble riddle." That admission undoubtedly would have pleased Blavatsky, who went to great lengths to shroud her life in secrecy.

Blavatsky was born to Russian nobles—her father was an army officer and her mother a novelist—in Ekaterinoslav in the Ukraine in 1831. While a teenager, she married Nikifor Blavatsky, a provincial governor of the czar. She left her husband soon thereafter, however, and fled to Constantinople and a life of adventure in 1849. Blavatsky claimed that she spent her next 25 years traveling the world as a pilgrim, sitting at the feet of gurus and undergoing initiations into ancient occult mysteries in, among other places, Tibet.

During her travels, Blavatsky was introduced to SPIRITUALISM and became a medium. While in Cairo in 1871 and 1872, she attempted to launch a Spiritualist society, but she lacked the organizational skills to sustain the following her considerable charisma attracted, and her "Société Spirite" collapsed. In 1873, she moved to New York, where she earned a reputation as a rough-talking, chain-smoking bohemian who ate too much and slept too little. One year later at a spiritualist séance, she teamed up with Olcott, a genteel reformer who would provide Blavatsky with the organizational skills she clearly lacked.

In 1875, Blavatsky and Olcott cofounded the Theosophical Society in New York. Inspired by Blavatsky's conviction that spiritualist phenomena were caused not by mediums passively channeling disembodied spirits of the dead but by adepts whose initiation into ancient mysteries enabled them actively to manipulate occult forces in accordance with occult laws, the Theosophical Society aimed in its early years to investigate those spiritualist phenomena and discover via experiments the occult laws undergirding them. This agenda, along with Blavatsky's first and most influential book, *Isis Unveiled* (1877), attracted elite New Yorkers to endless discussions in her fashionable salon. But the organization itself soon fizzled.

Hopeful that a change in venue would provide the Theosophical Society with new life, Blavatsky set sail with Olcott in 1878

Helena Petrovna Blavatsky, the charismatic spiritual teacher and cofounder of the Theosophical Society in 1875 in New York City. (*United Lodge of Theosophists*)

for India, where she added to its mission two additional goals: promoting Asian religious traditions over missionary Christianity and constructing one "Universal Brotherhood of Humanity" out of the Babel of sectarian religions. In this work, the Theosophists were inspired, according to Blavatsky, by a secret brotherhood of "Masters" who had been entrusted throughout the ages with conserving and propagating an ancient wisdom tradition that permeated the Hindu and Buddhist scriptures and all other truly Theosophical works.

While in Ceylon (now Sri Lanka) in 1880, Blavatsky officially converted to BUDDHISM by promising to take refuge in the Buddha, the

Dharma (Buddhist teaching), and the Sangha (community of Buddhist monks). She was by her own admission, however, an "esoteric Buddhist" who saw Gautama Buddha as merely one master among many and Buddhism as but one expression of the ancient wisdom.

The greatest crisis in the life of Blavatsky and her society occurred in 1884, when her former friend Emma Coulomb accused her of manufacturing through exceedingly ordinary means ostensibly extraordinary phenomena. After a lengthy investigation, Richard Hodgson of the London-based Society for Psychical Research issued in 1885 what came to be known as the "Hodgson Report." Hodgson claimed in that document that all the spiritual phenomena attributed to Blavatsky and her fellow Theosophists were produced either through fraud or hallucination. Blavatsky, he concluded, was "one of the most accomplished, ingenious, and interesting imposters in history."

After the report was issued, Olcott urged Blavatsky to leave the Theosophical Society's headquarters outside Madras, India. Reluctantly, she moved to London, where she continued to write and to attract followers. She published her most systematic Theosophical work, *The Secret Doctrine*, in 1888 and began her own magazine, *Lucifer*, as an alternative to the Olcott-controlled *Theosophist*.

After her death in 1891, Blavatsky's ashes were scattered in New York, London, and Adyar (near Madras). She left behind an international organization with hundreds of branches on five continents. Today she is revered by Theosophists across the globe, who see her not as an imposter but as one of a handful of modern sages initiated into the ancient mysteries.

Boardman, William Edwin See HIGHER CHRISTIAN LIFE MOVEMENT.

Book of Mormon The Book of Mormon is a scripture of the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS and other Mormon churches. Published in 1830 by JOSEPH SMITH, JR., the founder of the Mormon movement, the Book of Mormon is viewed by Mormons today as the word of God that fulfills even as it supplements the Bible.

The official title of the book that Mormons accept as “another testament of Jesus Christ” is *The Book of Mormon: An Account Written by the Hand of Mormon upon Plates Taken from the Plates of Nephi*. That account purports to be a translation of gold plates buried in pre-Columbian times on the Hill Cumorah in Manchester, New York. Mormons believe that Smith was led to these gold tablets in 1823 by an angel named Moroni, who came to him in a vision. After taking possession of them in 1837, Smith began to translate the Egyptian-like hieroglyphics, inscribed on the plates.

More a work of history than of doctrine, the Book of Mormon tells the story of Near Eastern peoples who migrated to the “promised land” of America during the Old Testament period and of the appearance of Jesus in the New World following his crucifixion and resurrection. The book chronicles the story of the family of Lehi, a Hebrew prophet who fled Jerusalem shortly before that city was destroyed by the Babylonians in the sixth century B.C.

After crossing the Arabian desert, Lehi’s family traversed the Atlantic Ocean by ship. Upon their arrival in the New World, Lehi’s

descendants tilled the earth, built cities, maintained temples, and followed the laws of Moses. But eventually Lehi’s sons split into two antagonistic factions: the civilized Nephites and the barbarous Lamanites. These two groups were reconciled for 200 years after Jesus came to the New World to preach, perform miracles, ordain disciples, and found his church. In the third century, however, they resumed their internecine struggle. Although the Nephites emerged from the battle victorious, both groups were decimated. Some Lamanites survived and are known today as American Indians. The Nephites left behind only a lone prophet, Mormon (hence “Mormonism”), and his son Moroni. It was the sad chronicle of these last Nephites, inscribed on gold tablets in the fourth century, that Smith purportedly discovered in 1823. And it was Moroni himself, in the form of an angel, who led Smith to his discovery.

When Smith’s “translation” of the “golden bible” appeared in March 1830, it created an immediate stir. Some of Smith’s contemporaries accepted the claim that this new scripture contained “the fullness of the gospel of Jesus Christ.” They saw in Smith the fulfillment of the Book of Mormon prophecy of a “choice seer” named Joseph who would come to restore Israel to its ancient glory. Others, however, denounced Smith as a fraud, his friends as conspirators, and his followers as dupes and rubes.

Smith’s enemies advanced a number of criticisms concerning the Book of Mormon, some of them contradictory. The book, some said, could not be a new divine revelation because large chunks of it were plagiarized from the Bible. Written in the style of the King James Version of the Bible and divided like the Bible into books, chapters, and verses, Smith’s text borrowed copiously, they argued, from both the Hebrew Bible and the New Testament. Others argued, on the other hand, that the Book of Mormon should be rejected because it contradicted the Bible.

They contended, moreover, that the book was riddled with grammatical errors.

Critics found it as difficult to agree about Smith's authorship as they had about the book's relationship to the Bible. Some argued that the largely unlettered Smith could not have written the book, while others claimed Smith's hand in the book's production was far more evident than the hand of God. One critic who found the text to be rife with "Smithisms" was ALEXANDER CAMPBELL, the founder of the Disciples of Christ (see CHRISTIAN CHURCH [DISCIPLES OF CHRIST]). Why, Campbell asked, if the book was written so long ago, did it endeavor to "decide every question" asked by inquiring New Yorkers during the past 10 years? Why did it bear the mark of FREEMASONRY, republican political theory, and romantic nationalism? Why did it contain answers to virtually every theological controversy of the modern period: "infant baptism, ordination, the trinity, regeneration, repentance, justification, the fall of man, the atonement, transubstantiation, fasting, penance, church government, religious experience, the call to the ministry, the general resurrection, eternal punishment," to say nothing of the origins of American Indians?

If Smith's and his followers' responses to these criticisms did not win over critics of Mormonism, they did satisfy early Mormons, who embraced this story of a God who continued to work throughout history to redeem his people from ancient apostasies and who promised to restore in the New World both ancient Israel and the primitive Christian church.

Contemporary Mormons may disagree about how to interpret particularly knotty passages in the Book of Mormon, but they agree that God in all ages speaks to his chosen people in revelations given through prophets. In addition to the Bible ("so far as it is correctly translated") and the Book of Mormon, they recognize two collections of Smith's revelations and translations as divinely inspired

scripture. Both those texts—*Doctrine and Covenants* (1835) and *The Pearl of Great Price* (1851)—address doctrinal and ecclesiastical matters on which the largely narrative Book of Mormon is either silent or ambiguous.

Booth, William See SALVATION ARMY.

Bradford, William (1590–1657) Author of one of the classics of American literature and governor of Plymouth colony for 30 years, William Bradford is one of the best known PILGRIMS. The colony's survival, tenuous as it was, truly owes its existence to Bradford's wisdom and foresight.

Born in March 1590 in Austerfield, England, Bradford fell in with religious dissenters as a youth. At 16, he joined the separatist congregation at Scrooby and soon became a respected member. The congregation suffered increasing persecution from the civil authorities. In order to escape this persecution, Bradford and others migrated to Holland in 1607.

While in Holland, Bradford, like most of his colleagues, worked in the textile industry. By 1619, he had become convinced that no future lay with the little group there. When the *Mayflower* left for America in 1620, he was among the 101 passengers aboard.

The first winter in America was a time of group and personal tragedy for Bradford. His wife fell overboard and drowned in December, and by March nearly half the colony at Plymouth had succumbed to illness and starvation. Among this number was the colony's governor, John Carpenter. Bradford was cho-

sen to succeed him. He would hold this position for 30 years, between 1620 and 1657.

The choice of Bradford was a fortunate one. He developed a good working relationship with Massasoit, the leader of the neighboring Wampanoag, organized the distribution of land and supplies, and administered justice. If any criticism can be laid against him, it is of moderation and forbearance. His patience with troublemakers and toward the cheating and greedy stockholders back in England seems superhuman. Given to leniency, he seemed inclined to suffer others as long as they remained sufferable. Differences in religious and political opinions were less threatening to him than they were to the governor of the younger and larger MASSACHUSETTS BAY COLONY. Bradford could offer shelter and food to a Jesuit priest who was passing through, and voting at Plymouth was not limited to church members.

Beyond his service to the colony, which was instrumental to its survival, Bradford's importance is due to the tremendous number of writings he left behind at his death (May 9, 1657). His *History of Plymouth Plantation* is the best contemporary source of information about the colony. But Bradford also left journals, poems, and letters that provide a remarkable picture of the Pilgrims' struggle to build a new life in a new land.

Langdon, Jr., *Pilgrim Colony: A History of New Plymouth, 1620–1691* (New Haven: Yale University Press, 1966).

Bradstreet, Anne (1612–1672) Anne Bradstreet, America's first published woman poet and arguably one of its first notable poets of any gender, was born in Northampton, England, to

Thomas and Dorothy (nee Yorke) Dudley. Her father was an active and vocal Puritan who had fought in several wars on behalf of the English Protestants. At the time of Anne's birth, he served as the steward of the earl of Lincoln, a position that, along with her mother's social status, provided Anne with educational opportunities exceptional for most women of the time.

Anne was educated at home, first by her father, then by several tutors. Additionally, her father's position as steward of the manor gave her access to the earl's extensive library. Anne's wide reading in the library, along with her familiarity with Greek, Latin, French, and Hebrew, eventually would be reflected in her poetry.

At the age of 16, Anne married Simon Bradstreet, who served as her father's assistant. By this time, Puritans (see PURITANISM) such as the Dudleys and Bradstreets found themselves under increasing political and religious pressure. The last years of James I's reign and the early years of his successor, the Catholic sympathizing Charles I, saw a marked increase in the persecution of Puritans. Anne's father was among a leading group of Puritans, including JOHN WINTHROP, who had committed themselves to establishing a Puritan colony in North America. When they departed England in March 1630, she and her family were on the *Arabella*, the same ship on which Winthrop sailed.

As was the case for many colonists, Bradstreet was shocked by the primitive conditions that met her in her new home of Salem, MASSACHUSETTS BAY COLONY. Yet, like her compatriots, she also was committed to making the colony successful. In fact, her family would be among the mainstays of the colony, with both her father and husband serving as governors of the colony.

Despite her position as one of the colony's elite, Bradstreet's life was not easy. She suffered through smallpox and an illness that left her progressively paralyzed in her

joints. Eventually, she contracted tuberculosis, to which she succumbed on September 16, 1672, in Andover, Massachusetts. She had eight children, all of whom survived to adulthood, but she would see one daughter and two grandchildren die. At the age of 54, she lost her home and all her possessions in a fire. Additionally, she had to fight many of the cultural conventions of the day that questioned both the intellectual ability of women and the legitimacy of women's activity outside the domestic sphere.

Bradstreet wrote a variety of poems reflecting the religious and moral sentiments of Puritan New England. Many poems spoke deeply of her love for her husband and children, while still others challenged the limits against which she pushed as a female poet in the 17th century. The only collection of Bradstreet's poems published during her lifetime, *The Tenth Muse Lately Sprung Up in America*, was printed in England in 1642, apparently at the behest of her brother-in-law John Woodbridge and perhaps unbeknownst to Bradstreet. The work, dedicated to her father, sold well in England, although it met with some carping, with many doubting that a woman had written the poems. The collection was reissued with additional poems posthumously in 1678.

Too many modern critics of Bradstreet's poetry show a marked ignorance of Puritan sensibilities. This is unfortunate, because Bradstreet's poetry is deeply rooted in and reflects those sensibilities. Among the Puritan themes she addresses is the struggle to reconcile great personal misfortune with God's grace and love, a theme Bradstreet addressed in many poems, particularly "Verses Upon the Burning of Our House." Other poems, including "The Vanity of All Worldly Things" and "The Flesh and the Spirit," similarly dealt with typical Puritan concerns. Even her love poems, while more personal than those of her male peers, reflect the warmth most Puritans directed toward their spouses and family members. In her poems addressing the

status of women, however, Bradstreet pushed hard against the social limits. In some of her poems, this resistance comes across as a personal lament, while in others, such as "In Honour of That High and Mighty Princess Queen Elizabeth," they become much more critical and challenging, as when she wrote:

*But she, though dead, will vindicate our wrong.
Let such as say our sex is void of reason
Know 'tis a slander now,
but once was treason.*

Although ignored as a writer for nearly three centuries, first because her style was soon displaced by other forms and second because of her gender, Bradstreet began to receive greater attention, first in the 1950s as some scholars began to recover the Puritan heritage of the United States, and then later due to interest by the women's movement. Although, as noted, many critics have attempted to interpret her work with an inadequate or even false sense of the context in which she wrote, the recovery of Anne Bradstreet's poetry is a vivid reminder of the breadth and depth of America's literary heritages and the role religion has played in them.

Bresee, Phineas Franklin See CHURCH OF THE NAZARENE.

Briggs, Charles Augustus (1841–1913) Charles Augustus Briggs was a biblical scholar, a Presbyterian minister, and, at the end of his career, a priest of the Episcopal Church. Briggs played a central role in theological battles that led to the fragmentation of mainline Protes-

tantism into fundamentalist (see FUNDAMENTALISM) and modernist (see MODERNISM) camps in the late 19th and early 20th century. His 1893 heresy trial, among the most famous in American religious history, reveals the bitter division between opposing definitions of theological and biblical orthodoxy.

Briggs was born in New York City on January 15, 1841. He was educated at the University of Virginia, where, in the midst of a college revival, he was converted to Christ and decided to enter the Presbyterian ministry. After graduating from Virginia in 1860, he studied privately for a brief time. He enlisted and served for three months in the Seventh New York Regiment early in the CIVIL WAR. Returning home in July 1861, Briggs enrolled at Union Theological Seminary in New York. He studied at Union from 1861 to 1863 and abroad at the University of Berlin from 1866 to 1869. In the period between his studies, he managed his family's barrel-making business when ill health forced his father's withdrawal from work. Following his return from Berlin in 1869, Briggs was called as pastor of the First Presbyterian Church in Roselle, New Jersey. In 1874, Union Seminary in New York City appointed him professor of Hebrew. He served with distinction at Union for nearly four decades.

Although the Old and New School Presbyterian denominations in the North had mended their schism of 1837 and reunited in 1870 as the Presbyterian Church, U.S.A., the denomination lacked a common theological journal. When the new *Presbyterian Review* was established in 1881, Briggs was nominated to serve as its coeditor with Archibald A. Hodge of Princeton Seminary. Princeton had long represented the doctrinally conservative Old School, and while Briggs himself had been an Old School Presbyterian, Union Seminary was a liberal New School institution.

The *Presbyterian Review*, rather than mollifying theological tensions within the denomination, actually exacerbated the dif-

Charles Augustus Briggs, the foremost Old Testament scholar of his day, was excommunicated from the Presbyterian ministry after a much-publicized heresy trial in New York in the 1890s.

ferences between traditionalists and progressives. Briggs's advanced views on scriptural interpretation soon came into conflict with the conservative approach to the Bible and to Presbyterian beliefs that the theologians from Princeton represented. Throughout this period, Briggs published articles championing the higher-critical method of scriptural interpretation. Hodge and others, however, argued for the inerrancy of the Bible and the complete trustworthiness of the plain meaning of Scripture, positions that would eventually typify American fundamentalism. After the publication of Briggs's most famous scholarly work, *Whither?* (1889), in which he asserted that divine revelation evolves over time, he came under intense criticism from

the denomination's conservative wing. Irreconcilable differences forced the demise of the *Presbyterian Review* by the end of 1889.

Briggs faced an even more formidable controversy in 1891. In his inaugural address on "The Authority of Holy Scripture," delivered when he assumed the chair of biblical studies at Union, Briggs denied both the verbal inspiration of the Bible and the doctrine of inerrancy, the linchpins of conservative teaching on Scripture. Briggs's address led the Presbyterian General Assembly, the highest decision-making body of the denomination, to veto his professorial appointment. He was subsequently tried for heresy and suspended from the ministry in 1893.

The decision against Briggs led Union to renounce its affiliation with the Presbyterian Church, U.S.A., and become an independent seminary. Briggs was thus able to retain his position at Union. The events of 1893 also drastically altered Briggs's denominational loyalties. He withdrew from the Presbyterian Church in 1898, and, attracted to the doctrinal broadness of Anglicanism, he was ordained to the Episcopal ministry in May 1899. Yet Briggs's progressive ideas aroused conflict even in the Episcopal Church. His growing concern for ecumenism, for example, led him to consider a future union of the Christian churches. The desire he stated in 1903 for "the recatholization" of Christianity was criticized by the low-church party within Episcopalianism. Many accused him of wishing to abandon Protestantism altogether for the Roman Catholic Church.

Briggs remained in the Protestant fold for the rest of his life. He wrote more than 20 books, including *Church Unity* (1909), his final contribution to the intellectual and cultural discussions that had occupied his mind since the 1860s. Together with Francis Brown and Samuel R. Driver, he also edited *A Hebrew and English Lexicon of the Old Testament* (1906), which remains in widespread use as a dictionary of biblical studies. Briggs also served as

one of the original editors of the prestigious *International Critical Commentary* series.

Briggs retired from academic and ecclesiastical debates in 1910, for he had begun to suffer regular attacks of nervous exhaustion. He died quietly at his residence at Union Seminary on June 8, 1913.

Brook Farm See TRANSCENDENTALISM.

Brooks, Phillips (1835–1893) Phillips Brooks was an Episcopal clergyman, author of the popular Christmas carol "O Little Town of Bethlehem," and one of the greatest preachers in late 19th-century America. Rector of Trinity Church in the fashionable Back Bay section of Boston, Brooks represented the "broad church" tradition in the Episcopal Church, a blend of theological liberalism and optimism about the human condition.

Brooks was born in Boston on December 13, 1835. He graduated from Harvard College in 1855 and from the Virginia Theological Seminary in Alexandria in 1859. After his ordination in 1859, Brooks served in Philadelphia, first at the Church of the Advent between 1859 and 1862 and then at Holy Trinity Church from 1862 to 1869. In October 1869, Brooks began his lengthy career at Boston's Trinity Church. A few years later, after a terrible fire destroyed large portions of downtown Boston in 1872, Trinity Church relocated to the newly developed Back Bay on land reclaimed from the Charles River marshes. There, Brooks oversaw the construction of a magnificent new building.

Brooks's broad churchmanship and conservative social views well suited his affluent

parishioners. "The spirit of man is the candle of God," Brooks repeatedly told his congregation, and he believed in the goodness and nobility of humankind generally. His faith in progress also kept him untroubled by the inequalities of life in the post-Civil War Gilded Age. Although he believed that poverty and suffering among the urban masses were for the most part deserved, he also trusted that social inequalities were simply temporary problems that would one day be dispelled by the natural harmony of God's purposes.

Brooks published a number of volumes of sermons, as well as *Lectures on Preaching* (delivered at Yale in 1877) and a posthumous collection of *Essays and Addresses*. He wrote the words of "O Little Town of Bethlehem" for the Sunday school children at Holy Trinity Church, Philadelphia, in 1867. Although elected bishop of Massachusetts in 1891, he served in that capacity for only a few months before dying after a short illness on January 23, 1893. Boston was so moved by his untimely passing that every pew in Trinity Church was filled for a memorial observance on the 10th anniversary of Brooks's death.

Brown, John (1800–1859) John Brown, lauded as a religious martyr and hanged for undertaking an armed insurrection to end slavery, remains one of the more discomforting and least understood characters in U.S. history. Born May 9, 1800, Brown was the second son of Owen and Ruth Brown (nee Mills). Both of his grandfathers had served

in the Continental Army during the Revolutionary War, and his father, a tanner, seems to have been a vocal opponent of slavery. After moving his family to Hudson, Ohio, the elder Brown supported Oberlin Institute (now Oberlin University), which had been founded after a rebellion by the students and faculty of Lane Seminary in Cincinnati who objected to Lane's refusal to take a militant antislavery stance.

At 16, Brown left Ohio and traveled to Plainfield, Massachusetts, and then to Litchfield, Connecticut, for his education. Brown hoped to enter the ministry of the Congregational Church (see CONGREGATIONALISM), but money troubles and a serious eye inflammation forced him to drop out and return home.

Brown married his first wife in 1820, Dianthe Lusk, with whom he had seven children. After her death in 1832, Brown married Mary Ann Day the next year. For the next 35 years, Brown's life reflected much of the social and personal turmoil of the times. He moved several times and, as a business man, went through periods of boom and bust, including a declaration of bankruptcy in 1842. Additionally, Brown experienced the deaths of several of his children, including four in 1843 alone.

During this time, Brown appears to have been involved in antislavery activities and served as a volunteer in the "Underground Railroad" (see HARRIET TUBMAN; SOJOURNER TRUTH). Brown also seems to have believed that abolitionism was a religious imperative. In 1837, while attending a memorial service for the abolitionist journalist Elijah Lovejoy, who had been murdered during an attack on his newspaper, Brown purportedly stood up and proclaimed, "Here before God, in the presence of these witnesses, I consecrate my life to the destruction of slavery." He spoke of slavery as an offense against God and of slave masters as destined to be punished for their sins against God and humanity. Sometime in the late 1840s, Brown appears to have

begun to view himself as the source of God's vengeance on those who enslaved their fellow human beings.

Brown met Frederick Douglass in 1847. Douglass would later write that in this meeting, Brown denounced slavery in language fierce and bitter, and thought that slaveholders had forfeited the right to live—that the slaves had the right to gain their liberty in any way they could. Brown thought that he had no better use for his life than to lay it down in the cause of the slave. During this meeting, Brown also revealed to Douglass his plans for the creation of an armed force dedicated to free the slaves and provide them with a chance to fight for their own freedom. In 1849, Brown moved his family yet again, this time to North Elba, New York. There they joined a community of blacks who were trying to establish new lives on 120,000 acres donated by the wealthy abolitionist Gerrit Smith.

Following the passage of the Fugitive Slave Bill (1850), Brown gathered a group of like-minded individuals into the League of Gileadites. All these individuals committed themselves to resisting the efforts of slave catchers to locate and return runaway slaves.

During this time, five of Brown's adult sons had moved to the Kansas Territory. Kansas was in a violent upheaval over the issue of slavery. The passage of the "Kansas-Nebraska Act" (1854) that allowed territories to decide whether to enter the Union either as free or slave states led both pro- and antislavery forces to move arms and men into the territory. By early 1856, Kansas had two legislatures, one the official proslavery territorial government and another Free State legislature based in Lawrence, which had been established as an antislavery town in 1854. At the urging of his sons, Brown went to Kansas in 1855 and began to organize the free state forces, with little success.

In April 1856, a sheriff was killed in Lawrence during an attempt to arrest some of the free state legislators. In response, the federal marshal declared the town in rebellion and

on May 21 led a posse of nearly 750 in an attack on the town. While there were no casualties (the free staters refused to fight back), the town itself was leveled. Brown heard the news just shortly before he was informed that Senator Charles Graham Sumner, a leading antislavery advocate, had been beaten nearly to death on the U.S. Senate floor by Representative Preston Brooks of South Carolina. Upon absorbing both of these blows, Brown reportedly retreated into the woods to pray. When he returned to the house, he ordered his men to sharpen their swords and, placing a revolver in his belt, led them to a proslavery settlement. Once there, Brown and his party dragged five men from their houses and hacked four of them to death. Brown himself, apparently, shot the fifth.

The result of the Pottawatomie Massacre, as it became known, was all-out war between the pro- and antislavery forces. The Browns compound was attacked and burned to the ground, and two of his sons were ambushed and wounded. Brown would later lead the successful defense of Palmyra against an attack by a proslavery militia and with 30 men undertook an unsuccessful defense of Osawatomie against a force of more than 250, during which his son Frederick was killed.

Brown's defense of Osawatomie made him a hero among the abolitionist forces (and even became the subject for a Broadway play), and for the next two years he traveled across the country to raise money and collect arms for the antislavery forces in Kansas. Brown also came to the notice of several leading U.S. intellectuals and writers, including RALPH WALDO EMERSON and HENRY DAVID THOREAU. He spoke before throngs of individuals, and in a meeting in Massachusetts he proclaimed, "The two most sacred documents in the world are the Bible and the Declaration of Independence. It is better that a whole generation of men, women and children pass away by a violent death than that a word of either should be violated."

Brown also met the abolitionist William Lloyd Garrison during this time. The two men represented radically different approaches to abolitionism. Garrison believed in moral suasion, human perfectibility, and a God of mercy. Brown represented a different and growing wing. For Brown, moral suasion was insufficient, God punished sinners and avenged the weak, and Brown increasingly saw himself as God's avenging angel.

During this time, Brown also met secretly with six leading New England gentlemen, including THEODORE PARKER, Gerrit Smith, the Unitarian minister Thomas Wentworth Higginson, and Dr. Samuel Gridley Howe (the husband of JULIA WARD HOWE). These men would provide the logistical and financial support for what became Brown's final assault on slavery, the attack on the federal armory at Harper's Ferry, Virginia (now West Virginia).

On October 16, 1859, John Brown and a group of 21 confederates, including three of his sons, attacked the armory. At first, everything went well, but the attack soon began to collapse. Rather than being joined by a stream of runaway slaves eager to join the rebellion, Brown found himself surrounded by local farmers, townspeople, and, finally, a contingent of marines led by a young army colonel named Robert E. Lee. Brown refused the demand that he surrender (just as he earlier had refused to escape from the armory). His trial would become a challenge to slavery.

During his imprisonment and trial, Brown found a level of success that had previously eluded him. Interviews with the press spread his words not only across the country but across the world. In an appeal for Brown's life, the French author Victor Hugo wrote, "A white man, a free man, John Brown, sought to deliver these negro slaves from bondage. Assuredly, if insurrection is ever a sacred duty, it must be when it is directed against Slavery. John Brown endeavored to commence the work of emancipation by the liberation of slaves in Virginia. Pious, austere, animated

with the old Puritan spirit, inspired by the spirit of the Gospel, he sounded to these men, these oppressed brothers, the rallying cry of Freedom."

Brown himself, in his closing statement at his trial, proclaimed, This court acknowledges, as I suppose, the validity of the law of God. I see a book kissed here which I suppose to be the Bible, or at least the New Testament. That teaches me that all things whatsoever I would that men should do to me, I should do even so to them. It teaches me, further, to remember them that are in bonds, as bound with them. I endeavored to act up to that instruction. I say I am yet too young to understand that God is any respecter of persons. I believe that to have interfered as I have done—as I have always freely admitted I have done—in behalf of His despised poor was not wrong, but right. Now, if it is deemed necessary that I should forfeit my life for the furtherance of the ends of justice, and mingle my blood further with the blood of my children and with the blood of millions in this slave country whose rights are disregarded by wicked, cruel, and unjust enactments—I submit; so let it be done! Despite his eloquence, Brown was sentenced to be hanged. The sentence was carried out on December 2, 1859. The future Confederate general Thomas J. (Stonewall) Jackson, who commanded the guard at Brown's execution, wrote to his wife that Brown "behaved with unflinching firmness." Farther north, Henry David Thoreau reflected on the execution, "Some 1800 years ago, Christ was crucified. This morning, Captain Brown was hung. He is not Old Brown any longer; he is an angel of light." In 16 months, the CIVIL WAR would start.

John Brown soon ceased to be a real person. Depending on one's perspective, he either was a monstrous and murderous madman or one who recognized a monstrous evil and acted to eradicate it. Union soldiers would go into battle singing of John Brown. What is clear is that Brown believed slavery to be an

offense against God that he was called to act against. He declared God had put the sword in his hands and, when God saw fit, took it away. For Brown, God's punishment on the sinful nation would not come from him but lay in the future.

Brownson, Orestes Augustus (1803–1876)

One of the most colorful figures in both American intellectual and Catholic history, Orestes Brownson was a religious and philosophical seeker who finally found a home in ROMAN CATHOLICISM. A controversialist by nature and a journalist by trade, Brownson's acerbic wit, independent mind, and willingness to follow his thoughts wherever they led made him enemies in all camps.

Born in Stockbridge, Vermont, on September 16, 1803, his father's early death interrupted his formal education. Brownson was, however, an avid reader with a particular interest in religious and political questions. Searching for spiritual stability, he joined the Presbyterian Church (see PRESBYTERIANISM) in 1822. Disgusted with the doctrines of election and eternal damnation, he left two years later, becoming a Universalist (see UNIVERSALISM.)

Although ordained a Universalist minister in 1827 and editor of the denomination's *Gospel Advocate*, the intellectual views that originally led him to reject Presbyterianism drove him ever further toward radical humanism. Breaking with organized religion, he became an itinerant preacher until contact with the English freethinker Fanny Wright turned him

toward ATHEISM and radical politics. During this period, Brownson joined an Owenite community in New York and edited the Owenite paper *Free Enquirer* (see OWEN, ROBERT DALE). He also served as an organizer of the Workingmen's Party and was a fervent socialist.

Beginning to doubt the wisdom of political action that set workers against capitalists, Brownson left the party. Estranged from organized religion intellectually and politically, Brownson embarked on another period as an independent preacher. As he did during all of his various passions, Brownson founded a newspaper, *The Philanthropist*, in whose pages he preached his religion of humanity.

During this time, Brownson fell under the influence of WILLIAM ELLERY CHANNING, viewing Channing's liberal Unitarianism and politics as consonant with his own views. Ordained a Unitarian minister, Brownson held pulpits in Walpole, New Hampshire (1832–34), and Canton, Massachusetts (1834–36), until he grew disillusioned with the cold rationality and materialism of Unitarianism.

At this time, Brownson followed many other "post-Unitarians" into the transcendentalist movement (see TRANSCENDENTALISM). Although suspicious of transcendentalism's individualism and its tendency to identify God with nature, Brownson found a congenial home among those who viewed external authority with suspicion and affirmed the universal possession of what Brownson called spontaneous reason—an intuitive knowledge of God. Increasingly interested in community, Brownson was attracted to the socialism of the French thinker Henri de St. Simon and its demand for a cooperative society.

To spread these ideas he founded the *Boston Quarterly Review* (1838), in which he attacked inherited wealth, industrialism, wage labor, Christianity, and democracy and called for the abolition of all penal codes. The *Review* gained a wide audience for Brownson's views, and he quickly became a notorious figure. Following a merger of the *Review* with

the *Democratic Review*, editorial disagreements with the new owners resulted in Brownson's resignation.

Brownson's concern with community and with locating the source of moral authority led him to look favorably upon the corporate model of the Roman Catholic Church as providing the most tangible means of divine communion and human community. Placing himself under the guidance of the coadjutor bishop of Boston, John Bernard Fitzpatrick, Brownson undertook the instruction necessary to become a Roman Catholic, receiving Communion on October 20, 1844. His period of religious questing was over, and Brownson would live the remainder of his days within the Church.

Although his religious searching ended, Brownson remained a controversial figure. His new journal, *Brownson's Quarterly Review*, took up the defense of Roman Catholicism and promptly lost readers throughout the country as he vigorously defended Roman Catholic orthodoxy and consigned all those outside the Church to hell, including his old comrades in arms. His spirited defense of Catholicism earned him official approbation from the U.S. Catholic bishops in 1849 and a letter of thanks from Pius IX in 1854. Brownson's erudition also led to an invitation from John Henry Newman to join the faculty of the new Catholic University of Dublin.

Brownson's orthodox views soon faded, and he became a strong advocate for a positive role for American culture in the Catholic Church. He advocated church-state separation and liberal democracy, while attacking parochial schools, Irish immigrants, Jesuits, and the temporal power of the popes. Such attacks cost him his Catholic audience and the support of the hierarchy. In 1865, he suspended publication of the *Review* due to ecclesiastical opposition. Although he revived the journal in 1872 with spirited defenses of papal infallibility and authority, Brownson was viewed with suspicion by his coreligionists who, like

Orestes Augustus Brownson, famed 19th-century transcendentalist who became a convert and leading spokesperson for American Catholicism. (Engraving by Alexander L. Dick)

others before them, wondered about the stability of his mind. Bitter and disappointed, he died in Detroit on April 17, 1876. Seven years later he received the honors he undoubtedly deserved when his remains were reinterred in the Chapel of the Sacred Heart at the University of Notre Dame.

Although the meanderings of his mind and spirit led many to dismiss him as a crank, Brownson exerted a significant influence on 19th-century American life. Religiously, he was among the first to argue publicly for the compatibility of American society with Roman Catholicism, and, along with his fellow convert ISAAC HECKER, he was influential in formulating an American Catholicism. Equally significant is the fact that *Brownson's Quarterly Review* was

not only the center of Roman Catholic intellectual currents but a center for political and social thought beyond Catholic concerns.

Bryan, William Jennings (1860–1925)

William Jennings Bryan was the leading spokesman for American FUNDAMENTALISM in the early 20th century and a three-time candidate for the United States presidency. Although best known today for his opposition to the teaching of evolution in the public schools, Bryan was one of the country's leading political liberals and the only pacifist secretary of state.

Bryan was born in Salem, Illinois, on March 19, 1860. He graduated from Illinois College in 1881. After his graduation from Union Law College in Chicago and admission to the bar in 1883, he practiced law in Illinois and Nebraska. A Democratic politician, Bryan held national office for the first time in 1891 when elected to serve as a congressman from Nebraska. Known as "the Great Commoner" because of his midwestern, agrarian roots, Bryan was nominated on three occasions (1896, 1900, and 1908) as the Democratic candidate for president. He lost all three times, however, and the election results revealed the limits of his national appeal. In 1896, he won 49 percent of the popular vote but did not carry a single state outside the South or east of the Mississippi River.

Bryan approached politics with the fervor of a moral reformer, and his greatest speeches had a decidedly religious, almost revivalistic, tone. His "cross of gold" speech at the 1896 Democratic convention, for example, won him tremendous support and soon became the most celebrated political oration since Lincoln's second inaugural address. "You shall not press down upon the brow of labor this crown of thorns," he shouted that day. "You shall not crucify mankind upon a cross of gold." Bryan spoke passionately on behalf of accepting silver as equal in value to gold as the basis of the national currency, a reform favored by the populist forces he represented but opposed by Republican bankers and businessmen in the East, who advocated the gold standard.

In 1912, the American people finally turned to the Democratic Party for a president. Bryan's support was crucial to Woodrow Wilson's election that year. He was rewarded with appointment as Wilson's secretary of state. Yet because of his continuing commitment to the ideals of Christian pacifism, a position typical of his geographic and religious background, the advent of World War I in Europe brought him into opposition to the policies of the Wilson administration. Troubled by protests over Germany's sinking of the *Lusitania* and fearing eventual American participation in the war, Bryan chose to resign his position in June 1915 rather than compromise his beliefs.

The final years of Bryan's life and career reveal similar conflict between the narrow conservatism of his religious views and the necessity for compromise characteristic of American politics. Always a temperance advocate, for instance, Bryan threw himself into the campaign for the prohibition of alcoholic beverages. Following the congressional elections of 1916, he played an important role in the eventual passage of the Eighteenth Amendment and the Volstead Act, which together outlawed the sale and manufacture of liquor after January 1920. In the same period, how-

ever, the center of the American population was shifting away from the Protestant rural and agrarian areas that favored Prohibition and toward “wet” urban areas. The 1920 census showed that for the first time most Americans lived in cities—a death knell for the short-lived reform Bryan had championed.

In the early 1920s, Bryan attacked the growing modernist (see MODERNISM) emphasis within American churches and accused liberal Protestants of undermining both traditional morality and civilization itself. He believed that the doctrine of EVOLUTION weakened the trust men and women once placed in God.

Bryan also feared Darwinism’s social implications, feeling that the idea of survival of the fittest would lead to greater oppression and war. This position became solidified following interviews with World War I German P.O.W.s who repeatedly spoke in such terms. Championing theological views that soon bore the label “fundamentalist,” Bryan campaigned against the teaching of that scientific theory in the nation’s schools. Hoping to duplicate the success conservatives had enjoyed in passing prohibition laws, Bryan encouraged the movement in several southern state legislatures to ban instruction about biological evolution.

As a consequence of this antievolution crusade, Bryan headed the prosecution against John Scopes, a young biology teacher in Dayton, Tennessee, charged in 1925 with teaching evolution, thus violating a new state law. Scopes was defended by Clarence Darrow, a sophisticated lawyer and well-known religious agnostic, who made Bryan look like an ignorant fool. While Bryan believed it was better “to trust the Rock of Ages than to know the ages of rocks,” Darrow forced his opponent to admit that no reputable modern scientist shared his views. Although Bryan actually won a conviction of Scopes on narrow legal grounds, the fundamentalist position became thoroughly discredited in the eyes of the national press who covered the trial.

Bryan himself not only was embarrassed by the trial but also was physically broken by the experience. He never left the trial site in Dayton and died on July 26, 1925, a few days after the announcement of the verdict.

Buchman, Frank Nathan Daniel (1878–1961) Frank Buchman was a Lutheran pastor and the founder of Moral Re-Armament, a movement created to prevent war through the promotion of a worldwide spiritual awakening. Buchman stressed the need for human beings to surrender their individual wills to the will of God. Using small gatherings, or “house parties,” where influential people might be converted to his moral vision, Buchman hoped to lay the foundation of a new social order under God’s rule.

Born in Pennsburg, Pennsylvania, on June 4, 1878, Buchman graduated from Muhlenberg College in 1899 and studied at Mt. Airy Seminary from 1899 to 1902. He served as a Lutheran minister in Overbrook, Pennsylvania, between 1902 and 1905 and then directed the first Lutheran settlement house in Philadelphia from 1905 to 1909. Following a trip to Europe in 1908, Buchman became convinced that religious experience could change the way people behaved. Buchman felt called to become an evangelist of the nonsectarian gospel he discovered and to disseminate his spiritual and psychological insights as widely as possible.

Following service, first, as the secretary of the YMCA at Pennsylvania State College and,

later, as a lecturer on evangelism at Hartford Seminary, Buchman arrived at Oxford University in 1921 and launched the movement to which he devoted the rest of his life. Known originally as the First Century Christian Fellowship or the Oxford Group movement, Buchman's organization employed small, informal gatherings as a means of persuading participants to change their lives. At the house parties he arranged, Buchman used his "Five C's" (confidence, conviction, confession, conversion, and continuance) to bring people to a "God-guided" life under the "Four Absolutes" (honesty, purity, unselfishness, and love). The Oxford Group movement attracted worldwide attention during the 1930s, when Queen Mary of Romania was numbered among its many notable patrons. Renamed Moral Re-Armament in 1938, the organization was dedicated to achieving personal, social, racial, national, and international change.

Moral Re-Armament soon lost much of its early spiritual vigor. Eager to attract intellectuals, the wealthy, and world leaders who could aid his goals, Buchman appeared to forget the original popular base on which his movement was built. His emphasis on international peace, moreover, fell into disrepute after war broke out in Europe in 1939. Adamantly opposed to communism and sympathetic to fascism, Moral Re-Armament adopted a prewar policy of appeasement that later was viewed as controversial. Buchman declared in 1936, for example, that he viewed the rise of Adolf Hitler as a heaven-sent opportunity to build "a front line of defense against the Anti-Christ of Communism." Only the patriotic efforts of many Moral Re-Armament members in assisting the war effort against Germany and Japan helped restore Buchman's group to favor in the public eye.

Buchman's health deteriorated in the 1950s, and he was unable to prevent his movement from again declining in influence. He died abroad at Freudensadt, Germany, on August 7, 1961. Although Moral Re-Armament

remains active today, it has never regained the prestige it possessed during its heyday in the 1920s and 1930s. Its popular "Up with People" program folded in 2001.

Buddhism Buddhism, one of the world's major religious traditions, exists in three major forms. The Theravada ("Way of the Elders") tradition is the oldest and most traditional. It emphasizes monasticism and is widespread in Southeast Asia. The Mahayana ("Great Vehicle") form predominates in East Asian countries such as China and Japan. It provides a more important role for the laity. The third major form is the Vajrayana ("Diamond Vehicle") path of Tibet. This tradition, which has been popularized in the West in recent years by the DALAI LAMA, integrates elements of the esoteric Tantric path of Hinduism into Buddhist practice.

In the United States, there are at least two distinct histories of the Buddhist tradition: the story of the Buddhism of Asian immigrants and their descendants and the story of the Buddhist interests of non-Asian-American sympathizers and adherents. The first story includes the transplantation to the United States of all three major forms of Buddhism by immigrants from Asia. The second story ranges from the interest in Buddhism demonstrated by Unitarians and transcendentalists in the mid-19th century to the more recent Buddhist explorations of the Beat Generation (see BEAT MOVEMENT) and the hip-hop group the Beastie Boys.

The first Asians in the United States came from China to the West Coast around the time of the gold rush of 1849. In 1853, the first Chinese temple in America was built in San Francisco's Chinatown. By the end of the 19th century, there were 400 such shrines on

the West Coast. These syncretistic temples enshrined a number of popular folk deities of China and made room not only for Buddhism but also for TAOISM and Confucianism. Chinese immigration declined precipitously after the Chinese Exclusion Act of 1882 and remained minute until the law's repeal in 1943. Many of the original temples closed for lack of patrons, and a number of less syncretistic Chinese Buddhist temples arose in their stead.

In the postwar period, new immigrants from China established Chinese Buddhist temples in major U.S. cities. Among the more influential are two in San Francisco: Buddha's Universal Church, established in 1963, which caters primarily to Chinese Americans, and the Sino-American Buddhist Association's Gold Mountain Dhyana Monastery, established in 1972, whose membership is primarily Caucasian. The largest Buddhist monastery in the Western Hemisphere, HSI LAI TEMPLE in Hacienda Heights, California, outside Los Angeles, is also of Chinese origin.

Although Chinese Buddhist arrived in America first, Japanese Buddhists and their descendants have made the greatest mark on American Buddhism. The two largest Buddhist groups in Japan—Jodo Shinshu and Nichiren—are probably the two largest in the United States as well. Founded by the Japanese reformer Shinran (1173–1262), Jodo Shinshu, or "True Pure Land" Buddhism, emphasizes the recitation of the name of Amida, the Buddha of "Infinite Light." Faith in the saving grace of Amida Buddha is thought by Jodo Shinshu practitioners to assure one rebirth in a heavenly realm known as the "Pure Land." Nichiren Buddhism originated with a contemporary of Shinran named Nichiren (1222–82). Nichiren Buddhists view the Lotus Sutra as the epitome of Buddhist teaching and emphasize their own recitation: "Hail to the Wonderful Truth of the Lotus Sutra." Nichiren Buddhists have traditionally distinguished themselves from most other Japanese Buddhists by their

proselytizing zeal and their unusual intolerance toward other faiths, although both those characteristics are moderating in contemporary times.

The first Buddhist missionary to what was then the Kingdom of Hawaii was a Jodo Shinshu Buddhist from Japan. After landing in Honolulu in 1889, he founded Hawaii's first Buddhist temple. The earliest Buddhist missionaries to the continental United States were also Jodo Shinshu adherents from Japan. In 1898 in San Francisco, these men established the first Buddhist temple in the United States. They also founded, after the model of the YOUNG MEN'S CHRISTIAN ASSOCIATION, a Young Men's Buddhist Association. One year later Jodo Shinshu priests established the Buddhist Mission of North America (BMNA).

This organization, which would change its name to the BUDDHIST CHURCHES OF AMERICA (BCA) in 1944, is currently America's second-largest Buddhist organization, with 61 temples and roughly 17,000 members. Though the BCA consists almost entirely of Japanese Americans, it has nonetheless been considerably "Americanized" and "Protestantized." Worship services incorporate hymns, organs, and sermons. Temples are furnished with pews and pulpits as well as educational wings for Sunday schools.

The largest Buddhist organization in the United States is likely SOKA GAKKAI INTERNATIONAL-USA (SGI-USA). An outgrowth of the Soka Gakkai movement, a nationalistic lay organization within Nichiren Shoshu ("Pure Nichiren"), this organization came to the United States originally as the Nichiren Shoshu Academy, established in California in 1960. In 1991, however, longstanding tensions between priests and laypeople led to a split in the movement. Today SGI-USA runs approximately 70 community centers and claims 100,000 to 300,000 members. The priestly group, now called Nichiren Shoshu of America, controls six temples in the United States, and its membership is considerably smaller.

Like Nichiren Buddhists in Japan, members of both groups orient their spiritual lives around the Daimoku, a chant that invokes the name of their favored scripture, the Lotus Sutra. SGI-USA originally recruited mostly Japanese Americans but now is composed predominantly of non-Asian converts, with a high percentage of blacks and Hispanics.

European-American interest in Buddhism antedates the immigration of significant numbers of Asian Buddhists to the United States. American interest in Buddhism began, like American trade with India and China, in the late 18th century. While many traveler and missionary accounts presented "Orientals" and their religions as barbaric, books such as Hannah Adams's *An Alphabetical Compendium of the Various Sects* (1784) and Joseph Priestley's *A Comparison of the Institutions of Moses with Those of the Hindoos and Other Nations* (1799) represented Asian religions in a relatively sympathetic light. Both, however, seemed at a loss to distinguish Buddhism from Hinduism, and both in the end cast their vote for Christianity.

Thanks to the emergence of Buddhist studies in Europe and TRANSCENDENTALISM in New England, more cosmopolitan Americans began in the mid-19th century to distinguish between Buddhism and other "heathen" religions. In 1844, these two strands came together when the Transcendentalist HENRY DAVID THOREAU published in the *Dial* an English translation of a French version of the Lotus Sutra by the pioneering Buddhologist Eugene Burnouf. RALPH WALDO EMERSON, another Transcendentalist, also evinced a broad interest in the Orient, but he knew far more about Hinduism than Buddhism.

Despite the efforts of these authors, Buddhism remained largely unknown until the publication of Sir Edwin Arnold's poetic life of the Buddha, *Light of Asia* (1879), helped to touch off a Buddhist vogue in Gilded Age America. During this period, American sympathizers and adherents actually traveled to

Asia and reported on their experiences back home.

One influential group of American intellectuals took advantage of Commodore Perry's forced opening of Japan in 1853 by sailing for Japan to learn about Buddhism firsthand. This group included art historian Ernest Fenollosa, Harvard-trained medical doctor William Sturgis Bigelow, and journalist Lafcadio Hearn. Fenollosa and Bigelow officially converted to Buddhism in a Tendai Buddhist ceremony in 1885. Hearn, who took a Japanese name, Japanese citizenship, and a Japanese wife, never formally converted to Buddhism.

A second group that helped to popularize Buddhism in America in the Gilded Age were the Theosophists (see THEOSOPHY). In 1878, HENRY STEEL OLCOTT and HELENA PETROVNA BLAVATSKY, who had cofounded the Theosophical Society in New York in 1875, moved themselves and their society to India. There they became harsh critics of missionary Christianity and equally spirited defenders of Asian religious traditions. In 1880, during a trip to Ceylon (now Sri Lanka), Olcott and Blavatsky (Russian-born but a recently naturalized U.S. citizen) became the first non-Asian Americans formally and officially to convert to Buddhism overseas. Olcott subsequently published a *Buddhist Catechism* (1881) and became a major contributor to a revival of Sinhalese Buddhism on the island.

Although the Theosophists did much to popularize Buddhism in America, it was the arrival of Buddhist missionaries from Asia at the WORLD'S PARLIAMENT OF RELIGIONS that catalyzed 19th-century American interest in Buddhism. During the parliament, convened in conjunction with the World's Columbian Exposition in Chicago in 1893, Buddhists from Japan and Ceylon represented their own tradition for the first time to an American audience. Soyen Shaku, a ZEN master from Japan, outlined the principles and practices of the Rinzaï Zen tradition, while ANAGARIKA DHARMAPALA, a Theravada Buddhist and Theosophist from

Ceylon, presented his own brand of Theosophical Buddhism. In the midst of the parliament, a Jewish man named C. T. Strauss became the first non-Asian American publicly to convert to Buddhism in the United States.

After the World's Parliament, a disciple of Soyen Shaku named DAISETZ TEITARO SUZUKI moved to the United States in an effort to promote Zen. He lectured at American universities and translated books and articles for Paul Carus, the editor at Open Court Publishing Company. Under Suzuki's tutelage, Mrs. Alexander Russell became the first European American formally to study Zen.

Suzuki's efforts bore fruit in the 1950s, when Beat authors like Jack Kerouac and Allen Ginsberg, inspired by Suzuki's lectures at Columbia University, began to champion Zen in bohemian circles in New York and San Francisco. Of all the Beats, however, the most serious student of Buddhism was undoubtedly the poet Gary Snyder, who like Fenollosa, Bigelow, and Hearn a century earlier, actually traveled to Japan, in his case to study Zen. Although ALAN WATTS, another Zen popularizer, would eventually dismiss "beat Zen" as "phony Zen," the Beats contributed importantly to America's second Buddhist vogue, which occurred in the 1950s and 1960s.

During those two decades, Zen centers opened in cities from Los Angeles to Rochester, New York, as Americans of many faiths introduced themselves to Zen. Among the more serious students of Zen in this period was the Roman Catholic monk THOMAS MERTON, who attempted to integrate Zen practices and insights into his spiritual life.

The newest form of Buddhism on the American scene is the Vajrayana ("Diamond Vehicle") Buddhism of Tibet. Vajrayana Buddhists distinguish themselves from practitioners of Theravada and Mahayana Buddhism by vowing to rely not only on the traditional "three refuges"—the Buddha, the Dharma (Buddhist teaching), and the Sangha (community of Buddhists)—but also on a fourth

refuge, the guru. A guru is necessary in the Vajrayana tradition because the tantric practices employed as a means to enlightenment—chanting, prostrations, meditation, and so on—are said to be both difficult and dangerous. Tibetan Buddhists also look to a series of Dalai Lamas as their spiritual and political leaders. The 14th and most recent Dalai Lama, His Holiness Tenzin Gyatso, has made frequent trips to the United States, and almost single-handedly prompted a third Buddhist vogue. During the 1990s, Hollywood produced three feature films about Tibetan Buddhism (*Little Buddha*, *Seven Years in Tibet*, and *Kundun*), and celebrities such as Adam Yauch of the Beastie Boys embraced both Tibetan Buddhism and the campaign to free Tibet from Chinese rule. In 1997, *Time* magazine ran a cover story on "America's Fascination with Buddhism."

Tibetan Buddhists first came to the United States in the wake of China's invasion of Tibet in the 1950s. Since that time, all four major forms of Tibetan Buddhism have transplanted themselves onto American soil. Of the Tibetan missionaries to the United States, the most important are Tarthang Tulku and CHOGYAM TRUNGPA.

A monk of the Nyingmapa sect, Tarthang Tulku, was one of the first Tibetans to enter the United States. Shortly after his arrival in Berkeley, California, in 1969, he founded the Tibetan Nyingma Meditation Center, the first Tibetan Buddhist organization in the country. Chogyam Trungpa, a Kargyudpa monk, came to America in 1970. After settling in Boulder, Colorado, he established a series of Dharmadhatu, or meditation centers, in cities across America. In 1973, the year of the publication of his widely read book *Cutting Through Spiritual Materialism*, Trungpa gathered his Dharmadhatu centers into a national organization called Vajradhatu. Both Tarthang Tulku and Chogyam Trungpa also established educational institutions to complement their meditation centers. Tarthang's Nyingma Institute opened its doors in Berkeley in 1973, while

Trungpa's Boulder-based Naropa Institute first offered courses in 1974.

Tibetan Buddhism is practiced not only by Tibetan refugees but also by European Americans. Among the most important non-Tibetan practitioners of Vajrayana Buddhism is Robert Thurman, the first American ordained as a Tibetan Buddhist monk. Thurman, who earned a Ph.D. in Buddhist studies from Harvard University and has taught at Columbia University, is one important representative of a new generation of Tibetan Buddhists in America who are also Buddhist scholars. In 1997, *Time* named him one of the 25 most influential Americans.

An interesting recent development in American Buddhism is the emergence of a generation of American-born Buddhist leaders beginning in the 1970s. While some of those leaders, like Thurman, devoted themselves primarily to teaching in secular universities, others established Buddhist institutes or meditation centers. Among those American-born innovators are Joseph Goldstein, Jack Kornfield, Jacqueline Schwartz, and Sharon Salzberg, who together established the Insight Meditation Society at a former Catholic seminary in Barre, Massachusetts, in 1975.

One of the most vexing problems facing all American Buddhists is whether and to what extent they should accommodate the Buddhist tradition to American circumstances. This problem is compounded by the fact that while some Americans seem to have been attracted to Buddhism by its commonalities with Christianity and American culture, others seem to have come to Buddhism through the COUNTERCULTURE.

Solutions by American Buddhists to the problem of acculturation and assimilation are varied and complex. On the one hand, Theravada monks from Sri Lanka who emigrated to the United States to run the Buddhist Vihara Society (established in 1966) in Washington, D.C., have insisted that Buddhism remain a tradition of monks who have withdrawn from

the world in order to practice meditation and, ultimately, achieve nirvana. These monks have made few accommodations to American circumstances and have, as a result, attracted few members. An earlier attempt at a monastic order of celibates, the Followers of Buddha, was founded in 1934 by Dwight Goddard, a former missionary to China and the author of the widely read *Buddhist Bible*. But this experiment was too anticultural for most Americans and quickly folded.

The list of American Buddhists who have self-consciously adapted their tradition to American soil is much longer. One leading advocate for "Americanizing" Buddhism is Philip Kapleau. Drawn to Zen by a D. T. Suzuki lecture in 1951, Kapleau moved to Japan in 1953 to study Zen. He returned to the United States in 1966 and established in Rochester, New York, the Zen Meditation Center. Noting that Zen was "Japanized" when it moved from China to Japan, Kapleau has worked eagerly and self-consciously to "Americanize" Zen by urging his students, for example, to chant Buddhist sutras in English and to wear comfortable Western clothes during sitting meditation.

Perhaps the most significant transformation that Buddhism has undergone in the United States is its "feminization." There is much truth to Gary Snyder's observation that "the single most revolutionary aspect of Buddhist practice in the United States is the fact that women are participating in it." In Theravada Buddhist countries in South Asia, Buddhism is almost exclusively an affair of celibate male monks. Even in Mahayana Buddhist countries, which carve out a place within the tradition for lay practitioners, women are typically seen as inferior beings who must be transformed magically into men before they can become bodhisattvas, or "enlightenment beings." In the United States, however, approximately half of Buddhist practitioners are women, and many Buddhist groups have female leaders.

Buddhism in America is now almost as diverse as Buddhism in Asia, so it is difficult to generalize about some generic American Buddhism. America's Buddhisms do seem, however, to be for the most part in continuity with a broader Mahayana trend away from a tradition of celibate male monks who have renounced the world and toward a tradition of male and female lay practitioners actively engaged in the public sphere.

Approximations of the total number of American Buddhists vary from about 1 million to 5 million. There is widespread consensus, however, that Buddhism is one of the country's fastest-growing religions. Scholars also agree that the vast majority of American Buddhists are Asian Americans. Of the 1,500 or so Buddhist centers in the United States, only about 2 percent were established before the new immigration boom began in 1965.

While Buddhism is clearly new to the United States, the country has already become an important Buddhist nation. Thanks to the old immigration from China and Japan and new immigration from Thailand, Kampuchea, Laos, Vietnam, and Taiwan, the United States now offers a wider range of Buddhist beliefs and practices than any place in the world.

Buddhist Churches of America The Buddhist Churches of America (BCA), the nation's oldest Buddhist group, is a New World manifestation of Jodo Shinshu, or "True Pure Land" BUDDHISM. Jodo Shinshu traces its roots to the 13th-century Japanese Buddhist reformer Shinran and so is popularly known as Shin Buddhism. In the United States, as in Japan, members of that school recite the name of Amida Buddha with the faith that the saving grace of this Buddha of "Infinite Light" will secure their rebirth in the "Pure Land."

Buddhism first came to America with Chinese and Japanese immigrants during the 19th century. In San Francisco in 1899, two True Pure Land missionaries sent by a Jodo Shinshu school known as Honpa Hongwanji founded what was then called the Buddhist Mission of North America (BMNA). As the organization spread across the West Coast, it attracted mostly Japanese Americans. However, in keeping with the Westernization mandate of the Meiji Restoration in Japan, it pursued a policy of warding off anti-Japanese nativism by creatively adapting Buddhism to modern culture.

One BMNA member who facilitated this process was Julius Goldwater. The first European-American priest of Jodo Shinshu, Goldwater had converted to Buddhism after meeting ERNEST HUNT, one of Hawaii's leading Jodo Shinshu Buddhists and himself an eager Americanizer of Buddhism. As a minister in the main BMNA temple in Los Angeles, Goldwater conducted English-language services, taught Sunday school, organized youth groups, and officiated at funerals and weddings.

During World War II, roughly 120,000 Japanese Americans, including virtually all BMNA members and most of its priests, were

Asian immigration to California has led to Buddhism's growth and distinctive places of worship, such as Shensin Temple, Los Angeles. (Pluralism Project of Harvard University)

forcibly relocated to internment camps. Goldwater worked hard to provide liturgical and devotional materials for Buddhists imprisoned in the camps. He founded an interdenominational publication and distribution society called the Buddhist Brotherhood of America, which published and distributed a liturgical manual for camp use. This liturgical manual incorporated Protestant liturgical and hymnodic forms into Buddhist services. Members affirmed Goldwater's anglicizations and Protestantizations of their tradition, at least semantically, when they renamed their organization the Buddhist Churches of America in 1944.

After World War II, the organization continued to adapt itself to American culture. Following the example of the GIDEONS, the Buddhist Promoting Foundation (established in 1965) has placed more than 300,000 copies of *Teachings of Buddha* in hotel rooms across the country. The organization publishes periodicals in both Japanese (*Horin*) and English (*Wheel of Dharma*). The BCA also moved into higher education, establishing the Institute of Buddhist Studies (IBS) in Berkeley in 1966. The IBS is now affiliated with the Graduate Theological Union in Berkeley, California. During the 1980s and 1990s, the BCA began

to make its presence known in the public sphere of politics, weighing in for multicultural education and against school prayer.

Throughout the 1990s and early 2000s, membership in the BCA remained fairly stagnant, with about 17,000 adult members in 61 temples throughout the United States. Many of these members are now aging, and some older temples, such as the one in Oakland, have closed, although there have been new temples opening, particularly in retirement communities such as Phoenix, Arizona.

Now more than a century old, the BCA struggles to retain its American-born members. It continues, however, to provide its older members with a community that links them with their ancestral homeland of Japan even as it aids their descendants' full participation in American society.

Burned-Over District A popular 19th-century designation for the region of upstate New York west of the Catskill Mountains and south of the Adirondacks, the term *burned-over* referred specifically to the effects of evangelical revivals (see REVIVALISM) on this area between 1800 and 1850. First used by the itinerant preacher CHARLES GRANDISON FINNEY (1792–1875) as a term of derision to describe the harmful effects of Methodist preaching on the local population, the phrase came into wider use to indicate the analogy between the sweeping and recurrent effects of western forest fires and the burning “fires of the soul” that accompanied seasons of revival.

After 1790, increasing numbers of New Englanders seeking better soil and more land moved across the Appalachian Mountains into new settlements in the fertile valleys of the Genesee country. At the same time, a smaller migration moved northward up the Susquehanna River from Pennsylvania. In the 1820s, the construction of the Erie Canal lured more settlers, including significant numbers of foreign immigrants, to the area. Coinciding with this rapid movement were a series of evangelical revivals collectively known as the SECOND GREAT AWAKENING, events sponsored by traveling preachers with the support of local churches, in which large numbers of people were converted to Protestant evangelicalism. Although the Second Great Awakening affected settlers in other parts of the nation as well, its effects on the newly established settlements of western New York were perceived by contemporaries to be particularly intense, culminating in waves of revivals in 1799–1800, 1807–08, and the late 1810s, reaching a peak in 1825–37. During and after the depression of 1837, the seasons of revival reportedly subsided as swiftly as they had come.

The Burned-Over District has retained its importance because of several religious developments that had national impact but seemed to be more noticeably present or had their origins in this region. The first was the growth in evangelical organizational strength that resulted from the revivals. A good amount of “church-shopping” followed revivals, where religious “salesmen” tried to convince new converts to join their church rather than another, and denominations competed for members. Furthermore, as settlers moved into the area, Baptists, Methodists, Presbyterians, and Congregationalists all sent missionaries to the region in order to establish what they saw as “proper” Christian influence in new communities. The work of missionary societies in western New York thus established a pattern of domestic, or “home” missions (see MISSIONS, HOME) that governed denominational

strategies throughout the antebellum era, as Euro-Americans continued to move westward across the Mississippi. Evangelical churches in the area, experiencing great numerical growth, also contributed financially to denominational efforts in other locales.

Revivals also led to religious and social innovations, many of which had their roots in the district. Charles G. Finney’s famous preaching tours and revivals resulted not only in increased numbers of churchgoers, but in theological, revivalistic, and social changes that soon affected Protestants throughout the country. Rejecting key features of Calvinism that he felt interfered with the goal of conversion, Finney stressed the power of the individual to choose God’s salvation. He also instituted a series of “new measures” in his revivals, including praying for people by name, calling them forward to an “anxious bench,” and allowing women to pray in public, that laid the groundwork for the popular development of revivalism into the 20th century. Finally, he linked the advocacy of social transformation with conversion, compelling thousands of newly committed Christians to work for antislavery, temperance, and other reform movements of the day.

Other religious innovators also found fertile soil in western New York. Two indigenous American religions, the SHAKERS and the Mormons (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS), gained strength from revival participants who joined their movements after experiencing conversion. Communitarians and other utopians, including the Oneida community and JEMIMA WILKINSON’S “New Jerusalem,” moved to the area after experiencing persecution elsewhere. After the 1830s, one could find more religious and socialist utopian experiments in the Burned-Over District than any other part of the country. The Millerites (see SEVENTH-DAY ADVENTIST CHURCH), an adventist group that attracted tens of thousands of Americans with the conviction that the world would end in the mid-1840s, were

also centered in the region. When the world survived after their prophecies, the ensuing disillusionment, along with the nagging effects of prolonged economic depression, led to the slow decline of western New York as a thriving center for religious innovation.

Bushnell, Horace (1802–1876) Congregational minister Horace Bushnell, the greatest American theologian of his generation and one of the most important thinkers in the history of American Protestantism, framed the intellectual system that eventually evolved into the movement known as theological MODERNISM.

Bushnell was born in the village of Bantam, Connecticut, on April 14, 1802. After graduating from Yale College in 1827, he studied law for a time but, following a conversion experience during a revival in 1831, entered Yale Divinity School, from which he graduated in 1833. Although he studied under NATHANIEL WILLIAM TAYLOR there, Bushnell went beyond Taylor's liberalized version of Calvinism. He found greater inspiration in the religious romanticism of Samuel Taylor Coleridge and Friedrich Schleiermacher and their understanding of God's dwelling within the human soul and humanity's intuitive access to the divine.

After leaving Yale, Bushnell was called to the North Church in Hartford, Connecticut, where he served throughout his pastoral ministry. At the North Church, Bushnell sought to meet the religious challenges of the day not only by rejecting the harshness of traditional

Calvinism and the excesses of revivalism, but also by projecting the optimistic spirit of American democracy into the theological sphere. Bushnell argued that nature and the supernatural constituted "the one system of God," faith and reason being part of a single continuum; religious truths, therefore, ought to correspond to actual human experiences.

In 1847 Bushnell published his most important book, *Christian Nurture*. This work, which dealt with the problem of original sin and provided a useful alternative to revivalism, laid the foundation for future approaches to religious education. Accepting the insight of his teacher William Taylor that "sin is in the sinning," Bushnell denied the Calvinist notion that children were hopelessly lost

Horace Bushnell, the 19th-century Congregational theologian whose preaching at North Church in Hartford reshaped mainline Protestantism.

in sin until they were converted. Instead, he hoped that children growing up would never know a time when they were not part of the Christian household. Bushnell's organic view of family and church helped him view Christian nurture as a means of drawing out the essential goodness in human nature. This opinion was sufficiently close to Unitarian theology, however, that it laid him open to charges by conservatives that he considered natural development, not conversion, the key to the Christian life.

Bushnell made another notable exposition of modernist religious thought in his *God in Christ* (1849) and *Christ in Theology* (1851). Both books suggested that verbal communication was essentially symbolic in nature and thus was never as precise as some orthodox theologians insisted. All religious language, including that of traditional Christian creeds, of doctrinal statements, and even of the Bible itself, Bushnell believed, was poetic rather than literal. Such assertions were anathema to many 19th-century believers. As a consequence of publishing these views, Bushnell was charged with heresy, but he retained his position at the North Church despite the uproar against him.

Bushnell also made important contributions to the development of American CIVIL RELIGION during the CIVIL WAR. In his sermon "Reverses Needed," delivered following the Northern defeat at Bull Run in July 1861, and in his postwar address to the Yale graduat-

ing class almost exactly four years later ("Our Obligations to the Dead"), Bushnell stressed the social nature of human existence and saw in the war a means by which his nation might realize its true, God-given unity. In the wartime period, moreover, Bushnell composed his treatise on the doctrine of the atonement, *The Vicarious Sacrifice*, which interpreted Christ's death at Calvary against the backdrop of young Americans suffering and dying in the Civil War. Bushnell thought the war was beneficial for the United States in the same way that the sorrows of Good Friday had been redemptive for the human race.

Bushnell's declining health led to his resignation from the North Church in 1859, although many years of travel and writing lay ahead of him. He lived long enough, in fact, to influence the emerging SOCIAL GOSPEL movement, which sought to relate religious beliefs and biblical insights to the need for social reform in the last decades of the century. Bushnell remained active in theological and church circles until shortly before his death in Hartford on February 17, 1876.

C

Cabrini, Francesca Xavier (1850–1917)

The first U.S. citizen to be canonized and founder of the Missionary Sisters of the Sacred Heart, Francesca Cabrini was born in Lombardy, Italy, in 1850, the youngest child of a prosperous farmer. In 1870, she graduated with honors from an academy run by the Daughters of the Sacred Heart in Arluno. She desired to join the order, but a smallpox infection in 1872 left her so weak that she was refused for health reasons. Cabrini spent the next several years (1872–74) as a schoolteacher and as the director of an orphanage (1874–80). At the orphanage, she attempted to form the staff into a religious order, taking vows herself on September 14, 1877. The closure of the orphanage led Cabrini to gather seven companions at an abandoned Franciscan monastery, where they organized the Missionary Sisters of the Sacred Heart on November 14, 1880. The order received papal approval in March 1888.

Although the sisters desired to undertake missionary work in China, they were directed to serve Italian immigrants in America, and one year later Cabrini and six compatriots arrived in the United States to begin that work. The poverty and need of the Italian immigrants threw the order into a flurry of activity, all under the careful administrative eye of “Mother Cabrini.” She supervised the order’s catechetical work with youths and prisoners and directed the establishment of numerous orphanages and schools as well as hospitals in New York, Chicago, and Seattle.

Cabrini was an indefatigable organizer. In the course of 35 years, she made more than 30 trips across the Atlantic and organized

Francesca Cabrini founded an order of women religious who worked to alleviate the poverty of Italian immigrants. She became the United States’ first citizen to be canonized by the Roman Catholic Church. (Library of Congress Prints and Photographs Division)

67 houses of her order throughout Europe, the United States, and South America—this despite a physical weakness so marked that it would be noted in Pius XII's speech at her canonization. Suffering from malaria for much of her life, she succumbed to it in 1917, dying at her order's Columbus Hospital in Chicago on December 22, 1917.

The process leading to her canonization was begun by the archbishop of Chicago, Cardinal George Mundelein, in 1928. The list of her merits was approved by Pius XI in 1931, who pronounced her venerable in 1933, the first step toward canonization. Beatified in 1938, Mother Cabrini, who had become a naturalized U.S. citizen in 1909, officially became a saint in the Roman Catholic Church on July 7, 1946.

Cahenslyism Cahenslyism, a 19th-century movement in the U.S. Roman Catholic Church (see ROMAN CATHOLICISM) for the establishment of parishes organized along national and linguistic lines rather than geography, was named after Peter Paul Cahensly, a German parliamentarian who visited the United States in 1883. A member of the Germany Center Party and an official of the St. Raphael Society, founded in 1871 to aid German immigrants, Cahensly was shocked by Irish dominance of Roman Catholicism in the United States and appalled by the decline of the German language and traditions among the immigrants. Like many at the time, he blamed the indifference of the "hibernarchy"—the predominantly Irish bishops—for the loss of thousands of German Catholics from the faith.

His solution, and that of many others, was the establishment of Roman Catholic parishes based on culture and language. Such parishes would allow German-speaking Catholics to maintain German culture and the traditions of German Catholicism. Cahensly was instrumental in having a petition placed before Pope Leo XIII in 1890 that called for a radical restructuring of the American church. Not only did it ask that parishes be organized along national lines but suggested that every parish should have priests of the same nationality as the parishioners, that parochial school instruction be in the students' mother tongue, and that there be representation of each nationality in the American hierarchy.

This petition infuriated most of the American bishops, who were committed to the creation of a unitary American Catholicism, and after a second petition on the subject was sent to Rome, Cardinal JAMES GIBBONS formally protested the meddling in American affairs by "officious" European gentlemen. Although the pope rejected the idea of establishing national parishes, the letter from the papal secretary of state informing Gibbons of this rejection also urged the American bishops to pay greater attention to the needs of new immigrants.

Calvert, Cecilius (1606–1675) Born in London, England, in 1606, Cecilius Calvert was the eldest son and heir of George Calvert (1580–1632), the first Lord Baltimore. The Calverts were a Roman Catholic family

who outwardly conformed to the rituals and practices of the Church of England until 1625, when Cecilius's father publicly announced his Roman Catholic faith (see *ROMAN CATHOLICISM*). Although legal proscriptions against Catholics forced him to resign several of his public offices, George retained his position as a privy counselor to James I.

By this time, the elder Calvert had turned most of his attention to aiding his fellow English Catholics, who suffered from social and legal liabilities in England. To accomplish this goal, he devised various colonization schemes. Purchasing land in Newfoundland in 1620, Calvert established the settlement

Cecilius Calvert, the second lord Baltimore, established the colony of Maryland, where his fellow Roman Catholics and all Christians could worship freely. (*Enoch Pratt Free Library*)

of Ferryland in 1623. A visit to the colony in 1628 forced him to realize that the climate was not conducive to easy colonization, and he persuaded Charles I to grant him the right to purchase land farther south in Virginia (see *VIRGINIA, COLONY*). The protests were so great that Charles rescinded the permission, granting him land north of the Potomac instead. George Calvert died (1632) before receiving the charter for this land, to be named Maryland (see *MARYLAND [COLONY]*) after Charles I's Roman Catholic wife, Henrietta Maria, and the grant was then made to Cecilius as heir.

Desirous of fulfilling his father's wish of establishing a colony where Roman Catholics were secure, Cecilius sent out two ships, the *Ark* and the *Dove*, to Maryland the following year under the governorship of his brother Leonard Calvert. This group was comprised of 30 gentlemen, 200 mostly Protestant laborers, and two Jesuit priests, who would perform the first public mass in British North America.

To preserve the peace, Cecilius directed his brother to allow complete religious freedom to all Christians. The Catholics also were warned to avoid antagonizing their fellow colonists and not to practice their religion too publicly. As added insurance against conflict, Calvert attempted to control the activities of the Jesuits, extracting from the Jesuit General the ruling that all priests must conform to the colony's laws and gaining veto power over appointments of priests to the colony.

Hostility from English Protestants who opposed a colony ruled by a Catholic and from the colonists who chafed under the absolute rule of the proprietor forced Cecilius to grant a measure of self-government to the colony, retaining only the right of veto over the colony's laws. This brought little respite, however, and until his death, Cecilius's energies were expended in attempting to control the colony. After a period of armed rebellion in the early 1640s, he reestablished his control in 1647. In 1649, Leonard's successor, the Protestant William Stone, attempted to establish peace by

convincing the colonial assembly to pass an "Act Concerning Religion," otherwise known as the Toleration Act of 1649 (see ACT OF TOLERATION, MARYLAND), which allowed religious freedom for all those not denying the Trinity and made it illegal to disparage anyone's religion.

This did not have the desired effect. In 1650, Protestants gained control over the colony's government and in 1654 forced the assembly to disfranchise all Catholics and to outlaw "popery, prelacy, and licentiousness." The Calverts once again regained control of the colony in 1658. For the next 17 years, until Cecilius's death on November 30, 1675, Maryland remained relatively peaceful and stable, and the proprietorship passed to his son George.

The "Glorious Revolution" of 1688 in England, which deposed the Roman Catholic James II and replaced him with the Protestants William and Mary, marked the end of the Catholic proprietorship in Maryland. Galvanized by the revolution, a group of Maryland Protestants seized control of the government. In 1691, King William III relieved the Calverts of their grant, and Maryland became a royal colony, thereby ending one of America's earliest experiences in religious liberty.

Calvinism A theological tradition that began with the reformer John Calvin, Calvinism is based upon the principle of God's absolute sovereignty and initiative in granting eternal salvation to human beings. English Calvinism, which found expression within the Puritan (see PURITANISM) movement of the

16th and 17th centuries, decisively shaped religious life in early America. Indeed, Calvinism has been the single most important force in religious thought in the United States, having influenced perhaps three-quarters of all American Christians in the years prior to the War for Independence.

John Calvin (in French, Jean Cauvin) was born in France in 1509. Sometime around 1533 or 1534, Calvin underwent a profound experience of religious conversion. He broke away from the Roman Catholic Church in May 1534 and dedicated himself to restoring Christianity to what he conceived to be the purity of biblical times. In the same period, he also began to write his *Institutes of the Christian Religion*, which would become one of the most important statements of Protestant belief. Calvin completed the first edition of the *Institutes* in 1536, the same year he arrived in Geneva, Switzerland, to begin the reformation of the church in that city. Over the next three decades until his death in 1564, he devoted himself to transforming Geneva into (in the words of Scottish reformer John Knox) "the most perfect school of Christ."

Eventually, nearly 5,000 Protestant refugees from other countries flocked to Calvin's Geneva in the mid-16th century. Harassed in their own homelands, these exiles were attracted both by Calvin's intellectual stature and by the safety his city offered them. Between 1553 and 1558, many English Protestants, fleeing persecution in the reign of the Catholic Queen Mary, were among the group of refugees in Geneva. There they imbibed Calvin's ideas on creation, divine redemption, history, and politics, which they brought back to England after Mary's death. Thanks to the tutelage of those English exiles under Calvin, most serious Protestants in England were committed to Calvinist theology by the end of the 16th century.

Calvin had borrowed heavily from the ideas of Augustine of Hippo, the great Christian theologian of the fourth century. In his

writings about the church, Augustine distinguished between its visible and invisible manifestations. Only God knew, on the one hand, who belonged to the invisible church. God had chosen the members of that church, Augustine said, even before the creation of the world. The visible church, on the other hand, was the human institution known on Earth. While insisting that membership in the visible church was no guarantee of eternal salvation, Augustine acknowledged that God's elect (see ELECTION) almost invariably belonged to the visible church during their lifetimes.

Calvin adopted Augustine's emphasis on the omnipotence of God and the passivity of humankind, and he employed those ideas as the foundation of his religious thought. Without divine grace, Calvin wrote, no person could repent and become a Christian. Yet God's grace was a gift that only the elect received. Calvin also denied the freedom of the human will. Humans were "free" to sin but not to save themselves. The credit for salvation belonged solely to God who, from eternity, had predestined the fate of the soul. Only God knew who would be saved and who would be damned. Although his teaching on predestination appeared to undercut participation in the visible church, since no amount of piety or faithfulness could ever change God's eternal decrees, Calvin contended that the elect would inevitably lead pious, Christian lives. He counseled people not to dwell on their failings, but simply to trust in the all-sufficient grace of God.

In the early 17th century, Dutch theologian Jacobus Arminius advanced a conspicuous challenge to Calvin's teachings on predestination (see ARMINIANISM). Arminius, who doubted that God arbitrarily would have chosen to save some human beings and damn others, wished to reaffirm the importance of the human will in spiritual matters. After Arminius's death, his followers formally disputed the deterministic logic of Calvinism.

The "Arminians" argued that God foreknew, but did not foreordain, who would be saved and gave all people the grace to accept eternal salvation. Orthodox Calvinists vigorously counterattacked and at the Synod of Dort in 1619 officially condemned Arminianism. The *Canons* of the Synod of Dort promulgated what are now recognized as the five principal tenets (popularly summarized by the acronym TULIP) of Calvinism:

1. total depravity (human beings are wholly sinful and entirely incapable of saving themselves);
2. unconditional election (God predestined some human beings for salvation without regard to their individual merits or possible good works);
3. limited atonement (Christ suffered and died on the cross to save only those whom God had already chosen for salvation);
4. irresistible grace (God's chosen ones can never reject salvation);
5. perseverance of the saints (the chosen will never fall away from their state of grace).

At the same time that Calvin's disciples on the Continent were debating his doctrines, Calvinists in England had also become engaged in a controversy. Arminians such as William Laud, the archbishop of Canterbury, desired to return participation in the sacraments of the church to the center of the process of salvation. Calvinists, called "Puritans" after the 1620s, continued to emphasize God's initiative and devalued human endeavors. Arguing about a number of important issues, including the role of bishops in church government, the use of vestments in worship, and the meaning of the church's sacraments, Arminians and Puritans in the Church of England eventually went their separate ways. Between 1620 and 1640, approximately 20,000 Puritans left England and migrated to New England, thereby conveying Calvinism to the New World.

In the century and a half between the arrival of the Pilgrims in Plymouth, Massachusetts, in 1620 and the start of the American Revolution, Calvinism became well established in America. Thousands of continental Calvinists belonging to the Dutch Reformed, German Reformed, and French Reformed (or Huguenot) traditions followed the English Puritan migration and streamed into the American colonies. British Calvinism was strengthened, moreover, by the arrival of Scottish and Scotch-Irish immigrants in the late 17th century. And, although the revivals of the GREAT AWAKENING often aroused violent controversies within the American churches in the mid-18th century, Calvinism provided the theological foundation on which the value and meaning of the awakening was debated.

By the late 18th century, however, Calvinist hegemony in America began clearly to decline. The fatalism implicit in the doctrine of predestination, for example, appealed less and less to a society that prized freedom of action and the opportunity for self-improvement. The view of the human condition advanced by the "Consistent Calvinists" like Congregational theologian SAMUEL HOPKINS, who claimed he would be willing "to be damned for the glory of God," appeared too harsh to increasing numbers of Americans. Extreme Calvinism placed believers in a moral quandary. They never could be sure whether or not they should *try* to be good. As a popular ditty of the day put it:

*You can and you can't,
You shall and you shan't;
You will and you won't.
You're damned if you do,
And damned if you don't.*

The SECOND GREAT AWAKENING of the early 19th century further undercut Calvinism's authority. American evangelicals (see EVANGELICALISM), even those who belonged to denominations like the Presbyterians and the

Congregationalists that had affirmed wholeheartedly Calvinist theology, reacted strongly against the notion of predestination. Anyone *could* achieve salvation by undergoing a spiritual rebirth. Presbyterian revivalist CHARLES G. FINNEY was renowned for pleading with men and women to change their hearts and surrender to God. His most famous sermon, "Sinners Bound to Change Their Own Hearts," argued that God required people to act for themselves. Despite the Calvinist insistence that men and women were morally unable to choose between heaven and hell, Finney taught that common sense showed they had the God-given power to make up their own minds.

Despite such noteworthy modifications, Calvinism did not entirely die out in the United States in the 19th century. In fact, the threat to it made some theologians even more vigilant in upholding the essential truth of Calvin's teachings. Among Presbyterians, the theological tradition cultivated at Princeton (see PRINCETON THEOLOGY) Seminary in New Jersey was the most resistant to altering Calvinist orthodoxy in any way. While some Presbyterians sought a flexible version of Calvinism more in accord with revivalism and religious emotions, the Princeton theologians held firm. As Princeton professor CHARLES HODGE remarked about his school, "a new idea never originated in this Seminary." The Princeton Theology continued to influence conservative Presbyterians and other evangelicals throughout much of the 19th and 20th centuries.

Despite revisions and resistance to change, Calvinism has dominated American Protestantism, especially denominations within the REFORMED TRADITION. While the direct heirs of colonial Presbyterianism and Congregationalism, the Presbyterian Church (U.S.A.) and the United Church of Christ, no longer emphasize strict Calvinist beliefs, smaller denominational bodies such as the Orthodox Presbyterian Church and the Presbyterian Church in America militantly maintain Calvinist orthodoxy. Moreover,

among members of the Dutch Reformed tradition, represented by the Reformed Church of America and the smaller, more conservative Christian Reformed Church, faithfulness to the traditional confessions of Calvinism is strictly preserved. And since many Baptists, Episcopalians, and members of various other independent churches also adhere to the principles of Calvinism today, the breadth of commitment to this theological tradition remains indisputable.

Cambridge Platform Adopted in August 1648, the Cambridge Platform set forth the basic doctrines and church polity of the Puritan (Congregational) churches (see PURITANISM; CONGREGATIONALISM) in New England. The document was the first official statement of these churches and made explicit what previously had only been implied in the writings of Puritan theologians. It remained the basis for Congregationalism until the 1830s.

The adoption of the Cambridge Platform was the result of many forces. During the 1630s, the colonies had been threatened by individuals whose teachings challenged their religio-political unity. These challenges led to the calling of a ministerial synod by the Massachusetts General Court in September 1646.

The Cambridge Synod, as it was known, drew delegates from all the Massachusetts churches, except Concord, as well as from New Hampshire, Plymouth, and Connecticut. Among the Connecticut delegates was THOMAS HOOKER, who had pushed for such a gathering for five years. The synod's deliberations

continued intermittently until August 1648. Its result, "A Platform of Church Discipline Gathered out of the Word of God," combined the church polity of Hooker with the theology of JOHN COTTON and Richard Mather. It duly affirmed the Westminster Confession of Faith as the fundamental expression of doctrine and then turned to its major points.

The first was limited church membership. The church was to be composed of those who could give evidence of a conversion experience. The children of these members could be baptized, but full membership would await their own conversion experience (see HALF-WAY COVENANT). The autonomy of the individual congregation was proclaimed, as well as its freedom from coercion by any synod or association of churches.

Religious and civil authorities were to be separate but mutually reinforcing. The civil authorities were not to hinder the churches but to "help and further them." In return, the churches should seek the approval of magistrates at every legitimate opportunity. While the state could not compel church membership, it was to enforce uniformity and punish persons guilty of idolatry, blasphemy, and heresy. Finally, the magistrates were allowed to call synods "to counsell & assist them in matters of religion."

The Cambridge Platform was the crowning glory of the first generation of Puritans. A succinct and coherent statement of Puritan beliefs and practices, it created a solid and stable system for subsequent generations of believers. Although requiring some adjustments in later years, the platform stood the test of time as a defining statement of Congregationalism for nearly two centuries.

Campbell, Alexander (1788–1866) Alexander Campbell was a Protestant minister and, with his father, Thomas, cofounder of the CHRISTIAN CHURCH (DISCIPLES OF CHRIST). He was also the most influential figure of American “restorationism” (see RESTORATION MOVEMENT), the religious movement that sought to return 19th-century Protestantism to the beliefs and practices of New Testament times.

Alexander Campbell was born at Ballymena, Ireland, on September 12, 1788. His early education was at home under the tutelage of his father, then a Presbyterian clergyman, and he later studied at the University of Glasgow in Scotland. When Thomas migrated to the United States in 1807, Alexander followed him, eventually settling in Pennsylvania in September 1809.

Disturbed by petty theological quarrels among his fellow Presbyterians in America, Thomas decided to withdraw from his denomination and promote unity among members of all Christian traditions. In 1809, he founded a new religious fellowship, called simply the “Christian Association of Washington” (Pennsylvania). Guided by principles that Thomas outlined, the Christian Association adopted a single, biblically based creed: “Where the Scriptures speak, we speak; where the Scriptures are silent, we are silent.” In 1811, Thomas and Alexander together organized a church at Brush Run, Pennsylvania, and served as its clergy. Because of the Campbells’ belief that immersion was the only proper form of the Christian baptismal rite, their church joined the local Redstone Baptist Association in 1813, an affiliation that lasted until 1827.

Alexander soon assumed sole leadership of the church, and he began to travel extensively over what is now the Midwest and upper South to win members for the non-denominational movement he championed. He formed groups called “Disciples of Christ,” which became one of the fastest-growing religious organizations of the time. Campbell

Alexander Campbell, a Scotch-Irish missionary and cofounder of the Disciples of Christ. His “restoration” of the Gospel had wide appeal to 19th-century Americans.

emphasized a Christianity based upon the New Testament, a faith both free from doctrinal hairsplitting and broad in focus. Noted for his detailed expositions of the structures and practices of primitive Christianity, he insisted that 19th-century Americans could, if they wished, reconstruct the first-century church and thereby transform their society.

Tension over a number of theological matters led eventually to the withdrawal of the Brush Run Church from the Redstone Baptist Association. After meeting Barton Stone in 1830 and finding common ground with Stone’s “Christians,” Campbell brought his Disciples of Christ into fellowship with Stone’s group. On January 1, 1832, 12,000 of

Campbell's "Disciples" and 10,000 of Stone's "Christians" came together for a meeting at Lexington, Kentucky. While its internal organization was not completed until 1849, a new denomination emerged out of the self-consciously nondenominational movements that both Campbells and Stone had launched. The Disciples of Christ grew from 22,000 members in 1832 to almost 200,000 in 1860. Alexander Campbell chartered Bethany College in Bethany, Virginia (now West Virginia), in 1840. Under his leadership as president from 1840 to 1866, the college provided an educated ministry for his rapidly expanding church.

Campbell remained active, writing and teaching for many years to come. He had already published an English translation of the New Testament in 1827. Later, he wrote other books on the Bible, baptism, and primitive Christianity. He also expounded his theological views over the course of five decades in two successive monthly journals: *The Christian Baptist*, published from 1823 to 1830, and *The Millennial Harbinger*, published from 1830 until 1866. The authority of Campbell's teachings in the denomination he helped found continues strong today. He died at Bethany on March 4, 1866.

Campbell, Thomas See CAMPBELL, ALEXANDER.

camp meetings The camp meeting was the most distinctive feature of religious life on the American frontier in the first decades of the 19th century. A notable offshoot of the SECOND GREAT AWAKENING and a highly effective means of evangelizing unsettled areas, camp meetings were interdenominational reviv-

als (see REVIVALISM) held in the open air over several days. While a revival was taking place, most participants, who had often traveled great distances, camped at the site where the religious exercises were held.

Although the camp meeting was popularized in the United States, the phenomenon itself originated in Scotland and northern Ireland. Scottish Presbyterians had developed a pattern of assembling once or twice a year to celebrate the Lord's Supper and hear sermons stressing the need for repentance. These gatherings lasted for several days, during which worshipers prepared themselves spiritually before sharing bread and wine at large tables. Presbyterians transported their "communion seasons" to the New World. That practice provided the basis for the revivals that began to occur on the American frontier in the 1790s.

Presbyterian minister James McGready of Logan County, Kentucky, is generally regarded as the person who initiated the camp meeting technique in America. He led a well-attended four-day revival at Red River, Kentucky, in June 1800 and repeated his success a month later at Gasper River, Kentucky. At the Red River revival, McGready, two other Presbyterians, and two Methodist clergy exhorted the men and women present to renounce their sins and let God reign over their hearts. Worshipers began to shout for mercy as the preachers moved among them, and scores reportedly sank to the ground in religious ecstasy. The outdoor setting, the welcome break from the ordinary routines of farm life on the frontier, and a genuine sense of their own sinfulness made many responsive to the preachers' appeals for spiritual conversion.

BARTON W. STONE, whom McGready had earlier influenced, attended the Gasper River revival and determined to duplicate what he had seen there. Stone summoned thousands to his own church at Cane Ridge, Kentucky, in early August 1801. The CANE RIDGE REVIVAL proved to be the largest and most success-

ful camp meeting ever held, as over 10,000 people—more than five times the size of the largest settlement in Kentucky at the time—gathered for a week under Stone's direction. The unusual bodily motions of those caught up in the religious enthusiasm at Cane Ridge (e.g., falling, dancing, jerking, laughing, and even barking) forever marked revivalism in the popular mind. While critics condemned the shocking delusions and excesses of camp meetings, defenders simply noted the extraordinary number of converts and new members revivals brought into churches on the frontier.

Camp meetings like the Cane Ridge Revival, however, proved to be relatively short-lived. Although McGready and Stone, the earliest proponents of the camp meeting, were Presbyterians, Americans who belonged to that denomination tended to value order over enthusiasm and quickly withdrew support for outdoor revivals. Baptists also soon abandoned camp meetings in favor of protracted revival services held inside church buildings in towns and cities. As a result, by 1840 the camp meeting became the almost exclusive domain of the Methodist denomination. Moreover, as the scattered populace and isolation found on the frontier were replaced by settled communities and organized church life, the urgent evangelistic impulses that shaped the first camp meetings became institutionalized and domesticated. Instead of the frenzied excitement of the frontier revivals, the next generation of camp meetings were carefully controlled, dignified affairs. Methodists transformed the grounds where gatherings were held into permanent Bible camps, conference centers, and summer resorts, such as at Chautauqua, New York, and Oak Bluffs, Massachusetts.

Camp meetings again became a vital feature of religious life in the United States as the Holiness movement emerged out of American evangelicalism in the late 19th century. In 1867, several Methodist ministers issued a call

A popular method of evangelization, camp meetings spread Protestantism to the scattered frontier population in the 18th and 19th centuries. (*Library of Congress*)

for a camp meeting to be held at Vineland, New Jersey. After that gathering, many who had been involved in it formed the National Camp Meeting Association for the Promotion of Christian Holiness, which sponsored more than 50 meetings over the next 15 years. Camp meetings continue to be associated with the Holiness movement today. A 1987 directory published by Asbury College in Kentucky, for example, listed 114 meetings that were to be held that year. Camp meetings still provide an opportunity for believers to leave behind

their ordinary routines and come together for extended periods of worship and Bible study.

GHS, Jr.

Bibliography: Dickson D. Bruce, Jr., *And They All Sang Hallelujah: Plain-Folk Camp-Meeting Religion, 1800–1845* (Knoxville: University of Tennessee Press, 1974); Leigh Eric Schmidt, *Holy Fairs: Scottish Communion and American Revivals in the Early Modern Period* (Princeton: Princeton University Press, 1989).

Cane Ridge Revival The Cane Ridge Revival (see REVIVALISM), a gathering of at least 10,000 people at Cane Ridge, Kentucky, in August 1801, was the largest and most memorable of the frontier CAMP MEETINGS of the early 19th century. For a week, hundreds of men and women prayed, sang, and proclaimed their new faith in Jesus Christ.

James McGready, a Presbyterian minister who took charge of three churches in southwestern Kentucky in 1796, was the first great frontier revivalist. At Red River, Kentucky, in June 1800 and at Gasper River, Kentucky, the next month, McGready and his associates gathered worshipers from as far as 100 miles away. They exhorted people to “let the Lord Omnipotent reign in their hearts,” and many responded by shouting for mercy and by falling to the floor in spiritual ecstasy. Barton W. Stone, a Presbyterian minister who had been converted by McGready and attended the Gasper River revival, soon adopted the same methods. Stone announced that a great meeting would be held at the small church at Cane Ridge, where he served as pastor.

Wooden preaching platforms were hastily constructed and a rough clearing made for the revival. Ministers of the Presbyterian, Baptist, and Methodist Churches all came together and cooperated in a common, nonsectarian effort. Since nearby Lexington, then Kentucky’s largest city, had fewer than 2,000 residents, the volume of people attending the Cane Ridge meeting was itself stupendous. After the

revival ended, some participants referred to the experience at Cane Ridge as the greatest outpouring of the Holy Spirit since the biblical day of Pentecost.

The gathering was a scene of milling crowds and immense confusion. Everyone walked about, assembled in small groups, and listened to ministers shouting at them simultaneously from several preaching platforms. The traditional process of religious conversion that had once required months, even years, of spiritual preparation was forgotten. Instead, at Cane Ridge all was compressed into mere hours, as believers passed rapidly through stages of guilt, despair, hope, and finally assurance of the forgiveness of their sins. The psychological stress caused by the tremendous throng of preachers and believers forced those who were wavering to respond immediately. Outbursts of religious emotion punctuated the affair: people sobbing, screaming, dancing, and jerking their limbs spasmodically.

Cane Ridge symbolized the tremendous religious changes occurring in the United States in the early years of the new republic’s life. Camp meetings became the principal means by which Protestantism spread on the western frontier during the period of the SECOND GREAT AWAKENING. Over the next three years especially, similar revivals were held throughout Kentucky, Tennessee, and southern Ohio, and thousands of previously unchurched settlers were incorporated into Christian denominations. While all churches in these areas gained new members in the wake of the revivals, the most insistently democratic denominations, the Baptists and the Methodists, expanded the most rapidly over the next decades. As a result of the enthusiasm Cane Ridge helped inspire, Baptists and Methodists soon became the largest church bodies in the United States.

Carolinas (colonial period) The religious life of the Carolinas during the COLONIAL PERIOD was quite mixed. The early history of both colonies manifested much religious diversity, but while attempts to establish the Church of England (see ANGLICANISM) in North Carolina were unsuccessful, South Carolina eventually managed both an establishment and legislation requiring religious conformity.

The earliest attempts at colonization in what is now the Carolinas were made by the Spanish (see NEW SPAIN). In 1526, Spanish colonies were planted in both modern-day North and South Carolina, but they soon failed. The French (see NEW FRANCE) made the next attempt, establishing a settlement at what is now Parris Island, South Carolina, in 1562. This settlement was equally unsuccessful, and despite repeated attempts at revitalization, it was abandoned by 1680.

North Carolina saw the first British attempt at colonization in North America as well as the creation of an American legend, when Sir Walter Raleigh established a colony at Roanoke Island in 1585. This colony survived only with constant resupply from England, and when the threat of a Spanish invasion interrupted British shipping between 1587 and 1590, the colony disappeared and with it the first English child born in North America.

No other formal attempts at colonization took place until the 1660s, although northern Carolina had begun to receive some settlement by Virginians (see VIRGINIA) who migrated south during the 1650s. Carolina was organized as a proprietary colony along feudal lines with the settlers required to pay fees to the proprietors. Despite this feudal form, its constitution—which John Locke (see ENLIGHTENMENT) supposedly helped write—allowed religious tolerance in a bid to encourage settlement.

Settlement in the northern part was slow, but South Carolina soon developed into a thriving colony, and by 1681 Charleston had

an Anglican church. In 1704, the colonial assembly established the Church of England and required conformity with its laws and rites. By 1723, there were 13 parishes in the colony, most of which were prosperous and well served.

Despite the existence of an established church, colonial South Carolina contained significant religious diversity. Beyond the pockets of Native Americans who survived European diseases and war to maintain their traditional religious beliefs, South Carolina had one of the largest populations of Africans in the colonies. Many of these enslaved Africans retained their traditional religious beliefs or merged them with the incipient Christianity they received. Given the high mortality rate among slaves in the rice and indigo plantations of the colony, South Carolina imported more recently enslaved Africans who helped to maintain the traditions longer there than in most other colonies.

European diversity was also marked. The colony's first governor was a Puritan (see PURITANISM), and many of its earliest settlements had distinctively Baptist leanings (see BAPTISTS). Quakers (see FRIENDS, RELIGIOUS SOCIETY OF) were also well represented in the colony, and one, John Archdale, served as colonial governor from 1694 to 1695. A group of Huguenots—French Protestants—arrived in 1680, and in 1730 German and Swiss Lutherans settled in the colony. Charleston was also the center of colonial Judaism, with the largest Jewish population (500) in the colonies at the beginning of the American Revolution.

One group markedly absent from both northern and southern Carolina was the Roman Catholics. Strictly enforced laws against their presence, Catholic priests, and the performance of the Mass prevented any noticeable Roman Catholic migration to the colonies.

Religious life in colonial North Carolina was equally diverse, albeit much less regularized. Settlement was slow in North Carolina,

and the colony had no incorporated town until 1706, when Bath was organized by a group of Huguenot settlers. Religious diversity in North Carolina owed much to the stringent religious laws of Virginia, which led many dissenters to migrate south.

From the earliest time, North Carolina included large numbers of Quakers, Baptists, Presbyterians (see PRESBYTERIANISM), and the unchurched, along with the indigenous peoples and enslaved Africans. Attempts to establish the Church of England in the colony met with much resistance and even violence. In 1701, the colonial assembly officially established the Church of England and followed this in 1705 with a law for tax support for Anglican churches. Both of these met with much opposition, and the proprietors quickly vetoed the establishment law, while an armed rebellion forced the repeal of the support law.

North Carolina reverted to royal control in 1729. This led to greater stability in the colony, although it was still prone to numerous insurrections. The Church of England was officially established in 1741, and while this put dissenters on an unequal political footing, it did little to end the colony's religious diversity. In the 1750s, a group of Moravians established Salem, and their presence, along with that of the Quakers, had a lasting influence on the religious ethos of that part of the state.

More importantly, however, has been the Baptist role in the history of both the colony and later the state. Baptists were among the earliest settlers of the colony, joining Quakers who drifted south from Virginia. These Baptists received a major organizational boost in 1751, when the Baptist missionary Shubal Stearns settled in Sandy Creek, North Carolina. There he organized several churches that formed the Sandy Creek Association, with 10 churches by 1760. This growth continued for the next decade, but increasing religious persecution and political conflicts soon forced many Baptists to flee the colony. This was

especially true after 1771, when government troops crushed the Regulator movement at the Battle of Alamance. The Regulators, who were in revolt against the eastern aristocracy, were particularly strong in Baptist-dominated areas, and Baptist hostility remained great, resulting in widespread Baptist support for the revolution and, later, support for laws guaranteeing religious liberty.

While their small populations and distance from the center of colonial development have resulted in little attention being paid to them, the Carolinas provide an interesting example of colonial religious diversity. As such, they served to demonstrate the peace that is possible in the absence of religious coercion and, in the North Carolina case, the hostilities and animosities that emerge when it is attempted on a varied population.

Lippy, *A Bibliography of Religion in the South* (Macon, Ga.: Mercer University Press, 1985).

Carroll, John (1735–1815) The first bishop of the Roman Catholic Church (see ROMAN CATHOLICISM) in the United States, John Carroll laid an admirable foundation for the church's growth and stability. More importantly, he set the example for future American Catholic bishops by his support for the U.S. political system and its commitment to religious liberty.

John Carroll was born on January 8, 1735, to a wealthy and distinguished Maryland Catholic family. His father, Daniel, an Irish immigrant, was a successful merchant and tobacco farmer, while his mother, Eleanor Darnall, was from an old Maryland Catholic family. Through her, John was related to the most important Catholics in the country.

Despite their social and economic standing, Catholics in Maryland lived under legal restrictions. Public celebration of the Mass and the building of churches were illegal. Even Bohemia Manor, the Jesuit school Carroll attended beginning at age 12, was unlawful. Sent to Europe the following year for further study, he attended St. Omer's in French Flanders and graduated in 1753. At this time, Carroll entered the Society of Jesus (see JESUITS) and spent the next several years training at Jesuit seminaries in France and Belgium. After his ordination around 1769, he taught philosophy and theology at several Jesuit schools and served as a tutor to English Catholics touring the European continent.

The suppression of the Jesuits by Pope Clement XIV in 1773 hit the young man hard. His life and dreams shattered, Carroll returned home to the America he had not seen in a quarter-century. Settling at his mother's estate at Rock Creek, Maryland, he began a small mission church and ministered to the needs of local Catholics.

The American Revolution saw Carroll a committed patriot. With his cousin, Charles Carroll of Carrollton (the wealthiest man in America and the only Catholic signer of the Declaration of Independence), and Benjamin Franklin, he undertook an ultimately unsuccessful diplomatic mission to Canada designed to gain French Catholic support for the Revolutionary cause.

While American victory in the Revolution eased most legal burdens on American Catholics, it left the church in the United States with no administrative center. No longer could it take directives from London, or anywhere on the continent for that matter. The church needed its own bishop. In 1783, Carroll and five other priests petitioned the pope to provide some structure for the American church by appointing a leader from among its members.

In response, the pope appointed Carroll superior of the American church. Disturbed by the lack of consultation in the appoint-

ment and the limited authority vested in the position, Carroll delayed acceptance. Only after receiving an expansion in authority and the title of vicar apostolic did Carroll accept, undertaking the job of imposing order upon a weak church spread over a vast nation.

This job was made somewhat easier when, in 1789, Pius VI appointed Carroll bishop of the diocese of Baltimore, which covered most of the United States, from Vermont to Louisiana. The selection had followed Carroll's suggestions. He had been chosen by the priests in the United States and his name submitted to Rome for approval. This was consistent with Carroll's view of the church. For him, the Roman Catholic Church was a combination of national churches united by doctrine and belief under the headship of the pope. As long as each national church was consistent with Rome in faith and doctrine, it should be allowed to organize its own affairs according to its traditions and national character. For Carroll, this meant an American church committed to religious liberty and to American democracy.

To increase the number of clergy in America, he encouraged European orders to establish themselves in the United States. In this, he was aided by the French Revolution, during which many French priests and nuns emigrated to America. Most visible among these were the Sulpicians, who would form the bulk of America's second generation of Roman Catholic leaders.

Most importantly, Carroll recognized that the Roman Catholic Church in the United States needed a complete infrastructure of institutions and organizations. This included the creation of American religious orders, like ELIZABETH SETON's Sisters of Charity. Education was preeminent in the mind of this former professor, and he was instrumental in the creation of what is now Georgetown University (1789), Mount St. Mary's College (Annapolis, Maryland, 1792), and St. Joseph's College (Emmitsburg, Maryland, 1809).

Carroll also established his authority over individual parishes, ending a long conflict about the ability of parish trustees to choose their own priests and control church money. At the Synod of Baltimore (1791) and the Provincial Council of 1810, he oversaw the first codification of church law for the United States.

Although many of his dreams for the American church would not be realized—Carroll was both the first and last American bishop chosen by the priests—Carroll created an admirable foundation for the growth of Roman Catholicism in the United States. At his death on December 3, 1815, the American church had four bishops and one archbishop, numerous schools and colleges, as well as a growing population. More importantly, it had an American character and ethos that aided it during the next 150 years as it struggled to respond to massive immigration and growth.

Carter, Jimmy (James Earl, Jr.) (1924–) Perhaps the most conventionally and actively religious U.S. president since Woodrow Wilson, Jimmy Carter brought to the broader American public a new sight: a southern, evangelical Protestant, comfortable with African Americans, committed to civil rights, and outspoken in his religious faith. He brought the term *born again* into the pages of the *New York Times* and turned a large but relatively unnoticed reality (with the exception of the BILLY GRAHAM crusades) into front page news.

Born on October 1, 1924, in Plains, Georgia, and raised in the small town of Archery, Carter led a life typical of many small-town white boys in the rural South. His father worked a family farm and ran a small business; his mother was a registered nurse. After finishing public schools in Plains, Carter attended Georgia Southwestern College and Georgia Tech University before graduating from the U.S. Naval Academy in Annapolis, Maryland, in 1946. Shortly after his graduation and receiving his commission in the U.S. Navy, he married Rosalynn Smith.

Carter was well on the way toward a successful naval career, having served in both the Pacific and Atlantic fleets and under Admiral Hyman Rickover, the father of the nuclear navy. This career was cut short by the death of Carter's father in 1953. As a result, Carter abruptly resigned his naval commission, returning home to run the family farm and, with his wife, Carter's Warehouse, a local feed and seed store.

Carter became a regular member of the local Southern Baptist (see SOUTHERN BAPTIST CONVENTION [SBC]) congregation and an active participant in community affairs. During this time, his political career began. He was elected to the county school board and served as president of the Georgia Planning Commission. In 1962, he successfully campaigned for a state senate seat, only to lose the 1966 gubernatorial race. The defeat did not deter him, and he ran again in 1970. This time he was successful and became Georgia's governor in January 1971.

Carter became a rising star in the national Democratic Party, serving as Democratic National Committee campaign chairman for the 1974 congressional elections. In December of that year, he announced his candidacy for president of the United States. He built a strong grassroots base throughout the country, which propelled him to victory in the Democratic presidential primaries and eventually in the presidential election.

Carter's presidency was a period of much domestic and international turmoil. Domestic economic woes and the Iranian takeover of the U.S. embassy in Tehran led to the increasing polarization of American politics. Despite these difficulties and an overwhelming defeat in the 1980 election, Carter's presidency had numerous successes, including the Panama Canal treaty, the peace treaty between Egypt and Israel, the SALT II treaty with the Soviet Union, and the establishment of U.S. diplomatic relations with the People's Republic of China. Domestically, the deregulation of energy, transportation, communications, and finance and the establishment of the Departments of Education and Energy left their mark on the country.

Carter also made human rights part of the international and domestic agendas. After his presidency, disregard of this issue was no longer possible. The human rights agenda reflected in many ways Carter's moralistic approach to politics. While this approach would cause him numerous difficulties, as it did Woodrow Wilson, it set him apart from the Kissinger-inspired realpolitik of the previous eight years and made him a distinctive personality in American politics. It also would serve him well after his defeat in 1980.

Perhaps no former president since John Quincy Adams has had a more active and successful public life. Unlike Adams, who spent his post-presidential years in the House of Representatives, Carter has worked in the worlds of religion and nongovernmental organizations, notably HABITAT FOR HUMANITY. Carter and his wife have also taken leadership roles in the areas of international peace and health, both through the work of the Carter Center—the combination Carter library and research center located in Atlanta—and as election observers. Carter also has been an active negotiator for peace in many of the world's trouble spots.

Religion continues to play a major role in his life. Carter still teaches Sunday school at his

local church and speaks readily of the importance of faith to his life. One of his books, *Sources of Strength* (1977), is a compilation of his weekly Sunday school lessons. His disagreement with the SBC's increasingly conservative views, especially on the role of women, led to Carter's formal break with the Southern Baptist Convention in October 2000.

While a final verdict on Carter's public life must wait for future historians, it is clear that he set the standard for speaking comfortably about religion in the public realm. Carter's words about his faith never seemed forced or false. He also seemed willing both in and out of government to live through his faith. His work for Habitat for Humanity, the ease with which he spoke of his personal struggles, and his passionate commitment to peace all served to elevate Carter in the public eye to heights he never reached while president.

Cartwright, Peter (1785–1872) An itinerant Methodist minister and frontier preacher, Peter Cartwright served for nearly 70 years, first in a circuit covering Kentucky, Tennessee,

Ohio, and Indiana and later in Illinois. Cartwright's evangelistic zeal, coupled with his wit and homespun sermons, contributed greatly to the expansion of Methodism throughout the Midwest and upper South in the first half of the 19th century.

Cartwright was born in Amherst County, Virginia, on September 1, 1785. His family moved to Kentucky when he was five years old. Cartwright had little formal education, and he later said he reveled in the horse races and gambling then so common in Kentucky society. Converted to Christianity, however, at a camp meeting (see *CAMP MEETINGS*) in 1801, Cartwright was licensed the next year as an exhorter of the Methodist Episcopal Church. He became a circuit rider in 1803, and having mastered extemporaneous preaching, he preached an average of more than a sermon a day for the next 20 years. He was ordained a deacon in 1806 and an elder in 1808. After serving as presiding elder of the Methodists' Cumberland District from 1821 to 1823, Cartwright was transferred in 1824 to the Illinois Conference, where he was a presiding elder for most of the next 50 years.

Cartwright scorned religious formalism and believed that daily Bible reading and regular prayer were the keys to the spiritual life. He preached a simple message of free salvation and rigorous moral conduct—hallmarks of early American Methodism. He also claimed that Methodist ministers could set the world on fire while other clergy were still earning degrees and negotiating their salaries. However, over the course of Cartwright's career, Methodism itself began to change, gradually abandoning its former simplicity. In his 1856 autobiography, Cartwright lamented that Methodists had turned their backs on the popular enthusiasm that once had fueled their movement. He feared that Methodist clergy, too, had become "downy doctors and learned presidents and professors," while lay men and women desired only wealth, fashion, and material comforts.

Cartwright's own successful political career in many ways exemplifies the rising respectability and influence he decried among members of his denomination. He was elected twice to the Illinois state legislature, representing his district from 1824 to 1840. He also ran for United States Congress in 1846 but was defeated by Abraham Lincoln. As the question of slavery began to divide the nation, Cartwright emerged as an important opponent of the slave system. When the Methodist General Conference of 1844 debated the question of slaveholding, Cartwright attempted to hold the two factions in his church together. When the split came and the Methodist Episcopal Church, South, was formed in 1845, he sided with the antislavery party and remained loyal to the continuing Methodist denomination in the northern states.

Cartwright is said to have preached nearly 15,000 sermons and baptized almost 10,000 converts over the course of his long career. Although Methodism evolved culturally in that time and his methods became outdated before his death, he maintained his plain manner and homey preaching style. Cartwright died in Pleasant Plains, Illinois, on September 25, 1872.

Catholic Worker movement Founded in 1933 by DOROTHY DAY and Peter Maurin to "popularize and make known the encyclicals of the Popes in regard to social justice," the Catholic Worker movement is a Roman Catholic (see *ROMAN CATHOLICISM*) lay movement committed to the participation of all in the mystical body of Christ. Maurin, the leading theoretician of the movement, called for a "green revolution" that would combine

sacramental piety, farming communes, voluntary poverty, houses of hospitality for the urban poor, and pacifism (see PEACE REFORM). The eventual goal was the establishment of a communitarian society free of the profit motive where the divine value of each human being could be grasped. Through its newspaper, also called the *Catholic Worker*, the movement drew on Day's journalistic experience to spread its message widely throughout American Catholicism.

Numerically strongest during the 1930s, when it touched thousands affected by the Great Depression, it lost ground during WORLD WAR II as a result of its pacifism. During the 1950s and 1960s, its influence rebounded as numerous priests and laypeople who had done stints in the houses of hospitality moved into positions of authority. This influence was strengthened by the fact that despite constant conflicts with governmental authorities, the movement rarely challenged church authority and was accepted, albeit grudgingly, by even the most conservative bishops.

The Catholic Worker movement reached its apex during the late 1960s and early 1970s. During that time, the movement's pacifism and its call for dramatic social transformation influenced the antiwar movement and found a receptive audience among many individuals, particularly those who had been touched by the changes wrought in the Catholic Church by VATICAN COUNCIL II. Also during this time, many who had undergone important formative experiences while working in Catholic Worker houses in the post-World War II period, such as Michael Harrington and the Berrigan brothers, became important social critics, in Harrington's case, or activists, as did the Berrigan brothers.

With the end of the Vietnam War and amid the general decline in social activism during the 1980s, the Catholic Worker movement also saw a decline in its visibility. Despite this, the movement continued on its course. While Catholic social action in the United

States tended to reject the agrarianism and "Christian anarchism" of the Catholic Worker movement, these emphases blended well with growing environmental concerns, giving the movement's farming emphasis a new importance in the late 20th century. Through its various communities, hospitality houses, and farms (168 in the United States and 21 internationally in 2006), as well as the *Catholic Worker* newspaper (still only a penny a copy), the Catholic Worker movement continued to challenge individuals to live out the claims of the gospels and to play a powerful moral role in the U.S. Catholic Church.

Central Conference of American Rabbis (CCAR) The professional association of Reform Jewish rabbis (see REFORM JUDAISM) in the United States and Canada, the Central Conference of American Rabbis is the oldest and largest rabbinical association in North America. Organized in 1892 under the watchful eye of ISAAC MAYER WISE, the founder of Reform Judaism in the United States, the CCAR has long been the central defining institution of Reform thought and doctrine.

Historically, this rabbinical dominance has hindered Reform Judaism's ability to respond to changed conditions. In its early years, the CCAR's control by rabbis whose cultural and linguistic homeland was Germany resulted

in its failure to adjust to the needs and attitudes of the eastern European Jews who dominated Jewish immigration from 1890 to 1927. Although willing to aid them materially, the CCAR's membership had little respect for their religious orthodoxy (see ORTHODOX JUDAISM). As Wise wrote in 1894, "the Central Conference at once rejected all illiberal elements, and stands only . . . for the American Israel of the liberal and progressive school. . . ."

This commitment to an "American Israel" also led the CCAR initially to adopt a hostile stance toward ZIONISM and to reject the traditional Jewish prayers for the return of the Jews to Israel and the restoration of the temple. The rise of Nazism and the horrors of the Holocaust, however, forced a revision of that policy. In 1937, the CCAR adopted a policy of neutrality on the issue of Zionism. After WORLD WAR II, its position became even stronger when it adopted a resolution announcing its solidarity with Israel, declaring that "their triumphs are our triumphs. Their ordeal is our ordeal. Their fate is our fate." This shift became institutionalized two years later when the CCAR made Israeli Independence Day part of Reform Judaism's religious calendar.

By the late 1940s and early 1950s, there was growing pressure within the CCAR to move toward more traditional forms of Judaism. Led primarily by the descendants of eastern European immigrants, this movement produced some major changes within the organization. These included greater use of Hebrew within worship, the restoration of Jewish symbols and customs, and the inclusion of a prayer for Israel in the prayer book.

Despite the increased traditionalism in religious forms, the CCAR remained committed to its purpose of creating an American Judaism attuned to the needs and realities of the modern world. Significantly, the CCAR was the first rabbinical association to ordain a woman as rabbi, in 1972. The CCAR also has been the only rabbinical association to vocally support the religious rights of gays

and lesbians, including the recognition of same-sex unions.

While many of these changes would have been inconceivable to the founders of classical Reform Judaism, in enacting them the CCAR continues to express its connections with those founders as it struggles to make the ancient religion speak anew to the world.

Channing, William Ellery (1780–1842)

William Ellery Channing is generally acknowledged to be the most important representative of the Unitarian movement that emerged out of New England CONGREGATIONALISM in the early 19th century. Channing's greatest contribution to Unitarian thought is contained in an ordination sermon he preached in 1819. There he spoke out against such traditional Protestant beliefs as the threefold nature of God, the deity of Jesus Christ, and the total sinfulness of human beings.

Born in Newport, Rhode Island, on April 7, 1780, Channing graduated from Harvard College in 1798 and served briefly as a private tutor in Richmond, Virginia. After a course of theological study, he was ordained to the Congregational ministry in 1803

and assumed the pastorate at Federal Street Church in Boston. Although Channing said he had long been troubled by the extreme CALVINISM he learned as a youth, he did not emerge as a spokesman for Unitarian theology until 1815. In "A Letter to the Rev. Samuel C. Thacher," however, Channing responded to fellow Congregationalist Jedidiah Morse's attack on liberals such as himself. Channing also published two open letters to Samuel Worcester, a conservative minister in Salem, who had entered the fray in support of the anti-Unitarian position.

The sermon Channing preached at the ordination of Jared Sparks in Baltimore, Maryland, in 1819, later published under the title "Unitarian Christianity," outlined the intellectual bases for the theological liberalism he and other Unitarians were championing. Channing declared that the New Testament taught God's essential oneness, not threeness, that is, God as Unity rather than as Trinity. While he believed that Jesus had been inspired by God to effect the moral and spiritual deliverance of humankind, Channing rejected the prevailing Calvinist doctrine that Jesus' death had paid a price to atone for humanity's innate guilt. Channing spoke of the essential similarity between God and humankind. The significance of Jesus' ministry, he thought, was his leading men and women toward perfection and bringing them into closer communion with God their Father.

Most of Channing's published work was in the form of lectures and sermons, not systematic theological treatises. His faith, like Unitarianism itself, was not entirely novel but a restatement of many beliefs already implicit within the Christian theological tradition. He emphasized the benevolence of God and, rejecting the doctrine of human depravity, underscored the divinely given potential within every human being. He also criticized others such as the transcendentalists (see TRANSCENDENTALISM) for moving too far away from accepted Christian beliefs. Channing's

William Ellery Channing, the "Luther of Boston," led the flowering of Unitarianism in antebellum New England. (Painting by Gilbert Stuart)

thought perpetuated a liberal religious outlook reminiscent of the late 18th century, and he helped bring stability and respectability to the new Unitarian denomination that first took shape in 1825.

Toward the latter stages of his life, Channing's trust in human perfectibility impelled him into increasing devotion to social reform, especially the nascent antislavery movement. He published an important indictment of the slave system in "Slavery" in 1835, and his last work, the "Address at Lenox" (1842), sought to arouse abolitionist sentiment in the North. In identifying theology with ethics, Channing exemplified, according to many, the best of the New England religious culture of his day, and a number of American reformers in the

middle years of the 19th century were to be counted among his disciples.

Although Channing served at the Federal Street Church for his entire ministerial career, he gradually withdrew from his pastoral responsibilities when his health began to decline. He died at Bennington, Vermont, on October 2, 1842.

GHS, Jr.

Bibliography: Andrew Delbanco, *William Ellery Channing: An Essay on the Liberal Spirit in America* (Cambridge, Mass.: Harvard University Press, 1981).

Charismatic movement Among the distinguishing marks of the Charismatic movement is the claim that the *charismata* ("spiritual gifts" in Greek) manifested by Christians in the apostolic age can still be enjoyed by Christians today. These gifts, which are typically bestowed through the ritual of the baptism in the Spirit, include spiritual healing, prophecy, and, most notably, glossolalia, or "speaking in tongues."

Most Charismatics, as participants in the movement are called, tend toward conservative Christian positions on doctrinal matters such as the Trinity, biblical inspiration, and the atoning death and physical resurrection of Jesus Christ. What draws Charismatics together, however, is not a common theology but a shared experience of baptism in the Spirit and a shared commitment to renewing and expanding the Christian church through the exercise of a wide range of spiritual gifts. These gifts are especially evident in Charismatic worship services, which typically emphasize praising God rather than the Eucharist or preaching.

Charismatics trace their origin back to the biblical day of Pentecost, when spiritual gifts, most notably speaking in tongues, were bestowed by the Holy Spirit on the early Christians. Historians view the Charismatic movement as a more recent creation that emerged

out of PENTECOSTALISM in the 1960s and 1970s. For this reason, it is sometimes referred to as "Neo-Pentecostalism."

Charismatics differ from Pentecostals in at least two respects. First, Charismatics tend to be white and middle class, and Pentecostals African American and working class. Second, Charismatics have not typically withdrawn from their churches in order to form separate denominations. The Charismatic movement, therefore, represents a transplantation of the Pentecostal impulse from the storefront churches of working people and minorities into the sanctuaries of white, middle-class members of the Roman Catholic Church and Protestant mainstream denominations.

One person who facilitated this shift to respectability was ORAL ROBERTS, who through his broadcasting empire did much to introduce non-Pentecostals to spiritual healing and speaking in tongues. Another key figure was Demos Shakarian, who in 1951 in Los Angeles founded the Full Gospel Business Men's Fellowship International. Members of this fellowship were, like Shakarian himself, both lay Pentecostals and successful businesspeople. The success of their well-publicized meetings signaled a shift in Pentecostalism toward middle-class, mainline respectability and away from clerical authority.

The Charismatic movement participated in these broader trends in Pentecostalism. It first received public attention in 1960, when the Reverend Dennis Bennett announced from his pulpit at St. Mark's Episcopal Church in Van Nuys, California, that he had received the spiritual gift of speaking in tongues. Bennett's revelation split his church, and he was soon exiled to a less prestigious post at St. Luke's Episcopal Church in Seattle, Washington. Bennett's new church expanded rapidly, testifying to the strength of the Charismatic movement.

From Bennett's Episcopal churches in California and Washington, the movement spread during the 1960s to Methodist,

Lutheran, and Presbyterian congregations in the West, the Midwest, and New England. Charismatics enjoyed particular success on college campuses. In 1963 and again in the early 1980s, speaking in tongues broke out at Yale University among members of the Inter-varsity Christian Fellowship, an evangelical student group.

The Charismatic movement first emerged among Roman Catholics at Duquesne University in Pittsburgh in 1966. From there, it spread through networks of Catholic student groups to other college campuses, including the University of Notre Dame and the University of Michigan. Roman Catholic authorities warned against divisive tendencies within the movement, but they have nonetheless made a place in their church for Charismatics. Like leaders in other, more sacramental Protestant denominations, however, they have tended to view baptism in the Holy Spirit not as a second experience of grace, as many Charismatics claim, but as an event coterminous with water baptism.

In 1994, the Charismatic movement received a boost when congregants at a small church called Toronto Airport Vineyard in Toronto, Ontario, Canada, began experiencing what would come to be known as “holy laughter,” or the “Toronto Blessing.” While some parishioners wept or spoke in tongues in typical Charismatic style, others laughed uncontrollably. Soon this new form of Charismatic practice spread throughout the United States. And while it won the endorsement of such luminaries as Oral Roberts, many evangelical Christians and some Charismatics denounced “holy laughter” as unbiblical nonsense.

Members of conservative denominations, including the SOUTHERN BAPTIST CONVENTION, opposed not only the “Toronto Blessing” in particular but also the Charismatic movement in general as overly emotional and even demonic. Still, the Charismatic movement has enjoyed considerable success. The “gifts of the Spirit,” almost unknown at the turn of the

20th century, are widely practiced in America at the start of the 21st.

charitable choice The term *charitable choice* refers to a specific section (section 104) of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, known popularly as the “Welfare Reform Bill.” Although arousing little notice or controversy when adopted, Charitable Choice and the subsequent attempts to expand it eventually led to the creation of the Office of Faith-Based and Community Initiatives at the White House and became the subject of much political debate and public attention. (see FAITH-BASED INITIATIVES)

Most simply, the charitable choice provision was designed to make it easier for faith-based organizations (FBOs) to bid for contracts to provide services funded by federal block grants under Temporary Assistance to Needy Families (TANF), the successor program Aid to Families with Dependent Children (AFDC). Many in Congress felt that such a law was needed to prevent discrimination against religious organizations in contracting service. Many also felt that the wider use of FBOs would lead to greater success in moving individuals from welfare into employment.

The charitable choice provision contained several major components. Although the legislation did not require states to contract with nonprofit organizations to deliver services paid for with TANF funds, it did stipulate that states could not treat religious service providers differently from other contractors or demand changes in their governance structure or religious character in order to receive funds. Additionally, under the legislation, religious organizations need not remove religious objects, art, or iconography from the buildings or rooms in which services are delivered. Finally, the law expressly exempts religious organizations from laws forbidding employment discrimination on the basis of religion.

The law also contains provisions protecting the religious beliefs (or nonbeliefs) of beneficiaries and forbidding the use of governmental monies for religious purposes, including proselytization, worship, or instruction. Service providers cannot discriminate against beneficiaries on the basis of religion or require that they attend religious services or engage in any religious practices. If a beneficiary does not wish to receive the service from a religious provider, the law requires that the state must ensure equivalent service by a secular provider.

Although many viewed charitable choice as a new development, governmental use of religious organizations to provide social services has a long tradition in the United States. FBOs were common in the international development field and quite prominent domestically before the adoption of charitable choice. Organizations such as Lutheran Social Services, Jewish Welfare and Family Services, and Catholic Charities received 50 percent or more of their operating budgets from public funds prior to 1996. Charitable choice, however, was the first legislation explicitly to address the ability of religious organizations to receive a particular type of governmental funding on an equal basis with other nonprofits and to do so without having to alter substantially

their religious character. To a great extent, one could argue that the provision did little to change the prevailing landscape, at least on its face, although it did ensure a level of uniformity in practice.

Charitable choice elevated to the level of public policy a series of unexamined assumptions about the structural strengths of faith-based providers. These assumptions were that FBOs were more effective and more efficient than secular providers and capable of serving as major sources of services and funding to fill the gap brought about by decreased government spending.

Such assumptions had almost no significant research data behind them. Indeed, research into the magnitude, scope, and potential of religiously motivated service providers was woefully inadequate at the time the legislation was adopted. Since the legislation, greater attention began to be paid to the role of religion and religious providers in the overall social services mix.

Despite the lack of knowledge about the “success” of charitable choice and the process of its implementation in various states, there has been a marked push to adopt similar rules for other federally funded social service programs and to encourage greater use of religious providers. This resulted partly from a generalized feeling about the manner in which religious providers worked as well as from subjective assessments of the qualities of services provided.

Much of the impetus behind welfare reform in the United States rested on the view that poverty—at least to some extent and for some individuals—resulted from bad values. If these values could be changed and those individuals removed from the welfare rolls, then more attention and funds could be provided to the truly needy. Since the end of poverty required a change in values, the best way to accomplish that change would be by increasing the places where recipients came into contact with individuals modeling the necessary

values. Moreover, it was believed that recipients would benefit from being seen more as people rather than as clients. Organizations driven by religious principles and motivations were assumed to satisfy these requirements. Even if the service provided had no religious content per se, the mere experience of being served by people in such a way would help transform individuals.

Combined with this was a view shared by many across the political spectrum that local organizations familiar with local needs and already doing productive service work had value and should be used more aggressively. Proponents of charitable choice pointed to the innumerable local organizations, many faith-based, that were doing wonderful work without governmental support. How much more work, they asked, could these organizations do with more funds? If the contracting system were made more welcoming, if religious organizations were not discriminated against or disfavored because they were religious, then they would be more willing to apply for funds and to submit bids. These very successful organizations would become even more successful, and the problems of poverty would soon begin to subside.

Such views drove the passage of charitable choice during the debate in 1996. A decade after its passage, questions about the validity of the assumptions that led to its adoption and the success of its implementation remained unanswered. Although some research has suggested an overall increase in the number of faith-based providers contracting with state governments, other studies have found significant problems in various states. Additionally, legal challenges to the manner in which the law was implemented in several states suggest that despite the safeguards within the legislation itself, state officials have been lax in oversight and enforcement of the bill.

Despite the problems, many have found the basic ideas driving charitable choice and the use of faith-based providers viscerally

compelling. During the 2000 political campaign, both presidential candidates spoke in favor of the idea. After his election, President Bush created the White House Office of Faith-Based and Community Initiatives and placed liaisons with FBOs in six cabinet departments. Although changes in the leadership of the White House office and the attack on the World Trade Center in September 2001 slowed the momentum somewhat, charitable choice remained a major part of the George W. Bush administration's domestic agenda.

Chauncy, Charles (1705–1787) In his 60-year ministry at the prestigious First Church of Boston, Charles Chauncy made liberal theology the dominant force in that city to such an extent that it became the prevailing orthodoxy. While not as radical as his younger contemporary and friend JONATHAN MAYHEW, Chauncy espoused a reasonable, enlightened version of Christianity that set the stage for the emergence of Unitarianism (see UNITARIAN CONTROVERSY) in the next century.

Chauncy, born January 1, 1705, was not a cold-hearted rationalist but one who believed that human reason served as the integrative source of religious experience. This view gave him a positive vision of the role of human activity and human will in doing good. In this position, Chauncy found himself as the defender of the status quo, a leader of the "Old

Lights" against the revival movement known as the GREAT AWAKENING.

Chauncy viewed the revivals as a resurgence of the antinomian and enthusiastic heresies that his Puritan forefathers had crushed the century before. GEORGE WHITEFIELD he viewed as a theologically ignorant ranter. He felt that JONATHAN EDWARDS'S congregation in Northampton suffered from insanity.

The emotionalism and passion of the revivals demanded a response. Chauncy provided one in his *Seasonable Thoughts on the State of Religion in New England* (1743). This book, beyond providing a catalog of the emotional and behavioral excesses of the revivals, detailed Chauncy's view of human reason as the center of religious faith. He did not reject religious emotions but argued that they must be subordinated to reason if chaos, disorder, and schism were to be avoided.

Jonathan Edwards responded with *A Treatise Concerning Religious Affections* (1746), one of the most significant works on religion ever written in America. Chauncy ignored it, having dismissed Edwards as a "visionary enthusiast not to be minded in anything he says."

While his opponents preached human sin and weakness, placing all in the hands of an omnipotent God, Chauncy turned the sermon into a lecture designed to expound religious truths and the moral obligations of humanity. His emphasis on the reasonableness of Christianity led him to a study of the doctrines of election and eternal damnation. These he could reconcile neither with reason nor with the existence of a benevolent deity. The conclusion to Chauncy was unavoidable. Salvation would be granted to all. By 1762, he had become convinced of this view, known as UNIVERSALISM, but hesitated making it known. Not until 1784, just three years before his death on February 10, 1787, would he publish his book on the subject, *The Salvation of All Men*, and then only anonymously in London.

Chauncy's views represented a transition from the Puritan theology of the 17th century

toward the development of Unitarianism in the 19th century. The result would be a major alteration in the religious and social makeup of New England and especially Massachusetts.

Christadelphians An outgrowth of ALEXANDER CAMPBELL'S RESTORATION MOVEMENT and the Adventism of WILLIAM MILLER, the Christadelphian movement has been more successful in Great Britain than in the United States, where it claims only a few thousand members. The movement is a significant example, however, of these two influential impulses in American religious life.

The founder of Christadelphianism was John Thomas (b. 1782), a medical doctor who immigrated from England to Cincinnati, Ohio, in 1832. There Thomas was introduced to the Restorationist theology of Alexander Campbell. Convinced that it was the duty of 19th-century believers to restore the Christian church to its apostolic purity, Thomas was rebaptized and became a member of the Disciples of Christ (see CHRISTIAN CHURCH [DISCIPLES OF CHRIST]). Soon he was traveling across the country as an itinerant preacher for the Campbellite cause and editing a series of Campbellite periodicals, beginning with the *Apostolic Advocate* (established in 1834).

Thomas eventually split from Campbell over what he saw as a lack of attention to a key principle of the Christian movement: the imperative to restore the contemporary church to the primitive purity of apostolic Christianity (see PRIMITIVISM). "Disfellowshipped" by

Campbell in 1837, Thomas turned an eager ear to the millennial and apocalyptic teachings of William Miller's Adventists. Thomas then creatively combined themes from Miller and Campbell into his mature theology, which he articulated in a series of books, beginning with *Elpis Israel: An Exposition of the Kingdom of God with Reference to the Time of the End and the Age to Come* (1850).

The first Christadelphian "ecclesia" (Christadelphians prefer not to refer to their associations as "churches") emerged in 1852 in New York City. That group initially called itself the Royal Association of Believers. Not until 1864, when his followers needed to demonstrate their membership in a bona fide religious organization to justify their opposition to military service in the CIVIL WAR did Thomas refer to his movement as "Christadelphian" ("Brethren in Christ").

Like other religious sectarians, Christadelphians draw a sharp distinction between those who are "in the truth" and those who are not. One way they articulate their separation from the evils of the world is through their refusal to participate in government. Typically, Christadelphians are pacifists. They generally refuse to join political parties, vote, hold political office, or sit on juries. Each of these refusals, along with their taboo against marrying outside the Christadelphian fold, helps to ensure their purity in the midst of what they believe is a polluted world.

Christadelphian theology is based on the Bible, which according to believers is the infallible word of God. But Christadelphians interpret the Bible through the writings of their founder. They tend, as a result, to emphasize prophetic books, such as Daniel and Revelation, which they read alongside and in light of accounts of important historical events, especially military clashes, that signify in their view the imminence of the Second Advent of Christ.

Christadelphians distinguish themselves from other Restorationist and Adventist groups

by their preference for Unitarianism over trinitarianism. Jesus is embraced as King of Israel and Son of God, but Christadelphians insist that he was "adopted" by God and thus did not exist before the creation of the world. In 2007, there were about 6,500 Christadelphians in around 200 ecclesias in the United States.

Christian Church (Disciples of Christ) The Christian Church (Disciples of Christ) traces its roots to the RESTORATION MOVEMENT of the early 19th century. The Restoration movement, an outgrowth of the SECOND GREAT AWAKENING, was composed of diverse religious elements all seeking to reestablish the primitive (see PRIMITIVISM) Christianity of New Testament times. Restorationism was marked by one primary goal: the reunification of all churches under the lordship of Jesus Christ and the absolute authority of the Bible.

In 1831, the two major Restorationist strands in the United States joined forces when many of BARTON W. STONE's "Christians" merged with ALEXANDER CAMPBELL's "Disciples." While its internal organization was not completed until 1849, a new body emerged out of the self-consciously nondenominational movements Campbell and Stone launched. Since Campbell preferred the name "Disciples of Christ," that became the label usually applied to the movement after 1831. (Stone's term, "Christian Church," while equally proper, was less commonly used.) Despite the fact that there was never perfect uniformity among the Disciples, emphasis on a New

Testament precedent for all beliefs and practices was central to the united movement.

Although the Disciples for many years refused to call themselves a denomination, because they believed such a designation was unbiblical, they still became the fastest-growing church in America in the 19th century. They competed with the Baptists and the Methodists in seeking the allegiance of common people on the western frontier. The Disciples were most successful in what is now the Midwest and the upper South. During the 1840s, they established two important institutions. Alexander Campbell founded Bethany College in western Virginia (West Virginia today) in 1840, and the Disciples created the American Christian Missionary Society, the movement's first semiofficial organization, in 1849. The sixth-largest religious body in the United States on the eve of the CIVIL WAR, the Disciples contained 192,000 members in 1860.

Since most of the church's leaders were border state moderates, the Civil War, which was so disruptive of other Protestant denominations, did not seriously threaten the Disciples' unity. In fact, the Disciples were one of the few American churches that did not split during the Civil War. However, a number of other factors, including continued growth, sociological diversity, and doctrinal disputes, soon threatened their unity after 1865. The inherent tension in the Restoration movement between primitivism, which demanded a literalistic interpretation of the Bible, and inclusivity, which allowed openness to the modern world, split the Disciples apart early in the 20th century.

The first schism was officially recognized in 1906, when the United States Census Bureau differentiated between the Disciples of Christ and the CHURCHES OF CHRIST, a group of highly conservative congregations. The use of pipe organs and instrumental music in churches, as well as the role of missionary societies and other ecclesiastical agencies, were cited as the

reasons for the breakup. The issue dividing the two religious bodies, however, actually went far deeper than that. The true conflict was over how biblical teachings in general were to be applied to the present-day life of the church. Conservative congregations, of which the majority were located in the South, refused to follow what they believed were the more liberal, modern theological tendencies adopted by the church's leadership in the upper Midwest.

The Disciples' congregations that remained after the defection of their ultraconservative brethren were by no means wholly united in belief. While few questioned the old verities of 19th-century Restorationism, many of the denomination's leaders actively embraced new theological trends. In the early 20th century, in fact, the *Christian Century*, a Disciples journal that had begun as the *Christian Oracle* in 1884, became the most prominent forum of liberal Protestant opinion in America. This trend toward liberalism further exacerbated denominational ties already stretched to the breaking point by intellectual controversies over Darwinism and biblical criticism.

During the heyday of the dispute between fundamentalists and theological liberals in American Protestantism, conservatives within the Disciples of Christ accused their leadership of undercutting the traditional authority of the Scriptures. When the traditionalists did not think their concerns had been given a fair hearing, they formed their own alternative denominational body, the North American Christian Convention, in 1927. The boundary line between the Disciples and the new association of independent Christian churches was not always clear. The publication of a directory of the conservative congregations in 1955, however, clearly denoted where the division had occurred. And when the Disciples restructured themselves in 1968 and created a regional and national structure akin to the organization of other mainline Protestant (see MAINLINE PROTESTANTISM) denominations,

an estimated 2,000 conservative congregations refused to acknowledge the change.

Throughout their history, the Disciples of Christ have maintained most of the practices common to the early Restoration movement: baptism by immersion for the forgiveness of sins as a condition for church membership, the celebration of Communion every Sunday, and the local autonomy of individual congregations. The Disciples also continue the tradition of having “no creed but the Bible.” Always proponents of church unity, they were active in founding the Federal Council of Churches (1908), the World Council of Churches (1948), and the Consultation on Church Union (1962). Typical of all the mainstream denominations since the 1960s, moreover, the church has experienced a slight numerical decline in the last quarter-century. Some attribute the apparent defection of members to various liberal social pronouncements made by the national leadership in recent years.

While the denomination reported more than 2 million members in the late 1940s, those figures have now been cut in half. The Christian Church (Disciples of Christ) had approximately 3,700 congregations and slightly more than 770,000 members in 2006.

Christian Methodist Episcopal Church Originally known as the Colored Methodist Episcopal Church in America until its name change in 1954, the Christian Methodist Episcopal Church (C.M.E.) has known a very different history from the two other historically black Methodist denominations. Like them, it owes its existence to disgust with racism, but whereas the AFRICAN METHODIST EPISCOPAL CHURCH (A.M.E.) and AFRICAN METHODIST EPISCOPAL ZION CHURCH (A.M.E. Zion) emerged out of northern Methodism before the Civil War, the C.M.E. emerged from the Methodist Episcopal Church, South, in the period following the war.

This separation, part amicable and part hostile, was symptomatic of the exodus of the former slaves from the churches of their erstwhile masters. African Americans' dissatisfaction with inferior status in the white church made them exceedingly susceptible to the missionary activity of the A.M.E. and A.M.E. Zion Churches, and by 1870, only 40,000 blacks remained in the southern Methodist church. In December of that year, with the blessing of the leadership of the Methodist Episcopal Church, South, the Colored Methodist Episcopal Church was organized. The senior bishop and three ministers of the southern Methodist Church presided over the new denomination's organization, and the bishop consecrated the C.M.E.'s first two bishops, William H. Miles and Richard H. Vanderhorst.

Throughout the 19th century, the C.M.E. remained a primarily southern denomination, centered mostly in Alabama, Tennessee, Georgia, and Mississippi. The increasing

migration of southern blacks to the North meant that the church also migrated and by 1945 had expanded to 18 northern states. It remains the smallest of the three black Methodist churches, however, numbering about 850,000 in the United States in 2003. The denomination operates five colleges—Miles, Paine, Texas, Lane, and Mississippi Industrial—and one seminary, Phillips, which is affiliated with the Interdenominational Theological Center in Atlanta.

Christian Reformed Church The Christian Reformed Church was created out of the wave of Dutch immigrants who came to the American Midwest from 1840 to 1920 and were dissatisfied with the Dutch Reformed churches (see REFORMED CHURCH IN AMERICA) already established there. The denomination had its institutional beginnings in April 1857 among a small group of settlers at Zeeland, Michigan, who formed the True Holland Reformed Church, later called the Christian Reformed Church. Most of the new Dutch settlers who entered Michigan and Iowa in the 1840s had already separated from the

state church of the Netherlands over its supposed theological laxity. Refusal to join the main Reformed Dutch denomination, therefore, merely continued that separatist trend in America.

Earlier in the 19th century, some Dutch Reformed clergy already had expressed fears that revivalism would erode the doctrinal conservatism that had been the hallmark of the REFORMED TRADITION. To resist this trend, Solomon Froeligh and other Dutch Reformed ministers in New York and New Jersey seceded from their church and formed the True Dutch Reformed Church in 1822. A later dispute within the Reformed Church in America over the propriety of its members being Freemasons led to another exodus of dissidents in 1882. Finally, in 1890, both the True Dutch Reformed Church and the 1882 secession movement were subsumed into the Christian Reformed Church. Dutch immigration to the United States helped this united denomination grow steadily into the early 20th century.

Although the language of its worship was changed to English in the 1930s, the denomination continues to be profoundly marked by its Dutch heritage. Maintaining an unceasing struggle against theological liberalism but rejecting narrow-minded FUNDAMENTALISM, the Christian Reformed Church maintains a heartfelt piety mingled with strict adherence to the traditional confessions of CALVINISM. A strong emphasis on intellectual matters has led members to support both the largest Protestant private school system in the United States and a heritage of theological education exemplified by Calvin College and Theological Seminary in Grand Rapids, Michigan. Still, the denomination has been doggedly insular and sectarian, refusing even to engage in ecumenical activity with a Christian body as compatible as the Reformed Church in America. An old proverb has sometimes been applied to explain this denomination's combative character: "One Dutchman a church,

two Dutchmen a denomination, three Dutchmen a schism.”

Consisting of about 275,000 members in more than 1,000 churches in 2008, the Christian Reformed Church seeks to be a solid bastion of conservative doctrine and church discipline in 21st-century America.

Christian Science Christian Science was one of the most successful new religious movements of 19th-century America. Incorporated by MARY BAKER EDDY (1821–1910) in 1879, the Church of Christ (Scientist) distinguished itself from contemporaneous American religious creations such as THEOSOPHY and Mormonism (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS) by insisting that all healing should be accomplished by spirit and mind without the aid of drugs or doctors. Christian Science has exerted an important influence not only on adherents but also on NEW THOUGHT and the POSITIVE THINKING tradition popularized after WORLD WAR II by Norman Vincent Peale.

Mary Baker Eddy was born Mary Morse Baker in rural New Hampshire in 1821. She suffered from a series of physical and nervous ailments and was an invalid for much of her early life. In 1862, Eddy met PHINEAS P. QUIMBY (1802–66), an itinerant mesmerist whose nonpharmaceutical cures relieved Eddy from many of her ailments. Soon Eddy was studying Quimby’s theories regarding the mental origins of disease and using terms such as *Christian Science* and *science of health*.

Following Quimby’s death in 1866, Eddy slipped on ice and severely injured her back. “On the third day” after this “fall,” Eddy reportedly cured herself and “rose again” from her bed. Eddy later described this resurrection experience as the founding moment of Christian Science. From that point forward, she devoted herself to developing and spreading her own version of Quimby’s science of health.

Eddy organized the first Christian Science service at her home in Lynn, Massachusetts, in 1875. That same year she published the first edition of her most important book, *Science and Health, with Key to the Scriptures*. Eddy organized the Christian Science Association in 1876 and incorporated the Church of Christ (Scientist) three years later. In 1881, she moved the church’s headquarters to Boston, where in 1895 the spectacular “Mother Church” was built.

Led by Eddy (now “Mother” to the faithful), Christian Scientists publicized their theories and practices through a monthly, the *Christian Science Journal* (established in 1883), a weekly, the *Christian Science Sentinel* (1908), and a daily, the *Christian Science Monitor* (1908). Between 1881 and 1899, converts were taught and practitioners were trained at Eddy’s Massachusetts Metaphysical College. Under its founder’s firm direction, the church grew from a small band who followed a charismatic healer to a large and bureaucratic international institution. By the time of Eddy’s death in 1910, the church boasted nearly 100,000 members. Her *Manual of the Mother Church* still functions as the movement’s charter.

Any discussion of the theology of Christian Science must begin with Eddy’s *Science and Health*, the distinctive scripture of the Church of Christ (Scientist). *Science and Health* is read alongside the Bible at Christian Science services, and in deference to the final and incontestable authority of both texts, no sermon is incorporated into the liturgy.

Eddy described the awakening in her of Christian Science as both a “discovery” and a “revelation,” and, in keeping with her view that revelation was both natural and ongoing, she revised her life-work numerous times. Earlier versions of that text include references to HINDUISM, for example, while later versions do not. In all its iterations, however, *Science and Health* represents a decisive turn away from the modified CALVINISM of Eddy’s youth. All editions of the book portray a friendly cosmos in which God is All and All is Mind. Only the spiritual world is real. Like matter itself, sickness, sin, pain, and death are illusions that can be manipulated by mental and spiritual means. Thus, Eddy urged her followers to shun both drugs and doctors and to rely on faith for their well-being and on Christian Science practitioners for healing.

Eddy moved beyond Quimby, who ignored theology in favor of therapy, to develop a theology for the science of health. But Christian Science still seems to appeal to its members more for its this-worldly benefits than for its otherworldly promises. More than everlasting salvation in a life to come, the church offers its members health, happiness, and prosperity here and now. Many Christian Scientists have apparently achieved at least some of those fruits. Members of the Church of Christ (Scientist) consistently rank very high in the United States in wealth per capita. A disproportionate number of Christian Scientists are, like their founder, women.

Christian Science has been described as a form of religious liberalism, and Eddy’s theories do bear important resemblances to the TRANSCENDENTALISM of RALPH WALDO EMERSON and the pragmatism of WILLIAM JAMES. Like Emerson, Eddy shunned Calvinist verities such as the absolute sovereignty of God and the total depravity of humans in favor of a more optimistic and egalitarian worldview in which humans who are fundamentally good are united to a decidedly nonthreaten-

ing God. Eddy joined James in justifying her truths primarily on the pragmatic ground that they worked.

Christian Science has been called a “harmonial religion,” but this description ignores Eddy’s fundamental disagreements with practitioners of more unabashed forms of harmonialism such as New Thought. Eddy proved herself at least a bit more gloomy than her optimistic New Thought contemporaries when she insisted that human beings, at least in their unregenerate state, are not with God but against God. It is through Jesus Christ that Scientists (as members of the movement are called) are able to penetrate the illusions that keep them separate from God and so live a life of freedom from sickness and sin. Eddy further distinguished Christian Science from New Thought by her abiding conviction that the human mind was capable not only of healing through “animal magnetism” but of injuring through “malicious animal magnetism.”

Following Eddy’s death in 1910, Christian Science grew into an international movement with hundreds of churches and “Christian Science Reading Rooms.” It also controls a major publishing house that includes a highly acclaimed newspaper, the *Christian Science Monitor*. The *Monitor*, begun by Eddy in 1908, is widely noted for its objectivity and for covering stories underreported or ignored by other newspapers. Although final control rests with the church’s board of directors, the newspaper has significant editorial freedom. There are a few areas, however, where the church’s control affects its coverage. The newspaper rarely prints stories critical of the denomination, and its coverage of medicine and health tends to avoid criticizing the church’s positions. Additionally, in its obituaries, the *Monitor* rarely mentions the cause of death, and the ages of individuals usually are not mentioned in the newspaper.

Since the late 1980s, the newspaper has experienced significant turmoil over its

inability to turn a profit, and rumors have abounded about its possible sale or closure. Stories in other media also have turned a brighter light on the church and its wealth, particularly its extensive property holdings in downtown Boston. Such scrutiny generally is unwelcomed by the church, particularly given the ongoing debate over Christian Science healing.

Christian Scientists usually shun medical doctors and rely on the use of Christian Science healers. As a result, arguments regularly emerge in the wider society both about the validity of the practice and the legal culpability of Christian Science parents whose children die after being treated by such healers.

While many believe that the Constitution's "Free Exercise" clause (see FIRST AMENDMENT) protects such practices, this is not the case. A majority of states, however, do have laws limiting the criminal liability for parents who choose religious means to treat their children. These statutes came under increasing challenge during the 1980s and 1990s, as prosecutors charged parents with crimes in the death of children who did not receive traditional medical treatment. While some were prosecuted successfully, none involving Christian Scientists have held up on appeal. Publicity about these cases, however, has led some states to limit the religious exemption. In 1992, Massachusetts repealed much of its religious exemption following the death of a two-year-old boy whose Christian Science parents had used spiritual healing.

Membership in the denomination has declined steadily since the 1950s, and today it probably has fewer than 200,000 members in the United States. Despite this decline, the denomination has a seemingly ubiquitous presence through its Christian Science Reading Rooms. Christian Science also has a central place in American religious history as a vivid example of the vitality and creativity within American religious life.

church and state, relationship between

The relationship between religion and the state in the United States is an issue that has engaged the minds of some of the nation's best thinkers, from THOMAS JEFFERSON to the late Supreme Court justice Hugo Black. The governments of the United States and of the states must constantly find a balance between two phrases in the FIRST AMENDMENT to the CONSTITUTION. One forbids the government from making any law respecting the establishment of religion, the other forbids any limits on the free exercise of religion. The need to interpret and apply these phrases to an increasingly complex religious landscape has made the federal judicial system the final arbiter of what is and is not allowable.

During the colonial period, an established church was the accepted ideal—in NEW SPAIN and NEW FRANCE, Roman Catholicism, in British America, Protestantism, either the Church of England or its congregational version known as PURITANISM. In the short-lived New Sweden and New Netherland, Lutheranism and the Dutch Reformed Church were established as well. These churches were supported by taxes, and membership in them often was required for the exercise of full civil rights—voting, holding public office, serving on juries. The strength and power of these establishments varied according to the will, circumstances, and resources of the colonies and their leaders.

The first prayer in Congress illustrates the complex relation of religion and government in the United States. (Billy Graham Center Museum)

Of all the colonies in British America, none was so scrupulous in maintaining its religious character as Massachusetts (see MASSACHUSETTS BAY COLONY). The Puritans desired religious and social uniformity and used the civil law to enforce religious behavior. While ministers held less real power than they had in most of Europe, they exercised a strong influence over public opinion. The persecution of one of its inhabitants, ROGER WILLIAMS, led to the creation of Rhode Island, the first colony to guarantee religious tolerance. The colony of Maryland (see MARYLAND [COLONY]) also allowed some religious leeway, although not as great as that permitted in Rhode Island. Founded as a refuge for English Catholics, Maryland allowed civil equality for everyone who did not deny the Trinity.

The period of the American Revolution changed this. The need to rally all segments of the population to support the war weakened the religious establishments. The hostility to the established churches by nonconforming groups and the growing influence of Enlightenment ideas strengthened this tendency. This was especially true in Virginia, where a coalition of deists, BAPTISTS, and Presbyterians ended the colony's religious establishment with the passage of Thomas Jefferson's "Bill for Establishing Religious Freedom."

This same coalition was instrumental in forcing the adoption of a Bill of Rights to the U.S. Constitution guaranteeing what is known as religious liberty. The Constitution originally applied only to the national government, however, and several states, primarily in New England, retained established

churches. While such establishments were often merely nominal, they conferred influence and respectability to a particular church. These states could not stand against the tide, and the churches were slowly disestablished. Massachusetts was the last to yield, giving up its Congregational establishment in 1833.

That the early 19th century saw few judicial decisions on church-state issues does not mean there were no conflicts over religion and political affairs. Indeed, in these years, a semi-official religious establishment emerged. This was the heyday of the Protestant empire, when Protestant civilization and democratic values seemed coextensive. By midcentury, the growing influx of Catholic immigrants challenged the nation's Protestant predominance, resulting in numerous conflicts. A main source of contention was schools. Catholics objected neither to religious instruction nor Bible reading in the public schools. They did object to Protestant instruction and Protestant Bibles. Opposition to Protestant dominance sparked riots and violence in many states (see ANTI-CATHOLICISM).

Jews also suffered under this quasi establishment. Maryland, North Carolina, and New Hampshire retained colonial laws denying them full civil rights (holding state office, serving on juries) into the 19th century, although the evidence suggests enforcement was lax (see ANTI-SEMITISM).

With the passage of the FOURTEENTH AMENDMENT, the number of legal challenges to state laws increased. Swelling immigration weakened the Protestant empire by diluting its numbers. By the 20th century, the federal courts were forced to arbitrate debates touching on religion.

There were several reasons for this. The first was the growing willingness of the federal courts to apply the First Amendment guarantees to the states through the use of the Fourteenth Amendment. The second reason was the dramatic increase of different religious groups in the nation. Attending this were

growing conflicts among different religious perspectives. Finally, greater federal involvement in education, medical care, and social programs brought the national government (and tax money) into increasing contact with religious organizations.

The expansion of conflicts over religion in the 20th century forced the federal courts to decide what is and is not acceptable. During this century, the courts and especially the Supreme Court have groped slowly for a method of applying the First Amendment. The Court has declared numerous activities to be unconstitutional violations of the establishment clause. These have included the use of public schools for religious instruction even after school hours (*McCullum v. Board of Education*), government-sponsored prayer in school (*Engel v. Vitale*), and Bible reading in school (*Abington School District v. Schemp, Murray v. Curlett*).

The courts have had to determine when laws undermined the free exercise of religion. Most of these decisions guaranteed protection to religious minorities. Many involved the JEHOVAH'S WITNESSES, and the Court has overturned laws limiting their ability to distribute literature and upheld their right to refuse to salute the flag (*Cantwell v. Connecticut, West Virginia State Board of Education v. Barnette*).

In the last quarter of the 20th century, the issue of free exercise took a surprising turn. Many conservative religious organizations that previously opposed attempts to remove religion from the public schools began to argue that their free exercise of religion was violated by the introduction of secular-humanistic religion into the public schools, primarily through the teaching of evolution (see CREATIONISM). While the federal courts have not accepted such arguments, they have been more inclined to allow tangential involvement between governments and religion based on the free-exercise clause. Resulting decisions have allowed the placement of

nativity scenes and menorahs in city halls and state capitols.

The end of the 20th and beginning of the 21st century found the conflicts over church and state intense in many ways and confused in others. Concern about the perceived relaxation of the Supreme Court's standard of review in determining whether a law unduly burdened religious liberty issues led Congress to pass the Religious Freedom Restoration Act (RFRA) in 1993. Supported by religious groups from across the political spectrum, it was declared unconstitutional in 1997 as a violation of both separation of powers and federalism.

Additionally, the tendency of politicians of all stripes to look to faith-based service providers to address seemingly intractable social problems led to a relaxation of the limitations under which some thought these agencies suffered when accepting government funds. While the implications of this "Charitable Choice" provision of the welfare reform bill of 1996 remain hidden, the thinking behind it played a major role in the 2000 presidential elections as both major candidates made strong pleas for greater involvement by religious communities in meeting social needs. In fact, one of the first actions of the newly inaugurated George W. Bush was the establishment of the Office of Faith-based Community Organizations.

The perception that the United States was beset by unending social evils—school shootings, drug abuse, single motherhood—led to increased demands for a greater religious presence in schools. Everything from a return to prayer in schools to posting the Ten Commandments in schools and other public places was demanded as a way of fighting this seeming moral decay. The result was greater litigation in local courts, with some of the cases eventually finding their way to the Supreme Court. These cases concerned prayer during graduation ceremonies and the funding of religious newspapers at public universities.

The decisions in these cases have not demonstrated a coherent First Amendment jurisprudence at the beginning of the 21st century, making it increasingly difficult to discuss the developments in what already was a confused arena.

Some things can be said, however. The first is that if something breaks the connection between the government and religion, particularly as it relates to the issue of individual choice, the Supreme Court is reluctant to find a violation of the Establishment clause. For example, if an individual can receive monies directly to seek a particular service and there exists a variety of service providers, then the individual may choose a provider with an express religious component, even if the government reimburses the organization directly rather than the individual. The legal right of the individual to that money and the individual's choice become the operative components. The government, however, cannot contract directly with providers that have express religious content in their services. One way of looking at this is that the government cannot buy religious services directly, but it can pay for individuals to receive a service with religious content when that individual is legally entitled to the service.

If, however, the situation suggests that the government is sponsoring the activity, such as a high school football game or a graduation ceremony at a public school, then no government actors, be they coaches, principals, or school board members may initiate any form of religious practice, namely prayers. This would violate the Establishment clause of the Constitution. If a student commencement speaker were to deliver a speech with an express religious content, school officials could not stop her or him from doing so. This would be an unconstitutional violation of her or his religious exercise.

The contentious issues of *EVOLUTION* and *CREATIONISM* continued to be fought out in the courts throughout the last two decades of the

20th century and into the 21st. The courts have been consistent in affirming that creationism, in all its forms, is inherently religious and cannot be taught as science in public schools without violating the Establishment clause of the Constitution.

Since new issues raise new questions about the definition of what constitutes an establishment or the limits of free expression, there never can be an end to the litigation over the appropriate relationship between church and state. What is fortunate, however, is that these conflicts are solved in the courts and not in the streets.

Churches of Christ The Churches of Christ (Noninstrumental) and the Christian Churches and Churches of Christ (Independent) are associations of churches that represent the most conservative wing of the RESTORATION MOVEMENT. In 1831, the major American Restorationist strands, under the leadership of BARTON STONE and ALEXANDER CAMPBELL, together formed a single denomi-

national body called the Disciples of Christ (see CHRISTIAN CHURCH [DISCIPLES OF CHRIST]). In the early 20th century, this coalition broke apart as two large groups of theologically conservative congregations left separately and organized their own quasi-denominational organizations.

Thomas Campbell, one of the early leaders of the Restoration movement, coined the phrase that best describes the Restorationists' original intent: "Where the Scriptures speak, we speak; where the Scriptures are silent, we are silent." Alexander Campbell, Thomas's son, believed that the Bible contained a clear description of those aspects of the early church that ought to be reconstructed. He thought Christians should reject the empty theological divisions that separated them and reunite to restore the purity of the apostolic age. Barton Stone was committed to similar goals, though he was less interested in structures than in simple holiness. Stone's followers tended to reject "worldly" concerns and were generally antimodern in their intellectual outlook. While these dissimilarities were overlooked when Stone and Campbell brought their groups together in the 1830s, they presaged a later conflict.

A critical figure in the breakup of the Restoration movement was Tennessee preacher DAVID LIPSCOMB. Lipscomb stressed three important teachings. First, he thought loyalty to the plain teachings of Scripture required that believers take no active role in politics or in other earthly affairs. He looked forward to the return of Christ, when all human governments would be destroyed and the thousand-year reign of Christ would be inaugurated. Second, Lipscomb attacked the use of instrumental music. (Hence, the term *noninstrumental* as a title for the churches that followed his leadership.) He considered church organs as worldly contrivances with no warrant either in the Bible or in the worship of the early church. Third, Lipscomb opposed missionary societies and other ecclesiastical agencies. He feared

they only routinized the sacred and detracted from genuine Christian spirituality.

The popularity of Lipscomb's positions in the late 19th century symbolized that a clear division had taken place within his denomination. In 1906, after prodding by Lipscomb, the United States Census Bureau officially recognized the existence of two separate organizations: Lipscomb's militantly antimodern Churches of Christ (Noninstrumental) and the more mainstream Disciples of Christ. The census of 1906 also revealed marked sectional differences between the two groups. Of the Churches of Christ's 159,000 members, 100,000 lived in states that had seceded from the Union in 1860 and 1861. Even today, an overwhelming majority of members in the Churches of Christ live within 200 miles of a line drawn from Chattanooga, Tennessee, to El Paso, Texas.

Other social divisions split Restorationist groups in the 20th century. The census of 1936, for instance, showed that, while the majority of the members of the northern-dominated Disciples of Christ lived in urban areas, more than half of the Churches of Christ's members were affiliated with rural churches. Lipscomb had earlier articulated what that distinction meant for him: His conservatives wanted people to come to Christ, but "the society folks" (i.e., the Disciples) only desired "fine houses, fashionable music, and eloquent speeches."

The Churches of Christ grew rapidly during the early 20th century, thanks largely to their evangelistic fervor. They spread their message with virtually no denominational organization or financial support for their preachers. Religious periodicals proved to be a unifying force in the movement, especially Lipscomb's *Gospel Advocate*. The Churches of Christ also founded a number of colleges that acted as centers of influence: David Lipscomb College in Nashville; Harding College in Searcy, Alabama; Abilene Christian University in Abilene, Texas; and Pepperdine University in Los Angeles.

The focus on biblical authority, the impulse that initially persuaded the Churches of Christ to separate themselves from the Disciples of Christ, however, tended to encourage further sundering of the conservative movement. In the 1930s, for example, Louisville preacher Robert H. Boll took a strong premillennialist (see PREMILLENNIALISM) stand. When the majority of the church rejected his position, approximately 100 congregations became alienated from the Churches of Christ. Recent disputes have concerned such matters as marriage and divorce, the covering of women's heads in worship, and the number of cups used in Communion services. The search for the purity of the early church, therefore, has often led members of the Churches of Christ into bitter controversy with one another.

The Christian Churches and Churches of Christ (Independent) are a second group of conservative congregations that drifted away from the Disciples of Christ early in the 20th century. During the heyday of the battle between fundamentalists (see FUNDAMENTALISM) and theological liberals in American Protestantism, conservatives within the Disciples accused their leadership of undercutting the traditional authority of the Bible. When the traditionalists did not think their concerns had been given a fair hearing, they formed their own denominational body, the North American Christian Convention, in 1927. Although the boundary line between the Disciples and the new association of independent Christian Churches was not originally clear, the publication of a directory of conservative congregations in 1955 helped denote where the division had occurred. And when the Disciples restructured themselves in 1968 and created a regional and national structure akin to the organization of other mainline denominations, an estimated 2,000 conservative congregations officially withdrew their names from the *Disciples Year Book*.

The Christian Churches and Churches of Christ (Independent) have much in common

with American EVANGELICALISM. They believe that the Bible is divinely inspired, and they are opposed to most forms of theological and social liberalism. They have been distinguished as well by their belief in the necessity of baptism by immersion as a condition for church membership. These churches are divided, however, over the question of whether the forgiveness of sins occurs before or during the act of baptism.

The Churches of Christ (Noninstrumental) is the largest of the three denominational bodies that presently make up the American Restoration movement. It reported more than 14,500 congregations and nearly 2 million members in 2006. The Christian Churches and Churches of Christ (Independent) now contain more than 13,000 congregations and about 1.3 million members.

Church of England See ANGLICANISM.

Church of God (Anderson, Indiana) See HOLINESS MOVEMENT.

Church of God (Cleveland, Tennessee) The Church of God (Cleveland, Tennessee) is the second-oldest Pentecostal (see PENTECOSTALISM) denomination in the United States. The origins of the church lie in a revival that occurred in east Tennessee in 1886, when eight Baptists joined together and dedicated themselves to the ideal of restoring primitive Christianity. Organized in 1902 as the Holi-

ness Church of Camp Creek (North Carolina), the denomination moved to Cleveland, Tennessee, and adopted its present name in 1907.

The Pentecostal movement emerged out of American Protestantism in the early 20th century. The AZUSA STREET REVIVAL, a period of intense religious excitement at a storefront church in Los Angeles, sparked Pentecostalism's growth after 1906. Part of a diverse movement that eventually inspired millions, Pentecostals were united by one central conviction: the belief that religious conversion must be followed by a second miraculous experience known as the baptism of the Holy Spirit. The ability to speak in tongues, that is, uttering ecstatic languages intelligible only to God (also known as glossolalia), was generally considered evidence that a person had received Spirit baptism.

The Church of God originated in the late 19th century in the mountainous region that covers eastern Tennessee and western North Carolina. The Tennessee Baptists who united in 1886 merged with a similar group of North Carolinians who had spoken in tongues at a revival held near Camp Creek, North Carolina, in 1896. The two groups adopted a formal church government in 1902.

The Camp Creek organization might well have remained in obscurity if it had not been for the leadership of A. J. TOMLINSON, an itinerant preacher and erstwhile Sunday school superintendent. In 1889, Tomlinson had organized a congregation that advocated Holiness doctrines of entire sanctification and Christian PERFECTIONISM. After several years of missionary work spreading these teachings in the Tennessee and North Carolina mountains, Tomlinson encountered and quickly assumed control over the Camp Creek church. He renamed the organization the Church of God to emphasize that it was the only true church, a community in continuity with the church of New Testament times. In 1909, Tomlinson was elected general moderator (later called general overseer) of the new denomination.

The acceptance of faith healing and glossolalia quickly set the Church of God apart from other churches in the area. After learning of the doctrine of divine healing taught by Pentecostal minister Carrie Judd Montgomery, Tomlinson began praying for the healing of the sick in his revival services. His ideas about Christian holiness convinced him that God would not merely help believers overcome sin in the present life, but would bring them physical healing as well. In January 1908, Tomlinson underwent a tremendous spiritual experience that was the Spirit baptism he longed to receive. From that point on, he looked upon the ability to speak in tongues as evidence of divine favor, and glossolalia became a regular feature of worship in the Church of God.

A general assembly of the denomination's ministers met yearly in various locations between 1906 and 1920. In 1920, a new auditorium was built in Cleveland, Tennessee, and while the general assembly has since gathered in a number of places, the church's headquarters have remained in Cleveland. After the creation of the post of general overseer, Tomlinson held the position and also edited the denomination's official journal, *The Church of God Evangel*. However, his refusal to share power with other church officers alienated his colleagues and led to a schism in the church. Accused of financial mismanagement, Tomlinson was deposed from his position in 1923.

Tomlinson took about 2,000 adherents with him to form a new denomination, which he also named Church of God. Following a lengthy period of litigation, the original denomination retained its name, and Tomlinson's denomination eventually accepted the designation Church of God of Prophecy. Although this church also split when Tomlinson died in 1943, his son Milton retained control over the main body. Tomlinson's Church of God of Prophecy, like the Church of God, maintains its headquarters in Cleveland and now has around 73,000 members.

In 1948, the Church of God formulated an official declaration of faith professing such conservative theological beliefs as the verbal inspiration of the Bible and the premillennial (see PREMILLENNIALISM) return of Jesus Christ. The church also affirmed the distinctive doctrines of Pentecostalism, namely, the availability of divine healing and the belief that baptism of the Spirit is evidenced by speaking in tongues. The denomination's strength remains in the region of the South where it was first formed, being heavily concentrated in Tennessee and North Carolina. In 2006 the Church of God reported approximately 1 million members in more than 6,500 congregations.

Church of God in Christ The Church of God in Christ (COGIC) is the oldest Pentecostal (see PENTECOSTALISM) denomination in the United States. Founded in Mississippi in 1897 by Baptist ministers C. H. Mason and Charles Price Jones and comprised primarily of African Americans, COGIC has grown over the years from a small sect into a substantial denomination. Today it is the largest black Pentecostal body in the world.

The Pentecostal movement, which emerged out of American Protestantism in the early 20th century, has produced more than 300 denominations and several million adherents. One conviction unites all members of this otherwise diverse movement: the belief that religious conversion must be followed by a second transforming experience called the baptism of the Holy Spirit. The ability to speak in tongues, that is, employing ecstatic, incoherent forms of speech intelligible only to God, is considered evidence that a person has been baptized in the Spirit.

The AZUSA STREET REVIVAL in Los Angeles is commonly considered the birthplace of American Pentecostalism. The revival was started in 1906 by WILLIAM J. SEYMOUR, a black Holiness preacher. Seymour earlier had espoused the doctrine of entire sanctification, the belief that Christians could be set free from the power of sin and attain holiness in the present life. In 1905, he accepted that speaking in tongues was proof of sanctification, and in April 1906, the group he led experienced its first outbreak of glossolalia. When the private home he used became too small for the crowds flocking to his revival, Seymour moved the meetings to an old building at 312 Azusa Street in a rundown section of Los Angeles.

At the height of the revival, worship at the Azusa Street Mission was held three times a day, beginning at midmorning and continuing past midnight. Miraculous healings and a general spiritual ecstasy marked the event. The revival also was notable for its interracial makeup, a feature some observers saw as a special sign of divine favor. Thousands flocked to Azusa Street. Seymour's ministry helped spark important growth in the Pentecostal movement, because many visitors who participated in the Los Angeles revival took its message back to their local churches.

C. H. Mason, then pastor of a Holiness congregation in Memphis, Tennessee, was among the people who came to the West Coast in that period. Mason, who had undergone a dramatic religious experience in 1880, was licensed as a Baptist preacher in 1893. Two years later, Mason met another Baptist preacher, Charles Price Jones of Jackson, Mississippi. Jones and Mason worked closely together for several years and formed a loose confederation of Holiness congregations that they named the Church of God in Christ. After hearing about worshipers speaking in tongues at the Azusa Street revival, Mason traveled to Los Angeles to witness the event firsthand. In March 1907, he himself experienced the bap-

tism of the Holy Spirit and spoke in tongues. Mason stayed in Los Angeles for five weeks, before returning home to report on what had occurred.

At his church in Memphis, Mason began to hold meetings lasting from 7:30 in the evening until 6:30 the next morning. Soon even the city's white newspapers took notice of this activity as people came to Mason's church to witness to their faith, to be healed of their illnesses, and to speak in tongues. Although Jones disapproved of Mason's Pentecostal practices and eventually parted company with him, most of the nascent denomination remained loyal to Mason. Mason's group kept the name Church of God in Christ and incorporated itself in the fall of 1907. Mason was elected general overseer of the church, a post he held until his death in 1961.

After Mason's death, the issue of authority surfaced, and for a time COGIC was divided into three contending factions. Each group claimed to be Mason's genuine successor, and all adopted the same denominational name. Six years of litigation led to the convening of a constitutional convention, which determined that an elected board of bishops would oversee the work of the church. James O. Patterson, Mason's son-in-law, was elected presiding bishop, and despite some defections, most dissident ministers and their congregations returned to the main fold.

The complexity of the denomination's governance sets it apart from the generally loose associations typical of other Pentecostal churches. The denomination also is more concerned with social problems than most white Pentecostals. Although its membership statistics may be somewhat inflated, its influence in the African-American community is unquestionably immense. Still headquartered in Memphis, COGIC reported more than 6 million members in more than 15,000 congregations in 2008.

Church of God of Prophecy See CHURCH OF GOD (CLEVELAND, TENNESSEE).

Church of Jesus Christ of Latter-day Saints The Church of Jesus Christ of Latter-day Saints (LDS) is the largest denomination of the Mormon movement. One of America's most successful and controversial new religious traditions, Mormonism emerged in the 1830s out of Christianity in much the same way that Christianity emerged from Judaism—by claiming to fulfill the promises of the tradition out of which it emerged even as it reformed that tradition's doctrines, practices, and institutions. Mormons accept the Bible ("so far as it is correctly translated") as divinely inspired Scripture, but they have added to the Christian tradition new scriptures (including the BOOK OF MORMON), new doctrines (e.g., the plurality and corporeality of gods and the "eternal progression" of humans toward divinity), and new practices, such as polygamy, marriage for eternity, and baptism for the dead by proxy. Because of these and other innovations, Mormonism is seen by some scholars not as another Christian denomination but as an entirely new religious creation. Mormons, however, typically describe themselves as Christians.

Mormonism first appeared publicly in 1830, the year that JOSEPH SMITH, JR., published the Book of Mormon and organized the Church of Jesus Christ in Fayette, New York. This church is now known as the Church of Jesus Christ of Latter-day Saints because of

Smith's conviction that the saints of God were living in the last days before the return of Jesus Christ. Smith's new scripture and new church synthesized venerable Jewish and Christian themes with the 19th-century concerns of the BURNED-OVER DISTRICT of western New York state. Like other liberal religious traditions that prospered in that region, Mormonism rejected harsh Calvinist orthodoxies such as predestination and original sin in favor of more modest accounts of divine sovereignty and more generous accounts of human character. It also participated in the populist strain of other Burned-Over District religious movements by minimizing the distinction between clergy and laity.

The Book of Mormon presents itself as a historical work narrating the New World drama of two ancient Hebraic peoples who sailed to the Americas long before Columbus. Both these groups eventually died out, but one left Native Americans as a remnant. Another claim of the book is that after his death and resurrection, Jesus Christ came to America, where he preached, performed miracles, ordained disciples, and established a Christian church. These early Christians eventually turned from God and thus disappeared, but they left behind a secret history of their New World experiences engraved on gold plates by a father named Mormon (hence "Mormonism") and a son, Moroni. Moroni developed over time from a human into an angel and eventually led Smith to this hidden historical treasure.

In their early history, the Latter-day Saints moved frequently, largely as a result of anti-Mormon propaganda and persecution. Wherever they settled, Mormons were greeted by debunkers who denounced Mormonism as heresy and the Book of Mormon as fraud. On a number of occasions, this criticism precipitated violence. Smith typically responded to this violence by uprooting his church and moving west. He transplanted his church from New York to Kirtland, Ohio, in 1831, then to

locations in Missouri, and, finally, to Nauvoo, Illinois, in 1839.

The Mormons experienced both economic prosperity and demographic growth in Nauvoo, but in the early 1840s Smith announced a series of new beliefs and practices that solidified brewing anti-Mormon sentiment and secured his own martyrdom. The most controversial such practice was “plural marriage,” or polygamy. In January of 1844, he announced himself as a candidate for the United States presidency. Later that same year, anti-Mormon sentiment erupted into violence. Smith and his brother Hyrum were arrested and imprisoned in Carthage, Illinois. On June 27, 1844, an anti-Mormon mob sacked the jail and killed Smith and his brother.

After Smith’s death, a struggle ensued over the leadership and direction of the Mormon movement. This battle resulted in the division of Mormonism into its two main groups: the Church of Jesus Christ of Latter-day Saints (also known as the Utah Mormons), which followed BRIGHAM YOUNG and affirmed controversial practices such as polygamy, and the much smaller Reorganized Church of Jesus Christ of Latter Day Saints (the COMMUNITY OF CHRIST), which followed Joseph Smith III and denied polygamy and other Nauvoo innovations as both unbiblical and contrary to the Book of Mormon.

Young’s most celebrated act as Smith’s successor was his spearheading of a massive Mormon migration, between 1846 and 1848, to the state of “Deseret” in the basin of the Great Salt Lake in present-day Utah. There, under Young’s tenure as territorial governor and superintendent of Indian affairs, the Mormons prospered as they once had in Nauvoo under Smith. Initially they emphasized their distinctiveness from the rest of American religion and culture, but after midcentury the Mormons felt increasing pressure to conform. A federal law passed in 1862 made polygamy illegal; in 1879, the U.S. Supreme Court upheld antipolygamy laws as constitutional; and an 1882 act disfranchised

The temple in Salt Lake City, Utah, is a mecca for Mormons worldwide. (*Library of Congress*)

all polygamists. As a result of these actions, a number of Utah Mormons were imprisoned in the early 1880s. Finally, in 1890, LDS president Wilford Woodruff announced a new revelation against plural marriage. This change, accompanied by the abandonment of a nascent Mormon political party, paved the way for Utah statehood in 1896.

Not all members of the denomination recognized the new revelation, however, and many continued to practice polygamy. Initially, this was an underground movement within the denomination itself. As the church became more aggressive in excommunicating those who continued the practice, polygamists established their own “churches” and undertook a clandestine existence, particularly in the vastness of the Rocky Mountain and intramontane West. During the 1990s and 2000s, the presence of these communities became the source of much tabloid journalism as several leaders of breakaway Mormon groups faced prosecution for polygamy and “statutory rape” for taking underage wives.

Interestingly the church has managed to become viewed both as an intensely patriotic and “American” denomination while remaining a fairly controversial and distinct subculture. While much of the latter results from its

secretiveness and the intense commitment of its members, in many ways the church always has been aggressively countercultural. During the 19th century, this was seen in its adoption of polygamy. In the late 20th century, the church was distinguished most by its strict ethical codes and commitment to traditional gender roles and family life. Mormons are enjoined to abstain from alcohol, tobacco, and caffeine, and most Mormon youths, particularly males, spend at least a year doing mission work for the church. Even established Mormon professionals often leave their jobs to undertake mission work of several months, if not years. Mormons also are under a religious obligation to practice “provident living,” avoiding debt and overspending. Additionally, they are prodigious givers to charity (see PHILANTHROPY), being required to tithe as part of church doctrine. Many liberals view the church’s position on women and personal morality with much suspicion, while evangelical Protestants often continue to deny that it is a Christian denomination at all.

During the 1960s and 1970s the group drew fire for its refusal to ordain African Americans to the priesthood—a policy reversed by a new revelation in 1978. Many observers identify the Church of Jesus Christ of Latter-day Saints as the fastest growing major religion in the world. In 2008, it claimed an American membership of more than 5.7 million and a worldwide membership of 13 million.

Church of the Brethren (Dunkers) The Church of the Brethren is an anticreedal, pietist denomination of German origin that stands alongside the Quakers (see FRIENDS, RELIGIOUS SOCIETY OF [QUAKERS]) and the MENNONITES as one of America’s three major “peace churches.”

Like other Anabaptist groups, the Brethren are primitivists (see PRIMITIVISM) who aim to restore at least a remnant of modern Christianity to its ancient purity. They practice a number of rituals attributed to the apostolic church, including foot washing, the holy kiss, the love feast, and anointing of the sick. They live simply and avoid drugs and alcohol. The Brethren follow other Anabaptist groups in rebaptizing adult converts, but their method of adult baptism is distinctive. Typically, they immerse the initiate three times, face first, in running water. Because of this practice of “trine immersion,” members of the Church of the Brethren are popularly referred to as Dunkers, from the German *tunken* (“to dip or immerse”).

The founder of the Church of the Brethren was Alexander Mack, Sr. (1679–1735), a radical pietist (see PIETISM) who in 1708 in Schwarzenau, Germany, called the first group of Brethren out of the German Reformed tradition in which he (and most of them) had been reared. The eight founding members of the group devoted themselves to Bible study, prayer, and fellowship. In typically pietist fashion, they minimized the importance of Christian doctrine and eschewed creeds. They incorporated ostensibly apostolic rituals such as foot washing into their Holy Communion services. Like other Anabaptists, they rebaptize adult members and manifest their withdrawal from the world by refusing to take oaths, fight wars, or otherwise participate in government. Initially, they also practiced celi-

bacy and a form of Christian communism, but those practices later fell away.

Largely because of their pacifism and unyielding commitment to the separation of church and state, the Dunkers were persecuted in Europe. The first group of Brethren migrated to America in 1719, seeking religious freedom. A second group came with Mack 10 years later, virtually emptying Europe of Dunkers. Like many other German sectarian groups, these members of the Church of the Brethren settled in Germantown, Pennsylvania, where they enjoyed a climate of greater tolerance and established the first New World congregation.

One of the most famous of the German-born Dunkers was Christopher Sauer (1693–1758), who came to America in 1724. Like Mack, Sauer was educated at the University of Halle. He worked as a medical doctor in Germantown and a farmer in Lancaster County, Pennsylvania, before turning to printing, the profession that would bring him fame. He began publishing the *Hoch-Deutsch Pensylvanische Geschichts-Schreiber* for the benefit of German-speaking Americans in 1739. In 1743, he produced a German edition of Luther's Bible, the first Western-language version of the Christian Scriptures printed in the Americas.

The Dunkers, who like the Mennonites eventually left urban areas for rural lives devoted to agriculture, existed in North America for nearly 200 years before they came to be known officially as the Church of the Brethren. Like other pietistic sects of German origin, they have suffered multiple schisms. Between 1881 and 1883 both a progressive and an ultraconservative faction split off from the main body of Brethren. The progressive group, whose members sought to downplay their German roots by accommodating themselves to American culture, formed the Brethren Church (Progressive Dunkers). The ultraconservative schismatics established the Old German Baptist Brethren (Old Order

Dunkers), which objected to practices, including the payment of salaries to ministers and the establishment of church-based schools and missionary societies, that in their view contravened apostolic models.

Another important offshoot of the Church of the Brethren was the EPHRATA COMMUNITY, a monastic group established in 1732 at Ephrata, Pennsylvania, by Conrad Beissel (1691–1768), a German-born pietist inclined toward solitude and asceticism. Because of their observation of the Sabbath on Saturday rather than Sunday, Beissel's followers came to be called the German Seventh-day Baptists.

The Church of the Brethren has endured its schisms by maintaining a middling position between its progressive and ultraconservative offspring. A member of both the NATIONAL COUNCIL OF CHURCHES and the WORLD COUNCIL OF CHURCHES, it has roughly 132,000 congregants in the United States. Like other peace churches, the Church of the Brethren maintains voluntary associations devoted to assisting its conscientious objectors. Other voluntary associations, such as Brethren Volunteer Service, provide humanitarian relief to the needy both at home and abroad.

Church of the Nazarene The Church of the Nazarene is the largest American denomination to emerge out of the HOLINESS MOVEMENT of the 19th century. It was founded in 1908 through the union of several religious bodies, including Phineas F. Bresee's Church of the Nazarene in Southern California and the eastern-based Association of Pentecostal Churches. The denomination emphasizes the doctrine of entire sanctification as a "second blessing" that comes to believers after conversion. Nazarenes

believe that, by the action of divine grace, Christians can be freed from inbred sin, brought into a state of full devotion to God, and enabled to adopt a lifestyle reflecting "holiness of heart."

Phineas Bresee, a Methodist clergyman and pastor of the First Methodist Church in Los Angeles, first encountered the Holiness movement during his ministry at that church. Some members of the congregation requested Bresee to call evangelists from the National Holiness Association, an organization founded in 1867 to help lead Methodists back to John Wesley's teachings on Christian perfection (see PERFECTIONISM). Bresee soon underwent an experience of sanctification and began conducting revivals with the aid of Holiness preachers. Conflict with his bishop over these activities, however, eventually forced Bresee to withdraw from the Methodist ministry in 1895.

Holiness leaders like Bresee believed in the importance of opposing the worldliness they saw spreading within American Methodism. Attempting to revive the simplicity of the early Wesleyan movement, they organized churches that welcomed, rather than rejected, the poor. With such goals in mind, Bresee founded a congregation known as the Church of the Nazarene in Los Angeles in 1895. Similar in some ways to the SOCIAL GOSPEL then being preached in mainline Protestant denominations, Bresee's ministry offered both spiritual and material care to modern city-dwellers. The Church of the Nazarene proved to be hugely successful, and the organization grew rapidly.

The eastern branch of the future Church of the Nazarene began when several independent congregations merged into the Association of Pentecostal Churches in 1896. Many of these churches were led by clergy who left the Methodist Episcopal Church because of its opposition to their teachings on sanctification and Christian perfection. Representatives of the association met with Bresee, and in 1907 the two groups united at Chicago to

form the Pentecostal Church of the Nazarene. The following year, this church also accepted the Holiness Church of Christ, a southern group, into its membership at a meeting in Pilot Point, Texas. By 1915, the new church numbered nearly 35,000 members. The title *Pentecostal* was dropped in 1919 in order to avoid confusion with groups that spoke in tongues, a practice the Nazarenes did not embrace.

Since the Church of the Nazarene emerged out of American Methodism, its beliefs reflect many features of the WESLEYAN TRADITION. Like Methodist founder John Wesley, Nazarenes teach that faith necessarily has a social component. True to Wesley's Perfectionist moral ideals, they pledge themselves to assisting the poor, hungry, and sick while refraining from the use of alcohol, tobacco, or drugs. Their Articles of Faith (contained in the denomination's *Manual*) also condemn the "indulging of pride" in either behavior or dress. Finally, Nazarenes are committed to missionary work both in American cities and in more than 80 locations outside the United States.

Headquartered in Kansas City, Missouri, the Church of the Nazarene reported in 2006 an American membership of approximately 630,000 people in nearly 4,900 congregations.

Church of the United Brethren in Christ

See UNITED METHODIST CHURCH.

Circuit Riders Circuit Riders were the itinerant Methodist preachers who spread Methodism throughout the American frontier. By the mid-19th century, the work of these men

had made Methodism the largest Christian denomination in the United States.

The circuit rider system owed its genesis both to early Methodist doctrine and the realities of 17th- and 18th-century American life. Doctrinally, the idea of itinerancy goes back to John Wesley, the founder of Methodism. Wesley firmly believed his duty was to take the Christian message anywhere and everywhere, proclaiming once that "The world is my parish."

This obligation to take Christian teaching wherever people needed it was challenged by the realities of the American landscape. Numerous individuals spread over vast distances required the creation of a ministry able to travel those distances. While Methodism did have a system of settled ministers, throughout the 19th century, most Methodist ministers were itinerants. They had responsibility for a series of churches or communities within a set geographical area; this area, known as a circuit, was his charge. Since horseback was the only logical means of travel, these Methodist ministers soon became known as circuit riders. Tradition has it that one of the first questions a Methodist bishop asked regarding a candidate for the ministry was, "Has he a horse?"

The minister was expected to visit every church in his charge during the course of a year and, additionally, gain converts and start Methodist churches in those communities lacking one. Many circuit riders had charges that encompassed vast areas. With few roads and bridges and minimal amenities, their ministries required a sense of duty and obligation.

Despite working with little supervision in sparsely populated areas, the typical circuit rider was committed to fulfilling his ministerial obligations. The circuit riders struggled with grueling travel conditions, bad weather, and poverty. They lived in the most difficult conditions, sleeping wherever they could find a room. Often they slept outdoors when dark-

ness found them miles from any habitation. They ate whatever was available. In his autobiography, PETER CARTWRIGHT, one of the most famous circuit riders, wrote that he "ate roasting ears for bread, drank butter-milk for coffee; took deer or bear meat, or wild turkey, for breakfast, dinner, and supper. This was old-fashioned Methodist preacher fare and fortune." More than half of all the circuit riders in service prior to 1847 died before the age of 30, and two-thirds died before they had spent 12 years as an itinerant.

Weather, illness, poverty, and exhaustion took their toll, but so did hostility and violence. Another notable preacher, Freeborn Garretson, wrote, "I was pursued by the wicked, knocked down, and left almost dead on the highway, my face scarred and bleeding and then imprisoned." Cartwright's autobiography also detailed numerous physical attacks on him during his career.

Francis Asbury, the first Methodist bishop in the United States, illustrates the reality of this life. From his detailed letters and writings, historians have estimated that Asbury traveled more than 270,000 miles and preached more than 16,000 sermons during his career. When exhaustion finally overtook him and he was forced to recuperate at White Sulphur Springs (now West Virginia), Asbury continued to read a minimum of 100 pages a day, led public prayers five times daily, preached publicly every other day, and gave a lecture nightly.

Such dedication, commitment, and sheer endurance led to the numerical growth and geographical expansion of Methodism in the United States. In 1784, Methodism in the newly independent United States was a small (15,000 members) and suspect denomination, hindered by its association with England; 60 years later it had more than a million members and a position of dominance in American Protestantism that it would hold until well into the 20th century.

civil religion The phrase *civil religion*, used by the French philosopher Jean-Jacques Rousseau in *The Social Contract* (1762), has come to refer either to the processes and rituals by which modern states reinforce their legitimacy among and increase support from their populations. American civil religion draws upon biblical religion as well as the traditions of Greek and Roman political life. Often expressed most clearly during times of crisis or war, American civil religion seems to ebb and flow in its ability to contribute to social cohesiveness.

The phrase *civil religion* has been subjected to considerable debate since sociologist Robert N. Bellah first brought it into academic and public discourse in 1967. Bellah claimed that Americans had developed "alongside of and rather clearly differentiated from the churches an elaborate and well-institutionalized civil religion." Bellah was particularly concerned to show that while this form of religion often served to legitimize the state's conduct, it also provided a means whereby the state could be held subject to a higher law. Historians and sociologists have argued over how constant and how "well institutionalized" such a religion might be; theologians have debated its value. Other terms, such as *public religion*, *religious nationalism*, or *patriotic faith* are preferred by some scholars. And one may well question the extent to which civil religion maintains a distinctive institutional form. Bellah himself eventually abandoned the term. Nevertheless, the concept points to some extremely

important features of religious life in modern societies.

The historical roots of American civil religion are twofold. One thread comes from the Hebraic tradition of the Bible, brought to American shores by Puritans in the early 17th century (see PURITANISM). Puritans often spoke of themselves as "a chosen people," selected by the biblical God to accomplish a great work—the creation of a righteous society, a "city on a hill," as JOHN WINTHROP put it, which would serve as a moral beacon for the rest of the world. Puritans read their own experience of migration and settlement in a land already populated by indigenous people as a repetition of the biblical story of the Exodus. Thus, they were the "new Israel," led out into the American wilderness, a proving ground that they often viewed as the haunt of Satan and his children, the Algonquin tribes. And like the Jews of old, many Puritans accepted that their position as God's chosen people required a willingness to suffer for their righteous goals. Such suffering for the faith came in the form of external threats from papist European states or neighboring tribes and from the internal threats of their own sinfulness.

The second thread in the development of American civil religion emerged out of the Revolutionary era (see AMERICAN REVOLUTION). It, too, consisted of an effort by Americans to understand their experience of creating a new society by seeking parallels with that of another ancient tradition: Greco-Roman republican politics. American Revolutionaries certainly drew upon their Puritan heritage in their struggle with Britain, often viewing the conflict itself as the millennial battle between Christ and Satan foretold in the Bible. But, as did many during the ENLIGHTENMENT, American leaders and educated citizens discovered enormous intellectual resources in the Greco-Roman heritage. In striving to create a new form of government, they found instructive and inspirational parallels between their own

attempt to unify a number of ethnic and religious groups under one political structure and that of the Roman Empire. As a consequence, one finds significant borrowings from ancient Rome in many aspects of American culture, ranging from the political ideal of liberty to the production of political rituals such as those for the inauguration of George Washington in 1789 (often referred to by his contemporaries as the "American Cincinnatus," after the famous Roman citizen/general) or the processions accompanying the heroic Marquis de Lafayette in 1824 and 1825. The Roman thread is perhaps most visible in such shared features of American life as the architectural designs common to public buildings, in which post offices and court houses often look like Greek or Roman temples, or in the engraving styles found on American currency. The dollar bill, with its Latin phrases *e pluribus unum* ("one out of many") and *novus ordo seclorum* ("new order of the ages"), has become an icon of the Roman influence on the formation of American civil religion.

Over the years, the civil religion emerging out of the country's birth struggles has changed. Certain elements have come to provide a core. Americans follow a ritual calendar of holidays, ranging from overtly political celebrations such as July 4th and Labor Day to the more family-centered holidays of Christmas and Thanksgiving. A set of sacred scriptures has emerged, including the Constitution (1789), the Declaration of Independence (1776), speeches by leaders such as Washington, ABRAHAM LINCOLN, Franklin Delano Roosevelt, and John F. Kennedy, and perhaps even a few Supreme Court decisions, such as *Brown v. Board of Education* (1954). But these "core elements" just as easily suggest that if there is a civil religion in the United States, it remains far distant from the realities of most citizens' lives.

A more fruitful way of discerning the patterns of civil religion might be found by focusing on the functions or problems for

which Americans have drawn on religious expressions in their public life. Two particular problems, first faced by citizens of the early republic, have continued to shape the development of American civil religion and account for its episodic appearance. The first is the problem of *national integration*, the creation of common sentiment capable of binding together a population of diverse ethnic, geographic, and religious backgrounds and interests. Elites have thought such sentiment was needed to assure the priority of national loyalty over more immediate, deeply felt regional, ethnic, or religious ties. This dimension of American civil religion often remains weak, especially in the ordinary ebb and flow of political life. Symbols such as Uncle Sam, the American eagle, the Great Seal, or the commemorative holidays of Memorial Day or July 4, lose their power and focus over time, or only resonate within certain segments of the population. In addition, the basic task of insuring the priority of national over more immediate loyalties has been steadily resisted by many Americans, who often seek to downplay the symbolic presence of the federal government in their daily lives.

But if Americans have resisted the nationalization of sentiment in ordinary times, they have been much more willing to respond positively under circumstances of danger or threat, a function that we could label *national mobilization*. American civil religion has been far more successful when developed in response to extraordinary times. On occasion, social crises (the Great Depression), natural disasters (the Chicago Fire), or even technological breakdowns (the Challenger explosion in 1986) have triggered the development and expression of civil religion. In the face of such crises, Americans have urged each other to put aside their differences and unite to stave off threat or loss. But it is especially the potential or necessity of war that has most consistently shaped the mobilizing tenor of civil religion.

Having seen in both European and Native American military power a kind of demonic attack on their divinely inspired goals, Americans in the colonial, Revolutionary, and early republican eras found the most compelling rationale for national unity arising out of their perceptions of violent threats to their common life. Thus THOMAS JEFFERSON in the Declaration of Independence (1776) spoke of those who possessed the natural (divinely given) rights of "life, liberty and the pursuit of happiness" as also having the duty to take up arms against those forces who would try to deprive a people of those rights. Jefferson's language of duty has given rise to a longstanding tradition in which those who possess liberty are required to be ever-vigilant and ready for personal sacrifice in liberty's defense.

Throughout American history, the occasion of war has served to link Jefferson's themes of liberty and sacrifice (see CIVIL WAR, WORLD WAR I, WORLD WAR II). During the period of western expansion (see MANIFEST DESTINY), Americans viewed their losses of life and property stemming from wars with numerous Native American tribes as sacrifices. General George Armstrong Custer, defeated by Lakota, Cheyenne, and Arapahoe warriors at the Little Big Horn in 1876, became a national martyr, dying a Christlike death for the advancement of civilization. Abraham Lincoln in his Gettysburg Address (1863) spoke forcefully about the blood spilled by American soldiers as providing the means of "a new birth of freedom" for the nation.

If civil religion has grown strongest during times of war, it also showed its limits during the VIETNAM WAR, a time of widespread national self-examination. In subsequent years, civil religion has not faded away, as some predicted. Increased ideological conflict with the Soviet Union during the 1980s, undergirded by a continued threat of nuclear war, was interpreted by both supporters and opponents of American policy in terms consistent with the tradition of civil religion. In a

1983 address, President Ronald Reagan spoke of the Soviet Union as "evil incarnate in the modern world." Large numbers of church members active in the widespread anti-nuclear weapons movement at the time saw American military expansion and increased support of counterinsurgency efforts by third world governments as violating America's fundamental identity as a country based on the ideals of liberty.

Americans have most frequently used civil religion to help sustain a sense of their own uniqueness in relation to an outside power. The collapse of the Soviet Union brought not an end of the tradition but another shift in its form. In initiating the Persian Gulf War in 1991, President George H. W. Bush demonized Iraqi leader Saddam Hussein as part Satan and part Hitler. He also elicited sympathy for the Kuwaitis, whose land had been occupied by Iraqi forces, as people yearning for liberty. Finally, President Clinton led a troubled North Atlantic Treaty Organization (NATO) coalition in an air war against Serbian president Slobodan Milošević in 1999, maintaining solidarity in that campaign by claiming that NATO was waging war in defense of human rights. Both presidents drew from the Declaration of Independence in justifying their actions and characterizing their opponents. As post-Vietnam policy makers, however, both Bush and Clinton feared that America would be reluctant to sacrifice its citizens for any cause not vividly and directly tied to the country's security.

Responses to the September 11, 2001, terrorist attacks (see SEPTEMBER 11, 2001, RELIGION AND) on the United States clearly demonstrated the power and reality of American civil religion, regardless of its inchoate and relatively indeterminate content. From the huge upsurge in donations to charities trying to deal with the consequences (including the massive number of blood donations) to the innumerable prayer services among religious communities throughout the country, Americans responded to the horror and tragedy

with an unabashed mix of religious and civic emotion.

The wars in Afghanistan and Iraq demonstrated that, contrary to many fears, Americans were willing to sacrifice once again, but only to the extent to which they could understand the need for the sacrifice and that the sacrifice made sense. As the war in Iraq dragged on and seemed to be marked by gross incompetence and bad planning, many Americans began to doubt once again. Additionally, the failure of the administration of George W. Bush to speak the language of sacrifice and national unity diminished its ability to call upon the powerful symbols of civil religion to galvanize the American public during a time of crisis.

Civil Rights movement The Civil Rights movement, the struggle for the universal application of legal and social rights in the United States, was a milestone in American religious, social, and political history. The term has two meanings, one narrow and one wide. The narrow meaning—which many intend when they refer to “the Movement”—defines the struggle for black political equality that leapt into public view in the 1950s and continued through the late 1960s.

The wider meaning includes all the struggles and attempts to ensure that political rights are applied equally to all Americans regardless of religion, background, color, sex, heritage, and other extraneous factors. In this sense, the Civil Rights movement never

Civil rights activist Martin Luther King, Jr., gesturing during a sermon at Ebenezer Baptist Church. (Getty)

ended. Its roots permeate human history in all the places where individuals suggested that equality before the law was a natural right.

The roots of the movement for black civil rights are long and deep. It is not unreasonable to suggest that the roots began when the first African resisted the process of enslavement by revolting, running away, or committing suicide rather than submitting to captivity. Similar forms of resistance marked the entire slave period. From work slowdowns to poisonings, from feigning illness to staging rebellions, slaves resisted enslavement and worked to affirm their human dignity and independence.

Such actions were not confined to the slaves alone. Freed blacks also resisted the social and legal constraints under which they labored. Racism in the churches led many into

separate black churches and even denominations (see AFRICAN-AMERICAN RELIGION; AFRICAN METHODIST EPISCOPAL CHURCH; AFRICAN METHODIST EPISCOPAL ZION CHURCH). Discrimination in social services and fraternal organizations led blacks to create their own institutions, which reflected black dissatisfaction with second-class status. In many of these organizations, religious leaders took the lead.

Not all institutions working to overcome the limitations under which blacks were forced to live were black institutions. Some, like the Quakers (see FRIENDS, RELIGIOUS SOCIETY OF), were composed of a majority of white members. While these predominantly white institutions might oppose slavery, organize schools for blacks, and even accept that blacks and whites were equal before God, they could do little to overcome the increasingly entrenched mores and laws that relegated blacks to the status of second-class beings.

ABOLITIONISM, the struggle to end slavery, would become the most institutionalized of the early attempts to recognize the dignity and equality of blacks. The abolitionist movement was a precursor of the Civil Rights movement in form, in its level of integration, and also in its internal conflicts and disagreements. Bursting on the scene with the first issue of William Lloyd Garrison's *The Liberator*, the abolitionist movement had been long in coming. Preceded by the so-called Negro conventions organized by Bishop RICHARD ALLEN of the A.M.E. Church and black opposition to the American Colonization Society, formed to convince slaveholders to free their slaves and then return them to Africa, abolitionism brought blacks and whites into an integrated sociopolitical movement for the first time.

For many, this crusade was driven by a Perfectionist religiosity emerging from the SECOND GREAT AWAKENING and took the form of moral suasion, nonaccommodation to evil, and nonviolence. This was the route of Garrison, THEODORE DWIGHT WELD, ANGELINA AND SARAH GRIMKÉ, and, for a while, the black

abolitionists Frederick Douglass and Charles Lenox Remond. Some abolitionists favored the political approach. Still others, eventually including Douglas and Remond, favored ballots if possible and bullets if necessary.

Speeches, testimonies by fugitive slaves, escapes along the Underground Railroad, and aborted rebellions all attested to the struggle against slavery and to the refusal of African Americans to accept second-class citizenship. As the black abolitionist Samuel Cornish declared, "[B]rethren! You are COLORED AMERICANS. The Indians are RED AMERICANS, and the white people are WHITE AMERICANS, and *you are as good as they, and they are no better than you.*"

As abolitionist efforts waxed and waned, the country divided and moved closer to the conflict that would define the nation for nearly a century. If the CIVIL WAR decided the question of slavery, the period of Reconstruction attempted to settle the question of black political equality. The so-called Reconstruction amendments (see FOURTEENTH AMENDMENT) abolished slavery, defined citizenship, and forbade limitations on voting imposed solely because of color. But as Reconstruction faded due to political compromise, the promise of equality was replaced with the reality of white political and social domination known as Jim Crow (see SEGREGATION). This was enshrined in law by the Supreme Court's decision in *Plessy v. Ferguson*, which established the legal acceptability of separate but allegedly equal facilities for blacks and whites. In reality, it established an entire system of white domination and black subjection, white power and black degradation, a white world and a black one. It was this world that the Civil Rights movement challenged and changed.

The struggle for black civil rights in the 20th century is an incomplete struggle in two parts. The first part encompasses the work of men like W. E. B. DuBois, A. Philip Randolph, and Roy Wilkins, and organizations like the

National Association for the Advancement of Colored People (NAACP), Congress on Racial Equality, and the Fellowship of Reconciliation. The second part was the work of men like MARTIN LUTHER KING, JR., Bob Moses, RALPH ABERNATHY, and new organizations such as the SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE (SCLC) and STUDENT NONVIOLENT COORDINATING COMMITTEE.

The first half of the 20th century saw increasing institutionalization of segregation. Laws were written to meet new conditions as well as older situations that had not been covered. This included enforced segregation in airport waiting rooms, for example, as well as laws such as the one passed by the Birmingham, Alabama, city council forbidding whites and blacks to play checkers together or in the presence of each other.

Simultaneously, the institutionalized political and social inequality of blacks was under growing attack. At the turn of the 20th century, the leadership of black America was firmly in the hands of BOOKER T. WASHINGTON, an accommodationist who was the most powerful black leader America had ever seen. Republican administrations made no appointments of blacks and few, if any, whites in the South, without his approval. But Washington was challenged by newer and younger black leaders who rejected Washington's accommodationism. These men organized the NAACP in 1909 and used its journal, *The Crisis*, as their voice. Edited by W. E. B. DuBois, *The Crisis* articulated the need for a concerted attack on legal segregation and the training of a black elite (the "talented 10th") who could lead the black masses to social equality.

Under the direction of Walter White, who served the organization from 1918 until 1955 and who was so light-skinned that he traveled through the South by passing as a white man, the NAACP documented the number and gruesomeness of lynchings. Blacks' increasing political strength was illustrated by the ability of the African-American community

to prevent Senate approval of Judge William Parker to the Supreme Court due to his support for laws that restricted black suffrage. Under White and his successor, Roy Wilkins, the NAACP became the organizational center for black opposition to segregation. The NAACP remained, however, an elite organization centering its work on legal and political remedies.

More in touch with working-class blacks was A. Philip Randolph, longtime president of the Brotherhood of Sleeping Car Porters. Randolph had a long and distinguished career. He fought with W. E. B. DuBois over the latter's suggestion that blacks should fight in World War I and with John Lewis, chairman of SNCC, over his speech at the 1963 March on Washington. Randolph was a working man, and his concerns always extended beyond race to include issues of economic justice. Not only Randolph but leaders within the Pullman Porters Union like E. D. Nixon in Montgomery, Alabama, would provide much of the local work for civil rights prior to the 1950s.

The 1940s and 1950s saw growing successes by both of these organizations in the area of civil rights. Franklin D. Roosevelt showed a greater interest in black concerns than any president since Theodore Roosevelt and had his own black "kitchen cabinet." His wife, Eleanor, had an even more active concern with civil rights issues, serving on the executive committee of the NAACP.

Black activists themselves also achieved marked success in this period. Randolph's threat to march against Washington in 1943 forced Roosevelt to issue an executive order integrating all war industries. During this period as well, the NAACP's legal challenges began to bear fruit, as its lawyers won a series of cases striking down "whites-only" primaries and segregation in higher education. This work culminated in 1954 with the Supreme Court decision in *Brown v. Board of Education of Topeka, Kansas*, declaring public school segregation illegal.

To have the courts overturn legal segregation was not the same as ending it in fact. During the next two decades, the Civil Rights movement tried to achieve in practice what law and the courts had said were rights. This struggle would be long, savage, and bloody. Also, more than any period since the abolitionist movement, it would be rooted in religion.

During this time, the drive for civil rights became a mass movement, due primarily to the work of Martin Luther King, Jr. When he and others formed the Montgomery Improvement Association in 1955 to end unfair treatment on city buses, the movement was born. Preaching a message of justice and nonviolence, King and his colleagues, working through the SCLC, slowly began to peel away the layers of racism and economic exploitation under which African Americans labored. The struggle was difficult but included dramatic successes in places like Birmingham and Selma, Alabama, where the viciousness of the attacks upon peaceful demonstrators galvanized public opinion, ultimately helping to end legalized segregation and paving the way for the Voting Rights Act of 1965.

The SCLC was a churchly organization, drawing its strength from the power of the African-American religious tradition. Rooted in the call for justice announced by the prophets in the Hebrew Bible, symbolized in the Exodus story of Moses leading the Israelites from slavery in Egypt to freedom in Canaan, and organized around Jesus' Sermon on the Mount, the SCLC spoke eloquently to the African-American situation and powerfully of their claims for justice.

King, Ralph Abernathy, and the SCLC taught that only through nonviolence could blacks win their rights. For them, nonviolence was more than a tactic, it was the strategic use of divine love and power. For King and his colleagues, nonviolence embodied the Gospel by effecting both CONVERSION and forgiveness. While this message dominated

the movement during the early 1960s, others began to question both nonviolence and white involvement.

Some of this opposition came from expected critics, primarily MALCOLM X. Other critics of nonviolence included Roy Wilkins of the NAACP, who urged that blacks should be willing to shoot back in self-defense. More surprising was the change in the attitude of SNCC. Organized as a younger, more active, and less clergy-driven counterpart to the SCLC, SNCC achieved its greatest visibility in 1964 with the creation of the Mississippi Freedom Summer and the formation of the Mississippi Freedom Democratic Party, which tried to unseat the regular (all-white) Democratic Party at the 1964 presidential convention. Freedom Summer brought students (primarily white northerners) into Mississippi to teach black children, participate in organizing, and fight segregation. One of the most shocking results of this endeavor was the brutal murder of James Chaney, Andrew Goodman, and Michael Schwerner in May 1964. This killing, accomplished with the participation of the local police, went far to radicalize SNCC.

King's assassination on April 4, 1968, with the resulting riots and violence, also weakened the appeal of nonviolence. There were increasing calls for aggressive response to racism and injustice. These voices included the Black Panthers advocating armed rebellion on one hand and the Conference of Black Churchmen demanding reparations on the other. As nonviolence gave way to Black Power, "We shall overcome" became "Burn, baby, burn." The refusal of entrenched white power structures to change and the violence with which they defended their bastions led to an increasing militancy among blacks. This militancy led to numerous violent confrontations with police and increasing violence in America's cities.

Richard Nixon's election as president in November 1968 did little to ease the calls for increasing militancy. The Republican admin-

istration's apparent lack of concern for African Americans, the Vietnam War, and increasing social conflict diverted attention from civil rights. Although this revived somewhat during the presidency of Jimmy Carter, President Ronald Reagan's administration was particularly hostile to advances on the civil rights front.

Equally significant was the fact that after the ending of legal segregation and the guaranteeing of voting rights, the more complex and tedious issues of economic justice were less amenable to traditional mass protests and legal challenges. Declining economic fortunes also led increasingly to situations where economic justice for blacks was seen as an economic threat by poorer whites, thus exacerbating racial tensions and animosities.

By the 1980s and 1990s, questions surrounding race in the United States seemingly had become more complex and resistant to straightforward legal solutions. The scourge of drug abuse and the rise of what seemed to be a permanent underclass composed primarily of people of color made many individuals question traditional approaches to racial issues. Opinion polls showed that blacks and whites in the United States had widely divergent views on the continuing power of racism and its affects on individuals' daily lives. Some commentators even claimed that the civil rights leadership intentionally favored policies designed to keep blacks subservient to the government in order to further their own ends. While such opinions remained minority views, their emergence suggested the apparent intractability that certain aspects of race had taken on. Additionally, questions surrounding police brutality and racial disparity in the application of the death penalty continued to show the lingering vestiges of racial inequity in American society.

The period of the Civil Rights movement remains a symbol of America's struggle to realize its most deeply held values. It had a particular appeal because of its religious thrust,

its nonviolence, and its martyred leader. The religious dimension of King's vision and that of his colleagues stirred chords in the hearts of many Americans and helped to bring an end to racial divisions enforced by law.

Civil War (1861–1865) The Civil War, the bitter four-year struggle between the North and the South, proved as traumatic for American religion as it was for the nation as a whole. The Civil War era was profoundly shaped not only by competing political ideologies, but also by religious ideas expressed within the churches of both the Union and the Confederacy.

Several decades before the bloodshed began, debates over SLAVERY had caused the country's three largest denominations to divide on regional lines. The Presbyterians were the first to split, when in 1837 the southern-oriented "Old School" faction expelled the northern-oriented "New School" from its fellowship. Next, the northern section of the Methodist Episcopal Church adopted an antislavery position so offensive to southern

whites that a new Methodist denomination was formed in the South in 1845. Finally, a firm stand by northern Baptists against appointing slaveholders as missionaries led to the organization of the SOUTHERN BAPTIST CONVENTION in 1845.

When the election of ABRAHAM LINCOLN in November 1860 helped impel the southern states to secede from the Union, many conservative northern ministers urged caution by the government. Those with strong commitments to ABOLITIONISM even argued that the departure of the South might be beneficial, freeing the United States of the taint of slavery. But when war broke out in April 1861 and Union-held Fort Sumter surrendered to southern forces in Charleston, South Carolina, virtually all religious bodies of the North (with the exception of historic peace churches such as the Mennonites and the Church of the Brethren) blessed the Union war effort.

Millennialism (see POSTMILLENNIALISM) became a strong theme in northern preaching

Frederick Douglass, slave-born and self-taught, escaped slavery to become the most eloquent American advocate of abolitionism. (*Library of Congress*)

during the Civil War. The United States was envisioned as a political paragon that would aid in the reformation of world civilization and prepare the way for the entrance of God's kingdom on Earth. Most northern Christians complacently trusted that final victory over the Confederacy would be the judgment of a righteous God against the wickedness of the rebellious, slaveholding southern states. JULIA WARD HOWE expressed this idea most vividly in her "Battle Hymn of the Republic," portraying Union soldiers as actors in a cosmic struggle between God and the forces of evil.

The formation of the two great wartime philanthropic organizations (see PHILANTHROPY), the United States Christian Commission and the United States Sanitary Commission, epitomized the blending of practical and spiritual concerns that characterized northern religious efforts. The Christian Commission was the fullest institutional expression of 19th-century religious benevolence. Organized in November 1861 under the guidance of the New York YMCA, the commission was intended to help northern chaplains lead worship and distribute religious tracts. The conversion of Union soldiers was its initial aim. After the first year of the war, however, commission agents increasingly found themselves ministering in practical ways to the physical needs of the troops, acting as nurses on battlefields and in hospitals. George H. Stuart, a Philadelphia merchant and Presbyterian lay leader who was its president, once replied to critics who wished his commission to deal solely with soldiers' spiritual concerns, "there is a good deal of religion in a warm shirt and a good beefsteak."

The Sanitary Commission, the largest and most tightly organized American philanthropic body of its time, was formed in June 1861 under the direction of Henry Whitney Bellows, a prominent Unitarian minister in New York City. Bellows conceived its mission to be the dispatching of salaried inspectors to the Union armies to oversee general medi-

cal care during the war. Although less forthrightly pious than the Christian Commission, the Sanitary Commission had prominent members of the more liberal denominations among its leadership, men and women who viewed their charitable labors as essentially religious in character. Novelist Louisa May Alcott, a Unitarian, for example, sewed shirts for the Sanitary Commission and wrote about the organization in her 1863 book, *Hospital Sketches*. And as “Mother” Mary Ann Bickerdyke, an agent who labored tirelessly with wounded soldiers, said to an army surgeon who inquired about her nursing qualifications, “I have received my authority from the Lord God Almighty!”

The Sanitary Commission eventually won the cooperation of the War Department and the army’s Medical Bureau and was able to become involved in all aspects of aid to the troops. The Christian Commission was even more popular. It evolved into a vast interdenominational fellowship, supporting a hierarchical structure that reached to more than 5,000 volunteers stationed throughout the Union armies. It also raised and distributed more than \$6 million in money and supplies over the course of the war. Both the Sanitary Commission and the Christian Commission accomplished their wartime goals and disbanded when the conflict ended.

Clergy and lay people in the South, no less than their Northern counterparts, were almost unanimously convinced that their national cause was holy and just. The new Confederacy, they said, had a special mission to maintain biblical values and the ideals of ordered liberty, which the North had perverted in the prewar period. Clergy also saw proof of their national righteousness in the constitution of the Confederacy for, unlike the United States Constitution, the Southern document explicitly recognized a national dependence on God. White Southern Christians, too, had their own millennialist interpretation of the struggle: Slavery symbolized

the divinely ordained pattern for the relationships of capital to labor and of a superior to an inferior race. As Stephen Elliott, the Episcopal bishop of Georgia, declared, “We do not place our cause upon its highest level until we grasp the idea that God has made us the guardians and champions of a people whom he is preparing for his own purposes.”

Clergy actively supported the war by serving both as military chaplains (approximately 2,300 in the Union army and roughly a third that number in the Confederate army) and—in a few notable cases—as soldiers. Holding worship services was the only duty specifically assigned to chaplains, but ministers performed many other useful tasks: teaching men how to read and write, delivering mail and writing letters home for wounded and dead soldiers, distributing Bibles and religious tracts, and serving as nurses during battles.

For some clergy, especially those of the depleted Southern armies, the temptation to pick up a rifle and fight, or to serve as a line or staff officer, was strong. Leonidas Polk, for example, was the Episcopal bishop of Louisiana, but having been trained at West Point before entering seminary, he accepted a general’s rank in the Confederate Army. William Nelson Pendleton, an Episcopal clergyman in Lexington, Virginia, also had been educated for military service. He commanded the artillery forces of the Army of Northern Virginia in the war and was said to have prayed for the souls of his opponents before opening fire on them in battle.

Major religious revivals broke out in the armies over the course of the war. Among the Northern troops, between 100,000 and 200,000 soldiers were said to have converted to Christianity, while at least 100,000 were similarly converted in the smaller Southern forces—approximately 10 percent of all the men engaged in the Civil War. Soldiers viewed the army revivals as intensely spiritual experiences in which, amid the dangers and often random violence of the battlefield, they were

able to feel God's providence guarding and guiding them. One Virginia soldier wrote in his wartime diary: "Oh Lord, if we should go into battle, be thou our shield & hiding place." And as an African-American soldier in the Union Army was heard to pray, "Let me live with the musket in one hand and the Bible in the other,—that . . . I may know I have the blessed Jesus in my hand, and have no fear."

The revivals among the Civil War soldiers had a particularly lasting effect on Christianity in the South, where after 1865 little seemed to be left *except* religion. Two former Confederate chaplains wrote books detailing the religious life of the Southern forces. In 1877, William W. Bennet, a minister who had headed the Methodist Soldiers' Tract Association, published *A Narrative of the Great Revival Which Prevailed in the Southern Armies*. Bennett believed the Confederate Army camp had been "a school of Christ," in which pious generals like Robert E. Lee and Stonewall Jackson led their men both in battles and in prayer meetings. Religion had become the "'silver lining' to the dark and heavy cloud" of the South's defeat. Popular Baptist minister J. WILLIAM JONES described his own experiences and those of other chaplains in Lee's army in a book entitled *Christ in the Camp* (1887). He thought that the soldiers converted during the war had been able to look beyond their misfortunes and set to work rebuilding Southern society after the Confederacy's crushing defeat.

Protestants in both sections hoped that the Civil War would be what they termed a "baptism of blood" for Americans, reconsecrating them for a high and holy mission. HORACE BUSHNELL, a Congregational minister in Hartford, Connecticut, explored this theme in sermons and addresses throughout the war. Only by the path of suffering could the United States be purged of its sinfulness and attain a more perfect national identity, Bushnell preached. Abraham Lincoln's death symbolized for Northern clergy a final ritu-

alized meaning of the war. His assassination on Good Friday in 1865, like Jesus' sacrifice at Calvary, redeemed a people from their sins and brought them new life.

White Southerners, on the other hand, fashioned an interpretation of the war that transformed military loss into a glorious spiritual triumph, also akin to the crucifixion of Jesus Christ. Through the formulation of what came to be known as the myth of the Lost Cause (see LOST CAUSE MYTH), Southern whites spoke of the moral benefits they gained from adversity. While temporal prosperity made a people arrogant and seduced them into thinking they did not need God (witness the North in the Gilded Age, southern clergy argued), the hardships endured by the South taught forbearance and genuine Christian humility.

In the haze of nostalgic romanticism and myth making that shrouded the nation in the last few years of the 19th century, the fallen Confederacy soon became—in the eyes of whites in North and South alike—a paragon of moral virtue. Victor and vanquished clasped hands of friendship over the bloody chasm of war and tacitly agreed to ignore the material needs and political rights of the newly emancipated slaves. As a result, the deeper ethical issue of slavery that once had divided American Christians was forgotten by all but African Americans and a few conscientious whites. The lynching of black men reached epidemic proportions throughout the South, and discriminatory Jim Crow laws were created to keep African Americans socially subservient. The moral rebirth many Christians had hoped the Civil War would bring never materialized. Not until the CIVIL RIGHTS MOVEMENT of the 1950s and 1960s were the larger moral concerns first raised during the Civil War era finally addressed by American society.

Clarke, James Freeman (1810–1888)

James Freeman Clarke was a mid-19th century Unitarian minister and transcendentalist (see TRANSCENDENTALISM). He is credited with providing the classic summary of Unitarian beliefs: “The fatherhood of God, the brotherhood of man, the leadership of Jesus, salvation by character, and the progress of mankind onward and upward forever.”

Clarke was born at Hanover, New Hampshire, on April 4, 1810. Stepson of James Freeman, who had led King’s Chapel, Boston, into Unitarianism in 1785–87, Clarke thoroughly imbibed optimistic religious rationalism as a youth. He graduated from Harvard College in 1829 and from Harvard Divinity School in 1833, then went west to serve in a new Unitarian congregation in Louisville, Kentucky, from 1833 to 1840. During that period, Clarke also edited a monthly religious magazine, the *Western Messenger* (1836–39) and became involved in the growing antislavery movement. He returned to New England and in 1841 organized the Church of the Disciples in Boston. Clarke’s greatest work was *Ten Great Religions*, a two-volume examination of the world’s religions that appeared in 1871 and in 1883. These books exemplified the fascination with Asian thought that surfaced in American religion during the 19th century.

Like fellow Unitarian minister Frederic Henry Hedge, Clarke represented the moderate, churchly side of the transcendentalist movement. Although many transcendentalists were openly hostile to organized Christianity, Clarke was an irenic advocate of liberal

religion who sought to keep Unitarianism a Christian denomination. He was a reformer who envisioned a “Church of the Future” that would combine all the best elements of the many branches of the Christian tradition. After 1867, he served as an adjunct member of the faculty at Harvard Divinity School, and as both a teacher and minister he had a profound impact on the shape of Unitarianism in his day. Trusted by both radicals and conservatives, he was also an important figure in the formation of the National Conference of Unitarian Churches, which in 1865 established a denominational bureaucracy and a regular assembly to set church policy.

With the exception of a period of convalescence and travel between 1850 and 1854, Clarke served at the Church of the Disciples from 1841 until his death more than four decades later. He died in Boston on June 8, 1888.

Bibliography: Arthur S. Bolster, *James Freeman Clarke, Disciple to Advancing Truth* (Boston: Beacon Press, 1954).

Clarke, William Newton (1841–1912) A Baptist minister and one of the leading systematizers of theological MODERNISM in his day, William Newton Clarke believed that religious experience, not religious belief, was the essence of faith. The textbook he published in 1898 (*An Outline of Christian Theology*) became the essential handbook of late-19th-century liberal Protestant ideas.

Clarke was born in Cazenovia, New York, on December 2, 1841. After graduation from Madison College and from Hamilton Seminary (both now Colgate) in 1861 and 1863, respectively, Clarke worked in short-lived pastorates at churches in New Hampshire, Massachusetts, Canada, and New York. He was professor of New Testament at Toronto Baptist College from 1883 to 1887. In 1891, he came to Colgate Seminary as professor of theology and remained there until his death.

Christian theology, Clarke consistently taught, should not view the Bible as a book filled with irrefutable facts or as a proof-text for doctrinal statements, the position on which conservative biblical interpretation was based. The Scriptures were the inspiration for theological inquiry rather than the objects of that study. Clarke's thinking followed the arguments German theologian Friedrich Schleiermacher had advanced in the 1820s concerning "the religious sentiment." Since the quest for the divine that both Clarke and Schleiermacher celebrated was a universal human attribute, every religion was assumed to contain some measure of truth. Although Clarke was unwilling to abandon the missionary enterprise entirely or repudiate traditional claims about the uniqueness and superiority of Christianity, a simpler, more realistic, and scientific faith (he argued in *A Study of Christian Missions* in 1900) needed to be carried to foreign lands.

Clarke resigned his professorship at Colgate in 1908 but continued to lecture on Christian ethics. Failing health led him to spend winters in Deland, Florida, where he died on January 12, 1912.

Coffin, William Sloan, Jr. (1924–2006)

William Sloane Coffin, Jr., was born in New York City on June 1, 1924, into a life of wealth and privilege. By the late 1950s, he would become one of the country's leading political activists and clergymen, playing a notable role in the CIVIL RIGHTS MOVEMENT and in opposition to the VIETNAM WAR. He also would become one of the sources for the Rev. Scott Sloan, "the fighting young priest who can

talk to the kids," one of the characters in the *Doonesbury* comic strip by Gary Trudeau.

Coffin's grandfather was a co-owner of the W. and J. Sloane Company, which sold furniture and rugs to the city's elite and played a major role in setting America's decorating tastes for decades. His uncle Henry Coffin served as president of Union Theological Seminary; his father, William Sloane Coffin, Sr., was a wealthy real estate developer active in community affairs, including serving as president of the Metropolitan Museum of Art.

The Great Depression took a toll on the Coffins' wealth, as William, Sr., and his brother refused to evict tenants who could not pay their rents, and the stock market collapse cut deeply into the Sloane Company's earnings. The greatest blow, however, was the death of William, Sr., in 1933. In an attempt to ease the family's finances, Coffin's mother, Catherine, moved the family to Carmel, California. There Coffin and his siblings attended public schools for the first time, and the young boy apparently had his first real introduction to economic and social inequality and injustice.

Aided financially by their uncle Henry, the Coffins had a much easier time of it than most individuals during the depression, and, in 1938, Coffin entered Deerfield Academy in Deerfield, Massachusetts, to pursue his planned career as a concert pianist. The following year, Coffin and his mother moved to Paris, where he continued his piano studies, receiving individual lessons from some of the most important pianists of the 20th century.

With the outbreak of World War II, Coffin and his mother moved to Geneva, Switzerland, eventually returning to the United States in 1941. Coffin finished high school at Phillips Academy in Andover, Massachusetts. He then entered Yale University, where he initially majored in music.

America's entry into the war drove the young man to attempt to join the Office of Strategic Services (the predecessor to the

CIA), but the recruiters felt that he did not look French enough to be a successful spy and turned him down. Instead, he left college and enlisted in the army, where he soon was moved to officer training. Coffin joined military intelligence. As a liaison officer to the French and the Russian armies, Coffin learned firsthand about Stalinism and political violence in the Soviet Union. After the war, his role in forcibly repatriating Soviet citizens previously held prisoners by the Germans affected him deeply. The disappearance of those individuals into Stalin's prison camps (or worse) left Coffin with, as he wrote in his 1977 memoir, *Once to Every Man*, "a burden of guilt I am sure to carry the rest of my life." This experience also would have a major affect on his early life and career choices.

After World War II, Coffin returned to Yale, where he befriended George H. W. Bush, who later would become the 41st president of the United States. He was president of the Yale Glee Club and inducted into Skull and Bones, the most elite secret society at Yale. Graduating in 1949 with a degree in government, Coffin attended an event that played a major role in his life. At the urging of his uncle Henry Coffin, he attended one of Union Theological Seminary's conferences. There, for the first time, he heard REINHOLD NIEBUHR speak. Niebuhr's fusion of religious language and faith with deep political insight affected Coffin deeply, and he decided on a career in the ministry.

The next year, he entered Yale Divinity School but shortly afterward took a leave of absence when, at the urging of his brother-in-law Franklin A. Lindsay, he joined the Central Intelligence Agency. For three years Coffin served as a CIA officer, overseeing Russian agents who were infiltrated back into the Soviet Union. Nearly all these individuals were captured or killed, a fact that left Coffin with a deep sense of the limitations of American power and the magnitude of its naiveté. He also began to develop serious reservations

about some CIA actions, including the overthrow of the government in Iran.

Coffin left the CIA in 1953 and returned to Yale Divinity School. He graduated in 1956 and accepted the position of chaplain at Phillips Academy. In that year, he also married his first wife, Eva Anna Rubenstein, the daughter of the pianist Arthur Rubenstein.

In 1957, he became chaplain at Williams College, and in 1958, Coffin returned to Yale as dean of its chapel. During this time, as the Civil Rights movement gained increasing momentum, Coffin began to undertake the social and political activism for which he would become well known.

Rather than simply preach against racism and segregation, Coffin undertook to join the nonviolent protests. These activities would lead to several arrests. The first was in 1961 in Montgomery, Alabama, when he was part of the Freedom Riders trying to integrate interstate transportation. Other civil rights-related arrests included one in Baltimore, Maryland, in 1963, while protesting segregation at an amusement park and a 1964 arrest in St. Augustine, Florida, for attempting to integrate a lunch counter. While some at Yale looked askance at these arrests, Coffin proclaimed that he was only setting a moral example as a minister should.

If Coffin's commitment to integration made him something of a hero at Yale, his increasingly outspoken opposition to the Vietnam War made him a much more controversial figure. Coffin, who had joined with several others in 1965 to form Clergy and Laity Concerned About the War in Vietnam and to advocate a change in American policy, became increasingly convinced that the only way to end the war was through civil disobedience. His first act was to offer the chapel at Yale as a sanctuary for young men seeking to avoid the draft. His second undertaking, and the one that generated the most difficult time for him, was when he, Dr. Benjamin Spock (the nation's leading expert on childrearing), and

several others collected draft cards and draft notices. In October 1967, they then returned these documents to the Justice Department. Nothing happened until January 1968, when Coffin, Spock, and three other individuals were indicted on charges of conspiring to counsel draft evasion. The trial was a cause celebre, and although the three were convicted at trial, the convictions were overturned on appeal, primarily due to errors on the part of the trial judge.

Coffin left Yale in 1976, desiring to focus on world hunger and to write his memoir. In 1978, he left this semiretirement to take the position of senior pastor at Riverside Church in New York City, which had been built by John D. Rockefeller for another liberal pastor, HARRY EMERSON FOSDICK.

During his time at Riverside Church, Coffin remained politically active, leading international movements against nuclear weapons and local programs focusing on racism, unemployment, and homelessness. In 1987, he left Riverside Church to spend his time as president of SANE/FREEZE, whose goal was complete nuclear disarmament. He felt that the threat of nuclear destruction was the greatest challenge facing humanity, and he continued in that position up until 1993, when he retired.

Coffin lived the remaining years of his life at his home in Stratford, Vermont, with his third wife, Virginia Randolph Wilson. (His first marriage ended in divorce in 1968, and his second, to Harriet Gibney in 1969, ended in divorce in 1976.) Although slowed by congestive heart disease and several strokes, he continued his political and social advocacy, including speaking out against the war in Iraq and supporting gay rights, up until his death on April 12, 2006.

Coke, Thomas (1747–1814) Thomas Coke was an English Methodist minister and one of the first two superintendents of the Methodist Episcopal Church in the United States. Always desirous of extending Methodism's evangelistic outreach, Coke spent most of his career fostering the growth of his denomination not only in America, but also throughout the world.

Coke was born in Brecon, Wales, on October 9, 1747. Educated at Jesus College, Oxford, from which he received a doctorate in civil law in 1775, he was ordained to the Anglican ministry and held a parish position between 1771 and 1777. He was ejected from his parish in 1777 because of his enthusiastic preaching and activities on behalf of the Methodist movement then emerging within the Church of England. Coke's religious fervor, however, won the attention of Methodist founder John Wesley (see *WESLEYAN TRADITION*), and he soon became his trusted associate. He served for six years as a minister in London. In 1784, Wesley chose Coke to undertake work in the newly independent United States, and he appointed him as a superintendent, a title later changed to bishop, with authority over the American church.

Coke traveled to the United States on nine occasions between 1784 and 1803. After arriving in America for the first time, he joined with Francis Asbury and other Methodist leaders in the critical "Christmas Conference," held in Baltimore in December 1784, at which the new Methodist Episcopal Church was organized. Although Coke had Wesley's authority to ordain Asbury as his joint superintendent without further consultation, he acquiesced to the democratic inclinations of the Americans who wished to elect Coke and Asbury themselves. Following that election, Coke and two other English Methodist clergymen ordained Asbury to the ministry.

Coke attempted to maintain cordial relations with Asbury and other Methodists in the United States, despite increasingly suc-

cessful American efforts to escape from English supervision. Like Wesley, who referred to human slavery as “the sum of all villainies,” Coke opposed slaveholding and threatened to exclude those who owned slaves from the church. While American Methodists gradually modified their original antislavery stance, Coke himself refused to compromise. By the early 19th century, Coke’s conflict with church members under his charge reached a point of crisis over a number of issues. Although he remained nominally an American bishop for the remainder of his life, he gave up virtually all his institutional responsibilities in the United States after 1808.

Filled with a zeal for foreign missions, Coke continued to direct his energies into building up churches in England’s overseas colonies. En route to Ceylon during a missionary journey, he died at sea on May 3, 1814.

cold war Following the conclusion of WORLD WAR II in August 1945, tensions between two former allies, the United States and the Soviet Union, grew quickly as their leaders grappled with a new postwar international order in which they had clearly emerged as the two leading powers. The term *cold war* refers to the long period of struggle between the two countries for dominance in world politics, beginning with the Soviet Union’s occupation of much of Eastern Europe after World War II and ending with the collapse of COMMUNISM in Eastern Europe between 1989 (the fall of the Berlin Wall) and 1991 (the end of the Soviet Union).

Although never engaging in a “shooting war,” the United States and the Soviet Union each developed massive military capabilities, pursued armed conflict through networks of client states, and sought to direct the course of global development through foreign aid, pro-

paganda, and covert operations. Such a commitment of energy and resources required the nearly perpetual mobilization of their own populations. In America, this mobilization took the form of a religious crusade, supported initially by most religious organizations and the majority of the population. Over time, however, the nearly mythical vision of American identity worked out at the beginning of the nuclear age came under increased scrutiny by Americans of many religious and intellectual perspectives. As a consequence, while America exercised great global influence and developed the world’s largest economy during the cold war, the nation was also beset by social and cultural crises that at times threatened America’s self-identity as “God’s Country.”

While the cold war was about many things—economics, spheres of influence, and the uses of power—its participants framed it primarily as a conflict over ideas of national identity and purpose. For Americans, those ideas had developed over the course of time into a CIVIL RELIGION. Americans were already used to seeing their own country as the embodiment of divine will and their enemies as demonic. But in contrast to earlier wars (see AMERICAN REVOLUTION; CIVIL WAR; WORLD WAR I), in which the tide of patriotic fervor rose and fell within a period of time limited by the conduct of actual war, the cold war seemed to many a struggle that would continue indefinitely, creating a problem of sustaining long-term support for militarization among a people who historically saw little benefit in standing armies.

The cold war began in the failure of the Allies at Yalta to agree on the organization of postwar Europe. Its tenor, however, emerged in the shock waves of the atomic bombs dropped on the Japanese cities of Hiroshima and Nagasaki, August 6 and 8, 1945. To many Americans, “the Bomb” marked not only the ending of World War II, but also a transition into a completely new period in history, and perhaps the end of history as well. Thus, the

bomb became a potent symbol of the risks and responsibilities facing Americans during the ensuing economic, territorial, and ideological struggle with the Soviet Union. President Harry S. Truman, in his August 10th announcement of his decision to bomb Hiroshima and Nagasaki, said “we thank God it has come to us instead of to our enemies, and we pray that He may guide us to use it in His ways and for His purposes.” Truman combined the traditional civil religious idea of America as a redeemer nation, carrying out God’s will, with the new idea that nuclear technology was itself a divine gift.

While a number of Americans, including Protestant REINHOLD NIEBUHR and Catholic Paul Furfey, questioned the morality of the bombings, most were content to view them in the terms set by Truman, and “the Bomb” rapidly became a symbol of American power and national identity. During the decade from 1945 to 1955, images of the bomb’s cloud appeared everywhere, as a marketing device and in popular music, literature, science fiction films, sermons, and theological works. The equation of technological achievements with divine providence gave Americans the symbolic substance to sustain their advance into an uncertain postwar future.

But at the same time as the new technology provided a positive symbol, its horror was inescapable, and Americans frequently vacillated between hope and fear. When the Soviet Union detonated its own atomic bomb in 1949 and a hydrogen bomb in 1954, widespread confidence in America’s divine mission slackened, as it became clear to many that the mission might entail the potential end of civilization.

To some religious leaders, such a catastrophe called for caution, and commissions conducted by the NATIONAL COUNCIL OF CHURCHES and the WORLD COUNCIL OF CHURCHES urged American leaders to restrain their growing tendency to see themselves locked in an eternal struggle with the demonic Soviet Union.

Catholics, with large groups of immigrants from Eastern Europe, did tend to support the growing ideology of anticommunism, but even JOHN COURTNEY MURRAY argued that the conflict should be fought with ideas, not nuclear arsenals. Among Jews, initial pride over the prominence of Jews among the scientists who developed atomic weapons and hopes that general recognition of their achievement would help erase ANTI-SEMITISM largely eroded by 1946. National organizations such as the Synagogue Council of America and the CENTRAL CONFERENCE OF AMERICAN RABBIS supported never-implemented plans to subject nuclear weapons to international control, thus echoing the growing critical concern among the nuclear scientists themselves. By contrast, Protestant premillennialists (see PREMILLENNIALISM) often spoke of the bomb as the culmination of biblical prophecy concerning the end of the world and for the next few decades produced an enormous popular literature correlating prophecy and cold war developments.

During the 1950s, anticommunism affected domestic American life in a number of ways. American Catholics were confirmed in their opposition to communism by the Soviet Union’s treatment of Eastern European Catholics, and while Catholics tended to avoid social activism during the decade, Catholic students organized large rallies in support of persecuted Czech and Hungarian Catholics. FULTON SHEEN and other leaders campaigned actively against communist expansion and domestic influence. Wisconsin’s Senator Joseph McCarthy, who organized growing fears into a purge of communist influence in the federal government, received widespread, though not uniform, support from fellow Catholics.

The stridency of cold war anticommunism issued from a remarkable American consensus contrasting with the social turmoil of preceding decades. Postwar abundance, shared by a growing middle class of mostly white Ameri-

In 1954, Congress approved the slogan "In God We Trust" for use on American currency. (Getty)

cans, suggested America really was favored by God, as Puritan forebears had thought (see PURITANISM). Vice president Richard Nixon argued with Soviet premier Nikita Khrushchev in their famous "Kitchen Debate" about the merits of American household appliances at a trade show in 1959. Under these conditions of affluence, and for the first time in American history, the major faiths achieved a harmony of purpose, leading Jewish sociologist Will Herberg to speak in his popular *Protestant-Catholic-Jew* (1955) of an "American Way of Life" cherished by all.

At times playing upon and at times ignoring the "doomsday" political climate, embodied most clearly in the Soviet construction of the Berlin Wall in 1961 and the Cuban missile crisis of 1962, during which nuclear war seemed imminent, religion was everywhere. Religious groups grew at remarkable rates during the 1950s, church membership climbing from 86.8 million to 114 million between 1950 and 1960 as Americans moved

to suburbs and took on the largest campaign of church-building in American history. *Time* magazine proclaimed BILLY GRAHAM the best-known religious leader in the world, apart from the pope. Books by Trappist monk THOMAS MERTON sold widely. Hollywood produced *The Ten Commandments* and other enormously popular Bible spectacles. Radios played "Big Fellow in the Sky." Americans thought positively (see POSITIVE THINKING), extending Norman Vincent Peale's own program by purchasing titles such as *Pray Your Weight Away* and *The Power of Prayer on Plants*. In 1956, Congress officially approved the slogan "In God We Trust" for American paper currency and inserted "under God" after "one nation" in the Pledge of Allegiance. The prevalent assumption that religion and America went hand in hand appeared in a remark frequently attributed to President Eisenhower: "Our government makes no sense unless it is founded in a deeply felt religious faith—and I don't care what it is."

The consensus established during the cold war's first decade dissolved gradually during the late 1950s, as racial tensions increased and various intellectuals, "Beats," and young people came to regard the consensus as stifling (see BEAT MOVEMENT; COUNTERCULTURE). By the mid-1960s, racial tensions and the United States entry in the VIETNAM WAR unleashed a torrent of protests and riots (see CIVIL RIGHTS MOVEMENT).

In response to these crises, new cultural divisions appeared, no longer along denominational lines, but across the older religious divides of Catholic, Jewish, Protestant, and secular. Likewise, new interfaith alliances appeared; the relevant religious dividing lines became those between liberals and conservatives, traditionalists and modernists of all faiths. At the same time, a wide variety of racial and ethnic groups asserted their cultural independence (see ETHNICITY; PLURALISM). In the wake of Vietnam, religion grew increasingly political, as liberals and conservatives fought over whose vision was sufficient to guide the country out of national turmoil and perceived decline.

The collapse of the Soviet Union in 1991 and the end of communism internationally, with the exceptions of Cuba, North Korea, Laos, and (to a lesser extent) China, raised important questions about the future of the world. Were we finally seeing a Hegelian end of history in which liberal democracy, while not necessarily emerging painlessly victorious, would be the only coherent system and option for social organization? Or was the world entering some chaotic period marked by growing numbers of small-scale conflicts as the order and stability provided by the cold war ended and economic, environmental, and ideological instability emerged. The following decade showed examples of both possibilities. While many parts of Africa, the former Yugoslavia, and the Caucasus descended into violence and chaos, the Baltics, Mongolia, South Korea, and Taiwan moved toward greater democracy and stability.

The collapse of communism also meant a shift from state-sponsored atheism. Religion began to return throughout the former communist world. Americans played a major role in this revitalization and pluralizing of religious life. Protestant missionaries brought a new tradition to many of these countries, Jewish emissaries strove to revitalize an oppressed and diminished tradition, and new religious movements such as Hare Krishna (see INTERNATIONAL SOCIETY FOR KRISHNA CONSCIOUSNESS) and NEOPAGANISM also began to make inroads in those countries, often due to leadership by Americans and in the face of resistance by political leaders and the predominant religious traditions, whether Orthodox, Muslim, Catholic, or Buddhist.

While many continued to agonize over the divisions in America and the seemingly increased level of political polarization, the fact that for 45 years the United States held off a major political and military threat without engaging it in a major military conflict and emerged as the world's sole superpower suggests a strong sense of internal cohesion at some basic level. To do this while simultaneously integrating a significant number of religious and ethnic minorities reflects the integrative power of the American system, particularly its ability to make room for a wide array of religious traditions.

colonial period The colonial period of American history constituted one of the most

innovative in terms of religious development and organization. This outcome is surprising considering that all the European powers that colonized what is now the United States desired to recreate their religious establishments in this land.

Both the French and Spanish colonies established Roman Catholicism as the state church, and the Spanish colonies implemented the Inquisition as a means of guaranteeing religious conformity (see *NEW FRANCE*; *NEW SPAIN*). Even the small and short-lived colonial possessions of Sweden and the Netherlands (see *NEW NETHERLAND*) attempted to ensure that the Church of Sweden (Lutheran) and the Dutch Reformed Church would be established in the colonies. Similarly, in the British colonies, such as *VIRGINIA* and *MASSACHUSETTS BAY*, religion was established by law, and religious uniformity was the goal.

In British North America, however, this goal was thwarted by many different realities. The first was the fact that many English colonies were established by groups seeking to escape the religious persecution they experienced at home and in America. Colonies such as Rhode Island, *PENNSYLVANIA*, and *MARYLAND* allowed for a diversity of religious views and practices unknown back in England. Pennsylvania actually encouraged diverse religious groups to settle there and drew many small sects that eventually would be wiped out in Europe.

Even a colony like Massachusetts Bay helped make British North America a religiously plural society. Although the Puritans' (see *PURITANISM*) opposition to bishops was at odds with the ideal of the British monarchs, the Puritans believed they were establishing the Church of England, albeit in a more perfect form. This led to conflict with those Puritans, the Separatists, who favored a complete break with the established church. Most notable among these opponents was *ROGER WILLIAMS*, whose clashes with the colonial authorities in Massachusetts led him to establish Rhode Island on the basis of religious tolerance.

Similarly, persecution of Quakers (see *FRIENDS, RELIGIOUS SOCIETY OF [QUAKERS]*) both in England and in North America led to the formation of Pennsylvania, primarily as a refuge for that group, but with religious toleration as one of its guiding principles. Its founder, *WILLIAM PENN*, actually encouraged numerous small sects to come to the colony, which soon became a haven for all religious groups, including Roman Catholics.

Like Pennsylvania, Maryland was originally designed as a refuge for another religious group persecuted in England, Roman Catholics. The colony's proprietors, the Calvert family (see *CALVERT, CECILIUS*), recognized that the existence of the colony as a refuge was dependent upon a policy of religious tolerance for all Christians and instituted such a policy at the colony's founding. This was extended by the colonial legislature with the passage of its "Act Concerning Religion" in 1649 (see *TOLERATION, ACT OF [MARYLAND]*). The act had a fitful existence, however, as the colony's Protestant majority overthrew the proprietary government and outlawed public religious services by Catholics. Restored in 1657, the act was finally abrogated in 1689 when, following the English overthrow of the Catholic king, James II, Protestants took permanent control of the colony's government.

The other source of opposition to the Puritan model were those who desired to see the establishment in North America of the Church of England in all its forms. Although the Puritan colonies, including those with both Congregational and Presbyterian leanings (see *CONGREGATIONALISM*; *PRESBYTERIANISM*), were capable of preventing such inroads until the formation of the Union of New England in 1686 placed them under royal control, other colonies were established with the intention of making the Church of England, as it truly existed in England, the established church.

Virginia and South Carolina were perhaps the most successful at this, with Georgia and North Carolina slightly less so. In these

colonies, the organization of parishes with resident priests was the goal. There also was occasional talk of appointing a bishop for the colonies, although this came to naught. Despite the laws, the Church of England never received the level of establishment and organization in these colonies as it did back in England. Anglicanism, moreover, was severely damaged by its association with England and loyalism during the Revolutionary War. The future of American religion lay with those smaller and more despised sects that were just coming into their own during the late 18th century. These groups, among them the Baptists and the Methodists, would soon sweep over the land, and while the descendants of the Puritans, the Congregationalists, would continue in their strength in New England and make some inroads into the Midwest, the colonial troika of Congregationalism, Anglicanism, and Presbyterianism would soon lose religious dominance.

Columbus, Christopher (1451?–1506)

More than 500 years after he landed on the island of San Salvador (Watling Island) in

the Caribbean in October 1492, Christopher Columbus had become more important as a symbol than as a historical figure. Although not the first European to land in the Americas—he had been preceded by the Vikings and probably English fishermen—Columbus opened up an entirely new phase in European exploration. Although he died believing he had landed in Asia (the Indies), Columbus truly “discovered” America for Europe. Some view him as an exemplar of European and Christian advance, while others see his career as the archetype of European violence and rapaciousness.

Since Columbus, more than any other individual, was responsible for opening up the Western Hemisphere for European settlement, his name has become linked inextricably with the evils and horrors that accompanied it. During the 1980s and 1990s, as the 500th anniversary of his first expedition neared, he became vilified increasingly and took on, in an almost mythological way, the sins of all Western culture. As a result, there was an increasing tendency to relegate the historical Columbus to the sidelines and replace him with the Columbus of metaphor. Despite this tendency, he was very much a man, a man who had marked strengths and weaknesses, both of which appeared during his four expeditions to the West.

Born in Genoa, modern-day Italy, probably in the year 1451, Christopher Columbus grew up in a family of skilled laborers. His father was a weaver, and Columbus appears to have followed this trade while young. He went to sea during his teens and by his mid-20s had traveled to Tunis and Marseilles. In 1476, while on a voyage to Flanders and England, his ship was sunk by French privateers. Columbus made his way to Portugal, where he was taken in by a Genoese family in Lisbon. While there he gained what formal education he had, learning to speak, read, and write Portuguese and Castilian (Spanish). He also

learned some Latin and improved his knowledge of sailing and navigation.

During his time in Portugal, Columbus became a successful merchant captain and was financially secure enough to marry into the lower nobility (1479). His wife, Felipa Perestrello e Moniz, had property in Madeira, where Columbus moved following their marriage. In the following year, Felipa gave birth to Columbus's only legitimate son, Diego.

Columbus left Madeira in the 1480s for at least one expedition, this time sailing to West Africa. After observing the trade in slaves, gold, and goods, he was convinced that a fortune could be made trading in the East.

Deeply religious, Columbus was increasingly concerned with the Muslim control of Jerusalem and with the prophetic books of the Bible, notably Daniel and Revelation. He became convinced that by sailing west he could arrive at Cathay (China) and Cipangu (Japan), thereby avoiding the Arab middlemen who controlled the China trade and creating a base from which Christian Europe could move to liberate Jerusalem.

Contrary to decades of mythology, Columbus did not create the view that the world was round. This had been known and accepted by learned men since the ancient Greeks. What Columbus did was underestimate its circumference and overestimate the size of China. According to his calculations, the distance from Europe to Japan—actually 10,000 miles—was 3,000 nautical miles. This shorter distance made the trip a relatively easy affair, convincing Columbus that it could be done.

Looking for financial backing, Columbus took these convictions to the Portuguese court in 1484, but the early successes of Portuguese navigators on the Africa route to India led to a rejection. He also offered the idea to Henry VII of England. Again he was rebuffed. There followed another attempt with Portugal, but the news that Bartholomew Diaz had rounded the Cape of Good Hope ended these negotiations as well.

Following this rejection, Columbus turned his attention to the Kingdoms of Castille and Aragon—Spain. There he also met early disappointment, especially when a panel of experts dismissed his estimation of the earth's circumference and recommended against the trip. Columbus persisted, however, and with the aid of King Ferdinand's keeper of the privy purse, Luis de Santangel, he won over the monarchs. Ferdinand and Isabella, ebullient over the surrender of the Moorish Kingdom of Granada and the unification of Spain under Christian control, granted Columbus numerous subsidies for the expedition. The ships and salaries were paid for from royal funds, as were the supplies. Columbus himself was to receive numerous concessions if the trip were successful, including a title and coat of arms, appointment as Admiral of the Ocean Sea, and a percentage of all the wealth obtained.

The expedition set sail on August 3, 1492, from the Spanish port of Palos, the country's major port of Cadiz being overwhelmed by the Spanish Jews, who had been expelled from the kingdom. After a stop in the Canary Islands for water and some minor repairs, Columbus and his crew would sail for 33 days before sighting land on October 12, 1492. Columbus and the crew went ashore on the island of San Salvador and took possession of it in the name of the Spanish monarchs, believing that they had landed on an island west of the Japanese archipelago. Convinced that he had missed Japan, Columbus continued sailing west in hopes of finding Cathay, China. But the wreck of his main ship, the *Santa Maria*, forced him to return home with a little gold and several Arawaks from the island of Hispaniola (the island consisting of present-day Haiti and the Dominican Republic).

He arrived in Spain to a hero's welcome and was soon preparing for a second voyage. The colony planted by this expedition on Hispaniola suffered from neglect by Columbus, who spent his time exploring Cuba, which he believed was a peninsula of China. Although

increasingly suspicious of Columbus's abilities, the monarchs outfitted a third expedition in 1498 under his leadership. On this expedition, Columbus first sighted the South American continent, reporting to the king and queen his belief that it was the terrestrial paradise. Reports of his highhandedness and a revolt among the Spanish colonists at Hispaniola led to an investigation, and Columbus was returned to Spain in chains.

Although the monarchs restored his titles and income, he was removed from any position of real power in the West Indies and had difficulty securing permission for a fourth expedition that left in May 1502. On this expedition, he made land in modern-day Honduras and explored the Central American coast down to the isthmus. Conflict with the natives and the loss of two ships forced his return to Hispaniola in April 1503. By this time, the ships were no longer seaworthy and had to be beached on the Jamaican coast. Requests for assistance from Hispaniola were ignored for a year, and Columbus and his companions did not return to Spain until November 1504.

Although this expedition had been the most financially successful, Columbus was ignored by the monarchs. Not until 1505 was he granted an audience with the king, who was growing weary with Columbus's demands. Increasingly ignored and engaged in numerous lawsuits, Columbus died on May 20, 1506. His remains were buried in Valladolid and then reinterred in Seville in 1509. Following the wishes of his son Diego's will, they were again removed and buried in Santo Domingo in 1541. At the time of this writing, their location, like Columbus's legacy itself, is a matter of much dispute.

Committee of Southern Churchmen A small, nondenominational Christian service organization based in Nashville, Tennessee, and led by Baptist minister WILL D. CAMPBELL, the Committee of Southern Churchmen was formed in 1964 out of the remnants of an earlier religious movement, the Fellowship of Southern Churchmen. Like the fellowship before it, the committee was dedicated to working for interracial justice and social reform in the South.

The Fellowship of Southern Churchmen (originally named the Conference of Younger Churchmen) was founded at a gathering in Monteagle, Tennessee, in May 1934. By the early 1950s, the fellowship had approximately 400 members, of whom roughly 80 percent were white and 20 percent African American. Ministers and teachers represented the largest portion of the membership. The fellowship emphasized a neo-orthodox position (see NEOORTHODOXY), that is, it synthesized traditional theological beliefs about God, sin, and the Christian gospel with a liberal, sometimes radical, political commitment to the poor. Aware of the South's hostility to "outside agitators" from the North, the fellowship restricted its membership almost exclusively to the southern-born.

Until the 1950s, the fellowship's members, like most southern liberals of the time, seemed confident that their policy of gradual racial integration would result in worthwhile social

progress for African Americans. However, as matters turned out, the decade witnessed a devastating counteroffensive by conservative whites. The fellowship was unable to adjust to changing circumstances, as segregationists sought to block the forward strides southern blacks had made throughout the region. The fellowship's membership dwindled, and its funds became depleted. Although individuals such as Presbyterian writer James McBride Dabbs and Will Campbell focused their attention on the emerging black-led CIVIL RIGHTS MOVEMENT, the fellowship ceased to exist as an organization by the end of 1957.

Then serving with the National Council of Churches, Campbell had been among those who escorted African-American children through jeering mobs in Little Rock, Arkansas, in 1957. That same year, he was the only white to participate in the establishment of Martin Luther King's SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE. Campbell resigned his post with the National Council of Churches and returned to the South in 1963. Seeking justice for downtrodden whites as well as for African Americans, he helped form the Committee of Southern Churchmen in 1964. Campbell believed that the overthrow of the idea of white supremacy and the success of the Civil Rights movement represented the South's reconciliation with God. The judging and classification of groups by race, he said, denied God's sovereignty over humankind.

Campbell's committee was a smaller, more conservative association than the Fellowship of Southern Churchmen. While it continued the earlier group's emphasis on the SOCIAL GOSPEL, it also recognized the limitations imposed upon any social reform program by the reality of human sinfulness. The committee has emphasized, therefore, the need for individual as well as collective action in addressing the problems of society. During the VIETNAM WAR, the group ministered to draft resisters and antiwar activists. From 1975 to 1983, the group published a theological journal called *Katallagete—Be Recon-*

ciled, which mirrored the committee's emphasis on sin, forgiveness, and Christian service. Campbell has argued that the real enemies of human rights in the South have been the government and the business community. Those institutions, he thought, have traditionally oppressed blacks and poor whites together.

Common Sense Philosophy See SCOTTISH COMMON SENSE REALISM.

communism Communism, broadly defined, is a social theory advocating the holding of the means of production in common rather than individually. As a worldview of history, communism became a powerful alternative to the capitalism shaping western Europe and the United States in the 19th century. Undergirding a global wave of revolutions in the 20th century, communism, despite its avowed atheism, often appeared to foster a religious dedication among its followers. In the United States, where communist activities remained marginal, the movement gave rise to a far more powerful worldview of anticommunism, arising in conjunction with early 20th-century IMMIGRATION. Anticommunism, similar in form to the NATIVISM that inspired the persecution of many non-Protestant groups in American life, became prominent during the "Red Scare" following WORLD WAR I. However, it was not until the COLD WAR that anticommunism gained a lasting hold in America, shaping political life, religious understandings, and popular culture.

Communism shared a millennialist desire quite widespread in the 19th century: to establish a perfect society based on the norms of community rather than manipulation (see MILLENNIALISM; COMMUNITARIANISM). Such desire for a perfect society, going back into the foundations of Western thought, also played an important role in the creation of America (see PURITANISM; AMERICAN REVOLUTION).

Communism emerged out of debate and controversy among a number of thinkers but was best expressed by Karl Marx (1818–83), a secular German Jew drawn to the budding workers movement after studying philosophy and law. In *Critique of the Gotha Program* (1875), Marx summed up the young movement's goal: "From each according to his abilities, to each according to his needs." Arising in opposition to the industrial capitalism radically reshaping Europe in the early 19th century, communism envisioned a future in which private property, and the state's protection of it, would be abolished and humans freed from the bondage of wage-labor. To accomplish this Marx envisioned the emergence of a universal class. In Marx's writings, the proletariat, unlimited by particular interests in preserving privilege, and fully aware of the alienation caused by private property, would unite to emancipate all by exercising universal suffrage. Only by altering "the relations of production"—that is, private ownership of the productive process—could emancipation proceed. Marx consequently dismissed the efforts of socialists and trade unionists to redistribute the fruits of production.

European revolutionary movements remained unsuccessful until the Russian Revolution of 1917. The victorious Bolsheviks, under the leadership of Vladimir Illych Lenin (1870–1924), seriously modified Marx's social theory and in the process built a centralized state that took on the task of abolishing many features of traditional Russian culture, including its ORTHODOX CHRISTIANITY.

Communist ideals, present in some form in 19th-century America among communitarian

groups such as the SHAKERS, the Mormons (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS), and Oneida Community (see NOYES, JOHN HUMPHREY), have attracted the support of Americans troubled by the social inequality that became prominent as a result of industrialization after the CIVIL WAR. SOCIAL GOSPEL preachers, such as WALTER RAUSCHENBUSCH and SOLOMON WASHINGTON GLADDEN, were critical of entrenched features of American capitalism and thought genuine religious faith impelled believers to seek the abolition of social injustice. Indeed, some form of radical critique of capitalism characterized many American religious and secular political viewpoints throughout the century (see CATHOLIC WORKER MOVEMENT; COUNTERCULTURE; KING, MARTIN LUTHER, JR.; NIEBUHR, REINHOLD; SOJOURNERS FELLOWSHIP). In organized form, however, the Communist Party of the United States, present since 1919, remained weak, garnering only 102,000 votes in the 1932 election, its highest number.

But if organized communism was mostly invisible, its specter loomed everywhere. In the wake of post-WORLD WAR I labor strikes and several bombings, U.S. attorney general A. Mitchell Palmer employed the wartime Sedition Act to curb dissent, rounding up 4,000 suspected radicals on January 1, 1920. Most of those detained, primarily Jewish immigrants from eastern Europe, were eventually released, but the "Red Scare" spawned widespread concern about foreigners polluting American life.

Many American intellectuals developed favorable views of Soviet efforts to construct a classless society during the years of the Great Depression, and official anticommunism declined as a result of the American alliance with the Soviet Union during WORLD WAR II. But by the late 1940s, as the Soviets occupied eastern European countries liberated from the Germans, President Harry Truman (1884–1972) and his administration recognized that Soviet leader Joseph Stalin (1879–1953)

was intent on world conquest. In addition to military and diplomatic efforts to “contain” the spread of communism, Americans turned increasingly to ferreting out its influence at home. While the earlier Red Scare had been a predominantly Protestant enterprise, the anticommunism of the cold war united Protestants with Catholics and Jews, all of whom now identified themselves as partakers in the “American Way of Life.” Both America and the Soviet Union came to stand for opposed millennial ideals, one divine, the other diabolical. Additionally, the persecution of religions by the various communist regimes provided a significant point of convergence for religious leaders in the United States. Whether it was the imprisonment of Catholic bishops in Hungary and Poland, the killing of Protestant missionaries following the victory of the Chinese Communists, or the persecution of Jews, nearly every religious group in the United States was affected by the antireligious practices of the communist regimes. With the Chinese Communist invasion of Tibet, even Buddhism, particularly as exemplified by the Dalai Lama, became an unceasing reminder of communism’s hostility to religion and religious individuals.

Anticommunism increasingly took on a powerful role in shaping the worldview of American culture during the cold war. Fear of communist subversion and infiltration fostered by the opportunistic Catholic senator Joseph R. McCarthy spread across the society. States passed laws making criticism of the government illegal, and pleading the Fifth Amendment often was seen as proof of Communist Party membership. Prior to their execution for espionage in 1950, Ethel and Julius Rosenberg claimed during their well-publicized trial that they were victims of ANTI-SEMITISM. The House Un-American Activities Committee launched full-scale investigations of Hollywood in 1947, “blacklisting” hundreds of actors and directors because of presumed connections to the Communist Party.

Nearly 40 feature films were produced echoing the fear of Communist subversion. Anticommunism also targeted education as a seedbed of communism. Libraries were purged of material critical of the American way of life, and several hundred college professors were dismissed. Ecumenical organizations such as the NATIONAL COUNCIL OF CHURCHES were suspect.

The publication of Aleksandr Solzhenitsyn’s *Gulag Archipelago* in three volumes between 1974 and 1978 brought to a wide audience the horrors of the Soviet system and the regime’s active and complicit role in the deaths of millions. They presented a detailed accounting of the murders, jailings, and forced starvation that could neither be denied nor dismissed as excesses. When combined with the growing awareness of the consequences of the Cultural Revolution in China (1966–76) and the horrors of the Khmer Rouge regime in Cambodia (1975–79), which murdered about 2 million of its own people (out of a population of 7.1 million), it became increasingly difficult to argue that communism offered a legitimate social and political alternative.

As a counterimage to what America was supposed to represent, communism enabled several generations of Americans to retain the original Protestant view that America was *the* Christian nation. It also enabled many non-Protestant Americans to gain status in American society by demonstrating their own commitment to the American way of life.

The opening of the Soviet archives following the collapse of the Soviet Union further demonstrated the level of horrors perpetrated by the Soviet police state. The materials in these archives also documented that the level of Soviet-inspired espionage in the United States, while not reaching the level of some paranoiacs, was much greater than had been acknowledged by many in the academic and religious worlds.

communitarianism The practice of communitarian living, usually signifying a community in which there is some degree of sharing common resources and property, has a long history in Judeo-Christian cultures. The term is sometimes also used to indicate a system in which social reform is attempted through small communities. In practice, these two meanings often have overlapped: Many communities constitute themselves and share goods with the express purpose of providing a template for society as a whole. Thus, communitarian groups often have utopian aims (see **UTOPIANISM**).

The most successful American communitarian enterprises have been explicitly religious, motivated by the conviction that believers must separate from the world and renounce certain aspects of their former lives in order to practice religion in its pure and authentic form. Persecution from outsiders often has added to the sense that spiritual purity cannot be maintained in society at large. All communitarian religious groups assume that purity of beliefs and practices is possible in this world and that their particular social form is best suited to the maintenance of holiness. Such communities are frequently characterized by the meticulous ordering and ritualizing of all aspects of life, including work patterns, diet, sexual practices, and even the definition of family.

Communitarianism can be traced back to the ancient Essenes, a male, celibate order

in Palestinian Syria that emerged sometime before the birth of Christ. Some 4,000 members held property in common and observed strict religious rituals, but they lived scattered in various towns and villages. Early Christian groups, similarly, advocated the sharing of resources and property, although it is less clear that the apostolic church constituted itself this way. Nonetheless, many later communitarian movements were inspired by the biblical formulation of the book of Acts 4:32–35, “they had all things in common,” a passage that describes the intimate connection between sharing resources and sharing spiritual goals. Christian movements therefore have frequently construed communitarian living as a spiritual restoration, a return to the model of the early church.

Traditional renderings of the communitarian impulse move rather quickly from the early church to several medieval European communities, including the Albigenses and the Waldenses, and on to the flowering of sectarianism catalyzed by the Protestant Reformation. The Cathars in France, the English Lollards, the Labadists in Holland, and the Anabaptists in central Europe all shared the desire to create a purified religious community and to separate themselves from a sinful world. With the European discovery of the “New World” of America, new sectarian communities were afforded the land and the relative freedom to fashion their own religious havens.

Communitarianism in America flourished most noticeably between the AMERICAN REVOLUTION and the CIVIL WAR. The opening of western lands, the social possibilities unleashed by the severing of traditional political and religious ties, a pervasive sense of the latent perfectibility of both individuals and society, millennialist prophecies, and growing qualms about an unabashed cultural commitment to the individualistic and competitive world of the capitalist marketplace led to the appearance of dozens of communitarian enterprises

in this period. During the course of the 19th century, more than 100,000 people scattered in more than 100 colonies experimented with alternative social forms. This enthusiasm peaked in the 1840s with the emergence of groups such as Hopedale, Bethel-Aurora, Bishop Hill, Amana, Oneida (see NOYES, JOHN HUMPHREY), Brook Farm, Fruitlands, and the SHAKERS. Interest waned rapidly in the late 1860s and 1870s, as Americans struggled to recover from the devastating effects of the Civil War, but communitarians continued to follow the line of westward settlement, seeking new opportunities for purity and further separation from the perceived sinfulness of American life. Other eras, most recently the late 1960s and early 1970s, witnessed a resurgence of many of the same impulses.

Although many American communes have looked back nostalgically to earlier periods or “golden ages,” such as the Garden of Eden or the apostolic church, for their models of communal living, communitarians occasionally characterize their experiments as progressive and bold ventures, not as retreats from the “real” world. Many see themselves setting an important example as pioneers, using the small community model to force upon the wider society certain kinds of spiritual and/or social reforms. The communitarian template offers a noncoercive path to societal change, whether characterized as a “city upon a hill,” a garden in the midst of the wilderness, or a pad where people can “discover” themselves.

Nonetheless, by focusing on communitarianism primarily as a consequence of the radical Reformation, historians often have ignored the many other social experiments in America that are also communitarian in nature. A most obvious example can be seen in Roman Catholic religious orders (see ROMAN CATHOLICISM), small communities of believers who often share resources and possessions, who live lives of ritual observance, and who have renounced key aspects of secular life. More recently, African Americans (see AFRICAN-AMERICAN

RELIGION), Hasidic Jews (see HASIDISM), and Buddhists (see BUDDHISM) have established communitarian enterprises in the United States. Few scholars have analyzed these social experiments in the same detail that has been applied to Euro-Protestant or quasi Protestant examples, but such study would undoubtedly enrich and perhaps qualify our assessments of communitarianism as a whole.

Community of Christ The Community of Christ, originally known as the Reorganized Church of Jesus Christ of Latter Day Saints, received its current name in 2001. The decision to adopt a new name had been made the previous year at the church’s World Conference, where it was argued that the new name reflected more correctly the church’s theology and mission. Such a shift also reflected the outcome of a long and complicated history.

For decades the Reorganized Church of Jesus Christ of Latter Day Saints (RLDS Church) was the largest and most moderate of the many Mormon groups that split off from the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS (the LDS Church), founded by JOSEPH SMITH, JR., in 1830. Historically, members of the RLDS Church, headquartered in Independence, Missouri, have been referred to as “Missouri Mormons” to distinguish them from the “Utah Mormons” of the LDS Church.

The roots of the RLDS Church go back to an intra-Mormon controversy precipitated by

Joseph Smith's murder in a jail in Carthage, Illinois, in 1844. At issue in that controversy were two key questions: Who would succeed Smith as the Mormons' temporal and spiritual leader and in what direction would the Mormon church move?

On one side of the controversy stood BRIGHAM YOUNG, who argued that Smith's successor should come from the Mormons' chief governing body, the Council of the Twelve Apostles. Young also contended that the Mormon movement should continue to distinguish itself from more mainstream Protestant denominations by persisting with controversial practices instituted by Smith while the Mormons were centered in Nauvoo, Illinois. Because many of these practices—polygamy or “plural marriage,” temple ordinances such as marriage for eternity, theocratic rule, and the ordination of a patriarch—were derived by Smith from Old Testament examples, it is fair to say that Young envisioned a Mormonism that freely mixed Christian and Jewish themes.

The other side in the controversy insisted that only a descendant of Smith should follow the founder as the movement's prophet. Lineage rather than office should determine Smith's successor, who should come not from the Young-led Council of the Twelve Apostles but from Smith's own flesh and blood. This contingent contended, moreover, that Smith had never instituted some of the most controversial post-1830 innovations, notably polygamy and marriage for eternity. Their Mormonism was, therefore, less Jewish and more plainly Christian than the Mormonism of the Young contingent. It was, as one scholar has noted, a “reformation” of Christianity rather than a “radical restoration.” While RLDS members joined LDS members in their hope of restoring the primitive Christian church, they distinguished themselves by harboring no hope of restoring ancient Israel as well.

Although many of Smith's family members, including his first wife, Emma Smith, opposed the “Brighamites,” in the end it was Young who emerged victorious. He was ordained the presi-

dent of the LDS Church in 1847, and one year later led the “Utah Mormons” westward to their current headquarters in Salt Lake City. Those who refused to recognize Young as Smith's successor organized a conference at Zarahemla, Wisconsin, in 1853 and established what they called the “New Organization.” They eventually tapped as their leader Joseph Smith III (1860–1914), who became president and prophet of the Reorganized Church of Latter Day Saints (also known as the “Reorganization”) upon its inception on April 6, 1860.

From the beginning, LDS and RLDS members agreed on many things. Both groups accepted the BOOK OF MORMON and the Bible (“in so far as it is translated correctly”) as divinely inspired Scripture, and both saw revelation as an ongoing process in which God revealed his will to his people through prophets such as Joseph Smith. Over time, the two main divisions in the Mormon church came together on key issues. In 1890, for example, the LDS Church, under pressure from the federal government, joined the RLDS Church in repudiating plural marriage.

“Utah Mormons” and “Missouri Mormons” continue to disagree, however, about many things. LDS members still call their president from the Council of the Twelve Apostles, and until 1996 RLDS members still insisted that their president be a direct descendant of Joseph Smith. The Reorganized Church also rejects some of Mormonism's later doctrinal developments—e.g., the plurality of gods and the eternal progression of humans toward divinity—as unbiblical. Finally, the Reorganized Church tends to be more liberal on social questions. Unlike the LDS Church, which excluded African Americans from ordination to the priesthood from 1847 until 1978, the Reorganized Church never set up racial barriers to ordination. And while the LDS continues to bar women from ordination, the RLDS welcomes women priests.

In 1991, the RLDS experienced its own schism when a small group of more traditionalist members left to form the Restoration Church of Jesus Christ of Latter Day

Saints. This schism reflected opposition to the RLDS's move toward defining itself more as a "Christian" church, with doctrines similar to mainstream Christian denominations in the United States. The Community of Christ also has a more liberal political bent than the Utah church, participating in the "Call to Renewal," a multidomination Christian movement to end poverty and racism and strengthen families and communities. The church also has a strong emphasis on teaching peace and has built a "Children's Peace Pavilion," an interactive, public museum located at its world headquarters in Independence, Missouri.

Few events reflected the church's process of change during the 1980s and 1990s as much as the choice of W. Grant McMurray as its head in 1996. McMurray became the first leader of the church not a direct descendant of Joseph Smith. This constituted a major shift in the church's self-understanding, since part of the reason for its founding was the conviction that Mormons should be headed by a descendant of Joseph Smith. In 1997, McMurray proclaimed a new direction calling for a "clear and compelling Christ-centered theology of peace and justice grounded in the scriptures, faith, and tradition of the Restoration movement." This new course resulted in the decision to change its name, and the RLDS Church became the Community of Christ, an international denomination, which, in 2006, reported more than 250,000 members in 50 countries.

Congregational Christian Churches See UNITED CHURCH OF CHRIST.

congregationalism Congregationalism is a form of church government that evolved out of the English Puritan (see PURITANISM) movement of the 16th century. As distinct from episcopacy (governance by bishops) and presbyterianism (governance by ministers and elected laity), classic congregational polity maintains that local Christian congregations may govern themselves without reference to any wider church authority or hierarchy.

Beginning in the late 16th century, groups of radical Puritans called Separatists broke away from the parish churches of the Church of England and established their own independent congregations. They believed that church membership should be restricted to those who were convinced believers in Jesus Christ. They also taught that each congregation was given authority by God to determine who might participate in its institutional and sacramental life. The PILGRIMS who settled Plymouth, Massachusetts, in 1620 were Separatists and the first adherents of Congregationalism to come to America. After 1629, other Puritans under the leadership of JOHN WINTHROP found the MASSACHUSETTS BAY COLONY a welcome outlet to escape from the English parish system. By the end of the 17th century, Congregationalists, the dominant religious group in New England, effectively had become a new Protestant denomination.

The government of the Congregational churches in America received its first official definition at a church synod convened at Cambridge, Massachusetts, between 1646 and 1648. The CAMBRIDGE PLATFORM of 1648 established a system of independent local churches in which members and their elected officers shared equal authority. A half century later, a synod meeting in Saybrook, Connecticut, in 1708 further systematized Congregational government. The SAYBROOK PLATFORM, adopted in four Connecticut counties, provided that lay and clerical representatives of the churches would meet and offer judgments in disputes between local congregations. Ministerial associations also

were created to approve candidates for ordination and oversee clergy. However, because the Saybrook Platform undercut the principle of absolute congregational independence and favored a modified connectional system, many churches both in Connecticut and in Massachusetts rejected its provisions.

Congregationalism next endured two major schisms that altered significantly its membership between 1735 and 1825. First, following the revivalist fervor of the GREAT AWAKENING of the 1730s and 1740s, some New England Congregationalists insisted that their clergy and fellow church members lacked true piety. Many of these dissidents, called New Lights (see NEW LIGHTS/OLD LIGHTS), eventually split from the Congregational establishment and later reorganized themselves as Baptist congregations. Second, in the early 19th century, the emerging Unitarian (see UNITARIAN CONTROVERSY) movement caused nearly 100 more parishes in the Boston area to break formally with Congregationalism. These liberal churches allied themselves with one another and in 1825 formed the American Unitarian Association, the forerunner of the modern-day UNITARIAN UNIVERSALIST ASSOCIATION.

Official Congregational polity continued to develop after these defections, although because of the principle of strictly independent church bodies, a true denominational bureaucracy did not emerge until the late 19th century. The first state conference of Congregational churches was held in Maine in 1822, but only in 1871 were Congregationalists organized fully on a national level, with the founding of the National Council of Congregational Churches.

In 1865, the Boston Platform superseded the two-century-old Cambridge Platform. The Boston Platform reaffirmed the idea that the local congregation, which derives its authority directly from Jesus Christ, is also sole basis of the church. However, the Boston Platform also allowed the conferring of ministerial standing and the installation of clergy to be shared by associations and conferences.

While the UNITED CHURCH OF CHRIST, formed by a union of the Congregational Christian Churches with the Evangelical and Reformed Church in 1957, is the most direct heir of the Puritan Congregational impulse today, many other churches in the United States trace their ecclesiastical lineage back to 16th-century English Congregationalism. These include the several Baptist denominations, the Unitarian Universalist Association, the Conservative Congregational Christian Conference, and a number of independent churches that maintain a self-governing Congregational polity.

Conservative Judaism Although the division of JUDAISM into three “denominations,” or branches, is an American phenomenon, Conservative Judaism claims to be the “authentic American Judaism.” While perhaps overstated, there is some basis for this claim.

Unlike REFORM JUDAISM and ORTHODOX JUDAISM, which have their roots in Europe as institutions, Conservative Judaism is an indigenous phenomenon brought about by American conditions and circumstances. Conservative Judaism attempts to follow the “middle way” between Reform and Orthodoxy, adapting to new realities when necessary but committed to the preservation of the tradition. Although a definite minority in the 19th century and without organizational form until 1913, in

2006 Conservative Judaism had more than 1.5 million members in 760 congregations.

The beginning of this major movement can be traced to a minor event that occurred in 1883 at a banquet honoring the first graduating class of Hebrew Union College in Cincinnati. The school, although dominated by Reform thinking, had been established to serve the entire American Jewish community. Knowing that several members of the college's board of directors followed *kashrut*, the Jewish dietary laws, the banquet's planners hired a Jewish caterer. When the first course was set before the participants, several rabbis stalked from the room, for on their plates were shrimp, one of the forbidden foods. This event demonstrated to the traditionalists that they could not work with the reformers. The magnitude of their differences became obvious two years later when the Reform group issued its statement of principles. In this statement, the PITTSBURGH PLATFORM, so much of Jewish tradition was rejected that for many traditionalists accommodation was impossible.

While the "*trefa* banquet" (*trefa* is Hebrew for forbidden food) was the immediate occasion for a separation between the more traditionally minded Jews and the reformers, it was not the sufficient cause. Conservative Judaism has its roots in the historical development of Judaism in the United States and in European intellectual currents.

Not all Jews in the United States were comfortable with the radical break with Jewish tradition represented by the reformers. This group, composed of more Orthodox immigrants and members of America's older Sephardic Jewish community, was concerned with retaining their Jewish identity, Jewish dietary laws, and the traditional religious rituals—including the use of Hebrew. This group, led by ISAAC LEESER, SABATO MORAIS, HENRY PEREIRA MENDES, Marcus Jastrow, and Benjamin Szold, rejected the complete disregard for tradition and Jewish law they saw among the reformers—as exemplified by the *trefa* banquet and the Pittsburgh Platform.

These men stood for the maintenance of the dietary laws (which the Reform leader ISAAC MAYER WISE disparaged as "kitchen Judaism"), the exilic character of the Jewish people, and unity with Jews throughout the world.

Many of these traditionalists agreed with the reformers that the 16th-century codification of Jewish law by Joseph Caro in the *Shulhan Arukh* needed alteration. The dead letter of the books had replaced the living letter of rabbinical synods. They rejected, however, what they saw as Reform's emphasis on utility—the attitude that the laws needed alteration not because they were tried and found wanting, but were tried and found difficult.

These men, generally referred to as the Historical School, were influenced by the thought of Rabbi Zechariah Frankel of Dresden. Frankel, affiliated with the Wissenschaft des Judentums (Science of Judaism) movement, felt that precise scholarship on the tradition was demanded, but unlike the reformers he used this scholarship not to denigrate tradition but to infuse it with new life.

Frankel desired to place Judaism on its "positive historical foundations." Rather than emphasizing the negative, he desired to see how the traditions expressed the living faith of a people. For Frankel, and for Conservative Judaism generally, the traditions were valuable because they were living vehicles of the religious expressions of the Jews. Not every element of the tradition was ordained by God; many were simply the creations of their age and location. But any alteration of that tradition would be equally so. As long as a tradition expressed the religious will of the Jewish people, it should be retained. If a practice no longer functioned as a source of religious value and meaning, then change was permissible, but only as an expression of the "total popular will." Rabbi Alexander Kohut of Ahavath Chesed in New York expressed the ideals of this movement in his first sermon (1885): "I desire a Judaism full of life . . . a Judaism true to itself and its past, yet receptive of the ideas of the present."

The emphasis on the totality of the community, *klal Yisrael* ("universal Israel"), has been dominant within Conservative Judaism. In fact, those involved in its formation viewed themselves as creating a religious organization that would bring together all Jews. The result, as so often happened in American history, was the formation of one more denomination.

It is telling that such a group first formed not a denominational organization, but a seminary—Jewish Theological Seminary in New York. Organized "to impart the love of the Hebrew language, and a spirit of fidelity and devotion to the Jewish law," the first class met on January 2, 1887, in the Shearith Israel synagogue in New York. Although its first graduate went on to become chief rabbi of the British Empire, the seminary struggled during its early years. By 1901, the school was close to folding.

The school was saved by the activities of CYRUS ADLER, who convinced a large number of Jewish laymen to re-endow the school. Even more important was Adler's ability to convince SOLOMON SCHECHTER to accept its presidency. Schechter, a Romanian-born rabbi and professor of Hebrew at the University of London, transformed the fortunes of the school and of the Conservative movement itself. Schechter viewed the school as a "theological center which should be all things to all men, reconciling all parties, and appealing to all sectors of the community." While it failed to achieve this goal—the Reformed and Orthodox went their own ways—it provided a middle way between the accommodationism of Reform and the parochialism of the Orthodox.

Giving organizational form to this middle way took time. In 1901, an Alumni Association of Jewish Theological Seminary was formed, then reorganized in 1919 as the Rabbinical Assembly of America, with the responsibility for ordaining rabbis and overseeing issues of Jewish law and practice within the movement.

Not until 1913 did an institution bringing together all like-minded congregations form. Its very name expressed the universal-

ity desired by the movement: the United Synagogue of America (see UNITED SYNAGOGUE OF CONSERVATIVE JUDAISM). Originally comprised of 60 congregations, by 1980, it had become the largest branch of American Judaism. It owed this growth to the huge numbers of eastern European immigrants who swept into America between 1880 and 1924. As they and their children drifted away from traditional Orthodoxy, some became nonobservant, others became Reform, but many joined the Conservative movement as a compromise. In institutional terms, this middle way served Conservatism well.

The fusion of tradition and change, however, has made it impossible for Conservatism to adopt either the majoritarian decision making of Reform or the authoritarianism of the Orthodox. Its commitment to tradition resulted in the secession of its more liberal members, who founded RECONSTRUCTIONIST JUDAISM—a fourth branch of American Judaism. Its commitment to change has led to growing tensions with the Orthodox community.

Over no issue has this conflict with Orthodoxy been greater than over the role of women within Judaism. The abolition of the barrier (*mehitzah*) separating women from men was only the first of many conflicts; the introduction of mixed seating in many synagogues was an even greater breach of traditional practice. The worst violations of Jewish law from the Orthodox perspective were changes allowing greater participation of women within religious services. Some of these were relatively minor, allowing women to read from the Torah during services, for example. Others were major transformations of Jewish tradition.

The first was the 1973 issuance of a *takhanah* ("legislative enactment") by the Rabbinical Assembly's law committee allowing women to be counted in a *minyan*, the 10 Jewish adults necessary to conduct services. There followed a decade-long conflict over whether to accept women in the rabbinate. This debate closed in 1983, when the faculty of Jewish Theological

Seminary voted 34-8 to admit women to the rabbinical school. In May 1985, Amy Eiberg became the first woman ordained by the Rabbinical Assembly.

The conflict over the role of women led to the formation of the Union for Traditional Conservative Judaism, composed of those opposed to women's ordination. This did not lead to a split within the denomination, however some of the more conservative rabbis and laity drifted into the Orthodox camp.

There are other ongoing tensions within the movement. The first of these is the traditionalism of the seminary faculty and the realities of life as a Conservative rabbi. While the movement itself is committed to the observance of the dietary laws, more than 60 percent of its members do not keep kosher homes, and Conservative rabbis have little authority to oppose this nonobservance. This separation found its expression in the adoption of a new name for the movement in 1990, the United Synagogue of Conservative Judaism.

Lack of authority is the source of yet more conflict between a traditionally trained rabbi and a less traditionally minded congregation. Power rests in the hands of the latter. While the rabbi can condemn, demand, and plead, there is little she or he can do. People can always leave or dismiss the rabbi. Many Conservative rabbis find themselves in the position of being their congregations' representative of tradition.

The 1970s and 1980s were difficult years for Conservative Judaism. A more traditionally oriented Reform movement attracted many of its liberal members, and an increasingly aggressive Orthodoxy appealed to the more conservative. There also was vigorous criticism from within, especially from those raised in the movement. Younger members criticized the sterile and impersonal nature of the synagogues, adaptation to middle-class values, as well as lax observance. Many founded *havuroth*, religious communities based on the pharisaic brotherhoods of the Roman era. While favoring more traditional observances, these *havuroth* also pushed for a

greater involvement of women and increased social concern.

In the last quarter of the 20th century, the Conservative movement struggled to find a way to reinvigorate itself. Attempting to articulate a positive identity, the movement issued a statement of beliefs and principles in 1988, *Emet Ve-Emunah*, that placed Conservative Judaism religiously between the Reform on the left and Orthodox on the right. It expressed Conservatism's commitment to the normativity of the Halakhah (Jewish law) and the Jewish tradition, while noting the role of development and change within the Halakhah. Most significantly, it recognized the role of religious authorities within the Conservative movement to interpret and adjust Jewish law, thereby rejecting the Orthodox claim that the law cannot be altered. To a great extent, the *Emet Ve-Emunah* simply restated officially the premises upon which Conservative Judaism is based. The statement, however, explicitly separates the movement from both the Reform and Orthodox. In no area were the tensions within Conservative Judaism and between it and Orthodoxy more visible than in the Conservative movement's 2006 response to homosexuality. In this decision three different opinions were accepted. One continued the ban on ordaining gays and lesbians as rabbis or cantors, while the other two permitted their ordination and the participation of Conservative rabbis in commitment ceremonies, but not weddings, for gays and lesbians.

The last decade of the 20th century saw Conservative Judaism at a crossroads. Seemingly outflanked on the left by Reform and on the right by the Orthodox, Conservative Judaism appeared to lack a clear focus. Interestingly, this difficulty saw a solution in changing demographics.

By focusing increasingly on serving local congregations and addressing the needs of the growing numbers of young professional couples with children, Conservative Judaism found a new population eager for structure and strong religious learning. Many of these

families were products of “mixed” Jewish marriages, where one spouse had been raised in a more religious household and the other in a less observant environment. For them, a Conservative synagogue provided an alternative comfortable to both.

This position as a “half-way house,” or default option, did not lead to a clear identity, however. At the beginning of the 21st century, Conservative Judaism entered a challenging period. Defections from the left and right and the lack of a positive religious and organizational self-understanding seemed to leave Conservative Judaism with little soul or spirit. Many doubted its ability to survive until the 2020s. Despite these predictions, Conservative Judaism’s deep historical roots and its commitment to using the power of religious tradition to answer pressing contemporary concerns continue to provide it, at least potentially, with the tools for renewal and revitalization.

Constitution (U.S.) The Constitution of the United States of America is the fundamental law of the nation. It provides the country with the basis for its national government, setting forth the government’s functions, powers, and roles. The genius of the document rests in its flexibility. Rather than legislate for all contingencies, the Constitution is formulated on broad principles that allow for responses to changing situations and conditions. The Constitution is specific, however, when it enumerates the limits of governmental power. These limits serve to prevent the rise of a despotic and tyrannical government.

Based on the philosophical and political ideas of the ENLIGHTENMENT, the Constitution is preeminently the work of JAMES MADISON, although the text as adopted was penned by Gouverneur Morris of New York. Between May and September 1787, delegates from 12 of the 13 states then composing the United States of America met in Philadelphia to find some way to strengthen the existing federal government. The instructions given the delegates by the various states empowered them only to modify the existing fundamental law of the land, the Articles of Confederation. Under the leadership of Madison, however, those present took it upon themselves to write a completely new constitution. When they had finished, 39 of the 42 delegates signed the new document, which they then presented to the people for ratification. By June of 1788, ratification by the people of the required nine states had been secured, and the Constitution took effect as the basis for the national government.

Religious issues played an insignificant role in the drafting of the Constitution. None of the delegates suggested that the document allow for a religious establishment. In fact, the only mention of religion in the document, in Article VI, Section 3—adopted over the objections of the delegates from Maryland, North Carolina, and Connecticut (North Carolina being the only one eventually to vote against it)—expressly forbids the

Consistent Calvinism See NEW DIVINITY.

requirement of religious tests for the holding of political office.

During the debates over ratification, some objected to this clause, fearing that it would allow Catholics and pagans to hold political office. The biggest fear, however, was from the other side, that the document did not sufficiently protect religion from governmental meddling. This and related fears led to the adoption of the first 10 amendments to the Constitution: the Bill of Rights. Of these amendments, one specifically deals with religion. The FIRST AMENDMENT states that "Congress shall make no law respecting the establishment of religion, or prohibiting the free exercise thereof; . . ."

These amendments, however, applied only to the national government and not to the various state governments. Several states retained their pre-Revolutionary religious establishments well into the 1800s. The relationship of the state governments to religion was a matter only of state law, not constitutional guarantees.

This changed with the adoption of the FOURTEENTH AMENDMENT. This amendment, ratified in 1868, was designed primarily to protect the newly freed slaves from political abuse by their former masters. Among its various provisions, the amendment states that "No State shall make or enforce any law which shall abridge the privileges and immunities of citizens of the United States."

Through the use of this amendment, the federal courts, and the Supreme Court as the ultimate arbiter of the Constitution's meaning, began to apply the freedoms guaranteed in the Bill of Rights to the states. The first Supreme Court decision to apply the "free exercise" clause of the First Amendment to the states was in *Cantwell v. Connecticut* in 1940. In 1947, the Supreme Court for the first time applied the "establishment clause" of the First Amendment to the states via the Fourteenth Amendment in its decision in *Everson v. Board of Education*.

Beyond its legal and political importance, the Constitution has deeper significance in

the United States as one of the icons of America's CIVIL RELIGION. An overwhelming majority in the United States pays homage to the document. Those who have never bothered to read the Constitution esteem it as one of the greatest works of the ages. All politicians favor it, and the epithet "unconstitutional" is often hurled at legislation the speaker opposes. This level of reverence for the Constitution illustrates its importance in American society. Everyone fights over the Constitution, and people with opposing views claim its support. While the desire of so many to wrap themselves in the Constitution does not necessarily honor it, the fact that the Constitution protects so many under its banner does. The constitutional guarantees to religious equality and religious freedom, despite the occasional lapses in application, cannot be overestimated in importance. They have made it possible for the United States to become a religiously pluralistic nation with a minimum of religious violence and bloodshed. Despite prejudice, hostility, and sporadic violence, the United States has been spared the large-scale conflicts that have marked other diverse nations. This must be attributed primarily to the guarantee of free religious exercise and prohibition of a religious establishment in the Bill of Rights.

conversion The word *conversion* derives from the Latin *conversio*, which means “a turning round” or “revolution.” In religious terminology, the word implies a change from one type of life to another—in Christianity, a rejection of sin and the acceptance of a new life in Jesus Christ. Emphasis on conversion and ongoing spiritual regeneration always have been hallmarks of *EVANGELICALISM* in America. Evangelicals traditionally regarded the experience of religious conversion as a mark of the genuine Christian.

The willingness to testify to one’s conversion experience was a central feature of the Puritan movement of the late 16th and early 17th century. Most Puritans believed that conversion was a gradual process. *PURITANISM* encouraged prolonged and continual self-analysis, a process in which believers searched their hearts for evidences of divine grace. After the Puritan migration to New England, candidates for church membership were required to undergo an examination about their conversion. When a person requested membership, the petitioner would be asked to describe how the results of God’s grace were first perceived and then acceded to.

As the original fervor of first-generation Puritanism waned, more and more New Englanders failed to recognize in themselves signs of the experience of saving grace that their parents and grandparents had known. Although most were professing Christians and tried to lead moral lives, these unconverted persons increased dramatically in number and presented a critical spiritual problem for the Congregational churches of New England. At the end of the 17th century, prominent clergy such as *INCREASE MATHER* and *SOLOMON STODDARD* introduced periods of intense preaching in their churches. Their goal was the inauguration of a “revival” (see *REVIVALISM*), that is, a time when people would experience conversion, feel their hearts changed, and enter full church membership.

During the *GREAT AWAKENING*, the religious explosion that shook the American churches

in the middle decades of the 18th century, the need for conversion became an overarching theme in the preaching of revival leaders. *JONATHAN EDWARDS*, for example, minister of the Congregational church in Northampton, Massachusetts, was alarmed by the spiritual complacency he perceived among many of his parishioners. To counter this, he preached a series of sermons on *JUSTIFICATION* by faith alone in 1734. He soon noticed important changes in his people: Religious interest and conversions began to increase markedly.

As Edwards realized, however, there was an inherent tension in the way preachers such as he approached the task of evangelism. Orthodox Calvinists knew that, from eternity, God had arbitrarily chosen to save some human beings and damn others without regard to actual merit. Calvinists believed that God would awaken faith within the hearts of the predestined elect (see *ELECTION*), while those predestined to damnation never would experience a conversion. Yet if conversion were solely a divine action, indeed an event foreordained by God before creation itself, there would seem to be little justification for pressing a sinner to repent. To stress the importance of the human will in conversion not only was inappropriate, but might even signal a lack of faith in divine grace.

Despite Calvinist misgivings, pressing for conversion rapidly became a highly successful recruiting technique for churches during the Great Awakening. Conversion changed from being a purely individual affair to being a mass concern. By the time of the *SECOND GREAT AWAKENING* in the early 19th century, emphasis on the use of one’s free will, coupled with pressure tactics about the need for acceptance of God’s grace, began to dominate American evangelical ideas on conversion. *CHARLES G. FINNEY*, arguably the greatest revivalist of all time, exemplified the attitude of that period. Finney was renowned for pleading with men and women to change their hearts and surrender to God. His most famous sermon, “Sinners Bound to Change Their Own Hearts,”

argued that God had given people power to make up their own minds and act for themselves. Anyone who wanted *could* undergo a spiritual rebirth and attain salvation.

Later in the 19th century, revivalist DWIGHT L. MOODY combined Gilded Age optimism with classic theological ARMINIANISM. He urged the crowds that flocked to hear him to effect salvation by giving their hearts to God. Moody's message was a simple one. Through an act of will, a person could accept divine grace and instantly be saved. Moody would hold up a Bible and assure his congregations that eternal life was available for the asking. All people had to do was "come forward and t-a-k-e, TAKE!"

This form of conversion that Moody popularized is typical of conservative Protestantism in the United States today. Evangelicals believe that individuals must welcome God's saving grace into their hearts in order to authenticate any claim to being a Christian. Conversion, feeling "born again" or "saved," therefore, remains the central experience by which a person enters into a life of religious commitment.

Conwell, Russell Herman (1843-1925)

Russell Conwell was a Baptist minister and popular lecturer of the late 19th and early 20th century. The most celebrated clerical spokesman for the GOSPEL OF WEALTH movement, he was famed for the lecture "Acres of Diamonds," in which he admonished listeners that it was their Christian "duty to get rich." Conwell also founded Temple University in Philadelphia to educate working men and women who were unable to attend a traditional college but still wished to better

themselves. He served as Temple's first president between 1888 and 1925.

Conwell was born in South Worthington, Massachusetts, on February 15, 1843. He studied at Yale College for two years before serving as an officer in the Union Army during the CIVIL WAR. He graduated in 1865 from the School of Law at Albany University in New York and practiced law in Minneapolis, Minnesota, from 1865 to 1868. Although wounds he received in the war forced him into a two-year convalescence period, Conwell returned to work in 1870 and found employment as a traveling journalist, lawyer, and businessman. The death of his first wife in 1879 led him to consider the ministry as a new career. Having taught Bible classes in local churches and having worked with the YMCA, he was called to a Baptist church in Lexington, Massachusetts, where he was ordained in 1880.

In 1882, Conwell came to Grace Baptist Church, a struggling congregation in Philadelphia. Conwell soon won renown not only for his preaching and evangelistic fervor, but also for his promotion of educational and social concerns. His ministry in Philadelphia reflected a mixture of religion and social activism that paralleled aspects of the SOCIAL GOSPEL movement. By 1893, Conwell's church, then called the Baptist Temple, contained more than 3,000 members and had become one of the most active Protestant congregations in the country. A new building was built with a gymnasium, Sunday school, and reading rooms—the perfect model of the “institutional church” of the period, not simply a place of worship, but a community center as well. Conwell provided free night-school classes in the basement of his church, and in 1888, this venture evolved into Temple University.

Conwell was undoubtedly best known for the speech “Acres of Diamonds,” which he delivered on over 6,000 occasions. Conwell believed that God gave everyone opportunities for material advancement. All people have “diamonds” in their own backyards, he declared, and they can uncover them if they look hard enough. When he was asked why he did not preach a less worldly gospel but only exhorted people to get rich, Conwell replied that “to make money honestly is to preach the gospel.” A self-made man who amassed a fortune, Conwell took seriously the idea of Christian stewardship. He believed in civic responsibility and charity, and he used his money to aid poor students at Temple.

Conwell's opinions on industriousness, self-help, and the universal potential for success struck a responsive chord in the minds of many Americans in the Gilded Age. He remained active both as minister of the Baptist Temple and as president of the university until the end of his life. He died at Philadelphia on December 6, 1925.

Cotton, John (1584–1652) John Cotton was one of the leading ministers of the MASSACHUSETTS BAY COLONY. His theological and social views helped form the “New England Way”—the religious and political structures of the Puritan colonies (see PURITANISM). This was an interesting role for someone so bookish that he daily spent 12 hours in his study and was heard to remark, regarding the many interruptions a minister suffers, that he found it much more rewarding to converse with the dead (in books) than with the living.

For Cotton, the road to America was not a direct one. Born in Derby, England, on December 4, 1584, Cotton attended Trinity College, Cambridge, where he received his B.A. degree in 1603 and his M.A. degree in 1606. In 1607, he became chief lecturer and dean of Emmanuel College, a position he held until 1612, when he took religious orders, receiving his B.D. degree from Emmanuel College the following year.

In the year of his ordination, Cotton received the prestigious appointment to St. Botolph's in Boston, England. The way to advancement seemed assured to the scholarly and accomplished minister. By 1615, however, Cotton had become a Puritan and brought the worship services at St. Botolph's into line with Puritan views. A lenient bishop allowed Cotton his ways for 18 years, but the king's opposition to Puritanism was stronger than the indifference of a bishop, and in 1632, Cotton was ordered to appear before the Court of High Commission (Star Chamber) to answer for his views. He went into hiding in London, where he remained until his departure for America in September 1633.

Cotton's arrival in Massachusetts was welcomed. (It was rumored that Boston had been given its name in hope of increasing the likelihood of his emigration.) The church of Boston appointed him teacher, the ministerial post responsible for supervising doctrine

and delivering sermons. His influence in the colony was felt immediately. Cotton began a series of sermons on the Covenant of Grace, warning people against falling into the belief that their actions could aid in bringing about their salvation.

Because of this strong belief in human inability regarding salvation, Cotton helped give birth to the ANTINOMIAN CONTROVERSY of 1636–37. In fact, Cotton was the ministerial idol of ANNE HUTCHINSON, the leader of the so-called Antinomians. Cotton initially supported Hutchinson, but he eventually acquiesced in her banishment, partially in response to pressure from his fellow ministers.

Although Cotton gave some support to Hutchinson, he firmly opposed another dissenter, ROGER WILLIAMS. Williams's belief that religious affairs should be removed from civil enforcement was something Cotton could not countenance either theologically or socially, and Cotton led the movement to banish Williams from the colony (1635). This did not

John Cotton, a Cambridge University graduate and Boston minister, whose preaching and writing shaped New England Puritanism. (Boston Public Library)

end the conflict, however, and the two carried on a pamphlet war over the issue during the 1640s and 1650s.

In his works, primarily *The Bloody Tenent, Washed, And made White in the Bloud of the Lambe* (1647), Cotton sets forth his view that the secular government must enforce religious uniformity. For Cotton, obedience to true religion was necessary for a functioning society. God judged societies on their godliness. Societies that allowed the existence of heretics and blasphemers called divine retribution down on themselves. Also, diversity of religious views led to conflict within society that threatened its existence. For these reasons, Massachusetts could not suffer the existence of those who deviated from Puritan orthodoxy; to do so imperiled the colony's continued existence. Those who did not conform must be made to do so or be removed from the colony.

Until his death on December 23, 1652, Cotton was most influential in setting the religious standards of Puritan New England. At his insistence, the churches of Massachusetts adopted (between 1635 and 1640) the testimony of a conversion experience as a requirement for church membership. He prepared the standard catechism, *Milk for Babies* (1646), setting out for children the basic doctrines of Puritanism. Finally, in 1648, along with Richard Mather, Cotton drafted the CAMBRIDGE PLATFORM, the document that would serve as the basis for the polity and doctrine of CONGREGATIONALISM until the 19th century.

Coucouzes, Iakovos (1911–2005) During a long career begun in 1939, Archbishop Iakovos Coucouzes became the most familiar

public representative of ORTHODOX CHRISTIANITY and the longest-serving Orthodox hierarch in American history.

The future leader of the GREEK ORTHODOX ARCHDIOCESE OF NORTH AND SOUTH AMERICA was born Dimitrios Coucouzes on the Aegean island of Imvros in 1911. Educated at the Ecumenical Patriarchate's seminary at Halki near Istanbul, he was ordained to the diaconate in 1934 and took the monastic name Iakovos.

He immigrated to the United States in 1939 and joined a small circle of clerics who helped Archbishop ATHENAGORAS SPYROU forge a centralized and unified Greek Orthodox Church in North America. Closely associated with the founding of the Holy Cross Greek Orthodox School of Theology, Iakovos was ordained to the priesthood in 1940 and served several parishes, including an influential pastorate in Boston from 1942 to 1954.

Consecrated a bishop in 1954, he played an important role in the ECUMENICAL MOVEMENT. He represented the patriarchate at the World Council of Churches in Geneva from 1955 to 1959 and eventually served the council as copresident.

Enthroned as archbishop of North and South America in 1959, Iakovos returned to the United States at a point when the children of the first generation of Greek immigrants were coming to maturity. His style of leadership was activist, and he was determined to claim a visible place for the Orthodox in American life.

Iakovos soon became a familiar figure at public events, offering prayers at presidential inaugurations and other such gatherings. A photograph of Iakovos standing with MARTIN LUTHER KING, JR., at Selma, Alabama, in 1965 became one of the best-known symbols of the ecumenical movement during the 1960s.

His major administrative achievement was the sweeping reorganization of the archdiocese in 1978, when the centralized structure adopted during the 1930s was replaced by a more traditional Orthodox system in

which a synod of diocesan bishops sits under the leadership of the archbishop.

During the 1960s and 1970s, Iakovos also emerged as an important ethnic leader, rallying Greek Americans against the Turkish intervention in Cyprus and the persecution of the patriarchate in Istanbul. Although his 1972 candidacy for the patriarchate was vetoed by the Turkish government, Iakovos eventually served as an effective advocate of the patriarchate with the Turks.

In 1994, Iakovos chaired a meeting of all the nation's Orthodox bishops in Ligonier, Pennsylvania. The group issued an unprecedented declaration that the process of uniting all Orthodox jurisdictions into a single North American church had already begun. The Ecumenical Patriarchate reacted angrily, viewing the Ligonier Declaration as a threat to its own position in North America. Patriarch Bartholomew announced in 1995 that he had accepted Iakovos's resignation. Iakovos retired reluctantly in 1996. He died in April 2005 and was interred on the campus of Holy Cross Greek Orthodox Theological Seminary in Brookline, Massachusetts.

Coughlin, Charles E. (1891–1979) A Roman Catholic priest and radio personality, Charles Edward Coughlin was one of the many people who gained notoriety during the Great Depression with their views on how to solve the country's economic problems.

Born in Hamilton, Ontario, on October 25, 1891, Coughlin grew up in a Catholic neighborhood surrounded by Roman Catholic institutions. After attending St. Michael's College, Toronto University (Ph.D., 1911), he taught philosophy and English at Assumption College in Sandwich, Ontario.

Ordained in 1916, he served various pastorates in the Detroit diocese. In 1926, sent

to found a parish at Royal Oak, Michigan, he established the Shrine of the Little Flower. A cross-burning on the lawn of his newly completed church, combined with parish financial problems, led Coughlin to turn to radio as a means of explaining Catholicism and soliciting money for his church.

He soon developed a wide following and in 1930 signed a contract with the CBS radio network. With the onset of the Great Depression, his talks became increasingly political, and his attacks on international bankers, unregulated capitalism, and the wealthy drew a large audience. It is estimated that 40 million listeners tuned in each Sunday afternoon, and Coughlin received more mail than any American of his time. This popularity did not save him in 1931, when his criticism of President Herbert Hoover became too extreme, and CBS removed him from the air.

Coughlin responded by developing a network of independent radio stations and in the election of 1932 threw his support behind Franklin Roosevelt. During this time, Coughlin's radio talks became increasingly anti-Semitic (see ANTI-SEMITISM) and supportive of the policies of Mussolini and, later, Hitler. In 1934, he organized the National Union for Social Justice, whose principles included the abolition of private banking, the nationalization of major resources, and price controls. Increasingly opposed to Roosevelt, he supported the newly formed Union Party in 1936, vowing that he would leave the air if its nominee, William Lemke, received fewer than 9 million votes.

His 40 million listeners delivered few votes, however, and the Union Party garnered only 1 million ballots. True to his word, Coughlin left the airwaves for seven weeks. When he returned, he continued his anti-Semitic and anti-Roosevelt diatribes, speaking of a British-Roosevelt-Jewish conspiracy to drag the United States into war.

After the bombing of Pearl Harbor, Coughlin continued his isolationist and pro-Axis views, steadily losing listeners and stations. In

Father Coughlin's social protest during the Great Depression at first won the radio priest wide popularity. The bishop of Detroit eventually silenced him for his isolationist, pro-Axis advocacy. (*Library of Congress*)

1942, the U.S. government barred his magazine from the mails for violating the Espionage Act, and the bishop of Detroit gave him the choice of keeping silent on social issues or leaving the priesthood. Coughlin chose the former and continued as pastor of the Shrine of the Little Flower until his retirement in 1966. Although he ceased his involvement in politics, he did continue to write pamphlets opposing communism and, later, Vatican II until his death on October 27, 1979.

Council on American-Islamic Relations

The Council on American-Islamic Relations (CAIR) is the largest civil rights organization in the United States focused on Islamic affairs (see ISLAM). Established in 1994 as an advocacy group under section 501(c)4 of the U.S. tax code, CAIR is based in Washington, D.C., and works to promote a positive image of Islam and Muslims in the United States. CAIR's mission is to "enhance understanding of Islam, encourage dialogue, protect civil liberties, empower American Muslims, and build coalitions that promote justice and mutual understanding." The council does this through advocating for policies that ease the integration of Muslims into American society; opposing laws, policies, and practices believed to discriminate against Muslims; and encouraging American Muslims to participate in political life.

The local chapters, of which there are 34, have been commended for their work with local governments and law enforcement officials. They often play a major role in community interfaith discussions, explaining Islam and Islamic beliefs and practices. Much of this work involves dealing with hate crimes and working with employers to convince them to accommodate Islamic religious practices.

Since its inception, however, CAIR has been embroiled in controversy about its funding and the associations of several of its founders and directors. One of CAIR's founders, Rafeeq Jaber, was affiliated with the Islamic Association of Palestine and received money from the Holy Land Foundation for Relief and Development, an organization run by the group Hamas. Later the foundation was designated a terrorist entity and closed. Other CAIR funds have come from the World Assembly of Muslim Youth, an organization also designated a terrorist funder. Less fraught, but still disturbing to many (including many of CAIR's members and local chapters), is the funding it receives from international donors, including the Saudi royal family and the ruler of Dubai.

Presenting a different face of CAIR is one of its core principles that condemns all violence against civilians. Additionally, CAIR has been a leader of the "Not in the Name of Islam" movement, a national online petition drive expressing individual Muslims' opposition to terrorism perpetrated in the name of Islam. Finally, CAIR, along with the ISLAMIC SOCIETY OF NORTH AMERICA, has publicly endorsed and supported the fatwa (ruling on religious law) issued by the Fiqh Council of North America expressly condemning terrorism. As the fatwa states: "1. All acts of terrorism targeting civilians are *haram* (forbidden) in Islam. 2. It is *haram* for a Muslim to cooperate with any individual or group that is involved in any act of terrorism or violence. 3. It is the civic and religious duty of Muslims to cooperate with law enforcement authorities to protect the lives of all civilians."

The scrutiny of CAIR illustrates the difficulties created for American Muslims by the events of September 11, 2001 (see SEPTEMBER 11, 2001, RELIGION AND) and the increased attention to terrorism that resulted. The need for Muslim groups who oppose religiously motivated terrorism to make this opposition clear and ongoing is also a consequence of those events, the long-term results of which remain to be seen.

counterculture The term *counterculture* refers to a diffuse set of movements, individuals, ideas, and practices that emerged in self-conscious opposition to dominant trends in American culture during the 1960s and early

1970s. With roots in the BEAT MOVEMENT of the 1950s, the counterculture flourished during a period of severe social tensions (see VIETNAM WAR; CIVIL RIGHTS MOVEMENT). While spawning conservative reaction during the 1980s and 1990s (see MORAL MAJORITY), the counterculture left a lasting impact on American values, religious life, politics, and popular culture.

The counterculture was born in the era of affluence following the end of WORLD WAR II. Although the COLD WAR years of the 1950s are often seen as a time of cultural conformity and revived mainstream religion, they also contained a significant current of dissent emerging from various marginal ethnic and racial groups within the culture (see ETHNICITY) as well as intellectuals such as Erich Fromm and Herbert Marcuse, many of them refugees from Nazi Europe who were dissatisfied with what they saw as the country's shift to suburban conformity. In addition to fueling the growing frustration over continued racial inequality, African-American influence also appeared in the popular culture, particularly in the musical forms of rock and roll and jazz. "Beatniks," such as poet Allen Ginsberg, often combined the language and marijuana smoking of the "hip" jazz subculture of urban blacks, the intellectual critiques of Western culture coming from psychoanalysis and existentialism, and popularized forms of Asian religion (see WATTS, ALAN WILSON) in an effort to articulate a worldview more satisfying than that available from the cultural mainstream.

In 1964, the dissent percolating through the previous decade exploded, fed by the increased political hostility over civil rights, the emerging "Free Speech Movement" in Berkeley, California, and growing American involvement in Vietnam. Increasingly, young people in their teens and 20s saw themselves separated from their elders by a "generation gap"—making the politically and culturally relevant dividing line in America one of age, not class, race, or religion. Hence the popular slogan: "Don't trust anyone over 30." During the 1960s, young people took their awareness of this generation gap

in two occasionally related directions. Some university students, inspired directly by the Civil Rights movement and the critiques of mass society developed by emigré intellectuals such as Marcuse, turned to politics. Members of the New Left characterized their efforts to oppose the war, support oppressed people in the United States and abroad, and create a new egalitarian politics as laying the groundwork for "revolution." Their youthfulness itself often seemed to guarantee that, unlike the Old Left, they would not falter for lack of will.

The counterculture itself ran along different lines. Its members were of more mixed origins than the New Left, and while equally inclined to see themselves as revolutionary, they tended to regard politics itself as part of the malaise affecting American culture, since politics by nature perpetuates the power of some versus others. By contrast, the counterculture sought harmony and, when not sharing the New Left's disdain for history, turned to HENRY DAVID THOREAU and WALT WHITMAN rather than Karl Marx for inspiration. Sharing some of the same disdain for a culture based on the "Protestant ethic" as their Transcendentalist forebears, members of the counterculture rallied to the cry of "turn on, tune in, drop out." Assuming the larger society would simply disintegrate if left alone, "hippies" sought alternatives to replace the moribund and, above all, "square" beliefs, practices, and values of middle-class American culture.

The counterculture viewed the human self as inherently creative, once freed from the shackles of conformity; thus individuals were encouraged to "do your own thing." Valuing hedonism over hard work, spontaneity over planning, the new over the old, the "intuitive" over the "rational," the counterculture appeared to outsiders as dangerously chaotic, threatening the framework of American society.

While counterculturists themselves agreed with this assessment, there were nevertheless significant patterns that gave the movement coherence as well as continuity with long-standing trends in American life, in particular

the great currents of revival and reform that periodically sweep American life (see REVIVALISM; SOCIAL GOSPEL). For instance, downplaying political change, counterculturists emphasized social transformation through individual self-realization. Whereas earlier reformers had urged individual Americans to take up the Gospel, counterculturists urged the taking of “dope”—psychedelic drugs. To “feed your head,” as the Jefferson Airplane sang, would alter consciousness and pave the way for religious enlightenment. Or in the words of Harvard psychiatrist Timothy Leary, an early experimenter with LSD (lysergic acid diethylamide): “Your only hope is dope.” While dope provided the medium for ecstatic religious experience, counterculturists also developed their understanding of reality by generally abandoning the religious traditions of their parents, turning instead to popularized versions of BUDDHISM, HINDUISM, OF NATIVE AMERICAN RELIGIONS.

In addition to self-realization, the counterculture endeavored to create new forms of communal experience, thereby preparing the way for the dissolution of dominant social institutions. Like the utopian movements of the 19th century (see COMMUNITARIANISM), many “dropped out” completely in order to create a new social order from the ground up, creating communes like The Farm in Tennessee and “getting back to nature.” The communal spirit also animated spontaneous gatherings, such as the San Francisco “Be-ins” held during the 1967 “Summer of Love.” Rock concerts and festivals such as Woodstock in 1969 promoted both communal solidarity and ecstatic experience, which even at the time were characterized as similar to the CAMP MEETINGS of the great 19th-century revivals. As a form of music, rock was seen to have the power to permeate individual senses, and its lyrics provided the counterculture with a language, a set of images, and stories that helped form personal as well as generational identity.

The counterculture’s communalism also gave rise to new forms of social and economic relations, some of which paralleled those of

earlier utopian movements. Regarding existing middle-class sexual norms as repressive and outmoded, counterculturists advocated sexual liberation and experimentation and the abandonment of the nuclear family, which many saw as an institution based not on love but on property. Sexual pleasure unconstrained could itself lead to social transformation, as suggested by the slogan “Make Love, Not War.”

Like the SHAKERS, counterculturists also redefined the meaning of work. Condemning the growth of corporate capitalism, which despoiled the Earth and produced mindless jobs for alienated workers, counterculturists instead viewed work as self-expression. Indeed, many ridiculed the “establishment” view of economic rewards. The Diggers, for instance, a group of street actors based in San Francisco’s mecca, the Haight-Ashbury district, viewed love as the basic economic principle. To that end, during 1967’s “Summer of Love,” they ran free stores; handed out free food, drugs, and money; and fed the large crowds gathered for free rock concerts in Golden Gate Park. Other enterprising counterculturists developed a counter economy, centered on arts and crafts production, health food stores, and cooperatives of all sorts.

The fate of the counterculture is difficult to trace. Hippies themselves mourned “The Death of Hip” at the end of the Summer of Love. Certainly the nation’s climate changed. Continuing escalation of the Vietnam War was accompanied by an increasingly hostile domestic scene: racial hostility and riots, “hippie-bashing,” and the debacle of the 1968 Democratic National Convention. But in spite of growing violence, the counterculture did not die at the hands of “rednecks” or enraged parents. Many of the central themes of countercultural life—self-expression, harmony with nature, sexual freedom, the monotony of the “treadmill”—began to appear in the everyday concerns of large numbers of Americans. The history of alternative religious groups such as the utopian communities, the Shakers, or the Mormons (see CHURCH OF JESUS CHRIST OF

LATTER-DAY SAINTS) suggest that it is difficult to maintain a stance of opposition to the dominant American culture. In part, this is due to the power of the idea of individual freedom upon which the culture is based. While the counterculture came into existence as a movement opposed to the dominant culture, at the same time, its members were basically trying to extend the scope of individual freedom, not replace it.

Covenant Theology Covenant, or Federal, Theology (from Latin *foedus*, "covenant"), was the most original theological doctrine developed by the Puritans (see PURITANISM). Designed to reconcile the doctrine of election with a doctrine of divine justice, Covenant Theology interpreted God's intercourse with humanity as operating under two covenants, or promises. The first was the "Covenant of Works." Here God offered Adam complete happiness and material fulfillment in return for Adam's perfect obedience to the divine law. With the fall of Adam and Eve, God offered Adam the "Covenant of Grace." This covenant is effected by Christ's complete fulfillment of the divine law. The Covenant of Grace offers salvation on the basis of faith, and God makes it possible for the elect to believe, since in their

fallen condition human beings are unable to will that belief themselves.

Although the covenant is at God's initiative and hence a work of divine power, it was accepted by Adam. Divine activity is not cold and impersonal but intimately linked to our acceptance of it in faith and is, thereby, very personal. One can rely on God to fulfill the divine promise. For this reason, one need not fear the whimsy of some immovable power that damns us for no reason.

The Covenant of Works is not abrogated, however, by the Covenant of Grace. It is no longer something the literal fulfillment of which is demanded of us but a goal toward which the saint (the redeemed individual) must constantly strive, and toward which the saint will strive because of her or his being numbered among the elect.

The question remained as to how one could know whether one had received the imputing of grace necessary for salvation. It is one thing to know that God will fulfill God's side of the bargain, another to know that one has done so oneself. The depravity of humanity is such that one "will bend the truth to his mind though he break it," according to Thomas Hooker. The Puritans believed that the human capacity for self-delusion was immense, and to think that one is good when one is not is common. How does one know, therefore, whether she is among the elect or not?

The Puritans never developed a completely satisfactory answer to this question. The answer they provided was intimately related to their views of society and morality. The desire for faith, the striving to fulfill the demands of the Covenant of Works, could be viewed as a demonstration of the presence of grace within an individual. This desire or striving does not bring about the presence of grace but shows that grace is already present. This is at best a partial demonstration of the existence of grace, given humanity's ability for falsehood and hypocrisy. It was, however, useful for determining the obviously degener-

ate. The hypocrites, even if not discovered by the human community, were known to God.

Covenant Theology was a doctrine of election that avoided Antinomian interpretations and their disruptive effects on the community (see ANTINOMIAN CONTROVERSY) while easing the apparent severity and randomness of the doctrine of election. It simultaneously maintained the necessity and priority of divine action in the saving act and room for human activity.

creationism For more than a century, the teaching of EVOLUTION has been the battleground for a bitter conflict between SCIENCE AND RELIGION in the United States. The creationist, or creation science, movement regards the theory of biological evolution, popularized in the mid-19th century by Charles Darwin, as antithetical to the biblical idea of creation described in the Old Testament book of Genesis. According to the creationist view, a literal reading of Genesis 1–2 reveals that God created the universe by fiat in six 24-hour days. Creationists reject any other premise as contrary not only to Christian belief, but also to science itself.

Although the publication of Darwin’s *On the Origin of Species* in 1859 sparked this debate, his theories of evolution were not immediately challenged by traditional Christians. Harvard scientist Asa Gray, America’s first great proponent of Darwinism, for example, remained an orthodox Congregationalist. He argued that nothing in Darwin’s evolutionary scheme necessarily contradicted the possibility of divine guidance over natural processes. Even George Frederick Wright, a colleague of Gray, who in

The Museum of Creation and Earth History in Santee, California, contains exhibits that depict the story of creationism and refute the theory of evolution. (Getty)

1912 contributed an essay to the conservative series *The Fundamentals* (see FUNDAMENTALISM), believed that evolution might well be consistent with God’s creative designs and a method by which God exerted providential care over history.

Over time, however, the original tolerance Christian conservatives evinced toward Darwinism eroded. During the early 1920s, antievolution articles began to appear in the *Princeton Theological Review*, a journal that had earlier carried cautiously supportive views of evolution. The well-publicized SCOPES TRIAL of 1925, moreover, also served to focus attention on the question of evolution. The dismissive reaction of many American agnostics to William Jennings Bryan’s defense of the book of Genesis forced conservatives to choose sides in the debate. And in 1926, George McCready Price, a Seventh-day Adventist who had earlier inspired Bryan’s questioning of Darwinism, declared that belief in evolution was essentially atheistic. Price and his successors helped devise “flood geology,” the theory that all plants and animals were created in the six days of Genesis, with the fossils being formed during Noah’s flood.

Advocates of the creationist position have argued in recent years that biological and

geological evolution are unproved hypotheses with no basis in scientific fact. Henry M. Morris, a close friend of Price, helped found the Institute for Creation Research in 1972. While Morris's concerns clearly were as much theological as scientific (he blamed Satan for inspiring the idea of evolution), his principal attacks against evolution were based on scientific grounds. The public school edition of his *Scientific Creationism* (1974), for instance, discussed the question of creation without reference to the Bible or any other religious text. Morris offered as an alternative to evolution the theory that the universe is only 10,000 years old. Although geological findings would seem to undermine this thesis, Morris argued that a universal flood might just as well explain the observable data.

Scholars of fundamentalism point to two main intellectual principles supporting the creationist viewpoint: an inerrantist (see *INERRANCY*) interpretation of the Bible and acceptance of the Scottish Common Sense philosophical system (see *SCOTTISH COMMON SENSE REALISM*). As Morris insisted in his aptly titled article "The Bible Is a Textbook of Science," anyone who wishes to know about creation ought to look first in the Bible, which is the "sole source of true information" and the "textbook on the science of Creation." The inerrantist view is based on the belief that since the Bible is the very Word of God, it must be accurate in all matters, in science and history as well as in theological doctrine. When combined with the rationalism of the Common Sense philosophy (an 18th-century philosophical school that emphasized how supernatural truth is discoverable through empirical study), inerrancy leads believers to great intellectual confidence. In the minds of creationists, as in the minds of fundamentalists generally, the Bible is a book of facts, a collection of precise propositions about reality and a dependable repository of scientific truths.

Despite considerable resistance from the regular scientific community and from most mainline American denominations, creation-

ists won a number of legislative victories for their teaching. In 1981, both the Arkansas and the Louisiana legislatures enacted laws that would have given equal treatment in the public schools to "evolution science" and to "creation science." The Arkansas law countered the standard evolutionary view of natural development by positing "a relatively recent inception of the Earth and of living things." When opponents of those state laws argued that they were introducing religious beliefs into the curriculum of public schools, the courts concurred and struck down the laws as unconstitutional.

Creationists continue to insist that what they teach is essentially a scientific premise, not a religious view. They emphasize that since hundreds of scientists with academic doctorates are part of their movement, creation science, though certainly debatable, cannot be dismissed as altogether unscientific. Furthermore, an important result of this controversy has been the increasing awareness among Americans that Darwinism is only a hypothesis, albeit a favored one, about the origins of life on Earth.

Following these defeats in court, the creationists developed a strategy to influence education at the local level by winning election to local and state school boards. Perhaps the most successful example of this was their attainment of a majority of the state school board in Kansas. From this position, they managed to remove evolution as a required curriculum topic in that state's schools. The ridicule heaped on the state nationally and internationally led to a backlash, and in the 2000 elections enough of the creationist members were defeated to result in a 7-3 majority in favor of restoring evolution to the curriculum.

Despite these losses in the courts of law and in the courts of public opinion, antievolutionists have continued to seek ways to diminish the teaching and explanatory power of evolution. The most common method of doing this is to minimize evolution as being a "mere theory." This lay behind the actions of the Cobb County, Georgia, school board, which

required that stickers be affixed to science textbooks stating that, "This textbook contains material on evolution. Evolution is a theory, not a fact, regarding the origin of living things. This material should be approached with an open mind, studied carefully and critically considered." In declaring the school board's act in violation of the establishment clause of the Constitution, a federal district court judge stated that "the distinction of evolution as a theory rather than a fact is the distinction that religiously motivated individuals have specifically asked school boards to make."

Still others have attacked evolution by highlighting the conflicts within contemporary biology, arguing that the different views of scientists over certain specifics of evolution demonstrate its inadequacy. In attempting to avoid the explicit religious basis behind much of creationist thought, some individuals affiliated with the Discovery Institute emphasize what Darwinian evolution seemingly has not yet explained. They use these arguments as a basis for criticizing the basic positions of Darwinian evolution. This has been the focus of "intelligent design."

Intelligent design has two basic premises. The first is that there exist certain complex phenomena within the natural world, and particularly within human beings, that cannot logically or reasonably be explained through random adaptation or mutation. The second point is that if human beings had discovered such complexity in any other arena of human life, they would attribute it to a designer. When humans find a statue in an archaeological dig, they do not think it has the same source as a boulder; they presume it had a designer. As one of intelligent design's leaders has stated, "there are natural systems that cannot be adequately explained in terms of undirected natural forces and that exhibit features which in any other circumstance we would attribute to intelligence."

In court, however, intelligent design has fared no better than "scientific creationism." In the one case that has gone to court, a federal

district court judge in Pennsylvania ruled that a local school board's requirement that intelligent design be taught clearly constituted a government endorsement of religion and, despite attempts to hide it, intelligent design had a creationist intent. As happened in Kansas, all of the school board members of the district who had supported the intelligent design curriculum were swept out of office in local elections.

Despite the almost universal opposition to creationism in the scientific community, creationists continue to insist that their position is science, not religion. They claim that hundreds of scientists with academic doctorates are a part of their movement, a claim that is minimized by the fact that the overwhelming majority of their scientists are engineers, computer specialists, and physicians, along with the occasional chemist. They number few biologists among their members.

In the more than 80 years since the Scopes trial, the ongoing fight over evolution is a reminder of the power of religious stories on people's lives. It also demonstrates that religious controversies can and do reappear, even when they were thought to be solved.

Crosby, Fanny (Frances Jane) (1820–1915) Fanny Crosby, one of the United States' most important hymn writers, was

born Frances Jane Crosby on March 24, 1820, in Putnam County, New York. Her parents, John and Mercy Crosby, were impoverished farmers, and when Fanny became ill at six weeks old, the local physician was unavailable to treat the girl. A local healer suggested the use of poultices, which only exacerbated the problem, leaving the young girl blind.

Her father died the following year. Fanny was raised by her mother and grandmother in a strongly religious home and at a young age had memorized huge sections of the Bible.

At 15, Fanny entered the New York School for the Blind, where her teachers encouraged her interest in poetry and music. She soon became proficient at the piano and the guitar. Fanny also proved to be a gifted student and was a favorite among the faculty and students. In 1847, shortly after graduating, she was invited to join the faculty as an English and history teacher.

Fanny quit teaching in 1858 when she married Alexander Van Alstyne, a fellow teacher at the school and a musician. Both Fanny and Alexander had been influenced by the nascent women's rights movement and such fervently Protestant reformers as THEODORE DWIGHT WELD and the Grimké sisters. At Van Alstyne's insistence, Fanny retained her name following her marriage. The couple had one child who died in infancy. Van Alstyne died in 1902.

Crosby was a prolific writer of both secular and sacred works and a notable celebrity. She began writing as a child but did not publish her first book of poems, *A Blind Girl and Other Poems*, until she was 24. Other collections included *Monterey and Other Poems* (1853) and *A Wreath of Columbia's Flowers*. Crosby also wrote popular songs, many of which proved to be commercial successes. In her later life, she was much in demand as a public speaker. She served as the pianist at the funeral of President Ulysses S. Grant, playing her hymn *Safe in the Arms of Jesus*.

It was as a hymn writer that Crosby made her most lasting mark. During her life, she seems to have written nearly 8,000 hymns using more

than 100 pseudonyms. These include some of the most familiar and popular hymns of all time. Although most reflect the romantic and Victorian sentimentality of the late 19th century, they continue to stand the test of time, and few Protestant hymnals currently published fail to include at least one song by Crosby. Among her most famous hymns are "Blessed Assurance," "Jesus is Mine! (This is My Story, This is My Song)," "Pass Me Not Oh Gentle Savior," and "To God be the Glory."

Crosby died on February 12, 1915, and is buried in Bridgeport, Connecticut. In 1975, Crosby was inducted posthumously into the Gospel Music Hall of Fame, making her only its second woman member.

Crummell, Alexander (1819–1898) Of the many notable 19th-century African Americans bypassed by historians, Episcopal clergyman Alexander Crummell is perhaps the most fascinating. In his abilities and in the tragedies of his life, he is reminiscent of W. E. B. DuBois, who in many ways continued Crummell's legacy.

Born in 1819 in New York City of an African-born father and a free-black mother, Crummell grew up in an African-American community that valued both education and religion. After distinguishing himself in elementary and high school, Crummell was sent to the newly opened Noyes Academy in Canaan, New York. Angered by the presence of black students and the school's abolitionist leanings, the local farmers hitched the school

building to a team of 90 oxen and dragged it into a nearby swamp, ending its attempt to integrate education.

The abolitionist dream did not die, however, and the next year (1836) Crummell entered Oneida Academy (Whitesboro, New York), run by the abolitionist Beriah Green. After graduating in 1839, he applied for admission to the General Theological Seminary in New York City to prepare for the Episcopal priesthood, only to be rejected because of his race. Disheartened, he persevered, studying privately with clergymen in Providence and Boston.

Ordained in 1842, Crummell served in Providence until 1844, when he applied for admission to the diocese of Philadelphia. There the bishop refused his application because of his color. Stung by this refusal, Crummell left for New York City, where he organized a congregation among working-class blacks. Although he formerly shunned political activity, he became active in the Negro Convention Movement and abolitionist activities, where he was closely associated with Frederick Douglass.

Encouraged by friends to travel to England to solicit funds for a church building, Crummell left America for a quarter-century. He arrived in 1848 to an England that welcomed and honored him. For three years, he traveled and preached, raising money for his church. In 1851, with the patronage of Sir William Dodie, he entered Queen's College, Cambridge, graduating in 1853.

Rather than return to America, Crummell looked to his ancestral home of Africa and sailed for Liberia. He founded several churches throughout that country and soon expanded his work to include education, becoming master of the country's leading high school in 1858 and a professor at the newly formed Liberia College in 1861. In great demand as a speaker for religious and national events, Crummell—who viewed himself as a public teacher—used these occasions to speak for racial pride and moral strength. However, Crummell's racial views antagonized Liberia's caste-conscious

mulatto elite, who looked down on African-born and darker-skinned Liberians. When a coup restored the mulattoes to power, Crummell was threatened and his son jailed. Disillusioned, he returned to America in 1873.

Settling in Washington, D.C., he founded St. Luke's Church, where he served until 1894 as senior minister. Until his death in September 1898, Crummell's major concerns were the role of blacks within the Episcopal Church and the development of a black intellectual elite. To further these goals, he founded the Conference of Church Workers among Colored People (1883) and the American Negro Academy (1897). In his demand for educated blacks to lead in the redemption of the race, Crummell anticipated DuBois's call for an educated class that pursued knowledge not for its own purposes but with a practical intent—the elevation of the race.

Crummell established an organized African-American presence within the Episcopal Church and supported the expansion of black churches and priests. He also created a tradition of black scholarship in the United States through the formation of the American Negro Academy. Finally, Crummell was a "public theologian," calling blacks to racial pride and moral strength, while demanding that whites recognize that racism violated their own higher religious and political values.

Cushing, Richard James (1895–1970) Perhaps no one embodied the spirit of American ROMAN CATHOLICISM, at least in its Irish and northeastern version, than did Richard James Cushing, archbishop of Boston from 1944 until his death on November 2, 1970. At ease both with his faith and with American society, Cushing was a jovial figure whose free-and-easy air attracted friends and admirers among all classes and religions.

Born in Boston to working-class Irish immigrant parents on August 24, 1895, he early developed the inclination toward the priesthood. After two years at Boston College (1913–15), he transferred to St. John's Seminary in Brighton, Massachusetts, graduating in 1921. Following his ordination in that year, he took over a parish but was transferred to the Boston office of the Society for the Propagation of the Faith, becoming its director (and a monsignor) in 1928. Cushing, long interested in foreign missions, soon turned the Boston office of the society into the most active and effective in the nation. His success as an administrator led to his appointment as auxiliary bishop of Boston in 1939. In 1944, he succeeded Cardinal William O'Connell as archbishop of Boston.

Cushing's episcopacy was a marked contrast from that of his predecessor. Where O'Connell had been an aristocratic and urbane Catholic separatist, Cushing was an informal man of the people who took pride in his humble origins. No separatist, he spoke in Protestant churches as well as synagogues, and was responsible for the establishment of a Catholic chapel at predominantly Jewish Brandeis Uni-

versity, to the horror of many Catholic conservatives. He even arranged for the midnight mass at St. John's Seminary to be televised, with a commentary, so that non-Catholics could understand what was happening.

Although often criticized for his ecumenicity, he refused to back down, declaring in a speech at Harvard in 1963, "I'm all for Catholics being identified with Protestants and Jews . . . in every possible friendly way. Nobody is asking them to deny their faith and they shouldn't be asking anybody to deny their faith." He pressed these views during the second Vatican Council (see VATICAN COUNCIL II) where, although his weak Latin led him to absent himself from most deliberations, he was deeply involved in the discussions leading up to the declaration on religious liberty and on Roman Catholic relations to other faiths.

Cushing welcomed the results of Vatican II as long overdue, seeing them as a legitimate memorial to John XXIII, with whom he identified. He was less favorably disposed toward Paul VI and felt that the encyclical *Humane Vitae* was an unfortunate public proclamation about matters of private conscience.

Despite this, his responses to the council were as contradictory as his responses to other political and social occurrences. A longtime member of the NAACP, he shared the view of his fellow Catholic J. Edgar Hoover that MARTIN LUTHER KING, JR., was a dangerous subversive. Outspoken in his support for labor unions, he also supported the John Birch Society due to its strong anticommunism.

As a bishop, Cushing greatly expanded the work within the diocese. Some 80 churches were built during his episcopate, along with three colleges, the first airport chapel, a seminary for older men seeking ordination, and the first diocesan center for radio and television in the country. His interest in missions continued unabated. He founded the Missionary Society of St. James the Apostle and allowed his diocesan priests to serve in South America.

His greatest concern was for the poor and the weak. The diocese built six new hospitals during his reign, and Cushing made frequent pastoral visits to Boston's jails. In 1947, he established St. Coletta's School for mentally retarded children. This was his special project, and he arranged to be buried on its grounds. Not one for ceremony, during his visits to homes for the elderly, he gleefully joined in the singing or dancing. Cushing saw himself as one of the people, and he took great pride in his free and easy interchange with the poor and the weak.

Although he identified with the working-class Irish of Boston, his influence extended into the ranks of the rich and powerful as well. He often called upon Joseph Kennedy to aid the diocese's fundraising and became friendly with the young John F. Kennedy. When Kennedy announced his candidacy for president, Cushing, although doubtful that the United States was ready for a Catholic president, assisted the campaign. Here Cushing asserted his most common theme, the compatibility of American values and Catholicism, as well as the inviolability of the human conscience, asserting in one statement that, "Whatever may be the custom elsewhere, the American tradition, of which Catholics form so loyal a part, is satisfied simply to call to public attention moral questions with their implications, and leave to the conscience of the people the specific political decision which comes in the act of voting."

Cushing's later years were difficult ones. Cancer, asthma, and ulcers left him drained and weak. He also watched as the numerous institutions he had built pushed the diocese into financial decline. Recognizing the need for new leadership, he resigned in September 1970 and died shortly thereafter on November 2, 1970.

Cushing's significance for the American church was twofold. First was his leader-

ship in calling for the church to recognize that it lived in a dynamic world to which it must respond. Certainly the church had its unchanging essentials, "but beyond these," he said in 1961, "there must always be innovation, enterprise, new vision." Before leaving to attend the 1963 conclave to elect a successor to John XXIII (Cushing had been made a cardinal in 1958), he admitted that the church had not always recognized that fact, expressing his desire that "the new Pope will be living in the twentieth century, and will think the twentieth century, and not the fourteenth or sixteenth century."

Cushing stood in the line of earlier bishops, most notably JOHN CARROLL and JAMES GIBBONS, who proclaimed the compatibility of Catholicism and American political values. The United States had a distinctive political and cultural tradition to which European models did not apply and that held that a person's Catholicism in no way affected her or his ability to be a good citizen or a servant of the general welfare. Cushing felt comfortable around non-Catholics and did much to break down the remaining elements of suspicion that they harbored toward the Roman Church (see ANTI-CATHOLICISM).

Personable, warm, and unpretentious, forward-looking but not cerebral, Cushing had the personality to make American Catholics confront the realities of the time and to cause non-Catholics to see the human, non-threatening face of the church. For these reasons, he was one of its most popular and loved representatives.

Dabney, Robert Lewis (1820–1898)

Robert Lewis Dabney was a Presbyterian minister, theologian, and one of the most articulate defenders of the defeated South in the post-CIVIL WAR period. Chosen during the war to be chief of staff to Confederate general Thomas J. "Stonewall" Jackson, a pious Presbyterian, Dabney published the first major biography of Jackson.

Dabney was born in Louisa County, Virginia, on March 5, 1820. He was educated at Hampden-Sydney College (1836–37), the University of Virginia (1842), and Union Theological Seminary, Virginia (1846). After serving as pastor of the Presbyterian church in Tinkling Spring, Virginia, and as headmaster of a classical academy, Dabney returned in 1853 to Union Seminary, where he taught for the next 30 years. Although he had cautioned political moderation prior to the outbreak of the Civil War, Dabney became a strong advocate of the Confederacy once the fighting began. He was present as the chaplain of a Virginia regiment at the First Battle of Manassas in 1861 and served for a few months in 1862 as Jackson's chief of staff. After Jackson's death in 1863, Dabney gathered materials for his biography. *The Life and Campaigns of Lieut.-Gen. Thomas J. Jackson*, published in 1866, celebrated both the military and the religious virtues of the Southern military leader.

After the war ended in 1865 and for the rest of his long life, Dabney kept alive the South's LOST CAUSE MYTH. In *A Defence of Vir-*

ginia, and Through Her of the South (1867), he defended slavery and the Confederate war effort and reminded his people of the miseries they were suffering at the hands of Yankee "invaders." He was a special critic of the emerging industrial capitalism of the "New South," a trend popularized by Atlanta editor Henry Grady and Methodist educator and minister ATTICUS G. HAYGOOD. In a commencement address at Hampden-Sydney in June 1882, Dabney argued that the outcome of the war was a providential tragedy, and he lamented the fact that many were seeking to remake the South with a materialistic northern mold. He feared that southerners would make temporal wealth their "idol, the all in all of sectional greatness," thus leading their region and its people into the worship of false gods.

Dabney's reputation as a theological scholar and polemicist brought him a place of prominence in his denomination. Known for his conservative CALVINISM, in his best-known academic work, *The Sensualist Philosophy of the Nineteenth Century* (1875), Dabney attacked various forms of modernist (see MODERNISM [PROTESTANT]) theology. Consistently pro-southern even in church debates, Dabney also opposed all efforts to reunite southern Presbyterianism with the church in the North.

Dabney fell ill with bronchitis in 1882, and poor health forced him to leave Virginia the next year. He assumed the professorship of moral philosophy at the University of Texas in 1883 and helped found Austin Theological

Seminary, serving on the faculty there until just before his death. Although he had entirely lost his eyesight by 1890, Dabney continued to lecture from memory for several more years. He died in Victoria, Texas, on January 3, 1898.

Dalai Lama XIV, Tenzin Gyatso (1935–) *Dalai Lama*, strictly speaking, is a title, not a given name. The current Dalai Lama, Tenzin Gyatso, or, to give his full name, Jetsun Jamphel Ngawang Lobsang Yeshe Tenzin Gyatso ("Holy Lord, Gentle Glory, Compassionate, Defender of the Faith, Ocean of Wisdom"), is the 14th Dalai Lama, the religious leader of the Gelug, or "Yellow Hat," school of Tibetan (and Mongolian) BUDDHISM. He also is the head of state and government of the Tibetan government in exile. Followers view the Dalai Lama as the incarnation of Avalokiteshvara, the bodhisattva of compassion. Each Dalai Lama is understood to be a reincarnation of his predecessor. Like Pope JOHN PAUL II, the current Dalai Lama has had such an influence on American religion that it is reasonable to include him in this volume.

He was born on July 6, 1935, and named Lhamo Thondup to a family of farmers in the Amdo province of Tibet, the fifth of nine children to survive infancy. When he was about two, the leaders of Tibetan Buddhism began the process of seeking the new incarnation of the Dalai Lama, the 13th Dalai Lama having died in 1933. Among the omens directing the search was the fact that the head on the embalmed body of the 13th Dalai Lama had

turned toward the northeast, indicating where to search for his successor. Shortly afterward, the regent, Reting Rinpoche, experienced a series of visions that pointed to Amdo and included a one-story house with distinctive guttering and tiling.

The monks undertook an extensive search. When they arrived in Taktser, the Thondup's village, they saw a house resembling the one in the regent's vision. After questioning the young boy's parents, they undertook the traditional test to determine whether an individual is an incarnation of a bodhisattva. They placed an array of objects before the child: toys, baubles, religious relics, and shiny things guaranteed to draw a child's attention alongside objects that belonged to the previous Dalai Lama. Thondup gravitated to the items owned by the 13th Dalai Lama.

Thondup was acknowledged as the Dalai Lama and received his new name. While Tibetan Buddhists typically refer to him as Yeshe Norbu ("Wish-Fulfilling Gem") or Kundun ("The Presence"), in the West he often is referred to as "His Holiness, the Dalai Lama."

Removed from his family and taken to Lhasa, the capital of Tibet, Tenzin Gyatso began his monastic education. A precocious and mischievous child, his autobiography tells of numerous antics and tricks played on older monks. He also was a dedicated student and quickly became aware of the gravity of his position and role. In 1959, he undertook his final examinations, passed with honors, and was awarded the Geshe Lharampa degree (basically a doctorate in Buddhist philosophy).

By this time, however, a dark cloud had engulfed Tibet. Nine years previously, the Chinese Communists had begun to move into Tibet, slowly consolidating control over the country. The Dalai Lama refused to relinquish his position as Tibet's ruler, which he had assumed at the beginning of the Chinese takeover. Growing Chinese violence against the Tibetan people and the harsh crackdown

on dissent convinced the Dalai Lama and his advisers that he should prepare to leave the country. This view was intensified when two leading oracles gave similar advice. Disguised as a soldier, the Dalai Lama slipped out of Lhasa on March 17, 1959. Three weeks later he arrived in India, where he was given asylum and began the process of building a government in exile and providing support for the numerous Tibetan refugees who already were in India and those who would soon join him.

Since his exile, the Dalai Lama has undertaken an important series of activities designed to improve the lives of the Tibetan people, to pave the way for the creation of a democratic and independent Tibet once the Chinese end their occupation, to promote Buddhism, and to further the relationships between Buddhism and other faiths and Tibetans and other peoples.

Prior to his exile in 1959, the Dalai Lama had left Tibet only twice, in 1954 to negotiate with the Chinese and in 1956 to attend a Buddhist ceremony in India. Since arriving in India, the Dalai Lama has become a regular international traveler, making more than 300 trips (as of 2006) and visiting more than 63 countries. The United States has been his most popular (non-Indian) destination, with more than 30 visits.

One of the most widely traveled spiritual leaders, the Dalai Lama has used his trips to focus on four commitments: the protection and self-determination of the Tibetan people, the spreading of the dharma (Buddhist teachings), the promotion of human rights and values among all peoples, and the promotion of religious harmony and understanding. He has striven to incorporate modern science into Buddhist understandings and has expressly stated that demonstrated scientific facts should take precedence over ancient religious traditions. At the same time, he has encouraged greater study of the relationship between the mind (particularly Buddhist teachings

The leader of the Tibetans in exile who fled the Chinese invasion, the Dalai Lama has been a leading advocate for Buddhism, peace, and ecology. (*Dan Farber*)

about the mind), meditation, and health. In his writings (he has published more than 72 books) and speeches, he regularly emphasizes the centrality of spiritual values in constructing a truly humane, just, equitable, and peaceful world. In his Nobel Peace Prize lecture, he stated: "Material progress is of course important for human advancement. In Tibet, we paid much too little attention to technological and economic development, and today we realize that this was a mistake. At the same time, material development without spiritual development can also cause serious problems. In some countries too much attention is paid to external things and very little importance is given to inner development. I believe both are important and must be developed side by side so as to achieve a good balance between them. . . . Inner peace is the key: if you have

inner peace, the external problems do not affect your deep sense of peace and tranquility. In that state of mind you can deal with situations with calmness and reason, while keeping your inner happiness."

In 2005, *Time* magazine named him one of the world's 100 most influential people. The following year, the U.S. Congress awarded the Dalai Lama its highest award, the Congressional Gold Medal (which he received in 2007). This honor is given to individuals who have performed an outstanding deed or act of service that contributes to the security, prosperity, and national interest of the United States. In 2007, the Dalai Lama accepted an academic appointment for the first time, becoming a Presidential Distinguished Professor at Emory University, from which he previously received an honorary doctorate in 1998.

Daly, Mary (1928–) Mary Daly is America's most widely known and controversial feminist philosopher and theologian. A prolific writer, Daly has published many books that offer sharp criticisms of patriarchal religions and attempt to construct not only a new postpatriarchal feminist theology

but also a new language in which to conduct that enterprise.

Born on October 16, 1928, in Schenectady, New York, Mary Daly attended Catholic schools in a working-class neighborhood. She attended the College of Saint Rose in Albany and received an M.A. in English at the Catholic University of America in Washington, D.C. She earned three Ph.D.s: in religion at St. Mary's College (1954) and in theology (1963) and philosophy (1965) at the University of Fribourg. Her dissertation in philosophy is entitled *Natural Knowledge of God in the Philosophy of Jacques Maritain*.

In 1966, Daly began teaching in the Theology Department at Boston College. She was an assistant professor from 1966 to 1969, when she was named an associate professor. She became the first chair of the Women and Religion section of the American Academy of Religion in 1971. Despite the support of professional societies and much student protest, she was not granted promotion to full professorship at Boston College. Daly was forced into retirement in 1999 after a male student insisted on enrolling in one of her courses and Daly insisted on an all-female class. A legal fight between Daly and Boston College ensued and was settled in 2001.

Since the publication of *The Church and the Second Sex* in 1968, which criticized sexism in the Christian church but did not aim to move beyond Christianity, Daly has been at the forefront of FEMINIST THEOLOGY and philosophy. Daly was the first woman to be invited to preach at Harvard University's Memorial Chapel, but in 1971, she and others walked out of that church, calling for an exodus from patriarchal religion. This event marked the beginning of Daly's post-Christian work as well as the initiation of "sisterhood as antichurch," a term she later changed to "Sisterhood as Cosmic Covenant" in *Beyond God the Father: Toward a Philosophy of Women's Liberation* (1973).

In addition to developing her own feminist theology, Daly has developed her own

feminist vocabulary, most notably in the *Websters' First New Intergalactic Wickedary of the English Language* (with Jane Caputi, 1987). Daly has also been at the forefront in raising lesbian concerns in feminist theologizing.

Mary Daly continues to be a major force in religious studies. Her autobiography, *Outercourse*, shows the importance to feminist theology of the narrative retelling of women's experiences. In *Quintessence*, Daly offers a radical feminist philosophical response to the millennial world of genetics, cloning, and environmental destruction.

Davies, Samuel (1723–1761) Samuel Davies was a Presbyterian minister, educator, and advocate of religious freedom before the AMERICAN REVOLUTION. He was instrumental in establishing the Hanover (Virginia) presbytery in 1755, his denomination's first association of churches in the South. A preacher of great power, Davies was a successful evangelist during the GREAT AWAKENING of the mid-18th century.

Davies was born near Summit Ridge, Delaware, on November 3, 1723. After studying at Samuel Blair's academy in Pennsylvania, he was licensed to preach in 1746. In 1748, he moved to Hanover County, where, as a dis-

senting clergyman in the midst of Virginia's Anglican religious establishment, he faced severe restrictions on his ministerial activities. At that time, pious men and women whose religious needs were not met by the services of the Church of England could gather only in private at their homes. Davies fought a lengthy legal battle on behalf of the seven Virginia Presbyterian churches he served. Arguing that the Toleration Act of 1689, which permitted freedom of worship in Great Britain, applied to the British colonies as well, Davies eventually won a favorable ruling in 1755. After that date, Presbyterians were free to organize their own churches.

Davies traveled throughout Virginia to help build up PRESBYTERIANISM in the colony. His sympathies lay with the prorevival faction within his denomination, and his sermons contributed to the final, southern phase of the Great Awakening. Davies attracted such fame as an evangelist that he was elected to the presidency of the College of New Jersey (now Princeton University) in 1759. His move to New Jersey, however, left no educated Presbyterian minister in Virginia, a fact that caused his church to enter a period of decline.

In poor health, Davies served only briefly at Princeton. He died on February 4, 1761, just 18 months after assuming the office of college president.

Davis, Andrew Jackson (1826–1910) The career of Andrew Jackson Davis as the greatest philosopher of American SPIRITUALISM began when, at the age of 17, he attended a lecture by an itinerant mesmerist and discovered that he apparently possessed the power of clairvoyance. In 1844, Davis went into a hypnotic trance during which he claimed to have learned that he could diagnose and cure

diseases, converse with the spirits of deceased luminaries such as Emmanuel Swedenborg (see SWEDENBORGIANISM), and even travel to spiritual worlds. Dubbed the “Poughkeepsie Seer,” Davis became America’s first and most successful professional medium. Through voluminous writings and an occult healing practice, he helped to precipitate the Spiritualist boom of the mid-19th century.

Born in Blooming Grove, New York, to a family of farmers, weavers, and shoemakers, Davis received little formal education. He attributed his insights into higher truths not to his own work but to the influence of spirits. Davis first outlined his beliefs and practices in a series of lectures that he delivered, supposedly while in a trance. Those lectures were published in 1847 as Davis’s first book, *The Principles of Nature, Her Divine Revelation and a Voice to Mankind*. Davis published many more books, including his five-volume magnum opus, *The Great Harmonia* (1850–55). His writings also appeared in *The Univercoelum* (1847–49), a New York weekly friendly to Spiritualism. In addition to writing and lecturing, Davis practiced medicine. He received a medical degree from the United States Medical College in New York City in 1886.

Although Davis was undoubtedly the most important thinker in 19th-century American SPIRITUALISM, his tendencies toward mysticism and philosophy distinguished him from many of his fellow Spiritualists, who lacked interest in theorizing about their experiences and claimed to mistrust anything that they could not demonstrate empirically.

Davis’s “harmonial philosophy,” which drew on Swedenborgianism, MESMERISM, and other romantic currents, postulated six ascending spheres of existence. According to Davis, humans progressed onward and upward through these spheres until they met God, whom Davis equated with the power of love and wisdom that resided in the Great Celestial Center. This divine power manifested itself, he believed, in all human beings,

who were in his view only emanations of the Divine Mind.

Davis demonstrated his kinship with other philosophers of “harmonial religion” by rejecting the reality of both evil and sin. Davis’s cosmic optimism was most apparent in his theory of “Summerland,” a heavenly abode where people go after death and where the season is always summer.

Davis’s theories were not entirely otherworldly. Like other universal reformers of his time, Davis believed that the transformation of individuals would result in sweeping social reforms. Ever the optimist, he looked forward to a utopian social order in which all plants, animals, and human beings would work together harmoniously for their common benefit.

Late in his life, Davis ran a bookstore and conducted a private medical practice in Boston. He died in 1910, but his legacy lives on in 21st-century America in the popular practice of channeling the spirits of the dead.

SRP

Bibliography: Andrew Jackson Davis, *The Principles of Nature, Her Divine Revelation and a Voice to Mankind* (New York: S.S. Lyon & W. Fishbough, 1847); Robert W. Delp, “Andrew Jackson Davis: Prophet of American Spiritualism,” *Journal of American History* 54 (June 1967) 43–56.

Day, Dorothy (1897–1980) One of the most fascinating people in American religious history, Dorothy Day stood in a long line of American converts to ROMAN CATHOLICISM whose faith and life made a lasting impact on that church and on society. As the driving force in the CATHOLIC WORKER MOVEMENT, she inspired many, both Catholics and non-Catholics, to an active Christianity devoted to the poor and to peace.

The third of five children of John and Grace (Satterlee) Day, Dorothy Day was born in Brooklyn, New York, on November 8, 1897. Her father’s work took the family to San Fran-

cisco in 1903, and the 1906 earthquake drove them to Chicago in 1907. While living in Chicago, the sensitive and studious Day read Upton Sinclair, whose graphic descriptions of work in the Chicago stockyards moved her deeply.

A Hearst scholarship sent her to the University of Illinois, Urbana, in 1914. While there, her radical politics and unconventional lifestyle increasingly alienated her from her family, and Day had to work as a maid to support herself. Often she was poorly clothed and hungry. These difficulties did little to stifle her intellect and much to deepen her compassion for the poor and unfortunate.

Leaving the university in 1916, she moved to New York, where she became a journalist. She worked for the *Call*, *Masses*, and *Liberator*, all leading left-wing magazines. Active in radical politics and living a rather bohemian life, Day became pregnant and had an illegal abortion in 1919. These personal upheavals—along with political turmoil, including the crackdown on radicals during World War I—distressed Day greatly. The source for her only novel, *The Eleventh Virgin* (1924), they drove her to greater introspection.

Drawn increasingly toward religion despite herself, she had her daughter Tamar (born in 1927) baptized over the objections of Tamar's father. Required to take religious instruction as part of Tamar's baptism, Day began to consider being baptized herself, to which she submitted on December 28, 1927. The internal struggle she experienced during this process of conversion is described in her book *The Long Loneliness*, which stands alongside THOMAS MERTON's *The Seven Storey Mountain* as a classic American Catholic conversion narrative.

While her conversion brought Day internal peace, it led to her estrangement from her friends, who viewed religion as an oppressive superstition. Neither was she at ease among her new community. Day's political ideas made her uncomfortable with what she saw

as the church's complacency with an unjust social order. The ability to merge her politics and her faith occurred after a meeting with Peter Maurin. A French-born Catholic philosopher, Maurin called for a process of social reconstruction known as the "green revolution." Based upon communal farming and the establishment of houses of hospitality for the urban poor, this revolution was driven by the idea of correlating the spiritual with the material. Those concerned with the poor were to become one with them, not doing *for* the poor and weak but *with* the poor and weak.

These ideas found their voice in the newspaper Maurin and Day founded in 1933. The *Catholic Worker* expressed the ideas of economic justice, pacifism, and racial equality that were the hallmark of Maurin's and Day's thought. In the following year, they founded

Dorothy Day addresses a demonstration in Union Square, New York, circa 1969. (Getty)

the first house of hospitality, St. Joseph's, in New York City. This was followed by houses in other cities, as well as communal farms where volunteers lived lives of voluntary poverty with the poor and homeless.

During WORLD WAR II the movement suffered as a result of its pacifism, which cost it much support. Day herself was repeatedly jailed for refusing to participate in New York's compulsory civil defense drills. The Catholic Worker movement supported conscientious objectors and offered alternative service at one of its farms in upstate New York.

Until her death on November 29, 1980, Day continued her struggle for a just social order, a struggle rooted in her belief in divine love as the ultimate transfiguring value. She believed that by literally living out Christ's command to love one's neighbor, the world would be transformed. Day's books, articles, and speeches took the message of the Catholic Worker movement to nearly all American parishes, and there were few areas where these views had not touched some members. Her influence reached Protestants and atheists as well. At the time of her death, Day was revered as America's most influential Roman Catholic voice calling for peace and social transformation.

"death of God" theology In April 1966, a cover of *Time* magazine was headlined "Is God

Dead?" Needless to say, such a public question met with much consternation and dismay, for it identified one of the most extreme, misunderstood, and perplexing periods in 20th-century theology, the so-called radical or "death of God" theology. Never a coherent movement, in fact, many of those associated with it meant different things by the term. This theological phase was an attempt to take seriously the contemporary situation in light of the work of the century's leading theologians.

The roots of "death of God" theology lay in 20th-century NEO-ORTHODOXY, specifically the work of Karl Barth, Dietrich Bonhoeffer, and PAUL TILLICH. Although all three would have disavowed the use put to their thought, radical theology took seriously Barth's claim that Christianity was not a religion, Tillich's claim that God does not exist as a being, and Bonhoeffer's cryptic comments about the role of Christianity in a "world come of age."

Theologians such as Gabriel Vahanian, Paul Van Buren, and William Hamilton wondered how humanity in the last half of the 20th century could relate to God when humanity had lost all sense of transcendence. For Vahanian, whose 1961 book *The Death of God* gave the movement its name, this was *the* issue. People whose lives were void of any feeling of the transcendent, who lived in societies with no underlying religious significance, and who existed in historical time without any sense of providence were not people capable of experiencing the divine presence. For such a people and society, God was effectively dead. While Vahanian never concluded that God did not exist, he did believe that unless there were a radical transformation of Western culture, a transcendent God could not be a living, vibrant reality.

Others, however, were not so reticent. Paul Van Buren and William Hamilton took the fact of Western society's absence of transcendental meaning as determinative rather than descriptive. For them, the absence of transcen-

dental values in society demonstrated that there was no God. In place of God, however, was the true humanity of the person Jesus, whose all-embracing love—demonstrated by his treatment of others and his death on the cross—showed us how we should live.

Richard Rubenstein, emerging out of the Jewish tradition, also used the existing historical context as the basis for his conclusion that neither God nor religion as traditionally understood were possible. The evil wrought by the Nazis in the Holocaust prevented one from proclaiming the existence of God and God's covenant with the Jewish people. It also prevented one from believing that individual and social life have any meaning beyond that which individuals and groups create themselves. Any meaning to be found in the life of the Jewish people must be made by the Jewish people themselves in the act of creating their own state and culture.

Perhaps the most extreme and undoubtedly the most flamboyant of the radical theologians was Thomas J. J. Altizer. In his book *The Gospel of Christian Atheism* (1966), Altizer drew on the German philosopher Georg W. F. Hegel to develop a radical incarnational theology. Altizer took seriously the traditional Christian claim that in Jesus, God had become man, or in Hegelian terms, the Universal had become specific and concrete. Once the Universal is concretized, however, it loses its Universal character. God become human in the world is no longer God as transcendent reality independent of the world. At the crucifixion, God as God truly dies. In this act, however, we are shown how to live out our lives in the world.

The extreme language used by some of these theologians and the sensational coverage they received in the popular press gave them a notoriety not often accorded to serious theological reflection. While as a major mode of theological development the "death of God" theology was short-lived, the challenges it presented increased theological reflection

on doctrines of God, the nature of the incarnation, and the implications of social realities for doing theology.

deep ecology Norwegian philosopher Arne Naess (b. 1912) coined the term *deep ecology* in a 1973 article, "The Shallow and the Deep, Long-Range Ecology Movements." The phrase has since become the most widely accepted label for an important branch of the global environmental movement.

Deep ecologists trace their sentiments to personal experiences of "ecological consciousness," which they describe as an intuitive, affective perception of the sacredness and interconnectedness of all life. A person who has experienced the "ecological self" transcends the limitations of ego, viewing the self not as separate from and superior to all else but rather as a small part of the divine cosmos. From this perspective, all life and even ecosystems themselves have inherent value, even if they are not plainly useful to humans. Deep ecologists credit Aldo Leopold with expressing this idea succinctly in his landmark "Land Ethic" essay, published posthumously in *A Sand County Almanac* (1949). There Leopold

argued that humans ought to act only in ways designed to protect the long-term flourishing of all ecosystems. Deep ecologists now call this perspective *ecocentrism* (or sometimes *biocentrism*) and trace today's environmental crises to anthropocentrism, the perspective in which nature is valued exclusively in terms of its usefulness to humans. Deep ecologists conclude that only by "resacralizing" our perceptions of the natural world can we put ecosystems above narrow human interests and thereby learn to live harmoniously with the natural world and avert human-caused ecological catastrophe.

While these spiritual sentiments and ecocentric ethics make it possible to speak of a shared deep ecology tradition, differences about the proper means to promote ecosystems have increasingly led to differentiation within the movement.

One important North American branch is bioregionalism. Envisioning communities of creatures living harmoniously and simply within the boundaries of distinct ecosystems, bioregionalism stands against large, growth-based industrial societies, preferring small, self-sufficient, and ecologically sustainable economies along with decentralized political self-rule. Deep ecology is best known, however, as the philosophy underpinning the work of radical environmentalists and Earth First! activists. Adding radical political analyses ("democracy is a sham") to ecological science ("we are in the midst of an unprecedented extinction crisis exacerbated and perhaps caused by human overpopulation") and spiritually based moral sentiments ("all life is sacred"), radical environmentalists believe that it is inadequate to focus exclusively on developing bioregionally sustainable communities. Ecocide must be resisted, they argue, by diverse means, including extralegal tactics and even sabotage. Finally, many deep ecologists believe that the root of the ecological crisis is spiritual. So they promote transformation of consciousness through ritual,

poetry, and music designed to evoke wild, authentic, and ecological selves in spiritually dead humans.

In the early 1980s, deep ecology "road shows" resembling itinerant revival meetings began serving as recruiting grounds for the most important ritual process invented by deep ecologists: the Council of All Beings. The council was created primarily by two practicing Buddhists, Joanna Macy and John Seed (who now calls himself a pagan) and functions as a "ritual of inclusion" helping people to feel kinship with other life forms and ecosystems. In council rites, humans are imaginatively or shamanically possessed by the spirits of nonhuman entities (animals, rocks, soils, rivers), allowing those entities to verbalize their anger at being so poorly treated by people and to cry out for fair treatment and harmonious relations among all ecosystem citizens. The humans in these rites seek personal transformation and empowerment for their ecological activism—through the gifts of special powers granted by the nonhuman entities in their midst. More recently, Seed and others have developed workshops that use meditative breath work and evocative music to deepen still further the participants' experiences of their ecological selves.

Today the Council of All Beings can be found at Earth First! wilderness rendezvous, festivals of NEOPAGANISM, and sometimes at NEW AGE RELIGION gatherings and meetings of environmentalist Christians. What distinguishes deep ecology from other forms of contemporary spirituality seeking to resacralize nature, however, is that deep ecologists are much less optimistic about the capacity of humans to change their ways. They do not share the optimism of many New Age practitioners. They also tend to be much more critical of the nation-state and of consumer capitalism than either New Age or neopagan devotees. In fact, deep ecologists tend to view modern industrial societies as incompatible with ecologically appropriate lifeways, prefer-

ring decentralized political self-rule and low-technology economic alternatives.

Deep ecology has found fertile ground in North America, particularly within the COUNTERCULTURE that began with the BEAT MOVEMENT in the 1950s and exploded during the 1960s and 1970s. (Beat poet Gary Snyder is now an honored "elder" of the deep ecology movement.) Several followers took the next logical step and in 2001 organized the Church of Deep Ecology. While the church seems to be limited to a small congregation in Minnesota, its Web site and materials have a national reach and promote deep ecology-related events throughout the country.

Some of the premises of deep ecology have generated a backlash and may have hurt the environmental movement. Among evangelical Christians, there is tremendous discomfort with the pagan components (see NEOPAGANISM) of deep ecology and its apparent denigration of human being and human creativity. This latter theme also disturbs others, including many secularists who oppose the movement's flaunting of irrationality as reflected in gatherings such as the "Anarch-Primitivist Gathering, Feral Visions Against Civilization."

In its early years, deep ecology had a wider resonance, given its focus on helping human beings see themselves as linked to the natural world. Beginning in the late 1990s, many of its supporters increasingly gave the impression of waging war against human beings. Which component of the movement gains dominance remains to be seen, however, as the illegal activities of certain groups associated with deep ecology gain greater visibility and notoriety. The entire movement may begin to suffer from the excesses of a few.

Dewey, John (1859–1952) John Dewey, philosopher and educator, set many of the terms for discussing liberal approaches to religion, political life, science, and education in America for several decades.

Dewey was born to middle-class parents Archibald and Lucina Rich Dewey in Burlington, Vermont, on October 20, 1859. Dewey grew up in a household devoted to religious and philanthropic concerns, undergirded with a love of learning. In 1875, he enrolled at the University of Vermont. Teaching high school upon graduation in 1879, Dewey grew frustrated with the problems of classroom discipline and left for graduate studies at Johns Hopkins, where he enrolled in 1882.

He took his first academic position at the University of Michigan in 1884, becoming chair of the philosophy department in 1888. At Michigan, Dewey, who had inherited his mother's passion for social reform, focused much of his energy on reconciling his New England Protestantism and what he saw as the democratic potential of American life with the modern evolutionary thought of such Europeans as Charles Darwin, Auguste Comte, and Karl Marx.

A member of the Ann Arbor Congregational Church, Dewey regularly taught Bible classes and served on church committees as well as the board of trustees for the Student

Christian Association there. During this time, he married Alice Chipman, a free-thinking student who was to have a lasting impact on both his social concerns and his theological perspective. The German philosopher G. W. F. Hegel and his English followers, such as T. H. Green, also heavily influenced Dewey during his graduate training. In these years, he spoke of Christian themes in a language that, like Hegel's, sought to emphasize the immanence of the divine within both the natural world and human social life. In Ann Arbor, he focused his sights on economic and social problems, defending the rights of workers in the wake of Chicago's Haymarket Square riots in 1887 and calling for government regulation of industry and business. While Dewey had much in common with other liberal Protestant reformers of his day (see SOCIAL GOSPEL), his Hegelianism led him to conclude that the religious and the secular were inseparable and that humans themselves would eventually make the kingdom of God visible in the democratic community as a whole. Thus, he told students in 1892, "The function of the church is to universalize itself and pass out of existence."

By the time he moved to the University of Chicago in 1894, Dewey was leaving liberal Protestantism behind. In his Chicago years, he spoke of religion in the modern world as best expressed through democracy, science, and art and abandoned the project of reconciling Christianity itself with modernity. Increasingly, he also strove to separate naturalism and empiricism from Hegel's philosophical absolute "Spirit." As he matured, he spoke most frequently of authentic religion as "natural piety," an experience available apart from the authoritative power of religious traditions and institutions.

At the core of Dewey's philosophical approach was a deep belief in the power of education and the need for "reconstruction" in both intellectual and social life. At Chicago, he was responsible for the university's educational

work, creating a Department of Pedagogy and an experimental elementary school. Working with progressives such as Jane Addams of Hull House and the National Education Association, Dewey was in the vanguard of a movement to reconstruct public education around the insights obtained from the social sciences and psychology, a movement that had a lasting, and often controversial, impact on American education throughout the 20th century. Angered over Chicago's lack of support for his experimental approach to education, Dewey accepted a position at Columbia University's Teachers College and Department of Philosophy in 1904.

Apart from a two-and-a-half-year stay in China and Japan after World War I, Dewey remained at Columbia until he retired in 1930. In the years between his return from Asia and the end of World War II, Dewey was prolific, producing books on art, epistemology, education, political theory, and religion. He was also extremely active in politics throughout this period. A trip to the Soviet Union in 1928 gave him hope that socialism could become a viable force in American life, and while he soon became an adamant anti-Stalinist, he never abandoned the hope that socialism and democracy could be combined successfully.

In the 1930s, his faith in the potential of a democratic, scientific culture was attacked by a number of intellectuals on both left and right, the foremost being REINHOLD NIEBUHR. A signer of the HUMANIST MANIFESTO, Dewey expressed his religious ideas most clearly in *A Common Faith* (1934), in which he sought to separate the natural "religious" quality of human experience from any association with historic religions, which he saw as limited expressions of such experience at best. In that work, he also attacked the resurgent emphasis on human sin common among Christian theologians and preachers influenced by Niebuhrian NEO-ORTHODOXY.

While his significance endures in many fields, during the 1940s, Dewey's fellow phi-

losophers became absorbed with questions far removed from those of freedom, democracy, and creativity, the concerns that Dewey saw as philosophy's central contribution to modern society. Active until the end of his life, Dewey died of pneumonia on June 1, 1952.

Dharmapala, Anagarika (1864–1933)

The first Buddhist missionary to the United States and the founder of the Maha Bodhi Society was born David Hewivitarne to a middle-class family in Colombo, Ceylon (now Sri Lanka) in 1864. In his early adulthood, he took the name Anagarika Dharmapala, which means "homeless defender of the Buddhist doctrine."

Though his parents were practicing Sinhalese Buddhists, they sent him to Christian schools where he attended church and endured compulsory Christian education. Following a much-publicized Buddhist-Christian riot, likely precipitated by Catholics who turned a Buddhist procession into a brawl, Hewivitarne left his Christian schooling behind.

Impressed with the pro-Buddhist and anti-Christian lectures delivered during an 1880 tour of Ceylon by the Theosophists HELENA PETROVNA BLAVATSKY and HENRY STEEL OLCOTT, Dharmapala joined the Theosophical Society (see THEOSOPIHY). He was soon working alongside Olcott in Ceylon, where they labored to raise money for Buddhist education, and in other parts of Asia, where they

endeavored to unite northern and southern Buddhists into one ecumenical International Buddhist League.

Influenced by the lamentations of the Victorian poet Edwin Arnold over the degradation of Bodh Gaya, India, the place of the Buddha's enlightenment, Dharmapala traveled to Bodh Gaya in 1891. There he vowed to restore the site and transform it into a sacred space that would be for Buddhists what Jerusalem is to Christians. To accomplish this task and to rescue other Buddhist sites from ill repair, Dharmapala organized the Maha Bodhi Society in 1891.

Dharmapala achieved international renown when he traveled to Chicago in 1893 as a delegate to the WORLD'S PARLIAMENT OF RELIGIONS. There he advocated a Theosophical version of the Theravada ("Way of the Elders") Buddhism of southern Asia that acknowledged important similarities between BUDDHISM and Christianity and urged all people of faith to practice religious tolerance. He also established an American branch of the Maha Bodhi Society.

Days after the parliament, Dharmapala officiated at a rite in which C. T. Strauss, a Swiss-born Theosophist of Jewish descent, became the first Westerner formally and officially to convert to Buddhism on American soil. Dharmapala returned to the United States for lecture tours on several occasions after 1893. In 1897, he presided over America's first celebration of Wesak, the festival of the Buddha's birthday.

Although he began his public career as a religiously tolerant Theosophist, Dharmapala's Buddhist rhetoric sharpened over time. By the turn of the 20th century, he spoke far more about Buddhism's superiority over all other religions than he did about the fundamental unity of religious traditions. In 1905, Dharmapala severed his long association with the Theosophical Society. "Buddhism is absolutely opposed to the teachings of other existing religions," he concluded, and "Theosophy is irreconcilable with Buddhism."

Dharmapala died in 1933 near the place of the Buddha's first sermon in Sarnath, India. He is recognized worldwide as a champion of a nonsectarian United Buddhist World and at home in Sri Lanka as a leader of a major revival of Buddhism.

dispensationalism Dispensationalism is a form of prophetic teaching and biblical interpretation that first became popular among American Protestants following the CIVIL WAR (1861–65). Dispensationalists rejected the optimistic POSTMILLENNIALISM of the day, the belief that human beings could establish God's kingdom through their own moral efforts. Dispensationalists placed virtually no value on human achievement, stressing instead the absolute sovereignty of God over history.

Dispensationalism was developed by John Nelson Darby, an Anglican minister who left the Church of Ireland and in 1831 helped found the movement known as the Plymouth Brethren. Darby emphasized that Christianity as it then existed was hopelessly corrupt, and he urged individuals to remove themselves from it. His central tenet was that the Bible explained historical change as a system of eras, or "dispensations," in which God tested humanity by different plans of salvation. There were seven dispensations in all, and in each one humanity failed and catastrophe and divine intervention ensued. The

first five dispensations had already concluded with the expulsion from Eden, the Flood, the Tower of Babel, the Exodus, and the crucifixion of Jesus. The present era, the church age, was soon to end with the RAPTURE of the church to heaven, and following a period of tribulation, Jesus Christ would return to Earth and the millennium (Christ's thousand-year reign) would begin.

Dispensationalism was the virtual antithesis of the modernist creed that also attained prominence in late 19th-century American Protestantism. While modernism was optimistic about social progress, dispensationalism was pessimistic. While modernists tended to emphasize evolutionary development, dispensationalists accentuated the supernatural and God's intervention in historical processes. And while modernism analyzed the Bible in relation to human life and experience, dispensationalism interpreted all human activity exclusively through the lens of the Bible. Dispensationalists believed that human beings were participating in a grand cosmic struggle, the details of which were not only outside their control, but also ordained by God at the beginning of creation.

Darby's teachings arrived in the United States in the 1870s and quickly spread through Bible and prophecy conferences, week-long summer meetings in which participants assembled for Bible study and prayer. His emphasis on supernatural causation was consistent with most Christian interpretations of history advanced prior to the mid-19th century. What was novel about Darby's views was not his stress on God's control over history, but his unique system of classification by eras. Darby won over a number of theological conservatives such as Reuben A. Torrey, A. C. Dixon, and—most importantly—CYRUS INGERSON SCOFIELD, whose *Reference Bible* (1909) became the standard text for American dispensationalists.

This tradition has proved to be tremendously influential in evangelical circles and

is the most accepted teaching about Christ's second coming in American fundamentalist churches today. Dispensationalism received wider exposure in the 1970s, when Hal Lindsey's *The Late Great Planet Earth* reached mass-market paperback bookshelves across the United States. This popular dispensationalist tract sold close to 20 million copies by 2000.

While Lindsey's book brought dispensationalist views to a much wider audience, it was dwarfed by the popularity of the "Left Behind" series written by Tim LaHaye and Jerry Jenkins. With the publication of the first book, *Left Behind*, in 1995 and continuing through 13 additional novels, the authors laid out in graphic detail a dispensationalist view of the end time, including the rise of the anti-Christ, the tribulation, and the rapture, as well as the final battle between good and evil. Weaving contemporary events and fiction within a dispensationalist framework, they introduced a much wider population to dispensationalism's complexities.

The books had sold more than 60 million copies by 2006. Six of the series reached the top of the *New York Times's* bestseller list, and one, *Desecration*, was the best-selling novel in the world in 2001. While some of their appeal can be attributed to their driving narrative and "fantastic" content, there is no doubt that they were able to increase the understanding and acceptability of dispensationalism. Views that once had been the esoteric beliefs of small groups of Christians were, as a result of these novels, discussed in *New York Times* editorials and major news shows and were even credited (probably erroneously) with driving public policy.

Divine, Father (ca. 1877/82–1965) Little is known about the early life of the man who, as Father Divine, was worshiped as God by his followers in the Peace Mission Movement begun in 1914. Apparently he was born George Baker on Hutchinson Island, Savannah River, Georgia, sometime between 1877 and 1882. His parents were sharecroppers, and his early life was that of a poor farm boy. Around 1900, he moved to Baltimore, where he worked as a gardener and an itinerant preacher. There he fell in with several self-proclaimed messiahs, including one Samuel Morris (the Father Eternal, Father Jehovah) who anointed Baker "God in the Sonship degree."

This title gained Baker his own followers in Baltimore, who traveled with him to Valdosta, Georgia, in 1914, where he founded a community and proclaimed himself God. After a legal conflict in which he was accused of being a public menace, he and his followers returned to the North, settling in a black section of Brooklyn, where he used the name Major J. Devine. There his wife, "Sister Penny," began serving meals to all comers—a major practice of the movement—and by 1919, Father Divine had formulated the central beliefs of the Peace Mission Movement. His followers were to refrain from sex, alcohol, and drugs, as well as cosmetics, movies, and tobacco. Segregation and prejudice were forbidden.

These were not merely formal requirements, for Father Divine gathered both black and white followers, including many who were

quite wealthy and highly educated. The movement was prosperous. By 1919, Father Divine purchased a house in Sayville, Long Island (New York) in a previously all-white area. Here his closest followers lived, and he dispensed the meals, money, and jobs that made him a legend throughout the black community. Conflict with his neighbors, who objected either to the crowds or to their color, led to his arrest in 1931. Convicted of disturbing the peace, on June 5, 1932, he was sentenced to a year in jail. He served three days before the judge—supposedly in perfect health and the prime of life—dropped dead. Divine reportedly remarked, “I hated to do it.” This event seemed to some to validate his claim of divinity. In January 1933, the New York Supreme Court overturned the conviction, and Father Divine was a free man.

Following his release from prison, he moved the Peace Mission to Harlem, from where the movement had drawn most of its members. By that time, his followers were so numerous that Fiorello La Guardia sought his endorsement during the New York mayoral campaign. At this time, the Peace Mission movement probably had 2 million members across the globe, although the movement claimed 20 million. It also had businesses spread throughout the world. Centered primarily in New York (including a 25-acre estate next door to President Roosevelt’s home), the church owned properties in California, Pennsylvania, and Switzerland. The businesses included farms, barbershops, bakeries, and stores. At both the movement’s center in Harlem and in its extensions through the world, members were provided with shelter, food, and clothing.

Father Divine and the Peace Mission movement suffered severe setbacks in the late 1930s as a result of scandals involving the two issues most anathema to the movement—sex and money. A wealthy white follower was arrested in California on charges of violating the Mann Act prohibiting transportation of

individuals across state lines for immoral purposes. Around the same time, one of Divine’s most important followers circulated tales of orgies. Finally, a New York court ordered him to return \$5,000 to a member declared to be mentally incompetent. Divine refused and to avoid imprisonment moved his headquarters to Philadelphia.

Although weakened by these scandals, the loss of his traditional power base in Harlem, as well as his marriage to a white Canadian follower in 1946 (Sister Penny died in 1937), he retained the loyalty of most members and managed to solidify the movement in Philadelphia.

The last 29 years of Father Divine’s life were nearly as hidden as his first 24. Although retaining leadership of the movement, he withdrew from the public eye. In 1953, he shifted his headquarters to Woodmont, a 73-acre estate outside Philadelphia. There he lived until his death on September 10, 1965. Control of the movement, and its \$10 million in property, fell to his wife, Mother Divine, who continues to direct the Peace Mission movement. Although smaller than in the past, the Peace Mission movement continues the tradition of feeding the hungry and preaching racial equality begun by Father Divine in 1914.

Dixon, Amzi Clarence (1854–1925) A. C. Dixon was a Southern Baptist (see SOUTHERN BAPTIST CONVENTION) minister and evangelist and one of the early leaders of the conservative Protestant movement known as FUNDAMENTALISM. The most notable contribution he made to the fundamentalist cause was his work as the initial editor of *The Fundamentals*, the 12-volume series paperback that gave the movement its name.

Dixon was born in Shelby, North Carolina, on July 6, 1854. He graduated from Wake Forest College in 1874 and studied briefly at the Southern Baptist seminary in Greenville, South Carolina, in 1875 and 1876. Following his ordination to the ministry, Dixon had a lengthy and well-traveled career as a pastor of churches not only in the South, but also in Baltimore, Boston, Chicago, Brooklyn, and London, England. Committed to the tasks of evangelism and conversion, he viewed each new pastorate as a means for reaching more lost souls with the message of Christian salvation. In 1893, Dixon preached with DWIGHT L. MOODY, the most highly regarded revivalist of the day, during Moody's evangelistic campaign at the Chicago World's Fair. Later, in 1906, Dixon was called to be pastor of Moody's church in Chicago, where he served until 1911.

Because he was interested primarily in the conversion of individual sinners, Dixon engaged in few debates about either doctrinal or social issues during the first decades of his ministry. His displeasure with the increasing respectability of theological modernism and the threats Darwinian evolutionary thought and biblical criticism posed to the Christian Gospel, however, eventually led Dixon to become a spokesman for the fundamentalist movement. When wealthy California businessman Lyman Stewart asked him in 1909 to aid in compiling a series of books setting forth the basic principles of Christianity, Dixon readily agreed. The first book in *The Fundamentals* series appeared the next year. Dixon

oversaw the publication of five of 12 volumes, all of which were sent free of charge to ministers, missionaries, and Sunday school teachers throughout the English-speaking world. Although Dixon resigned from his editorial position in 1911 when he left to become pastor of a church in London, he considered that to have been one of the most significant accomplishments of his half-century ministry.

After returning to the United States in 1919, Dixon spent a number of months traveling across the country as an itinerant evangelist and Bible teacher. In 1921, he accepted a call to the University Baptist Church, Baltimore. That was to be Dixon's last pastorate, for he died in Baltimore on June 14, 1925.

dominion theology See CHRISTIAN RIGHT.

Drew, Timothy (Noble Drew Ali) (1886–1929) As Noble Drew Ali, Timothy Drew, born January 8, 1886, in North Carolina, began the first of several U.S. movements to identify African Americans with ISLAM. This he did with the formation of the Moorish Science Temple of America.

Although a recipient of a poor education, as was often the case of American blacks, Drew received some knowledge of Eastern thought and Islam. He claimed to have traveled to the Middle East, where he received the title "Ali" from Abdul Aziz ibn Saud during a visit to Mecca.

Upon his return to the United States, Drew preached that blacks were Asiatics rather than Africans. Their true ancestral homeland was Morocco, and they properly should be called Moors. Ali developed an elaborate genealogy

and history for blacks. Prior to the American Revolution, blacks had been conscious of their nationality as Moors. The Continental Congress had stripped them of this identity, declaring them to be Negro, colored, and Ethiopian, assigning them to slavery in 1779.

Drew opened his first Moorish Temple in Newark, New Jersey, in 1913. This was followed by others in Detroit, Pittsburgh, and several other cities. In 1925, he established his headquarters in Chicago and incorporated the Moorish Temple of Science in the following year. (The latter was later changed to Moorish Science Temple.)

The beliefs of the Moorish Science Temple are set down in *The Holy Koran*, not to be confused with the Qur'an. In 64 pages of small print, Drew set out a strange combination of Islam, Christianity, and SPIRITUALISM, much of it lifted from *The Aquarian Gospel of Jesus Christ*, written by the Spiritualist Levi Dowling.

As the movement expanded, problems developed within and without. Devotees' newfound identity and liberation from fear led to numerous altercations with whites. These conflicts reached such proportions that Drew was forced to issue a statement against provocation, although not before tensions had reached a point where the mention of the "Moors" could turn many a midwestern police chief apoplectic.

Internally, many saw the movement as an occasion for self-aggrandizement and began peddling such items as Old Moorish Healing Oil and Moorish Purifier Bath Compound. When Drew attempted to end such practices, conflict erupted, resulting in the murder of his business manager. Drew was arrested, despite being out of the city at the time of the killing.

Released on bond, he died a few weeks later on July 20, 1929, under mysterious circumstances. While some claim his death was the result of a beating received in police custody, most accept that he was murdered by opponents within the Moorish Science Temple.

DuBois, W. E. B. (1868-1963) Arguably one of America's greatest intellects, William Edward Burghardt DuBois holds a distinctive position in African-American thought and life. Decades ahead of his time in advocating black educational and economic opportunity, racial pride, and political equality, DuBois was a man whose life was destined for frustration and bitterness, despite great individual ability and even success.

Born in Great Barrington, Massachusetts, on February 23, 1868, DuBois attended the local Congregational church, where, as at school, he was often the only black student. His accomplishments at school were many, and following his graduation from high school, the local church's aid enabled him to attend Fisk University in Nashville, Tennessee. There he encountered firsthand the harshness of the South's caste system and came in contact with the vitality and plurality of black America.

DuBois excelled at Fisk and, after graduating in 1888, refused a scholarship to study for the ministry in order to attend Harvard. Entering Harvard as a junior, he attracted the attention of the historian Albert Bushnell Hart and the philosopher and psychologist WILLIAM JAMES. He frequently visited the James house, where he encountered secular and liberal thought far removed from the religious intensity of Fisk. His contact with James, DuBois later claimed, turned him from philosophy to social analysis.

He graduated from Harvard College in 1890 and began his doctoral work under Hart. He was preparing to leave for a research trip to Europe in 1892, but a conflict over the

availability of research money for minority students led DuBois to write an “impudent” letter to the president accusing him of bad faith. The money was found, and DuBois spent the next two years studying at the University of Berlin.

Returning to “nigger hating America” in 1894, he was appointed professor of Greek, Latin, German, and English at Wilberforce University in Ohio. While there, he completed his dissertation, receiving his Ph.D. in 1895. The thesis, *The Suppression of the African Slave Trade to the United States*, was the first book issued in the Harvard Historical series and landed him a one-year appointment at the University of Pennsylvania, where he was assigned to write a study of Philadelphia’s black community. The result, *The Philadelphia Negro* (1899), ran counter to the academic tide. Its detailed analysis debunked the “scientific racism” of the time that attributed everything to genetic factors. DuBois’s work found that the problems of poverty, crime, and degradation among Philadelphia’s urban blacks resulted from historical and environmental factors rather than any racial deficiency of African Americans. In 1897, he accepted an appointment as professor of economics and history at Atlanta University. Here DuBois published several more books, including *The Souls of Black Folk*.

Considered by many his finest work, *The Souls of Black Folk* is a lyrical and reflective essay on the life, burdens, and religious vitality of American blacks, as well as the first scholarly reflection on black religious music. The book’s ominous prophecy that the “problem of the Twentieth Century is the problem of the color line” proved all too true.

The book also marked DuBois’s public break with BOOKER T. WASHINGTON over the issue of political equality for blacks. DuBois became increasingly involved in political affairs. In 1900, he had served as secretary of the first Pan-Africanist Conference meeting in London and in 1905 organized the Niagara movement as a black opposition group to

Washington’s accommodationism. In 1909, he helped found the National Association for the Advancement of Colored People (NAACP), leaving Atlanta University the following year to assume the editorship of its magazine, *The Crisis*. Underappreciated and volatile, he gave offense as easily as he took it, and conflicts with colleagues over the direction of the NAACP and *The Crisis* led to his resignation as editor in 1934.

He returned to Atlanta University, where he continued to publish works on the history and culture of African Americans. His increasingly radical views led to his retirement from the university in 1944. He returned to the NAACP as director of special research until 1948, when his support for Henry Wallace and the Progressive Party—despite the NAACP’s official support for Harry Truman—resulted in his firing.

His views on race, world peace, and economics ran counter to the views of 1950s America. He suffered increasing harassment by the United States government, including arrest for acting as an unregistered agent of a foreign power and revocation of his passport.

Buffeted by the racist society around him, DuBois grew increasingly bitter and angry. Despairing of any change in American society and hopeful about the emerging independent nations of Africa, he accepted the invitation of Ghanaian president Kwame Nkrumah to assume the editorship of the *Encyclopedia Africana*. He applied for membership in the Communist Party of the U.S.A., to which he was officially admitted on October 13, 1961, a week after he had left for Ghana. In February 1963, he took on Ghanaian citizenship, and at his death on August 27th of that year was given a state funeral.

In the decades since his death, American society has caught up to many of DuBois’s views. Not only is his *Souls of Black Folk* considered a classic interpretation of American culture, his *Black Reconstruction in America* (1935) has been validated by recent scholarship that

demonstrates that the period of Reconstruction in the South was riddled neither with political corruption nor black violence but was a period when many southern states had the most representative and efficient governments in their histories. DuBois must also be credited with a major role in the establishment of the African-American intellectual tradition in the United States. His seminal scholarship, support of black artists and scholars both personally and in the pages of the *Crisis*, and opposition to Booker T. Washington's emphasis on manual labor helped pave the way for future black intellectuals. Perhaps it was fitting that DuBois died on the day of the March on Washington, D.C., organized by the leaders of the CIVIL RIGHTS MOVEMENT. His sometime nemesis at the NAACP, Roy Wilkins, said of DuBois's life, ". . . it is incontrovertible that at the dawn of the twentieth century his was the voice that was calling you to gather here today in this cause."

DuBose, William Porcher (1836–1918)

William Porcher DuBose was an Episcopal clergyman and professor at the University of the South in Sewanee, Tennessee. The most important theologian in the history of the Episcopal Church, DuBose reflected the theological liberalism that gained ascendancy among American Protestants in the late 19th century. However, unlike the modernist (see MODERNISM) theologians of the North, DuBose's vivid sense of God's presence within human suffering and adversity reflected his critical experience as a white southerner living in the aftermath of the CIVIL WAR.

DuBose was born on April 11, 1836, in Winnsboro, South Carolina. The DuBoses were prominent plantation owners descended from Huguenots who had settled the low country of South Carolina in the 17th century. DuBose graduated from the Military College of South Carolina (the Citadel) in 1855 and earned an M.A. at the University of Virginia in 1859. Although he entered the Episcopal diocesan seminary at Camden, South Carolina, in October 1859, the outbreak of the Civil War forced him to withdraw and join the Confederate Army instead. He was wounded in battle and spent two months in a Union prisoner-of-war camp. After the war, he was ordained in 1866 and served briefly as rector, first at St. John's Church Winnsboro, and later at Trinity Church, in Abbeville, South Carolina. DuBose came to Sewanee, Tennessee, as chaplain of the University of the South in 1871. After the establishment of a department of theology at the university, he resigned his chaplaincy position in 1882 to devote himself to teaching. He also held the position of dean of Sewanee's School of Theology between 1894 and 1908.

In his spiritual autobiography, *Turning Points in My Life* (1912), composed for the celebration of his 75th birthday, DuBose explained how his theological position had evolved over the years. He believed that the Civil War had been pivotal in shaping his

William Porcher DuBose, a Confederate army veteran who became the Episcopal Church's most influential theologian.

development as a theologian. In the fall of 1864, when he came to the realization that the Confederate cause was lost, he sensed the ultimate futility of worldly concerns and dedicated himself from then on to the work of the church. Laying particular stress on the doctrine of the incarnation, DuBose taught that God was immanent in his creation, in human imperfection and suffering, and in the ongoing life of the Christian church. While Jesus Christ was the particular incarnation of God, all humanity participated generically in the incarnation of the divine.

Geographically isolated from the mainstream of American theology in his day and relatively unappreciated amid the dominant theological conservatism of the South,

DuBose began to receive recognition for his progressive orthodoxy only in the 20th century. He published six major theological books as well as numerous essays over the course of his teaching career. Having lived at Sewanee for nearly five decades, DuBose died there on August 18, 1918.

Dwight, Timothy (1752–1817) Grandson of JONATHAN EDWARDS, precocious, and wealthy through inheritance, Timothy Dwight had all of life's advantages. He did not waste them. Dwight early became a leading figure in the religious and political life of New England.

Born on May 14, 1752, in Northampton, Massachusetts, Dwight entered Yale at the age of 13. He spent the next 12 years of his life there, first as a student and then as a tutor. In 1777, he joined the American Revolution as a military chaplain. Resigning in 1779 to take charge of family property, he spent the next 16 years as farmer, legislator, teacher, and minister. In 1795, he became president of Yale and in that role made his greatest contributions.

His achievements prior to that time as an epic poet, hymn writer, and preacher were not insignificant, but as president of Yale, Dwight found the "bully pulpit" he desired. He revived the flagging fortunes of the school, augmenting the faculty and adding professional departments in medicine and theology. Dwight also brought a new religious fervor to the school. He began a series of lectures on the Christian religion that led to a revival among the Yale students. Considered one of the harbingers of the SECOND GREAT AWAKENING, this revival not

only infused new religious life into the college, but led to the formation of societies for moral uplift.

Foreign missions (see MISSIONS, FOREIGN) engaged Dwight's passion, and he encouraged his students to take the Gospel to heathen lands. He spoke of his hope that one day soon not a cathedral, mosque, or pagoda would remain standing. Dwight was one of the first religious leaders to favor total abstinence from alcohol, rather than moderation.

Domestic religious and political enemies attracted most of Dwight's energy. He feared the spread of irreligion and the Jeffersonians (see JEFFERSON, THOMAS). As a teacher and a public figure, he spent much of his time combating what he saw as the blasphemous views of THOMAS PAINE, Thomas Jefferson, and their followers. A staunch Federalist, Dwight believed that the party of John Adams provided the one bulwark against the inevitable results of the infidels, results seen in the atheism, violence, and chaos of the French Revolution.

In his defense of revealed religion, Dwight showed himself an heir of his grandfather, with some modification. Dwight, much more than Edwards, emphasized the moral demands of religion and the ability of human beings to act upon those responsibilities. This human action was possible because the moral truths of religion were grounded in the revelation of God manifested in the resurrection of Christ. Dwight, until his death on January 11, 1817, affirmed this truth against the skeptics and in doing so helped initiate a new period of religious activity in the United States.

Dyer, Mary (ca. 1591–1660) Quaker dissenter Mary Dyer's death by hanging on Boston Common ended her long-running conflict with the rulers of the MASSACHUSETTS BAY COLONY. The conflict began with her outspoken support for ANNE HUTCHINSON. It ended in her persistent attempts to spread her Quaker beliefs (see FRIENDS, RELIGIOUS SOCIETY OF) within the colony.

Nothing is known of Mary Dyer's early life, the first mention of her being in 1633, when the marriage of Mary Barrett to William Dyer was recorded in London. Two years later the couple joined the Puritan (see PURITANISM) migration to New England, where they became accepted members of the Boston community and the Boston church. This period of harmony soon ended as the entire colony became embroiled in the so-called ANTINOMIAN CONTROVERSY.

The Dyers supported the group led by Anne Hutchinson and John Wheelwright. When the colonial authorities moved against them in 1637, William Dyer was among those disfranchised and disarmed. This did not dissuade Mary, who remained loyal to Anne Hutchinson throughout her trial. This stance led to Mary Dyer's excommunication by the Boston church as well.

Moving to Rhode Island, she joined other dissenters from Massachusetts. During a visit to England in 1650, Mary became a Quaker. Fired with missionary zeal, she returned to Boston in 1657 to spread the Quaker message. Massachusetts authorities rewarded her concern by imprisoning her. Her husband, who had not adopted Mary's Quakerism, gained her release. Imprisonment did not dampen her spirit. She returned to Boston in the summer of 1659. The authorities again expelled her upon pain of death for reentering the colony. When she returned in September, she and her two companions, William Robinson and Marmaduke Stephenson, were tried and condemned to death. The noose had already been placed around her neck when the last-

minute intercession of her son with the colonial authorities, who did not wish to execute a woman, gained her yet another reprieve.

Incapable of ignoring the divine will that called her to preach in Massachusetts, Dyer reentered the colony in May 1660. This time she had tried the colony's patience once too often. Condemned to death at the end of May, she was hanged on June 1, 1660. In death, she joined numerous Quaker and religious

martyrs who refused to allow human laws to restrict religious belief and action.

ecumenical movement The ecumenical movement—the desire for a return to the unity of the Christian church—was a major element of 20th-century Christianity. The word *ecumenical*, deriving from the Greek *oikumene*, meaning the “inhabited world,” or more precisely the known world of Greco-Roman culture, however, has a long history. *Oikumene* appears 15 times in the New Testament, eight of them in Luke and Acts, speaking of the world into which Christians must spread the Gospel. In the early church, the word signified the church universal. The seven general church councils from 325 to 787, those that included representatives from throughout the *oikumene* as distinct from local assemblies, were referred to as “ecumenical.”

The church universal, however, was soon the church divided. There were repeated ruptures within the early church, culminating with the great split between the Eastern Orthodox Church and the Western Roman Church in 1054. The divisions caused by the Reformation of the 16th century helped to splinter Christianity even more. By the 19th century,

the unbroken body of Christ had been torn into innumerable pieces.

Credit must be given to these divided churches in that they recognized that the divisions were sinful, to use theological language. The refusal of each church to change its version of the truth while demanding that others do so however, made solving this problem impossible.

This attitude began to change during the 19th century, primarily in the area of missions. In fact, the missionary movement gave birth to the modern ecumenical movement. To a great extent, this new era of interdenominational cooperation began in the United States. The task of meeting the religious needs of a constantly expanding nation was beyond the scope of any one denomination. Denominations combined to meet those needs, creating the American Board of Commissioners for Foreign Missions (1810), the American Bible Society (1816), the American Sunday School Union (1824), and the American Home Missionary Society (1826). Equally significant was the PLAN OF UNION between the Presbyterians and Congregationalists.

While many of these organizations collapsed over doctrinal conflicts and none were completely inclusive, they set the tone for interdenominational cooperation. Cooperation was to be based upon actions, upon what the churches could do together. Theological and doctrinal issues would be ignored while the denominations cooperated on general

enterprises such as missions, charity, combating infidelity, and moral reform. Following the CIVIL WAR, there was an increase in the numbers of these organizations, especially among young people of college age: YMCAs and YWCAs (see YOUNG MEN'S CHRISTIAN ASSOCIATION; YOUNG WOMEN'S CHRISTIAN ASSOCIATION) in the United States, the Interseminary Missionary Alliance, and the Student Volunteer Movement for Foreign Missions. Organized on an international level in 1895 as the World's Student Christian Fellowship, the last had a major impact on the ecumenical movement, for it created a core of educated, able, and adventurous young people committed to interdenominational cooperation.

In the United States, these movements came together in 1908 with the formation of the Federal Council of Churches of Christ in America (see NATIONAL COUNCIL OF CHURCHES). The ability of 33 denominations to join together in Christian work provided a major impetus for further developments. The first of these was the International Missionary Conference in Edinburgh in 1910. The conference, generally considered the birth of the worldwide ecumenical movement, grew out of the earlier World's Student Christian Fellowship and other organizations devoted to foreign missions. In fact, the founder of the WSCF, JOHN R. MOTT, chaired the committee organized to continue the work begun at Edinburgh. The most visible result of the Edinburgh conference was the founding in 1921 of the International Missionary Council, whose function was to stimulate thinking about the missionary enterprise and to coordinate the activities of the various Christian churches in the mission field so that they, where possible, could engage in cooperative rather than competitive action.

The emphasis on the churches combining for shared action was continued by the calling of the Universal Christian Conference on Life and Work in Stockholm, Sweden, August 19–30, 1925. More than 600 delegates repre-

senting 91 denominations and 37 countries met to discuss economic, educational, and international issues. While responses to the conference were mixed, there was sufficient support to create a Continuation Committee to carry on the work of the conference. This committee, later reconstituted as the Life and Work Committee, and its organization of a second Life and Work Conference dealing with church, community, and the state marked a turning point for the ecumenical movement. At this conference (Oxford, July 1937), the idea of merging the Life and Work Commission with the Faith and Order Commission was approved. This approval paved the way for the eventual creation of the WORLD COUNCIL OF CHURCHES (WCC) following WORLD WAR II.

Cooperation on religious action, what is known in the ecumenical movement as life and work, has been the easiest but not the only element of the struggle for Christian unity. Issues of doctrine and of faith and order have troubled serious thinkers. If there is one truth, then how can there be several churches?

While missions, moral reform, and social service could cause division among churches, nothing divided like questions of doctrine and church governance. For this reason, most interdenominational organizations forbade or severely limited discussions of doctrine. Some viewed this limitation as hindering rather than aiding Christian unity. By an odd historical coincidence, three denominations in the United States took up this issue within days of each other in October 1910. In that month, the Protestant Episcopal Church, the Disciples of Christ, and the Congregational churches independently adopted resolutions calling for a world conference of Christian churches "for the consideration of questions touching Faith and Order," as the Episcopal resolution read. Committees formed to implement these resolutions found their work interrupted by WORLD WAR I. Not until 1927 was the first Conference on Faith and Order held in Lausanne, Switzerland.

Like the Life and Work Conference, Faith and Order organized a Continuation Committee to carry on the work of the conference. While little had been solved at the conference, its mere occurrence, including representatives from the Orthodox and ancient Eastern churches (see *ORTHODOX CHRISTIANITY*), marked a major shift in religious discussion. The second Faith and Order Conference, held in Edinburgh in 1937, resulted in a general agreement about the "grace of our Lord Jesus Christ" but little else except a decision to merge with the Life and Work Conference. The result of this merger was the formation in 1948 of the World Council of Churches.

This development, along with the 1951 reorganization of the Federal Council as the National Council of Churches of Christ in the USA, was a significant development for the ecumenical movement. For the first time, there existed organized institutions with denominational connections whose purpose was to pursue Christian unity, both in terms of action and doctrine. While few solutions have come from these discussions, they have illuminated similarities previously obscured.

Ecumenism, however, has not been limited to the formation of interdenominational institutions. One of the biggest obstacles to Christian unity has been the refusal of the Roman Catholic Church to join either the NCC or the WCC. Changes within the Roman church during the 1960s encouraged greater opening toward other Christian bodies. The Second Vatican Council (see *VATICAN COUNCIL II*) was most significant in this regard. At this conference, not only were Protestant, Anglican, and Orthodox bodies invited to send observers, but the adoption of several documents on the relationship of the Roman church to other Christian denominations and a statement on religious liberty went far toward lessening mutual hostility and suspicion.

The last quarter of the 20th century, while seeing a retrenchment of ecumenism on many levels, did see some movement

toward union on bilateral levels. Discussions between numerous Lutheran denominations in the United States led to the formation of the *EVANGELICAL LUTHERAN CHURCH IN AMERICA*, which undertook a series of negotiations with the Episcopal Church leading to a mutual recognition of each other's orders and sacraments. On an international level, discussions between Lutherans and Roman Catholics led to a fair degree of agreement on what had been hotly contested doctrinal differences.

Struggling with their own doctrinal and theological differences also made Christians more aware of the complexity of their relationship to the wider world. This has caused many Christian churches to reexamine their traditional attitudes toward non-Christian religions, especially Judaism. The Vatican II document "The Relationship of the Church to Non-Christian Religions" transformed the traditional Catholic view of other religions and explicitly rejected Jewish responsibility for the crucifixion of Jesus. The WCC and NCC have held numerous conferences dealing with the relationship of Christianity to other religions.

What began as a movement toward greater Protestant unity has become a movement of worldwide scope. While no one envisions a religiously united world, the ecumenical movement has produced a greater willingness to meet others in discussions based on mutual concern and appreciation. For this, if nothing else, its historical significance is assured.

Eddy, Mary Baker (1821–1910) The founder of CHRISTIAN SCIENCE and the woman who presided over its remarkable growth, Mary Baker Eddy stands among a handful of American religious reformers who have demonstrated both the charisma necessary to give birth to a new religious movement and the organizational skills to insure its long life. Her theories and practices, institutionalized in the Church of Christ (Scientist) (established 1879), have found their way into “harmonial religions” such as NEW THOUGHT and the POSITIVE THINKING tradition of NORMAN VINCENT PEALE.

Eddy was born Mary Morse Baker into a farming family in Bow, New Hampshire, in 1821. She received little formal education but was reared in the NEW DIVINITY theology developed by the followers of the Puritan divine JONATHAN EDWARDS. She married three times: in 1843, to George Washington Glover, who died one year later; in 1853, to a dentist, Dr. Daniel Patterson, whom she left after 20 unhappy years; and, finally, in 1877, to Asa Gilbert Eddy, who passed away in 1882.

Eddy’s early life was marked by an incessant battle with physical and nervous disorders, including the near-ubiquitous 19th-century malady of neurasthenia. These ailments left Eddy largely incapacitated. Her life took a new turn, however, when she traveled to Portland, Maine, in 1862 to meet PHINEAS P. QUIMBY (1802–66). A clockmaker by trade, Quimby was by avocation an itinerant healer who traveled across New England diagnosing diseases and dispensing cures. Long before Eddy, he used terms such as *Christian science* and *science of health* and theorized that sickness resulted from mental rather than physical disorders and so could be healed through techniques that gave mind priority over matter.

Eddy’s health improved dramatically after treatments by Quimby. She moved to Portland later in 1862 in order to continue her treatments and to apprentice under him. Shortly after her mentor’s death in 1866, Eddy

Mary Baker Eddy, the 19th-century religious reformer, founded Christian Science and wrote *Science and Health*. (First Church of Christ, Scientist, Boston)

slipped on ice outside her new home in Lynn, Massachusetts, suffering severe injuries. This incident, which would soon be enshrined in the lore of Christian Science as Eddy’s famous “fall,” confined her to bed rest until “on the third day” she miraculously “rose again”—a completely healed and completely new woman. Eddy had cured herself, but more importantly she had discovered Christian Science.

After her fall and resurrection in 1866, Eddy supported herself as an itinerant healer and worked out the theological implications of her discovery. She convened the first gathering of Christian Scientists at her home in Lynn in 1875 and in 1879 incorporated the Church of Christ (Scientist). Boston became Eddy’s

headquarters in 1881. The spectacular “Mother Church” was completed there in 1895.

Eddy described the awakening in her of Christian Science not only as a “discovery” but also as a “revelation,” and it was consistent with her view that revelation was both natural and ongoing that on numerous occasions she revised the distinctive scripture of Christian Science, *Science and Health, With Key to the Scriptures* (1875). In all its versions, however, *Science and Health* represented a decisive turn away from the modified CALVINISM of Eddy’s youth.

Eddy, like her pious Puritan forebears, read the Bible regularly and prayed enthusiastically, but she grew to prefer a loving and immanent deity to the Puritans’ radically transcendent and wrathful God. Like many of her contemporaries in Gilded Age America, she moved away from Calvinist orthodoxy and toward religious liberalism.

Eddy’s thought incorporated but moved far beyond Quimby’s theory that sickness and health are mental rather than physical. Eddy distinguished herself from Quimby by developing a detailed theology and by devoting considerable efforts to interpreting the Bible in light of Christian Science. God, she argued, was Mind. The “mortal mind” reflected but was inferior to this “divine Mind.” Humans were by no means utterly distinct from God, but they were separated from God nonetheless by illusions of pain and sickness, sin and death. By turning to Jesus Christ, however, people could break through their illusions and live, in union with God, a life marked by health, happiness, and prosperity.

Eddy’s unorthodox theories earned her a coterie of critics. The most famous was the humorist Mark Twain, who turned Eddy-bashing into sport. Although Twain delighted in deriding God for committing grievous grammatical errors in Eddy’s revelatory *Science and Health*, he saved his most biting invective for what he saw as her dictatorial leadership style. In a book called *Christian Science* (1907), he

predicted (incorrectly) that Christian Science would sweep the country, enslaving all Americans under “the most insolent and unscrupulous a tyrannical politico-religious master . . . since the palmy days of the Inquisition.”

Though most of Eddy’s converts remained faithful to their founder, whom they affectionately referred to as “Mother,” Eddy was criticized by some members of her own movement. EMMA CURTIS HOPKINS, who had served as editor of the monthly *Christian Science Journal*, broke away from Eddy in the mid-1880s and opened the Christian Science Theological Seminary in Chicago as an alternative to the Eddy-controlled Massachusetts Metaphysical College. Hopkins would eventually become one of the most important leaders of the New Thought movement.

Refusing to succumb to her critics, Eddy skillfully steered her way through internal schisms and around outsider contempt. In the process, she built not only a church but also a media empire. When she died in 1910, she left behind a highly acclaimed daily newspaper, the *Christian Science Monitor* (established 1908), and a church of nearly 100,000 members.

education, public school American public schools began in the early 19th century, shifting in focus over time as Americans turned to education in order to meet what they saw as the changing needs of society.

Public education was crucial to the general program of reform stemming from the SECOND GREAT AWAKENING. Reformers saw free, universal education as the best way to create the sort of responsible, religiously and morally grounded citizenry required to preserve the young republic. With heavy emphasis on moral instruction, education developed a noticeably Protestant flavor. By century's end, a second wave of Progressive Era reformers sought to recast education to conform to the needs of a more secular, urban society. Ensuing decades have been marked by continuing tension between those who see education as technical or professional preparation for participation in economic life and those who see it as developing the moral and intellectual insight necessary for citizenship.

Americans in the COLONIAL PERIOD took education seriously, though not always formally. Revolutionary leaders such as THOMAS JEFFERSON and THOMAS PAINE saw education as the crucible out of which a genuinely new, fully American person would emerge, the basis for a population of what Benjamin Rush called "republican machines." But in the years following the AMERICAN REVOLUTION, Americans conceived of education broadly, being achieved through a variety of means, such as the press, the churches, the family, and public debate, and pursued throughout an individual's life.

The specific impetus to create public schools came in response to a general demographic change in the early 19th century: the creation of childhood as a distinct phase in human life. As mortality rates decreased, adults began to look on children as unique individuals who required the special attention of parents. The family became a center of nurture and care rather than a center of production. Mothers became idealized for their new role as the dominant family figure. As one minister intoned: "When our land is filled with virtuous and patriotic mothers, then it will be filled with virtuous and patriotic men."

But with a burgeoning population, including immigrants from a variety of countries, reformers in the early 19th century sought to create institutions more capable of providing a uniform education than could be guaranteed by individual families. Expanding upon the educational goal of private evangelical academies (see EVANGELICALISM) and the growing SUNDAY SCHOOL MOVEMENT, religious leaders as diverse as HORACE BUSHNELL and LYMAN BEECHER campaigned for common schools to supplement education from home and church. Beecher, in his famous *Plea for the West*, called for an educational system capable of insuring America could meet its millennial task: to "lead the way in the moral and political emancipation of the world." In spite of the deep theological divisions at the time, Beecher, Bushnell, and other Protestants united around the goal of creating a public system based on Christian, republican values, where all classes could learn the skills and responsibilities necessary to sustain the expanding American nation.

Since the federal Constitution nowhere mentioned education, states reserved to themselves the right to develop their own approaches, making the creation of public schools an erratic and variable process. In Massachusetts, New York, and some western states, public institutions were well established by the 1830s; but in Virginia a public system did not emerge until after the CIVIL WAR. Without a clear separation between public and private, 19th-century American education consisted of a patchwork of institutions: local primary schools, state-authorized universities, and church-supported academies and colleges. Controversies over state control, public funding, and the sorts of knowledge taught troubled Americans from early in the century. However, by the 1850s, a general pattern of public control had emerged, influenced greatly by the nonsectarian views of HORACE MANN.

The idea of compulsory, publicly controlled, publicly funded education evolving

during the 19th century was contested by many Americans, particularly Catholics, who found themselves being denied funding as the notion of “public” spread. Catholics in New York City and elsewhere argued that “public” really meant Protestant and that the local schools were fomenting anti-Catholic sentiments. Unable to rectify the situation, by the late 1840s, Catholics were forced to establish their own school system, attached to local parishes (see ROMAN CATHOLICISM).

These conflicts were as much over symbolic issues of patriotic loyalty and national identity as they were over funding and structure. In the many decades since their creation, public schools have changed along with the rest of society, but they have also remained an important battleground in American culture. Originally a Protestant vehicle for forging a national consensus of values, they have become a crucial arena for the expression of public conflict, as can be seen in the bitter controversies over racial equality and desegregation that began in the 1950s (see CIVIL RIGHTS MOVEMENT). Religious, ethnic, and ideological groups of all stripes have sought to secure their own view of the world by incorporating it into the school curriculum, or else to insure that they, too, have sufficient access to the resources and opportunities provided by the schools.

In the early 20th century, associates of JOHN DEWEY sought to transform education, contending that the traditional Protestant, rural values and skills enshrined by the schools needed replacement by the more modern values of humanism and the teaching of scientific and technical skills appropriate to an urban, industrial society (see SECULAR HUMANISM; SCIENCE AND RELIGION; SCOPES TRIAL). But there also have been conflicts among the modernists who inherited Dewey’s vision, some seeing schools as providing a technically trained, competent workforce for an advanced economy, others arguing for their role in creating critically minded democratic

citizens. The struggle between traditionalists and modernists has endured as well, although in recent decades the traditionalists have come to include Catholics and Jews as well as conservative Protestants.

The 1960s saw numerous legal battles over religion and public education. In 1962, the U.S. Supreme Court ruled in *Engel v. Vitale* that required recitation of a prayer composed by New York’s state school board was unconstitutional. In doing so, the Court stated that, “it is no part of the business of government to composed official prayers for any group of the American people to recite as a part of a religious program carried on by government.” This decision was followed in 1963 by *Abington v. Schempp*. In this case, the Supreme Court declared that daily Bible readings and the recitation of the Lord’s Prayer in public schools violated the establishment clause of the Constitution.

Political and social conflicts over the presence of religious instruction in public schools continued throughout the 20th century, although the focus shifted to “moments of silence” at the beginning of the school day. The Court decided that such moments of silence are perfectly constitutional as long as they are not intended to serve as a basis for introducing governmentally mandated prayer in public schools. The fight over prayer has continued in other places, including prayers at graduation ceremonies (unconstitutional because the mere act of a public school inviting someone to deliver a religious address violates the establishment clause) and public invocations before football games (unconstitutional for the same reason).

Even more contentious has become the content of public education. While many fights involved evolution and sex education, there increasingly have been conflicts over how different religious traditions are represented in school textbooks and in teaching. California experienced a heated political conflict over the portrayal of different religious traditions dur-

ing textbook selection in 2005 and 2006. While Jews, Christians, and Muslims all weighed in on the debates, the controversy became greatest over the portrayal of Hinduism. The conflict became so intense that some who opposed the changes demanded by Hindu groups, claiming that they grossly misrepresented the historical record, received death threats.

The biggest quarrel continued to be over the teaching of evolution in public schools. This took a different turn with the introduction of "creation science" and "intelligent design" as supposedly "nonreligious" and intellectually valid alternatives to evolutionary theory. The Supreme Court rejected the claim that "creation science" was not a religious teaching in its decision in *Edwards v. Aguillard* (1987). Intelligent design has not found its way to the Supreme Court, but in the case of *Kitzmiller v. Dover Area School District* (2005), a federal district court in Pennsylvania ruled that intelligent design "could not uncouple itself from its creationist, and thus religious, antecedents."

The centrality of public education in the United States and the depth with which people hold religious views means that conflicts over the content and context of education will be inevitable. Both institutions are central to American life and values. Public schools are a central location for education and formation in the United States. As such, they will remain places where the deep disagreements in American public life readily come to the fore.

education, religion and The relationship between education and religion in America is a very long one, going back to the beginning of settlement. Religions in America usually took the lead in establishing educational institutions of all types. The relationship also has created conflict and hostility and led to some of the most violent riots in American history.

Education in its broadest sense began with the arrival of the first humans to the North American continent as the earliest peoples taught their children the traditions and customs necessary for life in the community. The historical knowledge we have of formal education begins with the arrival of Europeans on the North American continent. The first educators were the Catholic priests and monks who accompanied the conquistadores (see NEW SPAIN; ROMAN CATHOLICISM). These Catholic clergy worked diligently to teach the native peoples the basics of Christianity and to prepare them for conversion. (For more on this topic see RELIGIOUS EDUCATION. This article focuses on education more broadly.) As early as 1523, the first primary school in the Americas had been opened by Franciscans in Texcoco (modern-day Mexico).

In the modern-day United States, formal education had its beginnings with the arrival of the English settlers and found its greatest growth in the Puritan (see PURITANISM) colonies of New England. The religious views of the Puritans demanded first, an educated clergy, but also an educated laity. Individuals were encouraged to read the Bible themselves and to struggle in an informed manner with religious questions. For the Puritans, illiteracy was an invitation to irreligion, or, more pre-

cisely, to bad religion. One who was ignorant and unlettered easily could be led astray by superstition and idolatry. The way to combat these evils was to ensure that children received the basics of education. At a minimum, children needed to be taught how to read and write. They also should obtain at least a rudimentary knowledge of arithmetic, grammar, geography, and, of course, religion.

While in the early years of settlement most children were taught at home or by private teachers, in 1636, Charlestown, MASSACHUSETTS BAY COLONY, established its first grammar school; 11 years later, the colonial assembly ordered every town to establish and maintain a free public school. The early educational materials typically were a hornbook and a slate. The hornbook was a wooden paddle covered with transparent horn to prevent damage to the text sandwiched between. Typically, the text on the hornbook consisted of the alphabet, in both block and cursive forms, the Lord's Prayer (in its Protestant version in New England), an affirmation of the Trinity, as well as a list of the vowels and basic vowel-consonant combinations.

On the slate, students would write their lessons and undertake their ciphering, arithmetic. Older students were introduced to more complex materials, although the Bible remained a dominant reading text. In 1690, Benjamin Harris printed the first edition of the *New England Primer*. It would remain a leading textbook until the early 19th century, selling more than 5 million copies.

The primer began where the hornbooks left off. It included the alphabet, consonants and vowels, simple syllables, and lists of words of one, two, three, four, and five syllables. The book also included reading material, moving from the simple to the more complex. Much of the reading material consisted of religious and moral instruction, illustrating how education and religion were inextricably combined. There were biblical texts, prayers, catechisms, and advice from parents to chil-

dren, including a moral, last testament written to his children, in rhyme, by "Mr. John Rogers, minister of the gospel in London, . . . the first martyr in Queen MARY's reign . . . burnt at Smithfield, February 14, 1554. . . . [H]e was not in the least daunted, but with wonderful patience died courageously for the gospel of JESUS CHRIST." In his text, Rogers tells his children:

*Keep always God before your eyes/with all your
whole intent,
Commit no sin in any wise,/keep his
commandment.
Abhor that arrant whore of ROME,/and all her
blasphemies,
And drink not of her cursed cup,/obey not
her decrees.*

Not only did the primer teach reading, morals, and Puritan doctrine, it also taught the children of the struggle between "true" Protestant Christianity and the false doctrine of Catholicism. It taught the child that admirable people had been done to death for holding true to the faith and warned them in the strongest language to avoid the teachings of the Roman Catholic Church.

Such content would have serious consequences for public education in the 19th century as legal changes and immigration increased the variety of religious practices and dramatically increased the number of Catholics in the United States. Not every town or colony (or later state) was as attentive to educational concerns as the Puritan colonies, and in many places there existed few, if any, public schools. Private schools, tutors, or Sunday Schools often filled these gaps. Following the Revolution and the establishment of the United States, the growth of the population increased the concern that an uneducated populace would threaten the democratic institutions. This concern was so great that the law opening up the "Old Northwest Territory"—Michigan, Ohio, Indiana—for settlement set

aside one square mile section (section 16) of each township for the “maintenance of public schools in said township.” Later laws establishing additional territories tended to incorporate this rule as well. As a result, the 19th century saw a marked growth of public education.

Problems, however, began to emerge regarding the content of that education. While educational reformers such as Horace Mann saw the need to produce a nonsectarian education, they did not think that it should be devoid of religious content. The Bible and other religious texts often constituted a significant portion of the curriculum. What these reformers saw as nonsectarianism, however, Catholics saw as Protestantism. The use of the King James Version of the Bible and the Lord’s Prayer in its Protestant version made it clear to many Catholics that this was Protestant instruction.

When Catholics demanded that allowance be made for their versions of these materials or that Catholic children be excused from such religious instruction, violence often erupted. Claiming that Catholics were trying to ban the Bible from public schools, nativists (see NATIVISM) in Philadelphia held a series of public meetings and demonstrations that resulted in rioting that continued sporadically from May 4 to July 7, 1844. Churches and schools were burnt, shops looted, hundreds injured, and at least 15 people killed. It took a militia force of more than 5,000 to quell the rioting (see ANTI-CATHOLICISM).

Such conflicts continued off and on throughout the 19th century. One major result was the growth of private Catholic elementary and secondary (parochial) schools in the United States. In these schools, Catholic children could learn free from Protestant influences. While the freedom to establish such schools has been a markedly important element of U.S. history, many Catholics resented that such a choice was imposed on them by the content of the public school system, one they helped fund through their taxes. This gave rise

to one of the longest-standing conflicts involving religion and education in the United States, namely over using public funds to support expressly sectarian schools. In the 19th century, many states adopted laws and even state constitutional amendments prohibiting the use of state funds to support sectarian institutions. An attempt to add such an amendment to the U.S. Constitution, the so-called Blaine Amendment (named after James G. Blaine, a representative and later senator from Maine), failed by a mere seven votes in the Senate. The debate over public monies and religious schools continued into the 21st century. During John F. Kennedy’s 1960 presidential campaign, charges that he would provide funds to Catholic schools dogged his campaign. From the 1980s on, school vouchers, presented as a way of introducing competition into public education, struck many as a stalking horse for funding religious schools.

The desire by many individuals to ensure that their children’s education contained a significant religious component, was not hostile to their beliefs, and did not undermine morality led them to create their own private schools. While the largest number of these schools were Catholic, some Lutheran denominations, Jews, Seventh-day Adventists, and Muslims occasionally took that route. This enabled them to control, to a great extent, the content of the education and to ensure that their children received religious instruction. Since the 1970s, evangelical and fundamentalist Protestants (see EVANGELICALISM; FUNDAMENTALISM [PROTESTANT]) increasingly have moved in this direction as well. This development resulted both from concerns about immorality in the wider culture and the feeling that the public school environment was hostile to religion.

For those who did not choose the parochial school route, public schools presented a challenge to ensure that the practices in the public schools did not offend religious beliefs and practices. The struggle to ensure that

the public schools did not promote religion or create a hostile environment for minority traditions generated many court cases in the late 20th century. These cases included major conflicts over school prayer and Bible readings in public school (see CHURCH AND STATE, RELATION BETWEEN; FIRST AMENDMENT; FOURTEENTH AMENDMENT). Many court decisions focused on making it clear that public schools were neither places for religious indoctrination nor for the promotion of religion. While some objected to these decisions, others welcomed them, feeling that they led to a public school system that served all citizens regardless of their religious backgrounds.

Other conflicts involving religion and education had less to do with explicit religious practices and more to do with the secular content of education. These have included conflicts over sex education (see SEXUALITY), the manner in which religions were treated in textbooks, and even whether girls should participate in physical education classes. The longest-standing and most heated controversy, however, has involved teaching EVOLUTION in the public schools. This conflict began in the early 1900s and continued into the 21st century.

If religion played a major role in the development of elementary and secondary education in the United States, it has played an even greater role in higher education. All the early universities in colonial America (with the exception of the University of Pennsylvania) were established to train ministers for particular denominations. Additionally, many others had their origins in doctrinal controversies or concerns about theological laxness in existing schools. Yale University, for example, was founded because of fear that Harvard had become infested with liberalism.

As Americans moved westward and settled new areas of the country, numerous denominational colleges also were created. Designed both to form an educated ministry and to provide a bastion of civilization, these schools,

from Wabash College in Indiana to St. Olaf in Minnesota to Spring Hill in Alabama, strove to ensure that Presbyterians, Lutherans, and Catholics were both well educated and religiously formed.

These private schools were free from Constitutional limits on the content of their teaching and their religious practices. This fact does not mean that such schools have not had their share of controversy. Many were established because of conflicts over religious beliefs. Still others, like Antioch University, were created because of fights over political and social issues such as slavery and women's education.

Disagreements constantly bedeviled religiously affiliated colleges and universities as well as seminaries. Denominational concerns about what happened in these schools invariably brought clashes. Some of these clashes led to a school removing itself from religious control, such as Union Theological Seminary in New York, or in a reassertion of control and the removal of dissident faculty and students by the denomination, as happened at Southern Baptist Theological Seminary in the late 1980s. In some instances, this led to rebellions by students and faculty, as occurred at Lane Seminary in 1834, and to the founding of Oberlin's seminary. More recently, a 1973 crackdown on what the leadership of the LUTHERAN CHURCH—MISSOURI SYNOD saw as dangerous heresy at Concordia Seminary in St. Louis resulted in a massive exodus of faculty and students and the creation in 1974 of Seminex (Concordia Seminary in Exile).

More pedestrian concerns also resulted in conflicts between religious colleges and universities and their denominational founders. Often, these occurred because of money. Beginning in the 1950s as the federal government began to provide greater financial support to higher education and medicine, many colleges desired to seek such funds. While the courts have been much more lenient in allowing federal funds to religiously affiliated

institutions of higher education than to lower schools, even in colleges such funds could not be used for religious instruction. As colleges, universities, and medical schools sought out such funds, many denominations objected, fearing that acceptance of such funds would compromise their religious mission. As a result, many schools removed themselves from denominational control. While some continued to affirm their religious connection, for others it became increasingly tenuous.

Similarly, as many schools sought to broaden their appeal and increase their academic standings, they also broadened their student pool. Students affiliated with the founding denomination often ceased to be a majority or even a plurality. Combined with the general decline throughout the 1960s and 1970s of required chapel attendance and the "parental" authority of the schools, the expressly denominational atmosphere of many schools decreased precipitously.

Not all colleges and universities moved in that direction, however, and some vigorously reaffirmed their religious commitments, often requiring students, faculty, and administrators to sign faith statements to maintain their affiliation with the school. Additionally, several new colleges and universities were established with the express goal of affirming strong religious identities. These have included Liberty University, Ave Maria College, Thomas Aquinas College, and Patrick Henry College. Such schools reflect the continuity of the relationship between religion and education in the United States. They, like all such schools, were created to form young people intellectually and religiously and to turn them into religiously informed and committed adults.

Edwards, Jonathan (1703–1758) One of America's greatest religious thinkers, Jonathan Edwards was deeply influenced by both Neoplatonism and the philosophy of John Locke (see ENLIGHTENMENT). Edwards devised a theology at once orthodox and scientific, logical and mystical.

Edwards was born on October 5, 1703, in East Windsor, Connecticut, into two families of notable Congregationalist ministers. He graduated from Yale College in 1720. After two years of graduate work, he served a pastorate in New York, returning to Yale as a tutor in 1724. Two years later, he joined his grandfather SOLOMON STODDARD at the church in Northampton, Massachusetts, as a junior colleague, becoming the senior minister after Stoddard's death in 1729.

At Northampton, Edwards was immersed in parish duties, although he found some time for writing. To Edwards's surprise, in 1734, during a series of sermons against ARMINIANISM, the belief that human activity could help effect salvation, his parish underwent a religious revival that is generally considered the start of the GREAT AWAKENING.

Although Edwards was the spokesman for a renewal of traditional CALVINISM and orthodox doctrine, he defended these doctrines with the new learning. In doing so, he became a leading exponent of "religious experience." In his *A Treatise Concerning Religious Affections*, Edwards argues that true religion is more than

Jonathan Edwards, the eminent American theologian who deeply influenced the 18th-century revival of religion known as the Great Awakening.

mere assent to religious knowledge or doctrine. It is the complete possession of the individual, "driven by love which is the first and chief . . . and the fountain of all affections."

Continued reflection on the nature of God's majestic presence led Edwards to an increasing awareness of the seriousness of both church membership and the sacraments. In response to this awareness, he attempted to reverse some of the practices instituted by his grandfather. Edward's tightening of the criteria for BAPTISM and admission to the Lord's Supper met with increasing hostility from his congregation. His desire to deliver a series of sermons on the latter subject in 1748 met not only with disapproval, but also with a request for his resignation. The conflict lasted until

the summer of 1750, when the church voted 200-53 for dismissal. He delivered his farewell sermon July 1, 1750.

Thrown adrift with a wife and seven children, he received a call from the frontier town of Stockbridge, where his duties included services to both whites and the Housatonic Indians. The years spent in Stockbridge proved the most productive of Edwards's life. He continued his arguments on behalf of the traditional doctrines of Calvinism—the supremacy of God, the depravity of humanity, and the bondage of will. Edwards was no arid dogmatist, however. His writings have a sense of feeling and mysticism that seems almost Romantic. He also defended these traditional doctrines with a most complex use of the new, enlightened, and liberal learning of the time. John Locke's psychology and philosophical idealism became Edwards's weapons against the Lockians. It is unfortunate that Edwards is known chiefly (if at all) through his widely anthologized sermon, "Sinners in the Hands of an Angry God," one of the very few threatening and condemnatory sermons he ever gave.

In 1757, he was asked to fill the presidency of the College of New Jersey (later Princeton University) following the death of his son-in-law Aaron Burr, who was president. After some hesitation, he accepted the position in January 1758. While there his interest in science and modern thought ended his life. Firmly believing in the usefulness of the new science, he submitted himself to a smallpox inoculation. Complications resulted, and he died March 22, 1758.

Einhorn, David (1809–1879) David Einhorn was, as his son-in-law KAUFMANN KOHLER called him, “the Reform theologian *par excellence*.” Already a major figure in German REFORM JUDAISM before his 1855 arrival in the United States, Einhorn provided American Reform Judaism with an intellectual basis for its beliefs and actions. A theological radical, he had little patience with ISAAC WISE’s moderate reform and organizational concerns or with Wise’s attempt to create an Americanized Judaism. For Einhorn, Reform Judaism was a German phenomenon, dependent upon the German language and German philosophy.

Born in Dispek, Germany, on November 10, 1809, Einhorn studied at an Orthodox yeshiva, receiving his rabbinical certificate in 1826. He then took the radical step of attending several secular universities. This, along with his increasingly unorthodox views, led to a reaction among the Orthodox rabbis, who prevented his appointment as a rabbi for a decade. He finally obtained a position in Mecklenburg-Schwerin and later in Pesth, Hungary. Following the failure of the Hungarian revolution (1848–49), however, his

temple was closed due to his support for the revolution and the hostility of his Orthodox colleagues.

Einhorn came to the somewhat freer atmosphere of America in 1855 as rabbi of Temple Har Sinai in Baltimore. Even there his views caused problems, and in 1861, he left after being attacked for his abolitionist views. Einhorn served as rabbi of Keneseth Israel in Philadelphia (1861–66) and Adath Jeshurun (later Temple Beth-El) in New York (1866–79) until his death on November 2, 1879. During this time, he continued his theological work of placing Reform Judaism on a sound intellectual basis.

David Einhorn was the radical thinker of American Reform Judaism. For him, Judaism needed a drastic restructuring. It had become too encrusted with useless and unnecessary rituals and rules. For Einhorn, the goal was to locate and retain the eternal essence of Judaism and remove all that was temporary. As he said, “Like man himself the divine law has a perishable body and an imperishable spirit.” This imperishable spirit lay in Judaism’s monotheistic God and in the ethical commandments. These were eternal, while the ritual obligations were deemed to be merely reflections of the spirit of the time that created them.

David Einhorn’s teachings about religion dominated Reform Judaism for nearly seven decades. They included a rejection of the ritual law and the idea of a separate Jewish people. Judaism was a religion whose universal mission was to bring ethical monotheism to all. The dispersal of Jews throughout the world was not an exile, for sin but a necessary part of this mission. Since the Jewish people were not in exile, they did not look toward a messianic restoration of the Jewish state, but viewed the messianic age as one of universal peace and justice. Incorporated after his death into the PITTSBURGH PLATFORM of 1885, these views dominated American Reform Judaism until 1937.

election The word *election* is derived from Latin *electio*, which means “a choice.” In a religious setting, the term has traditionally referred to God’s choice of certain people to receive forgiveness of sins and eternal salvation. The concept of election appears in the New Testament in the writings of St. Paul, who refers to those whom God “chose . . . before the foundation of the world to be holy and blameless before him” (Ephesians 1:4). Emphasis on election has been a hallmark of CALVINISM and the REFORMED TRADITION.

Fundamental to belief in election is the concept of divine grace. The idea of grace is widespread throughout the Bible and generally denotes the favor God shows to undeserving, sinful human beings. In the fourth century, Christian theologian Augustine of Hippo chose to emphasize divine grace and denigrate the importance of human responsibility in the process of salvation. So strong was Augustine’s accent upon the divine, rather than the human, will that he believed God had foreordained the salvation of men and women before the creation of the world. God had predestined from eternity, therefore, the election of some souls to salvation.

The 16th-century reformer John Calvin adopted Augustine’s emphasis on the omnipotence of God and the passivity of humankind. He made the doctrine of predestination the foundation of his theological system. Without divine grace, Calvin wrote, no person could

repent and become a Christian. Yet God’s grace was a gift that only the elect received. The credit for salvation belonged solely to God, who had predestined the fate of human souls, gratuitously granting irresistible salvation to some and inescapable damnation to others. Although his teaching on election appeared to undercut the need for moral effort, since no amount of piety or faithfulness could ever change the divine eternal plan, Calvin counseled people simply to trust in the all-sufficient grace of God.

In the early 17th century, Dutch theologian Jacobus Arminius advanced a pivotal challenge to Calvin’s teachings on election. Arminius, who doubted that God’s choice could ever have been as arbitrary as Calvin suggested, wished to reaffirm the importance of the human will in spiritual matters. Arminius’s followers formally disputed Calvin’s fatalism and argued that, by God’s grace, all people might potentially attain everlasting salvation. Orthodox Calvinists vigorously counterattacked and at the Synod of Dort in 1619 officially condemned ARMINIANISM. The *Canons* of the Synod of Dort asserted that divine election was unconditional. God had predestined some human beings for salvation, Calvinists triumphantly proclaimed, regardless of individual merit or good deeds.

The Puritan movement that emerged in England in the late 16th century also wrestled with the implications of Calvin’s doctrine of election. While never directly contradicting Calvin’s teaching on predestination, Puritan theologians still sought some gauge by which ordinary believers might be assured that they were numbered among the elect. Puritans came to believe that there were four stages through which a true Christian would pass: effectual calling, justification, SANCTIFICATION, and glorification. The third stage, sanctification, was the key. At that point, believers might note their good works, thereby coming to a realization that God had chosen them and that they were, in fact, saved.

The Puritans carried these ideas about election to New England in their migration in the mid-17th century. Using the idea of the heart's preparation for grace, Puritan theologians intended to keep Arminianism at bay. However, allowing believers to observe the steps they took toward conversion insinuated that the soul's regeneration was more a gradual, contemporary process than a sudden and ancient divine decree. "Preparationism," therefore, helped further Arminian notions about self-reliance in America. Despite Calvin's commonly recognized authority, and even despite the emphasis placed upon divine sovereignty by theologian JONATHAN EDWARDS, predestination would not be the principal focus of later American teaching on divine election.

The person most responsible for overthrowing Calvinist determinism and stressing the free human will in Protestant thought was Methodist founder John Wesley. Wesley transformed Arminian themes and adapted them to the new religious movement he led. While earlier Protestant reformers had emphasized God's role in choosing some women and men for salvation, Wesley underscored the responsibility of human beings in appropriating the salvation that God graciously extended to them. Wesley's theology fit the self-reliant spirit of the young American republic, and by the middle of the 19th century, the Methodists had become the largest denomination in the United States.

A democratic Arminian emphasis on free will dominated the revivals of the SECOND GREAT AWAKENING. Revival leaders assumed that individuals had the innate ability to reform themselves, and they exhorted sinners to abandon evil and come to God. Anyone who wanted, they said, could be converted and attain salvation. New School Presbyterian clergyman CHARLES G. FINNEY exemplified the era. Finney taught that ordinary reason revealed that God had given people power to make up their own minds. In an

exuberantly democratic era that celebrated the importance of the "common man," when politicians pressed citizens for votes, Finney conceived that the Christian evangelist's primary job was convincing Americans to cast their spiritual ballots for God.

By the late 19th century, the emphasis American evangelicals placed, not on God's choice of the individual but on the individual's obligation to choose Jesus Christ, signified the triumph of Arminianism over the Calvinist understanding of election. While Calvin had once asserted that the most pious Christians could not save themselves nor the most heinous sinners damn themselves, the vast majority of Calvin's spiritual heirs in the United States today assume that the prerogative of accepting or rejecting eternal salvation rests entirely with them.

electronic church *Electronic church* is a contemporary term used to describe religious broadcasting, as well as organizations and leaders who regularly employ the electronic media. Despite the long history of religious broadcasting in the United States, the term *electronic church* usually refers to television programs produced by conservative Protestant figures from the fundamentalist, evangelical, and Pentecostal traditions. The prominence gained in the 1980s by televangelists such as JERRY FALWELL, PAT ROBERTSON (see RELIGIOUS RIGHT), Jim and Tammy Bakker, and Jimmy Swaggart generated unprecedented attention to this type of religious broadcasting.

The first wireless transmission of the human voice took place on Christmas Eve in 1906. The program included Bible readings and a rendition of "O Holy Night." The first regularly scheduled religious programming began at station KDKA in Pittsburgh in 1921,

when Calvary Episcopal Church broadcast its Sunday evening service. Radio broadcasting developed rapidly in the 1920s. Church leaders soon realized radio's potential advantages for evangelism, and by 1925, about 10 percent of all American radio stations were owned by religious organizations.

Two of the earliest popularizers of religious broadcasting were highly controversial. AIMEE SEMPLE MCPHERSON, the flamboyant founder of the International Church of the Foursquare Gospel, was one of the first evangelists to recognize the potential of radio. The radio, she observed in 1924, carried "on the winged feet of the winds, the story of hope, the words of joy, of comfort, of salvation." Roman Catholic priest CHARLES COUGHLIN began his highly effective radio ministry in 1926. By 1930, he had turned from discussing religious topics to promoting political causes. Credited with aiding the election of Franklin D. Roosevelt as president in 1932, Coughlin turned against him as the 1930s progressed. His preaching became so vitriolic that he was eventually forced off the air by church authorities in 1942.

Charles E. Fuller, a more conventional religious figure than either McPherson or Coughlin, was the most successful radio evangelist of the late 1930s. Fuller started teaching Bible lessons over the air at a radio station owned by the Bible Institute of Los Angeles in the 1920s. By 1930, he was broadcasting services from the church where he served as pastor. He moved to a national audience in 1937, and his program, *The Old Fashioned Revival Hour*, was heard on 30 stations with an estimated 10 million listeners. By mid-1943, *The Old Fashioned Revival Hour* and a second program, *The Pilgrim's Hour*, were broadcast on more than a thousand stations at an annual cost of \$1.5 million. Fuller, who helped found Fuller Theological Seminary in Pasadena, California, in 1947, continued his radio ministry until shortly before his death in 1968.

The first religious television broadcast was on Easter Sunday in 1940. Soon, the Federal

Council of Churches, an ecumenical association of Protestant denominations, arranged religious programming for NBC. Its initial production, *I Believe*, featured a discussion by leading theologians about religion's applicability to everyday life. In the early 1950s, several conservative denominations launched television ministries. The SEVENTH-DAY ADVENTIST CHURCH began its *Faith for Today* program in 1950, with its star, William A. Fagal, assuming the role of television's first on-air pastor. The LUTHERAN CHURCH—MISSOURI SYNOD started its dramatic series *This Is the Life* in 1951. And in 1954, the SOUTHERN BAPTIST CONVENTION initiated a series of films based on the parables of Jesus.

Roman Catholic bishop FULTON J. SHEEN was the first true superstar of religious television broadcasting. Sheen was already well known to Americans as an author. He had been the featured speaker on *The Catholic Hour* radio program since 1930. His *Life Is Worth Living* television program, which ran from 1951 until 1957, reached approximately 30 million viewers each week. Sheen's cassock and cape and the twinkle that shone in his eye impressed a faithful audience of Protestants as well as Catholics. Testimonials to his success included both an Emmy award and an appearance on the cover of *Time* magazine in 1952.

Despite Sheen's early prominence, religious television broadcasting was to become the almost exclusive preserve of evangelical preachers (see PREACHERS, PROTESTANT). Evangelist Rex Humbard began this trend in 1952 with broadcasts of Sunday services at his church in Akron, Ohio. "I saw this new thing called television," Humbard later remarked, "and I said, 'That's it.'" He believed God wished preachers to use television to spread the Christian Gospel throughout the United States. Pentecostal evangelist and faith healer ORAL ROBERTS also helped establish the religious broadcasting movement. He decided in 1954 to telecast the healing services he held

in Tulsa, Oklahoma. Another significant event in the use of television by conservative Protestants was the coast-to-coast broadcast of BILLY GRAHAM'S 1957 preaching crusade in New York City.

The real breakthrough for the new wave of televangelists occurred in 1960. The Federal Communications Commission, which regulates the broadcasting industry, ruled that a station's legal obligation to provide air time for "public service" broadcasts could be met by paid, as well as by free, programming. This decision, coupled with the heightened militancy of conservative Protestantism and the rise of the new RELIGIOUS RIGHT in the 1970s, enabled the electronic church to emerge as a significant force in American life. Given the chance to buy air time, evangelicals soon gained a virtual monopoly over religious broadcasting, purchasing more than 90 percent of all programming related to religious topics.

Evangelicals also developed television networks that offered a combination of family-oriented and religious programs. Evangelist Pat Robertson's Christian Broadcasting Network (CBN), which first went on the air in October 1961, was the most successful of these and became the second-largest cable television operation in the United States. Located in Virginia Beach, Virginia, Robertson's network had an annual budget of more than \$200 million in 1987 and reached more than 190 stations throughout the world. Robertson even founded CBN University in 1978, offering courses in communications as well as in law, education, and theology. Although his 1988 and 2000 campaigns for the United States presidency met with limited success, Robertson's television ministry established him in a position of considerable influence in the Republican Party.

After Robertson, the most notable televangelist of the 1980s was MORAL MAJORITY leader Jerry Falwell. Falwell, a Baptist minister, organized the Thomas Road Baptist Church in Lynchburg, Virginia, in 1956.

There he launched, first, a daily radio program and, later, a weekly television broadcast of his Sunday morning services (*The Old-Time Gospel Hour*). These ministries became a springboard for the creation of Moral Majority, an educational and fund-raising organization dedicated to lobbying on behalf of conservative political causes. The organization blended fundamentalist religious beliefs with rigidly conservative views on a host of ethical issues that troubled late-20th-century American society. At the height of Falwell's fame in 1983, yearly contributions to his *Old-Time Gospel Hour* totaled more than \$52 million.

Two other popular television ministries that gained great prominence in the 1980s later collapsed in the wake of sexual scandals. Jim Bakker, a minister of the ASSEMBLIES OF GOD and a former host on Pat Robertson's Christian Broadcasting Network, developed his own television show, *The PTL Club*, which by 1987 reached 13 million homes on cable TV. Along with his wife, Tammy, Bakker also built a Christian theme park and resort, Heritage USA, outside Charlotte, North Carolina. However, financial improprieties and revelations of Jim Bakker's affair with his secretary led to his resignation in disgrace in 1987. Jimmy Swaggart, an Assemblies of God evangelist like Bakker, began a weekly television broadcast in 1973. By the late 1980s, *The Jimmy Swaggart Show* was broadcast nationwide from his headquarters in Baton Rouge, Louisiana. After bringing charges of adultery against Jim Bakker in the spring of 1987, Swaggart was publicly exposed for his own sexual encounters with a prostitute. He was defrocked by his denomination in 1988.

One other prosperous television ministry has been the *Hour of Power* broadcasts of Robert Schuller, a minister of the REFORMED CHURCH IN AMERICA. Schuller began telecasting Sunday worship services at his Garden Grove Community Church in Southern California as early as 1970. By the mid-1970s, the program aired nationally in major cities. Schuller dreamed

of building a church that would serve both a walk-in and a drive-in congregation. This hope was realized in 1980 with the completion of the spectacular Crystal Cathedral, erected at a cost of nearly \$20 million. Fashioning an optimistic theology he called "possibility thinking," Schuller recast the Christian Gospel into a form that appealed to the age-old human quest for self-esteem and worldly success.

At present, about 16 million people, or roughly 8 percent of the national television audience, regularly listen to religious broadcasts. The number of syndicated religious programs increased dramatically between 1970 and 1975, jumping from 38 to 66. This figure further increased to nearly 100 by the early 1980s. Most of the audience of the electronic church is also active in local congregations. These viewers tend to believe that the religious broadcasts they watch are supplements to their Sunday morning churchgoing. Their financial giving to the television ministries is unquestionably substantial. The total annual revenue for religious broadcasting in the United States exceeds \$1 billion.

Despite the lurid scandals of the 1980s, most religious broadcasters believe the Gospel they preach on radio and television. Like many popular religious leaders throughout American history, the televangelists insist that Christianity was never intended to be an obscure creed intelligible only to the intellectually sophisticated. Rather, it contains a plain message that anyone can understand. The electronic church simply provides an effective means, they say, of spreading the Gospel widely throughout modern American society.

Eliot, John (1604–1690) Among the Puritans (see PURITANISM) who fled to America in order to escape increasing persecution was one whose labors among the Algonquin-speaking Indians earned him the title "Apostle to the Indians." John Eliot (born in Winford, England, in August 1604) labored among the Wampanoag and Massachusetts Indians for 44 years, only to see most of his work destroyed by war.

Like most of the Puritan ministers who came to New England, Eliot had been educated at Cambridge University. While there, he was deeply influenced by the work of THOMAS HOOKER, whom he assisted in operating a school at Little Boddon. When Hooker was summoned before the Court of High Commission (Star Chamber) in 1630 for his religious beliefs, Eliot—sensing danger—wisely emigrated to the MASSACHUSETTS BAY COLONY the next year.

Upon arriving, he served as a supply minister in Boston until 1632. In that year, he was called to a church in Roxbury. There Eliot combined work among the English with a growing concern for the Native Americans. He eventually would devote all his energy to the latter.

With the aid of native tutors, he slowly learned the Algonquin language, producing an alphabet, dictionary, and grammar and delivering his first sermon in that language in 1646. Eliot had the consuming Puritan interest in doctrine and the Bible. This led him to produce an Algonquin catechism (1653) and a translation of the Bible. This would be the first Bible printed in America, the New Testament in 1661 and Old Testament in 1663.

Eliot's labors among the Indians bore fruit slowly but steadily. His efforts led to the chartering of the Society for the Propagation of the Gospel in New England by the Brit-

ish parliament in 1649 to support missions among Native Americans. In 1651, a group of Eliot's converts formed the town of Natick. By 1674, 1,100 of these "Praying Indians" were organized into 14 self-governing towns, many with their own native ministers. In these towns, the converts were transformed socially into Englishmen and women. They conformed to English modes of dress and economics, settling into permanent villages with the men engaged in agriculture and the women in domestic activities.

The outbreak of King Philip's War (1675–76) virtually destroyed these communities. Racism and suspicion led the New England colonists to vent their fury on these Christianized Indians, who were more accessible than the elusive Metacombet (King Philip) and his warriors. Their towns were burned and hundreds died in concentration camps. By the end of the war, only four towns remained intact. Eliot's work never recovered, although he continued to work among the scattered and demoralized Indians until his death on May 21, 1690.

Emerson, Ralph Waldo (1803–1882)

Inheriting a mixture of the declining PURITANISM and nascent Unitarianism (see UNITARIAN CONTROVERSY) of his New England ancestors, Emerson gained a considerable reputation as a gifted speaker and an original mind in his own day, becoming the central figure in the school of thought known as TRANSCENDENTALISM.

Emerson was born in Boston to William and Ruth Haskins Emerson on May 25, 1803. His father, who was the pastor of Boston's First Unitarian Church, died of tuberculosis while

Emerson was quite young. Emerson grew up under the Calvinist (see CALVINISM) influence of his aunt Mary Moody Emerson. As a boy, Emerson studied Latin, Greek, mathematics, and writing, eventually enrolling at Harvard College in 1817. In addition to the classics, he immersed himself in the works of Shakespeare, Montaigne, and contemporary European authors. After graduating in 1821, he began teaching at a private school for young women run by his brother William. Having decided on the ministry, he entered Harvard Divinity School in 1824.

His vocational choice provided a ready vehicle for his writing. Following his return from a trip to Florida, taken to recover from rheumatism, Emerson preached regularly in a number of neighboring Massachusetts towns. In 1829, after his marriage to Ellen Tucker (who died in 1831), he was called to the pulpit of Boston's Second Church. However, he found the Unitarianism of his day too confining, writing in his journal, "It is the best part of the man, I sometimes think, that revolts against his being the minister. His good revolts against official goodness." After requesting that he be permitted to forego administering Communion to his congregation and being refused by the church board, he announced his resignation following a sermon on "The Lord's Supper," September 9, 1832, and sailed to Europe on Christmas Day. During travels in England, he met Samuel Taylor Coleridge, William Wordsworth, John Stuart Mill, and Thomas Carlyle, with whom he formed a lasting friendship.

After his return, he settled in Concord, marrying Lydia Jackson in 1835, and began receiving invitations to preach and lecture. Emerson loved conversation, and the informal Transcendental Club meeting in his home brought together a number of important intellectual figures: BRONSON ALCOTT, WILLIAM ELLERY CHANNING JR., MARGARET FULLER, and HENRY DAVID THOREAU. As his reputation grew, lecturing became increasingly lucrative,

Ralph Waldo Emerson, the sage and seer of 19th-century transcendentalism who preached self-reliance as the cardinal virtue. (Engraving by J. A. J. Wilcox)

and Emerson spent several decades delivering lectures throughout the United States and in England. Emerson also edited the Transcendentalist organ, *The Dial*, for several years and produced a number of volumes of collected essays and poems.

In line with the concerns for social reform common in his circle (see LIBERALISM, THEOLOGICAL) Emerson spoke out on a number of public issues, denouncing the forced removal of the Cherokee from Georgia in the late 1830s and the Mexican War (1846–48). As tensions between North and South mounted, he adopted the cause of ABOLITIONISM. After the outbreak of the CIVIL WAR, he voiced frequent support for President ABRAHAM LINCOLN. In later life, conservationist JOHN MUIR also

sought to enlist him in the cause of wilderness preservation, though without much success. In the 1870s, declining health forced him to cut back on his writing, which remained sporadic up to the time of his death on April 27, 1882.

Emerson was a dynamic thinker, led by the fluidity of language to question everything he asserted. “A foolish consistency is the hobgoblin of little minds,” he claimed in “Self-Reliance” (1847). Urging independence of mind, he attacked what he saw as the stale conformity of New England, especially its religion. Invited to speak by Harvard students, he encouraged them in his famous “Divinity School Address” to reject the formalism of the existing church and to think: “Yourself a newborn bard of the Holy Ghost—cast behind you all conformity, and acquaint men at first hand with Deity.” In the same way, he urged Americans to think the sort of new thoughts demanded by their unique position in history and by the unique continent they were conquering. His own efforts to cast off what he saw as the conformism of New England’s intellectual life led him to explore not only the leading European thinkers Kant, Hegel, Schiller, and Goethe, but also classics of Asian thought, such as the *Bhagavad Gita* (see HINDUISM) and to seek direct connection with the divine through nature. While his originality is sometimes questioned, his relentless passion to encounter “the currents of the Universal Being” in the midst of mind, nature, society, art, language, and individual life ensures Emerson a lasting influence on American thought.

Enlightenment The Enlightenment, which has exerted a tremendous influence on religion in the United States since the beginning of the republic, refers to an intellectual movement in the modern West devoted to utilizing reason to improve society, politics, and religion. Enlightenment thinkers believed deeply in the perfectibility of human beings and the possibility of social progress. Their scientific spirit inclined them toward skepticism and tolerance in religion, but only in exceptional cases to infidelity.

The German philosopher Immanuel Kant described the Enlightenment as "man's emergence from his self-incurred immaturity." Kant's definition sums up a diffuse set of intellectual currents accompanying the broad-scale transformations through which medieval Europe became a modern society. Revolutions in science, political and economic life, philosophy, and religion all emerged after the 130 years of religious war and colonial expansion that followed in the wake of the Protestant Reformation (1519–64). The beginnings of the Enlightenment are often traced to England during the Glorious Revolution (1688), a point in time close to the publication of such influential works as Isaac Newton's *Principia Mathematica* (1687) and John Locke's *An Essay Concerning Human Understanding* (1690). Its roots certainly extend even earlier to the work of Francis Bacon (1561–1626) and René Descartes (1596–1650). For these founders of the modern scientific world view, true knowledge was not guaranteed by religious authority or

tradition but rather by individual rational effort. The power of reason was sufficient to expose the errors of tradition.

The potential for human reason to cast doubt upon revealed religious truth enabled Enlightenment thinkers to expand and splinter into various, often conflicting, parties. In England, the materialist political philosopher Thomas Hobbes (1588–1679) and John Locke (1632–1704), whose political theories played a role in sharpening the revolutionary ideas of American colonists, remained loyal members of the Church of England. In France, on the other hand, with an entrenched aristocracy and a powerful Catholic Church, Enlightenment themes of the triumph of human reason over superstition often took on a much sharper anticlerical tone, eventually culminating during the French Revolution in the movement to confiscate church lands and in French *philosophe* Denis Diderot's complaint that "mankind shall not be free until the last king is strangled with the entrails of the last priest."

Enlightenment thinkers differed sharply over correct scientific method, whether political rule ought to be invested in the people or a sovereign, whether all religion was merely superstition, and whether progress in human affairs was really possible. However, they shared a conviction that human reason or will, once released from the bonds of authority and tradition, could be relied upon as the surest guide to human happiness and the improvement of society.

Americans at first were simply recipients of enlightened ideas arising in England. Much of Puritan social theory, biblical interpretation, and theology was dependent upon the neoplatonic metaphysics the Protestant reformers had inherited from the Middle Ages. But a number of Puritan intellectuals in America were able to form at least some links between their CALVINISM and the new faith in reason. Beginning in the late 17th century, students at Harvard had begun reading directly or

indirectly the works of Descartes, Locke, John Tillotson, and to some extent Sir Isaac Newton. John Ray's *Wisdom of God Manifest in the Works of Creation* (1691), an inquiry into nature as a source of knowledge about divinity, became a popular introduction to "natural theology." COTTON MATHER drew on Newton's argument for an ordered universe in *Reasonable Religion* (1700) and *The Christian Philosopher* (1721). Locke's plea for religious tolerance, *The Reasonableness of Christianity* (1695), was read and appreciated far more than his theory of knowledge, though JONATHAN EDWARDS drew heavily on Locke's views of human knowledge.

During the second half of the 18th century, moderate versions of Enlightenment ideas spread across America's upper classes. Anglicans (see ANGLICANISM) in both southern and northern colonies backed up their rejection of revivals and religious enthusiasm (see GREAT AWAKENING) by portraying their own religion as the most reasonable. John Witherspoon, a Scottish Presbyterian convinced of the harmony between Christian faith and the new "natural philosophy," brought the "common sense" ideas of fellow Scots Dugald Stewart and Thomas Reid, as well as those of Adam Smith and even skeptic David Hume, into the curriculum at the College of New Jersey, now Princeton University.

In addition to efforts within church circles to stem the enthusiastic tide of popular religion, others who doubted Christianity were also using the new faith in reason to diminish Christianity's hold on colonial minds. Outright skeptics were few. Benjamin Franklin may have been the only American comfortable in the anticlerical salons of Parisian society during the revolutionary years, and few colonists were familiar with the work of French authors. Another Enlightenment movement, deism, played a more prominent role in American life.

In general, deists, originating in England, expanded upon the work of Locke and Newton, and spoke of the world as a rational

order, created by a rational God. Calvinists had often spoken of divine sovereignty, meaning that God's freedom was not subject to the laws of nature. Consequently, God could only be known through faith. Deists, however, thought the creator was bound by the same standards of rationality and morality visible in the natural order. Accordingly, deists were suspicious of biblical accounts of miracles and claims of the Bible's supernatural authorship. Deists did tend to approve the concept of an afterlife, which served as an anchor for moral rectitude.

While deist clubs formed in many colonial towns, the movements as a whole lacked organizational power. Deists found their most congenial home in the lodges of FREEMASONRY, spreading throughout the colonies and often developing a relation of tolerance with Protestant liberals. The rituals and symbols used by the Masonic brotherhood showed a strong Enlightenment influence. The sun symbolized both reason's inner light and natural order. Such architectural symbols as the compass and square signified both the rational order of nature and the human capacity to design and build a well-ordered, just society.

Deists were an ideologically diverse group, although many deists played influential roles in the formation of revolutionary sentiment. Deists spoke of the reasoning powers of all human beings, the possibility of human perfectibility, and universal moral standards serving to judge the actions of states and rulers all shaped the discourse of colonists bent on revolution. THOMAS JEFFERSON'S Declaration of Independence is perhaps the most recognizable statement of deist values; 52 of its 56 signers were deists, although the vast majority also were faithful Anglicans. Most members of the Continental Congress and many generals in the Continental Army were deists as well.

In the years following the Revolution, a number of more radical Enlightenment voices were raised, many of them deist, but some,

such as that of English immigrant Joseph Priestley, took hold within the growing camp of Unitarianism (see UNITARIAN CONTROVERSY). Priestley forged a unique blend of French materialism, scientific insight, dissenting Protestantism, and a deep commitment to the justness of the American Revolution. TOM PAINE's *The Age of Reason* (1794–96) and *Reason the Only Oracle of Man* (1784) by Ethan Allen gained notoriety for their attacks on Christianity. Rationalist Elihu Palmer drew on the rhetoric of French *philosophes* to portray a postrevolutionary world stripped of priests and kings, a millennial republic of justice and peace built on the foundation of human reason. Virginia's College of William and Mary, where Jefferson had earlier abolished the chairs of divinity, became the leading center of radical learning.

The radical deist influence declined sharply in the first years of the 19th century. In more theologically and politically moderate forms, the Enlightenment lived on in the thought of Protestant liberals and New England Unitarians. But the radical republican vision of Paine and Palmer, which had looked to France for revolutionary inspiration, suffered as Jacobin forces there turned the revolution in a more extreme direction. In the midst of an America undergoing an enthusiastic Protestant revival (see SECOND GREAT AWAKENING), influential Calvinist clergy such as TIMOTHY DWIGHT of Yale increasingly portrayed deists as part of an international conspiracy, threatening the foundations of Christian civilization.

In the long term, Enlightenment ideals played a crucial role in the rise of a more secular American culture (see SECULARISM; DEWEY, JOHN). The language by which Americans speak of their faith in science, their conviction that the future is one of progress, and the value of religious and political liberty is rooted in the worldview of the Enlightenment. At times, Americans have been able to blend the Enlightenment with the Bible. But

throughout American history, followers of the two traditions also have repeatedly clashed.

Ephrata Community An 18th-century monastic order, the Ephrata Community offered its members simple lives of solitude and piety. The community, an offshoot of the CHURCH OF THE BRETHREN, was founded by Johann Conrad Beissel (1691–1768), a devoted German pietist who emigrated to Germantown, Pennsylvania, in 1720.

From his rebaptism in 1722 until he left the group in 1728, Beissel was officially a member of the Church of the Brethren. But community life among the Dunkers, as members of the Church of the Brethren were popularly called, proved too much for the solitary Beissel, who frequently withdrew from church fellowship for long periods of isolation. By 1732, Beissel had gathered around him enough like-minded pietists (see PIETISM) to form a monastic group in Ephrata, Pennsylvania.

Among the distinctive practices of the Ephrata Community was its observation of the Sabbath on Saturday rather than Sunday. Because of this practice, Beissel's followers came to be known as the German Seventh-day Baptists. Members of Beissel's community also engaged in daily spiritual warfare with the temptations of the flesh, practicing continence in all things. Celibacy and poverty were key ideals, and segregation of the sexes and asceticism key practices.

Beissel's community soon began attracting converts not only from the Brethren but

also from the much larger German Reformed community of Pennsylvania. Perhaps because of its successes, the Ephrata Community experienced tensions with other German pietists in the area. But more than anything else, Beissel's inclination toward the solitary life of the ascetic led to the group's demise. Administrative affairs were not the pietist's forte; his resolve to rule with an iron fist created conflicts among community members.

Following his death in 1768, Beissel was succeeded by John Peter Miller (1710–96), who like most Dunkers had been raised in the German Reformed tradition. Miller was able to hold the group together for a time, but shortly after his death in 1796, the Ephrata experiment dissolved. Despite its short life, this community stands as a conspicuous example of monastic living in lay-oriented America. The cloister and its buildings may still be viewed by visitors to Ephrata, Pennsylvania.

Klein, *Johann Conrad Beissel: Mystic and Martinet* (Philadelphia: Porcupine Press, 1973).

episcopacy Episcopacy is a form of church government in which authority is centered in the office of bishop. The word itself derives from the Greek *episkopos*, meaning "overseer" or, as it is traditionally translated when it appears in the New Testament, "bishop." By the end of the second century, a threefold order of bishops, priests, and deacons had been established as the governing hierarchy of the Christian church. The bishop, whose authority was said to derive directly from the apostles of Jesus, presided as chief pastor and administrator of a geographic district known as a diocese. He alone was sanctioned to per-

form the sacramental rites of ordination and (by the Middle Ages) confirmation.

Between the second and the 16th centuries, Christianity everywhere was organized on this episcopal system, which Roman Catholic and Eastern Orthodox Churches maintain today. However, at the time of the Reformation, most Protestant denominations abolished the episcopate, denouncing it as a corrupt institution. They adopted instead either a presbyterian (governance by clergy and elected laity) or a congregational (governance by local congregations) structure. Only Anglicans continued to govern according to the medieval episcopal system. A few Protestant denominations, namely, Methodists, Lutherans of Scandinavian heritage, and Moravians, while still formally maintaining the bishop's office, modified its pre-Reformation functions.

Episcopacy became a source of conflict at one critical juncture in American history. Although the episcopate was central to the governance of the Church of England, no Anglican bishop resided in America during the colonial period. An uproar arose in the 1760s, when some Anglicans in the colonies began to press for their own bishop. Since bishops in England held temporal as well as ecclesiastical powers, American Congregationalists, Presbyterians, and even a few Anglicans reacted negatively to the proposal, fearing it represented an imposition of British tyranny similar to the Stamp Act of the same period. American resistance was successful, and no Anglican bishop was consecrated in America until after the War for Independence. But as patriot leader John Adams later remarked, "the apprehension of Episcopacy" contributed significantly to the outbreak of the AMERICAN REVOLUTION.

Episcopalians, Methodists, and Roman Catholics were the three major denominations with bishops in the United States at the time of the founding of the country. SAMUEL SEABURY of Connecticut was consecrated in

Scotland in 1784 as the first bishop of the Episcopal Church. THOMAS COKE was ordained by John Wesley in 1784 as the first bishop (or superintendent, the term Wesley preferred) of the Methodist Episcopal Church. And JOHN CARROLL of Baltimore, the first Roman Catholic bishop, was consecrated in 1790.

Episcopal Church Originally known as the Protestant Episcopal Church in the United States of America, the Episcopal Church is a member of the Anglican (see ANGLICANISM) Communion, the worldwide fellowship of churches that trace their historical roots to the Church of England. The Episcopal Church was organized in October 1789, when its first general convention adopted a constitution, ratified a set of church canons, and authorized a *Book of Common Prayer* for use in services of worship.

Anglicanism came to America in the first half of the 17th century. The English settlers who established colonies in Massachusetts and Virginia were members of the Church of England, and though the New England settlements rapidly adopted a congregational form of church government (see CONGREGATIONALISM), those in Virginia continued loyal to the episcopal (see EPISCOPACY) polity and liturgical forms of Anglicanism. While Virginia remained the center of Anglican strength during the colonial period, Anglicanism had spread throughout all thirteen colonies before the AMERICAN REVOLUTION. The founding of two missionary organizations in England, the Society for Promoting Christian Knowledge (1698) and the SOCIETY FOR THE PROPAGATION OF THE GOSPEL IN FOREIGN PARTS (1701), also helped revitalize Anglican spiritual life

and led to the establishment of many new churches in America.

Anglicanism suffered tremendously during the Revolution. Since the clergy, especially those in the northern colonies, tended to be loyal to the English Crown and preferred to close their church buildings rather than alter their services and pray for the American cause, many were forced to return to England or emigrate to Canada during the war. Most Anglicans in the southern colonies were sympathetic to the revolt from Great Britain. Two-thirds of the signers of the Declaration of Independence were Anglican laymen.

After the Revolution and during the early national period, the new Episcopal Church struggled to reestablish its institutional life. Its principal concern was creating a denomination that was indigenous to America and independent of the English king, the “supreme governor” of the Church of England. Because the sacramental rites of ordination and confirmation (confirmation being a prerequisite for admission to Holy Communion) could not be performed without a bishop, the procuring of an American bishop was absolutely essential. In November 1784, SAMUEL SEABURY, a Connecticut clergyman, was consecrated as the first American bishop by three bishops of the Scottish Episcopal Church. And after the British parliament passed legislation allowing the consecration of clergymen who were not British subjects, William White of Pennsylvania and Samuel Provoost of New York were consecrated as the second and third American bishops in July 1789.

During the 19th century, the Episcopal Church (like most American denominations) grew rapidly, increasing from roughly 30,000 to more than 700,000 members between 1830 and 1900, and from about 600 to more than 6,200 churches in the same period. In that century, three separate church “parties” emerged, each emphasizing distinctive theological and liturgical views of the Christian life. Bishop JOHN HENRY HOBART of New York and Bishop

Barbara Harris is the first woman to become a bishop in the Episcopal Church. She was elected bishop of the diocese of eastern Massachusetts, the largest in the United States, in September 1988. (David Zadig)

John Stark Ravenscroft of North Carolina were representative of the high church party (later called **ANGLO-CATHOLICISM**), which stressed the apostolic succession of bishops and the historic catholicity of the church. Alexander Viets Griswold, bishop of the Eastern Diocese (the New England states except Connecticut) and William Meade, bishop of Virginia, represented the low church, or evangelical, party. Episcopal evangelicals, similar to American Protestants generally, emphasized the importance of individual conversion and a disciplined moral life. And the broad church, or liberal party, which developed after the **CIVIL WAR**, sought a faith that was open to modern intellectual and social trends. **PHILLIPS BROOKS** of Trinity

Church, Boston, and **WILLIAM PORCHER DUBOSE**, a theologian at the University of the South, were leading spokesmen for broad church Episcopalians.

Disagreements over “churchmanship” led to the only major schism the Episcopal Church has suffered. When George David Cummins, the assistant bishop of Kentucky, was censured by high church Episcopalians for participating in a Protestant Communion service, he resigned his position and helped organize the Reformed Episcopal Church (REC) in December 1873. The leaders of the new REC adopted a prayer book and rules of order similar to those of the Episcopal Church, but envisioned a closer relationship with other Protestant denominations than had been feasible within the increasingly Catholic-oriented Episcopal fold. Although in recent years the REC and the Episcopal Church have discussed the possibility of reunion, the REC remains a separate denomination with roughly 9,000 members.

The Episcopal Church (despite its internal diversity) has engaged in dialogue with other Protestant churches with some hesitation. In 1886, for example, William Reed Huntington convinced Episcopal bishops to accept a fourfold position as the basis for Christian reunion. Afterwards known as the Chicago-Lambeth Quadrilateral, the document Huntington proposed affirmed the following starting points for ecumenical discussions: 1) the Holy Scriptures as the Word of God; 2) the Nicene Creed as an acceptable statement of the Christian faith; 3) the two sacraments instituted by Jesus—baptism and the Lord’s Supper; and 4) the historic episcopate. The episcopate remained a subject of controversy in Episcopal ecumenical ventures, but Huntington’s document helped open an era of interchurch cooperation that began in the early 20th century and peaked in the 1960s.

The second half of the 20th century proved to be tumultuous for the Episcopal Church. Beginning in 1949 and culminating in 1979, Episcopalians studied and approved the most

radical revision of the *Book of Common Prayer* since the introduction of an English-language prayer book in 1549. Although many traditionalists clung to the Elizabethan English used throughout the earlier 1928 edition of the American Prayer Book, scholars insisted that the new prayer book of 1979, which replaced the 1928 book, represented the best liturgical thinking of the day. The place of women in the church was another area of disagreement, as barriers to female participation in the church were gradually removed after 1964. In 1976, church canons were altered to allow the ordination of women to the priesthood. And Barbara Harris, consecrated suffragan (assistant) bishop of Massachusetts in 1989, became the first female bishop of the Anglican Communion, an event marked by protest from theological conservatives.

Beginning in 1965, the church began to decline in numbers, paralleling similar patterns in other mainline denominations. By 2005, the denomination had about 2.3 million members and may experience greater declines as it faces the specter of schism. The church's ordination of women and then its consecration of women bishops had led it into conflict with other members of the worldwide Anglican communion, particularly the churches in Africa and Asia. This conflict was exacerbated by its increasing willingness to ordain homosexuals and to consecrate same-sex unions. The issue became a crisis when the American church consecrated the first openly gay bishop.

Following this act, the Episcopal Church in the United States received a demand from the worldwide Anglican communion to cease ordaining gays and repent. While the denomination offered a conciliatory response at its 2006 convention, it met neither demand. Whether the church will remain in communion with the worldwide Anglican Church remains uncertain, particularly given the increasing strength of the Anglican Communion Network (1994), a group of conservative parishes.

If this group moves to separate, the body they establish might become the Episcopal Church within the United States recognized as part of the international Anglican network.

Liberals in the Episcopal Church in the 1960s struggled to relate the Gospel to the realities of the modern world. James Pike, the bishop of California, for instance, denied the virgin birth of Jesus and questioned the relevance of the doctrine of the Trinity for his time. He was eventually censured by his fellow bishops, who objected to his tendency to vulgarize and caricature the "great expressions of the faith." In the 1980s, Bishop John Spong of the diocese of Newark likewise wondered whether the language of the Bible should still inform the thinking of 20th-century Christians. Spong challenged the church's sexual mores when he ordained a homosexual to the priesthood in 1989, an action later repudiated by his fellow bishops.

The organization of the Episcopal Church today is substantially shaped by the American democratic experience of the late 18th century. Although the church derives its name from the bishops who preside over its liturgy and governance, actual authority is divided equally among bishops, clergy, and laity. Each diocese (usually conforming to the boundaries of a state) is administered by one or more bishops and an annual convention of clergy and delegates from local parishes. A General Convention of bishops and elected clerical and lay representatives from each diocese meets every three years to decide church policy. Within the General Convention, there are two houses: the House of Bishops and the House of Deputies, and consent from both bodies is required before a legislative proposal can be enacted. An elected presiding bishop and executive council carry on the work of the national church between meetings of the General Convention.

The Episcopal Church occupies a somewhat anomalous position in American religion, permitting great latitude in belief but

defining unity quite rigidly through worship and polity. On one hand, it holds to the ancient creeds of Christendom and through its prayer book maintains uniform orders of worship and preserves the liturgical heritage of Catholic Christianity. On the other, a wide variety of interpretation of both biblical texts and theological tradition has often been tolerated.

One of the most important developments for the Episcopal Church during the late 20th century was dialogue with the Evangelical Lutheran Church of America about developing a relationship of full communion. These discussions were concluded in the summer of 2000 when the two denominations adopted a "Call to Common Mission" that committed them to enter into full communion where each denomination would recognize the legitimacy of the other's baptism and ordination on an equal footing with its own. While not a merger of the two denominations, it did bring them into a close theological and working relationship when it became effective at the beginning of 2001.

The Episcopal Church grew numerically through the middle of the 20th century, experiencing a growth of about a million members between 1950 and 1965. After 1965, and paralleling the declines in other mainline Protestant denominations over the same period, membership slipped by 1 million. In 2007, there were about 2.5 million members of the church in 7,500 parishes.

eschatology Eschatology is the study of "last things," or the "end-times" (from the Greek *eschaton*). When employed in American religion, this term usually refers to events Christians believe will occur at the time of the second coming of Jesus Christ. Eschatology has roots within the Jewish and Christian traditions, particularly in the Hebrew Bible Book of Daniel and the New Testament Book of Revelation. Moreover, eschatological beliefs have generally been expressed in relationship to expectations of a coming millennium, a 1,000-year period of unprecedented peace and righteousness alluded to in the 20th chapter of the Book of Revelation.

Scholars of American religion divide Christian millennialism into three main categories:

1. Postmillennialists (see POSTMILLENNIALISM) believe that God's kingdom will be established on Earth by the faithful actions of the church. It is the duty of Christians to labor to transform human society until the golden age begins, at which time Christ will return and inaugurate his reign. In the estimation of postmillennialists, therefore, Christ's second coming can only take place *after* the millennium.
2. Premillennialists (see PREMILLENNIALISM), on the other hand, argue that a radical break must occur between the present age and the establishment of the kingdom of God. They expect that the coming of Christ will *precede* the millennium and that the supernatural Christ, not the church alone, can reform human society. One form of premillennialism that has achieved enormous popularity over the past hundred years is called DISPENSATIONALISM, a division of cosmic time into various dispensations, or stages, in which God reveals himself.
3. Amillennialists (that is, those who believe in "no millennium") do not interpret bib-

lical references to the 1,000-year reign of Christ literally but believe instead that goodness will simply develop naturally in the world until the second coming of Jesus. Amillennialists also tend to emphasize the presence of the kingdom of God within the institutional church and the hearts of faithful believers.

The optimistic period before the CIVIL WAR was the heyday of postmillennial beliefs in the United States. These progressive religious ideas were manifested principally within Protestant REVIVALISM and numerous reform movements, such as antislavery, peace, and temperance. After the Civil War and amid the widespread disillusionment of the Gilded Age, however, premillennialism gained the upper hand. It heavily influenced the fundamentalist movement that emerged late in the century and is widely accepted among most conservative Christian groups in 20th-century America. And since millennialism is seldom discussed at present by the leadership of either the mainline Protestant denominations or Roman Catholicism, the amillennial interpretation of the Bible may be said to dominate that portion of American Christianity today.

The 18th and 19th centuries witnessed a burgeoning interest in eschatology and the proliferation of millennial movements in America. Major denominations that trace their historical roots to the millennialism of that era are the Disciples of Christ, the Seventh-day Adventists, the Mormons, and the Jehovah's Witnesses. The Shakers as well (originally named the United Society of Believers in Christ's Second Coming), although tiny now, had a significant impact on American religion after the Revolutionary War. Eschatology, thus, remains a key concept not only for understanding American religion in the past, but also for interpreting developments in the present day.

establishment, religious The phrase *religious establishment* refers to the practice in colonial America that granted privileged status to a single Christian denomination in a colony or, later, a state. Prior to the AMERICAN REVOLUTION, nine of the original 13 colonies had religious establishments. In Virginia, Maryland, North Carolina, South Carolina, Georgia, and portions of New York, ANGLICANISM was the state-supported faith. In Massachusetts, Connecticut, and New Hampshire, the Congregational churches were officially established. Only Rhode Island, Pennsylvania, New Jersey, and Delaware had no established churches.

Providing government support for Christianity had a long history prior to the settling of North America. In the early fourth century, the Roman emperor Constantine, after a military victory he attributed to the Christian God, granted patronage to the church and established Christianity as the official religion of the empire. The idea that church and society should constitute a unified entity continued throughout the Middle Ages. Christianity was viewed as the foundation upon which the medieval European social world was constructed. Despite challenges, church-state unity remained intact even in areas affected by the Reformation of the 16th century.

The American colonial religious establishments grew out of the religious situation in England in the 1530s. After overthrowing the authority of Roman Catholicism in his realm, Henry VIII had declared that he, not the pope, was "Supreme Head" of the English church. Thereafter, the monarch was to have power to

appoint the bishops who administer and lead Anglican church affairs, and the government was to raise taxes to support clergy and maintain the church's property. The English settlers who came to Virginia in 1607 brought this heritage with them. As early as 1619, the Virginia legislature made provision for assistance to Anglican clergy. Parish boundaries were legally fixed, farmlands (called glebes) were set aside for the support of ministers, and lay vestries (committees that administered parishes) were given broad powers over ecclesiastical and charitable affairs in the colony.

Although Puritans chafed at the restrictions the Anglican establishment placed upon them in England, they carried their vision of a unified Christian society to New England in the 1630s. While a polity based upon the autonomy of local congregations replaced the episcopacy of the Church of England, Puritan churches still functioned like English parishes. Town governments assessed taxpayers for the support of a minister and maintenance of the meetinghouse. All residents were also expected to attend worship services, even those who were not church members.

Three of the early American colonies, on the other hand, followed distinctive religious paths. Rhode Island was settled in the late 1630s by ROGER WILLIAMS and others who had been driven out of Massachusetts by the Puritan leadership. Rhode Island was to prove a haven for BAPTISTS, Quakers, and other dissenting religious groups throughout the colonial period. Maryland was founded in 1634 under the auspices of a Roman Catholic proprietor, CECILIUS CALVERT, who instructed that all settlers were to be granted religious liberty. This stipulation was codified in 1649 by the ACT OF TOLERATION, which granted legal protection to all Christians who believed in the doctrine of the Trinity. And WILLIAM PENN'S colony, which he received from Charles II in 1688, was founded upon the principle that true religion flourished best where there was no coercion about matters of faith.

After the Glorious Revolution of 1688, the English monarchy sought to expand its authority over the American colonies. One means of accomplishing this political end was the establishment of the Church of England in colonies where it had not been the official faith. The joint monarchs William III and Mary II and their successor, Anne, instructed royal governors to lobby colonial legislatures to establish Anglicanism. The policy met only limited success at first. The royal governor of New York, for instance, persuaded the colonial assembly in 1693 to provide six "good sufficient Protestant" ministers to serve the four counties around New York City. The first church officially chartered under this act, however, was a Dutch Reformed church. The policy proved more effective in Maryland and South Carolina, where the Church of England was established in 1702 and 1706, respectively, and—several decades later—in Georgia (1758) and North Carolina (1765).

Despite Anglican and Puritan intentions, the GREAT AWAKENING of the mid-18th century presented a radical challenge that started to topple the colonial religious establishments. In the Congregational churches of New England, the revivals of the 1740s created severe tension, as revivalist "New Lights" began to insist that their fellow church members and clergy lacked genuine piety. Some New Lights withdrew from their parishes, founded new churches, and pressed for tax relief. ISAAC BACKUS, the principal spokesman of this group, argued that state-supported churches corrupted true Christianity. In his most famous work, *An Appeal to the Public for Religious Liberty Against the Oppression of the Present Day* (1773), he pressed for the full separation of church and state.

In the South, Presbyterian minister SAMUEL DAVIES became one of the principal dissenters against the Anglican establishment during the Great Awakening. At that time, pious non-Anglicans in Virginia were allowed to gather for worship only within their own

homes. Davies fought a lengthy legal battle on behalf of the Presbyterian churches he served. He argued that the Toleration Act of 1689, which permitted freedom of worship in Great Britain, applied to the British colonies as well. He won a favorable ruling in 1755, and after that date Presbyterians were free to organize their own churches.

The American Revolution eventually made the position of the Anglican colonial establishments untenable. Since Anglican clergy were bound by their ordination oaths to support and pray for the English king, colonial legislatures after 1776 were loath to support ministers opposed to the patriot cause. Thus, southern legislatures finally acceded to requests by dissenting Baptists and Presbyterians and suspended payment of the salaries of Anglican clergymen—in Maryland, Virginia, and North Carolina in 1776, in Georgia in 1777, and in South Carolina in 1778. Yet because these legislatures often retained their traditional controls over the licensing and selection of ministers, the clergy as well became vocal advocates of disestablishment. They quickly realized the advantages of regulating church affairs entirely free of governmental control.

After the war ended, Virginia legislator Patrick Henry made one last effort to support a religious establishment by championing a "General Assessment" that would distribute funds impartially among all Christian churches. Baptist minister JOHN LELAND was one of the key figures fighting Henry's plan. Because of their earlier refusal to comply with the Anglican religious establishment, Baptist preachers in colonial Virginia had been imprisoned and their worship services disrupted. This experience led Leland to believe that governments could best assist Christianity by leaving it alone. He thought religious establishments had done more to harm the cause of Jesus Christ than all the persecutions of Christianity combined.

In alliance with statesmen such as nominal Anglicans THOMAS JEFFERSON and JAMES

MADISON, Leland eventually saw his position vindicated. Madison argued in his *Memoorial and Remonstrance* of 1784, for example, that religion was best served when it was taken entirely out of the hands of the state. Jefferson's Bill for Establishing Religious Freedom, which was adopted by the Virginia House of Burgesses in 1786, began with the premise that "Almighty God hath created the mind free." The Virginia legislative assembly resolved that citizens should never be compelled against their wishes to worship in or support a church.

When delegates gathered in Philadelphia in 1787 to draft a constitution for the new nation, the role of religion in government received consideration. Article Six of the Constitution provided, for instance, that no religious test would be required for holding a federal office. Madison and Jefferson also wanted the Constitution to make a positive statement about the freedom of religion. Madison, therefore, helped guide the Bill of Rights through the first Congress in 1789 and gave religious liberty the solid base he sought. The FIRST AMENDMENT codified Madison and Jefferson's beliefs: The government of the United States would neither favor nor inhibit the exercise of religious beliefs.

The First Amendment established religious freedom as a binding policy for the nation. However, the restrictions of the federal Bill of Rights did not at that time apply to the individual states, and thus weak Congregational establishments were able to survive in Connecticut, New Hampshire, and Massachusetts for several more decades. The Massachusetts constitution of 1780, for example, continued a truncated version of the prerevolutionary religious establishment, in which towns were required to elect their own "public teachers of piety, religion and morality." As political power passed out of the hands of Congregationalists in New England, however, the last state establishments fell. In Connecticut in 1818, a coalition of Baptists, Methodists,

Anglicans, and nonbelievers passed a new state charter that stipulated “no preference shall be given by law to any Christian sect.” New Hampshire passed a similar law in 1819, and in 1820, Maine, originally part of Massachusetts, entered the union as a state with no established church.

The UNITARIAN CONTROVERSY, which tore apart Congregational parishes into Trinitarian and Unitarian factions early in the 19th century, led at last to disestablishment in Massachusetts. Since the “public teachers” elected by towns were not required to be either orthodox Congregationalists or ordained ministers, voters in some localities started to choose Unitarians to fill those positions. Divisions between Unitarians and Trinitarians became so heated that lawsuits resulted. In the famed “Dedham Decision” of 1820, the Unitarian-dominated Supreme Court of Massachusetts ruled that control of church property and the right to call a minister belonged to the parish (that is, to the town) rather than to the communicant membership of the local church. The effects of this decision were far-reaching, for it meant there was no further reason for orthodox Congregationalists to support their own established status. Numerous Congregationalists withdrew, formed separate churches, and in 1833, joined forces with other dissenters to abolish the religious establishment.

Connecticut Congregationalist LYMAN BEECHER offered one of the most perceptive comments about the end of the old religious system in New England. When Connecticut disestablished Congregationalism, Beecher at first felt depressed. But when he later reflected on the revolution that had occurred, he observed that Christianity had actually gained far more than it had lost by being thrown entirely upon its own resources. The American churches had learned to exert far more spiritual influence through voluntary (see VOLUNTARYISM) societies and revivals, he concluded, than through all the “queues

and shoe-buckles, and cocked hats, and gold-headed canes” of former days.

Ethical Culture The Society for Ethical Culture embodied the concerns of advocates of REFORM JUDAISM dissatisfied with the limitations of the Reform movement itself. Seeking to establish a group committed to moral principles and the need for social improvement, the society was unable to expand beyond a base group of intellectual supporters.

SECULARISM played a large role in the years after the CIVIL WAR, thoroughly reshaping American life. At the institutional level, new organizations emerged—public universities, modern business corporations, and professional bodies, all able to function without reference to the evangelical assumptions about society. At the level of ideas, many prominent people in American culture began to speak publicly about the superior value of a secular society. While some of these figures, such as Samuel Clemens (Mark Twain) and Colonel BOB INGERSOLL, railed against the influence of religion in any form, others sought to provide the new secular outlook with the same support religious institutions were able to provide their members.

One organization, the Free Religious Association (see FROTHINGHAM, OCTAVIUS BROOKS), arose in 1867 out of postwar Unitarian efforts to formulate a liberal position in a changing social environment (see UNITARIAN UNIVERSALIST ASSOCIATION; LIBERALISM, THEOLOGICAL). The second organization, the Society for Ethical Culture, began under the leadership of FELIX ADLER, who first served as president of the Free Religious Association. Adler's battles for free thought, however, were waged against his own Jewish tradition, not against liberal Protestantism.

Groomed for the rabbinate by his father and the congregation at New York's prestigious Temple Emanu-El, Adler chose teaching instead, taking a position at Cornell University in 1871 after completing his Ph.D. at Heidelberg University in Germany. At Heidelberg, exposure to new methods of biblical scholarship shattered his faith. He replaced religious belief with philosopher Immanuel Kant's conviction in the supremacy of a moral law. However, Adler was not satisfied with simply bypassing the influence of his Reform background.

Returning to New York City in 1876, he presented a lecture on May 15 in which he proposed creating a religious society free from creedal concerns. The Society for Ethical Culture, as this new group came to be called, provided secular-minded Jews with an alternative to the Reform synagogue and what he saw as spurious debates within the Reform movement over how to accommodate Jewish religious identity to American culture.

The society was underwritten by Gentiles like John D. Rockefeller, Jr., as well as wealthy New York Reform Jews, some of whom belonged to Adler's father's synagogue. Reflecting the impact of the Protestant SOCIAL GOSPEL, Ethical Culture adopted the Sunday morning hour for its meetings, where lectures showing "the supreme importance of the ethical in life" became the alternative to traditional ritual and prayer, and the motto

"Deed not Creed" replaced doctrinal debate with social concern.

Eventually applauded by liberal Protestants, the movement received considerable criticism in its early days. Conservative Protestants denounced it from one side, while those more secular than Adler attacked it as being "vaguely idealistic." Expanding somewhat in spite of these attacks, local groups formed in Boston, Philadelphia, Chicago, and St. Louis and banded together in 1889 to form the American Ethical Union. The union served as a clearinghouse for information and also began publishing a journal, eventually known as the *International Journal of Ethics*. In 1896, the movement became international, holding congresses in Zurich and Germany over the next several years that attracted leaders from academia and several European governments.

If the impetus for Ethical Culture lay in repudiating Judaism, Adler insured that it would retain a Jewish identity and thus a limited potential for growth. Joseph Seligman, the society's first president, attracted many young Reform Jews. With a Jewish board of directors, Adler continued to address the issues faced by east European immigrant Jews entering America on the bottom rung. Adler denied his link to Judaism while at the same time attracting other Jews disenchanted with the religion. Thus, by the turn of the century, a new generation of leadership among Reform Jews was able to marshal the growing concern for social justice that Adler had seen as the impetus behind Ethical Culture. In spite of organizing numerous activities to attract members, including a series of summer camps for children and a variety of cultural activities, membership never grew substantially. After more than 100 years, the American Ethical Union claims only a few thousand members.

ethnicity Ethnicity has long been a powerful force in the United States, often closely tied to religion, race, and class, although historians and sociologists find it difficult to define. One problem is that most definitions of ethnicity, implicitly or explicitly, rest on the idea of an “other” set against a normative center.

For instance, one century-old meaning of *ethnic* in the English language refers to those not Jewish or Christian, that is, pagan or heathen. This meaning lasted well into the 19th century, when Hinduism, Buddhism, or Islam were considered “ethnic” religions by Protestant Christians. But a secondary meaning became increasingly important. *Ethnic* was often used among Anglo-American Protestants as a rough, if somewhat dismissive, synonym for “picturesque” or “exotic” when referring to those peoples, Christian or otherwise, who displayed a degree of local color, remained embedded in folkways, and were not acculturated to the progressive ideals of urban-industrial society. This usage is still current today, although gaining a more universal application. On one hand, *ethnics* as a noun still tends to refer to non-British peoples who came to the United States during the migrations of the 19th century and later. On the other hand, *Anglo-Saxon* is itself increasingly understood to denote a discrete system of folkways, an ethnicity among American ethnicities.

Ethnicity also tends to evoke ideas of kin, common blood, or race, when in fact an ethnic group is often a flexible, constructed fiction, especially in highly mobile, immigrant societies such as the United States. For instance, *Anglo-Saxon* was only clearly defined as a group toward the end of the 19th century, when Jews and Catholics from south and central Europe arrived in numbers sufficient to

prompt earlier arrivals to define themselves distinctly. *Anglo-Saxon* then was taken to mean an amalgam of British and Continental peoples with common roots and interests—Normans, Picts, Jutes, Saxons, Angles, Scots, and Welsh, but also Protestant Teutons, Irish, and French. At about the same time, people with regional identities such as Calabrese, Milanese, Sicilian, or Piedmontese found themselves struggling to define themselves as Italian or Italian American. The need to redefine oneself in the United States—whether the particular example is the varied Africans who have been transformed into African Americans or the Indonesians, Saudis, and Moroccans who are laboring to build a Muslim-American community—helps to account for the imprecise nature of ethnic communities’ boundaries. The task of building ethnic American identities has been further complicated by the question of who has the power to define. Newly arriving immigrants have often found themselves forced into synthetic categories such as “Asian” or “Latino,” when in fact their own sense of self-identity rests on regional, religious, or tribal affiliations. No small part of the history of ethnic groups in America has been the effort to seize the power to define their own identity, a struggle nowhere more marked than in the case of the African-American community.

The relationship between ethnicity and religion is intimate. Religion often supports ethnicity by providing an institutional setting for the maintenance of tradition, but at the same time, ethnic identity can also supersede religion as the source of individual and group identity, particular in a highly secularized culture. Religion and ethnicity often share the same fate in a fluid society, where the pressure to assimilate is strong. When individuals seek to assimilate, they will often reject the religion with which their ethnicity is most closely identified. Other individuals, having struggled free from an ethnic background, have later found traditional religious

values and folkways to be important sources of coherence and identity. Ethnicity, like religion, has become for many a matter of choice, one source among others to draw upon in the process of creating an American identity. For still others, ethnicity and religion, particularly when closely tied to race, have become highly politicized and are used as effective tools both to support identity and to work for change in the dominant society.

Since the reopening of immigration in 1965 and the ethnic revival that followed, ethnicity and ethnic identity have been celebrated, decried, and politicized, so there is currently much debate over what role they should play in American society. This is particularly evident in the controversy concerning the teaching of multiculturalism in the primary and secondary schools. One line of thought tends to favor a culture-blind approach to education, to stress the “classics,” and to see ethnic identity as emotional and clannish—a threat to the rational individualism at the heart of American democracy. This position is dismissed by ethnic group activists and many religious minorities as an attempt to maintain older, Anglo-Protestant forms of cultural authority. A second line favors a form of education in which the highly varied experiences of different ethnic and religious groups are all accounted for in a curriculum that emphasizes the vitality and texture, as well as the perennial conflicts, in a multicultural and democratic society. Many cultural conservatives see this as caving in to special interests.

Evangelical Lutheran Church in America

The Evangelical Lutheran Church in America (ELCA) is the largest Lutheran (see LUTHERANISM) denomination in the United States. Organized in 1987, it represents the merger of two major Lutheran bodies, the Lutheran Church in America (LCA) and the American Lutheran Church (ALC), and the smaller Association of Evangelical Lutheran Churches (AELC). Since American Lutheranism contains what church historian Martin Marty called a “crazy-quilt pattern” of separate ethnic, geographic, and theological traditions, the background of the ELCA is, to say the least, variegated. Both the LCA and the ALC themselves resulted from earlier mergers of several small Lutheran denominations in the 1960s, while the AELC was formed after a split in the ranks of the conservative LUTHERAN CHURCH—MISSOURI SYNOD in the 1970s.

The ELCA’s heritage reaches back to the ministry of Pennsylvania pastor HENRY MELCHIOR MUHLENBERG. In 1742, Muhlenberg emigrated from Germany to undertake missionary work among Lutheran settlers in the New World. Arriving in Pennsylvania, he discovered Lutheran church life thoroughly entwined with that of the German Reformed population, whose members were committed to the liturgical and doctrinal teachings of John Calvin. Lutherans and Reformed, who shared a common language, also tended to use the same clergy, form “union churches,” and worship together. Proselytizers belonging to German sectarian groups such as the MORAVIANS and the Dunkers (see CHURCH OF THE BRETHREN) further confused Lutheran denominational identity and even falsely posed as Lutheran clergy.

Muhlenberg wished to regularize American Lutheranism, keeping it loyal to the teachings of German reformer Martin Luther. The most effective step he took toward attaining that ideal was forming in 1748 the Pennsylvania Ministerium, the denomination’s first permanent governing body. A constitution

was prepared that gave the laity a voice in church government but subordinated them to the clergy. A new book of worship drew upon Lutheranism's rich liturgical heritage.

In the late 18th century, German Lutherans in the mid-Atlantic states began to move southward along the Shenandoah Valley to the Carolinas and westward across the Appalachians to Ohio, Kentucky, and Tennessee. The Pennsylvania Ministerium soon was incapable of providing for those distant settlements. As a consequence, new synods (federations of local congregations with the power to ordain clergy) were founded in South Carolina (1787), North Carolina (1791), New York (1792), and Ohio (1818). Language also became a matter

for debate, as German Americans moved away from their original ethnic enclaves. Although Lutherans living in isolated rural locations continued to use German, new English-speaking congregations appeared in relatively populated areas where Germans mingled with British ethnic groups.

By the early 19th century, leaders in the various state synods were seeking a national body to unite them and make corporate decisions about worship and doctrine. Despite resistance to the principle of a centralized hierarchy, which some church members viewed as too much like Roman Catholicism, the formation of the General Synod of the Evangelical Lutheran Church in 1820 gave a

Old Lutheran Church in Philadelphia, 1880. (*Library of Congress*)

new direction to Lutheranism in the eastern United States. In the transitional period that followed, SAMUEL SCHMUCKER, president of the General Synod's new seminary at Gettysburg, Pennsylvania, provided his denomination with critical leadership.

Schmucker wished to see Lutheranism integrated into the Protestant evangelical movement that dominated the religious landscape of the United States. He thought that Lutherans, who had initiated the Reformation in the 16th century, should also play a dominant role in spreading the Christian Gospel in America. Schmucker opposed the narrow doctrinal conservatism of the "Old," or "Historic," Lutherans, who insisted upon staunch adherence to classic Lutheran creedal statements. He believed that Americans should not have to be bound either to antiquated ecclesiastical documents or simply to "the minutiae of any human creed." He argued, moreover, that the genius of the new "American Lutheranism" would lie in its ability to adapt to changing cultural and religious circumstances.

Under Schmucker's direction, the General Synod gathered together two-thirds of the Lutherans in the United States by 1860. But two schisms soon shook the church and radically undermined Schmucker's dream of a broad, unified Lutheran front. First, during the CIVIL WAR, five synods in the seceding Southern states organized themselves separately as the Evangelical Lutheran Church in the Confederate States of America. After the war, this denomination became known as the United Synod South. Second, in 1867, five other synods that were formerly part of the General Synod withdrew and formed themselves into the General Council of the Evangelical Lutheran Church. Led by CHARLES PORTERFIELD KRAUTH, the General Council, unlike the General Synod, demanded full subscription to the Augsburg Confession, the 16th-century statement of Lutheran beliefs.

The General Synod, General Council, and United Synod South were all centered in

the East. Meanwhile, thousands of Lutherans from Scandinavia and Germany flooded into the Midwest between 1830 and 1914. They, too, established their own synods along ethnic lines. Some 60 new Lutheran church bodies were started by Swedes, Norwegians, Danes, Finns, Germans, and others between 1840 and 1875. Although the largest midwestern Lutheran organization, the Lutheran Church—Missouri Synod, remains distinct from the ELCA, the other ethnically divergent, but often theologically congruent, traditions gradually began to coalesce into a single denominational stream in the early 20th century.

With the outbreak of WORLD WAR I, the process of Lutheran unification started in earnest. The war not only suspended the flow of immigrants to the United States but also heightened a self-conscious "Americanism" among many recently arrived ethnic groups. Lutheran bodies chose to band together and coordinate their labors in ministering to American troops in 1917 and 1918. With the exception of the Missouri Synod, most Lutherans recognized the value of an agency that would be able to represent their common interests. As a result, the National Lutheran Council was formed in 1918. It represented eight Lutheran groups in the United States, roughly two-thirds of all American Lutherans. Besides undertaking traditional foreign and home missionary work, the council provided material relief to Europeans during World War I and WORLD WAR II.

Several mergers of independent Lutheran synods into larger denominational bodies occurred between World War I and the 1960s. First, three Norwegian groups joined in 1917 to create the Evangelical Lutheran Church. This denomination was centered at Luther Seminary in St. Paul, Minnesota. Next, the eastern-based Lutherans of the General Synod, General Council, and United Synod South reunited in 1918 and formed the United Lutheran Church in America. The Slovak Zion

Synod and the Icelandic Synod joined this church in 1920 and 1940, respectively. Third, the synods of Ohio, Iowa, Texas, and Buffalo united in 1930 as the American Lutheran Church. The midwestern-oriented ALC was joined by the Norwegians of the Evangelical Lutheran Church and of the Lutheran Free Church, and by the Danes of another small denomination, the United Evangelical Lutheran Church, in 1960 and 1963, respectively. Finally, the United Lutheran Church in America joined with the Swedish Augustana Synod, the Finnish Evangelical Lutheran Church, and the Danish American Evangelical Lutheran Church to form the Lutheran Church in America in 1962.

By the mid-1960s, many Lutherans believed that the former divisions within American Lutheranism were about to end, as the LCA, the ALC, and theologically moderate elements of the Missouri Synod began to discuss one last, universal merger. Although a radically conservative theological movement soon took control of the Missouri Synod and stopped that dialogue, the new Association of Evangelical Lutheran Churches, founded in 1976 by 110,000 former Missouri Synod members, continued unification talks. These discussions focused on two principal concerns: preserving the distinctive doctrinal emphases that had often kept Lutheran churches separate, while providing the organizational stability needed to further Lutheran evangelistic efforts in the late 20th century. An accord was reached at a meeting in Columbus, Ohio, in April–May 1987, and the 2.9-million-member LCA, the 2.3-million-member ALC, and the AELC were officially united on January 1, 1998.

An important development in the history of the new denomination took place in the late 1990s, when it began discussions with the Episcopal Church regarding the possibility of shared communion. These discussions came to a successful conclusion in the summer of 2000, when the two denominations adopted a “Call to Common Mission” com-

mitting them to full communion with each other at the beginning of 2001. While this was not a complete merger, each denomination recognized the validity of the other’s baptism and ordination and allowed a sharing of the sacraments.

As with most of the denominations that constitute mainline Protestantism today, the ELCA is experiencing internal strain. There is theological skirmishing between progressive and conservative groups whose interests were necessarily slighted during the process of merging. The church continues to engage in ecumenical discussions with other denominations. It has considered, but did not approve, union with the Episcopal Church, whose worship and beliefs closely resemble those of Lutheranism. The ELCA is now the third-largest (after the Southern Baptist Convention and the United Methodist Church) Protestant denomination in the United States. In 2007 it reported 4,709,956 members organized into 65 geographical synods and containing more than 10,448 congregations.

Evangelical United Front The term *Evangelical United Front* refers to the coalition of single-issue organizations working for

social reform during the first half of the 19th century.

Based on a shared ideology of Christian benevolence, a multitude of groups coordinated their efforts in the areas of religious education and home and foreign missions (see *MISSIONS, FOREIGN*; *MISSIONS, HOME*). Another more-perfectionist wave arising in the late 1820s turned to *PEACE REFORM*, *TEMPERANCE*, and *ABOLITIONISM*. The coalition, which enabled Protestants to see themselves as upholding the demands of both the Gospel and patriotism, underscored the dominant influence of Protestantism as an unofficial religious establishment. The socially conservative nature of many of the earlier groups proved to be a limitation, as the front collapsed with the rise of the antislavery movement in the late 1830s.

At the beginning of the 19th century, evangelical reform swept the country, emanating out of a New England affected by the optimistic religious fervor stemming from the *SECOND GREAT AWAKENING*. Evangelical faith assumed that individuals transformed by conversion would necessarily make a dramatic impact on society. Evangelicals, influenced by the *NEW DIVINITY* of *SAMUEL HOPKINS*, *TIMOTHY DWIGHT*, and *LYMAN BEECHER*, organized numerous missionary enterprises, such as the American Tract Society, the American Bible Society, the American Sunday School Union, and the American Home Mission Society to convert the poor, the unbelieving rationalists, and the heretics and to bolster declining moral standards. These organizations, often lay-led and inspired by the work of British organizations, focused on single issues, attracted a multid denominational membership, particularly Presbyterians (see *PRESBYTERIANISM*) and Congregationalists (see *CONGREGATIONALISM*), as well as *METHODISTS* and other evangelicals. Independently chartered along various lines, the organizations embodied the principle of *VOLUNTARIYISM* that was to become so crucial in American life.

A second wave of reform emerged in the 1820s, associated with the revivals of *CHARLES GRANDISON FINNEY* (see *REVIVALISM*). In contrast to the darker views of an earlier *CALVINISM*, already somewhat abandoned by Lyman Beecher, Finney and his followers preached the possibility of a moral perfection that could be attained in this life and then prompt individuals with this dramatic “change of heart” to contribute to the creation of a morally pure society. In this second wave of reform, evangelicals sought not simply to shore up society’s moral standards, but to remove social evils as well.

In the 1830s, the front foundered, splintered by a number of tensions. Conservative reformers remained most interested in promoting personal piety, but perfectionists took their desire to stamp out sin in radical directions. Abolitionism, the movement to eradicate slavery immediately, spread beyond the confines of the Quakers (see *FRIENDS, RELIGIOUS SOCIETY OF*) with the conversion of *THEODORE DWIGHT WELD* to the cause in 1835 in Cincinnati. Abolitionists helped spread the desire to take dramatic action to remove social evils to the temperance and peace reform movements as well. Both William Lloyd Garrison (1805–79), anarchist editor of the more radical organ *Liberator*, and the Grimké sisters (see *GRIMKÉ, ANGELINA EMILY AND SARAH MOORE*) pushed existing organizations to accept women’s leadership, hence raising the social stakes of reform. Increasingly, convictions such as those voiced by Garrison in a warning to the American Colonization Society in 1829—“the terrible judgment of an incensed God will complete the catastrophe of republican America”—worked to split the society in two.

The front dissolved in the sectional crisis preceding the *CIVIL WAR*, but its impact in the antebellum period can be measured by considering the financial resources raised by member groups. By 1828, the federal government was spending only \$700,000 more than was gathered by the largest benevolent

organizations. By 1840, the front's combined budget exceeded that of the federal government. The front's continuing influence lies in the fact that the evangelical hopes of a Christian America have never been completely abandoned by subsequent generations of reform-minded Protestants.

evangelicalism Evangelicalism is a general term for a religious and cultural movement that has played a predominant role in American history. Unlike Europe—where evangelical simply means “not Catholic”—in the United States, it conjures up both more sweeping and more particular meanings emphasizing individual conversion, the authority of Scripture, and moral and social reform.

While most American evangelicals look to the 17th and 18th centuries as the time of religious orthodoxy in America, the 19th was truly the evangelical century. During this time, with the notable exceptions of Episcopalians and Unitarians, most Protestants were evangelicals. The 19th century also provided the evangelical movement with the source of much of its strength—REVIVALISM. Although revivalism had earlier beginnings, primarily in the first GREAT AWAKENING (roughly 1734–64), in the 19th century, it became a major part of the American religious landscape. No one represented this better than CHARLES GRANDISON FINNEY, who transformed revivalism from an event to a technique. For Finney revivals could be brought about by human activity and planning without denying their divine source.

This emphasis on human ability, called ARMINIANISM from the Dutch theologian Jacob Arminius (1560–1609), argues that the individual has the ability to accept or reject God's grace—to choose or refuse salvation. Arminianism's strength in the United States constituted a major shift in Protestant thinking—away from the earlier insistence on predestination and the inability of fallen individuals to choose the good—both of which remain tenets of the Reformed churches and Presbyterianism.

The insistence on human activity also created the impetus for the moral and social reform movements of the 19th century. Among the many movements supported by evangelicals in this period were ABOLITIONISM, women's rights, and TEMPERANCE. Evangelicals also spent much effort on education, and the fruits of those labors include the founding of hundreds of colleges.

In the last half of the 19th century, new intellectual and scientific movements from Europe arrived in the United States. Two of these, EVOLUTION and biblical criticism, had a tremendous impact upon religious thought in the United States, and the responses to them served to define and create 20th-century evangelicalism.

The publication of Charles Darwin's *On the Origin of the Species by Means of Natural Selection* (1859) troubled many evangelical thinkers. The increasing acceptance of Darwin by the scientific community and the publication of his *The Descent of Man* (1871) (along with the more radical views of Darwin's popularizers) threatened religious beliefs. Not only did the theory of evolution deny the biblical account of creation, it contradicted the belief in the special, divine creation of human beings as well. This, along with the higher biblical criticism that challenged the literal truth of the Bible, menaced traditional Christian views of the world.

The development of evolution and biblical criticism broke American Protestants

into two opposing camps. There were ministers and theologians who accommodated Christian beliefs to the new scholarship and science. This movement was known as theological liberalism (see LIBERALISM, THEOLOGICAL; MODERNISM) and generally ceased to use the term *evangelical*.

FUNDAMENTALISM arose among those Protestants who rejected the higher criticism of the Bible and Darwinian evolution in defense of what they saw as traditional Protestant orthodoxy. The doctrines they defended included the literal acceptance of the virgin birth, the resurrection of Jesus, miracles, and the unquestionable authority of Scripture. Conflict between modernists and fundamentalists marked most of the first quarter of the 20th century. While a few denominations remained aloof from both modernism and fundamentalism during this time, many, like the Presbyterians and northern Baptists, were torn by conflict.

Fundamentalism inherited the mantle of American evangelicalism, and during the late 19th and early 20th century, fundamentalism and evangelicalism were basically synonymous. The years after the 1920s saw definite growing differences. While fundamentalists and evangelicals agree on many doctrinal issues, there is much separating them. In the late 1920s, some theological conservatives emerged from the modernist-fundamentalist conflicts with a distaste for the rigid sectarianism of the fundamentalists. This group, which included HAROLD JOHN OCKENGA, Edward John Carnell, and CARL F. H. HENRY, differed mainly in attitude and tone from the fundamentalists. These neoevangelicals, as they called themselves, were more open and flexible in their relations to others. They felt that the partisanship and fighting of the 1920s hurt the image of Christian orthodoxy. The efforts of these men during the 1940s and 1950s basically defined and organized 20th-century evangelicalism.

Twentieth-century evangelicalism came about primarily through the founding of

three institutions: the NATIONAL ASSOCIATION OF EVANGELICALS (1942), the magazine *Christianity Today* (1956), and the Evangelical Theological Society (1949). A fourth element in the growth and strength of evangelicalism in the 20th century was BILLY GRAHAM and the Billy Graham Evangelistic Association. Through a combination of doctrinal orthodoxy and intellectual effort, these institutions gave a new respectability to theological conservatism in the 1950s and 1960s. *Christianity Today* demonstrated to a wide audience that religious conservatives were not anti-intellectual boobs. The massive crusades led by Billy Graham, along with his moral stature, provided tremendous numbers of people with a view of evangelicalism at its most personable level. Carl F. H. Henry's *The Uneasy Conscience of Modern Fundamentalism* (1947) did much to develop social concern among evangelicals.

Neoevangelicals maintained a moderate conservatism in political views, another position separating them from most fundamentalists. The late 1960s and 1970s saw the growth of a more radical and activist wing of evangelical thought. The most prominent example of this was the appearance of the magazine *Post-American* in 1971 (later *Sojourners*; see SOJOURNERS FELLOWSHIP) under the editorship of Jim Wallis. In the 1980s, the organization HABITAT FOR HUMANITY, dedicated to providing affordable housing both in the United States and internationally, became a visible manifestation of the social concern of some evangelicals due primarily to the involvement of former president JIMMY CARTER.

The resurgence during the late 1970s and early 1980s of an activist and politically conservative fundamentalism served to overshadow the evangelical movement. Despite this event and despite the fact that many people, including the media, lump evangelicals and fundamentalists together, evangelicalism remains an important force in American Christianity. From centers like Wheaton College in Illinois, Calvin College in Michigan,

and Fuller Theological Seminary in California, evangelicalism continues to define itself as a distinctive form of American Protestantism, separate from both fundamentalism and liberalism.

evolution The theory of evolution contends that humans and the world they inhabit evolved over a long period of time as a result of the gradual process of natural selection. This theory appears to contradict traditional readings of the book of Genesis, namely that God created humans and the world in six days at the beginning of time.

The publication in 1859 of Charles Darwin's *On the Origin of Species* popularized this theory and represents a pivotal event in the relationship between SCIENCE AND RELIGION in the United States. Although Protestants since the 17th century had assumed that faith, reason, and science were all compatible, the dissemination of Darwin's theories on organic

evolution in the decades after the CIVIL WAR challenged that earlier synthesis.

The radical impact of Darwin's thought, however, was not immediately apparent to American Christians. While he was the first to present a plausible mechanism (natural selection) by which one species might gradually be transformed into another, Darwin was not unique in suggesting the possibility of evolution. Most theologians, in fact, initially accepted his evolutionary hypothesis. They had already harmonized the six "days" of creation to which the biblical book of Genesis refers with the eons actually required for the Earth's geological development. They believed, therefore, that evolution could also be made consistent both with God's creative activities described in Genesis and with God's ongoing, providential care of worldly events.

Harvard scientist ASA GRAY, for example, became a prominent proponent of Darwinism while remaining an orthodox Congregationalist. He suggested that nothing in Darwin's biological theories necessarily contradicted the idea of a divine direction over the evolutionary processes. Even as conservative a figure as Princeton Seminary professor BENJAMIN WARFIELD, the theologian who coined the term *inerrancy* to describe the literal truth of the biblical text, thought that evolution might well have provided the means by which God guided creation. And George Frederick Wright, who contributed an essay on evolution to the landmark series *The Fundamentals*, did not think his defense of Protestant orthodoxy precluded evolutionary notions of divine creativity.

Nevertheless, over the years, many conservatives came to question Darwinism, perceiving the threat that natural selection posed to traditional Christian belief about divine sovereignty. This opposition was best articulated by CHARLES HODGE, the scholar who had trained Warfield at Princeton. Hodge's critique was stated succinctly in his 1874 book *What Is Darwinism?*, in which he attacked Dar-

win's rejection of divine design. Hodge concluded that Darwin's refusal to acknowledge that God, not mere chance, guided the evolution of species was tantamount to atheism. At the same time, many of Darwin's agnostic supporters also began to appreciate the critical significance of this point. They eagerly pressed Darwin's theories in hopes of driving an immovable wedge between Christianity and science.

By the 1920s, antievolution had become one of the principal touchstones of theological conservatism in America. Under the leadership of statesman and politician WILLIAM JENNINGS BRYAN, the growing fundamentalist movement articulated the manifold threats Darwinism posed to traditional Christian civilization. Fundamentalist leaders feared that evolution undermined faith in the Bible as the source of truth and would inevitably lead Americans into immorality and atheism. Despite Bryan's successful prosecution of John T. Scopes (see SCOPES TRIAL) for violating the Tennessee antievolution law in the famed "Monkey Trial" of 1925, Bryan won, as it turned out, only a Pyrrhic victory. His inept attacks on Darwinism raised such an outcry of indignation and ridicule from the national press that FUNDAMENTALISM itself soon appeared thoroughly discredited.

Despite the embarrassing aftermath of the Scopes trial, most conservative Christians remained quietly loyal to Bryan's views on evolution over the next half-century. The rise of CREATIONISM in the 1970s reveals, moreover, that fundamentalist opposition to Darwin's controversial theory is as strong as ever. Creationists wish to preserve the idea that God controls the processes of creation and natural development, and they argue that Darwin's evolutionary theory is not the only viable hypothesis that explains the origins of life on Earth. They also hope "creation science" will one day be taught as a legitimate scientific theory. Creationism even won a short-lived victory when the Arkansas and Louisiana state

legislatures in 1981 both passed laws (later declared unconstitutional) giving equal treatment to "evolution science" and to "creation science" in the curricula of public schools.

Following these defeats in court, opponents of evolution developed a strategy to influence education at the local level by running for local and state school boards. Perhaps the most successful example of this was their attainment of a majority of members on the state school board in Kansas. From this position, they managed to remove evolution as a required curriculum topic in that state's schools. The ridicule heaped on the state nationally and internationally as a result of these actions led to a backlash, and in the 2000 elections, several of the antievolution members of the school board were defeated. A 7-3 majority voted in favor of returning evolution to the curriculum in January 2001.

Despite these losses in the courts of law and public opinion, antievolutionists continue their struggle to diminish the explanatory power of evolution and hinder its teaching in public schools. Many attempt to manipulate the conflicts within contemporary biology, arguing that disagreements between scientists over certain evolutionary specifics demonstrate its inadequacy. Still others emphasize what Darwinian evolution seemingly has not yet explained and use this as a basis for criticizing the entire edifice. This latter has been the tactic of the supporters of "intelligent design."

Intelligent design has two basic premises. First, within the natural world, and particularly within human beings, there are complex operations that cannot be explained through random adaptation or mutation. Second is the claim that if human beings found such complexity in other areas of human life, they would attribute it to a designer. Humans do not presume that buildings have the same source as caves, for example.

Intelligent design, however, has failed in the courts, just as "scientific creationism" did.

In its one court case, a federal district judge in Pennsylvania ruled in 2005 that mandating the teaching of intelligent design constituted a government endorsement of religion.

Darwin's theory and the conflicts it has engendered continue to have tremendous significance for the interaction of religion and American culture. Although no amount of scientific evidence will ever prove or disprove whether an all-powerful God directs the universe, agnostics and fundamentalists together agree that evolution is critical to their understanding of how the world came into being.

faith-based initiatives The passage of the Personal Responsibility and Work Opportunity Reconciliation Act in 1996 included a provision that initially generated little interest but has since received immense attention, as it led to the establishment of a special White House office and introduced a new phrase into America's vocabulary. Section 104 of the act, the so-called CHARITABLE CHOICE provision, has moved from insignificance to importance and, in doing so, has made the phrase *faith-based initiatives* a regular part of America's lexicon. Faith-based initiatives may be understood to mean many things. At its simplest, it means making government more attentive to the role that faith-based organizations (FBOs, organizations affiliated with religious groups or having an expressed religious motivation for their work) have played and play in meeting the needs of the poor and deprived in the United States. Others see a more nefarious plot behind them, suspecting they are a basis for unmaking the welfare state and turning over all social service provision (and even funding) to nongovernmental charitable agencies. Faith-based initiatives received a great deal of attention during the 2000 presidential campaign and were declared central to President George W. Bush's domestic policy when he created the White House Office of Faith-Based and Community Initiatives shortly after taking office.

While the departure of the office's first director, John DiIullo, after only seven

months in office and the terrorist attacks on the World Trade Towers and the Pentagon on September 11, 2001, diminished much of the policy's focus and momentum, it remained a much touted part of the Bush administration's domestic agenda. In late January 2001, President Bush ordered the creation of a Center for Faith-Based and Community Initiatives in five executive departments—Health and Human Services, Housing and Urban Development, Justice, Education, and Labor. In doing this, the president stated that the purpose of the centers would be “to coordinate department efforts to eliminate regulatory, contracting, and other programmatic obstacles to the participation of faith-based and other community organizations in the provision of social services.”

The goals of the White House Office of Faith-Based and Community Initiatives were to

- identify and act to remedy statutory, regulatory, and bureaucratic barriers that stand in the way of effective faith-based and community social programs; and
- ensure that, consistent with the law, faith-based programs have equal opportunity to compete for federal funding and other support.

Despite the flurry of activity and pronouncements, little was done to clarify either the policy's purpose or goals. Too often, people

spoke of the government giving money to religion when no money was given for services. Some early proponents quickly became critics, while others spoke of the necessity for conversion before individuals could escape the conditions of impoverishment. Others opposed these initiatives, fearing that they would support the “wrong kind” of religious organizations and others that they would support the “right” kind of religion.

Major reasons for the controversy surrounding the issue of faith-based initiatives included people’s ignorance of the FBOs’ delivery of service as well as ignorance of the legal and practical issues involved. To a great extent, the federal government did little contracting, either directly or indirectly, with providing human and social services until the 1950s and 1960s. Given the absence of federal involvement, there emerged few challenges based on the U.S. Constitution. Although state and local governments regularly used religious or faith-based agencies to deliver human and social services, until the Supreme Court announced in its decision in *Everson v. Board of Education of Ewing Township* that the Establishment Clause was incorporated into the rights protected by the FOURTEENTH AMENDMENT and thereby applicable to the states, these state practices could not give rise to federal constitutional questions, although they could raise state constitutional questions.

The states always have given governmental monies to private hospitals, orphanages, and poorhouses, many of which were religious in nature. For example, as early as 1810 an orphanage established by the New York Orphan Asylum, an expressly Protestant organization, received state money to house more than 200 orphans.

With urban growth in the late 19th century, public expenditures for services increased, until by the last quarter of the century subsidies became the prevailing method for financing most social and human service organizations. In the medical field, an 1889

survey of 17 major hospitals revealed that 12 to 13 percent of their income came from government sources, and a 1904 Census Bureau survey estimated that governments provided 8 percent of all hospital income nationwide, a figure exceeded in many states.

By the early 20th century, government support for private hospitals was so widespread that a 1909 report by the American Hospital Association referred to it as “the distinctively American practice.” Given that the overwhelming number of private hospitals at that time had been established by religious organizations, a large portion of this money went to hospitals founded on religious principles. The first Supreme Court case addressing the issue of government contracting with a religiously affiliated provider involved a hospital founded and operated by a religious order, a fact that gave the Supreme Court no pause in allowing the federal subsidies.

Medical treatment was not the only or even the primary place where state and local governments contracted with private nonprofit organizations to provide services. Major government monies were given to private organizations to deliver services to the poor.

A study conducted in the late 1880s of 200 private orphanages in New York City found that these organizations received twice as much of their funding from government support as they received from legacies, donations, and private contributions. For all social services in that city, the amount the local government reimbursed private benevolent institutions for their care of prisoners and paupers grew faster than did total city expenditures for those purposes, from less than \$10,000 in 1850 to more than \$3 million by 1898, 57 percent of all city expenditures for the care of the poor, indigent, and prisoners. While impossible to separate out what percentage of these monies actually went to religious organizations, it is known that most orphanages of the time were established along religious lines and served orphans of a particular faith. In fact, in

1863, the New York legislature chartered the Roman Catholic Protectory to receive truant, vagrant, and delinquent children whose parents had requested the courts send them to Catholic rather than predominantly Protestant institutions.

In New York City, numerous religious organizations received funds to provide services to the poor, sick, needy, and indigent. These included the Salvation Army, the New York Association for Improving the Condition of the Poor (a Protestant organization), the Society of St. Vincent de Paul, and the United Hebrew Charities.

By the beginning of the 20th century, the use of private nonprofit organizations who serviced the orphaned, the sick, and the destitute was widespread throughout the United States. Many ostensibly nonsectarian institutions, however, were completely Protestant in ethos and practice. Catholics and Jews, in order to protect the religious rights of their members, felt compelled to compete equally for government monies in order to prevent their coreligionists from being either underserved or converted to alien religions.

In those states whose constitutions forbade the payment of state monies to "sectarian" institutions, the limitation often was evaded. A 1917 decision by the Illinois State Supreme Court rejected the claim that county payments to a sectarian institution for poor care violated the state's constitutional ban on such aid. The court reasoned that if the county paid the institution less than the actual cost of care, this could hardly be called *aid* to a sectarian organization and, therefore, did not violate the state constitution.

The CIVIL WAR brought about the first major growth in the power and reach of the national government in the United States. Not only was a massive national army created and the navy expanded, but contracts for war materiel and the introduction of the income tax greatly increased the national government's power.

One of the major challenges facing successful prosecution of the war was maintaining the health and morale of the troops. Disease, stress, and loneliness all took their toll. Disease actually far outstripped the battlefield as a source of casualties. To address these problems, numerous denominations and volunteer organizations engaged in an ongoing process to serve the soldiers of the Union (and also the Confederate) Army. While these undertakings did not primarily, or even necessarily, involve government funds, they did create a working relationship with government, including government efforts to accommodate or facilitate the work of the religious organizations, work that served military needs and, at times, governmental policy.

These organizations undertook three main activities: medical and nursing care; the maintenance of morals, morale, and sanitation; and services to the freedmen. Expressly religious organizations or organizations with a marked religious component were active in all these.

The numbers of refugees, contrabands (slaves liberated during the Union advance), and later the freed slaves provided the Union Army and the federal government with an immense challenge. The responsibility to care for these individuals devolved upon them. The most common method of dealing with these groups was indirect through reliance on private associations, mostly religious.

In no area was this more expansive than in the provision of aid to the freed slaves. In September 1861, the American Missionary Society sent a group to work with freed slaves who were housed near Fort Monroe in South Carolina. In 1862, General William Tecumseh Sherman officially requested additional aid to the abandoned and refugee slaves he was protecting at Port Royal, South Carolina. This work expanded throughout the war and with its conclusion became formalized in the Freedmen's Bureau under the direction of Major General Oliver Otis Howard. A

man of staunch piety, he was known as the "Christian Soldier." Howard was committed to educating and aiding the recently freed slaves. He issued a statement in 1865, declaring that, "The utmost facility will be afforded to benevolent and religious organizations in the maintenance of good schools for refugees and freedmen until a system of free schools can be supported by recognized local governments." The most used organizations were the American Missionary Association (AMA) and the American Freedmen's Union Commission (AFUC).

Both organizations had express religious commitments. The AMA demanded a fervent piety of its teachers. The AFUC required that its teachers demonstrate a genuine spirit of love for God and man and, like the AMA, refused to hire Roman Catholics. Both saw their work with the recently freed slaves to be part of their religious, indeed Protestant Christian, mission and included religious instruction among the work they did. The United States Sanitary Commission (despite its name, a private entity), while nominally nonsectarian, had a Unitarian minister as its chairman, and the board included numerous religious representatives.

Of nursing volunteers, perhaps the most important (and undoubtedly for many the most memorable) were women Roman Catholic religious. An estimated 3,200 women served as volunteer nurses during the war; at least 600 were Roman Catholic nuns. These women were particularly welcomed by the soldiers and the medical corps.

Religious organizations were particularly active in maintaining the morals and morale of the soldiers. The Christian Commission, often at odds with the Sanitary Commission, distributed religious tracts and Bibles to the soldiers as well as offering religious services. It also took an active role in collecting and distributing medical supplies, clothing, food, and other items of personal need among the soldiers. Additionally, like so many other indi-

viduals in the war zone, its members, almost completely volunteers and often clergy on leave from their pulpits, served as nurses and orderlies in the hospitals. Supported by individual congregations, particularly those of an evangelical bent, the YOUNG MEN'S CHRISTIAN ASSOCIATION, and numerous industrialists, the Christian Commission was granted access to the battlefields and to the military camps and hospitals.

In the field hospitals, the Christian Commission members serving as nurses, aides, and orderlies provided bandages and other medical supplies along with food and comfort. While the government did not reimburse the Christian Commission or any other soldiers' aid society, whether religious or secular, the military and the government did provide a sort of formal recognition. These partnerships expanded to help the refugees created by the war and to support the freed slaves during and after the war.

This development reflected what would become a dominant model in the United States's delivery of human and social services, contracting with private voluntary agencies. This model also was used during WORLD WAR I. While the New Deal saw greater use of government agencies to deliver services, reliance on private organizations continued, particularly after the start of WORLD WAR II. The expansion of perceived governmental responsibility in delivering numerous services led, after the war, to a massive growth of federal funds to supply social needs and services, from health care to education.

The 1950s and 1960s firmly established and entrenched these patterns of governmental funding. All levels of government in the United States pay nonprofits to deliver services either by contracting for services, paying fees for services delivered, or delivering subsidies either directly or indirectly (*e.g.*, vouchers).

President Lyndon Johnson's War on Poverty and the social policies of the Nixon administration made great use of private non-

profits for the delivery of government-funded social services. Using nonprofits served the goals of both political liberals and political conservatives. Services were received by those in need without creating an even larger federal (or state) bureaucracy. By the time of Ronald Reagan's presidency, 40 percent of social service monies spent by all governments in the United States went to nonprofit organizations.

Unsurprisingly, a large percentage of these dollars went to religious social service providers. In fact, today the seven largest religious social service agencies serve more than 60 million people annually. For many, governmental monies dwarf all other sources of funding. Catholic Charities USA typically received 60 percent or more of its income, the Salvation Army 16 percent, and even the YMCA nearly 10 percent of its monies from government sources. At one point, the *Non-profit Times* removed Lutheran Social Ministries from its list of 100 largest nonprofits because more than 90 percent of its revenue was from government sources.

By the middle of the 1990s, many began to question what social service expenditures had produced. To many individuals across the political spectrum, it appeared that the American welfare system was in disarray. Many viewed rampant drug abuse, the marked growth of out-of-wedlock children, and the development of an "underclass" to be vivid examples of how the system failed to solve the problem of poverty. Some claimed that the system actually created new problems by creating a sense of entitlement and discouraging initiative and responsibility. The U.S. welfare system had led to what the 19th century would have called pauperization, a process whereby individuals are encouraged to remain on the dole through indiscriminate relief that forced no obligations or responsibility on the individual but actually encouraged laziness and indolence.

This view was rooted, at least partially, in the valid belief that poverty often was caused

by certain personal failings. The view held that, in the absence of a massive economic decline, illness, abandonment, or disability, poverty resulted more from what one failed to do rather than from what was done to one. Additionally, a welfare system that indiscriminately supported the able-bodied and the potentially self-sufficient wasted funds that could be targeted more appropriately toward those who were poor through no fault of their own.

In this view, ending poverty required changing lives. The process was not merely a matter of handing over money but also demanding that individuals internalize certain values and norms about how to live and then act on them.

On one level, the argument is self-evident. Individuals cannot be productive citizens, cannot hold long-term jobs with the possibility for advancement if they are not conscientious, responsible, and sober. People must get up in the morning, get to work, and do what the job requires. Addiction, indolence, surliness, and slovenliness are not systemic problems; they are individual problems that can be solved only through a change in the individual and that person's values and attitudes. Money cannot solve these barriers to a successful life.

While those holding this view had an explicit perspective on the role of religion in helping individuals, others, of many political stripes, had a more amorphous belief that this perspective had some validity. These individuals felt that changing the values and attitudes with which individuals approached life would be sufficient. Convergence occurred in the belief that religious organizations, religious human and social service agencies, were particularly good locations for this to happen. These organizations were believed to be filled with individuals who could model the values of sobriety, industry, responsibility, and commitment that those on welfare needed to develop in order to lead successful and productive lives.

Religious or faith-based human and social service organizations also were believed to bring other values and goods to the table. In many distressed communities, both urban and rural, the only institutions functioning for social good were the local churches. As stores and jobs fled the inner city, the church remained.

Many believed that those who worked in religious organizations brought to their jobs a deeper sense of commitment. For them, the work with the poor was not merely a job, but a calling. FBOs brought an added value to service delivery, the argument went. Faith commitment meant those in need were served not merely from a bureaucratic perspective, as clients, as numbers to be processed, but as individuals with whom personal connection was demanded and required.

Finally, many felt that the religious communities of this country held within themselves an untapped potential for service. The numbers of individuals available as volunteers and the funds they controlled were viewed as potentially powerful forces in the struggle to redeem human lives from the spectres of poverty, addiction, and debasement.

The success of religious-based services appeared to result from their commitment to mentoring, one-on-one support, and local congregational members who were willing to share their religious values and social commitment with others. Henry Cisneros, secretary of housing and urban development during the Clinton administration, identified four main reasons for the success of faith-based or religious institutions in addressing community and individual needs. These included faith communities' financial resources and committed and caring individuals. Perhaps most important, religious organizations and individuals are committed to serving and helping the entire person, not to material gain. Religion, or at least the commitment of religious people, it was concluded, would not merely buy groceries, but

could change lives. During the late 1990s, the role of religion or religious-based services in improving the lives of the poor and debased was a major topic in the media. An analysis of newspaper articles in 1996 and 1997 found an overwhelming number contrasted the highly personal and caring services provided by religiously motivated organizations and volunteers with the impersonal services provided by a bureaucratic system. The distinctive essence of faith-based services was perhaps summed up most directly by Amy Sherman, one of its leading proponents. "At its heart, a religion-based service provider aims to transform lives."

With so much weight in their favor, the idea of faith-based initiatives seemed reasonable, and the Bush administration initially made a concerted effort to deliver. It directed large sums to training FBOs how to apply for governmental monies and encouraged the use of FBOs in the delivery of services. Additionally, in the areas of sex education, with the administration's "abstinence only" mandate, and in services to prisoners, FBOs seemed to have been privileged. Many of the services provided by such organizations appear to have crossed the acceptable boundaries between service provision and religious education and indoctrination.

Others have criticized the administration for playing politics with the monies, holding out the promise of large sums to gain or reward political support from religious leaders in impoverished areas, particularly in the inner cities. Still others have criticized the administration for not even attempting to deliver on its promises. They argue that by manipulating the power of the idea of faith-based service delivery for political ends, the administration failed both those in need and the FBOs themselves.

By 2007, the growing weakness of the Bush administration led to a decrease in the emphasis on faith-based initiatives. Legal challenges to several of the policies, includ-

ing the use of special “training” sessions on contracting policies for FBOs, also had slowed down the focus on the initiatives. As a formal policy, the entire future of faith-based initiatives was in doubt. Despite that fact, as is clear from history, the role of religious organizations in serving the poor, the weak, and the sick will remain central to human and social service delivery in the United States.

Falwell, Jerry (1933–2007) As founder of the MORAL MAJORITY (1979–87), Jerry Falwell was one of the leaders responsible for the politically active conservative Christianity that emerged in the 1970s. Born on August 11, 1933, in Lynchburg, Virginia, Falwell was one of twins. His father, Carey, a successful businessman, and his mother, Helen, provided a financially secure and prosperous home life where Falwell was doted on by his parents and much older siblings.

His father suffered from a drinking problem, however, and this undoubtedly contributed to his early death when Falwell was only 15. The last days of his father's life seem to have affected Falwell tremendously. He often speaks of how moved he was by his father's acceptance of Christ just days before his death and the way in which this changed his father.

During high school, Falwell was successful and popular. He captained the school's football team, edited the school newspaper, and graduated as class valedictorian. Despite this, his mischievous nature often got him into trouble, and he was not allowed to deliver the valedictory address at graduation.

Falwell attended Lynchburg College, where he became a Christian and first felt the call to the ministry. The call became so strong that he transferred to Baptist Bible College in Springfield, Missouri, in 1952. After finishing bible college, Falwell served various pastorates until being called to Thomas Road Baptist Church in Lynchburg in 1956. He remained the church's pastor until his death, and from there he built his massive religious and political empire.

Falwell first came to public prominence with his “Listen America” rallies during the nation's bicentennial in 1976. At these rallies, Falwell urged Americans to turn from what he viewed as their moral laxity and to embrace truth and virtue. Falwell also spoke of returning the United States to what he saw as its Christian, or at least godly, roots. He railed against the Supreme Court's ruling forbidding state-sponsored prayers in public schools, against liberal politicians, and, as the issues became prominent, against homosexuality and abortion. In 1979, Falwell and other conservative Christians established the Moral Majority, an organization designed to give a political voice to the views of political and social conservatives. To a great extent, this coalition helped mobilize sufficient voters to help elect President Ronald Reagan and to produce the eventual Republican majority in the U.S. House of Representatives and the Senate.

Nonetheless, the Moral Majority had little success in driving through most of its political positions. Falwell, claiming it had served its purposes, disbanded the organization in 1989 to devote his efforts to his ministries.

While Falwell significantly reduced his formal involvement in electoral politics, he

continued as a prominent religiously conservative spokesman. Following the September 2001 terrorist attacks on the World Trade Towers and the Pentagon, Falwell appeared to blame the attacks on what he viewed as a decline in religion and morality in the United States. He declared that, "I really believe that the pagans, and the abortionists, and the feminists, and the gays and the lesbians who are actively trying to make that an alternative lifestyle, the ACLU, People For The American Way, all of them who have tried to secularize America. I point the finger in their face and say 'you helped this happen.'" Although he later apologized for giving the impression that anyone was responsible other than the terrorists, he insisted that his reading of the Bible led him to the conclusion that societal immorality would lead God to remove protection from a country.

Although suffering serious health problems during early 2005, Falwell continued as an important spokesman for one segment of the RELIGIOUS RIGHT. In that year, he publicly suggested that the huge number of hurricanes that year might have been part of God's punishment of the United States for its immorality, and he took a highly visible role in the "Friend or Foe of Christmas" campaign, designed to deal "with the grinchers who are trying to steal Christmas." Falwell continued to work as a minister and a senior administrator at Liberty University until his death on May 17, 2007. Along with serving as senior minister at Thomas Road, Falwell also oversaw Liberty University and *The Old-Time Gospel Hour* television program.

Fard, W. D. (unknown–ca. 1934) The founder of the NATION OF ISLAM (NOI), Black Muslims, W. D. Fard remains as mysterious today as when he first appeared in the black section of Detroit on July 4, 1930. There—known by the various names Wallace Fard, Wali Farrad, Professor Ford, Farrad Mohammed, and F. Mohammed Ali—he made his living as an itinerant peddler.

Many stories circulated about Fard's early life. He claimed he had been born in Mecca to a wealthy family of the tribe of Koreish (Quraysh)—the tribe of Muhammad (the founder of ISLAM)—and had attended college in England, or at the University of Southern California, where he had been groomed to enter the diplomatic service of the Kingdom of the Hejaz (modern-day Saudi Arabia). He abandoned this career, however, in order to bring religious truth and freedom to his "Uncle," the black man living in the "wilderness of North America."

As a peddler in Detroit, he told people that his silks "were the same kind that our people used in their country . . .," according to an early convert. When asked to tell about this country, he explained that the so-called Negroes were the original humans who had been stolen from their home by the "white devils." Blacks needed to separate themselves from these "subhumans" and return to their true religion, Islam. When they did so, Allah would unleash his fury on the whites and restore blacks to their rightful place as his chosen people.

Fard's teachings impressed many recent black immigrants from the rural South and soon gained several thousand followers. He produced two basic texts for his followers,

The Secret Ritual of the Nation of Islam, which was passed on orally, and *Teaching for the Lost Found Nation of Islam in a Mathematical Way*. Fard also organized several auxiliaries to the Nation of Islam, including a school, a girls' training class, and a security organization—the Fruit of Islam.

The NOI soon came to the attention of the police, who were troubled by Fard's apparent emphasis on human sacrifice as a means of expiating sin, as well as his teaching that every follower was to sacrifice four Caucasian "devils." Newspaper stories of human sacrifice among Nation of Islam followers, known to the police as the "Voodoo Cult," brought the movement to the attention of white Detroit—attention that was increased by the attempted sacrifice of two white welfare workers that was widely reported in the Detroit press and caused much fear among white Detroiters.

Objections to sacrifice led to one of the many divisions within the movement. Others involved conflicts over loyalty to the U.S. flag and Constitution, communist and Japanese infiltration, and an attempt by the Ethiopian government to use the NOI as a channel for funds. Despite these divisions, Fard achieved a remarkable degree of organizational stability in a relatively short time. Starting in 1933, he began to recede into the background, decreasing his public appearances and leaving affairs to his assistant ministers. Fard disappeared completely on June 30, 1934.

His disappearance led to a series of violent leadership conflicts that forced one group to flee to Chicago. This group, led by ELIJAH MUHAMMAD, established its own temple in Chicago, and Elijah Muhammad declared himself the legitimate successor to Fard. Although considered schismatic and minor as late as 1937, Muhammad's group eventually became the dominant branch of the NOI.

Under Elijah Muhammad's leadership, the NOI transformed Fard's status. Fard was revealed to have been Allah himself in human form, who came to save his people. Fard had

passed on his teaching to Elijah Muhammad, who remained as Allah's messenger on Earth, to teach American blacks their true religion and their true nature as the superior race. These teachings remained the cornerstone of the Nation of Islam throughout the life of Elijah Muhammad and were central to the movement's expansion during the 1950s and 1960s.

Bibliography: Doanne Beynon Erdman, "The Voodoo Cult Among Negro Migrants In Detroit," *American Journal of Sociology* 43 (July 1937–May 1938), 804–907; C. Eric Lincoln, *The Black Muslims in America*. 3rd ed. (Grand Rapids, Mich.: Eerdmans, 1994).

Farrakhan, Louis Abdul (1933–) Born Louis Eugene Wolcott in the Bronx, New York, in 1933, Louis Farrakhan, as head of the reconstituted NATION OF ISLAM (NOI), had become by the 1990s the most visible spokesman for African-American separatism in the United States. As a result, he received much media attention, especially during JESSE JACKSON'S 1984 run for the presidency, when the NOI provided security guards for Jackson's campaign, and when Farrakhan issued a veiled death threat against a black newspaperman who reported that Jackson called New York "Hymietown." Despite his visibility, Farrakhan remains a mystery to most Americans.

Although born in New York, Wolcott grew up in Boston, where he was raised by his mother, a West Indian immigrant. Deeply religious, he attended an Episcopal church and served as an altar boy. He graduated with honors from Boston English High School, where he ran track. Wolcott also played the violin and piano.

In 1951, he began college at Winston-Salem (North Carolina) Teachers College but dropped out after two years to pursue a musical career playing calypso and country music in nightclubs. In 1955, Farrakhan met MALCOLM X, who recruited him for the NOI (Black

Muslims). The influence of Malcom X and, later, a personal meeting with the Honorable ELIJAH MUHAMMAD led Wolcott to adopt the "X" as his last name, signifying the lost names of his African ancestors and proclaiming his existence as an ex-Negro, "ex-slave, ex-Christian, ex-smoker, ex-drinker, ex-mainstream American."

Louis X soon became a significant part of the NOI, and Elijah Muhammad himself bestowed the name "Abdul Farrakhan" on the young man. Farrakhan wrote the only play, *Orgena* ("a Negro" spelled backward), and song, "A White Man's Heaven is a Black Man's Hell," sanctioned by the NOI. He served as Malcolm X's assistant at Temple No. 7 in Harlem before being appointed head minister of the Boston Temple.

When Malcolm broke with the NOI, Farrakhan replaced him as national representative and also led the attack upon Malcolm within the movement. Although denying any direct involvement by the NOI in Malcolm's assassination, he has admitted that verbal attacks on Malcolm may have created a climate that led to his murder.

Following the death of Elijah Muhammad in 1975 and the actions of his son and successor WARITH DEEN MUHAMMAD in transforming the NOI into an orthodox Sunni Muslim group that renounced racial separatism (the World Community of Al-Islam in the West), Farrakhan led a breakaway movement in 1978. In this schismatic movement, which retained the name Nation of Islam, Farrakhan returned to the religious and racial views of Elijah Muhammad. These included the belief that W. D. FARD was Allah come to Earth, that Elijah Muhammad was his apostle, that blacks were the first humans, and that whites are devils and inferior beings created by a mad scientist. Farrakhan also expanded upon Elijah Muhammad's view that UFOs are emissaries from a giant "mothership" come to rescue blacks from the apocalypse that will destroy the Earth and all the wicked people.

Farrakhan has been given to extremist views. His flaming oratory has included calling Hitler a "great man" (albeit wickedly so), describing Judaism as a "gutter religion," and complaining about the "Jewish-controlled media." His references to "white devils" and his avowed racial separatism also brought him much attention. As a result, many black political leaders felt pressure to disavow him. Some, among them Tom Bradley and David Dinkins, were quick to do so, while others resisted.

Farrakhan's work to reestablish the Nation of Islam was fairly successful. By the mid 1990s, its membership was close to 60,000, and he had repurchased both the NOI's former headquarters, Temple No. 2 (which he renamed Temple Maryam), and Elijah Muhammad's home in Chicago, from which he bases his work. Farrakhan also has attempted to realize the NOI's vision of black self-sufficiency and economic development, primarily through the Power Pac cosmetic line.

The Nation of Islam's strong moral code and its teaching of black self-respect and independence offered a powerful message to an African-American community hit hard by poverty, drug abuse, and declining public concern for civil rights. Like both Elijah Muhammad and Malcolm X, Farrakhan's message reached far beyond the members of the NOI. At public rallies, he regularly spoke to audiences numbering in the thousands, and many African Americans opposed to both his theology and his racial separatism reacted warmly to his message of black pride and independence. As the leader of the longest-lived of all black separatist groups, Farrakhan seemed poised to bring the message into a new day and a new audience.

Beginning in 1990, however, Farrakhan appeared to be moving the NOI into a new direction. He encouraged Black Muslims to participate in local and national politics, an activity that was anathema to Elijah Muhammad and a source of much frustration to Malcolm X. Farrakhan also made some overtures

toward orthodox Islam. In autumn 1990 at the General Meeting of the Continental Council of the Masjid of North America, he publicly recited the Shahadah, the orthodox Muslim profession of faith. The result was his acceptance into the Muslim fold by Warith Deen Muhammad. Some suspected that this action was solely undertaken with an eye toward the Saudi and Gulf sheikdom monies that Warith Muhammad controlled. While the suspicions seemed to be proven by Farrakhan's actions in the early 1990s, there was a hint of change.

Following a bout with life-threatening cancer, Farrakhan emerged a transformed man in the eyes of many. The result was that the hinted changes became solidified. In spring 2000, at the annual Savior's Day event, Farrakhan publicly expressed his commitment to Orthodox Sunni Islam and his desire to bring the NOI into an active engagement with mainstream Islamic institutions. Sharing the dais with him that day were Imam Warith Deen Muhammad and the leaders of several American Muslim organizations, including the secretary general of the ISLAMIC SOCIETY OF NORTH AMERICA. Initially this appeared to be more than rhetoric, as members of the NOI soon became a common presence at orthodox Islamic meetings and conferences throughout the United States. It eventually became clear that Farrakhan could not abandon completely the heterodox elements of the Nation of Islam despite his formal, public embrace of Sunni Islam. The NOI's newspaper, the *Final Call*, regularly ran old articles and speeches of Elijah Muhammad, and Farrakhan's public speeches continued to resonate with the language of the NOI of the 1960s. In February 2006, he delivered a speech in which he condemned the "false Jews [who] promote the filth of Hollywood."

Despite this, he tried to hold himself out as a changed man. In 2001, a 15-year-old ban on his entering the United Kingdom was lifted. (He had been forbidden entry because his racist and anti-Semitic views were seen

as incitements to violence.) That year he also delivered a two-and-a-half-hour-long speech to a "rap summit," where he called upon leading rap music performers and producers to accept their responsibilities as leaders and elevate the level of their discourse.

In spring 2006, Farrakhan began to suffer from a relapse of the prostate cancer that initially had been diagnosed in 1998. As he faced this life-threatening illness, he was forced to turn over the daily management of the NOI to its board and to prepare his followers for a future without him. Everyone, including Farrakhan, spoke optimistically of a smooth transition and the continuation of the NOI's work. History suggested a less rosy path. Leadership transitions in the NOI have been messy, often leading to schism, if not violence. Additionally, no clear successor to Farrakhan looms on the horizon. When Elijah Muhammad died, it was acknowledged that his son, W. D. Muhammad, would succeed him. Such is not the case with the current NOI. Additionally, even if an acceptable successor were identified, he would lack Farrakhan's charisma. Just as Marcus Garvey's Universal Negro Improvement Association collapsed without him, the NOI could be on the same course without Farrakhan.

feminist theology Feminist theology is theology that denies male domination and seeks to empower women. It is difficult to offer a more precise definition of feminist *theology* because there are in fact many different feminist *theologies*. Feminist theologians disagree, for example, about whether Judaism, Christianity, and Islam are essentially sexist. They agree, however, on the need to criticize the biases against women inherent in what they view as patriarchal theologies and the urgency of pressing beyond those theologies to articulate views that affirm and empower women.

Although rooted in the 19th-century women's rights movement, feminist theology first emerged forcefully around the midpoint of the 20th century. In the 19th century, social and religious reformers such as ANGELINA AND SARAH GRIMKÉ, ELIZABETH CADY STANTON, Matilda Joslyn Gage, and Susan B. Anthony moved in the direction of feminist theology when they reinterpreted Genesis 1–3, arguing that this foundational creation myth argued for the original equality of men and women (Gen. 1:27) and honored the place of Eve as the “mother of all living” (Gen. 3:20) (see WOMAN'S BIBLE).

Today many feminist theologians continue to focus their interpretive energies on Genesis. Phyllis Trible, for example, has argued that Genesis 2–3 cannot be interpreted to justify the domination of men over women, and Elaine Pagels has criticized the misogynist tendencies of church fathers (in particular, Augustine), who read the creation narratives as an indictment of women for bringing sin into the world.

An important year in the development of feminist theology was 1968. Two books published in that year outlined the patriarchal institutions of religion and the history of their sexist teachings: Kari Borresen's *Subordination and Equivalence: The Nature and Role of Woman in Augustine and Thomas Aquinas* and MARY DALY's *The Church and the Second*

Sex. In an attempt to expose the hierarchical assumptions of the patriarchy, these two Roman Catholic women argued that traditional Christian theology wrongly dictates that women are the “lesser sex” and are to be submissive to men. Women are, they contended, prohibited from leadership, teaching, or ritual roles in many religious groups. DALY's work developed into a widely influential, radical feminist theology that moved from being Christian to being post-Christian and has since settled in a location outside male-defined religion altogether.

Since 1968, feminist theologians have followed two broadly defined paths. The first led to liberal feminist theologies that work within a particular religious tradition in an effort to reform and reconstruct the roles and images of women in it. The second path led to radical feminist theologies that, viewing traditional organized religions as irredeemably misogynist, align themselves with a variety of goddess- and Earth-based religions.

Among the reconstructionist theologians working to reform Christianity is Rosemary Radford Ruether, who aims not only to expose patriarchy as a system oppressive to both sexes but also to describe the parameters of a liberating church. From her work was born the “women-church” movement, which presents a gender-inclusive model of the worshipping Christian community.

Feminist biblical scholarship has also largely followed this reconstructionist path. Phyllis Trible's work on the Hebrew Scriptures and Elisabeth Schuessler Fiorenza's on the New Testament are major examples of scholarship that criticizes the history of patriarchal exegesis even as it celebrates the roles of women in the biblical text and as scriptural interpreters.

Although reconstructionists argue that their religious traditions have become patriarchal, they do not typically believe that their religions are essentially so. Thus, the scriptural work of Judith Plaskow aims to move

beyond the historical exclusion of women from Judaism by putting women back into the covenant God made with Israel (Exodus 19:15) in order to be "standing again at Sinai." And Rachel Adler pushes this vision further by seeking a more inclusive Judaism still rooted in traditions. Riffat Hassan, who argues for a "post-patriarchal Islam," reinterprets the Qur'an to find what she sees as the originally intended equality between the sexes in Islam. Buddhist feminists such as Rita Gross are also working within their tradition to refashion a religion connected to its sacred scripture and traditions but separate from patriarchy and its alleged sexism and misogyny.

Womanist theologians (see WOMANIST THEOLOGY) have also retold their stories, pointing not only to the bankruptcy of traditional theologies but also to the limitations of white, European-American feminism. Jacqueline Grant and Katie G. Cannon have traced the history of African-American women through slavery to the present. Biblical scholars Renita Weems and Clarice Martin reclaim the presence of Africa and Africans in the biblical text and decry racist and sexist biblical interpretation.

Finally, some lesbian theologians aim to reconstruct their respective religious traditions to include the erotic power of the divine. Jewish lesbian feminists, such as Rebecca Alpert, are reforming their faith by finding their own interpretive strategies and critical voices. In the Christian tradition, Carter Heyward criticizes not only the sexism but also the heterosexism of the Christian church and points to the need for repentance and reform.

Other theologians, most notably Mary Daly, have chosen the second, more radical path of feminist theology, rejecting their inherited religious traditions and seeking older roots for women's spirituality. Many of these theologians (or "theologians") define themselves as post-biblical, post-Christian, post-Jewish, or in newer terms utterly dis-

connected from the Jewish or Christian traditions. Sallie McFague represents a type of radical feminist theology that is concerned with the environment and with creating new metaphors or models of God (e.g., mother, lover, and friend). McFague wants to build from the base of Christianity but considers herself "post-Christian."

Other feminists, such as Starhawk and Carol Christ, turn away from the Christian and Jewish traditions in search of older, goddess-centered religions. Spirituality, ritual, and social justice are central to feminist theologies that are reclaiming their goddess heritage. NEOPAGANISM and witchcraft (or the "Craft") are names for the movement back to spiritualities that affirm either one goddess or multiple goddesses.

Feminist theologians disagree about many things, but they do share some common features: an interest in language and symbols, a concern for social justice and political reform, a desire to provide a spiritual base for environmental activism, and a hope for the creation of a global feminism that allows for and affirms differences in race, class, ethnicity, and sexual orientation.

Finney, Charles Grandison (1792–1875)

Charles G. Finney was the premier figure in American EVANGELICALISM before the CIVIL WAR and the greatest revivalist of the SECOND GREAT AWAKENING, the period of intense spiritual excitement that spanned the first three decades of the 19th century. After undergoing a sudden religious conversion in 1821, Finney abandoned his career as a lawyer and set to work as an itinerant missionary in upstate New York. Over the next decade, he introduced controversial revival techniques known as the “new measures,” which not only helped shape religious belief and practice in the new United States but also had a profound impact on American social views. Finney hoped that winning souls for Christ would help Americans establish the millennial kingdom of God on Earth.

Finney was born in Warren, Connecticut, on August 29, 1792. His parents were farmers, and the shortage of land in Connecticut forced the Finney family to move westward two years after his birth. The Finneys eventually settled in Hanover (now Kirkland), New York. Charles returned to Connecticut to attend Warren Academy in 1812 and then planned to enroll at Yale College. However, he was dissuaded from going to Yale and instead taught school for two years in New Jersey. In 1818, he entered a legal apprenticeship in Adams, New York.

By his own account, Finney was a sinful, worldly man until his conversion on October 10, 1821. Walking to his office that morning, he received the startling insight that salvation was available to anyone who would consent to receiving it. According to his own account, Finney stopped in the middle of the street and felt God’s Holy Spirit descend upon him. The next day, when a deacon of his church reminded him of a court case he was scheduled to plead for him in court, Finney responded: “I have a retainer from the Lord Jesus Christ to plead his cause, and I cannot plead yours.” After studying theology with George Gale, the Presbyterian pastor at Adams, Finney was

licensed to preach in December 1823. He was ordained to the Presbyterian ministry in July of the following year.

Finney had remarkable physical characteristics that he put to good use in his ministerial work. He was over six feet in height and possessed piercing, hypnotic eyes. A commanding figure in the pulpit, he spoke in plain language to everyone who gathered to hear him. Finney also was not afraid to address people directly by name. In the revivals he led, he pleaded with men and women to change their hearts and surrender to God. He called them forward to the “anxious bench,” a front pew where they publicly struggled to acknowledge their sins and seek forgiveness. There, friends and neighbors stood close by to “pray them through” the experience.

Finney was immediately successful as villages, towns, and eventually cities “caught fire” during revivals he organized. He held protracted meetings, that is, community-wide revivals, prepared in advance, lasting for several weeks—urban events akin to the exuberant CAMP MEETINGS on the frontier. In 1825, he moved through the Mohawk Valley of New York. Attracting national attention, he went to Wilmington, Delaware, and Philadelphia in 1827, and the next year he ministered in New York City. Finney’s revival campaign achieved its greatest success in Rochester, New York, in the winter of 1830–31. Although resisted at first by many clergy who resented the disruption he caused in their churches, he eventually won over even his most bitter foes. New England Congregationalist leader LYMAN BEECHER, for example, who once swore that he would “call out all the artillerymen, and fight [Finney] every inch of the way to Boston,” actually welcomed him to the city in late 1831. Only illness stopped Finney. He curtailed his itinerant activities in 1832 and accepted a permanent pastorate at the Second Free Presbyterian Church in New York City.

In spite of all his well-meaning evangelistic efforts, Finney fostered divisions within his

own Presbyterian denomination. Those who opposed him tended to focus their attacks on three key features of his revivalistic work: his willingness to allow women to preach and pray in public, his admitted abandonment of traditional Calvinist (see CALVINISM) teachings about the workings of divine grace, and his openness to social reform. The latter two issues especially were to become critical factors in the NEW SCHOOL/OLD SCHOOL dispute that split the Presbyterian Church in 1837.

For many women in Finney's day, simply coming forward to the "anxious bench" to offer a public testimony about their faith represented a form of social and psychological emancipation. And the heavenly promises they received when they were spiritually reborn might also become the beginning of a new earthly life. On a purely mundane level, Finney employed women as assistants in the organizational work of his revivals, and he created women's auxiliaries that assured female participation in church work both locally and nationally. Some women gave such moving accounts of their conversion that they were invited to serve as traveling evangelists, speaking wherever revivals were held.

Finney's most notable theological innovation was the emphasis he placed on the human, rather than the divine, role in effecting religious transformation. As he declared in 1835 in his practical manual *Lectures on Revivals*, a "revival is not a miracle," but simply "the right use of the constituted means." In opposition to earlier teaching dating from the GREAT AWAKENING of the 18th century, when clergy argued that a revival should only be viewed (in JONATHAN EDWARDS's phrase) as "a surprising work of God," Finney believed that human beings could and should strive to seek divine blessing. Despite the Calvinist insistence that men and women were morally unable to choose between heaven and hell, Finney taught that God had given them power to make up their own minds. The title of his most famous sermon epitomizes the message

Finney continually preached: "Sinners Bound to Change Their Own Hearts." In the exuberantly democratic era that celebrated the rise of Andrew Jackson and the "common man," when American politicians were not embarrassed to garner votes for their party, Finney conceived that the revivalist's work was likewise convincing sinners to cast their spiritual ballots for God.

Increasingly optimistic about the progress of revivals across the country and about the growth in church membership, Finney predicted in 1835 that the start of the millennium, the thousand-year reign of Christ on Earth, was only three years away. Finney's teaching on free will had always suggested the possibility of a person's attaining moral perfection in the present life. He was at first hesitant, however, about applying those theological beliefs to the political sphere, for he believed that society could be reformed only when human beings had been fully transformed from within. Thus, in 1830, he identified drinking alcohol as a sin to be eradicated by conversion, not by prohibition laws. Still, his emphasis on the need to dedicate oneself to the advancement of God's kingdom certainly was open to concrete social interpretations. In New York City in 1832, Finney concluded that slaveholding was sinful, and he refused membership in his church to anyone involved with the slave system. The next year, he allowed William Lloyd Garrison's new American Anti-Slavery Society to use his church building as a meeting place. And in the same period, he inspired THEODORE DWIGHT WELD, a young revivalist he had converted, to organize an abolition crusade in western New York and Ohio.

Although Finney's career changed course in 1832, he remained an influential figure in American Protestantism. After working for a brief period as a pastor in New York City, he accepted an appointment to the professorship of theology at newly founded Oberlin College in Ohio in 1835. Later, he served as president

of the college from 1851 to 1866, and as pastor of the First Congregational Church in the town from 1837 to 1872. Finney's presence at Oberlin assured that the college would become a national center not only for revivalism, but also for antislavery and other reform movements.

Besides *Lectures on Revivals*, Finney's most important writings were *Lectures on Systematic Theology* (1846), which reflects the modifications he made of traditional Calvinist orthodoxy, and his informative *Memoirs*, published the year after he died. Although he resigned his pastorate at the church in Oberlin in 1872, Finney remained active as a lecturer at the college until shortly before his death. He died at his home in Oberlin on August 16, 1875.

First Amendment Adopted in 1791 to meet the objections that certain freedoms were not protected by the new Constitution, the First Amendment and the nine others ratified with it form what is commonly known as the Bill of Rights. They are understood to guarantee to the inhabitants of the United States rights the national government cannot infringe.

The First Amendment to the U.S. CONSTITUTION is arguably the most familiar, at least in broad outline, and the most important of the constitutional amendments. In this amendment are written all the legal guarantees that make freedom a meaningful term and democracy possible. "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the

press; or of the right of the people peaceably to assemble, and to petition the government for a redress of grievances."

In terms of religion, the amendment has two distinct clauses. One prohibits Congress from making any law respecting the establishment of religion. The other clause prevents Congress from passing any law prohibiting a person from the exercise of her or his religious beliefs. Originally applicable only to the federal government, these clauses were first applied to the state governments by the Supreme Court in the 1940s as among those rights protected by the FOURTEENTH AMENDMENT.

The meaning and application of these two clauses is for the Supreme Court to decide. The Court's duty is to apply these important yet vague formulations to specific situations. This task has increased in complexity since the Court's 1940 decision in *Cantwell v. Connecticut*, in which it argued that the "free exercise" clause of the amendment was binding on the states due to the Fourteenth Amendment. The Supreme Court has attempted to apply the religious clauses to legal statutes through the use of various metaphors. These have included "excessive entanglement," "wall of separation," and "legitimate secular purpose."

The need for such complex schemes of interpretation illustrates the difficulty in applying the "establishment" and "free exercise" clauses to particular cases. Nearly everyone would agree that human sacrifice should be punished as murder regardless of whether one's religion required it. But what of animal sacrifice? Is it unconstitutional for a city or state to outlaw animal sacrifices? In the case of *The Church of Lukumi Babalu Aye v. City of Hialeah* (1993), the Supreme Court apparently decided that it is, if the ordinance is solely directed at a religious practice. Can a state pay for bus transportation for children attending religious schools? Yes, according to the Supreme Court in *Everson v. Board of Education* (1947). Such activity falls within the legitimate police

powers of the state to protect citizens. Other CHURCH AND STATE issues decided by the Court have involved polygamy (no) (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS), compulsory public school prayer (no), compulsory school Bible reading (no), and Sunday closing laws (yes) (see SABBATARIANISM).

As one can see from this short list, the questions allow no easy answers and are bound to become more difficult. As the varieties of religious beliefs in the United States increase, scholars believe that the cultural hegemony of the Christian or Judeo-Christian tradition will be increasingly challenged. The federal courts will be called upon to decide the issues. In this role, they will struggle to determine the appropriate application of the "free exercise" and "establishment" clauses of the First Amendment to the new realities of America's religious landscape.

Fosdick, Harry Emerson (1878–1969) A renowned Baptist preacher, theological liberal (see LIBERALISM, THEOLOGICAL), and social activist, Harry Emerson Fosdick was one of the most visible religious leaders of his day. Born in Buffalo, New York, on May 24, 1878,

Fosdick converted at the age of seven and soon thereafter expressed a desire to serve as a missionary.

For the 1900–01 school year, Fosdick attended Colgate University, where he was influenced deeply by the liberal Baptist theologian WILLIAM NEWTON CLARK, who emphasized the need to separate the eternal substance of the Christian message from its transient historical forms. After a year at Colgate Seminary, Fosdick entered Union Theological Seminary in New York. His education there strengthened his liberal leanings. He also became a strong advocate of the SOCIAL GOSPEL, maintaining that the churches had a definite role to play in the creation of a more just social order. After graduating from Union in 1904, Fosdick took the pulpit at Montclair Baptist Church in New Jersey, where he developed a reputation as an outstanding preacher. He also taught at New York's Union Seminary, originally as a part-time instructor and later as professor of practical theology.

Upon returning from chaplaincy work in Europe in 1918 for the YOUNG MEN'S CHRISTIAN ASSOCIATION, the young Baptist minister accepted a call to a Presbyterian pulpit at First Presbyterian Church in New York City. While there, Fosdick preached his most famous sermon. "Shall the Fundamentalists Win?" was both a plea for less hostility between liberals and fundamentalists (see FUNDAMENTALISM) and a public refutation of major fundamentalist doctrines, including the virgin birth, which he claimed was inessential; the inerrancy of the Bible, which was, in his view, incredible; and the belief in the second coming of Christ, which he believed needed reevaluation. Published as "The New Knowledge and the Christian Faith," the sermon made Fosdick a lightning rod for fundamentalist attacks, especially in the PRESBYTERIAN CHURCH (U.S.A.). Many wanted the denomination to force Fosdick out of his Presbyterian pulpit. Although these attempts failed, he left the church in 1924.

At the urging of John D. Rockefeller, Fosdick was hired by Park Avenue Baptist Church, which five years later moved to its new building, Riverside Church. Nonsectarian and mission driven, Riverside Church became a center of liberal Protestantism and the Social Gospel. Among the numerous activities sponsored by the church was a job placement agency organized during the Great Depression of the 1930s.

Fosdick's message extended far beyond his church. A highly popular radio show, *National Vespers*, and his many books brought his message to millions. Perhaps even more significant was the effect he had on the students in his classes on practical theology at Union Seminary.

After retiring from his pastorate in 1946, Fosdick led an active life promoting social and economic justice, racial harmony, and world peace. Although he had been a strong supporter of American entry in WORLD WAR I, even writing an enormously successful defense of American intervention—*The Challenge of the Present Crisis* (1917)—he became a convinced pacifist during the 1920s, a position he would hold the remainder of his life, even during WORLD WAR II. Despite his concern with the apparent intractability of evil, which made him less optimistic in his later years, Fosdick remained committed to the idea that human participation with God's activity in history was all that was necessary to overcome sin and evil. Although slowed by arthritis and a heart condition, Fosdick continued to be active until his death on October 5, 1969.

Fourteenth Amendment The Fourteenth Amendment, adopted in 1868, is one of the three amendments to the United States CONSTITUTION adopted during the Reconstruction era. Along with the Thirteenth Amendment outlawing SLAVERY and the Fifteenth guaranteeing the right to vote regardless of race, color, or previous conditions of servitude, the Fourteenth Amendment was designed primarily to protect newly freed slaves from political and legal abuse.

The amendment has five sections. The second through fifth deal with issues emerging from the CIVIL WAR. They outline the punishments for states that disfranchise blacks, forbid the paying of Confederate war debts, and disbar Confederate leaders from elective office.

The first section, however, is by far the most important. It declares all persons born in the United States citizens of that nation and of the state in which they reside. It also forbids the states from passing any laws that "abridge the privileges and immunities" of United States citizens and from denying any of its citizens due process and equal protection under the laws.

This is significant because it seems to guarantee to the citizens of the various states the same rights they have as United States citizens. It was some time, however, before the implications of this amendment became part of American law. This happened through what is known as the incorporation doctrine, which states that within the "due process" clause of the amendment are included particular rights and liberties. The first time a Supreme Court majority took this position and incorporated (or included) sections of the FIRST AMENDMENT into the Fourteenth Amendment's due process clause was in *Gitlow v. New York* (1925). In the majority opinion, Justice Edward Sanford wrote, "For the present purposes, we may and do assume that freedom of the speech and of the press . . . are among the fundamental rights and 'liberties' protected by the

due process clause of the Fourteenth Amendment." Few recognized the significance of this point until the Court's decision in *Stromberg v. California* (1931) struck down a California statute prohibiting the display of a red flag as an emblem of anarchism. In the majority decision, Chief Justice Charles Evans Hughes wrote, "It has been determined that the conception of liberty under the due process clause of the Fourteenth Amendment embraces the right of free speech."

In its decision in *Cantwell v. Connecticut* (1940), the Supreme Court broadened the incorporation doctrine to embrace the "free exercise" clause of the First Amendment. The incorporation of the "establishment" clause occurred in the Court's decision in *Everson v. Board of Education* (1947).

These latter decisions brought state and local laws touching on religion under the examination of the federal courts. The result was a proliferation of court cases as the implications of these rulings were worked out. Clearly, the Fourteenth Amendment and the incorporation doctrine have been very significant. They have protected the liberties and freedom of the citizens of the various states and prevented the suppression of unpopular opinions and religious views.

Franklin, Benjamin (1706–1790) One of the most influential and important members of colonial America as well as a dominant force in the move for independence and in drafting the CONSTITUTION, Benjamin Franklin

was born in Boston, MASSACHUSETTS BAY COLONY, on January 17, 1706. Raised in the ethos of Puritan (see PURITANISM) Boston, Franklin soon demonstrated his inventiveness, opposition to authoritarianism, and biting humor. Franklin also helped formulate what became, for many, the dominant cultural understanding of religion in the United States. He saw it as important and useful, something to be developed but also something that should not divide people but should drive them toward social improvement and doing good.

The 15th of 17 children of Josiah Franklin, a candle and soap maker, and his second wife, Abiah Folger, Franklin knew a modestly comfortable working-class life. His precociousness was readily apparent, and his parents desired him to study for the ministry. They initially sent him to a private school, but financial difficulties forced them to withdraw him. Franklin then attended one of the city's common schools, Boston Latin, but did not graduate. Franklin basically was self-taught, an undertaking aided greatly by his career as a printer that gave him ready access to books.

At the age of 12, he was apprenticed to his brother James, a printer in Boston. James, a fairly dour and uncreative type, was protective of his authority and proved a difficult taskmaster for Benjamin, whose creativity was accompanied by a significant ego. When his brother refused to let Franklin write for the *New England Courant*, the newspaper James started in 1721, Franklin submitted a series of letters to the paper under the name of Mrs. Silas Dogood, a middle-aged widow. Through 14 letters over seven months in 1722, Widow Dogood managed to become the talk of the town and the source of much speculation. When James finally discovered who the author was, he reprimanded his brother so severely that the latter ran away. Franklin arrived in Philadelphia in 1723 with \$1 in his pocket and knowing no one in the city. He eventually found employment as a printer, and, although disappointed by several individuals who had

promised to assist him in setting up a printing shop, Franklin slowly made his way into the business.

Philadelphia enabled Franklin to realize his full potential as an inventor, writer, and public servant. He helped to establish the city's volunteer fire department, the University of Pennsylvania, and the country's first hospital. In Philadelphia, Franklin's genial deism and commitment to social improvement developed into what could be seen as his religion.

The religious tolerance of the Quaker colony of Pennsylvania fused with Franklin's personality and his opposition to authority and helped mold Franklin's attitude to religion. In the colony, Quakers, Lutherans, Moravians, Baptists, and even Jews and Catholics lived in peace and economic prosperity. This experience led Franklin to develop the view that all people would be better off, personally and economically, if they developed an attitude of tolerance.

Franklin believed in God and in the social usefulness of religion. He felt religion was a source of morality and that it could develop fellow-feeling and community responsibility, but only if it did not become exclusivist and uncritical. His humorous writings often were directed at those tendencies in religions, particularly the Puritanism of his native Massachusetts Bay Colony.

In one of his stories, "A Witch Trial at Mount Holly," two accused witches were subjected to the following tests. They were to be weighed on a scale against a Bible and then tossed in the river with hands and feet bound to see if they floated. The accused agreed to submit to the tests, on the condition that the accusers agree to take them as well.

While Franklin apparently did not subscribe to any particular religious doctrine, he became a member of a Presbyterian church in Philadelphia and remained a pew-holder throughout his life, although after the first five Sundays he never attended again. When once

asked about this, he replied, "I am a Presbyterian, but Sunday being my day to read, I do not frequent the meetings of that organization." This free-thinking attitude toward religion unnerved his parents. They once wrote him a letter expressing their concern over his "erroneous opinions." Franklin crafted a response that expressed his understanding of religious views and opinions, one many would come to see as the American attitude to religious beliefs. Franklin felt that it was vain for any one person to insist that "all the doctrines he holds are true and all he rejects are false." Just as no individual could be completely right all the time, neither could any religion. The doctrinal distinctions about which his mother worried had little importance for Franklin. He wrote, "I think vital religion has always suffered when orthodoxy is more regarded than virtue. And the Scripture assures me that at the last day we shall not be examined by what we thought, but what we did . . . that we did good to our fellow creatures." When, in the year of his death, he was queried by Ezra Stiles, a Congregational minister (see CONGREGATIONALISM) and president of Yale, about his religious beliefs, Franklin responded, "Here is my creed. I believe in one God, the creator of the universe. That he governs by his providence. That he ought to be worshipped. That the most acceptable service we render to him is doing good to his other children. That the soul of man is immortal, and will be treated with justice in another life respecting its conduct in this. These I take to be the fundamental points in all sound religion, and I regard them as you do in whatever sect I meet with them."

Such an attitude led Franklin to support religious undertakings throughout the city of Philadelphia. He helped to raise money to construct an auditorium to be used, in Franklin's words, "for the use of any preacher of any religious persuasion who might desire to say something." That he truly meant any was demonstrated by his additional statement

that “Even if the Mufti of Constantinople were to send a missionary to preach Mohammedanism to us, he would find a pulpit at his service.”

Franklin regularly contributed to the building funds of every denomination and religion in Philadelphia, including a donation of £5 to Congregation Mikveh Israel’s in April 1788 for its new synagogue. When the British evangelist George Whitefield came to preach, Franklin, who initially had committed himself to giving him nothing, became so impressed with Whitefield’s preaching that he refused to hear him again lest it bankrupt him.

During the July 4 celebrations in 1788, Franklin was too sick to leave his bed. The parade passed by his house, and from his window Franklin watched the marchers pass by according to his parade arrangements. For the first time, “the clergy of different Christian denominations, with the rabbi of the Jews, walked arm in arm.” This was to be repeated two years later, when, upon his death, his casket was accompanied to the graveyard by the city’s clergy of every faith.

While throughout U.S. history other views and approaches to religion emerge regularly, Franklin’s attitude, his example, and his public life helped to create a distinctive approach to religion and religious pluralism, one that, at least on a functional level, has predominated over the course of American history. This view was based on a sense of tolerance, an aversion to tyranny, a commitment to free expression and compromise, the duty to respect others, and a sense of humility. The fact that the United States has in many ways and at most times embraced this approach (although not always and not without opposition) has made it possible to incorporate so many individuals of such differing religious views into a relatively peaceful country.

Freemasonry A moral and religious fraternal practice within the Judeo-Christian family, Freemasonry (or Masonry) arose in Britain early in the 18th century and quickly spread to the European continent and American colonies. The movement derives its name from the work of the masons of King Solomon’s temple, whose physical labor in constructing this biblical house of worship is taken as a model for the task of building one’s character in the modern world.

The precise origins of Freemasonry remain obscure. Many followers trace the roots of their tradition to King Solomon himself, or to still earlier biblical figures. From these beginnings, Masonry is said to have been kept alive by builders’ guilds in ancient Rome and the Middle Ages as well as by the Knights Templar, a 12th-century military order that participated in the Crusades to regain Jerusalem, with its temple site, for Christianity. Some Masons, together with most scholars, distinguish between these sacred mythological origins and the rise of the movement in early 18th-century England and Scotland, when middle-class men, imbued with the new optimistic faith of the Enlightenment, began joining moribund lodges of operative Masons and turned them into spiritual chambers of ritual and symbolism. Organized Masonic history, in any case, dates from the formation of the Grand Lodge of England in 1717.

Freemasonry immediately became popular in colonial towns and cities in North America. By the time of the Revolution, perhaps

several thousand Americans, including such leading political figures as Benjamin Franklin and George Washington, belonged to the brotherhood. Indeed, for a few years following the Revolution, Freemasonry supplied many of the beliefs and symbols of the new nation's CIVIL RELIGION. (One legacy from this period is the national seal of the United States, containing the Masonic symbol of the All-Seeing Eye placed at the apex of an Egyptian pyramid, that appears today on the one-dollar bill). But the faith of the Enlightenment was not to rule America. The rise of evangelical Protestantism in the early 19th century brought sharp attacks on the fraternity for its secrecy, exclusivity, and alleged idolatry, causing three-fourths of the lodges to close and membership to plummet. By 1850, however, Masonry had begun to recover and entered its period of greatest growth, reaching close to 1 million members by the year 1900, and its high point of about 4 million by the mid-1950s.

As products of the moderate British Enlightenment, Freemasons believe in many of the same tenets of rational religion shared by most Episcopalians and Unitarians: God (often referred to as "The Great Architect of the Universe") created everything in the universe but does not intervene directly in its operation; the human soul is immortal; reason provides adequate means to apprehend the laws of God in nature and morality; and the highest duty of humankind is to obey the laws of morality. Freemasons part company with Episcopalians, Unitarians, and all other Christians, however, in omitting the story of Jesus. They do this in the belief that Freemasonry teaches only those principles held in common by all the world's religions and thus can unite all men regardless of background. Not surprisingly, Jews have found such a universalistic faith hospitable, and they have been received into many, though not all, Masonic lodges. Nevertheless, a strong, though disguised, Christian element can be found in the most sacred of Masonic stories, that of Hiram

Abif, King Solomon's master builder, who is murdered for his virtue and miraculously resurrected. Masons also celebrate the holidays of the Christian saints John the Baptist and John the Evangelist, and there exists a Masonic subgroup (the Order of Knights Templar) that explicitly reveres the Christian Trinity.

Beliefs alone, however, tell less than half the story of Freemasonry. The devotional life of Masonry centers around a series of rituals called "degrees," which progressively initiate members into the spiritual wisdom imparted by the tradition. This gnostic form of the brotherhood's practice raises the question of Freemasonry's connection with the occult. Scattered references to the ancient mystery religions of the Middle East, Egypt, and Greece as well as to various European strains of mysticism and magic (hermeticism, Rosicrucianism [see ROSICRUCIANS], and alchemy) can be found in the earliest records of the fraternity, and some of these themes achieved greater elaboration as Masonry developed. But whereas the leading traditions of the occult aim to lead a follower to a mystical experience of oneness with the sacred forces of the universe, Freemasonry seeks no such communion. Rather, it uses its ties to pre-Christian faiths simply to support its claim to universalism and to enhance the ceremonial appeal of its beliefs.

Considering the significant differences that separate the fraternity from the mainstream of Protestant evangelical and liberal faith in the United States, Masonry has had a remarkably large influence on American life. In addition to attracting an enormous membership of its own, the brotherhood has spawned women's auxiliaries and youth groups for boys and girls. It has also stimulated the emergence of a vast number of fraternal organizations, from the Independent Order of Odd Fellows to the Benevolent Protective Order of Elks, the religious meanings of whose practices remain unexplored but may well hold much in common with the outlook of Freemasonry.

Frelinghuysen, Theodorus Jacobus (1691–1748) Theodorus J. Frelinghuysen was one of the founders of the Dutch Reformed Church in America. A minister in the Raritan Valley of New Jersey, he achieved notoriety for his insistence on the necessity of conversion and living a godly life. As a result of this evangelical emphasis, Frelinghuysen is now generally regarded as the herald of the remarkable series of mid-18th-century revivals known as the GREAT AWAKENING.

Frelinghuysen was born near the Dutch border at Hagen, Germany, in November 1691. The son of a Reformed pastor and educated at the University of Linggen, he was profoundly influenced by continental PIETISM, a religious movement that stressed personal holiness. Frelinghuysen served briefly in two separate pastorates in the Netherlands following his ordination. In 1720, he migrated to Amer-

ica, where, as a Reformed clergyman, he was under the jurisdiction of the Dutch Reformed Church. He served churches in New Jersey for almost three decades.

Because many of his clerical colleagues considered him more troublesome than saintly, Frelinghuysen’s persistent emphasis on heartfelt piety made him an influential, but unpopular, figure in church affairs in the New World. Overturning the cold formalism that characterized Reformed churches at that time, he laid down strict requirements for admission to Communion. Frelinghuysen demanded that the “unconverted” be excluded from the Lord’s table until they could testify to their genuine repentance and reliance on the Holy Spirit. He criticized the ecclesiastical hierarchy back in Amsterdam, moreover, for failing to send pietist clergy to America. Since he also encouraged lay participation in church life, which soon fostered growth in the areas where he ministered, leaders of the Great Awakening such as GILBERT TENNENT, JONATHAN EDWARDS, and GEORGE WHITEFIELD later testified to Frelinghuysen’s influence on their evangelistic work.

Frelinghuysen trained several young men for the ministry and caused a considerable stir in his denomination when he ordained them himself, without obtaining permission from church headquarters in Holland. Seeking local autonomy for Dutch churches, he helped organize the first coetus (organization of churches) in America in 1747. Although he did not live to see this movement come to fruition, Frelinghuysen’s leadership was critical to the eventual formation of an independent Dutch Reformed Church in 1755.

The exact date and place of Frelinghuysen’s death are unknown. He is assumed to have died in New Jersey in about 1748.

Friends, Religious Society of (Quakers)

The Religious Society of Friends, popularly known as the Quakers, dates its founding to 1652, when George Fox, standing on Pendle Hill in northwest England, received a vision from God. This vision lifted Fox out of his frustration with the failures of the numerous contending religious groups that had emerged in England during the Puritan revolution. Long a searcher for religious truth, Fox was near despair when he heard the voice of God telling him that “there is one even Jesus Christ who can speak to your condition.” Fox interpreted this message to mean that the immediacy of the spiritual presence was the source of all religious truth. This became the basis for the Quaker doctrine of the inner light—the spirit of the transcendent God perceptibly entering into human consciousness.

Fox took this message throughout England, preaching the need for complete and true obedience to Christ. This obedience included pacifism, a rejection of oaths, and the refusal to make prescribed signs of respect—such as removing one’s hat—to social superiors. Such attitudes often brought the Quakers into conflict with political and religious authorities both in England and in the American colonies.

The first Quakers came to British America in July 1656, when Mary Fisher and Ann Austin arrived in Boston aboard a ship from Barbados. The colonial authorities quickly arrested them on charges of witchcraft and shipped them back. No sooner had this happened than another group arrived to meet the same welcome. In response to this growing influx of religious enthusiasts, the colony barred ships from landing Quakers in the colony. In

response, Quakers started settling in the religiously tolerant colony of Rhode Island. From there, they continued their attempts to take their religious message to the MASSACHUSETTS BAY COLONY, where the authorities adopted increasingly extreme measures in response, including the execution of four Quakers on Boston Common.

The founding of Pennsylvania (see PENNSYLVANIA [COLONY]) in 1681 by the Quaker WILLIAM PENN provided a place of refuge for English Quakers, as well as persecuted religious groups throughout Europe. Under Quaker leadership, the colony became prosperous and successful, but the demands of running the colony, especially during the French and Indian War, threatened their religious tenets and led Quakers to remove themselves from the colony’s assembly.

Quakers in the United States held their first General Meeting in 1681 in Burlington, New Jersey. In 1685, it merged with the Philadelphia annual meeting to become “The General Yearly Meeting for Friends of Pennsylvania, East Jersey, and of the Adjacent Provinces.” Now known as the Philadelphia Yearly Meeting, it is the oldest Quaker group in the United States.

Although Quakers early settled in the southern states, their growing opposition to slavery made them increasingly unwelcome there. As tension between proslavery and antislavery forces intensified, Quakers increasingly left the South for the newly opened regions of Ohio and Indiana, giving the Midwest a fairly large Quaker population, but a minuscule presence south of the Ohio River.

One significant element of Quaker history that should not be overlooked is that from the beginning, women had an equal role in the community’s activity. Knowing that God was no respecter of persons, Quakers recognized that the divine spirit could settle anywhere, and so women have played a major role in the denomination’s history. Equally signifi-

cant was the fact that this equality within the denomination led Quaker women such as Susan B. Anthony and Lucretia Mott to leadership roles in the struggle for women's rights.

Although there are fewer than 120,000 Friends in the United States, they are divided into three main theological groupings. The largest, the Friends United Meeting, most resembles mainstream Protestantism with its programmed meetings and hired ministers. Numbering around 45,000, they consider themselves to be the continuation of the "orthodox" Friends who did not separate during the numerous schisms of the 1800s.

The Friends General Conference is a result of the Hicksite controversy in Quakerism. In the 1820s, a Quaker minister named Elias Hick began to condemn the growing worldliness and formalism of the Quakers. After several years of controversy, Hick's followers withdrew from the Philadelphia Yearly Meeting to organize what became the General Conference. The churches affiliated with the Friends General Conference do not prepare worship services but wait for the divine spirit to lead one to speak. The conference numbers about 35,000 members and is the most active in social issues.

The Evangelical Friends Alliance, with roughly 39,000 members, was formed in 1965 by Friends meetinghouses influenced by EVANGELICALISM. It brought together congregations that had recently adopted evangelical practice with older congregations formed by the schism created when the British Quaker John Gurney visited the United States in 1837–40 and urged the adoption of revivalistic methods and a salaried ministry.

The remaining Quakers are joined in several different meetings that are not affiliated with any of the above conferences. Despite these differences in affiliation, most of the conferences are on good terms with each other and join in numerous activities, primarily social action, through such bodies as the

American Friends Service Committee and the Friends Committee for National Legislation.

frontier A term broadly applied to areas of social, cultural, political, and economic contact, the *frontier* has traditionally indicated a line of advance that marked the gradual process by which European-American migrants settled and "civilized" western regions of the North American continent, rendering order from apparent chaos. Following the thesis posited by Frederick Jackson Turner in the 1890s, many scholars have seen the social transformation that occurred on the American frontier as directly responsible for the creation of a distinctive American identity. In recent years, this paradigm of westward movement has been the focus of considerable debate and revision, as historians have acknowledged the drawbacks of viewing American history solely from the perspective of European-American migration.

Drawing upon Turner's thesis, scholars until recently have depicted religion on the frontier almost solely in terms of the spread of Protestant Christianity westward, focusing on the characteristic forms that religious adherence assumed in an environment of continuous social formation. William Warren Sweet,

the best-known scholar of "frontier religion," has argued that the institutions and practices that came to be most closely associated with American evangelical religion in the 19th century were largely a product of a frontier culture. The individualism, emotionalism, pragmatism, anti-intellectualism, and egalitarianism that came to characterize evangelical religion were attributed to the needs and desires of a mobile, sparsely settled, and largely agrarian population.

The most widespread and best-known of these religious practices was REVIVALISM, the periodic gathering of participants and observers for the purpose of encouraging emotionally charged religious fellowship and individual conversions to Christianity. Although revivals had characterized evangelical Protestantism during the GREAT AWAKENING of the 18th century, they became an intrinsic aspect of religious life during the early 19th century, as European-American migrants settled territories west of the original 13 states.

In 1801, Cane Ridge, Kentucky, was the site of a large revival (see CANE RIDGE REVIVAL) in which some 3,000 participants experienced tremendous outpourings of enthusiastic spiritual expression, including dancing, singing, barking, jerking, and rolling. Such CAMP MEETINGS also gave rise to a particular brand of itinerant preacher, men and women who could "stir up" the passions of individuals, create a strong sense of religious community with little regard to denominational affiliation, and evoke from their listeners the desire to repent and convert. CHARLES GRANDISON FINNEY, the most famous frontier itinerant, preached throughout New York State and instituted a series of "new measures," practices that set the pattern for revivalism into the 20th century. Finney's innovations included praying for individuals by name, encouraging women to speak in public, and using an "anxious bench" at the front of the assembly so that participants considering conversion could come before the entire congregation. In construing

a revival as a function of human practices and passions, Finney also downplayed the role of God as the initiator of conversion and heightened the importance of individual enterprise and assent.

This pattern of frontier revivalism, instigated in New York, Kentucky, and other areas encompassing the line of European-American settlement, set the stage for evangelical practices on frontiers farther west throughout the 19th century. Camp meetings, sometimes lasting three to five days, provided social interaction and the foundations of community organization for settlers who had left their homes and families back east. Denominational structures were transformed to meet the needs of the westward migration, and revivalism favored those organizations, especially BAPTISTS and METHODISTS, that were flexible enough to adjust to a variety of social and cultural settings.

But if the frontier has provided a setting for the extension of Protestant religious groups westward, it has also promoted experimentation and syncretism. European Americans who had severed their ties with eastern communities and churches were often more likely to entertain new religious ideas and practices. Just as Finney's new measures thrived in the environment of western New York, so too did new religions such as Mormonism, Shaker communities, and a variety of utopian experiments find rich soil and ready believers. New religious groups, seeking further distance from a society that often barely tolerated their practices, proved instrumental in the subsequent development of American frontiers.

Scholars in recent years have chosen to look at frontiers not simply as lines of European-American settlement, but as places of intercultural contact among a variety of migrants, including Native Americans and settlers with roots in Europe, Africa, Asia, and Latin America. In this view, a frontier does not necessarily imply a movement from social chaos to order, but instead indicates meet-

ings, negotiations, and often confrontations among a multiplicity of cultures about what constitutes community life. Additionally, it has been argued persuasively that even European-American settlement never followed a continuous, slowly advancing cultural front, but instead functioned in a variety of ways, giving rise to urban, agricultural, mining, timber, and ranching frontiers, all with different forms of social and religious organization. Rather than seeing in these newer definitions of the frontier a loss of religious coherence, some scholars view them as an opportunity to explore religious beliefs and practices in myriad circumstances, and indeed to expand more traditional concepts of what constitutes religion itself.

Frothingham, Octavius Brooks (1822–1895) Octavius B. Frothingham was a Unitarian minister and first president of the Free Religious Association, an ultraliberal theological movement that (in Frothingham's words) went "beyond Christianity." His ministry and growing disenchantment with theistic beliefs symbolized a general transition within American Unitarianism as a whole after the CIVIL WAR. In the second half of the 19th century, Frothingham's denomination changed from being a recognizably Christian church to a religious organization with an essentially humanistic focus.

Frothingham was born in Boston on November 26, 1822. Following his graduation from Harvard College (1843) and Harvard

Divinity School (1846), he became the pastor of the North Church in Salem, Massachusetts, where he served for eight years. He next led churches in Jersey City, New Jersey (1855–59), and in New York City (1859–79), eventually transforming New York's Third Unitarian Society into the so-called Independent Liberal Church. In 1872, he published *The Religion of Humanity*, one of the classic expressions of naturalistic religious thought in postbellum America. Frothingham also wrote *Transcendentalism in New England* (1876), an insider's view of that movement and the earliest history of TRANSCENDENTALISM.

When the National Conference of Unitarian Churches was organized in 1865 with a constitution that officially committed the denomination to the "Lordship of Christ," Frothingham and other religious radicals began to make plans to cut their institutional ties with Unitarianism. Instrumental in founding the Free Religious Association in 1867, he was elected its president, a post he held until 1878. Frothingham also contributed numerous articles to *The Index*, the association's journal. The Free Religion movement was short-lived and by the end of the century had been reabsorbed into Unitarianism. However, Unitarianism itself had changed and was far more compatible with religious humanism (see SECULAR HUMANISM) than it had been a half-century before.

Because of ill health, Frothingham retired from the Independent Liberal Church in 1879, and the congregation soon disbanded after his departure. Still active as a writer in retirement, he died in Boston on November 27, 1895.

Fuller, Charles E. See ELECTRONIC CHURCH.

Fuller, Sarah Margaret (1810–1850)

Writer, reformer, literary critic, and acclaimed conversationalist, Margaret Fuller synthesized the convictions of TRANSCENDENTALISM and the concerns of early women's rights activists. Though dismissed during her lifetime as a second-rate author, Fuller's *Woman in the Nineteenth Century* (1845) survives as a classic in the tradition of Mary Wollstonecraft's *Vindication of the Rights of Woman* (1792) and Simone de Beauvoir's *The Second Sex* (1953). Fuller's thought also lives on in contemporary FEMINIST THEOLOGY.

Fuller was born in 1810 in Cambridgeport, Massachusetts, where her facility with languages such as Latin, Greek, Italian, and French earned her a reputation as a child prodigy. Her family moved to Groton, Massachusetts, in 1833. They relocated in 1839 to Jamaica Plain, Massachusetts, where in that same year Fuller organized a conversation circle for prominent Boston women, many of them transcendentalists. In 1840, Fuller became editor in chief of *The Dial*, an organ for transcendentalist thought and literature. She served in that post for four years. Fuller moved in 1844 to New York City, where she worked as a literary critic at Horace Greeley's reform-minded paper, the *New York Tribune*. She relocated in 1846 to Europe, where she mingled with such luminaries as Thomas Carlyle, William Wordsworth, and George Sand. In Italy, she met and married Giovanni Angelo, marquis Ossoli. During the European revolutions of 1848, she served as a nurse and chief administrator at the Hospital of the Trinity to the Pilgrims, which served Roman soldiers. After the French took Rome in 1849, she and her husband fled with their newborn child to a mountain village and, eventually, to Florence. From there, Fuller decided, in the spring of 1850, to return with her family to the United States. Tragically, the boat that was carrying Fuller, her husband, and her child ran aground off Fire Island, just

short of their New York destination, and all three perished on July 19, 1850.

Fuller once confided to transcendentalist WILLIAM HENRY CHANNING her "secret hope" that women would some day contribute significantly to the American literary tradition, and her own work helped to transform that hope into a reality. During her lifetime, however, Fuller was noted more as a conversationalist than as an author. Though the universal reformer Thomas Wentworth Higginson praised Fuller as "the best literary critic whom America has yet seen," detractors from James Russell Lowell to Perry Miller dismissed her as a woman whose ego far outweighed her capacities as a thinker and as a writer.

Margaret Fuller, transcendentalist writer whose *Woman in the Nineteenth Century* (1845) was the first philosophical statement of feminism by an American woman.

A new generation of scholars has begun to challenge this consensus. The book they esteem most highly is *Woman in the Nineteenth Century*, a feminist manifesto that in their view provided much of the inspiration and intellectual foundation for the women's movement. Fuller's *Woman* shared much with Mary Wollstonecraft's earlier work, *A Vindication of the Rights of Woman*. But whereas Wollstonecraft grounded her feminist views in Enlightenment notions of rights, Fuller proceeded from Romantic notions such as the glories of the cultivation of the individual soul. Among "the prophets of the coming age" whom *Woman* conjured up were the socialist Charles Fourier, the seer Emmanuel Swedenborg (see SWEDENBORGIANISM), and the German romantic Johann Wolfgang von Goethe.

Transcendentalism was, however, the most notable philosophical and religious influence on Fuller's work. Along with intimates such as RALPH WALDO EMERSON and JAMES FREEMAN CLARKE, Fuller affirmed such Transcendentalist verities as human perfectibility, historical progress, and self-reliance. She, too, trusted spirit more than matter, intuition more than reason. Because she believed that women were "intuitive in function, spiritual in tendency," she found room in her work to heap praise on her sex.

Fuller belied the title of her most famous book by examining the roles and images of women from ancient to modern times. She discussed in *Woman* both the Madonna and Isis and drew on Hindu myths and European folklore as well as the Bible. Among the theological affirmations of the book was Fuller's insistence that God was immanent in both women and men. Women should devote their lives first and foremost, Fuller argued, to God, not men. Fuller shocked many of her readers by discussing frankly taboo subjects such as prostitution and by her insistence that Christianity had done little to improve the lot of women.

Though Fuller's *Woman* was largely forgotten in the first half of the 20th century, it inspired a generation of early American feminists. In July 1848, three years after the book appeared, friends of Fuller organized the first woman's rights convention at Seneca Falls, New York. Their Declaration of Sentiments owed much, of course, to the Declaration of Independence; but it may have owed more to Fuller's *Woman*.

SRP

fundamentalism (general) *Fundamentalism* is a word used to identify certain movements within a variety of religions. It is an expansion of the original use of the word to identify a form of Protestantism (see FUNDAMENTALISM [PROTESTANT]) that emerged in the late 19th and early 20th centuries. The word was extended to movements in other religions because of the perception that they share approaches to scripture, morality, social organization, and the modern world. While some scholars (and representatives of the movements) have expressed discomfort and opposition to this expansion, it has become common usage and does seem to be a useful term.

While many view fundamentalisms as a return to older and purer forms of the religious tradition (and this invariably is the claim of those who hold to the views), it is important to see that fundamentalisms are themselves modern phenomena. They are modern responses to new realities, usually perceived as challenges to religion. These often are

developments in science and other forms of knowledge, including those that seem to challenge the divine nature of revelation (usually the religious scripture) as well as new social and cultural developments seen as threats to the divinely sanctioned social order.

The challenges can vary from society to society and from religion to religion, although several perceived threats are usually shared. For fundamentalists within the three monotheisms, *EVOLUTION* invariably is viewed as a major challenge, both to their doctrine of the human being and to their view of the divinely revealed nature of religious scriptures. Another shared perception of threat is the loss of cultural dominance, often linked with the view that this loss means that society has begun moving in a direction contrary to God's will. From Protestant fundamentalists in the United States to Muslim fundamentalists in Egypt to Buddhist fundamentalists in Sri Lanka, the demand that society conform to the divine will is powerful. The view that society has to be brought back into conformity with the divine will also explains fundamentalists' movement into the political arena and some of their willingness to use violence. Compromise is unacceptable because it means rejecting the divine will.

Groups to which it is reasonable to apply the generic term *fundamentalist* share certain views. These are

1. a view that religious scriptures are divinely revealed and completely without error (see *INERRANCY*);
2. a view of religious knowledge as propositional, as a set of rules knowable from revelation;
3. since the divine will can be known, it must be realized;
4. failure to realize the divine will on Earth will lead to social punishment;
5. an obligation to separate from those who are not true believers; and
6. strict moral codes.

Within the different forms of fundamentalism, there is a real conflict between those who believe that the combination of points 3 and 4 require true believers to be actively engaged with the wider world through politics and even violence (see *RELIGIOUS VIOLENCE; TERRORISM, RELIGION AND*). While politically engaged fundamentalists and even groups willing to use violence have received the greatest attention by scholars and the mass media, there are numerous fundamentalist groups whose response has been to withdraw from the world. In many ways, the Old Order *AMISH* represent this model, but for decades it was the model of Protestant fundamentalists in the United States and Muslim fundamentalists in India.

Scott Appleby, and Emmanuel Sivan, *Strong Religion: The Rise of Fundamentalisms Around the World* (Chicago: University of Chicago Press, 2003); Brenda Brasher, *Encyclopedia of Fundamentalism* (New York: Routledge, 2001); Gilles Kepel, *The Revenge of God: The Resurgence of Islam, Christianity, and Judaism in the Modern World* (University Park: Pennsylvania State University Press, 1994); Martin Marty and R. Scott Appleby, *Accounting for Fundamentalisms: The Dynamic Character of Movements* (Chicago: University of Chicago Press, 1994); Martin Marty and R. Scott Appleby, *Fundamentalisms Comprehended* (Chicago: University of Chicago Press, 1995).

fundamentalism (Protestant) Fundamentalism—a form of Protestant Christianity distinguished by its commitment to biblical *INERRANCY*, *DISPENSATIONALISM*, strict morality, and religious separatism—slowly emerged out of the mainstream of American evangelical Protestantism (see *EVANGELICALISM*) during the last third of the 19th century. By the 1920s, when the term was first used, fundamentalism was a separate and recognizable religious movement whose adherents viewed themselves as heirs of orthodox Christianity. In the

late 19th and early 20th century, this was at least partially true. During that time, fundamentalists had not separated from other conservative evangelical Christians with whom they shared an opposition to EVOLUTION, biblical criticism, MODERNISM, and liberalism.

But fundamentalists were not true heirs. They adopted new ideas and new concepts as transformative of the Christian tradition as the modernists they opposed. The new ideas were dispensationalism, PREMILLENNIALISM, and biblical inerrancy. While all three had antecedents in the history of Christianity, they had never been dominant. Within fundamentalism, however, they became determinative for judging a believer's orthodoxy.

Premillennialism cut across the grain of American Protestantism. Historically, American Protestantism was postmillennial (see POSTMILLENNIALISM), meaning that most Protestants believed Christ's return would occur after the millennium, the thousand years of peace and prosperity. This belief fit well with the optimism that marked the United States. Premillennialism presented a different face entirely. Premillennialists rejected the possibility of progress, asserting that this world was destined for decline and decay.

This version of premillennialism was based on a theory of biblical interpretation known as dispensationalism. Originating in England, dispensationalism was formalized in the United States by Cyrus Scofield's *Scofield Reference Bible*. Dispensationalism claims that world history is divided into various periods of time, dispensations. These periods, of which there are seven, are marked by changing relationships between humanity and God and are foreshadowed in the Bible.

If the biblical description of historical events determined the understanding of humanity's relationship to God, the Bible had to be true, inerrant. For fundamentalists, this term contained the idea that the Bible was not only reliable but also precise. Seven days meant seven days. This level of precision

meant the Bible was completely adequate on all issues. Anything contradicting the Bible was wrong. The Bible contained facts, not theories.

This conviction brought fundamentalists into sharp conflict with their opponents, who tried to harmonize the Bible and science. Evolution and biblical criticism were not demonstrably true, claimed the fundamentalists, but mere hypotheses. In fact, evolution directly contradicted their view of science as the collection and cataloging of facts. Evolution was a theory that adapted facts to fit it.

Fundamentalists were fighting a cultural battle as well—a battle against America's Gilded Age. They feared that American society had lost all sense of the spiritual nature of human beings, who were nothing more than objects to be bought and sold, and social Darwinism demonstrated that the losers deserved to fail. Combined with these more reflective views were the confusion and fear of those who suffered during that period of rapid industrialization, urbanization, and immigration.

No event served to solidify fundamentalism as much as WORLD WAR I. For fundamentalists, the war was the result of the ideas of Charles Darwin, Friedrich Nietzsche, and biblical criticism. Germany was the source of both biblical criticism and the Nietzschean superman. In the popular fundamentalist mind, the violence and rapacity of the Germans resulted directly from their rejection of biblical truth. To the fundamentalists, the war demonstrated what would happen to the world when morality and Christianity were undermined.

The fusion of these ideas into a powerful movement occurred during the 1920s, when the sniping between religious conservatives and moderates became an all-out war. The modernists were better organized and better established. In 1919, fundamentalists found a unified voice in the World Christian Fundamentals Association. This organization, explicitly premillennial and dispensational,

was formed to combat the spread of modernism within the denominations.

The following year, a broader group of conservatives within the Northern Baptist Convention organized a fundamentals group to remove modernists from the denomination. One of this group's leaders, Curtis Lee Laws, editor of the denomination's *Watchman-Examiner*, and neither a dispensationalist nor an inerrantist, coined the term *fundamentalist*.

As the fundamentalists attempted to remove the corrupt from the fold, they found themselves increasingly isolated, antagonizing their allies as much as their opponents. Rather than maintain alliances with theological conservatives, they insisted upon acceptance of dispensationalism, premillennialism, and inerrancy as marks of orthodoxy. By this categorization, Laws himself was excluded.

During the 1920s, the Presbyterians (both North and South), the Northern and Southern Baptist Conventions, the Disciples of Christ, and to a lesser extent other denominations were dominated by conflicts with the fundamentalists. With their insistence upon dispensationalism, premillennialism, and inerrancy as proof of right belief, fundamentalists often alienated their allies and allowed their opponents to frame the debate over the issues of tolerance and inclusiveness. By 1926, fundamentalism was a spent force within the major denominations. The more militant fundamentalists left to found new denominations or centered their activities in interdenominational fundamentalist organizations, thus beginning the history of fundamentalism as one of sectarianism and separatism.

The failure to purge the denominations of modernists signalled the death knell for fundamentalism within mainstream Protestant evangelicalism. The trial of John Scopes (see SCOPES TRIAL) for teaching evolution discredited fundamentalism as a cultural movement. The eventual conviction of Scopes was lost amid the carnival atmosphere of the trial. Led

by H. L. MENCKEN, the nation's media reported the defeat of a crusade, a defeat that drove the fundamentalists underground. For the next several decades, fundamentalists' despair over the world led to a rejection of both American culture and politics.

Fundamentalism did not die following the defeats of the 1920s, but merely retrenched. Some fundamentalists, disgusted with sectarianism and conflict, left the movement. Calling themselves neoevangelicals, they became the respectable face of conservative Protestantism. Others followed a path of increasing sectarianism. J. Frank Norris, BOB JONES, and Carl McIntire are only three who opted for strict separatism.

By the mid-1950s, separatism, the refusal to have anything to do with nonfundamentalists, had become the final element in defining fundamentalism. In 1957, BILLY GRAHAM, until that time a darling of the fundamentalists, accepted the sponsorship of the ecumenical Protestant Council for his New York crusade. This split the fundamentalist movement and narrowed the term's use to strict separatists. Separatism increasingly isolated the movement in the 1950s and 1960s.

What many in the 1920s saw as a dead movement returned in the late 1970s and 1980s. The social dislocation of the 1960s sent many people into the fundamentalist fold. Patriotism, morality, and security were the traditional values to which fundamentalists appealed.

These themes were combined with a message of a supposedly simpler time—a time when drug use and abortion were shameful secrets, and people could walk the streets safely. Fundamentalists made sophisticated use of the media and developed effective organizations. No one managed this better than JERRY FALWELL, who from his church in Lynchburg, Virginia, created a political movement, the MORAL MAJORITY, that touched resonant chords even among those opposed to his religious views. These chords played the music

The Moody Bible Institute is a major center that has trained generations to interpret the Bible as the literal word of God. (Billy Graham Center Museum)

that helped to elect Ronald Reagan president in 1980.

While Falwell eventually would increasingly remove himself from the political fray, his place was taken by others, including Pat Robertson. The strength fundamentalists had shown in developing their organizations was put at the service of political goals, and by the 1990s, fundamentalists had become a major, if not the major, force within the Republican Party.

The fundamentalist resurgence had a significant impact in the religious realm as well. Serious questions about doctrine affected two denominations historically aloof from such debates—the SOUTHERN BAPTIST CONVENTION and the LUTHERAN CHURCH—MISSOURI SYNOD. During the 1970s, these denominations experienced the controversies other denomina-

tions had suffered during the 1920s. This time, however, the fundamentalists emerged victorious. While the effect within the Missouri Synod was not that visible, given its historical tradition of separatism and its confessional basis, the opposite was the case for the Southern Baptists. Its size, the diversity within it, and the resulting rejection of many historical doctrinal views transformed the denomination into something new and different.

Fundamentals, The *The Fundamentals* was a 12-volume paperback series of books published between 1910 and 1915 in defense of what its authors believed was traditional Christian orthodoxy. Intended simply as a “testimony to the truth” (as the subtitle of the books puts it), the series gave shape and intellectual substance to the conservative theological movement now called FUNDAMENTALISM that had emerged in England and America at the end of the 19th century.

The project was the brainchild of Lyman Stewart, a wealthy California businessman who financed the publishing venture with

the aid of his brother and partner, Milton. Stewart hired well-known Baptist evangelist AMZI CLARENCE DIXON, then pastor of DWIGHT L. MOODY's church in Chicago, as the editor of the first five volumes. Dixon later edited a four-volume edition in 1917 as well. The work was eventually completed by REUBEN ARCHER TORREY and Louis Meyer, and it contained 90 articles written by many of the most distinguished conservative theologians and Bible scholars of the day. The Stewarts mailed some 3 million free copies of *The Fundamentals* to Protestant leaders throughout the English-speaking world in an attempt to spread their views.

The essays tended to be quite moderate in tone and discussed a variety of popular and scholarly topics. The articles carefully avoided the most pressing political issues of the day, including Prohibition, and assumed that the church should remain entirely aloof from social concerns. The books, moreover, made virtually no mention of controversial theological beliefs about the second coming of Christ, then popular among some conservative Protestants. And despite opposition to Darwinist theories about biology and the origins of humankind, a few essayists even made room for a theistic form of evolution, that is, the possibility that God had directed the evolutionary development of life on Earth.

In terms of the subject matter of the series, about a third of the articles dealt with the Bible and defended it against attacks by liberal critics who rejected the validity of portions of its text. The authors of *The Fundamentals* believed that the Scriptures were not only scientifically and rationally verifiable, but also wholly without error. Another third of the essays discussed traditional theological questions such as the doctrine of the Trinity and teachings about sin and salvation. The rest of the writings are somewhat more difficult to classify; some contained condemnations of various modern "heresies" (Mormonism, CHRISTIAN SCIENCE, JEHOVAH'S WITNESSES, and SPIRITUAL-

ISM), and others made appeals to readers to engage in missionary and evangelistic work.

The immediate response to *The Fundamentals* was surprisingly muted, and neither serious theological journals nor popular religious magazines gave the books more than passing notice. It is now clear, however, that the series, which coined the term later identified with a broad, antimodern movement in the 20th century, represented an important transitional phase in the development of a new religious phenomenon. Although for a time "fundamentalism" remained only a loose alliance of Protestant traditionalists, by the 1920s, the movement had become more militant and had begun to jettison the moderate positions espoused by its earliest proponents. Thus, while the initial reception of *The Fundamentals* was meager, the long-term significance of those volumes for American Protestantism has been and continues to be immense.

Furman, Richard (1755–1825) Richard Furman was a Baptist minister and prominent religious leader in South Carolina in the early 19th century. A strong advocate of centralized authority in ecclesiastical affairs, he was the first president of the Triennial Convention, the original national body of BAPTISTS. Known among his colleagues as the "apostle of education," he developed an educational plan for his denomination in 1817, and Furman University, the first Baptist college in the South, was named in his honor.

Furman was born in Esopus, New York, on October 9, 1755. His family moved to the South shortly after his birth. Although he had little formal education, he was a bright

student who was able to learn a good deal by studying at home. He was converted by revival-oriented Separate Baptists in 1771 and immediately began work as an evangelist. Furman won renown for his preaching while he was still a teenager, serving as a Baptist pastor near Charleston, South Carolina, after 1774. Although his support of the American cause during the War for Independence forced him to flee from the British in South Carolina, he was able to return home after the war. In 1787, he became minister of the First Baptist Church in Charleston, then the most prominent Baptist church in the South.

Furman's organizational ideas emphasized the importance of centralized missionary and educational efforts. When Baptists formed the General Missionary Convention (soon known as the Triennial Convention) to give needed support to Baptist overseas missionaries, Furman was chosen as its initial president in 1814. He was elected to a second three-year term in 1817. Furman also was active in the organization of the South Carolina Baptist Convention, the denomination's first state convention. He headed the South Carolina organization between 1821 and 1825. In addition, he served

as moderator of the Charleston Baptist Association for more than 25 years.

Furman's most lasting contribution to his church was in the field of education. While the early Baptist movement tended to disparage the importance of education, Furman insisted that meeting educational needs, especially training young men for the ministry, would be essential for the denomination's long-term success. He founded a committee to raise funds for education, and he directed it for 34 years. He also urged Baptists in Georgia and the Carolinas to build a college and theological school, which were established shortly after his death.

Furman held the pastor's position at the First Baptist Church from 1787 until his death nearly four decades later. He died at High Hills, South Carolina, on August 25, 1825.

Garvey, Marcus (1887–1940) Marcus Garvey organized the first mass movement of blacks in the United States by emphasizing racial pride, self-sufficiency, and unity. Although the movement collapsed following his deportation from the United States in 1927, he laid the groundwork for the demands of black empowerment that emerged in the 1960s and 1970s.

Born in St. Anne's Bay, Jamaica, on August 17, 1887, Marcus Garvey was the youngest of 11 children. Of African descent, Garvey suffered under Jamaica's strict three-color caste system of whites, creoles (those of mixed race), and blacks. Despite this social discrimination, his father's descent from Maroons—escaped slaves who successfully defended their freedom against both the Spanish and English—gave the young Garvey pride in being black.

Forced by poverty to leave school at the age of 14, Garvey became a printer's apprentice and in 1904 went to Kingston, where he participated in an unsuccessful printer's strike in 1907. Following his debacle, he bounced around the Caribbean and Central America, working as a journalist and fruit picker. Angered by the exploitation and mistreatment of his fellow workers, he complained to British consular officials, whose indifference convinced Garvey that blacks could not rely on whites for justice and aid.

He traveled to England in 1912, where he met Africans for the first time. This led to

an interest in African affairs, and he began to write for the *Africa Times and Orient Review*. During this period, Garvey read BOOKER T. WASHINGTON'S autobiography, *Up from Slavery*. Although he opposed Washington's political quiescence, Garvey was drawn to Washington's plea for black economic independence and self-sufficiency.

In 1914, he returned to Jamaica, where, on August 1, he organized the Universal Negro Improvement and Conservation Association and African Communities League (UNIA), designed to draw the race together through education, commercial development, and racial pride. Invited to the United States by Booker T. Washington to discuss a trade school the UNIA had opened in Jamaica, he arrived on March 23, 1916. By this time, Washington was dead, and Garvey was alone and unknown in America.

During that summer, Garvey organized a chapter of the UNIA in Harlem. Although its membership was originally drawn from the West Indian community, it soon included large numbers of American blacks, and Garvey's speaking tours to black churches and groups throughout the United States generated national support. In January 1918, he began publishing the *Negro World*, which became one of the leading African-American weeklies, with a circulation of more than 200,000 and sections in Spanish and French for the benefit of subscribers in Africa, Latin America, and the West Indies.

Blacks flocked to Garvey's movement, and the 1920 international meeting of the UNIA brought several thousand delegates from every state in the union and dozens of countries to New York City. The convention was marked by parades, mass meetings, and displays by the various arms of the UNIA, including the paramilitary African Legion and the Black Cross Nurses.

Much excitement had been generated by the formation of the Black Star Line in the previous year. This steamship company, owned, operated, and manned by blacks, was to be Garvey's downfall. Although successful at raising funds, the company was hampered by antiquated equipment and soon faced financial collapse. Garvey and three associates were arrested in 1922 on charges of mail fraud in connection with the company's failure. Acting as his own attorney, Garvey used the trial as a forum for his racial and political views. Although his codefendants were acquitted, Garvey was convicted and sentenced to five years in prison and fined \$1,000.

During his appeal, Garvey attempted to restructure the steamship company as part of a larger back-to-Africa movement that included settlements in Liberia. This effort collapsed in 1924, when the Liberian government—under pressure from France and England—closed the settlements. The following year, the Supreme Court refused to hear Garvey's appeal, and on February 8, 1925, he entered the federal penitentiary in Atlanta.

The movement dwindled during his imprisonment, although the campaign for his release revived it somewhat. In 1927, President Calvin Coolidge commuted Garvey's sentence and ordered him deported. Returning to Jamaica, he presided over the 1929 convention of the UNIA, the movement's last great moment. Weakened in the United States by Garvey's absence, and throughout the world by the Great Depression, the UNIA declined rapidly.

Moving in 1935 to London, where he published the magazine *Black Man*, Garvey

labored to keep the movement alive, but asthma, aggravated by pneumonia, weakened him severely. In 1940, he suffered two strokes that paralyzed his right side and resulted in his death on June 10, 1940.

Although moribund at the time of his death, "Garveyism" has had a long-lived significance. The first person to develop a mass following among American blacks, Garvey did so by appealing to racial pride and black nationalism. These would reappear in the Black Power movement, and MALCOLM X could claim that the Black Muslims were reaping the seeds Garvey had sown.

Garvey used the black churches as vehicles for transmitting his ideas. He also urged blacks to think of God as one of them. The motto of the UNIA, "One God! One Aim! One Destiny!" contained within it the implication that God was with the blacks in their struggle for independence and justice, and even black himself. Although he avoided antagonizing the established churches, Garvey and several of his followers urged the creation of an all-black church with a black Christ and black images. In response, the African Orthodox Church was founded under Garvey's auspices with a former UNIA chaplain and Episcopal priest consecrated as its first bishop. Its journal, the *Negro Churchman*, attempted to develop a religiosity freed from European symbols and white dominance. Although rejected by most African Americans, Garvey's views were a precursor of the black theology of the later 20th century.

German Reformed Church The roots of the German Reformed Church in the United States can be traced to late-17th-century immigration, principally from the Palatinate, an area along the Rhine in southern Germany. German settlement in America began with the founding of Germantown, Pennsylvania, in 1683 and continued throughout the 18th century until, by the eve of the Revolution, Germans numbered more than 225,000 in the thirteen colonies. Although most German Protestants were Lutherans, the German Reformed community was distinguished by its adherence to the Heidelberg Catechism of 1563. The catechism, commissioned by Elector Frederick William III of the Palatinate, sought to mediate between the theological teachings of Swiss reformer John Calvin (see CALVINISM) and the ideas of Martin Luther, whose thought dominated Germany.

John Philip Boehm was the principal organizer of the German Reformed Church in America in the first half of the 18th century. A schoolmaster in Germany, Boehm settled in Pennsylvania in 1720 and in 1729 was ordained to the ministry of the Dutch Reformed Church. Because of the similarity between the beliefs of the Dutch Reformed and German Reformed Churches, the church in the Netherlands originally provided assistance to both Dutch and German emigrants in America. Geographical distance as well as

differences in language and culture, however, eventually made this relationship a difficult one to maintain. As a consequence, German Reformed congregations often lacked clergy and had to learn to improvise with lay leadership.

The initial coetus (that is, the representative body containing ministers and lay elders from several local congregations that is essential to the governance of the Reformed Church) was organized by Michael Schlatter in 1746. By then numbering approximately 80 congregations, the church adopted a constitution in 1748 and thus brought itself within the emerging denominational system of the colonies. During the War for Independence, pastors and congregations actively supported the patriot cause, and in 1791, inspired by the ideals of civil independence, the German Reformed Church officially separated from the Dutch and claimed the right to ordain clergy without approval from the Netherlands. The Synod of the Reformed German Church in the United States of America, consisting of 178 congregations and more than 50,000 adherents, assembled for the first time in 1793.

The westward movement of German settlers carried the church into western Pennsylvania and Ohio in the early 19th century, but latent divisions within the denomination accompanied them. Disputes about worship, including the use of English and revivalistic techniques, for example, raised serious questions about the church's ability to adapt to both the secular and the religious culture of America. A short-lived schism, moreover, occurred during the same period. Although pastors had always been allowed to train candidates for the ministry, this system was halted in 1820 with the adoption of a plan for a denomination-wide seminary. Lebrecht Frederick Herman organized the Synod of the Free German Reformed Congregations of Pennsylvania in an attempt to maintain theological education as the local congregation's prerogative.

The most significant developments in the German Reformed Church, however, were centered at the denomination's seminary, opened in 1825 at Carlisle, Pennsylvania, and finally established at Mercersburg, Pennsylvania, in 1837. There, faculty members JOHN WILLIAMSON NEVIN and PHILIP SCHAFF became architects of a movement known as the Mercersburg Theology. Nevin and Schaff criticized the superficiality of popular American revivalism and highlighted instead the spiritual depth of their church's historic liturgy and creeds. These teachings not only stirred controversy about "Romanism" within the German Reformed ranks, but also undermined proposals of merger with the Dutch Reformed, the Presbyterians, and the Lutherans, who feared that Catholic tendencies had emerged in their sister denomination.

On average, approximately 40,000 Germans entered the United States each year between 1830 and 1845, and the majority settled in the Midwest. The eastern and Ohio synods of the German Reformed Church established the first General Synod of the German Reformed Church in the United States in Pittsburgh in 1863 (with 230,000 members, 1,200 congregations, and 500 ministers). However, most new German settlers remained aloof from that church, opposing it on a variety of grounds, and they organized instead the German Evangelical Synod of North America in 1872. The Evangelical Synod's strong identification with German culture in the Midwest greatly benefited the church for a time, as immigration from Germany to the United States surged in the 1880s. Slow to accommodate itself to American society, the synod provided strong ethnic cohesiveness well into the 20th century. Although it adopted an English-language catechism in 1892 and an English hymnal in 1898, it continued to use German in its minutes until 1925.

In ironic contrast to this inward-looking focus, the German Evangelical Synod profoundly influenced American religious life

by nurturing two of the United States' most distinguished theologians, REINHOLD NIEBUHR and H. RICHARD NIEBUHR. Educated at the synod's college in Elmhurst, Illinois, and at Eden Theological Seminary in St. Louis, the Niebuhr brothers helped shape 20th-century Protestant thought by their ability to relate traditional theological concepts to the political realities of the modern era.

H. Richard Niebuhr's 1951 book, *Christ and Culture*, for instance, is now considered the classic exposition of how Christians interact with the world. Reinhold Niebuhr, active throughout his life in politics, was founder and editor of the magazine *Christianity and Crisis*, which brought religion to bear on social justice concerns.

In the early 20th century, the Reformed Church in the United States and the Evangelical Synod (having dropped "German" from their names in 1869 and 1927, respectively) consciously sought to reach beyond their narrow ethnic base and attract English-speaking members. In this, they were largely unsuccessful. After merger attempts with the United Brethren in Christ and the Presbyterian Church in the United States fell through, the two German Reformed bodies united in 1934 to form the Evangelical and Reformed Church. This new church contained 600,000 members and 3,000 congregations predominantly in Pennsylvania, the Midwest, and the Plains states. Despite expanding to 800,000 members during the 1950s, a period of unprecedented growth in mainline American Protestantism, the Evangelical and Reformed Church not only was unable to keep pace with the population growth of the nation as a whole, but also had fewer congregations in the 1950s than it had 20 years earlier.

As part of the ecumenical impulse of the time, discussions of merger with the Congregational Christian churches had begun in 1944. A number of obstacles immediately presented themselves. Reinhold Niebuhr characterized the theology of the Congregational Christian

churches as “modern liberalism shading off to Unitarianism,” while his own denomination tended to be conservative in its theological orientation. And while the Congregational Christian churches staunchly upheld the independence of individual congregations, the Evangelical and Reformed had a strong sense of connectedness between congregations, a pattern typical of churches with a presbyterian (see PRESBYTERIANISM) form of church governance. In spite of these difficulties, a merger into a new, 2-million-member denomination called the UNITED CHURCH OF CHRIST was eventually effected in June 1957.

Unlike the continuing denominational tradition of the Dutch Reformed churches, whose institutional life they had once roughly paralleled, the German Reformed churches so radically altered themselves in the 20th century that their former identity was virtually extinguished. No longer the church of an immigrant people, indeed, no longer even a church, the German Reformed surrendered the distinctive ethnic heritage that had earlier marked them and adapted to the tolerant theological and social milieu of contemporary mainline Protestantism.

Ghost Dance The Ghost Dance, which spread rapidly across the western states in 1889, is the best-known example of an extensive series of Native American religious movements, in which members of indigenous cultures used ritual and prophetic means to revive their traditional worlds in the wake of conflict with encroaching colonial or American society. Although many saw the massacre of Lakota at Wounded Knee, South Dakota, in December 1890 as marking the end of the dance as a social movement, it continued among other Plains tribes (see NATIVE AMERI-

CAN RELIGIONS: PLAINS) for a number of years and has occasionally resurfaced among groups of Native American social activists.

In its best-known form, the Ghost Dance emerged from a vision given to WOVOKA, a member of the Tovusi-dokado band of Nevada's Northern Paiutes (Paviotso), during an eclipse of the Sun on January 1, 1889. Wovoka's own religious influences included several forms of the millennialism common in 19th-century America, including a native Paiute tradition of the world's end; the evangelical PRESBYTERIANISM of his employer, David Wilson; Mormonism; and perhaps some beliefs of native prophets active to the north (see NATIVE AMERICAN RELIGIONS: INTERMONTANE/CALIFORNIA), such as the Wanapum leader Smoholla or John Slocum, a Squaxin prophet from the Warm Springs reservation in Oregon. Wovoka's vision also resembles that of an earlier movement, involving his father, that spread after 1869 from the Walker River Paiute in western Nevada to members of several northern California tribes, including the Pomo, Modoc, Klamath, Shasta, and Karok.

The Ghost Dance is notable because of its rapid diffusion during a period of great social stress. Between 1889 and the early 1890s, the new movement spread west and east to other Great Basin tribes: Washoe, Western Shoshone, Bannock, and Ute; to California and southward to the Mojave; east across the Plains to the Kiowa, Comanche, Caddo, and Pawnee in Indian territory (Oklahoma); and northeast among the Arapaho, Wind River Shoshone, Cheyenne, Assiniboine, Lakota, and others.

In its basic form, the Ghost Dance taught by Wovoka grew out of the traditional Paiute Round Dances that provided the people with an opening to spiritual influence. Men, women, and children would join hands, moving in a clockwise direction to symbolize the Sun's trajectory across the sky. Wovoka came to see the Round Dance as the right vehicle

for enabling the living to communicate with the dead, as he had in his vision. The dance took on an ecstatic character as dancers fell in trances, taken to the land of the dead. Returning to this world, they could also testify that both the dead and depleted game would soon return as part of the world's renewal.

In spreading throughout much of the West, the dance provided a symbolic and ritual means for tribal members to create an alternative future to the one they were being offered by missionaries, the Office of Indian Affairs, and the United States Army—a future in which the only way to survive was to cease living as members of distinct cultures (see ASSIMILATION AND RESISTANCE, NATIVE AMERICAN). In a period marked by drought and malnutrition, rapid land loss, forced relocation, and religious persecution (see AMERICAN INDIAN RELIGIOUS FREEDOM ACT), many Indian people sought ways to construct a future in which they were not the passive beings envisioned within the myth of the dominant culture (see MANIFEST DESTINY).

News of the prophet's activities spread from tribe to tribe across telegraph lines and postal networks. Many tribes sent representatives to Nevada to meet the new prophet, whose power was evident to all in the fact that he could communicate with groups from various tribes in their own separate languages. Many of these leaders understood themselves to have been initiated into a new movement or way of life. The dance spread as these leaders returned to their reservations, bearing symbols of Wovoka's blessing. Given the wide gap between the Paiute worldview and that of other tribes, Ghost Dance preachers had to select elements from Wovoka's teachings that might mix creatively with the worldviews of their own tribes. By amalgamating these elements with their own traditions about the future, combined with elements common to the evangelical Christianity present among the agencies, the various tribal practitioners created a ceremonial and mythical means

for transforming a disturbing present into a hopeful future.

The version of the Ghost Dance practiced by the Lakota (western Sioux) receives continued attention from historians, journalists, and the public, largely due to the United States Army massacre of Big Foot and his band (among whom were many dancers) at Wounded Knee, South Dakota, on December 29, 1890. Wounded Knee has consequently become a powerful symbol of the end of the FRONTIER, the near-extinction of the Indian, and the birth of modern America. In typical fashion, many interpreters emphasize the irrationality of Lakota Ghost Dancers. Both popular and scholarly treatments portray the Ghost Dancers as warding off an inevitable future by a last-ditch futile effort to dream away their powerlessness. Lakota leaders of the dance, such as Kicking Bird or Short Bull, appear to be religious fanatics or opportunists, eager to increase their own political prestige, clinging blindly to the hopes that bullet-proof ghost shirts would make them invincible as they rose to battle the army.

However, this interpretation ignores both the complexity of cultural diffusion and the legitimacy of the dance as a religious movement. Lakota dancers were not irrational, but rather began to practice the new dance because it promised to renew the religious ritual forms under which Plains culture had historically flourished. Lakota traditionally understood the annual return of the bison herds to be dependent upon the petitions to the powers, *wakan tanka*, that sustained life. The annual Sun Dance, prohibited under 1883 Office of Indian Affairs regulations, provided Lakota with the primary ritual means by which to purify themselves in order to insure that the bison would be willing to return. Consequently, it was not the near extinction of the great herd by 1883, under pressure from encroaching Americans, that provoked a fundamental crisis among Lakota, since they understood the periodic absence of bison as

a ritually reversible process. Instead, the prohibition of the Sun Dance created a religious crisis, resolved only by introduction of the new dance, which Lakota recast to resemble the Sun Dance as closely as possible.

While many groups abandoned the dance itself in the wake of Wounded Knee, other tribes, such as the Pawnee and a group of Canadian Dakota (eastern Sioux), retained it into the 20th century. Some claim it continued to lead an underground existence for several decades, reemerging among American Indian Movement activists in the early 1970s.

While the attention devoted to the Ghost Dance suggests that it is a unique movement, it remains simply one example of a series of efforts by native peoples to transform their lives under the impact of European-American colonialism by the renewal of traditional religions.

Gibbons, James (1834–1921) During his long tenure as the leading member of the Roman Catholic Church's hierarchy in the United States (see ROMAN CATHOLICISM), James Gibbons, cardinal archbishop of Baltimore, guided the church through a period of turmoil, change, and challenge. Although often accused of vacillation and indecision, Gibbons's prudence held the church together.

As an interpreter of America to Rome and Catholicism to Americans, Gibbons gained the respect both of presidents and popes.

Unlike most of his peers, James Gibbons was born in the United States, in Baltimore, on July 23, 1834, of Irish immigrant parents. His father was a moderately successful clerk. The elder Gibbons's poor health led him to leave for Ireland with the family in 1837. In 1853, six years after his father's death, Gibbons's mother returned to the United States, settling with her son in New Orleans.

In January 1854, a mission sermon piqued Gibbons's interest in the priesthood, and the following year he entered St. Charles College outside of Baltimore, graduating in 1858. He continued his studies at St. Mary's Seminary, receiving his ordination on June 30, 1861.

Gibbons served for four years as a priest in Baltimore, his tenure spanning the CIVIL WAR. He demonstrated great pastoral, administrative, and diplomatic skill. Personally pro-Union, he served as chaplain to the troops garrisoned at Forts McHenry and Marshall while avoiding conflicts with his predominantly pro-Confederate parishioners and neighbors.

These abilities brought the young Gibbons to the attention of the archbishop of Baltimore, MARTIN SPALDING, who asked the young priest to become his secretary. Gibbons accepted and was soon involved in the preparations for the Second Plenary Council of Baltimore (1866) (see BALTIMORE, COUNCILS OF). As assistant chancellor for the council, he so impressed the members of the hierarchy that when the vicariate apostolic of North Carolina was created (in 1868), the 32-year-old Gibbons was named bishop.

Consecrated on August 16, 1868, Gibbons, the youngest of 1,200 bishops in the Roman Church, was responsible for a 50,000-square-mile diocese of 1 million inhabitants with only 700 Catholics, three priests, and no Catholic institutions. While head of this diocese, Gibbons developed the manner and tone

that later served him well. He was a forceful yet tolerant proponent of Catholic doctrine, a fighter for converts and for strong Catholic institutions. Simultaneously, he cultivated warm relations with non-Catholics and argued that American political institutions were not hostile to Catholicism but conducive to its strength and expansion.

His duties expanded in 1872, when he was named administrator and then bishop (1873) of the diocese of Richmond. During this time, he wrote his most famous book, *The Faith of Our Fathers* (1867). This soon became the most popular explanation of the Catholic faith in America, with nearly 2 million copies in circulation by the time of Gibbons's death. Popular outside the United States as well, it was translated into six different European languages.

The ailing archbishop of Baltimore, James Roosevelt Bayley, often called upon Gibbons for assistance. Recognizing the need for a smooth transition of authority in the nation's premier see, Bayley asked Gibbons to become his co-adjutor. After much hesitation, Gibbons accepted in May 1877. Five months later, Bayley was dead, and Gibbons, age 43, became the head of the most important archdiocese in America.

His first nine years as archbishop of Baltimore were relatively uneventful. He successfully directed the third Plenary Council of Baltimore (1884), which set in place the framework for the parochial school system and the operations of the American church for the next three decades. This earned him the support of all the nation's bishops as well as the commendation of Leo XIII, and it was widely rumored that he soon would receive a cardinal's cap. This he did on June 30, 1886.

The next 15 years of Gibbons's episcopacy would be among the most troubled for the American church, as it attempted to respond to the needs of its predominantly immigrant members and to the difference between European and American realities. Although early

in the papacy of Leo XIII Gibbons was able to use his influence to forestall papal condemnation of the Knights of Labor and the writings of the economist Henry George by arguing that such condemnation was alien to American realities, by the 1890s, this influence was on the wane as the commitment of Gibbons, JOHN IRELAND, John Keane, and other bishops to the American cultural and social ethos increasingly appeared suspect in Roman eyes.

Since the 1790s, the church had allied itself with the conservative regimes of Europe and had suffered under revolutionary and democratic governments, most notably in France and Italy. To Rome, the United States looked like the mother of all these threats. Certainly the church did not experience state persecution in the United States, but it received no financial or legal aid, and ANTI-CATHOLICISM was not unknown. The state upheld religious liberty, democratic ideals, and a free press and was predominantly Protestant in ethos. In addition, it was an upstart nation that presumed to have a moral superiority over the nations of Europe. This growing papal concern about the influence of American society on the American church became visible with Leo XIII's encyclical *LONGINQUA OCEANI* (1895), rejecting the view that the American model of church-state separation should be universally adopted.

This conflict culminated on January 22, 1899, when Leo addressed the apostolic letter *Testem Benevolentiae* to Gibbons. This letter informed Gibbons that rumors had reached the pope that some American clerics held questionable views regarding the nature of the church and belief. These supposed beliefs were that there should be increased freedom in the church, and that to respond to the modern age, the church needed to change not only externals but doctrine as well (see AMERICANISM).

Gibbons informed Leo that such views were condemned by the church's hierarchy.

Although no one was singled out for punishment, this letter, along with Leo's condemnation of Catholic modernism in 1907, ended creative thought within the United States Roman Catholic Church until the 1950s.

After guiding the American church through two difficult decades, Gibbons's last decades were filled with peace and public honors. His assistance in easing conflicts in the Philippines over the property owned by religious orders, along with his support for the creation of the National Catholic War Council (1917) and its transformation into the National Catholic Welfare Conference (1919), earned him the praise of many. Gibbons served as an unofficial adviser on Catholic affairs, including the concerns of the papacy, to several presidents and went far in demonstrating the compatibility of Roman Catholicism to the American governmental system. In 1917, Theodore Roosevelt lauded him as "the most respected and venerated and useful citizen of our country."

At the time of his death on March 24, 1921, Gibbons could look back with satisfaction on his life. He had shepherded the Roman Catholic Church in the United States through dangerous times. A church that could have been shattered by ethnic tensions was unified. A church that could have been marginalized by its association with reactionary European political currents was accepted, albeit grudgingly, as a legitimate part of American culture, due primarily to Gibbons's efforts.

Gideons International Founded in 1899, Gideons International is a voluntary association dedicated to aiding Christian churches through service, personal witnessing, and distributing Bibles. Known by most people through their placement of Bibles in motels and hotels (and perhaps from the Beatles' song "Rocky Raccoon"), the Gideons developed from a chance encounter between two business travelers in Boscobel, Wisconsin, in 1898. John H. Nicholson attempted to check into the Central Hotel, only to be told that it was overbooked. The clerk suggested that he might share a room with Samuel Hill. During their small talk, both men discussed their strong Christian faith, with Nicholson telling how he had developed the habit of reading the Bible each night before going to bed because of a promise he had made to his dying mother at the age of 12. As the two prayed that night, the idea for an association of Christian businessmen began to take form.

The two met again the following year in Beaver Dam, Wisconsin. At this meeting, they committed themselves to an association directed primarily at bringing Christian commercial travelers together for worship, evangelism, and service. They scheduled an organizational meeting at the Janesville, Wisconsin, YMCA for July 1, 1899.

The meeting attracted only one participant other than Nicholson and Hill. This was Will J. Knights. Despite the low turnout, they proceeded to organize the association, selecting Hill as president, Knights as vice president, and Nicholson as secretary and treasurer. After discussing what to call the association, they eventually settled on the name *Gideons*, from the biblical prophet Gideon (Judges 6–7), who placed himself in God's service. According to the Gideons' official history, "Humility, faith, and obedience were his great elements of character. This is the standard that the Gideon association is trying to establish in all its members, each man to be ready to do

God's will at any time, at any place, and in any way that the Holy Spirit leads."

The task of placing Bibles in hotels emerged naturally from the fact that most of the association's early members were traveling businessmen. As such, they wondered how they might witness in the hotels in which they spent much of their time. The initial suggestion was that they place a Bible with the hotels' reception desks to be available for borrowing. This idea was expanded upon at a board meeting in Chicago on October 19, 1907. There, a board member suggested that the Gideons place a Bible in every hotel room in the United States. This suggestion was adopted at the Gideons' annual convention in 1908.

In the hundred years since that decision, the Gideons have grown from a small organization to more than 250,000 members who currently distribute Bibles and New Testaments in more than 180 countries. While they continue their distribution in hotels and motels, they have expanded their efforts to include jails and prisons, members of the military, college and university students, as well primary and secondary school students in the fifth through the 12th grades. The women's auxiliary of the Gideons has taken upon itself the responsibility of distributing Bibles and New Testaments to those in the nursing field, including nursing students. The Gideons Bibles and pocket-sized New Testaments with Psalms and Proverbs are marked with the Gideons' logo (a jar of oil with a flame) and are color coded, dark green for military, law enforcement, and emergency personnel (firefighters and EMTs); white for medical personnel; red for schoolchildren fifth to 12th grades; and light green for college students.

While the work of the Gideons usually has been looked upon as innocuous, although a target for much humor, their distribution of Bibles in public schools has created some controversy (see CHURCH AND STATE, RELATIONSHIP BETWEEN). The earliest challenges to the practice of distributing Bibles and New Testaments

in public schools date back to the 1950s, when the first suit was filed in New Jersey, but since the decision never has been adjudicated before the U.S. Supreme Court, the practice has continued, except when challenged. In most of these instances, the threat of a lawsuit has led individual schools or school districts voluntarily to end the practice, while others have resulted in court orders forcing a stop to the practice. The most significant court decision occurred in 2002, when the Federal Court of Appeals for the Seventh Circuit ruled that the practice and policy of an Indiana school district that permitted the Gideons to distribute Bibles in public schools during school hours violated the Establishment Clause of the Constitution. The Supreme Court declined to hear the case on appeal.

Despite previous decisions, the practice continues and continues to generate controversy. In 2004, a threatened suit against the Kansas City, Missouri, metropolitan school district for allowing the distribution of Bibles by the Gideons resulted in a voluntary discontinuation of the practice. Additionally, the balance between the free exercise rights of the Gideons to distribute the Bibles and New Testaments and the Establishment Clause (see FIRST AMENDMENT) is unclear. In January 2007, police in Key Largo, Florida, arrested two Gideons distributing Bibles in front of an elementary school for trespass. While the details of this case depend on exactly where they were standing, the case itself illustrates the complex tension between the Establishment Clause and the Free Exercise Clause that currently bedevils the courts.

While the Gideons have suffered some limits on their work, both in terms of legal issues in the United States and hostility to Christianity in other countries, they continue their work at a dizzying pace. The Gideons claim to distribute 63,000,000 Bibles and New Testaments worldwide each year. This averages to more than 1 million copies a week, or 120 per minute. Their success may be seen in the

fact that other religions have begun copying their activities. Several Buddhist organizations have undertaken the process of distributing an anthologized collection of Buddhist holy writings (see BUDDHISM) to hotels, and some Muslim organizations (see ISLAM) have done the same with the Qur'an. Most important, the work of the Gideons well demonstrates the American tendency to address a perceived need through the voluntary work of committed individuals (see VOLUNTARISM; PHILANTHROPY).

Gladden, Solomon Washington (1836–1918) In the years of reconstruction, industrialization, and expansion following the CIVIL WAR, Solomon Washington Gladden was one of the first Protestant clergy to emphasize social justice as the basis for Christian responses to the changing society. His views gained widespread influence for the SOCIAL GOSPEL among fellow clergy, policy makers, and citizens during a career spread over half a century.

Born February 11, 1836, and raised on a farm outside Oswego, New York, Gladden received a B.A. from Williams College in 1859. Apart from a stint on the New York-based editorial staff of *The Independent*, an abolitionist organ that became the nation's leading church paper after the Civil War, Gladden's career focused on pastoral ministry. He served churches in New York and Massachusetts until appointed pastor of the First Congregational Church of Columbus, Ohio, in 1882, where he remained until retirement in 1914. He died in Columbus on July 2, 1918.

Gladden was not a trained theologian, nor did he try to approach favorite topics such as race, economics, or religious divi-

sions in a systematic way. But in the course of writing more than 38 books and many articles, sermons, and speeches, he offered exacting critiques of the social injustices he saw embedded in the fabric of American society. Gladden's inspiration owed much to the work of theological liberals such as his friend HORACE BUSHNELL, who sought to reconcile Darwinian science and Christian faith and emphasized an immanent God active in the development of nature and society. But whereas many representatives of the new theology were social conservatives, Gladden came to interpret the Christian faith, embodied in Jesus' teachings about love, as requiring substantial reconstruction in American society. A pastorate in Springfield, Massachusetts (1875–82), involved him in the affairs of the labor movement. Unlike WALTER RAUSCHENBUSCH, he did not become socialist. He did, however, advocate many policies running counter to the laissez faire attitudes of the day, such as public ownership of railroads and utilities and the rights of labor (including cooperative corporate ownership), policies that he saw contributing to the coming of the kingdom of God. He also played a role in improving race relations. Influenced first by BOOKER T. WASHINGTON and later by W. E. B. DuBOIS, he came to see that political as well as economic enfranchisement was necessary to overcome the legacy of slavery.

Gladden, like many of his contemporaries, linked the advance of the Christian faith to the growth of American civilization, concluding that "a considerable part of the life of civilized society is controlled by Christian principles." For Gladden, this meant that the churches could best aid the cause of the kingdom by securing social reform in those areas of society not yet ruled by principles of Christian love.

Thinking that progress required Christians to abandon their denominational animosities, Gladden was also an advocate of ecumenical cooperation, becoming an early

Solomon Washington Gladden, a pioneer of the Social Gospel movement in the Gilded Age. (*First Congregational Church, Columbus, Ohio*)

leader in the Federal Council of Churches (see NATIONAL COUNCIL OF CHURCHES). He saw Jews and Catholics as potential allies in the effort of social justice. He argued that those who had truly heard the Gospel would see the vital relationship between individual and social salvation. Thus, he refused to support the work of evangelists such as BILLY SUNDAY. There were also other limits to cooperation. Although he denounced the application of social Darwinian ideas about the survival of the fittest to economic life, he used that language to describe the relationships between the world's religions. He had no doubt that morally superior American Christianity could best meet the needs of modern human nature.

Gospel of Wealth In its most recognized form, the Gospel of Wealth was a philosophy of stewardship promoted by the great steel magnate Andrew Carnegie. In an article entitled "Wealth," published in the June 1889 edition of the *North American Review*, Carnegie set forth his view that those who have accumulated great fortunes possess an obligation to dispense with some of their money to benefit their "poorer brethren." The immigrant bobbin boy, whose rise to riches constituted one of the most spectacular success stories of late-19th-century America, believed that the concentration of wealth in the hands of a relatively few leading industrialists was "not only beneficial but essential to the future of the race." These highly qualified individuals possessed the skills and capacities necessary to bring order and efficiency to the nascent industrial system, upon whose output depended the welfare of the mass of the populace.

Nevertheless, the rich had an obligation to expend part of their fortunes on worthy public projects. Most prominent among Carnegie's own philanthropies were the hundreds of libraries he subsidized all over the United States and in some foreign countries. His benefactions also supported scientific research, the advancement of teaching, and international peace. Carnegie's Gospel of Wealth emerged directly out of his adherence to the notion of social Darwinism, which had widespread public support during the decades after the CIVIL WAR. Applying Charles Darwin's evolutionary

theories to society, social Darwinists preached the virtues of competition, confident that in the “struggle for survival” the fittest would survive (see *EVOLUTION*). Progress would naturally emanate from the relentless competition that occurred in the economic arena.

Other prominent Americans simultaneously promoted ideas that bolstered Carnegie’s Gospel of Wealth. The Philadelphia Baptist minister and founder of Temple University, RUSSELL CONWELL, preached his sermon “Acres of Diamonds” 6,000 times to an estimated audience of 13 million people. His message: Everyone not only has a right to be, but has an obligation to be, rich. The signs of visible wealth, he told his audiences, were evidence of the godliness of their bearers. Episcopal bishop William Lawrence asserted that it was God’s will that some should attain great wealth. In his words, “Godliness is in league with riches.”

If some were entitled to riches, others were condemned to poverty. Poverty, preached supporters of the Gospel of Wealth, results from laziness, improvidence, vice, and, in some cases, misfortune. It was basically not a result of social conditions or broad economic forces but rather an indicator of individual failure.

As a justification for social inequality, the Gospel of Wealth lost most of its power with the rise of the new Progressive intellectual currents around the turn of the 20th century, but as a motive for philanthropy it retained considerable force. In the last decades of the 20th century, the Gospel of Wealth took on new forms with the flourishing of the computer software industry and the Internet. Software and Internet entrepreneurs such as Steve Jobs of Apple and Bill Gates of Microsoft adopted a prophetic stance, delivering a message of the new millennium as a technological promised land. They also engaged in philanthropic activities, donating computers to poor school districts and communities, funding medical research and public health projects, and establishing scholarships for minority

children. Some information technology entrepreneurs continued to harken back to Carnegie’s reasoning and biblical principles to spur their philanthropy and justify their wealth. But others, informed by BUDDHISM, HINDUISM, or NEW AGE RELIGION (all in the air in Silicon Valley), fashioned a new Gospel of Wealth on very different grounds. Like Carnegie’s 19th-century theology, however, those new Gospels of Wealth all stressed the importance of technology and learning as the basis for social progress and viewed capitalism as a moral and spiritual force.

Bibliography: H. W. Brands, *Masters of Enterprise: Giants of American Business from John Jacob Astor and J. P. Morgan to Bill Gates and Oprah Winfrey* (New York: Free Press, 1999); Andrew Carnegie, *The Andrew Carnegie Reader* (Pittsburgh: University of Pittsburgh Press, 1992).

Grace, Sweet Daddy (Charles Emmanuel) (1881–1960) Founder of the United House of Prayer for All People and a prominent black religious leader, Charles Emmanuel “Sweet Daddy” Grace left little information about his early life. He was born in Brava, Cape Verde Islands, on January 25, 1881, of mixed African and Portuguese parentage. Although he denied being a Negro and often talked disparagingly of blacks, the membership of his United House of Prayer for All People was overwhelmingly composed of poor urban blacks.

Grace, probably an assumed name, although some authorities argue that his birth name was Marcelino Manoel de Graca, came to the United States about 1900. He apparently spent 25 years working as a railroad cook before organizing his first house of prayer in Charlotte, North Carolina, in 1926, although some claim that Grace started his first house of prayer in Wareham, Massachusetts, in 1921.

Grace did not claim to be divine, but his role with the church overshadowed that of

the deity. He was known to tell his followers, "Never mind about God. Salvation is by Grace only. . . . Grace has given God a vacation and since God is on his vacation, don't worry him. . . . If you sin against God, Grace can save you, but if you sin against Grace, God cannot save you."

Other than its veneration of Bishop Grace as the mediator between God and humanity (and a strong emphasis on raising money for him), the church shared many characteristics with other Pentecostal-Holiness churches (see PENTECOSTALISM; HOLINESS MOVEMENT). It emphasized ecstatic worship, including speaking in tongues and dancing, and forbade drinking, smoking, and the "beautification of the person."

Church membership also provided concrete benefits. Grace was often compared to FATHER DIVINE, and Grace's House of Prayer, like Divine's Peace Mission movement, provided meals at church-run cafeterias. It also owned several residences and retirement homes. Most important, however, was its emphasis on healing. Testimonies gathered from members of the church by Arthur Fauset for his book *Black God of the Metropolis* invariably cited healing as the reason for joining the church. The church's *Grace Magazine*, when placed upon the chest, was said to cure colds and even tuberculosis. The various items sold by the church to raise funds, including cold creams, hair pomades, toothpaste, and soaps, were equally invested with curative powers.

The sale of these items as well as frequent personal donations from members provided the money to run the church and to keep Grace in a rather princely style. Daddy Grace lived a royal and flamboyant life—royal enough to receive the attention of the Internal Revenue Service, which led him to leave the country for several years during the 1930s. Big cars, fancy jewelry, and expensive clothes were part of his mystique—along with an 84-room mansion in Los Angeles and an estate in Cuba.

At the time of his death in Los Angeles on January 12, 1960, the United House of Prayer for All People claimed a membership of 3 million. Although this number is highly inflated, the church had a significant membership, and unlike many other religious movements dominated by a single charismatic individual, retained much of its membership after Grace's death and even experienced some growth until 1970.

In that year, the IRS moved to collect nearly \$6 million it claimed was owed by Grace's estate. This severely affected the movement, and by 2005, it probably had fewer than 50,000 members, with congregations in New York, Atlanta, Chicago, Boston, and other cities.

Bibliography: Lenwood G. Davis, *Daddy Grace: An Annotated Bibliography* (New York: Greenwood Press, 1992); Arthur H. Fauset, *Black Gods of the Metropolis: Negro Religious Cults of the Urban North* (New York: Octagon Books, 1970).

Graham, Billy (William Franklin) (1918–) Billy Graham was born on November 7, 1918, the eldest child of William Franklin and Morrow Graham in Charlotte, North Carolina. By the mid-1960s, he had become America's preeminent evangelist (see EVANGELISM), a friend of presidents, and one of the most admired men in the country. He would hold this position throughout the century, and in the 1990s he would deliver both the invocation at the inauguration of President Bill Clinton (1992) and the eulogy at the funeral of former president Richard Nixon (1994).

Graham was raised in a conservative southern Presbyterian (see PRESBYTERIANISM; SOUTH) household and internalized the values of that society, including a rejection of alcohol, pre- and extramarital sex, and profanity. In 1934, during a revival (see REVIVALISM) in

Charlotte led by the itinerant evangelist Mordecai Ham, Graham underwent a CONVERSION experience and shortly afterward decided to become a preacher.

In the fall of 1936, he entered Bob Jones University in Columbia, South Carolina, found the atmosphere too stifling, and transferred in January 1937 to Florida Bible Institute. Doing so earned him the animosity of Bob Jones, Sr., and as Graham showed openness to nonfundamentalist Christians (see FUNDAMENTALISM) during the 1950s, this hostility would become more pronounced. While attending Florida Bible Institute in Tampa, Graham first joined a Baptist church. This began a longstanding and mutually beneficial connection between Graham and the SOUTHERN BAPTIST CONVENTION. While at Florida Bible Institute, Graham experienced a period of emotional turmoil, including a broken engagement and an internal struggle about whether to enter the ministry. This struggle came to an end in 1938, when Graham surrendered to the call and committed himself to the ministry.

After finishing at the institute, Graham entered Wheaton College (Wheaton, Illinois) in the autumn of 1940. There he met Ruth Bell, whom he married in 1943. After graduation, Graham began his ministry as pastor of the United Gospel Tabernacle in Wheaton. He resigned that position in 1945 to take up full-time evangelistic work with Youth for Christ. Between 1945 and 1949, Graham led Youth for Christ rallies in England and throughout the United States. He also served as president of Northwestern Bible College in Minneapolis (1947–51) after being personally chosen for that position by the school's retiring founding president, William B. Riley.

In 1949, one of the two events occurred that served to make Graham's career. The 1949 revival campaign in Los Angeles was accompanied by William Randolph Hearst's famous directive to his newspaper staff to "Puff Graham!" This favorable treatment in the media, including *Life*, *Time*, and *Newsweek*, and the

conversions of several celebrities during the crusade, generated tremendous amounts of publicity for the young evangelist. Eight years later, Graham's 1957 New York City crusade brought the evangelical movement to a central position on the American scene. It was during the New York crusade that Graham committed himself and his organization to working with all the Christian denominations in the community. By including representatives of mainline Protestantism, Graham earned the ire of many of his fundamentalist supporters, who felt that he had seriously compromised Gospel truth by associating with liberals (see LIBERALISM, THEOLOGICAL). This action, which became the norm for all of Graham's later crusades, demonstrated his willingness to change his mind as he confronted new realities and new situations. Similarly, Graham was one of the first evangelists to insist that his crusades in the American South, and later in South Africa, not be segregated by race.

During the 1950s and 1960s, Graham did more than anyone to bring evangelicals into the mainstream of American public culture. A symbol of this was Graham's access to numerous American presidents. Although he managed to antagonize President Truman by reporting some of his conversation with the president, Graham was close to both Dwight Eisenhower and then Vice President Richard Nixon, whose candidacy he obliquely supported in 1960. Lyndon Johnson also attracted Graham as both a southerner and a man of working-class roots, and Johnson convinced Graham to support his War on Poverty. In 1968 and 1972, Graham again supported Richard Nixon. The revelations of Nixon's activities during the Watergate crisis and Nixon's extreme vulgarity on the tapes caused Graham a great deal of personal pain. While he rejected the claim made by some that he was used intentionally by Nixon to further Nixon's political goals, Graham became increasingly leery of politicians. Graham also was close to Ronald Reagan, however,

and—surprisingly to some—to President Bill Clinton as well. Interestingly, Jimmy Carter, the president closest to Graham in religious orientation and social background, held the evangelist at a distance.

During the 1980s, Graham, and the evangelical movement in general, were overshadowed by the resurgence of a militantly political fundamentalism. Although Graham ceased to hold center stage in the media, this did not end his evangelistic work. He continued to preach throughout the United States and the world, including visits to the Soviet Union and Eastern Europe. He also spoke out in favor of nuclear disarmament, another position that distanced him from many fundamentalists.

During the 1990s, however, Graham regained much of his earlier visibility. His appearance at President Clinton's inauguration and Richard Nixon's funeral were highly visible illustrations of his public stature. Evangelistic trips to China and North Korea during times when the United States's relations with those countries were quite tense demonstrated Graham's tendency to place evangelistic concerns over political ones.

Billy Graham's work is funded through the Billy Graham Evangelistic Association (BGEA), an organization he founded in 1950. Graham receives an annual salary from the BGEA and has little involvement with its operation. Although there have been some criticisms of the way the BGEA has allocated its money, the organization has been a model of fiscal responsibility and public accountability, another fact that has separated Graham from many other evangelists. This was especially true during the 1980s, when several highly visible television evangelists were brought down by evidence of financial and personal irregularities.

By the late 1990s, Graham increasingly began to withdraw from the overall management of the BGEA. In 1995, his son Franklin Graham became the first vice chairman of BGEA. Despite his age and occasional health

problems, however, Graham continued to lead crusades, retaining his massive following and high level of respect.

Despite advanced age and Parkinson's disease, he led what was billed as his final crusade in New York in June 2005.

Graham's ministry is firmly within the evangelical tradition. He is strongly committed to the authority of the Bible, and his belief in the centrality of a conversion experience provides the basis for the "crusades" he has led throughout the world. Associated with the group of people known as neoevangelicals, Graham helped to start the magazine *Christianity Today* and has helped to make his alma mater, Wheaton College, a center for evangelical scholarship. No one living has preached before as many people as Graham, and it is estimated that more than 2 million people have been converted by Graham. Graham has also reached wide audiences through numerous books and newspaper columns and through television and radio. All this activity as well as his integrity and deep personal humility have made him one of the most visible and respected figures in American religion. In 2000, *Time* magazine named him among the most important people of the century.

Graham, Franklin (1952–) Born July 14, 1952, outside Asheville, North Carolina, William Franklin Graham III is the fourth of the five children of Ruth Bell Graham and the evangelist William Franklin Graham (see GRAHAM, BILLY). Franklin became the successor to his father as the head of the Billy Graham Evangelistic Association (BGEA).

This choice, however, was not foreordained. To a great extent, Franklin Graham was a true prodigal son, given to motorcycle riding, gun toting, and, rumor had it, even drinking. Most of this came to an end one night in 1974. Sitting alone in a hotel room in Jerusalem, Franklin Graham underwent a conversion experience and dedicated his life to Jesus Christ. The possibilities for service provided by the combination of Frank-

lin Graham's personality and his conversion were quickly recognized by Bob Pierce, the founder of World Vision, an evangelical relief agency, who invited Graham to join him on an Asian tour on behalf of Samaritan's Purse, an evangelical Christian relief agency. That experience convinced Graham that his calling was to serve those whose lives had been disrupted by war, famine, epidemics, and natural disasters.

His dedication to such service led Graham to join the board of Samaritan's Purse in 1978. With Pierce's death the following year, he was elected president of the organization. Currently, Graham serves as president and chief executive officer, overseeing Samaritan's Purse's relief work in more than 100 countries.

Billy Graham (right), the leading evangelist of the second half of the 20th century, with his son and presumptive successor to head the Billy Graham Evangelistic Association, Franklin Graham. (*Billy Graham Center Museum*)

This work led to an even bigger set of obligations as his rapprochement with his father and his father's legacy led Graham eventually to undertake his own evangelistic career, conducting his first crusade in 1989. Now comfortable with his own calling, he committed himself to spending 10 percent of his time as an evangelist, conducting crusades on behalf of his father's BGEA.

His abilities as an administrator and his gifts as an evangelist soon made it apparent that he would be a worthy successor to his father as head of the BGEA. This was formalized in 1995 with his election as first vice chairman and the designated successor to the chairman of the BGEA.

While this designation may not seem surprising—the rebellious youth fits in well with the traditional conversion process (and even has a significant psychological basis given the pressures Franklin must have felt as Billy Graham's son)—Franklin Graham's trajectory illustrates something more. The way he entered the evangelical movement, through international relief work, cannot be overestimated as a significant phenomenon. The importance of evangelical relief agencies, of which World Vision is perhaps the best known, must be understood as a major development in American evangelicalism. They provide a major source of activism and commitment, not to mention financial support. The fact that Graham has refused to decrease that work shows how important active service to others is in the life of a committed evangelical.

Additionally, this major difference may serve Graham well when he succeeds his father as head of BGEA. As he recognized early in his youth, few could fill his father's shoes, but Franklin Graham brings a distinctive style and experience with him that will help deflect unproductive comparisons. People already know what he is and what he is not. This should give him the freedom to build on BGEA's success without feeling a

need to make radical changes in order to place his own stamp on the organization, or to keep things exactly as they are for fear of criticism. That said, his succession to the leadership of the BGEA will signify a major generational shift in American EVANGELICALISM.

Graves, James Robinson (1820–1893) A Southern Baptist preacher and editor of the *Tennessee Baptist*, then the largest Baptist weekly in the world, James Robinson Graves was also the dominant figure in the controversy over the “old landmarks,” a set of ecclesiastical principles that disrupted the SOUTHERN BAPTIST CONVENTION at the turn of the century.

Graves was born on a farm near Chester, Vermont, on April 10, 1820. Although he had little opportunity to receive a formal education, he studied privately and later found employment as a schoolteacher in Kingsville, Ohio (1840–42), and in Jessamine County, Kentucky (1842–43). Graves joined a Baptist church when he was 15 years old and was ordained to the Baptist ministry in 1842. He served as the pastor of churches in Ohio between 1843 and 1845. Graves left Ohio to take a teaching position in Nashville, Tennessee, and by 1846, he had become editor of the *Tennessee Baptist*. Graves's paper was enormously successful and had some 13,000 subscribers by the eve of the CIVIL WAR.

In 1848, Graves began to publish articles defending what he regarded as the distinctive tenets of the Baptist faith. Although the term *landmark* (from Proverbs 22:28, “Do not remove the ancient landmark that your ancestors set up”) was coined in 1854 by James M. Pendleton, a Baptist pastor in Bowling Green, Kentucky, Graves popularized the idea. He

convened a mass meeting at Cotton Grove, Tennessee, in 1851 that drafted the precepts of Landmarkism and emerged as a leader of the movement. Basic to Landmarkism was the belief that adult BAPTISM by immersion and the independence of the local congregation were the distinguishing marks of the true church of Jesus Christ. There had been an unbroken line of Baptist churches observing these practices, Graves said, that extended from apostolic times to the present day. The corollary of Graves's position was that any deviation from the landmarks nullified a church's claim to being a "church." Thus, Graves dismissed the Methodists and Disciples of Christ as mere "religious societies" and condemned all fellowship with them.

Landmarkism became a potent force in the Southern Baptist Convention, especially in the region known as the Old Southwest, during the last half of the 19th century. The movement stimulated a new denominational self-consciousness, hindered pulpit exchanges with ministers of other denominations, and generally negated attempts at rapprochement with other southern Protestants. Landmarkism eventually gave rise to a splinter group represented today by the American Baptist Association, a small denomination organized in Arkansas in 1905, which in 2005 had about 290,000 members.

Graves moved his paper from Nashville to Memphis after the Civil War, and from that base in west Tennessee he toured the South with his message. He published several books, the most important being *Old Landmarkism: What Is It?* (1880), which contains the classic pronouncements about the doctrine. After suffering a stroke that confined him to a wheelchair, Graves entered retirement in 1889. He died at Memphis on June 26, 1893.

Gray, Asa (1810–1888) Asa Gray was the most distinguished American botanist of his generation. An orthodox Congregationalist, he was also an amateur theologian and advocate for Darwinism. In contrast to the agnosticism held by many of Darwin's interpreters, Gray taught that EVOLUTION was God's method of effecting biological and moral progress in the world. Untroubled by new scientific findings advanced during the second half of the 19th century, Gray combined an essentially tolerant Protestant faith with his work as a scholar and teacher.

Gray was born at Sauquoit, New York, on November 18, 1810. After graduating from Fairfield Medical School with an M.D. in 1831, teaching high school at Utica, New York, and traveling abroad on research for several years, he began a long career as a professor at Harvard in 1842. Following the publication of Charles Darwin's *On the Origin of Species* in 1859, Gray favorably reviewed the book in the March 1860 issue of the *American Journal of Science*. As Gray argued in his 1876 collection of essays, *Darwiniana*, the theory of evolution did not necessarily contradict Christian doctrine, for God's purposes could well be understood in evolutionary terms. Gray's acceptance of Darwinism proved a boon to liberal theologians. Despite a negative initial response to Darwin among American Christians, and contrary to Darwin's own explicit dissent, Protestant modernists (see MODERNISM, PROTESTANT) considered the doctrine of evolution as simply one of many manifestations of the divine presence in the natural world.

Gray retired from his teaching duties at Harvard in 1873, but he continued to hold his professorship and remained active as a scholar until his death. After suffering a stroke, he

died at his home in Cambridge, Massachusetts, on January 30, 1888.

Great Awakening Used to describe the wave of religious revivals that shook American churches in the mid-18th century, the term *Great Awakening* first appeared in 1842, when Joseph Tracy employed it as the title of his book on the quickening of religious interest in the colonial period. Scholars since Tracy's time have generally considered the series of revivals that started in the late 1720s, peaked in 1740, and continued into the 1770s to have been part of a single historical phenomenon. The Great Awakening marks the beginning of the dominance of EVANGELICALISM (a movement emphasizing the need for conversion and acceptance of Christ as personal savior) within American Protestant churches.

The awakening was heralded by local revivals that developed under the leadership of Dutch Reformed minister THEODORUS J. FRELINGHUYSEN in northern New Jersey around the year 1726. In an attempt to eliminate the formalistic worship he perceived in churches in his area, Frelinghuysen demanded that his parishioners be excluded from Communion until they could testify that they had repented of their sins and relied entirely upon the Holy Spirit. This position soon fostered growth where Frelinghuysen ministered, and many leaders of the awakening later testified to his influence on their own evangelistic work.

William Tennent, Sr., and his sons Gilbert, John, and William, Jr., were key figures in the outbreak of revivals in the Presbyterian denomination. When GILBERT TENNENT was called to the Presbyterian church at New Brunswick, he and Frelinghuysen quickly recognized that they had similar spiritual interests. Frelinghuysen encouraged Tennent

Title page of . . . *Revival of Religion in New England* by Jonathan Edwards. (Billy Graham Center Museum)

to regard an experience of regeneration, followed by inward assurance of divine grace, as the sole mark of a true Christian. In the late 1720s and early 1730s, Tennent was also involved with the "Log College" his father had founded to train clergy. Despite being derided for its lack of academic credentials by those who opposed the revivals, the Log College turned out a group of ministers who continued the tradition of the awakening within Presbyterianism.

A more significant stage of this religious excitement developed under the leadership of JONATHAN EDWARDS, minister of the Congrega-

tional church in Northampton, Massachusetts. Edwards was alarmed by the spiritual complacency he perceived among his parishioners and by their acceptance of ARMINIANISM, that is, belief in the human ability to obtain God's grace. To counter these threats, Edwards preached a series of sermons on JUSTIFICATION by faith alone in 1734. He soon noticed important changes in his people: Religious interest and conversions began to increase, and by 1736, the revival had spread to neighboring towns in the Connecticut River Valley. Edwards recorded the events in *A Faithful Narrative of the Surprising Work of God*, which was published in London in 1737. Edwards's book had a tremendous influence on Anglican clergymen John Wesley and GEORGE WHITEFIELD, inspiring their efforts to evangelize the masses in England and America.

Whitefield had studied at Oxford University, where he befriended the Wesley brothers, John and Charles. Although he remained a Calvinist (see CALVINISM) in theological orientation and rejected the Wesleys' emphasis on the freedom of the human will, Whitefield absorbed their ideas about the need for heartfelt piety and spiritual regeneration. Whitefield's restlessness and religious enthusiasm eventually led him to North America. Although his initial American trip to Georgia in 1738 was a modest success, his next tour, which lasted from 1739 to 1741, represented a crucial moment for the growth and spread of the Great Awakening.

Whitefield, known as "the Grand Itinerant," arrived in Philadelphia in November 1739. He hurried up and down the eastern seaboard, from town to town, from crowded church to busy market, wherever people would listen to his message. He estimated that 20,000 people heard him preach on Boston Common in October 1740. At Northampton, his preaching made Jonathan Edwards weep. And back at Philadelphia a year later, he preached to thousands in an auditorium specially built for his visit. Even the skepti-

cal Benjamin Franklin was impressed with Whitefield and the good effect he had upon the people of his city.

Despite such praise, some clergy in America soon began to resent his mission and the awakening in general. Timothy Cutler, an Anglican minister in Boston, complained that the enthusiasm Whitefield generated amounted almost to madness. His evening sermons were said to be "attended with hideous yellings, and shameful revels, continuing . . . till break of day." Worst of all, Cutler reported, Whitefield encouraged laity to turn against their proper ecclesiastical leaders and question established religious beliefs and customs.

While Whitefield's American tour was upsetting his fellow Anglicans, a storm of opposition to the awakening also broke out among the Presbyterians. Gilbert Tennent, who had been asked by Whitefield to accompany him and lead revivals, brought about the Presbyterian rupture by his sermon on "The Danger of an Unconverted Ministry," which he preached in March 1740. In contrast to what he called the "carnal security" of routine churchgoing and unexamined adherence to creeds, Tennent summoned men and women to genuine repentance and an experience of God's power over their lives. He had gone too far. Using the issue of ministerial education and the inadequacy of the preparation of the revival-oriented Log College men, the conservative "Old Side" party (see NEW SIDE/OLD SIDE) ejected Tennent's New Brunswick presbytery in 1741 from the Synod of Philadelphia. The "New Side" Presbyterians, as the revival party was known, responded by organizing a church of their own. This division, a direct result of the Great Awakening, continued until 1758, when the Presbyterian factions came together again under the dominance of the New Side.

Further opposition to the awakening was aroused by Congregational minister James Davenport, pastor of the church at Southold,

Long Island. Following Whitefield and Tennent to Connecticut in the summer of 1741, Davenport stirred the revival excitement while lambasting the ministers of the colony with unrelenting personal invectives. He claimed to be able to distinguish infallibly between God's elect and the damned, and he sang publicly as he walked the streets on the way to places of worship. Davenport was arrested both in Connecticut in 1741 and in Massachusetts the next year. His bizarre antics helped turn opinion in New England against the revivals.

Congregationalist CHARLES CHAUNCY, leader of the emergent antirevival, or "Old Light" (see *NEW LIGHTS/OLD LIGHTS*), faction in his denomination, blasted the awakening from his pulpit at the First Church in Boston. In *Seasonable Thoughts on the State of Religion in New England*, a lengthy work published in 1743, Chauncy cataloged what he believed were the worst features of the revivals. Although George Whitefield had been feted at Harvard College during his earlier visit to Boston, Chauncy convinced the Harvard faculty to close their doors to Whitefield in 1744.

Radical "New Light" Congregationalists in New England, on the other hand, insisted that many of their fellow church members and clergy, Chauncy being a prime example, lacked true piety. Called "Separates," this group was led by ISAAC BACKUS of Norwich, Connecticut. Backus had been brought to "a saving knowledge of the truth" at a local revival in 1741. In 1748, he accepted a call to minister to a Separate church in Middleborough, Massachusetts. Disturbed over the question of baptism, Backus and six others were later rebaptized after a profession of faith in Jesus Christ. This was the beginning of a tremendous surge in growth among BAPTISTS in New England. Eventually, the awakening encouraged more than a hundred congregations to split from the Congregational establishment, and close to 80 of these eventually reorganized themselves as Baptist churches.

In the southern colonies, the Great Awakening developed far more slowly than in the North. Although Whitefield had preached to large numbers of people during his evangelistic tours of the South, the hostility of the Anglican religious establishment, as well as the general lack of settled population centers, prevented revivals from developing. Whitefield blazed a trail for the spread of the awakening, but he himself was unable to consolidate it into a widespread movement, as he had done in the North.

The earliest discernible outbreak of religious enthusiasm in the South appeared in Hanover County, Virginia, where William Robinson, a graduate of William Tennent's Log College, was sent by New Jersey Presbyterians on a missionary tour in 1742. Other itinerant revivalists followed Robinson and kept the spiritual interest alive. In 1747, SAMUEL DAVIES succeeded Robinson at Hanover County. Davies fought a lengthy legal battle against the Anglican establishment on behalf of toleration for the seven Virginia Presbyterian churches he served, and he attracted fame as a successful evangelist. He traveled throughout Virginia to help build up Presbyterianism. Called to the presidency of what is now Princeton University in 1759, his departure for New Jersey left no educated minister of his denomination in Virginia. As a consequence, the cause of revivalism among southern Presbyterians quickly declined.

The Baptists emerged as the most prominent evangelical force in Virginia. In 1754, Shubal Stearns and Daniel Marshall came to Virginia from Connecticut, where they had been converted by Whitefield. The two clergymen introduced several key evangelical elements: a free church without any hierarchy, a ministry that depended upon the call of God as its single credential, and the baptism of adult believers only. Although Stearns soon left for North Carolina and Marshall went on to Georgia, they had helped form a strong coterie of Baptists in Virginia. As an Anglican

leader remarked in 1759 about the headway the Baptists were making, their “shocking delusion . . . threatens the entire subversion of true religion in these parts.”

Anglicans gained their own revival party when DEVEREUX JARRATT was installed as rector at Bath, Virginia, in 1763. He had been influenced by both Whitefield and the Wesleys. Under his preaching, churches became so crowded that he was compelled to hold services outside. Jarratt also began to move outside the geographic boundaries of his parish, and large assemblies gathered to hear him in the open air. In 1773, he joined forces with the “METHODISTS,” evangelical societies forming within Anglicanism, and cooperated with them in revivals that occurred just prior to the American Revolution. After the war, when those societies left Anglicanism and formed the Methodist Episcopal Church, Jarratt felt he had been betrayed. Remaining within the Anglican fold, he contributed greatly to the growth of the evangelical party within the newly organized Episcopal Church.

With the beginning of the War for Independence, the Great Awakening effectively came to an end, as Americans were forced to consider matters even more pressing than the eternal states of their souls. The awakening, a spontaneous religious movement that swept across all colonial boundaries and spanned more than three decades, introduced a new sense of cohesiveness to the American people. Although no one is able to give an exact estimate of the number of people who joined churches in that period, the impact upon all the Protestant denominations was unquestionably immense. The awakening, in fact, while building up churches, also tended to minimize denominational distinctions. John Wesley exemplified this element in the revivals when he declared he would make no distinction between men and women of different denominations who still acknowledged “the common principles of Christianity.” “Dost thou love and fear God?” he asked.

If the answer were positive, he concluded: “It is enough! I give thee the right hand of fellowship.”

As a result of this understanding about the relative unimportance of denominations, the Protestant churches of the new United States were able to develop a certain functional unity. This sense of fellowship, an essential harmony existing beneath the diversity of outward ecclesiastical forms, bore even greater fruit in the 19th century in the creation of a system of voluntary societies for the promotion of various religious causes. During the burst of renewed evangelical fervor, now called the SECOND GREAT AWAKENING, which appeared in the late 1790s, American Protestants successfully channeled their efforts into many common tasks, including building new churches and Christian schools and establishing numerous agencies of moral and social reform.

Greek Orthodox Archdiocese of North and South America The Greek Orthodox Archdiocese of North and South America is the largest organization of Greek Orthodox Christians in the United States. Although established in 1922, its roots go back to the late 19th century.

Only a few Greeks lived in the United States before the 1880s, but immigration surged after 1890. Greeks began to organize Orthodox parishes to preserve their religious and ethnic identity. The nation’s first

Greek Orthodox parish, Holy Trinity in New Orleans, began in 1864 as a pan-Orthodox venture. Purely Greek communities began to form later, led by New York's Holy Trinity in 1892 and Chicago's Assumption in 1893. Early parishes were typically organized by lay societies, which at the time petitioned the Church of Greece or the Ecumenical Patriarchate of Constantinople for priests. This informal approach persisted until 1918, even though the Church of Greece exercised formal authority over Greek churches in America after 1908. This long period of fluidity made it difficult to impose hierarchical authority later.

When efforts to organize a Greek diocese finally began, they were compromised immediately by political struggles. Meletios Metaxakis, the liberal archbishop of Athens, visited the United States in 1918 and assigned a bishop to

gather the approximately 150 Greek parishes then existing into a diocese. But soon after returning to Greece, Meletios was deposed by royalists, who sent a conservative bishop to America to counter Meletios's efforts.

Meletios returned briefly to the United States, but in 1921 he was unexpectedly elected patriarch of Constantinople. One year later, he established the Greek Orthodox Archdiocese of North and South America. The royalists reacted vigorously, and the 1920s were marked by extended tumult in America, including rival hierarchies, parish schisms, and numerous lawsuits. Peter Kourides, a lay official, later recalled that "police were stationed at strategic positions within some of the churches to prevent bloodshed."

The worst period of strife ended in 1930, when the patriarchate and the Church of

After 1890, Greek immigrants organized churches, such as this Greek Orthodox church in Amoskeag, New Hampshire, to preserve their religion and ethnic culture. (*Library of Congress*)

Greece agreed to remove all the contending bishops and to send a new archbishop to America. ATHENAGORAS SPYROU arrived in 1931 to take up the task of healing divisions. The persuasive Athenagoras spent more than a decade working to mend the divisions of the 1920s, traveling around the United States and knitting together a highly centralized archdiocese.

Despite the exigencies of the Great Depression, the archdiocese made progress, and a number of crucial national institutions, including a theological seminary, were established. Athenagoras also championed Greek identity and fostered the development of an extensive network of language and catechetical schools for children.

Elected ecumenical patriarch in 1948, he left behind an archdiocese basking in what one historian has called the Greek-American community's "era of respectability." Expansion continued during the 1950s under the leadership of Archbishop Michael Constantines, who had served earlier as metropolitan of Corinth in Greece. In 1959, Michael was succeeded by Archbishop IAKOVOS COUCOUZES, who had spent most of his career as a priest in the United States.

Under Iakovos, the archdiocese played a significant role in ecumenical activities and began to address the increasing acculturation of its members. In 1970, the 20th archdiocesan Clergy-Laity Conference approved the use of English in the liturgy, but the proposal was rejected decisively by Patriarch Athenagoras.

A stormy and unresolved debate over language followed. The struggle was fueled after 1965 by the resumption of Greek immigration, which created a renewed pastoral need for ministry in Greek. Despite this controversy, the expansion of the archdiocese continued, and it achieved recognition as the largest, best-organized, and most affluent Orthodox jurisdiction in North America.

Archbishop Iakovos was forced into retirement in 1996 by the Ecumenical patriarch

over concerns about the archdiocese's level of independence. His successor, Archbishop Spyridon, proved too imperious for independent-minded Americans, and he resigned in 1999. He was succeeded by Archbishop Demetrios, who has tried to negotiate the demands of clergy and laity in the Americas for greater control and the more traditional views emanating from the Ecumenical Patriarchate in Istanbul.

It now claims about 1.5 million members in the United States. In 2004, its 563 parishes were organized into eight dioceses in the United States. The archdiocese also serves Canada and significant communities in Latin America. The archbishop also supervises smaller American jurisdictions of Carpatho-Russian, Ukrainian, and Albanian Orthodox on behalf of the Ecumenical Patriarchate.

Grimké, Angelina Emily (1805–1879) and Sarah Moore (1792–1873) Sarah and Angelina Grimké were the first women born into a slaveholding family in the South to speak out forcefully for the abolition of slavery. They were also among the first women to agitate for the right of women to speak in public. Breaking through the separate domestic sphere allotted to them as Victorian females, the Grimké sisters argued on biblical grounds that God saw both the enslaved-

ment of African Americans and the bondage of women as sin.

The Grimkés were born in Charleston, South Carolina, to an affluent family that included 14 children and numerous slaves. Because of their personal experience with the “peculiar institution” of southern slavery, the Grimké sisters were particularly useful to ABOLITIONISM. Neither Sarah nor Angelina received much formal education, but both were eager readers who became convinced after reading the Bible that slavery was contrary to the will of God. Though raised in the EPISCOPAL CHURCH, both sisters were spiritually restless, affiliating themselves at one time or another with PRESBYTERIANISM, Quakerism (see FRIENDS, RELIGIOUS SOCIETY OF [QUAKERS]), and SPIRITUALISM.

The Grimkés’ odyssey out of the slaveholding South began in 1819, when Sarah traveled with her ailing father to Philadelphia, where he subsequently died. On her solitary way home, Sarah met some Quakers and was introduced to the Society of Friends. One year later, she became a Quaker herself, and in 1821, she moved to Philadelphia. Angelina joined her sister in 1829, and the two soon began attending antislavery lectures and Quaker meetings.

The Grimkés first captured widespread attention on September 19, 1835, when radical abolitionist William Lloyd Garrison published Angelina’s antislavery letter in *The Liberator*. Calling abolitionism “a cause worth dying for,” Angelina emphasized that she wrote on the basis of “what I have seen, and heard, and known in a land of slavery, where rests the darkness of Egypt, and where is found the sin of Sodom.”

In 1836, the Grimkés traveled to New York City, where they began speaking to groups of women about slavery, first in private parlors and later in larger and more public venues. In that same year, both Angelina and Sarah produced their first of many abolitionist pamphlets based on their firsthand knowledge of slavery. Angelina’s *An Appeal to the Christian*

Women of the South (1836) and Sarah’s *Epistle to the Clergy of the Southern States* (1836) both refuted biblical arguments for slavery popular among southerners and contended that slavery was contrary to the will of God and the principles of the Declaration of Independence.

In 1837, Angelina and Sarah made their way to Boston, where their historic decision to address “mixed” audiences precipitated a great controversy about the right of women to speak in public. Among those who objected to the Grimkés’ forthrightness were the Congregational ministers of Massachusetts, whose “Pastoral Letter” denounced on New Testament grounds females “who so far forget themselves as to itinerate in the character of public lecturers and teachers.” Also objecting was Catharine Beecher, the first daughter of preacher LYMAN BEECHER, who like her father was not as radical a reformer as the Grimkés. While Catharine Beecher argued in an open letter to Angelina that slaves should be freed gradually and settled in an African colony, Angelina insisted that slaves should be granted immediate emancipation followed by full suffrage. Angelina also rejected Beecher’s suggestion that women should exercise their influence in the private sphere of the home.

The Grimkés’ public career took an important turn on May 14, 1838, when Angelina married THEODORE DWIGHT WELD. On the following day in New York City, both Grimkés attended the Anti-Slavery Convention of American Women. At that gathering, the Grimkés and fellow female abolitionists were taunted by antiabolitionist mobs who burned the meeting place to the ground.

Whether they were frightened by this mob violence or cajoled by the more moderate Weld is not certain, but the Grimkés subsequently withdrew from public view. After producing *American Slavery As It Is* (1839) with Weld, the Grimkés concluded their public careers. In 1840, both Angelina and Sarah moved with Weld to a farm in Belleville, New Jersey, where they devoted themselves to teaching

and educational reform. In 1864, the sisters settled in Hyde Park, Massachusetts. Sarah died in 1873 and Angelina in 1879.

Though their public agitation on behalf of slaves and women lasted only from 1835 to 1839, the Grimkés did much to link women's rights with abolitionism and to convince Americans that the enslavement of African Americans and the bondage of women were contrary to both the design of nature and the commandments of God.

H

Habitat for Humanity Perhaps few undertakings better deserve the term *phenomenon* than does the organization Habitat for Humanity International. Its fusion of religion, self-help, PHILANTHROPY, a former United States president, and an all-embracing ethos together make it a fascinating enterprise.

Strangely, Habitat for Humanity is even more intriguing for its history. Founded by Millard and Linda Fuller in conjunction with CLARENCE JORDAN and other members of KOINONIA FARM, Habitat for Humanity is a combination of evangelical Christianity, civil rights, and personal transformation.

The transformation that helped to give Habitat for Humanity its birth was that of Millard and Linda Fuller. Born and reared in Alabama, the Fullers had built up their marketing company to the point where they were millionaires while still in their 20s. But success took a major toll on their health and personal lives.

Following a period of reflection, they concluded that they had lost track of the essence of their Christianity and rededicated themselves to God. This rededication began with selling their possessions and giving away all their money to the poor. Eventually, they found their way to Koinonia Farm, an interracial Christian agricultural community established in Georgia by Clarence Jordan in 1942.

While there, they developed the idea of establishing "partnership housing," a scheme in which those in need of homes would work

with volunteers to build simple, affordable, decent housing. Funding for these houses would be provided by a revolving loan fund capitalized by donations, fund-raising activities, house payments, and no-interest loans from supporters. The first letter from Koinonia Farm described it:

What the poor need is not charity but capital, not caseworkers but co-workers. And what the rich need is a wise, honorable and just way of divesting themselves of their overabundance. The Fund for Humanity will meet both of these needs. Money for the fund will come from shared gifts by those who feel they have more than they need and from non-interest bearing loans from those who cannot afford to make a gift but who do want to provide working capital for the disinherited. . . . The fund will give away no money. It is not a handout.

The first homes were built near Americus, Georgia, where Koinonia was located in 1968. This was followed by a move to Africa in 1972, where the Fullers attempted to put their ideas into practice in Zaire. Success there convinced the Fullers that their vision could and should be expanded. They returned to the United States in 1976, where at a meeting of supporters Habitat for Humanity International was formed with the goal of providing quality housing internationally.

The idea met with a remarkable reception, aided to some extent by the commitment that Jimmy and Rosalynn Carter, longtime supporters and neighbors in Americus, brought to the project. Such publicity helped. But the vision and commitment of the Fullers and others, the belief that people can help others help themselves, and the romance of the “flash builds,” where people join together to build a home for real people whom they can meet and see, spoke to something deep not only within the American psyche, but also to people around the world. A home—an idea that resonates with shelter, warmth, and security—is not an idea anyone can oppose. The “sweat equity” of the soon-to-be owners also makes the work appealing.

Habitat for Humanity, which is unabashedly Christian, even evangelical, in its vision also shows how values and commitments readily cross religious lines when a common good is perceived. By focusing on service, “the theology of the hammer,” as Millard Fuller put it, religion becomes a force for bringing people of all and no religious beliefs together.

During 2004 and 2005, Habitat for Humanity underwent a period of massive internal turmoil. Amid accusations of sexual harassment and imperiousness, Fuller was removed as the organization’s head and replaced by Jonathan T. M. Reckford, a Presbyterian minister and former senior executive of Best Buy. Following his firing, Fuller and his wife created a new organization, Building Habitat, to continue their work.

While Habitat for Humanity did not seem to have been hurt by the publicity surrounding the change in leadership, many expressed concern about whether a more formal business model would weaken its grassroots support. Additionally, talk that Habitat was contemplating relocating from its headquarters in Americus, Georgia, to Atlanta raised suspicions about whether the organization was changing its ethos. The opposition to the move led to a compromise whereby the major-

ity of the daily operations remained in Americus, and senior staff relocated to Atlanta.

While Habitat alone may not solve the world’s housing problems, it has been remarkably successful, building more than 225,000 houses that shelter more than a million people in some 3,000 communities worldwide. It now ranks as one of the 20 largest home builders in the United States and the largest nonprofit builder. As Millard Fuller said, “My responsibility is to use what God has given me to help His people in need.”

Half-way Covenant Adopted in 1662, the Half-way Covenant was basically an adjustment of the criteria for BAPTISM and full membership in the New England Congregational churches (see CONGREGATIONALISM). Its adoption and effects have led it to receive many interpretations from scholars. Some have argued that it was necessitated by declining religious fervor, others attribute it to increased religious scrupulousness. Still others viewed it as a response to decreasing numbers of eligible voters.

While the adoption of the Half-way Covenant resulted in the eventual transformation of New England PURITANISM, it was not caused by any major change in religious belief, nor by concerns over the franchise. In fact, of the four colonies involved—MASSACHUSETTS BAY

COLONY, New Haven, Plymouth, and Connecticut—only the first two made full church membership a requirement for full citizenship and the franchise, and by 1665 they had eliminated it as a voting requirement.

The Half-way Covenant was necessitated by requiring testimony of regeneration (a CONVERSION experience) for full membership in the Congregational churches of New England. This requirement, adopted by nearly all the churches between 1635 and 1640, had unexpected results. While it did not affect the “first generation” of Puritans in America—since they had been accepted into church membership solely on the bases of not living scandalous lives and assenting to the doctrines of the church—their children, the “second generation,” felt the implications strongly. Many never felt the working of grace in their souls that marked the experience of regeneration and, as a result, never became full church members. Since baptism was limited to those infants who had at least one parent as a full member, many of their children—the “third generation” of Puritans—could not be baptized.

This troubled many ministers who, understanding God’s covenant as eternal, saw no reason why it should be cut off in the third generation. As early as 1645, Richard Mather argued that the children of baptized persons should be eligible for baptism themselves, but no official action was taken on his suggestion until June 1657, when a ministerial assembly in Boston recommended that children of baptized members be eligible for baptism. When several ministers attempted to implement this recommendation, they faced opposition from church members, and the question languished for another five years.

In 1662, the ministers again took up the issue at a meeting now known as the Half-way Synod. After meeting in four sessions throughout that year, it issued recommendations at the end of September. Over the objections of the president of Harvard, Charles

Chauncy, and Richard Mather’s sons Increase and Eleazar (see MATHER, INCREASE), the synod recommended that churches accept children of all baptized members. As they phrased it, “Church-members who were admitted in minority, understanding the Doctrine of Faith, and publickly professing their assent thereto; not scandalous in life, and solemnly owning the covenant before the Church, wherein they give themselves and their children to the Lord, and subject themselves to the Government of Christ in the Church, their children are to be baptized.”

The General Court of Massachusetts urged the churches to adopt these recommendations. They met much opposition from the laity, however, who were strengthened in their opposition by the Mather brothers and John Davenport of New Haven. As late as 1672, only two-fifths of the churches in Massachusetts had implemented the change. By that time, Increase Mather had accepted it (1671), but his brother, Eleazar, went to an early grave (1669) still opposed. In Connecticut, the conflicts were so great that the General Court announced in 1669 all positions were acceptable until new light fell on the subject.

Eventually, even the most recalcitrant were reconciled, and the Half-way Covenant became an accepted part of the New England way. For many, however, it remained a symbol of the decline of the colonies from their earlier purity and religiosity. More appropriately, this change should be understood as part of the ongoing attempt of Puritan congregationalism to create a workable doctrine of the church.

Handsome Lake (Ganio'dai'io) (1735–1815) Handsome Lake, a religious visionary and political leader, rallied his people, the Seneca nation of the Iroquois, during a time of economic dislocation and political disruption in the early 19th century. His evangelistic efforts to revive his culture produced a new religion that played a continuing role in Iroquois life.

Born in 1735, Handsome Lake lived in the western part of the Iroquois Confederacy, the Haudenosaunee, in the Genesee River village of Gano'wages, in what is now New York State. In the years prior to the French and Indian Wars, Iroquois land extended from Lake Erie to the Hudson River. Their actual realm of influence stretched from the Mississippi River to the Atlantic seaboard, as they controlled both trade and the delicate balance between European powers competing for access to furs in the Ohio country. Handsome Lake came of age as this era of Iroquois dominance in the Northeast ended. He took an active role in Iroquois efforts to retain their regional control, fighting against the British prior to the 1763 Treaty of Paris, which removed the Iroquois's French ally, and with the British during the American Revolution under the leadership of the Mohawk Joseph Brant. After the war, Handsome Lake, now a Seneca chief, took part in several delegations to Washington, ultimately failing in their efforts to stop American settlements advancing onto Haudenosaunee land, much of which was eventually sold to the Americans.

With the effective destruction of the Iroquois Confederacy's power, a loss of population due to war and disease, and the rising influence of Christian missionaries, many Iroquois, including Handsome Lake, despaired over the dissolution of traditional ways of life. Living in the Seneca village led by his brother

Cornplanter, who turned to Quaker missionaries to find help coping with the new society, Handsome Lake began receiving visions in the spring of 1799.

After succumbing to illness, and assumed dead by his relatives, Handsome Lake awoke and described a visit by three angels dressed in Iroquois ceremonial clothing. Handsome Lake's visions, which combined both traditional Iroquois and Christian symbolism, became the basis of an oral tradition, handed down into the present. He claimed the angels told him that the Iroquois should retain traditional festivals, such as the early summer strawberry festival, and refrain from the evils of whiskey, witchcraft, love-magic, and abortion/sterility medicine. In visions received over the next year, Handsome Lake was taken by another angel on a tour of heaven and hell. On a journey to the sky, Handsome Lake said he met George Washington and Jesus, who spoke to him about the frustrations of ministry among the white people who had crucified him. During these visions, Handsome Lake received numerous instructions about proper Iroquois responses to white culture. The early visions placed a great deal of emphasis upon the need for personal confession and salvation, and in the latter there was corresponding concern for social renewal.

By creatively adapting aspects of American culture and resisting others, Handsome Lake took a leading hand in negotiating the path for his people's continued identity in American society. To some extent, this leader's visions legitimized certain cultural and economic transformations: He opposed the predominant matrilineal power in Iroquois family life, and he supported the agricultural labor and domestic power of men, thus replacing traditional Iroquois division of labor and family structure with a model similar to that advocated by the Quaker missionaries. In addition, his ritual of confession incorporated the missionaries' ideas of sin and salvation. But he also denounced many white practices

and upheld tribal ownership of land, gift-giving as the preferred mode of exchange, and much of traditional mythology and ceremony (apart from those practices associated with shamanism and witchcraft). The new religion spread widely as Handsome Lake preached in councils of Iroquois leaders, to visiting delegations from other tribes, and in many Iroquois towns.

Made leader of the Iroquois nation in 1801, Handsome Lake was less successful at politics than evangelism, becoming embroiled in controversies over witchcraft and competition with other Seneca leaders, such as his brother Cornplanter and Red Jacket. He died on August 10, 1815, without having achieved his goal of political unity among the Iroquois, which he hoped to accomplish by strengthening his own visionary role at the expense of other chiefs. By 1850, the accounts of Handsome Lake's visions had been incorporated into an oral tradition called the Gaiwiiio, the "good word," or the Code of Handsome Lake. The "Longhouse Religion," or "the Old Way of Handsome Lake," endures today, remaining the primary form of traditional Iroquois religious life.

Harkness, Georgia Elma (1891–1974) A social activist, poet, and ecumenist, Georgia Elma Harkness was America's first professional female theologian and the first woman to teach theology at a major Protestant seminary in the United States. Harkness was an early advocate of women's rights in the church, even as she demonstrated the ability of women to do theology and to teach in areas outside the traditional female sphere of religious education.

Born on a family farm in Harkness in the Lake Champlain region of New York, Harkness was raised by METHODISTS. She had a conver-

sion experience at the age of 14 and became a church member. She graduated from Cornell University in 1912 and for the next six years worked as a schoolteacher in New York State. She then resumed her education at Boston University, where she earned an M.A. degree in religious education in 1920 and a Ph.D. in philosophy in 1923.

Harkness was hired in 1922 as an assistant professor of religious education at Elmira College, a woman's school in Elmira, New York. She taught in the philosophy department there from 1923 until 1937. After spending time at Union Theological Seminary in New York City in the mid-1930s, Harkness decided that her calling was theology rather than philosophy. In 1937, she was hired as an associate professor in the Department of the History and Literature of Religion at Mount Holyoke College (also a woman's school), but after only two years there she accepted a position as professor of applied theology at Garrett Biblical Institute (now Garrett-Evangelical Theological Seminary) in Evanston, Illinois. Harkness's last academic position was as professor of applied theology at Pacific School of Religion, where she served from 1949 until her retirement in 1961.

During her long and distinguished teaching career, Harkness traveled widely, frequently as a delegate to ecumenical conferences (see ECUMENISM). She wrote 40 books on topics ranging from social ethics to devotional poetry. Critics described her theological work as insubstantial, but admirers applauded Harkness for making theology accessible to laypeople.

Harkness described herself as an "evangelical liberal" who based her progressive political stances and her Christocentric theology on biblical teachings. She believed that both sin and salvation were social, and she saw it as every Christian's duty to usher in the kingdom of God here and now.

A self-described pacifist and socialist, she opposed wars from WORLD WAR II to the

Dr. Georgia Harkness, the first woman theologian to teach in a seminary in the United States. (*John C. Bennett Archives*)

VIETNAM WAR and criticized capitalism as anti-Christian. In 1950, she served alongside REINHOLD NIEBUHR, PAUL TILICH, and seven other male theologians on the Commission of Christian Scholars appointed by the Federal Council of Churches (see NATIONAL COUNCIL OF CHURCHES) to consider the morality of nuclear weapons. Although the majority decided that Christian ethics did not proscribe the first use of nuclear weapons, Harkness dissented, contending according to the commission's report "that God calls some men to take the way of non-violence."

Despite her controversial commitment to pacifism, Harkness is best remembered as an

early champion for the rights of women in the church, including the right to full ordination. Though radical in her aims on women's issues, she was moderate in her means. When urged in the 1970s to refer to God as "She," Harkness refused. Yet she publicly lamented the fact that the church remained "the most impregnable stronghold of male dominance." As early as 1924, she was deriding the reluctance of Christian denominations to ordain women as "a deep-seated relic of medievalism," and she continued to agitate for the full ordination of women in her own Methodist denomination until that right was granted in 1956. In 1948, Harkness achieved wide acclaim when

she debated neo-orthodox theologian Karl Barth (see NEO-ORTHODOXY) at a meeting of the WORLD COUNCIL OF CHURCHES in Amsterdam. Harkness argued that Genesis asserted that male and female were created equal and in the image of God; Galatians, moreover, established the fact that Christ did not discriminate between men and women. Her views on women and Christianity are detailed in *Women in Church and Society* (1972), a book she wrote at the age of 81.

Harkness retired in 1961 and moved to Claremont, California. In 1975, Garrett-Evangelical Theological Seminary established a Georgia Harkness Chair in Applied Theology in recognition of Harkness's pioneering contributions.

Hasidism A mystical strain of JUDAISM that emerged in Poland and the Ukraine during the 18th century, Hasidism has played an important role in American Judaism only since World War II. Composed of various sects, or dynasties, contemporary Hasidism emphasizes piety, strict ritual observance, and withdrawal from the wider world. Easily recognizable by their distinctive dress, Hasids have settled primarily in the Williamsburg and Crown Heights sections of New York City, where they live a relatively insulated existence.

The roots of Hasidism are traceable to the teachings of Israel Ben Eliezer (1700–60), the Baal Shem Tov or Besht (Master of

the Good Name). Around 1735, he began to wander around Poland teaching that study of the Talmud and asceticism were not the only ways to gain divine knowledge, but that God could be known through the feelings. He emphasized joy and happiness, claiming that God hallowed all passions and all activities if done with piety, devotion, and purity. He and his disciples also emphasized the mystical tradition known as the Kabbala, especially the divine light or spark that is present in creation.

As the movement grew, it engendered a reaction among the rabbinic leaders. Despite this opposition, Hasidism gained wide popular support, and it reached its height following legal recognition by the Russian government in 1804. By the mid-1800s, nearly half of eastern Europe's Jews were affiliated with one of the Hasidic dynasties.

The most distinctive feature of Hasidism is the role played by the rebbes. Unlike the traditional rabbis, whose honor resulted from their learning, the rebbes drew followers due to their mystical power and charismatic personalities. Because of his righteousness the rebbe, mediates between his followers and the divine, effecting forgiveness of their sins and transforming the evil within them into good. As Hasidism became institutionalized, the rebbes tended to pass on their leadership roles to close disciples, usually relatives, breaking up the movement into various sects and creating the Hasidic "dynasties" that exist today.

Although individual Hasids came to the United States during the late 19th century, there was no organized Hasidic community until the 20th century, when the earliest rebbes, scions of the Stoliner and the Chernobyl (named for the towns where the original founder lived), came to the United States after the Russian Revolution. The greatest influx of Hasids into the United States came after the rise of Nazism. Some, like the Lubavitcher rebbe MENACHEM MENDEL SCHNEERSON, came during the war; others who survived the

Holocaust and the Soviet occupation of Eastern Europe arrived later. There are now nearly 20 Hasidic dynasties in the United States, mostly centered in Brooklyn, although some have established communities in upstate New York, where they can live in greater isolation from the modern world.

Of all the Hasidic groups in the United States, the two most significant are the Satmars and the Lubavitchers. These groups differ radically in their approaches to the wider world. The Satmars, the largest group in the United States, were founded only in the 1920s, although the founder, Rebbe Yoel Teitelbaum (1886–1982), descends from a long line of Hasidic rebbes. The most distinctive element of the Satmars is their virulent opposition to the state of Israel. Believing that the Jewish state can be restored only by the Messiah,

they view the secular state of Israel as blasphemous. The present rebbe, a nephew of the movement's founder, exercises strict control over his followers, along with several smaller Hasidic groups of Hungarian origin that lost their rebbes during the Holocaust.

The Lubavitchers, the most visible of all Hasids, differ greatly from other Hasidic groups. With their origins in Lithuania, they fell heir to the studiousness of the Lithuanian Jewish tradition. The founder, Rabbi Schneur Zalman (1748–1812), formulated the movement known as Habad, an acronym drawn from *Hochma* (wisdom), *Binah* (reason), and *Da'at* (knowledge), giving Lubavitch Hasidism the other name by which it is known. Although a Lubavitch community was organized in the United States during the 1920s, it remained small until 1940. In that year, the rebbe Joseph

Hasidic Jews celebrating the festival of Purim in Brooklyn, New York. (Getty)

Isaac Schneerson (1880–1950) arrived in the United States. He settled in the Crown Heights neighborhood in Brooklyn with hundreds of his followers, most of whom were also refugees. After his death, he was succeeded by his son-in-law, Menachem Mendel Schneerson.

The younger Schneerson turned the movement into the most organizationally sophisticated of all the Hasidic groups. Unlike most other Hasids, the Lubavitchers actively proselytize among other Jews. One of the rebbe's greatest desires was to bring nonobservant Jews into observance. Since the Lubavitchers' mystical theology emphasizes the divine spark within everyone, if nonobservant Jews begin to observe one of the religious laws (*mitzvot*), the spark will grow, driving them to greater religious observance until they are consumed by religious fire. Lubavitchers see this as a necessary part of entering the messianic age. There are nearly 40 Lubavitcher yeshivas (religious schools) in the United States, 100 Habad houses in college communities, and numerous summer camps. The movement also sends members to serve the needs of Jews around the world.

During the late 1980s and early 1990s, Schneerson's followers began increasingly to view him as the Messiah. This seemed to be borne out by his predictions, among them that the 1991 Gulf War would be short and Israel spared, that the Soviet Union would collapse, and that Russian and Ethiopian Jews would undertake an exodus to Israel. This expectation received a setback in the winter of 1992, when Schneerson suffered a stroke, but as he slowly recovered, his followers' expectations continued to rise. Even his death in 1994 did little to cool the messianic fervor of some Lubavitchers, and tensions emerged between those who continued to expect his return as the Messiah and those who were willing to postpone their expectations, suggesting a possible rift in the organization.

Although the fastest-growing of all movements in American Judaism due to a high

birth rate and active proselytizing, all Hasidic groups in the United States combined contain fewer than 200,000 members. Their impact is much wider than those numbers suggest. The traditions and tales of Hasidism have entered into the religious and cultural fabric of American Judaism. Hasidism also has infused greater life into ORTHODOX JUDAISM in particular. Self-consciously strict in its interpretations of Jewish law, Hasidism has served to pull American Orthodoxy to the right. Its unabashed difference from society provided a countervailing element to the engagement with the world that marked modern Orthodoxy in the United States.

Even many secularized Jews, anxious about their failure to maintain the religious laws, view the Hasids as faithful maintainers of Jewish tradition and provide them with a great deal of financial support. In doing so, they perhaps take the concept of the *zaddik* to its logical, albeit extreme, conclusion: For them, Hasidism exists to atone for the failings of the secularized community.

Hawthorne, Nathaniel See LITERATURE AND RELIGION.

Haygood, Atticus Greene (1839–1896) Atticus G. Haygood, Methodist bishop and educator, was one of the first white church leaders in the postbellum South to protest the mistreatment of African Americans. Known for his paternalistic racial attitudes, Haygood wanted his region to look toward the future and leave its past, especially the crippling effects of slavery, behind.

Haygood was born on November 19, 1839, in Watkinsville, Georgia. He graduated from Emory College, then in Oxford, Georgia, in 1859 and subsequently was ordained to the ministry of the Methodist Episcopal Church, South. After serving as a Confederate chaplain, he rose to prominence in his denomination after the CIVIL WAR. He became president of Emory in 1875 and editor of the influential *Wesleyan Christian Advocate* in 1878.

Although newspaperman and Atlanta *Constitution* editor Henry Grady popularized the phrase *New South*, Haygood originated the term, employing it as the title of a sermon on Thanksgiving Day in 1880. Published by a New York financier and widely circulated in the North, Haygood's sermon spoke of how southern whites were much better off in 1880 than they had been before the war. Haygood continued his attack on what he considered the false virtues of the LOST CAUSE MYTH in his path-breaking book, *Our Brother in Black* (1881).

Although he believed divine providence had allowed Africans to be brought to America to Christianize and civilize them, he rejoiced that God had destroyed slavery. Confederate defeat, he said, had provided many benefits to both white and black southerners, including the educational work of the northern churches in the South after the Civil War ended. *Our Brother in Black* won considerable praise from philanthropists in the North, and within a year, Haygood was named the executive agent of the newly created Slater Fund, an organization dedicated to the industrial education of blacks. He was a moving spirit, too, in the creation of Paine College in Augusta,

Georgia, another African-American educational institution.

Haygood resigned from the Slater Fund to accept election as bishop of California and missionary bishop of Mexico in 1890, taking up residence in Los Angeles. After contracting a fever on a visit to Mexico, he returned to Georgia in 1893. Embittered by the lack of acceptance of his views on race, Haygood lived in a weakened condition in Oxford, Georgia, for two more years. He died there on January 16, 1896.

Haystack Prayer Meeting Often described as the founding event of the Protestant foreign missions movement in the United States, the Haystack Prayer Meeting (1806) was a fabled gathering of students who later gained renown for their commitment to evangelical missions abroad. While seeking shelter from a summer thunderstorm in a hayloft, a group of Williams College students, including Samuel J. Mills, James Richards, Francis Robbins, Harvey Loomis, Gordon Hall, Luther Rice, and Byron Green, dedicated themselves to foreign missionary labors and subsequently formed the Society of the Brethren (1808), adopting the motto "We can do it if we will." Joined at Andover Theological Seminary by ADONIRAM JUDSON, Samuel Newell, and Samuel Nott, Jr., the group advocated organized, interdenominational mission efforts that would spread the Gospel to all parts of the globe. In 1810, they sought counsel from the Congregational General Association of Massachusetts. In response, and due largely to the groundswell of support among seminary students, Congregational ministers in New England founded the American Board of Commissioners for Foreign Missions (1810). Judson and Rice were among the first group of missionaries to leave for India in 1812 under the auspices of the newly estab-

lished organization. For later generations of evangelicals, the Haystack Prayer Meeting served as an enduring symbol of the power of youthful initiative and popular support for the early organization of foreign missions.

healing See CHARISMATIC MOVEMENT; HOLINESS MOVEMENT; PENTECOSTALISM.

Heaven's Gate On March 26, 1997, news began to break of a mass suicide among a group of young people who shared a house in Rancho Santa Fe, California. A total of 39 people had died, most of them computer professionals and all of them members of a religious group known as "Heaven's Gate." The suicides were occasioned by the appearance of the comet Hale-Bopp and the group's belief that the comet was accompanied by a spaceship that would take them from this world to a higher and better place. This spiritual place required them to leave behind their "outer shells"—their bodies.

Horrified, Americans were immediately reminded of the Jonestown Massacre (see JONES, JAMES WARREN) and wondered what would compel people to such an act. In this case, it was religious belief formed by a fusion of Christianity, THEOSOPHY, gnosticism, belief in UFOs, and desire for spiritual self-actualization.

In this fusion, Heaven's Gate was not exceptionally bizarre. For more than a century, similar movements have traveled the United States religious landscape. The suicides, however, were, if not unique, at least a major aberration. Despite the dispassionate view of scholars about NEW RELIGIOUS MOVEMENTS, many spoke out again against the dangers of "cults," renewing the debate about whether certain religions are illegitimate and deserving of special suspicion.

Heaven's Gate was the product of the religious visions of Marshall H. Applewhite (1931–97) and Bonnie Lu Trusdale Nettles (1928–85), known at various times as Bo and Peep, Do and Ti, and The Two. The couple met while Applewhite was in a Houston hospital, and Nettles, one of his nurses, urged him to join her at several Theosophical meetings. The twosome soon began holding their own meetings throughout the western United States, promising their followers celestial bliss and escape in a UFO.

Initially, they called their group Human Individual Metamorphosis, or HIM, and convinced a small group of fairly successful and talented individuals to give up their possessions, friends, and families to prepare for their departure into the heavens. In 1975, they and their followers left Oregon, where they had been living, and moved to eastern Colorado, where they believed a spaceship would meet them and take them away.

When the ship did not come, the group ceased its public activities and did not resurface until 1993. In that year, they purchased an advertisement in *USA Today* claiming that the Earth's present civilization was about to be "recycled" and "spaded under." By this time, Nettles had died, and Applewhite had assumed sole leadership.

His preaching about celestial or extra-terrestrial beings who had imparted to him knowledge of a high level of human consciousness attracted a small following composed primarily of information technology professionals who eventually gathered with Applewhite in a house in Rancho Santa Fe, California. The house was rented in October of 1996 by Applewhite, who told the owner that his group was composed of Christian-based angels who had been sent to Earth.

The appearance of the Hale-Bopp Comet and the rumor that it was being followed by a spaceship was a momentous occasion for the group. This spaceship, which purportedly had been detected by an amateur astronomer,

was widely discussed on talk radio. The group viewed its appearance as their chance to be taken up to a higher spiritual plane.

As the message on their Web site said:

Whether Hale-Bopp has a “companion” or not is irrelevant from our perspective. However, its arrival is joyously very significant to us at “Heaven’s Gate.” The joy is that our Older Member in the Evolutionary Level Above Human (the “Kingdom of Heaven”) has made it clear to us that Hale-Bopp’s approach is the “marker” we’ve been waiting for—the time for the arrival of the spacecraft from the Level Above Human to take us home to “Their World”—in the literal Heavens. Our 22 years [from 1975, the year of the failed appearance] of classroom here on planet Earth is finally coming to conclusion—“graduation” from the Human Evolutionary Level. We are happily prepared to leave “this world” and go with Ti’s crew.

All that was needed was to remove their earthly shells, the only things that still held them back. This they did by committing mass suicide on March 26, 1997. The comet continued on its course, and the spaceship turned out to be only a fairly dim star lurking behind the comet.

Hecker, Isaac (1819–1888) Roman Catholic convert, founder of the Paulists, and defender of the American political system, Isaac Hecker was, with his friend and con-

fidante ORESTES BROWNSON, the most ardent early-19th-century articulator of ROMAN CATHOLICISM to Protestant America and of America to the Roman Catholic hierarchy.

The son of German immigrants, Hecker was born in New York City on December 18, 1819. Originally baptized a Methodist (see METHODISTS), by his mid-teens he had embarked upon the intellectual and spiritual quest that would take him from Methodism to Unitarianism (see UNITARIAN UNIVERSALIST ASSOCIATION), Mormonism (see CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS), socialism, TRANSCENDENTALISM, and finally Catholicism. The last he found under the guidance of Brownson, whom Hecker would later call his “spiritual parent.”

At the age of 24, Hecker joined the transcendentalist commune at Brook Farm but was disenchanted with the extreme individualism and solitariness of transcendentalism. A stay at Bronson Alcott’s Fruitlands community did little to ease this feeling. In 1844, he lived with HENRY DAVID THOREAU and his family, continuing the study in philosophy and theology that he had begun in the 1830s while working in his family’s bakery.

Naturally contemplative and increasingly influenced by Continental Romanticism, Hecker was drawn to the Catholic Church, with its emphasis on tradition, coherence, and order. In this, Brownson led the way intellectually, but it was Hecker who made a commitment first. More than two months before Brownson, Hecker was baptized in the Roman Catholic Church on August 2, 1844.

The next year, Hecker and two other converts sailed for Europe to begin their novitiate in the Redemptorist order. After four years of training in Belgium and Holland, in 1849, Hecker was ordained a Roman Catholic priest in London, where he served for two years before returning to America as a missionary. A successful and widely traveled evangelist, Hecker quickly made an impact on the Roman Catholic Church in America, so much

so that in the early 1850s he was nominated to become bishop of Natchez, Mississippi.

A change in the Redemptorists' leadership in the United States ended this evangelical work, however, and the increasing insularity of the predominantly German order began to disturb Hecker and his fellow American convert priests. These men desired to found a distinctly American house for the order, where English rather than German would be the language and whose mission would be to serve the rapidly Americanizing immigrants.

Chosen to plead their case in Rome, Hecker sailed to Europe in 1857. Incensed by this failure of obedience, the rector major of the Redemptorists expelled him from the order. Hecker had made a sufficiently strong case that Pius IX nullified the expulsion and released Hecker and his compatriots from their vows, granting them permission to create a new order aimed at the conversion of Protestants.

Upon returning to New York in July 1858, Hecker and his colleagues organized the Missionary Priests of St. Paul the Apostle (Paulists), with Hecker as superior. Although seriously debilitated by leukemia after 1872, he remained as superior until his death on December 22, 1888.

Until that time, Hecker was a tireless exponent of Catholicism. Through the pages of the *Catholic World* (founded 1865) and in the tracts published by the Catholic Publication Society (1866, now Paulist Press), Hecker and his order argued for the compatibility of Roman Catholicism with American life and sought to convince the church of the need to accept the modern world of political democracy, religious liberty, and scientific advance. These views would later be central to the Americanist controversy (see AMERICANISM) within the Roman Catholic Church. Although Hecker had been dead for a decade, his life would be at the center of the controversy, when the French translation of Hecker's biography suggested (approvingly) that Hecker sought

Influenced by Orestes Brownson, transcendentalist Isaac Hecker converted to Roman Catholicism and began the Paulist Order to promulgate Catholicism among American Protestants. (Painting by G. P. A. Healy)

the creation of a separate American Catholic Church, or at the very least the democratization of the existing church.

While these views, condemned by Leo XII in 1899, were not truly Hecker's, they did contain the kernel of Hecker's thought. During the papacy of John XXIII (1958–63), Hecker's call for an openness to the modern world would be heard, and his belief that the church's truths have nothing to fear from science, democracy, or freedom would be affirmed.

Henry, Carl Ferdinand Howard (1913–2003) Carl Henry was a Baptist minister, educator, and the first editor of the influential magazine *Christianity Today*. He is considered to be the senior statesman of American EVANGELICALISM.

Born in New York City on January 22, 1913, Henry grew up on Long Island. Although he took a position as a newspaper reporter after high school, a conversion experience led him to enroll at Wheaton College, the evangelical college near Chicago, from which he graduated in 1938. He received graduate degrees at Wheaton and at Northern Baptist Seminary in Chicago in 1941 and 1942, and he was ordained to the Baptist ministry in 1941. Henry taught theology at Northern Baptist from 1940 through 1947. During his summers, he also taught at Gordon College in Massachusetts and studied for a Ph.D., which he received from Boston University in 1949.

Henry moved to Pasadena, California, in 1948 to serve on the faculty at Fuller Theological Seminary, an institution founded the year before through the efforts of radio evangelist Charles E. Fuller. Although Henry and his colleagues affirmed the infallibility of the biblical text and were respectful of the doctrinal militancy of FUNDAMENTALISM, they also desired to overcome the narrow sectarianism that often typified evangelicals in that era. The faculty became representative of the "neo-evangelicalism," a term Fuller president Harold Ockenga coined to describe "fundamentalism with a social message." Henry's 1947 book, *The Uneasy Conscience of Modern Fundamentalism*, deplored conservative Protestants' emphasis on personal morality

at the expense of a positive social program. He argued that the collapse of Western civilization, as evidenced by post-World War II Europe, provided the church with a tremendous opportunity to which evangelicals were generally failing to respond.

By 1955, Henry had been invited by evangelist BILLY GRAHAM to become the editor of a new magazine, *Christianity Today*. Graham wished the publication to become the evangelical community's alternative to the *Christian Century*, the organ of mainline Protestantism. Henry moved to Washington, D.C., to take the new position. He served as editor for a 12-year period, in which the circulation of *Christianity Today* surpassed that of its liberal rival. Henry's magazine became recognized as the intellectual voice of the new evangelicalism he championed. Still, Henry eventually lost his job to Harold Lindsell in 1968 because he failed to meet the standards of political conservatism imposed by J. Howard Pew, the magazine's most important financial backer.

After leaving *Christianity Today*, Henry began work on his six-volume *God, Revelation and Authority*, completed in 1983. At the same time, he accepted a position at Eastern Baptist Theological Seminary in Philadelphia, teaching there from 1969 to 1974. In 1974, he became a lecturer-at-large for World Vision, the nondenominational evangelical relief organization. Henry retired in 1978 but continued to write and lecture. In 1984, he published his six-volume work, *God, Revelation, and Authority*. Henry died in December 2003 in Watertown, Wisconsin.

heresy The term *heresy*, derived from the Greek *haireisis*, meaning "choice" or "religious

school," refers to the denial of accepted doctrines and the teaching of erroneous beliefs. Since the earliest days of the church, Christian leaders have claimed the prerogative of distinguishing between truth and falsehood in matters of theology. In the 19th century especially, numerous heresy trials were conducted in the United States, as Christian denominations, most notably the Presbyterians, grappled with the religious implications of new and changing intellectual trends.

One of the earliest theological controversies occurred when Old and New School (see *NEW SCHOOL/OLD SCHOOL*) Presbyterian factions fought over the significance of *REVIVALISM* in their denomination. Philadelphia pastor Albert Barnes, a New School minister, was renowned for adapting his beliefs to fit the loose theological standards typical of the revival movement. After preaching and publishing a sermon that criticized the Westminster Confession, the classic expression of Presbyterian orthodoxy, Barnes was charged with heresy. The doctrinally rigid Old School party accused Barnes of questioning several key Presbyterian beliefs. Although the New School party had enough votes to acquit Barnes when he was tried in 1831, he was charged with heresy again in 1835 and at that time convicted.

In 1835, *LYMAN BEECHER*, then one of the most famous clergymen in the United States, was also arraigned for heresy by the Presbyterians. Influenced by revivalism and highly optimistic about American social advances, Beecher began to question traditional Calvinist teachings about sin and increasingly emphasized the possibility of human progress. As a result, three indictments for heresy were brought against him, charging that he failed to uphold orthodox Presbyterian beliefs about human depravity. But efforts to censure Beecher failed, and he was acquitted.

Although controversies over race, slavery, and the *CIVIL WAR* distracted Americans in the middle decades of the 19th century, con-

cern about theological and intellectual issues returned to the churches by century's end. More than any other Protestant denomination, Presbyterians were shaken by disputes between doctrinal conservatives and so-called modernists, leaders who wished to reconcile religious beliefs with developments in modern culture.

The first highly publicized heresy trial of the postwar period involved Presbyterian pastor David Swing of Chicago. Swing argued that religious creeds, like all human expressions, were imperfect and might contain errors. "A creed is only the highest wisdom of a particular time and place," he declared. Francis Patton, professor of theology at the Presbyterian seminary in Chicago, compiled a list of Swing's alleged heresies. The basic issue, as Patton and his followers saw it, concerned doctrinal integrity: If you profess a creed, you should either stand by it in every detail or renounce it entirely. Swing's allies perceived the problem differently. In their minds, even Jesus Christ himself would not have been doctrinally pure enough for rigid Presbyterians like Patton. Tried for heresy in 1874, Swing was acquitted but still withdrew from his denomination and established an independent congregation.

An even more bitter controversy engulfed Presbyterian clergyman *CHARLES AUGUSTUS BRIGGS*, who had taught at his denomination's Union Theological Seminary in New York since 1876. In 1891, Briggs was inducted into the Chair of Biblical Studies at Union. In his inaugural address on "The Authority of Holy Scripture," Briggs denied both the verbal inspiration of the Bible and the doctrine of *INERRANCY*, beliefs that were the linchpins of conservative teaching on the Bible. Briggs's address led the Presbyterian General Assembly, the highest decision-making body of the denomination, to veto his professional appointment and charge him with heresy. His trial extended over three years, and in 1893, he was suspended from the Presbyterian ministry. Briggs, however, retained his position

at Union, for the seminary severed its relationship with Presbyterianism, and he soon joined the Episcopal Church.

Despite the widespread internal strife that Presbyterians in the North experienced over charges of heresy, other Protestant denominations in the 19th century, though not untouched by controversy, suffered fewer serious divisions. Congregationalists and Baptists, for example, with their loose ecclesiastical structures, did not have the means to enforce doctrinal conformity and thus offered a relatively free field for the growth of liberal ideas. While both the Episcopal Church and the Methodist Episcopal Church possessed the organizational cohesion to prevent theological innovation, neither had an ethos attuned to hunting down suspected heretics. Episcopalians had traditionally adopted a policy of theological comprehensiveness, and Methodists were more concerned with proper behavior and heartfelt devotion than with correct beliefs. Finally, in the conservative South, the few outbreaks of apparent heresy (e.g., Crawford Toy among the Southern Baptists and James Woodrow among the southern Presbyterians) were squelched so swiftly that orthodoxy remained virtually unsullied in the region as a whole.

In American Protestant circles, accusations of heresy that agitated churches in the 19th century—questions of biblical authority and subscription to traditional creeds—surfaced again in the fundamentalist (see FUNDAMENTALISM) controversy of the 20th century. Protestants continued to divide into liberal and conservative camps and debate the meaning of their beliefs. Roman Catholics also faced controversies about heresy in that same period. Unlike Protestants, whose debates centered on interpretations of the Bible, Roman Catholics considered the appropriate relationship of their church to American society and to the modern age.

In an apostolic letter entitled *Testem Benevolentiae*, addressed to Cardinal JAMES

GIBBONS of Baltimore in 1899, Pope Leo XIII condemned a heresy he called AMERICANISM. According to the letter, Americanism was an unfortunate outgrowth of the political liberties that citizens of the United States enjoyed. Leo repudiated the idea that the church should either adapt itself to its secular environment or introduce greater individual freedom of belief. Four years earlier, in the encyclical *LONGINQUA OCEANI*, the pope had cautioned Catholics against thinking that the separation of church and state Americans celebrated was a desirable arrangement for Roman Catholicism generally. This was to counter the statements of bishops of the time who had expressed enthusiastic opinions about their church's relationship with American culture. However, since Cardinal Gibbons later responded that no church leader ever held the exact position Leo condemned, Americanism has often been dismissed by American Catholics as a "phantom heresy."

Heschel, Abraham Joshua (1907–1972)

A leading Jewish theologian and social activist, Abraham Joshua Heschel bridged the gulf between traditional religious practice and modern society. Heschel understood that the problem of secular society was not unbelief, but the inability to believe. This inability caused individuals to focus on themselves. To overcome that self-absorption, Heschel formulated a theology that articulated traditional Jewish understandings in light of modern philosophical and psychological concepts.

Born in Warsaw, Poland, in 1907, and descended from a long line of religious scholars and Hasidic (see HASIDISM) rabbis, Heschel's vocation as a theologian now seems predestined. Following a traditional religious education in which he immersed himself in

the study of the Talmud and the Kabbala, Heschel undertook a secular education, first at a Yiddish *gymnasium* in Lithuania, and later at the Hochschule für die Wissenschaft des Judentums and the University of Berlin. Expelled from Germany in 1938, he returned to his native Poland. An offer of a professorship at Hebrew Union College found Heschel out of the country when the Nazis invaded Poland, thereby saving him from the horrors of the Holocaust.

Arriving in the United States in 1940, Heschel taught at Hebrew Union College (Cincinnati, Ohio) for five years, leaving in 1945 for the more traditional and congenial atmosphere of Jewish Theological Seminary. There he served as professor of Jewish ethics and mysticism until his death on December 23, 1972.

During the early 1950s, Heschel's work began to attract widespread popular attention, beginning with the 1951 publication of *Man Is Not Alone*. Already a respected interpreter of the Jewish tradition, Heschel addressed in his theological work the existential questions of modern humanity, primarily the problem of meaninglessness. Meaninglessness, for Heschel, resulted from modern humanity's inability to encounter the God of the Bible. Cut off from community and skeptical of supernaturalism and miracles, modern humanity lacks the location, experience, and language necessary to experience God as a concerned creator.

The fact that God was a living God, not some impersonal being or unmoved mover, was central to Heschel's theology. The living God of the Bible was an empathic God who needed humanity and expressed that need in demands made upon humanity. Faith is humanity's way to respond to these demands. In responding to divine demands, humanity simultaneously experiences itself as the object of divine concern. From this interchange, faith and religious feeling, and thereby meaning, emerge.

Heschel's significance for contemporary American Judaism was not limited to his theological work. He was a public figure, perhaps the preeminent public figure in traditional Judaism. Heschel was among the earliest to voice his support for Soviet Jews, demanding that they be allowed to practice their religion and to emigrate. Heschel's advice was significant in the negotiations behind the declaration on the Jews that emerged from VATICAN COUNCIL II. This "Declaration on the Relationship of the Church to Non-Christian Religions" (*Nostra aetate*) was a turning point in the Roman Catholic Church's understanding of Jews and Judaism. It rejected the view that Jews were responsible for the death of Jesus and condemned ANTI-SEMITISM.

Heschel's social views were not limited to Jewish issues, however. He was a vocal supporter of the CIVIL RIGHTS MOVEMENT, labeling racism a cancer of the soul and an unmitigated evil. Heschel marched with MARTIN LUTHER KING, JR., at Selma and was jailed for his activities. He opposed the VIETNAM WAR and added his voice to those demanding American withdrawal.

This combination of traditional religious views and social action was a hallmark of Heschel's theology. As a traditionalist, he took the reality of evil seriously. He wrote, "There is one line that expresses the mood of the Jewish man throughout the ages: *'The earth is given into the hand of the wicked'*" (Job 9:24). Humanity cannot ignore responsibility, however, for we are commanded to love good and hate evil. "At the end of days evil will be conquered by the One; in historic times evils must be conquered one by one."

(See also CONSERVATIVE JUDAISM; JUDAISM.)

high-church tradition See ANGLICANISM.

Higher Christian Life movement The Higher Christian Life movement originated in the late 19th century among American Protestants who believed in the possibility of Christian PERFECTIONISM. Although the Perfectionist ideal was first espoused by the HOLINESS MOVEMENT that emerged out of American Methodism, many members of non-Methodist denominations both in Great Britain and in the United States were influenced by it. The spirituality embodied in the Higher Christian Life was further articulated in the Keswick teachings, a related religious movement that began in England in 1876.

The idea of Christian perfection was originally popularized in the 1830s by Presbyterian revivalist CHARLES G. FINNEY and his colleague ASA MAHAN, a Congregational minister and first president of Oberlin College in Ohio. Both Finney and Mahan had read Methodist founder John Wesley's *Plain Account of Christian Perfection* and believed absolute obedience to God's laws was possible in the present life. Mahan applied Christian Perfectionism to social reform activities, notably the campaign against slavery. In the same period, Methodist evangelist PHOEBE PALMER stressed the importance of entire SANCTIFICATION, a religious experience by which the Christian became consecrated wholly to God.

The urban revivals of 1857 and 1858, with their noontime prayer meetings and interdenominational lay leadership, helped spread Perfectionism throughout much of the United States. In the optimistic moral climate of mid-19th-century America, the expectation that a Christian *could* overcome sin seemed completely reasonable. In 1858, Presbyterian minister William E. Boardman, a frequent participant in Palmer's "Tuesday Meetings for the Promotion of Holiness," published *The Higher Christian Life*. This book furnished a classic statement of how a Christian might win victory over sin. Boardman was instrumental in attracting his fellow Presbyterians, as well as Quakers, Congregationalists, and Baptists, to the growing Holiness revival.

Immediately following the 1857–58 revival, both Finney and Palmer conducted revivals in the British Isles. A few years later, the husband-and-wife team of Robert Pearsall and Hannah Whitall Smith further spread Holiness teaching in Great Britain. Raised as Quakers, the Smiths had each experienced an emotional "baptism of the Holy Spirit" after attending Methodist camp meetings in the late 1860s. On a trip to England in 1872, they spoke publicly about those experiences of sanctification and soon became popular speakers at Holiness meetings. Hannah Smith's *The Christian's Secret of a Happy Life*, published in 1875, also became an important devotional guide. She summarized her beliefs in an analogy that compared Christians to clay in God's hands: "In order for a lump of clay to be made into a beautiful vessel, it must be entirely abandoned to the potter, and must lie passive in his hands."

In the early 1870s, Hannah and Robert Smith joined William Boardman in promoting Holiness teaching in England. Later, at Oxford in the summer of 1874, the Smiths, Boardman, and Asa Mahan participated in an influential convention. Anglican clergyman T. D. Harford Battersby, who had attended the Oxford convention, organized an open-air

conference at his parish in Keswick, a small town in northwest England. The first Keswick conference took place in July 1875. An annual event thereafter, it became one of the principal institutions of the Holiness movement. Keswick teachings were imported back to the United States in the 1880s by American revivalist DWIGHT L. MOODY, who had conducted successful revivals in Great Britain from 1881 to 1884.

Americans always were influential at Keswick, and in 1913, a separate American organization was born under the leadership of Charles G. Trumbull and Robert C. McQuilkin of Pennsylvania. Trumbull had experienced an intense conversion to what he called the "Victorious Life" in 1910. As editor of the weekly *Sunday School Times*, Trumbull transformed that journal into an organ of Keswick teaching. Trumbull and McQuilkin, then associate editor of the periodical, created Victorious Life conferences, a series of summer gatherings held at various locations along the East Coast beginning in 1913. In 1924, the Victorious Life conference was moved to its present home at Keswick Grove, New Jersey.

Unlike other groups within the Holiness movement, the Higher Christian Life and Keswick circle never formed a separate denomination but remained simply a conglomerate of individuals committed to common ideals. This group was distinctive because it owed far more to CALVINISM than to the ARMINIANISM espoused by most Holiness advocates. Although the Arminian tradition, which typified the Methodist churches, tended to stress that Christians might overcome all conscious sin by their cooperation with God, Calvinists customarily underscored believers' continuing sinfulness and the passivity of the process of sanctification. Thus, Keswick leaders spoke of "yielding" to God's grace and accepting the "suppression," not the eradication, of one's sinful proclivities. The result of sanctification was not merely a pure heart but visible Christian service as well.

The Higher Christian Life movement, like the Holiness movement generally, offered Christians a sense of the certainty of their salvation. This idea became popular in many segments of American Protestantism. It spread throughout the Protestant churches in the early 20th century and is now a distinguishing feature of EVANGELICALISM in the United States.

higher criticism See BIBLICAL INTERPRETATION.

Hinduism Hinduism, one of the world's major religious traditions, exists in the United States both as the faith of Asian Indian immigrants and their descendants and as a religious tradition that has influenced European-American sympathizers and adherents.

Hindu immigrants came to the United States later than their Buddhist counterparts from China and Japan, yet Hinduism preceded Buddhism as an intellectual influence. American interest in Hinduism dates back at least to *India Christiania*, written by the Puritan divine COTTON MATHER in 1721. The first sympathetic treatment of Hinduism appeared in *An Alphabetical Compendium of the Various Sects* (1784) by the Unitarian Hannah Adams. Widespread American interest in Hinduism was not sparked, however, until after English translations of Hindu religious texts such as Charles Wilkins's *Bhagavad Gita* (1785) and Sir William Jones's *The Laws of Manu* (1794) began to appear in the last two decades of the 18th century. One influential book that used these translations was *A Comparison of the Institutions of Moses with Those of the Hindoos and Other Ancient Nations* (1799) by the British Unitarian JOSEPH PRIESTLEY.

Indians who came to America brought their religious practices and customs with them. Hindu Festival of India, Edison, New Jersey, July 1991. (Steven Gelberg)

Although scholars in the nascent field of academic Orientalism used their newfound knowledge of Sanskrit to produce translations of Hindu scriptures throughout the 19th century, nothing did more to popularize Hinduism in America during those hundred years than New England TRANSCENDENTALISM. RALPH WALDO EMERSON was introduced to Asian religious traditions at a young age by his aunt Mary Moody Emerson, a Unitarian who saw in the Hindu monotheism of the Indian reformer Rammohun Roy a faith that mirrored her own. Emerson's writings did not begin to reflect his Asian interests until the appearance, beginning in the 1840s, of poems such as "Hamatreya" and "Brahma" and essays like "Oversoul," "Illusions," and "Compensation."

While Emerson was moved most deeply by the *Bhagavad Gita*, an epic narrative, HENRY DAVID THOREAU, another transcendentalist, was more influenced by *The Laws of Manu*, a work of Hindu ethics. Thoreau scoffed at the thought of joining any organized religion, but he came close to referring to himself as a Hindu when, after his experiment at Walden Pond, he affirmed, "To some extent, and at rare intervals, even I am a yogin."

Perhaps more than Emerson and Thoreau, so-called lesser Transcendentalists such as JAMES FREEMAN CLARKE helped to transform Hinduism into a legitimate religious alternative in America. Both Clarke's *Ten Great Religions: An Essay in Comparative Theology* (1871) and Samuel Johnson's *Oriental Religions and*

Their Relation to Universal Religion (1872) attempted to portray Hinduism in a favorable light, though both ultimately opted for a form of Christian liberalism.

Theosophists (see THEOSOPIHY) like HELENA PETROVNA BLAVATSKY and HENRY STEEL OLCOTT built upon the transcendentalists' interest in Asia. Unlike Emerson and Thoreau, Blavatsky and Olcott actually moved to India and immersed themselves in Hindu culture. The Theosophists were initially attracted more to Buddhism than to Hinduism, but Annie Wood Besant changed that when she succeeded Olcott as president of the Theosophical Society in 1907. A British socialist turned Theosophist, Besant championed Hinduism as the religion par excellence for the modern West. Indian nationalists recognized her in 1917 for her efforts on behalf of their country and its traditions by electing her the only Western president of the Indian National Congress. Her books and lectures educated a generation of American Theosophists and Theosophical sympathizers about Hinduism.

Another Theosophically-inclined Hindu, the Indian-born Mohandas K. Gandhi (1869–1948), had a more profound effect on American religious life than Besant. Attracted to Theosophy in his youth, Gandhi is most famous for his nonviolent civil disobedience. Gandhi adapted this theory in part from JAINISM, an ascetic South Indian tradition whose ethics center on the practice of ahimsa, or nonviolence toward all living beings. Gandhi's influence on MARTIN LUTHER KING, JR., and through him on the American CIVIL RIGHTS MOVEMENT is well known. But Gandhi's work was also closely followed by black newspapers and black intellectuals as early as the 1920s.

Hinduism's place in America changed dramatically when it began to arrive in person rather than on the page. A few Asian Indians came to the United States as early as 1820, but this immigrant flow was nothing more than a trickle until the last decade of the 19th century, when railroad work began to

draw Indian laborers to western Canada and the United States. Still, by the time this first wave was cut off with the passage of restrictive immigration legislation in 1917, only about 6,000 Asian Indians had entered the United States, and the majority of those were Sikhs. Not until the repeal of the Asian Exclusion Act in 1965 did large numbers of Hindus emigrate to America.

The first Hindu missionaries to the United States came in 1893 in the wake of the WORLD'S PARLIAMENT OF RELIGIONS, a gathering of liberal religionists from around the world held in conjunction with the Chicago World's Fair. Like the Asian Indian immigrants who preceded them, these Hindu missionaries worked to transplant many of the diverse beliefs and practices that constitute Hinduism. They tended, however, to stress modernist elements of Hinduism—monotheism, caste reform, and the tradition's compatibility with science and with other religions—emphasized during the 19th century reform movement that historians have called the Hindu Renaissance.

One delegate to the parliament and the first great Hindu missionary to the United States was SWAMI VIVEKANANDA. A disciple of Ramakrishna, a Hindu mystic and devotee of the Hindu goddess Kali, Vivekananda had come to the United States in an effort to spread in the West the truths and practices of Advaita Vedanta, a nondualistic form of Hinduism that postulates the unity of the impersonal God, or Brahman, with the individual soul, or Atman. A smashing success at the parliament, Vivekananda stayed in America long enough to found the VEDANTA SOCIETY in 1894 as a branch of his India-based Ramakrishna Mission. The Vedanta Society, which now has centers in numerous American cities, aims to spread the doctrines and disciplines of Vedanta and to promote religious tolerance by preaching the fundamental unity of all religions.

The second important Hindu missionary to the United States also came as an invitee to

an interreligious conference. SWAMI PARAMAHANSA YOGANANDA arrived in Boston in 1920 as a delegate to the International Congress of Religious Liberals. Unlike Vivekananda, who eventually returned to India, Yogananda took up residence in the United States. His SELF-REALIZATION FELLOWSHIP (SRF), which is now based in Los Angeles, aims to teach the principles of Hinduism and the techniques of *kriya* yoga, a tantric discipline in which practitioners seek to achieve God-realization by manipulating their kundalini, or spiritual energy. Like the Vedanta Society, the SRF emphasizes commonalities rather than differences between Hinduism and Christianity. Its approach, however, is more practical and less philosophical, emphasizing the therapeutic and material benefits of Hindu yoga.

Although Vivekananda and Yogananda did more to arouse interest in Hinduism than to earn converts to it, a few Americans did formally convert to Hinduism early in the 20th century. Some went on to become teachers themselves. The Chicago attorney and NEW THOUGHT advocate William Walker Atkinson, for example, published numerous books on Hinduism, including *Fourteen Lessons in Yoga Philosophy and Oriental Occultism* (1903), under the name of Swami Ramacharaka. A more controversial convert was Pierre Bernard, the founder of the Tantrik Order in America, who referred to himself as "Oom the Omnipotent."

Thanks to the efforts of Vivekananda, Yogananda, Atkinson, and Bernard, some Americans became Hindus in the early 20th century, but Hinduism did not become a popular religious alternative in America until the 1960s. Three factors conspired to create a favorable climate for American Hinduism. The first was the achievement of Indian independence in 1947. Independence fostered a proliferation of new religious movements in India, and many of those movements made their way to the United States. A second factor that spurred this Hindu turn was the COUN-

TERCULTURE, which gave a boost to alternative religions of all stripes. The final and decisive factor was the lifting in 1965 of the Asian Exclusion Act, which had restricted the flow of Chinese, Japanese, and Asian Indian immigrants to the United States since 1924.

Following this legislative watershed, a panoply of Asian Indian gurus moved to America and established followings here. Yogi Bhan arrived in the United States in 1969 and gathered devotees into a collection of Sikh-influenced communes (see SIKHISM) called the Healthy, Happy, Holy Organization. The "boy guru" Maharaj-ji came to America in 1970 and brought his "lovers of God" into the Divine Light Mission (later, Elan Vital). Swami Muktananda Paramahansa toured the United States on three occasions between 1970 and 1981, and his followers founded the Siddha Yoga Dham Associates (SYDA) in 1974. The most controversial of these new gurus was Bhagwan Rajneesh, who arrived in 1981 and established a short-lived commune in eastern Oregon called Rajneeshpuram. This group was criticized by anticult groups and investigated by the U.S. government for a host of irregularities, including authoritarianism, drug use, and weapons stockpiling. Rajneesh himself was arrested in 1985 for violating immigration laws and deported.

Other Asian Indian gurus who did not actually visit also earned substantial American followings. The International Sathya Sai Baba Organisation promotes the teachings of the faith healer Sathya Sai Baba, while centers associated with the Indian-based Sri Aurobindo Society spread the yogic techniques of the poet-philosopher Sri Aurobindo Ghose. Even a 19th-century Hindu guru has merited an American audience. Brought to Flushing, New York, from the Indian state of Gujarat in 1972, the Swaminarayan Mission and Fellowship promotes the worship of the Indian saint Sri Swaminarayan not only as an exemplary devotee of the Hindu deity Vishnu but also as an incarnation of God on Earth.

Finally, a third class of gurus, American-born converts to Hinduism, achieved acclaim in the United States in the 1960s and 1970s. Franklin Jones (later known as Da Free John and Avatar Adi Da Samraj) split off from Swami Muktananda Paramahansa's SYDA to organize the Dawn Horse Fellowship (subsequently renamed The Free Daist Avatatic Communion). Richard Alpert, a Harvard professor of psychology and friend of the former LSD investigator Timothy Leary, took the name of Baba Ram Dass after embracing Hinduism and earned American followers. Not surprisingly, these non-Indian gurus tend as a rule to Americanize Hinduism more freely than their Asian Indian counterparts. Many of them borrow generously not only from Hinduism but also from other Asian traditions. Among the most highly Americanized Hindu societies in America is the Hanuman Foundation of Baba Ram Dass. *Be Here Now* (1971), a cartooned text that functions as an unofficial scripture for the organization, draws on ideas derived from psychoanalysis, Tibetan Buddhism, Sikhism, Hinduism, Taoism, Christianity, and Judaism.

Of all the Hindu movements that emerged in America after 1965, two stand out most prominently: the TRANSCENDENTAL MEDITATION (TM) movement of MAHARISHI MAHESH YOGI and the INTERNATIONAL SOCIETY FOR KRISHNA CONSCIOUSNESS (ISKCON) of A. C. BHAKTIVEDANTA SWAMI PRABHUPADA.

Maharishi Mahesh Yogi came to America in 1959 to lecture on an ostensibly scientific technique for spiritual liberation called Transcendental Meditation. Soon he had gathered hundreds of younger Americans into his Spiritual Regeneration Movement (SRM). TM provides classes in a simplified version of the teachings of nondualistic Hinduism, or Advaita Vedanta, and the practices of yoga. TM practice consists primarily of chanting and meditating on a mantra personally selected for the student by his or her guru. Maharishi Mahesh Yogi and his movement benefitted

greatly from the Beatles' well-publicized but short-lived flirtation with TM in the 1960s.

A second important form of Hinduism transplanted to the United States in the 1960s was the devotional Hinduism of the International Society for Krishna Consciousness. Like the TM movement, the "Hare Krishnas" organized themselves around a charismatic guru, in this case founder A. C. Bhaktivedanta Swami Prabhupada. Prabhupada was a devotee of Lord Krishna, who is seen by most Hindus as one divine descent of Vishnu among many, but by Hare Krishna followers as the one Supreme Lord. Prabhupada arrived in the United States in 1965 and settled in Los Angeles.

Unlike most other Hindu missionaries to America who stressed Hindu philosophy, he emphasized a simple ritual: chanting a mantra to Krishna. ISKCON initially attracted an almost exclusively European-American membership, but more recently it has appealed to Indian immigrants as well. Members of ISKCON distinguish themselves from other Americans by adopting Indian names, wearing saffron robes, and shaving their heads after the manner of Hindu holy people.

Although both TM and the Hare Krishna movement can be seen as modern Western inventions, they can also be viewed as continuations of more long-standing reform movements within Hinduism. ISKCON members trace their tradition back to the 16th-century Indian reformer Caitanya, while Maharishi Mahesh Yogi acknowledges his primary debt to the eighth-century Hindu philosopher Shankara.

An important sidelight to all of these recent Hindu imports is the ANTICULT MOVEMENT. Asian Indians have been persecuted in America at least as early as the anti-Indian riot in Bellingham, Washington, in 1907. And Hinduism came under fierce attack in books such as Katherine Mayo's *Mother India* (1927) and Mersene Sloan's *The Indian Menace* (1929). But opposition to American Hinduism did not become organized until the 1970s, when relatives of some converts

began the controversial practice of deprogramming in an attempt to deconvert their loved ones from "heathen" faiths. The widely publicized attempts by parents to save their children from the Indian gurus in the 1960s and 1970s points to the fact that these Hindu-based movements, like the earlier Zen movement within American Buddhism, tended to attract non-Asian individuals rather than families. Hindu families who came to America after the repeal of the Asian Exclusion Act built less controversial and more stable groups centered on a venerable Indian institution: the Hindu temple.

In the wake of the new immigration legislation of 1965, immigration from Asia in general and from India in particular skyrocketed. The 2000 census found 1.6 million Asian Indians living in the United States, most of them Hindus. These new immigrants differed significantly from the cohort of the first quarter of the century. While earlier Indian immigrants had come from rural areas to work on American farms, the post-1965 immigrants came to a much greater extent from cities and worked in professional occupations. And while almost all of the earlier immigrants were men, the new immigrants came far more frequently as families. As a result, the more recent immigrants had both the means and the motive to build new temples.

Hindu temples arose in San Francisco and Los Angeles before World War II, but not until the 1970s did Hindu temples begin to spring up in many major American cities. In 1977, Asian Indians consecrated America's first Indian-style Hindu temples: the Sri Ganesha Temple (now the Maha Vallabha Gnapati Devasthanam) in Flushing, New York; and the Sri Venkateswara Temple in Pittsburgh, Pennsylvania. Since that time, Asian Indian immigrants and their children have built roughly 150 Hindu temples. According to Harvard University's Pluralism Project, in 2001, there were more than 800 Hindu centers in the United States. Estimates regarding the num-

ber of American Hindus vary widely, with 1.5 million probably the best number in 2005.

The construction of Hindu sacred spaces in America testifies to the fact that Hinduism has gone beyond influencing sympathetic American intellectuals to establishing itself on American soil. In the process of being transplanted here, Hinduism is also taking on new and decidedly American forms. Although this process is more rapid among European- and African-American students of Indian gurus, it is also evident among Indian-American devotees at Hindu temples.

One of the most obvious and important Americanizations of temple-based Hinduism is the tendency toward ecumenism. Two facts of Hindu life in America support this tendency: the relatively small size of the Indian-American population in any given U.S. city and its astonishing diversity. In India, there are typically numerous temples in a city. Many are dedicated to either Vishnu or Shiva, two deities who along with the impersonal (and therefore almost entirely unworshipped) Brahma constitute what some have described as the Hindu "trinity." In American cities, however, there is often no more than one Hindu temple. Hindu temples in the United States attempt to appeal to all Hindus in their area by making room for a variety of gods and a wide array of devotional practices. Many American temples, including those in Flushing, New York, and Calabasas, California, have shrines dedicated to both Shiva and Vishnu.

Hindu temples in the United States often look on the outside like temples in India. On the inside, however, they appear like American megachurch complexes. There are often sanctuaries for congregational worship (rare in India) and kitchens, meeting rooms, and schoolrooms in the basement for social, cultural, and educational activities. One scholar has referred to this development as "split-level Hinduism."

Thus, even as Hinduism makes American religion more pluralistic, America is further-

ing the already considerable pluralism within Hinduism. ISKCON members, for example, have taken their movement back to India, and some American-born Hindu gurus are beginning to attract followers in India. In this way, the most multifarious of the world's religions is becoming even more diverse.

Hobart, John Henry (1775–1830) John Henry Hobart was the first Episcopal bishop of New York and leader of the traditionalist, or “high church,” party in the early 19th century. Hobart stressed the importance of the EPISCOPACY and a general dislike for non-Anglican Protestantism. He looked with suspicion upon ANGLICANISM’S Reformation heritage and carefully traced the historic roots of the EPISCOPAL CHURCH back to the first-century Christian community.

Hobart was born in Philadelphia on September 14, 1775. After graduating from what is now Princeton University in 1793, he studied with William White, bishop of Pennsylvania. Ordained in 1798, Hobart served for brief periods in churches in New Brunswick, New Jersey, and in Hempstead, New York. After being called as an assistant minister at

Trinity Church in New York City in 1801, he quickly rose to prominence and was consecrated bishop of New York in 1811. Extremely active in missionary work, he preached as far west as Michigan and did much to increase the size of the Episcopal Church.

Throughout his career and in numerous tracts and books, Hobart championed high church Episcopalianism. The high church tradition he inherited from the Church of England claimed two essential bases of authority: a theological one, grounded in Anglicanism’s historical continuity with early Christianity, and a political one, secured by the ecclesiastical establishment in England. Although the outcome of the War for Independence forced American Anglicans to abandon their establishmentarian position, they continued to emphasize that membership in the church, the visible society of the redeemed, was essential to the Christian faith. Hobart’s most famous work, *An Apology for Apostolic Order and Its Advocates* (1807), offered a vision of the primitive church, surrounded by a hostile population, as the most desirable model for the Episcopal Church to follow. When called upon to define the true nature of Christianity, Hobart stressed the formal and external over the experiential and internal. Although he did not live to see its arrival in America, many of his theological emphases matched the concerns of the later Anglo-Catholic movement (see ANGLO-CATHOLICISM).

Hobart died on September 12, 1830, in Auburn, New York, while undertaking a visitation of his diocese.

Hodge, Charles (1797–1878) Charles Hodge was a Presbyterian minister and his denomination’s most prominent theologian

in 19th-century America. He was noted as a staunch supporter of CALVINISM and of a highly conservative, rationalistic method of BIBLICAL INTERPRETATION known as SCOTTISH COMMON SENSE REALISM.

Hodge was born in Philadelphia on December 28, 1797. He graduated from what is now Princeton University in 1815 and from Princeton Seminary in 1819. He then taught biblical literature at the seminary between 1820 and 1826. In 1826, he left the United States for three years of European study at Paris and at Halle and Berlin in Germany. In that period, he encountered the doctrinal indifference of both German PIETISM and the liberal theology of Friedrich Schleiermacher. As a result of his experience in Europe, Hodge returned to Princeton in 1828 with a determination to repel all threats to Protestant orthodoxy.

Patterning himself after Archibald Alexander, his mentor at Princeton, Hodge was guided by two principles. First, he was thoroughly opposed to intellectual innovation of any kind. He was content simply to defend beliefs contained in the Westminster Confession, the 17th-century theological document that is the Presbyterian standard of faith. Hodge's statement that "a new idea never originated in this Seminary" reflects his straightforward adherence to Protestant traditionalism at Princeton. Second, Hodge considered the formulation of theology to be merely a process of inductive reasoning. A Christian, he believed, could construct an objective system of truth by studying the "facts" contained in the Bible, which he saw as an infallible source of religious truth. This belief, the essence of the Scottish Common Sense philosophy, reflects the concern for scientific method that was a hallmark of 19th-century intellectual life.

For many years, Hodge was the leader of the ultraconservative forces within Presbyterianism. As an Old School (see NEW SCHOOL/OLD SCHOOL) Presbyterian, he resisted efforts to cooperate with other denominations or to alter the theological standards of his denomi-

nation in any way. Thus, he opposed the modifications of Calvinist teaching on human sin and free will that NATHANIEL W. TAYLOR advanced, and he fought REVIVALISM and the revivalistic "new measures" that CHARLES G. FINNEY popularized. Hodge was not troubled when the Old and New School factions split into two separate denominations in 1837, and he tried to prevent the eventual reunification of Presbyterianism in the North in 1869.

Hodge's publications were numerous. He served as editor of the *Biblical Repertory* (later renamed the *Princeton Review*) from 1825 to 1872. He wrote several commentaries on books in the New Testament, and his *What Is Darwinism?*, published in 1873, contains one of the earliest attacks on Charles Darwin's theory of EVOLUTION. Probably Hodge's most enduring work is his three-volume *Systematic Theology*, which appeared in the early 1870s. He trained more than 2,000 students during the years he taught at Princeton. His son A. A. Hodge and his student BENJAMIN B. WARFIELD both maintained the conservative tradition within Presbyterianism and made important contributions to debates on biblical authority during the fundamentalist (see FUNDAMENTALISM) controversy in the late 19th and early 20th century.

Hodge served for nearly six decades as a professor at Princeton. He died there on June 19, 1878.

Holiness movement An American Protestant movement that began in the mid-19th century, Holiness focused on the possibility

of a Christian believer's gaining complete freedom from sin in the present life. This conviction first found expression among two major groups of Americans: METHODISTS seeking a return to the simplicity of the early history of their denomination, and participants in the revivals and reform activities inspired by the SECOND GREAT AWAKENING. By the end of the 19th century, large numbers of Holiness advocates had become alienated from the mainline denominations and began forming new congregations and churches, notably, the CHURCH OF THE NAZARENE and the SALVATION ARMY. Today most Holiness denominations emphasize the gifts of the Holy Spirit, including divine healing, and lively, enthusiastic forms of worship.

According to traditional Protestant teaching, Christians pass through two main stages on the way to salvation. At the first stage (JUSTIFICATION), one's sins are forgiven by God; at the second stage (SANCTIFICATION), believers are enabled to live godly lives. The Holiness movement has always had its greatest institutional impact upon American Methodist denominations, for, while Calvinists such as the Presbyterians have generally accentuated the importance of justification, Methodists have stressed sanctification. As Methodist founder John Wesley taught, serious Christians might even attain release from all conscious sin and achieve moral PERFECTIONISM. Holiness leaders speak of "entire sanctification" or the "second blessing" of the Holy Spirit as the experience that perfects the believer's will.

CHARLES G. FINNEY, the famed revivalist of the Second Great Awakening, helped popularize Wesley's Perfectionist ideals in mid-19th-century America. Finney believed that human beings could and should strive to seek God's blessing. Despite the persistent Calvinist belief that men and women were predestined for either heaven or hell, Finney taught that God had given Christians power to help decide their eternal fate. After the founding of Oberlin College in Ohio in 1833, Finney, the

school's first professor of theology, and ASA MAHAN, Oberlin's president, explored together the doctrines of sanctification and perfection in Wesley's writings. In 1839 in *Scripture Doctrine of Christian Perfection*, Mahan described how believers might attain victory over sin through the presence of Jesus Christ within their hearts.

PHOEBE PALMER, a lay Methodist evangelist, was another prominent figure in the early Holiness movement. She led a series of weekly prayer meetings for "the Promotion of Holiness," gatherings that featured prayer and personal religious testimonies. In Palmer's view, holiness was immediately available to the believer through faith in Jesus Christ. Conversion was the first blessing of God's grace. Entire sanctification occurred next, when a believer surrendered everything to God. The simplicity of this message won many disciples to Palmer's cause.

The urban revivals of 1857 and 1858, with their noontime prayer meetings and interdenominational lay leadership, further spread Christian Perfectionist beliefs. In the sanguine religious climate of mid-19th-century America, the expectation that a person could overcome sin seemed incontrovertible to many Christians, even members of Calvinist denominations. In 1858, Presbyterian minister William E. Boardman, a frequent participant in Palmer's prayer meetings, published *The Higher Christian Life* (see HIGHER CHRISTIAN LIFE MOVEMENT). This book furnished a classic statement of how a Christian might win victory over sin. Boardman was instrumental in attracting his fellow Presbyterians, as well as Quakers, Congregationalists, and Baptists, to the growing Holiness revival.

The same spiritual impulses that helped build up Christian denominations sometimes divided them as well. For example, the political implications of Holiness doctrines—the belief that personal and social sanctity were related—occasioned a major exodus from the ranks of the Methodist Episcopal Church in

the 1840s. Although Methodists had once considered slaveholding to be sinful and forbade those who owned slaves to be church members, they moderated their views in the early 19th century. But rising abolitionist sentiment in the North brought the issue to the center of the church's life. When his denomination failed to condemn slavery unequivocally, New England clergyman Orange Scott convinced several thousand Methodists to withdraw and join him in organizing the Wesleyan Methodist Church. This denomination later became one of the principal Holiness churches in the United States.

The CIVIL WAR (1861–65) brought the initial phase of the Holiness movement to an end, and religious attention centered instead on men in the armies. Not long after the war's conclusion, however, Methodist pastors John Inskip and William B. Osborn issued a call for a camp meeting to promote Christian sanctification. This event, held in Vineland, New Jersey, in July 1867, marked the beginning of a new stage in the Holiness movement. After the Vineland camp meeting, many involved in it formed what became known as the National Holiness Association and chose Inskip as their president. Although the National Holiness Association (now the Christian Holiness Association) was founded as an interdenominational organization, its focus quickly changed and became almost exclusively Methodist. Led by a close-knit group of Methodist revivalists, the association sponsored 52 CAMP MEETINGS between 1867 and 1883.

In the early 1870s, the husband-and-wife team of Robert Pearsall and Hannah Whitall Smith, who had each experienced an emotional "baptism of the Holy Spirit" a few years before, joined William Boardman in promoting Holiness teaching in Great Britain. At Oxford, England, in the summer of 1874, a convention was held in which the Smiths, Boardman, and Asa Mahan all participated. Anglican clergyman T. D. Harford Battersby,

who had been inspired by the Oxford convention, organized an open-air conference at his parish in Keswick in July 1875. This Keswick conference soon became an annual event and one of the principal institutions of the Holiness movement.

By the mid-1870s, a growing spirit of "comeoutism" emerged in American Methodism. Despite its official commitment to keeping Methodists loyal to their denomination, the National Holiness Association tended to encourage, first, division and, eventually, the formation of new churches. Methodist denominational leaders also grew concerned about the emotionalism displayed at Holiness gatherings. When John P. Brooks, editor of *The Banner of Holiness*, left the Methodist Episcopal Church in 1885, he advocated the renunciation of denominations that suppressed Holiness and the creation of independent fellowships. "In the world but not of the world" became a popular Holiness aphorism, and participants in the movement began to condemn the worldliness they perceived among church members who had not experienced sanctification.

Daniel Sidney Warner's Church of God in Anderson, Indiana, was the first new church body spawned by the Holiness movement. Warner had been a member of a small German pietist sect from which he had been expelled in 1878 after his experience of entire sanctification. Believing that all existing denominations were antithetical to genuine Christianity, Warner and five others announced in 1881 that they had entirely freed themselves from ecclesiastical organizations. Only God, they claimed, could know who were true Christians. Despite these initial anti-institutional beliefs, Church of God leaders later decided that while the church itself could not be organized, the church's work should be. The Church of God is now headquartered at Anderson, Indiana. Emphasizing the restoration of primitive Christianity and faith healing, it has about 250,000 members.

Two of the largest Holiness bodies, the Church of the Nazarene and the Pilgrim Holiness Church, developed in a fashion similar to Warner's Church of God. Individuals first withdrew from the Methodist Episcopal Church, then formed independent Holiness fellowships, and finally organized separate denominations.

Phineas Bresee was pastor of the First Methodist Church in Los Angeles when members of his congregation requested him to call evangelists from the National Holiness Association to lead a revival. Bresee himself soon underwent an experience of sanctification that led him to renounce the Methodist ministry in 1895. Increasingly disturbed by the worldliness he alleged was corrupting American Methodism, Bresee founded a congregation known as the Church of the Nazarene that would welcome, rather than reject, the poor. The Church of the Nazarene quickly grew, and other Holiness bodies merged with it. The denomination reported an American membership of approximately 630,000 members in 2003.

Martin Wells Knapp, a Methodist pastor and founder of the Pilgrim Holiness Church, experienced sanctification in 1889 while reading the Bible. Although he organized an aggressive Holiness revival in Cincinnati, Ohio, he remained loyal to the Methodist Episcopal Church for a time. In 1897, however, Knapp and a handful of followers formed the International Holiness Union and Prayer League, and in 1901, he withdrew from Methodism altogether. Mergers with several other Holiness organizations eventually led to the formation of the Pilgrim Holiness Church in 1922. In 1968, the Wesleyan Methodist Church and the Pilgrim Holiness Church united and became the Wesleyan Church, a denomination that now contains about 120,000 members.

A number of other Protestant groups, not strictly Holiness denominations, were also influenced by the movement in the late 19th century. The Salvation Army, for example, was

founded by British Methodist William Booth in London in 1865 and brought to the United States in 1880. Booth and his wife, Catherine, intended the charitable system they developed to speed the work of saving the souls of the downtrodden. Acts of social relief were thought both to symbolize God's love for sinful, fallen humanity and demonstrate that the Salvationists took the social as well as the spiritual aspects of Christianity seriously. Booth's famous *In Darkest England and the Way Out* (1890) boldly proclaimed his goal: to save souls among a class of people often ignored by the more traditional Christian churches.

A. B. Simpson left the Presbyterian Church in 1881 in order to serve those neglected by traditional church structures. He had experienced the baptism of the Holy Spirit after reading William Boardman's *The Higher Christian Life* in 1874. Seven years later, after feeling that his weakened heart had been miraculously healed, Simpson was rebaptized by immersion. He organized a number of independent evangelistic and missionary ministries over the next few years, culminating in the formation of the Christian and Missionary Alliance in 1897. Simpson coined a phrase that expressed his version of the essential truths of the Christian gospel: "Christ our Saviour, Sanctifier, Healer, and Coming King." Although the Christian and Missionary Alliance was not intended to be a new denomination, but simply a movement bringing people from many churches together, by the 1960s, its leadership acknowledged that it, too, had become a separate denomination.

In the early 20th century, a crisis occurred that further disrupted the already disparate Holiness movement and marked the birth of another new religious phenomenon. Holiness advocates for many years had used the term *baptism of the Holy Spirit* to describe the "second blessing" or "deeper work of grace" that accompanied entire sanctification. Some preachers began to identify speaking in tongues, the miraculous gift that Jesus' disciples received

on the day of Pentecost (Acts 2), as the definitive sign that one had received Spirit baptism. The AZUSA STREET REVIVAL, which began in Los Angeles in April 1906, is generally regarded as the genesis of American PENTECOSTALISM. At that time, Holiness leader WILLIAM J. SEYMOUR gathered thousands of people into the three-year revival he led. Inspired by speaking in tongues and extraordinary healings, Seymour's followers organized new churches based upon Pentecostal teachings.

Because Holiness groups stress the Holy Spirit's power, worship in this tradition is enthusiastic and often accompanied by shouts of praise. In some churches, worshipers lift their arms into the air to show that they have been moved by the Spirit. Unlike Pentecostals, however, Holiness Christians disapprove of speaking in tongues. Prayers for healing also are routinely offered, and participants report experiences of being healed. Life on Earth, Holiness doctrine teaches, is a continual struggle to renounce the world, root out sin, and attain eternal salvation.

homosexuality, religion and The issue of homosexuality and religion as a public phenomenon began to play a major role in American religious history in the last third of the 20th century. While American Judaism and Christianity struggled with the issue most directly and publicly, other religions also had to address it. Questions of how congrega-

tions should respond to openly homosexual members, whether to ordain (see ORDINATION) gays and lesbians, and whether to perform marriages or commitment ceremonies for gay and lesbian couples increasingly dominated much of the organizational life of many denominations.

This development reflected a major shift in the histories of most religions found in the contemporary United States. With the possible exception of some variants within HINDUISM and some Native American traditions (see NATIVE AMERICAN RELIGIONS), the dominant historical view of most religious traditions in the United States has been that homosexuality is wrong. For Christians and Jews, this position primarily has rested on an interpretation of Leviticus 18:22 that seems expressly to condemn homosexual activity. Additional sources of opposition, particularly within the Catholic tradition, have come from an understanding of natural law, which viewed sexual activity as being primarily for the purpose of procreation. Sexual activity that thwarted this end violated natural law. Homosexuality was a sin. Additionally, until the late 20th century, homosexual activity was illegal in most jurisdictions and identified as a mental illness.

Drawing from the CIVIL RIGHTS MOVEMENT and the women's movement (see WOMEN, RELIGION AND) as well as from the growing social ethos of individual autonomy and freedom, a movement began that demanded greater acceptance for homosexuals and for an end to discrimination against them. The start of this movement usually is dated from the so-called Stonewall Riots in June 1969.

The move for greater acceptance of homosexuality and homosexuals also affected religion. The first major issue that religious organizations had to face was that of membership in the religion and in a particular congregation. If homosexuality were a sin, how could an open and practicing homosexual be allowed into a congregation? Certainly, congregations were filled with myriad individuals

who committed God alone knew what sins. They, at least, acknowledged the reality of the sin by keeping it private. Open and admitted homosexuals did not seem to acknowledge the sinfulness of their lives, so how could they be recognized and admitted into membership?

For many, particularly conservative Protestant denominations, there was no way to reconcile this tension. Many of these denominations made little effort to undertake such reconciliation. While some made explicit statements about welcoming all, the understanding was that homosexuality was one of the many things one would have to put away following conversion. This hostility to homosexuality on the part of conservative Christians and the hostility to conservative Christianity among liberal denominations led to the creation of the METROPOLITAN COMMUNITY CHURCHES.

Historically progressive denominations such as the UNITARIAN UNIVERSALIST ASSOCIATION, the UNITED CHURCH OF CHRIST, and REFORM JUDAISM had the least difficulty in affirming a position of welcoming gays and lesbians into membership. While this move met with some resistance, most members found it in keeping with their historic views, and it was easily accommodated.

More mainstream traditions had difficulty addressing the issues surrounding homosexuality and religion. More deeply committed to traditional teachings than the liberal movements, yet more open to changing social realities and with more theologically diverse memberships, these movements struggled for decades with their responses to homosexual membership, ordination, and gay marriage or commitment ceremonies.

The EVANGELICAL LUTHERAN CHURCH IN AMERICA, the UNITED METHODIST CHURCH, the PRESBYTERIAN CHURCH (U.S.A.) (PCUSA), and CONSERVATIVE JUDAISM had the greatest struggle in deciding on these issues. While most of these denominations could make a welcoming statement regarding homosexual membership, the issue of ordination became

increasingly divisive. The Presbyterian Church (U.S.A.)'s 1978 statement on homosexuality reflects these views. "Persons who manifest homosexual behavior must be treated with the profound respect and pastoral tenderness due all people of God. There can be no place within the Christian faith for the response to homosexual persons of mingled contempt, hatred, and fear that is called homophobia. Homosexual persons are encompassed by the searching love of Christ. The church must turn from its fear and hatred to move toward the homosexual community in love and to welcome homosexual inquirers to its congregations. It should free them to be candid about their identity and convictions, and it should also share honestly and humbly with them in seeking the vision of God's intention for the sexual dimensions of their lives."

Conservative Judaism shares a similar approach. A description of the consensus of its Committee on Jewish Law and Standards declared, "We all agree that homosexuals have the same rights and responsibilities, and bear the same sanctity, as all other Jews. We all agree that fellow Jews and congregations have a sacred duty eagerly to facilitate the spiritual growth and lovingly to welcome the participation of gay men and women—as we do all other Jews—in personal Jewish observance and learning, and in the religious and social lives of our communities."

The issue of ordination has presented different challenges. Again, while some of the more liberal religious traditions moved forward fairly quickly, most religious traditions in the United States moved much more slowly on this issue.

RECONSTRUCTIONIST JUDAISM has been quite welcoming. Since 1985, the Reconstructionist Rabbinical College has admitted gay and lesbian candidates into its rabbinical and cantorial programs. The Reconstructionist Rabbinical Association (RRA) welcomes homosexual marriages/commitment ceremonies and supports its members who officiate

at them. In 2006, the RRA elected a lesbian as its president.

Reform Judaism's leading rabbinical seminary, Hebrew Union College-Jewish Institute of Religion, began admitting openly gay students, and in 1990 the Reform movement's rabbinical association, the CENTRAL CONFERENCE OF AMERICAN RABBIS, declared that "all rabbis, regardless of sexual orientation, be accorded the opportunity to fulfill the sacred vocation that they have chosen."

The mainline denominations within Christianity, while moving forward on discussing the issue, have yet to shift their position on ordination. The United Methodist Church's (UMC) Book of Discipline declares, "the practice of homosexuality incompatible with Christian teaching." It continues by stating that "self-avowed practicing homosexuals cannot be ordained as ministers." This statement does, however, leave open the possibility of ordaining celibate homosexuals. The UMC's seriousness about this policy was demonstrated in 2005, when a minister was stripped of her clergy status after having been convicted of engaging in a lesbian relationship.

The Evangelical Lutheran Church in America (ELCA) has a policy similar to the UMC, although it has framed its position more positively, acknowledging that individuals with homosexual orientation may be ordained as long as they remain celibate. The ELCA regularly has revisited this issue, however. In its last vote on whether to ordain practicing homosexuals (2005), the measure failed by an exceedingly close margin of 503-490.

Like the UMC and the ELCA, the PCUSA has struggled with the issue of homosexuality and the church for several decades. In 2002, it reaffirmed its position that prohibits non-celibate same-sex relations for ministers and elders (as well as sexual relationships outside of marriage for heterosexuals). This position seemingly was softened in 2006, when its General Assembly voted to allow local pres-

byteries to give the church statute their own interpretation.

The level of tension and unease with the various options may have been epitomized by Conservative Judaism in 2006. In that year, its religious law committee issued three separate rulings on the ordination of gays and lesbians, each of which is authoritative. One of the rulings approved the ordination of celibate gays and lesbians and led Jewish Theological Seminary to open its rabbinical training program to admitted homosexuals.

In all these denominations, the struggle has proven quite divisive, often giving rise to separate movements of individuals who oppose actions that seem to undo traditional understandings of homosexuality and groups who see their role as welcoming and supporting gays and lesbians in the denomination. For no denomination in the United States has the issue proven more divisive than for the EPISCOPAL CHURCH.

Although among the first of the more mainstream denominations to ordain admitted, albeit celibate, homosexuals in the late 1970s, the denomination began to face a backlash over this issue. Although the opposition had its beginning when the church began ordaining women as priests in 1976, it increased dramatically in 2004 with the consecration of Eugene Robinson as the first openly gay, noncelibate bishop in the United States. This act led many conservative Episcopal churches to seek support from overseas. The archbishop of the Nigerian church declared it to be in "impaired communion" with the American church and in 2007 began to meet with conservative Episcopalians in the United States to discuss undertaking supervision of their churches.

For the Roman Catholic Church, the issue of homosexuality has presented the widest number of challenges. First, the church views homosexuality, or at least homosexual activity, as a sin, both from revelation through biblical texts and through reason. It "violates"

natural law. While it may not be a greater sin than heterosexual activity outside marriage, it is an activity that the church cannot be seen to condone, although gays and lesbians can be parishioners. Second, the church cannot accept the ordination of open, practicing homosexuals. The church requires that all its priests be celibate, so under church law one cannot be a practicing homosexual and a priest. Finally, during the 1980s and 1990s, the church was buffeted by stories of priests sexually abusing children. Much of this abuse involved young boys, and the church increasingly felt pressure to ensure that such practices were ended. The Vatican's formal response was issued in November 2005. This "Instruction" on the admission of homosexually inclined men to a seminary articulated the church's policy on this matter. Men with "transitory" homosexual leanings may be ordained deacons following three years of prayer and chastity. However, men with "deeply rooted homosexual tendencies" and those who are sexually active cannot be ordained.

The greatest challenge has involved the issue of same-sex marriages. While most denominations and traditions have continued to affirm that marriage, at least in its religious sense, is between a man and a woman, even some of these have called on the government to provide some recognition of commitment for gays and lesbians to protect their rights and interests. Additionally, while some denominations approve of their clergy officiating at marriages or commitment ceremonies for gays and lesbians, others oppose such actions. Despite official opposition, large numbers of clergy continue to perform such ceremonies.

The shift in religious and wider social attitudes toward homosexuality has not been without resistance. Within the more conservative religious movements, there has been increasingly aggressive opposition to what some have labeled the "homosexual agenda." This opposition increased dramatically with the growing public debate over gay and les-

bian marriage. James Dobson, a conservative Christian leader, writing in 2005, described this "homosexual agenda" as seeking to create "universal acceptance of the gay lifestyle, discrediting of scriptures that condemn homosexuality, muzzling of the clergy and Christian media, . . . overturning laws prohibiting pedophilia, indoctrinating children and future generations through public education, and securing all the legal benefits of marriage for any two or more people."

Many individuals accuse this "homosexual agenda" of forcing them to accept what their religion teaches them is wrong. They also tend to see it as a direct attack on traditional Christianity. (Similar statements could be made for ISLAM and ORTHODOX JUDAISM as well.) This movement played a major role in the 2004 presidential elections, when the issue of gay marriage appeared on ballots in many states. This apparently encouraged numerous conservative voters to come to the polls, possibly aiding the reelection of George W. Bush.

While many conservative Christians may aggressively oppose increasing acceptance of homosexuality, few have (or would) go as far as the members of Westboro Baptist Church in Topeka, Kansas. Led by Fred Phelps, the church, a small independent congregation, has sent its members to protest at the funerals of soldiers killed in Iraq and Afghanistan. Phelps declares that the deaths of these military personnel (along with other disasters) are a result of America's sinfulness, as demonstrated by its increasing acceptance of homosexuality.

Despite the continuing conflict over homosexuality and its legal and social recognition in American society and religion, the cultural shifts in the past four decades have been seismic. The conversation has changed dramatically. The overall move has been toward greater, if at times grudging, acceptance of gays and lesbians in society and in religion. While some may vehemently oppose this development, it clearly has been the main trajectory. Along with this move has been the

need for radical rethinking of religious texts and understandings, a move that has developed and deepened as religious leaders and thinkers ponder these changes.

Hooker, Thomas (1586–1647) As a leading Puritan divine, a founder of Connecticut, and driving force behind the CAMBRIDGE PLATFORM—the first official statement of the religious and political views of New England PURITANISM—Thomas Hooker played a major role in the development of CONGREGATIONALISM and colonial New England generally.

Like many of his Puritan contemporaries, Hooker, born July 7, 1586, was educated at Cambridge University. After receiving his B.A. degree in 1608, he remained at Cambridge as a fellow until 1618. As minister of the Anglican church in Esher, Surrey (1620–26), and at St. Mary's in Chelmsford (1626–30), Hooker developed a reputation as a brilliant and powerful preacher. His preaching drew large crowds and the attention of church authorities, who summoned him before a court of inquiry to question him about his Puritan tendencies.

Realizing that such a summons bode ill, Hooker jumped bond and escaped to Hol-

land. In Holland, he served as the minister of several English churches, but his views on church government brought him into conflicts with religious authorities there as well, and in 1633, he sailed to New England. Arriving in the MASSACHUSETTS BAY COLONY in September of that year, Hooker received a call from the church at Newtown (now Cambridge), outside Boston.

A scarcity of land and the awareness that Massachusetts was not big enough to contain the theological differences between him and JOHN COTTON led Hooker and his congregation to the Connecticut River Valley. There they founded the settlement of Hartford.

Hooker led in the drafting of the "Fundamental Orders," the basic law for the new colony of Connecticut. To a much greater extent than in Massachusetts Bay, political and religious government in Connecticut were grounded on popular consent. Church membership was not a requirement for voting, and limits on civil authorities were much greater.

There were religious changes as well. Under Hooker's leadership, restrictions on church membership were eased. Hooker's theology also allowed for a greater role for human action in conversion, and with it a more active position for the ministry in bringing about acceptance of God's saving grace.

This greater freedom, however, did not include a separation between church and state. Hooker's view of society was no different from that of his fellow Puritans. The civil law, while forbidden to compel church membership, sought to guarantee conformity of religious behavior. Those who threatened religious unity and social cohesion deserved civil punishment. Given these views, it is not surprising that Hooker was repeatedly asked to publicly defend Puritan orthodoxy. In 1635, while still at Newtown, Hooker was chosen by colonial authorities to refute ROGER WILLIAMS'S views on the freedom of conscience. He served as a moderator of the 1637 synod called to condemn ANNE HUTCHINSON and her followers

(see ANTINOMIAN CONTROVERSY). At this synod, Hooker first broached to Governor JOHN WINTHROP the idea for a general meeting to forge a document detailing the Puritans' statement of faith and church governance.

Nothing came of this idea until September 1646, when the first of a series of ministerial assemblies met to debate those issues. Hooker was a leading voice in the deliberations but did not live to see the adoption of the final document incorporating most of his views on church government, the Cambridge Platform of August 1648. He had died on July 7, 1647, a victim of an epidemic that swept the region.

Hopkins, Emma Curtis (1853–1925)

One of the founders of the NEW THOUGHT movement, Emma Curtis Hopkins was not the first woman to inspire a new religious movement in the United States, but she was the first who unabashedly celebrated her womanhood and called upon the name of a decidedly female God.

Hopkins was born in Killingly, Connecticut, in 1853 and attended Woodstock Academy. She married in 1874, but the marriage was short-lived. Hopkins's career as one of the most famous apostates from the Church of Christ (Scientist) began when she moved to Boston in 1883 and enrolled in a class taught by MARY BAKER EDDY, the charismatic founder of CHRISTIAN SCIENCE. Three months later, Hopkins emerged as a Christian Science practitioner. She served as the editor of the *Christian Science Journal* from 1884 until 1885.

Hopkins broke with Eddy in the mid-1880s. One major source of tension between the two women was Hopkins's eclecticism. Whereas Eddy utilized her interpretive skills almost exclusively on Christian Scriptures, Hopkins looked to mystics and philosophers from diverse religious traditions, including the religions of Asia, for spiritual insight. Hopkins's comparative bent is especially evident in her 12-volume lifework, *High Mysticism: A Series of Twelve Studies in the Wisdom of the Sages of the Ages* (1920–22). In it, she argues that both Jesus and Gautama Buddha were practitioners of the "spiritual science" of mental health.

Hopkins moved in 1886 to Chicago, outside the immediate sphere of Eddy's influence, and began her own ministry as an independent Christian Science teacher and practitioner. She founded the Hopkins Metaphysical Association and the Emma Hopkins College of Christian Science (later renamed the Christian Science Theological Seminary) as alternatives to Eddy's church and her Massachusetts Metaphysical College. Hopkins also published her own periodical, the *Christian Metaphysician* (1887–97). Despite denunciations by Eddy, Hopkins's initiatives were surprisingly successful. One year after her move to Chicago, she had organized followers in 17 cities across the United States.

There was from the beginning an incipient feminism in mainstream Christian Science, but Eddy, like Theosophical Society founder HELENA PETROVNA BLAVATSKY, downplayed both her status as a woman and the profeminist elements in her theology. Hopkins did just the opposite. Her version of the Christian Trinity postulated three aspects of God, each manifested in a given historical epoch. God the Father lorded over the time of the Old Testament patriarchs. God the Son served both Jews and Gentiles during New Testament times. And God the Mother-Spirit was incarnating even as women were emerging from domesticity and moving into the public

square in the late 19th century. In 1889, Hopkins translated this theology into practice by becoming a New Thought bishop and beginning to ordain women to the ministry. She thus became the first woman in America to ascend to the episcopacy.

Many of Hopkins's students went on to start metaphysical movements of their own. Charles and Myrtle Fillmore cofounded the Unity School of Christianity; Malinda Cramer taught Divine Science; and one of Hopkins's last students, Ernest Holmes, established the Church of Religious Science. Together with her students, Hopkins developed the spiritual alternative to Christian Science now known as New Thought.

Harley, *Emma Curtis Hopkins: Forgotten Founder of New Thought* (Syracuse, N.Y.: Syracuse University Press, 2002); Emma Curtis Hopkins, *High Mysticism: A Series of Twelve Studies in the Wisdom of the Sages of the Ages* (Santa Monica, Calif.: DeVorss, 1974); Beryl Satter, *Each Mind a Kingdom: American Women, Sexual Purity, and the New Thought Movement, 1875–1920* (Berkeley: University of California Press, 1999).

Hopkins, Samuel (1721–1803) Samuel Hopkins was a Congregational minister, a theologian, and the most important disciple of JONATHAN EDWARDS. Hopkins helped formulate a theology known as the NEW DIVINITY, which reconciled traditional Calvinist doctrines about human depravity and divine sovereignty to the egalitarian moral framework of early 19th-century American EVANGELICALISM. Hopkins believed that God could turn the hearts of sinners to righteousness, infuse Christians with “disinterested benevolence,” and lead them into activities of social and moral reform.

Hopkins was born in Waterbury, Connecticut, on September 17, 1721. He graduated from Yale College in 1741. Profoundly affected by the commencement sermon Edwards delivered to the Yale students that

year, Hopkins elected to study for the ministry under Edwards's tutelage at Northampton, Massachusetts. Between 1743 and 1769, Hopkins was minister of a frontier church in what is now Great Barrington, Massachusetts. Although his strict views on church membership forced him to leave Great Barrington, he was called in 1769 to the First Church in Newport, Rhode Island. He served in Newport for the remainder of his life.

Hopkins's most significant contribution to American theology was his teaching on sin. Sin, he believed, was embodied primarily in human selfishness and in acts of self-love, while true Christian virtue consisted of selflessness, or “disinterested benevolence.” Thus,

A student of Jonathan Edwards, Samuel Hopkins inspired the temperance, antislavery, and missionary movements that flourished in 19th-century Protestant churches.

the genuinely converted led moral lives not because they thought good deeds improved their standing before God, but because they knew human goodness manifested God's grace and mercy. This position led Hopkins to conclude that believers should even be willing to be damned for the glory of God. Although his critics charged that these teachings would lead Americans to abandon earthly concerns altogether, the opposite, in fact, occurred. Hopkins stressed that the soul's regeneration depended upon an active exercise of the human will, and as a result of his dual emphasis on conversion and benevolence, he inspired a passion for social reform that later found expression in the TEMPERANCE, ABOLITIONISM, and missionary campaigns.

Hopkins was himself located in an important port city where he could observe the slave trade firsthand. He was among the first Americans to condemn the institution of slavery. Believing it made a mockery of Christian efforts to evangelize the African peoples, he insisted that slaves were moral beings, equal in God's eyes to whites and in all ways deserving of humane treatment. In 1776, he sent a pamphlet to the members of the Continental Congress. How could Americans complain about the injustices they suffered at the hands of the British, Hopkins asked, when they also enslaved thousands of their fellow human beings in the colonies?

Hopkins's chief theological writings are contained in his two-volume *System of Doctrines*, published in 1793. He died at Newport on December 20, 1803.

GHS, Jr.

Bibliography: Joseph A. Conforti, *Samuel Hopkins and the New Divinity Movement: Calvinism, the Congregational Ministry, and Reform in New England Between the Great Awakenings* (Grand Rapids, Mich.: Eerdmans, 1981).

Howe, Julia Ward (1819–1910) Julia Ward Howe was a social reformer, champion

of ABOLITIONISM, and author. Her poem "Battle Hymn of the Republic" formed the lyrics for a popular song that inspired Northerners dedicated to the destruction of slavery during the CIVIL WAR.

Daughter of a wealthy Episcopal banker, Julia Ward was born on May 27, 1819, in New York City. She married Samuel Gridley Howe, a doctor, reformer, and head of the Perkins Institute for the Blind in Boston, in 1843. After her marriage, Howe became increasingly attracted to Unitarianism and began attending JAMES FREEMAN CLARKE'S Church of the Disciples, which was noted for both its theological and its social radicalism. Howe also grew into an ardent supporter of the antislavery movement. She entertained the abolitionist crusader John Brown in her home and believed that his execution for inciting insurrection among Virginia slaves in 1859 was "holy and glorious."

After the Civil War broke out in 1861, Howe visited a Union army camp in Washington, D.C. She was so inspired by the military scenes she witnessed that on her return to Boston she composed a poem to accompany the popular song "John Brown's Body" she had heard the troops singing. The "Battle Hymn of the Republic" was published in the February 1862 issue of the *Atlantic Monthly*. It rang with the rhetoric of POSTMILLENNIALISM and envisioned the Union cause as part of the eternal conflict of the forces of God against the powers of evil: "Mine eyes have seen the glory of the coming of the Lord:/ He is trampling out the vintage where the grapes of wrath are stored;/ He hath loosed the fateful lightning of His terrible swift sword:/ His truth is marching on." Although Howe's lyrics were not as popular with the soldiers as the simpler "John Brown's Body" version, they increased in popularity over the years and eventually brought her lasting fame.

After her husband's death in 1876, Howe actively espoused the cause of women's rights and served in the American Woman Suffrage

Abolitionist Julia Ward Howe wrote the Union's crusading anthem, "Battle Hymn of the Republic."

Association and the Women's International Peace Association. An advocate of the ordination of women, she herself often preached in Unitarian pulpits. Although she published two books of poetry, as well as essays and drama, Howe's prominence as a writer rested principally upon the "Battle Hymn." In 1907, she became the first woman elected to the American Academy of Arts and Letters.

Howe died on October 17, 1910. She was so beloved that 4,000 people attended her funeral at Boston's Symphony Hall, and the president of the American Unitarian Association delivered the eulogy.

Hsi Lai Temple Hsi Lai Temple is the largest Buddhist monastic complex in the Western Hemisphere and the most impressive architectural expression of Chinese BUDDHISM in the United States. Located in Hacienda Heights, California, in the vicinity of Los Angeles, Hsi Lai was built at a cost of \$30 million and consecrated in 1988. The 20-acre temple complex includes not only a main shrine but also a meditation hall, lecture hall, library, international conference center, living quarters for monks and nuns, and lodging for visitors. A Buddhist college called Hsi Lai University is located nearby.

Hsi Lai, which means "Coming to the West," is an outreach project of the Fo Kuang Shan ("Buddha's Light Mountain") monastery in Taiwan, founded in 1967 by the Buddhist reformer Master Hsing Yun. Hsi Lai is also affiliated with the Buddha's Light International Association (BLIA), a lay society established by Hsing Yun in 1992. At the end of the 1990s, the United States had 19 Fo Kuang Shan-affiliated temples and centers and 18 BLIA chapters. The vast majority of BLIA members and Hsi Lai monks and nuns are ethnically Chinese, but some African Americans and Caucasians also participate. Many of the temple's activities are conducted in English as well as Chinese languages.

Fo Kuang Buddhism teaches "humanistic Buddhism." Scholars have described this socially engaged form of Buddhism as an effort to translate hopes for a better existence in the afterlife (the "Pure Land" in Buddhist parlance) into action for a better life here and now on Earth. In an effort to create this worldly utopia, Hsi Lai offers a wide variety of activities, including prayer services, meditation sessions, classes in Chinese languages and martial arts, summer camps, arts exhibi-

tions, charitable events, and radio and television programs. The temple also promotes Buddhist ecumenism by sponsoring events that bring together American Buddhists of different nationalities and sects.

In the many countries in which his organizations operate, Master Hsing Yun has worked hard to cultivate ties with political leaders. In 1996 in Hacienda Heights, that strategy backfired when Hsi Lai was drawn into a national political scandal. At an April 29, 1996, visit by Vice President Al Gore, nuns raised more than \$100,000 for the Democratic Party. Soon the media were portraying Hsi Lai monastics as secret agents for Taiwan while the United States Congress and Justice Department were investigating Hsi Lai leaders for violations of campaign finance laws. Defenders of the temple denounced the controversy as a tempest in a teapot that represented a return to the anti-Asian "yellow peril" rhetoric directed against Chinese and Japanese Americans in the 19th century.

Both the Hsi Lai Temple and the BLIA have endured the controversy. The temple complex, which now houses roughly 100 monks and nuns, remains a major tourist attraction for Buddhists and non-Buddhists alike. Hsi Lai University is beginning to attract a wide variety of American Buddhists.

Vice President Al Gore's alleged fund-raising at Hsi Lai Temple was used against him in his campaign for president of the United States in 2000. (Mike Getetoz)

And Hsi Lai Temple's long list of activities keeps laypeople returning regularly to Hacienda Heights for a taste of the fruits of Buddhist monasticism.

Queen, eds., *American Buddhism: Methods and Findings in Recent Scholarship* (Surrey, U.K.: Curzon Press, 1998), 36–56.

Hubbard, L. Ron (1911–1986) A science fiction writer and creator of SCIENTOLOGY, L. Ron Hubbard was born on March 13, 1911, in Tilden, Nebraska, and died on January 24, 1986. Many of the details of Hubbard's life are essentially contested. Not only did he seem to exaggerate many details, as the founder of Scientology, he was the subject of several official biographies that tended to present Hubbard's life in the most flattering and embellished manner.

This embellishing of his life began with the stories of his education. Hubbard and the church claimed that Hubbard graduated from George Washington University and was trained as a nuclear physicist, despite the fact that he dropped out after his second year and failed his second-year physics course. Additionally, Hubbard claimed to have received a Ph.D. from Sequoia University, an unaccredited institution accused by California state authorities of being a diploma mill.

From the 1930s until around 1950, Hubbard spent much of his time as a writer of pulp fiction. Although best known as a science fiction writer, Hubbard also wrote western, fantasy, and adventure novels. His career as a writer was interrupted by World War II. During the war, Hubbard served as a naval officer and appears consistently to have received unsatisfactory ratings. Official church biographies, however, portray Hubbard's military

career in a much different light, and a copy of his discharge papers circulated by the church showing him winning medals and citations is absent from the official Department of Defense documents. Hubbard left active duty in 1945, but he received disability payments from the military for medical reasons for several years, long after he claimed that Dianetics cured the illnesses from which he suffered.

In 1950, Hubbard published the book for which he became best known and which became the basis for Scientology. This book, *Dianetics: The Modern Science of Mental Health*, introduced the idea of "auditing." Hubbard claimed that "auditing" could cure human beings of all their mental and physical ailments. Although the book sold remarkably well, critical and professional responses expressed caution and concern, with the American Psychological Association pointedly stating that none of the procedures in *Dianetics* had been proved empirically and cautioning against their use until they had been demonstrated to be valid.

During the 1950s, Hubbard's personal life was the source of scandal. His second wife filed for divorce, accusing Hubbard of bigamy, kidnapping, and physical and mental torture. Hubbard dismissed these accusations, as he did all negative publicity and any discrepancies between his claims and facts. In 1953, he declared Scientology to be a religion, and the first Church of Scientology was established in Camden, New Jersey. By this time, Hubbard had moved to England, from where he directed the church throughout the 1950s.

The practices of Scientology came under increasing scrutiny throughout that decade. The U.S. Internal Revenue Service (IRS) suspected that the church functioned mostly as a business. Followers were required to pay for obligatory "auditing" sessions and "E-meter" analyses that supposedly helped the individual identify mental blocks to individual improvement. These sessions brought huge sums into the church.

The amount of money involved and the ways in which Hubbard was paid by the church, 10 percent of the gross income of the church as well as additional direct cash payments, created the suspicion that he was distributing profits through indirect means. This led the IRS to revoke Scientology's tax-exempt status in 1958.

By this time, however, Hubbard and Scientology faced numerous other problems. During the 1960s, England, New Zealand, South Africa, Australia, and Canada all opened criminal investigations of the church. To avoid the publicity (and possible prosecution), Hubbard moved to Rhodesia in 1966. Here he hoped that the pariah white government would grant him some respite, particularly since he offered to invest millions of dollars in the economy, battered by international sanctions.

This hope proved unfounded, and Hubbard was expelled from Rhodesia the following year. In that year (1967), Hubbard also officially resigned as executive director of the Church of Scientology and began an eight-year cruise around the Mediterranean Sea as "commodore" of Scientology's Sea Organization. The members of the "Sea Org," as it came to be known, eventually would become the elite leadership of Scientology. Hubbard eventually returned to the United States in 1975, but controversy followed him and the church. In 1977, the FBI raided the offices of the Church of Scientology, seeking evidence about "Operation Snow White," the church's official program designed to intimidate and malign its opponents, including government officials.

Two years later, Hubbard's wife and several leading church officials were convicted of conspiracy against the U. S. government. Hubbard himself was convicted, in absentia, of fraud by a French court and sentenced to four years in imprisonment and a Fr 35,000 fine.

Hubbard went into hiding and remained a recluse for the remainder of his life. He returned to science fiction writing during the

1980s, publishing *Battlefield Earth* and *Mission Earth*. Even his death in 1986 was mired in controversy. Church officials attempted to have his body cremated immediately but were prevented from doing so by a county medical examiner. Although Hubbard's death was determined to be from a stroke, the autopsy found high levels of hydroxyzine, which, although often used as an antihistamine, is a psychoactive drug that would have been forbidden by Scientology teachings opposed to psychology and psychiatric treatment. Additionally, there were suspicions raised about the whereabouts of Hubbard's personal physician and the fact that in the days shortly before his death, Hubbard's will was changed, leaving the bulk of his estate to the church.

Hubbard's death was announced to his followers as part of Hubbard's continuation of his spiritual advancement. Hubbard, in the words of a Scientology spokesman, had consciously ended his physical existence in order to continue his spiritual work "on a planet, a galaxy away."

Ron Hubbard* (New York: H. Holt, 1988).

Huguenots The Huguenots, as they were popularly known (their name has no clear origin), were adherents of the REFORMED TRADITION in France. Although Huguenots arrived in the New World as early as the mid-16th century, a number of factors militated against the continuation of a separate French Reformed Church in America. Because the principal identity of the Huguenots had been religious rather than ethnic or national, most aban-

doned their French roots and joined other denominations, notably, the Dutch Reformed Church and the Church of England, by the mid-18th century.

French reformer John Calvin, who had been converted to Protestantism in 1534, settled permanently in Geneva, Switzerland, in 1541. Sending missionaries back to France to advance the Protestant cause in his native land, Calvin helped the Huguenot movement grow rapidly between 1540 and 1560. After a series of brutal religious wars that began in 1562 (including the infamous St. Bartholomew's Day Massacre of August 1572), the Huguenot leader Henry of Navarre succeeded to the French throne as Henry IV. Although he renounced his Protestant allegiance in 1593, Henry eventually issued the Edict of Nantes (1598) and granted toleration to Protestants. Still, the edict offered only civil rights to the Huguenots, not approval of their religious faith, and harassment soon increased again. During the reign of Louis XIV, all forms of Protestant public worship were banned, and in October 1685, an order was issued to destroy church buildings and arrest ministers.

For many years prior to the revocation of the Edict of Nantes, Huguenots had been seeking refuge in other European countries. Of more than 2 million French Protestants, 400,000 emigrated from France in that period. Some made their way to America, most settling in the vicinity of what is now Charleston, South Carolina (as early as 1562), and near present-day New York City. Since Huguenot immigration to America came mainly through the Netherlands and England, close connections had been formed with the Reformed churches in those countries. Some of the first settlers at Plymouth (1620) and New Amsterdam (1626) were Huguenots with Anglicized or Dutch names. Indeed, several ministers of the Dutch Reformed Church in New York made a habit of preaching in French. By 1683, the New York Huguenots had secured a pastor of their own and formed churches in New

Rochelle and New Paltz. By the end of the 17th century, French Reformed churches were established in New York City, Boston, Virginia, and South Carolina.

The Huguenots usually arrived in America in small groups, often without pastors to establish French-speaking congregations. Eager to forget France and its unhappy past, many chose to adopt the culture of the English and Dutch Protestants who had given them refuge. As a result, the French Reformed in New York generally became members of the Dutch Reformed churches (even the "French" church at New Paltz started to keep its records in Dutch about 50 years after its founding), while Huguenots in the South tended to become Anglicans. In all, approximately 20,000 Huguenots came to America before the Revolution, the last migration of any consequence occurring in 1712 with the settlement of a group of French Protestants in Lancaster County, Pennsylvania.

Although individual Huguenots and their descendants were influential as members of the legal, medical, and commercial elite of the colonies, by 1750, a distinct Huguenot *religious* presence had virtually disappeared. The French Reformed community was almost effortlessly absorbed into the prevailing Anglo-American Protestant culture. Solely in the area around Charleston were the Huguenots numerous enough to have a major impact on a region, yet the memory of their presence even in the South Carolina low country today continues only in the surnames of prominent families such as the Legares, the Ravensels, and the Manigaults. And while in the North the names of prominent citizens like Paul Revere, Henry David Thoreau, and John Greenleaf Whittier suggest a common Huguenot past, little else "French" remains about these important figures.

humanism See SECULAR HUMANISM.

Humanist Manifesto This proclamation of humanist values, signed in 1933 by a group of Unitarian ministers and several notable philosophers, articulated a religious acceptance of modernity (see MODERNISM, PROTESTANT). Its optimistic assessment of the future failed to attract wide support.

In the early 20th century, the battle between religious liberals and conservatives in America intensified with the acceptance of SECULARISM among a broad number of intellectuals. For Unitarians (see UNITARIAN UNIVERSALIST ASSOCIATION), humanism became an increasingly attractive alternative to what many saw as an outmoded Christian liberalism (see LIBERALISM, THEOLOGICAL) that was still trying to reconcile the forms and symbols of faith with modern science and values. Humanists, often representatives of what philosopher George Santyana called the "genteel tradition" in America, saw themselves as eagerly embracing modern institutions and values, providing an important naturalistic framework for the discussion of pressing moral and social questions.

By the early 1930s, humanists feared that American culture was returning to the religious infancy of its past. Under the press of social and economic crisis, NEO-ORTHODOXY was gaining the upper hand among serious intellectuals. Unitarians found in humanism the greatest rallying force since TRANSCENDENTALISM had swept through the denomination in the 19th century. In general, humanists favored naturalism over supernaturalism, science and reason over faith, democracy over tyranny, and human experience over revelation.

Eager to bring a clear perspective to bear in times characterized by both the hope of the New Deal and alarm over the rise of fascism in Germany, in 1933, a group of midwestern Unitarian humanists commissioned philosopher Roy Wood Sellars to draft a public statement

of humanist goals and values. The document, a set of theses for debate, circulated among intellectuals. Some ignored or disparaged it, others amended it. In the end, the "Humanist Manifesto" appeared in a spring 1933 issue of *The New Humanist*, bearing the signatures of 34 individuals, including JOHN DEWEY. Half the signers were Unitarian clergy.

The manifesto issued 15 assertions, denying the divine creation of the universe and supernatural intervention in the order of things and urging that religion focus on satisfying the human search for self-fulfillment. While consistently using the word *religious* to indicate the new point of view advocated by humanists, the manifesto added that "there will be no uniquely religious emotions and attitudes of the kind hitherto associated with belief in the supernatural."

The manifesto is probably most significant for the fact that it failed to gather much support, though it aroused the suspicions of conservatives. A few months after publication, one humanist concluded it "fell like a dud in the battle-scarred career of American theological thought." Some of the original signers sought to revive and update it with a "Humanist Manifesto II" in 1973 and a "Secular Humanist Declaration in 1980." In its most recent form, "Humanist Manifesto 2000," signers call for global institutions such as a world parliament to secure human rights and overcome poverty, war, and environmental degradation.

Hunt, Ernest Shinkaku (1878–1967)

One of the earliest and most energetic Westernizers of BUDDHISM, Ernest Shinkaku Hunt

served as the director of the English department of the Honpa Hongwanji Buddhist Mission of Hawaii, an outgrowth of the Jodo Shinshu ("True Pure Land") sect of Mahayana Buddhism loosely affiliated with the BUDDHIST CHURCHES OF AMERICA. Hunt also founded the Western Buddhist Order and brought the International Buddhist Institute to Hawaii.

Born in England in 1878, Hunt graduated from Eastbourne College in Sussex. He encountered Buddhism while traveling through India during a stint with the British merchant marine. Intent on becoming a priest in the Church of England, he enrolled in an Anglican seminary but converted to Buddhism before being ordained.

In 1915, he moved to Hawaii with his wife, Dorothy Hunt, who was also a Buddhist. Together the Hunts established Buddhist Sunday schools, where they instilled in the English-speaking Buddhist youth of Hawaii a love of all forms of Buddhism. In 1924, the Hunts were ordained in a joint ceremony by Yemyo Imamura, bishop of the Honpa Hongwanji Buddhist Mission of Hawaii. During this first Buddhist ordination ceremony in Hawaii, Ernest Hunt was given the name Shinkaku ("True-Light Bearer"). In 1926, Hunt ascended to the head of the English department, an arm of the Honpa Hongwanji Buddhist Mission of Hawaii that specialized in ministering to English-speaking Buddhists.

The Hunts focused their efforts on two groups: European Americans and Nisei, or second-generation Japanese Americans (especially Japanese-American youths). To these constituencies, they preached an Americanized version of Buddhism. For use in Buddhist services, Ernest Hunt compiled a Buddhist catechism and a widely used English-language liturgical manual called the *Vade Mecum* (1932). Dorothy Hunt composed English-language Buddhist hymns that would soon be sung not only in Hawaii but also on the United States mainland.

In 1928, the Hunts gathered approximately 60 of their students into an English-speaking branch of the Honpa Hongwanji called the Western Buddhist Order. What drew students to this organization was its ecumenical stance. Although officially a part of the Jodo Shinshu sect, the Western Buddhist Order opened its arms to all Buddhists.

The Hunts collaborated with Bishop Imamura in 1929 to bring to Hawaii a chapter of the International Buddhist Institute (IBI), an ecumenical organization based in Japan that aimed to bring together all the world's Buddhists. Imamura became president of the institute, while Ernest Hunt was elected its vice president.

In all their endeavors, the Hunts promoted a Buddhism that was both nonsectarian and socially activist. Champions of a Buddhist version of the SOCIAL GOSPEL, they inculcated in their Sunday school students not only Buddhist teachings but also Buddhist practices rooted in an ethic of active good will. Members of the Hunts' organizations visited prisons and hospitals and taught the blind and the deaf.

The ecumenical work of the Hunts ground to a halt when Bishop Imamura was replaced after his death in 1932 by bishops hostile to the ecumenical and internationalist agenda shared by Imamura and the Hunts. During WORLD WAR II and the period of persecution of Japanese Americans, Hunt ministered to Buddhists in Hawaii privately and at his Island Paradise School. Eventually, he made his way into the Soto Zen tradition. Ordained in that tradition in 1953, he became 10 years later the first non-Asian priest in the West to achieve the lofty rank of Osho. He died in Honolulu in 1967 at the age of 90.

Hurley, George Willie (1884–1943) A relatively unknown contemporary of FATHER DIVINE, MARCUS GARVEY, and SWEET DADDY GRACE, George Willie Hurley founded the Universal Hagar's Spiritual Church (UHSC) in Detroit in 1923. Revered by some of his followers as divine, Hurley was one of the most important figures in African-American SPIRITUALISM.

Born in rural Georgia in 1884, Father Hurley was raised a Baptist. After studying for the Baptist ministry at Tuskegee Institute, he converted to Methodism. In 1919, he and his wife, Cassie Bell Martin Hurley, moved to Detroit, where they attended a black storefront church in the Holiness (see HOLINESS MOVEMENT) tradition. In the early 1920s, Hurley became a member of the International Spiritual Church and began a preaching ministry. Prompted by a vision, he established the UHSC in 1923. By the time of his death in 1943, Hurley's association boasted 37 churches in eight states. He was succeeded in his post as the spiritual head of the UHSC by his widow, "Mother" C. B. Hurley. Since Mother Hurley's death in 1960, the church has been run by a group called the Wiseman Board.

Hurleyites are educated in the ways of the UHSC through a number of means, including a School of Mediumship and Psychology, which, according to Hurley, is a modern resurfacing of the Great School of the Prophets, an ancient esoteric institute attended by, among others, Jesus. In this school, students learn how to communicate with spirits of the dead. As they are initiated into higher and higher mysteries, they become "uncrowned mediums," "crowned mediums" and finally "spiritual advisers." The church also runs a secret order for men and women called The Knights of the All Seeing Eye. This order has its own rituals and titles.

Hurley's eclectic gospel mixes elements from spiritualism, ROMAN CATHOLICISM, black Protestantism (see AFRICAN-AMERICAN RELIGION), VODOU, FREEMASONRY, astrology, and black nationalism. Perhaps the most shocking element in that gospel is the affirmation

that Hurley was himself divine. Hurley taught a dispensational theology in which Adam, the God of the Taurian Age, yielded to Abraham, the God of the Arian Age, who yielded to Jesus, the God of the Piscean Age. Jesus was then superseded by Hurley, the "black God of this Age." Hurley will rule Earth in this capacity for seven millennia.

Hurley distinguished himself from other leaders in the black Spiritualist tradition by eagerly mixing religion and politics. His message contained a biting critique of segregation and other forms of racial oppression. A pioneering Afrocentrist, Hurley argued that civilization originated in Africa and that Ethiopians were God's chosen people. He also developed a festival called "Hurley's Feast" to supplant Christmas, which he believed was a white celebration. During this sacred week, which ends each year on Father Hurley's birthday, February 17, Hurleyites exchange gifts and cards and decorate trees at home.

The UHSC maintains a small membership today in New York, Detroit, and other major cities in the East and Midwest.

Hutchinson, Anne (1591–1643) A "woman of ready wit and bold spirit," as an opponent described her, Anne Hutchinson was at the heart of the ANTINOMIAN CONTROVERSY, one of the greatest religious and political controversies in colonial Massachusetts (see MASSACHUSETTS BAY COLONY). Her abilities were such that banishment was seen as the only way to remove her from influence in the colony.

Born in Alford, England, in 1591 (christened July 20), Anne was the daughter of Francis and Elizabeth Marbury. Her father, an Anglican minister, had been removed from office by the time of Anne's birth. By 1605, however, Francis was again in favor

and received a series of prestigious appointments in London, where the young Anne was exposed to life in the capital and to new ideas, especially PURITANISM.

On August 9, 1612, Anne married William Hutchinson, a wealthy farmer and merchant from Alford. William shared Anne's religious concerns, and the couple attended, when possible, the sermons of JOHN COTTON in Boston, England, 24 miles (a day-and-a-half journey) from Alford. The couple were committed Puritans and, as the religious situation deteriorated during the 1620s, decided to join the Puritan migration to America, arriving in Boston in September 1634.

Although Anne's admission to the church was delayed due to comments she had made aboard ship, the Hutchinsons were welcome additions to the colony. Anne had a gifted theological mind and soon began to hold religious meetings in her home. Originally, these were small groups of five to six women. The quality of Anne's thought was soon recognized, and the numbers increased to "three-score or fourscore persons," according to JOHN WINTHROP.

Hutchinson was most concerned with the covenant of grace. Like all Puritans, she believed human activity was useless in bringing about salvation. Unlike many of her contemporaries, Hutchinson rejected the claim that personal behavior was a clue to the presence of this grace within a person. "Sanctification," the purity of one's behavior, was no proof of "justification," the status of one's soul.

Hutchinson combined this with an insistence that grace was implanted in the soul by the Holy Spirit. The Spirit then took control of the person's life. For orthodox Puritans, this came dangerously close to a claim for direct revelation that superseded Scripture.

These ideas struck at the heart of the Puritan experiment in New England. If true, what purpose did moral striving serve? If the church were unable to instruct the justified, what was the meaning and purpose of Scripture? The

Anne Hutchinson's unorthodox views prompted the Antinomian Controversy and led to her banishment from the Massachusetts Bay Colony. (*Library of Congress*)

possible answers endangered the ordered society the Puritans were trying to create.

While Hutchinson's views immersed her in a much wider crisis—the Antinomian Controversy—there was another problem: her position as a woman in a society that limited positions of authority to men. By 1637, many authorities viewed her meetings as violations of Scripture and the cause of dissension and conflict in the colony.

Hutchinson was called before the General Court in November 1637. The charges against her were vague at best: holding meetings not “fitting” for her sex, promoting divisive opinions, and dishonoring the ministers.

During questioning, Hutchinson deftly parried every thrust. As a theologian, she was superior to Winthrop—her main interlocutor—and in debate, his equal. Her responses finally drove Winthrop to the point that he attempted to cut off argument by telling her that “We do not mean to discourse with those of your sex.”

By the end of the second day, the hearing was a draw, and it looked as though Hutchinson would be released with a censure and an admonition. At this time, Hutchinson moved beyond the carefully worded and scripturally supported answers of her previous testimony. She told of direct revelations given her by God, revelations foretelling her persecution in New England, her deliverance from such a calamity, and possible judgment on the colony. This provided the court with an opportunity to condemn her. It declared her revelations devil-sent delusions. The session ended with the court placing her under house arrest until the spring, when she was to be banished from the colony.

Following her banishment, Hutchinson and her family took the path of many dissidents from Massachusetts and moved to Rhode Island (see WILLIAMS, ROGER). The following year, she had a stillbirth, a “monster” in the language of the time, which proved to many the error of her views. In 1642, her husband died, and she moved to Long Island, where, in late August or early September 1643, she and 10 of her children were slain during an Indian war. For the rulers of Massachusetts, this was final proof of her errors, for they could discern God's hand in picking “out this woeful woman, to make her . . . an unheard of heavy example.”

Hutterites The Hutterites are religious sectarians who emerged out of the Anabaptist movement of the Radical Reformation in 16th-century Europe. They distinguish themselves from the MENNONITES and the AMISH by their rejection of private property and their insistence on following the primitive Christian practice of communal ownership of goods. Like the Mennonites and the Amish, Hutterites manifest their withdrawal from the corrupt world into their biblically based Christian communities by wearing plain clothing, living in rural areas, supporting themselves through the hard work of farming, and refusing to swear oaths or bear arms. They distinguish themselves from the Amish, however, by their willingness to make use of tractors and other modern conveniences.

The tradition of the Hutterian Brethren, as the Hutterites prefer to be called, began among Swiss Anabaptists in Moravia in 1528 under the influence of Jacob Hutter. A Tyrolean reformer who fled to Moravia to escape religious persecution, Hutter was burned at the stake in Austria in 1536 for his heretical insistence that Christians follow the apostolic model of holding “all things in common.” Under the leadership of Hutter and successors (who used his martyrdom as a rallying cry for Hutterite vigilance in the face of the corruptions of the world), Hutterite colonies sprang up in Moravia in the 1530s and 1540s.

They then spread to Austria, Germany, and Switzerland. During the Counter-Reformation, Hutterites fled to Hungary and subsequently made their way to Romania and the Ukraine.

Virtually all of Europe’s Hutterites migrated en masse from Russia to the United States between 1874 and 1877. What prompted this migration was the same nativist “Russification” campaign that drove Mennonites and other German Russians to America during the 1870s. The first group of Hutterite immigrants, consisting of no more than 500 people, settled in South Dakota. There Hutterites organized themselves into three self-sustaining colonies, or *Bruderhofs*.

The Hutterites’ refusal to proselytize clearly went against the grain in voluntaristic America. But thanks to the highest birthrate of any group in modern America and an extraordinary ability to contain defections, the Hutterites prospered. At the outbreak of WORLD WAR I, there were an estimated 1,700 American Hutterites in 17 colonies. Because of their pacifist stance and the reluctance of the U.S. government to recognize its legitimacy, almost all of America’s Hutterites fled to Canada during the war. By WORLD WAR II, however, the Hutterites were officially recognized as conscientious objectors and returned in great numbers to the United States.

Because of their prosperity and longevity, many scholars see the Hutterites as the most successful example of Christian communism in the United States. While most experiments in COMMUNITARIANISM lasted only a few years, the Hutterites have survived for more than a century. They have about 36,000 members in more than 400 congregations.

Identity movement The virulently racist and anti-Semitic religious movement known as Christian Identity (or Identity) began as a quirky theological movement within Victorian Protestantism. Originally known as Anglo (or British)-Israelitism, this group believed the 10 lost tribes of the Jews from the Northern Kingdom had migrated from Israel to the Caucasus (becoming Caucasians) and eventually settled in Britain and northern Europe, where they became the Anglo-Saxons. Jews, they believed, were descendants of the two tribes of the Southern Kingdom who, although captured by the Babylonians and exiled, were eventually allowed to return to Israel. In this view, the Anglo-Saxons and the Jews were related and together shared the right to be called the “chosen people.”

Strangely, this vaguely philo-Semitic movement would be transformed in the early 20th century into a virulent anti-Semitic and racist ideology. This hatred reached such extremes that some groups would renounce all links to Christianity with its Jewish roots and its message of love and forgiveness. For these groups, the essence of life lay in struggle, especially racial struggle, and anything hindering this struggle violated the laws of nature.

This transformation began in the United States during the 1920s and 1930s with the writings of William Cameron, editor in the 1920s of the *Dearborn Independent*, the Michigan newspaper owned by Henry Ford. Cameron

published the first major American version of the anti-Semitic forgery *The Protocols of the Elders of Zion*. Gerald L. K. Smith, one of the United States’ leading right-wing demagogues, also was a believer in the Christian Identity ideology. Perhaps the most visible and organized Identity movement in the United States for years was the Worldwide Church of God, founded by the science fiction writer Garner Ted Armstrong. The church taught that Jews were evil and that Anglo-Saxons were the chosen people of God. Since Armstrong’s death, however, the church has struggled to bring itself in line with the teachings of mainstream EVANGELICALISM and has renounced this doctrine. This turnabout paved the way for the group’s entry into the NATIONAL ASSOCIATION OF EVANGELICALS in 1997.

In the 1940s to the 1960s, the anti-Semitic components of Identity were articulated by California lawyer Bertrand Comparet, Wesley Swift, the founder of the Church of Jesus Christ, Christian, which for decades made Identity central to its beliefs, and William Potter Gale, a former aide to Douglas MacArthur and director of guerrilla operations in the Philippines during World War II, who founded the Christian Defense League.

In this new version, the Jews were stripped of their Biblical roots and their connection with God. At first, the two southern tribes (the “House of Judah”) were accused of intermarrying with heathens, thus defiling themselves and God’s law. Later versions separated them

completely from the Jews of the Bible, claiming they were merely the descendants of the Khazars, a tribal people from southern Russia who converted en masse to Judaism in 740.

In the most prevalent versions of Identity, the white Anglo-Saxon-Celtic (brought in undoubtedly to incorporate the Scots) peoples are viewed as God's real "chosen people," who descend in an unbroken line from Adam and Eve. By nature and divine design, they are the superior race. The modern Jews descend from Cain, who was born of a sexual liaison between Eve and the Serpent (the real original sin) in Eden. They are biologically evil, the "synagogue of Satan."

Nonwhites are "pre-Adamic" beings. They have no souls and are the biblical "beasts of the field." Cain mated with these peoples to produce today's Jews. As the spawn of Satan, the Jews are involved in a plot to unite the world under a single government, which will then be handed over to the rule of the devil himself.

In order to prevent this catastrophe, whites in America, who constitute the true "House of Israel," must prepare for the bloody battle with the forces of evil, the people of color manipulated and led by the Jews, in a racial holy war. God's law on Earth can only be established through victory in this battle, Armageddon. There the forces of good—the white "Israelites"—will be pitted against the armies of Satan, represented by the Jewish-controlled federal government. Identity followers believe they must wage an all-out war against the ZOG (the Zionist Occupied Government), all those of color, white "race traitors," and anyone else who stands in their way.

Identity followers also believe that America is the New Jerusalem and that the U.S. Constitution was given to their ancestors, the white Christian Founding Fathers, by God. They claim that the authentic Constitution consisted of just the first 10 amendments of the Constitution (the Bill of Rights) and the Articles of Confederation. Only white Chris-

tian men are "true sovereign citizens" of the republic. Other Americans are merely "state citizens," illegally created through the FOURTEENTH AMENDMENT by an illegitimate "de facto" government. Since the modern American government is illegitimate, Identity followers believe the Internal Revenue Service, civil rights legislation, and abortion rights are also unlawful.

For nearly 50 years, the virulent racist theology of Identity has made inroads into racist and antigovernment groups such as the KU KLUX KLAN, neo-Nazis, Posse Comitatus, and racist skinheads. Currently, it commands a large following beyond traditional white supremacists, including inside the patriot movement.

Explicit Identity groups such as the Covenant, Sword and Arm of The Lord (CSA), the White Patriot Party, Posse Comitatus, Aryan Nations, and the Order have been responsible for the racist right's most violent incidents since the 1970s. Murder, robbery, and savage attacks on individuals have characterized their methods. Timothy McVeigh, who bombed the federal building in Oklahoma City, placed two calls to Elohim City, a 22-year-old armed Identity enclave in Oklahoma headed by Robert Millar, just days before the attack.

Millar had close ties to some of the most violent Identity adherents. In April 1995, Millar personally supervised the transfer of the body of Richard Wayne Snell from Arkansas to Elohim City. Snell, an Identity adherent and CSA member, had been executed in Arkansas for the 1983 murder of a pawnshop owner he mistakenly thought to be Jewish. Previously, Snell had been convicted of murdering a black Arkansas state trooper in 1984.

Millar, who had brought both Snell and CSA founder James Ellison into the movement, believes that someone will soon be resurrected from the dead to lead the white Israelites in battle against the satanic federal government. After Snell's body arrived at Elohim City, the casket was left open for several

days in anticipation of the possibility that Snell might be this "savior."

The Identity movement promotes anti-Semitic paranoia and hatred through numerous methods, including books, newsletters, audio cassettes, videos, shortwave and AM radio, satellite and cable television, camp meetings, far Right Patriot rallies, and church meetings. The Internet has been a successful medium for promulgating the movement's views. Identity has also been particularly active in prisons. Still, all the various Identity groups combined have a membership of less than 60,000.

The growth of the computer industry also has supplied Identity with two large funders, Carl Story and Vincent Bertollini, who after retiring from the industry moved from California to Idaho, where they finance Identity propaganda. In one of their largest endeavors, they paid for the "11th Hour Remnant Messenger" to mail to 9,000 Idaho addresses a packet of Identity materials, including an introductory letter, an anti-Semitic booklet, and a poster explaining the group's Identity beliefs. This single mailing cost more than \$100,000.

For some on the farthest right, the Christian Identity movement is insufficient. It is tainted by Christianity's Jewish roots and its false message of love, when the true law of nature is struggle, the struggle for the victory of the species, the race.

The most visible of these groups is the World Church of the Creator (WCOTC), based in East Peoria, Illinois, and headed since 1970 by Matt Hale. Hale became pontifex maximus of the church in 1996, following the suicide of its founder, Ben Klassen, in 1993. The goal of the group is to make "this [the United States] an all white nation and ultimately an all white world." Its slogan is "RaHoWa," an abbreviated form of "Racial Holy War."

The Church of the Creator (the original name of WCOTC) and "creativity," the church's theology, were created by Ben Klas-

sen, a onetime Florida state legislator born in Ukraine and raised in Canada. Founded in 1973, the Church of the Creator completely rejected "the Judeo-democratic-Marxist values of today" and desired to supplant them "with new and basic values, of which race is the foundation." The WCOTC attacks Christianity as the "tremendous weapon in the worldwide Jewish drive of race-mixing." Creators assert that Jews "concocted" Christianity in order to mongrelize and destroy the white race. Much of WCOTC's hatred and energies are directed against Jews, whom it accuses of being "parasites" who "control and manipulate the finances, the propaganda, the media and the governments of the world."

WCOTC has become one of the most virulent, violent, and quickly growing hate groups in the United States. Members have been implicated in numerous racially motivated assaults and arsons and at least one murder. The murder led to the conviction of several members and a civil judgment against the church that awarded nearly all of its assets to the family of the victim, a black veteran of the Persian Gulf War. This event led to Klassen's suicide and to the church's decline until it was revived by Hale in 1996.

Not until 1999 did the existence of the WCOTC come to the awareness of most Americans. That Fourth of July weekend, WCOTC activist Benjamin "August" Smith went on a shooting rampage throughout Illinois and Indiana, leaving two dead and nine wounded before he fatally shot himself. All Smith's victims were either black, Jewish, or Asian American. In January 1999, Hale had named Smith "Creator of the Year" because of his success in distributing the church's anti-Semitic and racist tract, *Facts That the Government and the Media Don't Want You To Know*.

Although the incident's national impact was not as great as that of the Oklahoma City bombing, Smith's rampage was a clear reminder that religion in the United States manifests itself in numerous ways, not all

of them positive. Sadly, many of those shot on the first day of the rampage were Jews on their way to services, and the final victim was a Korean man on his way home from church.

immigration The United States is a nation of immigrants, so it should not be surprising that immigration has played an important role in American religious history. Beginning with the Puritans, immigrants brought with them different religious traditions, and, once in the New World, those traditions underwent a wide variety of transformations.

Immigration is a complex process, and many different factors determine the ways religions develop and change. The race and ETHNICITY of an immigrant group, which help to determine its initial reception in America, have an enduring impact on the shape of a religious tradition. The occupational skills, languages, and literacy levels of immigrants and the stage of economic development in the United States at the time of their arrival are secondary factors that help to determine the subsequent development of their religion. Later migrations into a community as well as external developments often play important roles in the reshaping of a religious tradition and can alter the relations among different religions in unexpected ways. All these factors have helped to create the pluralistic (see PLU-

RALISM) landscape of contemporary American religion.

The way these different factors can work to shape and reshape a religious tradition is well understood in the case of American JUDAISM. German Jews arriving in the antebellum period faced relatively few barriers due to their ethnicity. They were well placed in terms of occupational skills and literacy. This enabled them to engage in the burgeoning commercial life of the expanding republic. They also shared with many Americans a set of moderate and progressive religious ideals derived from the 18th-century ENLIGHTENMENT. These helped mute religious traditionalism and to adjust to the host culture dominated by Protestants. This first wave of Jewish immigrants soon achieved a level of social and economic integration that enabled them to aid a second wave that arrived from Russia and eastern Europe around the turn of the 20th century.

Immigrants in this second wave arrived at a time when jobs were plentiful in the rapidly expanding urban-industrial order, so many were able to move into the middle class in a generation. These immigrants, however, brought with them religious traditions and cultural ideals that were different from those in the first wave. Due to social conditions in eastern Europe and Russia, Jews in the second wave tended either to be more traditionally religious or more politically radical than the Germans, which created conflict within the community. Eventually, interaction between the two groups resulted in the differentiation of their religious life into REFORM, CONSERVATIVE, and ORTHODOX JUDAISM. The progressive ideals of the first wave and the more radical ideals of the second worked together to give the American Jewish community as a whole a liberal cast that endured in subsequent generations.

External developments in world history also played a major role in the shaping of American Judaism. Germans migrated after the failure of the Revolution of 1848; Russians migrated in

The Great Hunger drove 1.5 million Irish to immigrate to the United States after 1830. (*Library of Congress*)

response to pogroms after the assassination of Czar Alexander II in 1881; Jews also migrated in the wake of the Bolshevik revolution and more recently after the fall of the Berlin Wall and the breakup of the Soviet Union. The community has also been reshaped by ZIONISM, the Holocaust, and the founding of Israel, developments that contributed to the distinctiveness of American Judaism and to American political culture in the 21st century. The ongoing evolution of the community with Hasidic immigration and changing fortunes in the Middle East continues to raise new questions about both the shape of the Jewish community and its contribution to the complex forces at play in contemporary American society.

Catholic (see ROMAN CATHOLICISM) immigrants also participated in the commercial and industrial expansion of the nation, thereby making their own move toward the American

mainstream. However, the ways they assimilated gave a unique shape to the Catholic community, one resulting in different contributions to the current American scene. Catholic history is usually discussed in terms of a first, antebellum wave composed primarily of Germans and Irish and a second wave made up of distinct groups of southern and eastern Europeans. The dominant group became the Irish, in large part due to their proficiency in English. As a result, the historical antipathy between Irish and Anglo-Protestants shaped the Catholic community's move toward the mainstream. The Catholic Church played an important role in Irish Americanization strategies. A unified American church was created in order to mediate intra-Catholic ethnic differences and to Americanize the immigrants, while it also served as a fortress to protect against total assimilation and to perpetuate

Christian devotional traditions that were distinctly Catholic. This defensive strategy also resulted in the creation of Catholic parochial schools as an alternative to the public school system. External developments played an important role in the creation of the Catholic ethos and community. Developments overseas such as famine and revolution set in motion different waves of Catholic immigration. The defensive strategies of the leaders of the American church were influenced in many ways by the efforts of the papacy in Rome to defend traditional orthodoxy against the encroachments of modernity.

This strategy was successful until VATICAN COUNCIL II, when the Roman leadership of the church undertook to modernize Catholicism. Liberal developments resulting from the council effectively destroyed the fortress church mentality originally formulated to maintain American Catholic identity. Great numbers of Catholics still remain in a church that is alternatively described as chaotic and thriving, but are conspicuously diverse in their political, social, and religious convictions. At the same time, the idea of cultural Catholicism—a distinctly Catholic ethos and sensibility—is often discussed but remains a largely uncharted force on the American scene.

The Jewish and Catholic experiences, along with those of others like Scandinavian Lutherans (see LUTHERANISM) and the Greek Orthodox (see ORTHODOX CHRISTIANITY), can be described as the classic east-to-west “immigrant saga” of peoples moving up from an ethnic periphery toward an allegedly postethnic mainstream, a story long central to America’s melting pot myth and history. But in the past 40 years, these histories have been set in a new context as a result of the CIVIL RIGHTS MOVEMENT and new patterns of immigration. The Civil Rights movement introduced into the old melting pot story of America both the dynamics of race and highly politicized ideas about ethnicity. At the same time, new patterns of immigration refocused attention on

the experiences of older communities once relegated to the margins and on newer immigrant communities.

One result of the Civil Rights movement was an explosion in scholarship about African-American (see AFRICAN-AMERICAN RELIGION) history, which has opened enormous and varied vistas obscured for centuries. Despite the existence of a substantial black middle class, race has also been shown to be a structural impediment that belies the normativeness of the older model of free immigrants moving to the center from the periphery. Certain standard dynamics of the process of immigration have, however, been recast in order to understand African-American religious history. The concern with premigration backgrounds has led to an exploration of the West African religions and ethnicities that existed before the passage into slavery. Questions about the stages of development in the American economy also have been recast, but with attention to the way in which racism consistently blocked the path to full participation by African Americans in the nation’s economy. Discussions about the development of black Christianity now tend to follow an Afro-oriented, race- and economy-based story. The antebellum period marked the formation of a distinct African-American Christianity; postbellum churches served as the locus for the development of black ethnicity and identity; mid-20th-century churches provided networks through which the questions about racism and rights were pressed into the mainstream.

Current discussions of black Christianity tend to emphasize its distinct contribution to the variegated texture of the contemporary scene. In its many forms, black Christianity is now seen as having a unique character, largely a product of African origins, slavery, and the inequities rooted in racism. The introduction of race into the story of immigration has begun to reshape the discussion about the nation’s religious traditions in other important ways.

The fact that British Protestants and African slaves occupied demographically dominant niches during the colonial, revolutionary, and early national periods has highlighted a fact partially obscured in the older immigrant saga myth and history. The Protestant community that defined the 19th-century American mainstream was itself not postethnic, but a complex ethnicity of its own: white, largely British-American in culture, and Protestant in religion. Anglo-American Protestantism is now beginning to be seen as an ethnic history among other ethnic histories.

The centrality of race in American history and the renewed, politicized interest in ethnicity have also refocused attention on the religious histories of older communities that were once dismissed as marginal and on the religious traditions of newer immigrant communities. Questions about race and ethnicity and the relations between old and new groups within a single immigrant community are joined in complex ways in the case of Hispanics or Latinos, further decentering the old "immigrant saga," both history and myth. Older Mexican groups in the Southwest were not immigrants, but conquered people; subsequent migrations have not been east to west, but south to north. Race and ethnicity issues have also been recast as a result of the Spanish and Indian contributions to Mexican identity. Additional migrations by different Caribbean and South and Central American peoples, all of whom have distinct ideas about how Spanish and Indian, as well as African, elements factor into their identities, have given the Latino community an unparalleled ethnic complexity. Class variables, America's shift to a postindustrial economy, and the proximity of many Latin nations to the United States make generalizations about how the ongoing migrations are reshaping the nation's religious life highly problematic. Historians have only recently begun to turn their attention to the new forms of religion that are entering the United

States with Latino immigration, to questions about the relations between Latin and North American Catholicism, and to the study of Latino conversion to Protestantism.

Engagement with questions of race and ethnicity and attention to new patterns of immigration have also drawn attention to America's Asian communities. Japanese and Chinese Americans have recently received greater attention than in the past, a development rooted in the importance of East Asia in the global economy and in the explosion of immigration from Asia to the United States after 1965. But both groups have had long American histories. They have over generations brought to America religious values rooted in their premigration backgrounds and have made distinct contributions to the American culture and economy. Both groups also have been subject to unique pressures due both to racism and to external factors in world history. Recent migrations by many other peoples have complicated immensely the idea of an "Asian-American" community. Indians, Tibetans, Laotians, Vietnamese, and Cambodians, together with Iraqis, Iranians, Lebanese, and other West Asians who have longer American histories are contributing demographically modest but highly distinctive religious, cultural, and racial elements to the contemporary scene. Immigrants bringing to America HINDUISM, BUDDHISM, and ISLAM are now beginning to play a prominent role in American religious history.

Immigration has always played a central and complex role in American religious history. British Puritan immigrants dominated America's colonial and early national religious history. Roman Catholics and Jews substantially altered the religious landscape of mainstream America as a result of their 19th- and early 20th-century migrations. African Americans have long been central to the story of American religious history, although only recently have their contributions been brought to light. Latinos and Asians are only

the most recent contributors to a great American legacy. Their impact on the religious life of the nation as a whole will be hard to assess until well into the 21st century.

inerrancy The term *inerrancy*, when applied to the Christian Scriptures, signifies the belief that the original words of the Bible were divinely inspired and true in every detail, in scientific and historical facts as well as in religious doctrines. Inerrancy has always been one of the central tenets of American FUNDAMENTALISM. It is also a view held by many evangelicals and other theologically conservative Protestants today.

The concept of biblical inerrancy first appeared among Protestant writers in the late 17th century to combat Roman Catholic appeals to tradition and the authority of the church. Spokesmen for the Protestant Reformation stressed both the self-sufficiency of the Scripture in interpreting itself and the essential accuracy of its text. Protestants argued that the Bible was a book that even the simplest Christian could read and comprehend. As Reformed theologian Francois Turretin wrote, "the Scriptures are so perspicuous

in things pertaining to salvation that they can be understood by believers without the external help of . . . ecclesiastical authority."

A philosophical system called SCOTTISH COMMON SENSE REALISM, which arose within Protestant ranks in the 18th century, gave further credence to the idea of inerrancy. The Common Sense philosophy came out of controversies during the ENLIGHTENMENT over the basis of human knowledge. Scottish clergyman Thomas Reid and others tried to give a solid metaphysical foundation to the everyday observations people made. Following the inductive methods of 17th-century scientist Francis Bacon, Reid and his followers asserted that the external world was just as it appeared to be. Common Sense thus provided a rational, scientific justification for every statement that appeared in the Bible: A person could simply believe whatever he or she read there.

The reliability of the Bible did not come up for debate among American Protestants until the mid-19th century. The publication of Charles Darwin's *On the Origin of Species* in 1859, however, signaled an important shift in the relationship of religion and science. Prior to that date, believers had followed the reasoning of Common Sense Realism and simply assumed that Christian faith, human intellect, and science were all fundamentally compatible. But the dissemination of Darwin's theories on organic EVOLUTION forever destroyed such a facile intellectual synthesis. After the CIVIL WAR, informed readers of the Bible were forced to ask whether the new scientific discoveries, particularly in the areas of biology and geology, were undermining or authenticating scriptural statements. How, for instance, could the world have been created in six days, as the book of Genesis claimed?

Responding to the challenges they faced, conservative Protestants fell back upon the philosophical tenets that had nurtured them in the past. Thus, as Presbyterian professor CHARLES HODGE of Princeton Seminary asserted in the early 1870s, the Bible should

be accepted as a “store-house of facts.” Theologians like Hodge believed not only that people had found divine truth in the depository of Scripture throughout the ages, but that they could do so still. The 1881 article “Inspiration,” coauthored by Hodge’s son Archibald A. Hodge and by BENJAMIN B. WARFIELD, moreover, represented a classic expression of the “certainty” offered by Common Sense Realism and inerrancy. Hodge and Warfield argued for the absolute trustworthiness of the plain reading of Scripture. Pressing their view with mathematical preciseness, they asked Christian believers to stand upon the unshakable ground of a Bible that was literally true in every detail.

In the late 19th century, the Bible became a battleground over which American Protestants fought, the Presbyterians especially. Despite the liberals’ claim that they wanted to bolster rather than undermine Christianity by appealing to lofty religious ideas not necessarily found in the Bible, they were swamped by the general conservative reaction within their denomination against those new forms of thought. Presbyterian traditionalists insisted upon the objective truth of both the Scriptures and the traditional creeds, and they vehemently defended inerrancy against critics who indicated obvious errors and historical discrepancies in the Bible. In the last decade of the 19th century, modernist Presbyterian professors CHARLES AUGUSTUS BRIGGS, Henry Preserved Smith, and Arthur Cushman McGiffert were convicted of heresy, and each eventually left the denomination. In 1910, the Presbyterian General Assembly affirmed inerrancy as the first of five essential points of Christian orthodoxy.

The Presbyterian action, of course, hardly silenced those who questioned the accuracy of the Bible. By the 1920s, the acceptance of evolution, and the consequent rejection of biblical inerrancy, had become widespread in American culture. Against this trend, the emerging fundamentalist movement mobi-

lized. Under the leadership of statesman and politician WILLIAM JENNINGS BRYAN, fundamentalists articulated the manifold threats they thought Darwinism posed to traditional Christian civilization. Bryan feared that evolution undermined faith in the Bible as the source of truth and would inevitably lead Americans into immorality and atheism.

J. GRESHAM MACHEN, a professor of New Testament at Princeton Seminary, was another religious leader who espoused the doctrine of inerrancy in that period. In his 1923 book *Christianity and Liberalism*, Machen charged that Presbyterians and other American Protestants were drifting away from their theological and spiritual moorings. Following the tradition of the Hodges and Warfield, Machen affirmed that the Bible contained “documentary evidence” and was an “infallible” guide for the Christian. He also stated that those who held beliefs contrary to his own definition of biblical orthodoxy should not be allowed to remain members of his church. As it turned out, Machen and his followers, not their modernist adversaries, left the mainline Presbyterian denomination in 1936, after liberals gained control of the General Assembly.

Although Machen’s withdrawal from his denomination represented the end of the dominance of inerrancy within mainline Protestantism, the idea remained strong in other parts of American Christianity. Clearly, most evangelicals, and even members of nonevangelical denominations, wanted to believe in the essential truthfulness of the Bible in matters both of history and science and of doctrine and ethics. The doctrine of inerrancy, however, produced one of the most vexing controversies within conservative Protestantism since WORLD WAR II.

In the 1950s, some evangelical scholars began to question the value of a wooden, literal exegesis of the Bible, since the Bible clearly contains some material errors. In 1967, Fuller Theological Seminary, the most prominent of the evangelical divinity schools,

removed the doctrine of inerrancy from its statement of faith. Critics of inerrancy maintained that the Bible's infallibility defined the ability of Scripture to lead people to salvation and moral living, not to information about history or science. In response to this trend, Harold Lindsell, then the editor of the evangelical magazine *Christianity Today*, published *The Battle for the Bible* in 1976. He questioned the wisdom of the defection from the doctrine of inerrancy.

Recent debates about biblical literalism have not been limited to evangelical institutions of higher education and seminaries. Conservatives within the LUTHERAN CHURCH—MISSOURI SYNOD, for example, gained control of their denomination in the 1970s and forced an affirmation of inerrancy on the church. "The Chicago Statement on Biblical Inerrancy," drawn up in 1978, was published the next year in a volume called *Inerrancy*. Several scholars in that volume argued that the doctrine, when carefully defined, was both what the Bible teaches about itself and the central tradition of the Christian churches. In the 1980s, the SOUTHERN BAPTIST CONVENTION also split over this issue. The fundamentalist faction in the denomination began what some considered a purge of Southern Baptist colleges and seminaries that did not teach inerrancy. Inerrancy continues to remain, as it has been since the late 1800s, an acrimonious topic among conservative Protestants in the United States.

Ingersoll, Robert Green (1833–1897) A leading proponent of SECULARISM, orator and author Robert Green Ingersoll made a career of attacking religion. In response to a speech by Ingersoll, Mark Twain once said, "It was the supreme combination of English words that was ever put together since the world began." Twain was not alone in his estimation of Ingersoll's abilities. Whether applauded or cursed for the agnosticism that fueled his saberlike wit, Ingersoll captured the ears of his contemporaries in late-Victorian America.

Ingersoll was born August 11, 1833, to John and Mary Ingersoll, in Dresden, New York. Living within the religiously fertile atmosphere of the "BURNED-OVER DISTRICT," Ingersoll grew up subject to a breadth of religious influences. His father was a staunch Calvinist and minister in the Congregationalist Church; his mother was a reader of THOMAS PAINE on the sly. With only an intermittent formal education to serve him, Ingersoll read voraciously, digesting the works of Paine, Shakespeare, the French *philosophes* (see ENLIGHTENMENT), and popular scientists. From his parents, he gained a passion for social reform. He began to practice law prior to the CIVIL WAR, and having been commissioned with the rank of colonel in the Union Army, was captured and imprisoned by the Confederacy in 1862. Upon release, he gained prominence through his legal practice. He was appointed attorney general of Illinois in 1867 and took an active role in the Republican Party over the next two decades.

During the 1870s, Ingersoll began lecturing extensively in addition to practicing law, publishing essays to support his family in what became a lavish manner. He quickly gained notoriety as the foremost agnostic of his day. He frequently likened organized religion to the institution of slavery, calling for abolition of mental servitude. Science, the achievement of human reason, provided modern people with a surer form of faith than had the churches, and Ingersoll's oratory urged his

contemporaries to embrace science, progress, and the potential for human moral perfection with the same sort of emotional faith stirred up by more orthodox preachers.

In terms similar to contemporary European critics of religion, such as Ludwig Feuerbach (1804–72) and Friedrich Nietzsche (1844–1900), Ingersoll attacked religious belief in divine beings as a projection of human aspirations. He began his essay “The Gods” (1872) by claiming: “Each nation has created a god, and the god has always resembled his creators.” Ingersoll’s rationalist critique of religion ignited extensive opposition from clergy and the press, even supplanting Charles Darwin as the focus of orthodox apologetics (see *EVOLUTION*). However, he gained the lasting admiration and friendship of liberal churchman HENRY WARD BEECHER. In subsequent essays, he extended and developed his attack. In “Ghosts” (1877) he portrayed the limitlessness of human achievement unshackled from religious superstition: “Humanity is the sky, and these religions and dogmas and theories are but mists and clouds changing continually, destined finally to melt away.” In “Some Mistakes of Moses” (1880), he offered a detailed, scathing examination of the idea that the Bible was divinely inspired.

Ingersoll complemented his commitment to human intellectual freedom with a firm support for human political rights. In his time, he championed the extension of rights to women, children, and blacks, and due process for those convicted after the Haymarket Riot of 1886. He influenced people such as socialist Eugene Debs and the civil liberties lawyer Clarence Darrow. Although his thinking was far from original, he offered the most sustained and emphatic plea for religious toleration and freedom of thought of his day.

Insight Meditation Society The Insight Meditation Society (IMS) is one of the most successful American Buddhist organizations catering to European-American converts and sympathizers. Its roots are in Theravada BUDDHISM, one of the three major Buddhist schools and the most popular Buddhist form in Southeast Asia. IMS teachers stress *Vipassana*, or insight meditation, a spiritual practice rooted in Theravada monasticism but adapted in the United States for a lay audience.

IMS was established in 1975 on the site of a former Catholic seminary just outside Barre, Massachusetts. The founders were a group of European Americans informed by the COUNTERCULTURE who had studied insight meditation with Theravada Buddhist teachers in Asia. At IMS, however, they taught a meditative practice largely shorn of the beliefs and rituals of that tradition. In the 1980s, IMS teachers supplemented this initial emphasis on insight meditation with instruction in *Metta*, or loving kindness meditation.

In 1988, IMS moved west, opening the Spirit Rock Meditation Center in Marin County, California. IMS and Spirit Rock are also associated with the Cambridge Insight Meditation Center in Cambridge, Massachusetts, the Vipassana Metta Foundation on Maui in Hawaii, and the Barre Center for Buddhist Studies, located near IMS headquarters in Barre. The group also publishes a journal called *Inquiring Mind*.

Because many of IMS’s founding members, including Joseph Goldstein, Jack Kornfield, Jacqueline Schwartz, and Sharon Salzberg, were raised Jewish, IMS has come to be associated with “Jewish Buddhism.” Sylvia Boorstein, a well-known IMS teacher, is perhaps the most widely recognized Jewish Buddhist in America. In books such as *That’s Funny, You Don’t Look Buddhist: On Being a Faithful Jew and a Passionate Buddhist* (1997), Boorstein presents herself not as a former Jew who has become a Buddhist but as a Buddhist who remains a faithful Jew.

Like many American ZEN centers, IMS appeals mostly to European-American lay converts who are seeking a meditative practice without monasticism. As cofounder Jack Kornfield put it, the goal of IMS is “to offer the powerful practices of insight meditation . . . without the complications of rituals, robes, chanting and the whole religious tradition.” Because IMS does not keep a membership list (in fact, it refuses to distinguish between members and nonmembers), it is difficult to determine its size, but it is clearly one of the most vital Buddhist organizations in the United States today.

Institutional Church See SOCIAL GOSPEL.

international affairs, religion and The relationship between international affairs and religion in the United States has been powerful and important, if subtle and sometimes episodic. This relationship has not always involved religion affecting international affairs but also of international affairs affecting religion. The most obvious example of the latter was how French support for the AMERICAN REVOLUTION and expatriates such as Tadeusz Kosciuszko played a powerful role in minimizing anti-Catholicism among American Protestants.

With the few exceptions noted below, religion, or more precisely support for a particular version of religion, has played a minimal role in the making of American policy. Particular understandings of the role of religion in life, however, have played such a role. In fact, some scholars have argued that the United

States's first foreign war, the war against the Barbary Pirates (or the Tripolotanian War) was waged by then President Thomas Jefferson as much against the unified forces of monarchy and religion in the various North African states as against their piratical activities. Despite the fact that it was a war against Muslim kingdoms, the religious character of this war was expressly denied and rejected, finding its statement even in the Treaty of Peace and Friendship, article 11 of which stated: “As the Government of the United States of America is not, in any sense, founded on the Christian religion; as it has in itself no character of enmity against the laws, religion, or tranquillity, of Mussulmen; and, as the said States never entered into any war, or act of hostility against any Mahometan nation, it is declared by the parties, that no pretext arising from religious opinions, shall ever produce an interruption of the harmony existing between the two countries.”

This phrase, to a great extent, expressed the role that traditional religion, with some exceptions, has played in America's international affairs. This does not mean that international affairs have not had a religious component. The religious element in America's international affairs primarily has been driven by the values of America's CIVIL RELIGION. This has resulted in a demand for morality in foreign affairs, including opposition to monarchy and despotism and support for open markets.

This started early in America's history. The war with the Barbary Pirates was driven by these motives. The refusal to pay tribute in order to ensure safe passage on the high seas and public outrage over the enslavement of seamen and passengers drove the move to war. Reflected in the slogan “Millions for defense, not one cent for tribute” was a sense of moral indignation that would lie behind much of the U.S. approach to international affairs, both among the American populace and in government as well.

This attitude was reflected in events that galvanized American public opinion during the late 19th and early 20th centuries. These included the Damascus blood libel of 1840, the Greek war for independence, and opposition to Russian pogroms against the Jews. Illustrative of such issues was the response by the American government and the American people to the attacks on the Armenians in the Ottoman Empire between 1876 and 1909 and particularly from 1915 to 1918, the Armenian genocide.

The American ambassador to the Ottoman Empire, Henry Morgenthau, was so vehement in criticizing the attacks that he suspected he had crossed the limits of appropriateness as a diplomat to a sovereign state. Throughout Turkey and Syria, American missionaries and teachers sent back a steady stream of reports of the atrocities and murders and did what they could to assist the refugees and survivors, both among the Armenians and the Assyrian Christians.

Back in the United States, the outcry to aid the suffering Armenians was tremendous. It brought together some of the country's leading public figures, from Theodore Roosevelt to Clara Barton. From retirement, HARRIET BEECHER STOWE stepped to the platform and spoke about the obligation of Americans to aid the Armenian people in their time of need.

These responses were driven by a sense of moral outrage and basic American senses of justice and right, as well as views of how government should work. The idea that a government not only would fail to act to protect its own citizens but actively work to harm them was offensive. Additionally, the idea that such actions were beyond the reach of other states also offended American sensibilities. This sense of moral outrage would find its greatest statement in President Woodrow Wilson's stated goals for the peace to follow WORLD WAR I.

A descendant of Presbyterian ministers (see PREBYTERIANISM) and former president of

Princeton University, Wilson brought to international affairs a sense of morality that often has been a hallmark of American approaches to foreign affairs. In many ways, it was this morality that initially led Wilson to oppose American entry into the war. The idea of aiding either side when both included some of the world's leading despotic regimes was inconceivable. The overthrow of the czarist regime in Russia in February 1917 and the creation of a democratic government (before the Bolshevik Revolution several months later) plus the German decision to resume submarine warfare against commercial shipping, including passenger ships (itself reflective, in Wilson's mind, of the immorality and cruelty of despotic regimes) convinced Wilson to enter the war on behalf of the Allies.

Wilson enunciated the view that the war was to be fought to make the "world safe for democracy." The meaning of this was made clear in Wilson's "Fourteen Points" speech, which he delivered in January 1918, 10 months before the end of the war. The 14 points included open covenants openly arrived at, free navigation of the seas, national self-determination, and a league of nations.

Wilson's plan ran aground as a result of another American international affairs tradition, isolationism. American isolationism had its roots in another strand of American civil religion. It grew out of the view that American engagement with despotic and corrupt regimes not only would spoil American purity and democracy, it also was suspected that such connections would draw America into European intrigues and pointless wars.

These positions reflect the spectrum of how international relations in the United States has been driven by a strong morality rooted in America's self-understanding as having a distinctive mission in the world, as being divinely ordained to bring democracy and freedom to the world. The only difference between the two was whether the United States should be an active missionary in this

work or maintain itself as a model and an example for others to emulate?

Formal American international relations traditionally have moved back and forth between these poles. They have been driven by the essence of America's civil religion, with little influence from formal religious views or perspectives. There have, however, been instances in which religious views or the desire to support coreligionists played a noticeable (albeit rarely determinative) role in American international relations. Most of these instances emerged in the late 20th century and included opposition to the appointment of an American ambassador to the Vatican, a powerful element of anticommunism, support for the state of Israel, and the movement against contemporary slavery, including sexual trafficking in women and children.

If any movement in the international affairs of the United States had an express religious motivation, it was resistance to the naming an American ambassador to the Vatican. The uproar began in late October 1951, when President Harry Truman announced his intention to appoint General Mark Clark ambassador to the Vatican to replace Myron Taylor, who had resigned as the president's special representative. Although the president chose his words carefully, making the representative position solely to the officially recognized state and not the "Holy See," such distinctions rang hollow to many.

J. M. Dawson, executive secretary of the Baptist Public Affairs Committee, declared the appointment to be a "frantic bid for holding machine-ridden big cities in the approaching hot Presidential race." He criticized it as being "a deplorable resort to expediency, which utterly disregards our historical constitutional American system of separation of church and state." Even the president's minister, the Rev. Edward Hughes Pruden, said in a sermon that he had done everything in his power to dissuade Truman from naming an ambassador to the Vatican. Although a vari-

ety of groups opposed this move, the opposition to the appointment was led by Protestant organizations. These included Protestants and Other Americans United for the Separation of Church and State, the Baptist Public Affairs Committee, and the Federal Council of Churches. The opposition was so great that the nomination was withdrawn in January 1952.

The opposition was driven to a great extent by both the conviction that such a nomination constituted recognition of a particular religion and that it gave it a favored status. Many also feared that it would lead to an entangling of the American government with the operations of a particular religion, ROMAN CATHOLICISM. For other individuals and groups, such an appointment raised the specter of Catholic power in American politics (see ANTI-CATHOLICISM). They feared the Catholic Church, viewing it as a despotic and hierarchical organization that opposed religious and intellectual liberty as well as freedom of speech and the press. The opposition was so great that while running for president in 1960, John F. Kennedy, who would become the first Roman Catholic president, expressly rejected the idea of appointing an ambassador to the Vatican. In fact, the United States would not have an ambassador to the Vatican until 1984. Even then, the nomination ran into significant opposition both in Congress and in the courts before it was approved. American presidents since that time, however, have appointed successive ambassadors with little opposition.

If the opposition to an ambassador to the Vatican reflected the ongoing remnants of U.S. anti-Catholicism, the significant role the Catholic Church played in opposing communism illustrated the increasing centrality of Catholics in American life. While not alone among religious groups in their opposition to communism, Catholics tended to be more consistent and committed than other groups. To a great extent, this occurred because numerous countries controlled by

communist regimes or threatened by communist takeover were historically Catholic or had significant Catholic connections. Additionally, the Catholic Church felt most keenly communists' attempts to control religion. The persecution of the church in countries such as Poland did much to galvanize and maintain public opposition to the communist regimes and reminded people constantly of the real issues at stake during the COLD WAR.

Similar views were common among many American Protestants, particularly evangelicals. The persecution of Christians in communist countries, the limitation on religious work and literature, as well as stories of Christians martyred at the hands of communists played into evangelical circles, as they did in Catholic ones.

While it would be absurd to claim that religion drove the cold war, it is not untrue to say that the antireligious actions of the communist regimes regularly reminded Americans of what was at stake. Whether the imprisonment of the Polish archbishop, the murder of Christian missionaries, or the persecution of Soviet Jews, communist attacks on religion regularly made people aware of the differences between the United States and the communist countries when religion was involved.

While this article focuses on religion's role in international affairs, as opposed to ethnic concerns, to some extent, the role of public opinion in maintaining U. S. support for Israel combines both. The overall policy, however, is driven primarily by the American morality discussed above. Americans understand Israel as a pluralistic, democratic state besieged by violent and despotic enemies. Israel, therefore, deserves American support. Additionally, on the realist side, Israel has proven itself to be a staunch ally not given to bouts of anti-Americanism and anti-Western rhetoric, as has sometimes been the case with its Arab neighbors. Among American Jews, support for Israel has its basis in concern for their less-fortunate brothers and sisters who

deserve a place that preserves them from the oppression and ANTI-SEMITISM that has bedeviled them in many countries (and continues to do so), whether it be Russia, Zimbabwe, France, or Syria. For many, however, it is also a religious concern, the goal of returning to their historic land and being able to worship freely again in the land of their ancestors. For still others, there is a sense that the establishment of the state of Israel presents the beginning of the messianic age and the fulfillment of ancient prophecies.

This view of the fulfillment of prophecies also strengthens the support for Israel among a wide spectrum of American evangelicals and fundamentalists (see FUNDAMENTALISM). They have taken to heart the biblical prophecy that God will bless those who bless the Jews and curse those who curse them. For a wide section of evangelicals and fundamentalists, the ingathering of the Jews also is a precursor of the messianic age, perhaps perceived very differently than among Jews. Christians, therefore, have an obligation to support Israel and to ensure that its security is guaranteed.

Although this group constitutes a minority in the United States (and even a minority among those who support Israel), they do constitute a core group of staunch supporters who can readily be called upon in times of need. They also aid Israel financially by providing support for organizations such as Wings of Eagles, which aids Jewish immigration to Israel, and by constituting a huge proportion of the tourist dollars that pour into the country.

Evangelicals also have played a major role in two often ignored foreign affairs initiatives of the late 20th and early 21st centuries—concerns with religious freedom internationally and the modern-day slave trade, particularly sex trafficking. In response to concerns over religious persecution and attacks on religious minorities, in 1998, Congress passed the INTERNATIONAL RELIGIOUS FREEDOM ACT, which requires regular reporting by the State

Department on the status of religious freedom throughout the world and authorizes the president to sanction countries that violate people's religious freedom.

An additional policy initiative has been the opposition to the contemporary slave trade. This opposition has consisted of advocacy and rescue work. Religious organizations have been central in undertaking efforts to ransom individuals enslaved due to the war in Sudan as well taking direct action to free women who have been forced into sexual slavery. Religious organizations were central to the passage in 2000 of the Victims of Trafficking and Violence Protection Act and its much strengthened renewal in 2006. The bill mandated the creation of the Office to Monitor and Combat Trafficking in Persons at the Department of State, with a director who holds an ambassadorial level appointment.

While religion and religious belief rarely played a major role in forming America's international affairs, they have been significant undertone. They frame how Americans view and understand the world and influence many of their decisions. Additionally, American civil religion has played a major role in how the United States has approached the rest of the world and how it relates to that world. Specific international policy concerns pushed by religious groups also have become policy initiatives in America's foreign relations to the extent that they were viewed as central to other shared American values, for example, religious liberty. Given the United States's complex religious landscape, religious motives alone rarely have driven foreign policy.

International Religious Freedom Act The International Religious Freedom Act (IRFA) is a U.S. law passed by Congress and signed by President Bill Clinton on October 27, 1998. The purpose of the law is to ensure that the promotion of religious freedom is part of U.S. foreign policy and to advocate on behalf of individuals throughout the world who are persecuted for their religious beliefs.

IRFA created three entities to monitor religious freedom abroad and to ensure that it remain a component of American foreign policy. First, it established the Office of International Religious Freedom within the U. S. Department of State. The office, headed by the ambassador-at-large for international religious freedom, is tasked with the responsibility of monitoring religious persecution and discrimination throughout the world and of developing and implementing programs and policies designed to promote religious freedom. Additionally, the State Department issues an *Annual Report on International Religious Freedom*.

Second, IRFA also established the United States Commission on International Religious Freedom. The commission is a bipartisan body and not part of any branch of government. It is composed the 10 members, three of whom are appointed by the president, three by the president pro tempore of the Senate (two of whom must be recommended by the Senate minority leader), and three by the Speaker of the House of Representatives (two of whom must be recommended by the House minority leader). The 10th member is the ambassador-at-large for international religious freedom, who serves ex officio. The mandate

of the commission is to monitor violations of the right to freedom of thought, conscience, and religion or belief internationally and to make independent policy recommendations to the president, secretary of state, and Congress. The commission on occasion plays a significant role in domestic affairs. One major example of this was the commission's action in response to a 2005 case before the U. S. Court of Appeals for the Fifth Circuit. In that case, *Li v. Gonzales*, the Fifth Circuit upheld the order to deport a Chinese man who had been arrested, beaten, fired, and then charged with the "crime" of organizing an unregistered house church in China. The Department of Justice, in a letter to the court, argued that China had the "sovereign right" to regulate unregistered religions and that its treatment of unregistered churches was not a legal issue.

The commission met with the Department of Justice and demonstrated that the Department of Justice's position was "at odds with the efforts to advance freedom of religion or belief in China by the President, the Secretary of State, and the U. S. Embassy in Beijing." Much chagrined, the Justice Department sent a follow-up letter to the court acknowledging that its previous position had been in error. In response, the Fifth Circuit vacated its decision and authorized the granting of asylum to Li.

The final entity created by IRFA was a special adviser on international religious freedom within the National Security Council. This adviser has lead responsibility for informing executive branch officials of the international religious freedom implications of certain policies, collecting and assessing information regarding violations of religious freedom internationally, and helping to formulate foreign policy responses to those violations.

In its initial versions, IRFA included mandatory sanctions against countries that were deemed to be gross violators of religious freedoms. As adopted, however, the law contains a provision allowing the president to waive those sanctions if doing so would be in the

furtherance of the aims of the act or promote the interests of U. S. national security.

The International Religious Freedom Act, while not being able to end all abuses of freedom of religion and belief internationally, has served to highlight this freedom. Additionally, the act has pointed out how certain policies might undermine the goals of promoting international religious freedom. Finally, IFRA serves as a major reminder that in many ways, the preeminent freedom that the United States has given to the world is the freedom of religion and belief.

Smolin, *Exporting the First Amendment?: Evangelism, Proselytism and International Religious Freedom Act* (Birmingham, Ala.: Cumberland School of Law, 2001).

International Society for Krishna Consciousness (ISKCON) The International Society for Krishna Consciousness (ISKCON) is an American outgrowth of the *bhakti yoga* ("discipline of devotion") tradition within HINDUISM. Hare Krishnas, as members of ISKCON are called, trace their origins to the Vaishnava tradition of devotion to the Hindu god Vishnu begun by the 16th-century Bengali reformer Caitanya. The more proximate founder of ISKCON is A. C. BHAKTIVEDANTA SWAMI PRABHUPADA (1896–1977).

A devotee of the Hindu god Krishna (who is typically represented as one of the avatars, or human incarnations, of Vishnu), the Indian-born Prabhupada worked as a businessman before renouncing the world and becoming a *sannyasin*, or world renunciant, in 1959. He moved to New York City in 1965 at the behest of his guru, who had urged him to introduce Westerners to Krishna. One year later, he founded ISKCON. Buoyed by the COUNTERCULTURE, the movement spread across America. A San Francisco temple opened in 1967, and by

the late 1960s, ISKCON was centered in Los Angeles. The movement subsequently spread to India, where ISKCON maintains a temple outside Bombay.

ISKCON peaked in numbers and influence sometime around the death of Prabhupada in 1977. Since that time, the organization has endured the sorts of trials that typically follow the death of a NEW RELIGIOUS MOVEMENT founder. In 1987, the Governing Body Commission, which had run the organization since Prabhupada's death, expelled one of Prabhupada's first disciples, Kirtanananda Swami Bhaktipada, the founder of a Hare Krishna commune in West Virginia called New Vrindaban, for deviating from ISKCON orthodoxy. Kirtanananda subsequently organized his followers into the International Society for Krishna Consciousness of West Virginia. In 1996, he was convicted of racketeering, fined, and sentenced to prison.

The Hare Krishna movement initially recruited primarily middle-class European Americans, but recently it has attracted some Indian immigrants and their children. The organization has also abandoned some of the rigor of the early COMMUNITARIANISM. While most recruits in the 1960s and 1970s did not work outside the movement, during the 1990s, more than half of ISKCON's members were either self-employed or worked for non-ISKCON concerns.

The ritual practice of ISKCON members consists first and foremost of chanting a mantra: "Hare Krishna Hare Krishna Krishna Krishna Hare Hare Hare Rama Hare Rama Rama Rama Hare Hare." This mantra, which is typically sung to the accompaniment of cymbals and drums, invokes not only Krishna but also Rama, the other major deity of Vaishnavites whose name ISKCON members equate with that of Krishna. Another important feature of Hare Krishna spiritual practice is regular worship at the temple. There are approximately 60 ISKCON temples in United States cities. Each temple typically includes

images of Krishna, Radha (Krishna's consort), Caitanya, and Prabhupada.

Hare Krishna devotees distinguish themselves from other Americans not only by chanting but traditionally also by their appearance (male members sport saffron robes and shaved heads), their diet (they refuse to eat meat or to take intoxicants), and their eager recruiting tactics. The presence of Hare Krishna devotees at American airports has aroused hostility from some Americans who regard ISKCON as the paradigmatic "cult" in America. In an effort to address accusations of brainwashing, ISKCON members have minimized aggressive recruiting in public places.

ISKCON members differ in some important respects from other Hindus in India and the United States. American converts to Hinduism tend toward Advaita Vedanta, or non-dualistic, Hinduism, a more philosophical and less devotional tradition that represents God as impersonal. And while most Hindus in India share the Hare Krishnas' preference for devotion to a personal deity, they do not share the insistence of ISKCON members that Krishna is the one supreme lord.

ISKCON has faced numerous scandals and controversies during its history. In the late 1970s and 1980s, stories began to emerge of physical, emotional, and sexual abuse of children at the society's boarding schools in both the United States and India. These were later corroborated by ISKCON itself in an article that appeared in the *ISKCON Communications Journal* in 1998. This led to numerous victims suing the organization. Rather than lose its property, ISKCON declared bankruptcy in 2002. In 2005, ISKCON reached a settlement whereby it agreed to pay \$9.5 million both to those who were parties to the initial suit and to other victims as well.

In response to this abuse, the society established in 1998 the ISKCON Child Protection Office, also known as the Association for the Protection of Vaishnava Children. The organization undertakes background checks

on youth workers, provides training on identifying and responding to abuse, and investigates reports of abuse within the movement.

ISKCON found itself involved in numerous other legal controversies. The first involved the case of whether members of the Hare Krishna movement (as it was then known) could be barred from soliciting monies or selling books in airports and other public spaces. In this case, the courts ruled that airports were not public fora and, therefore, use of the space could be regulated without violating an individual's free speech rights.

More troubling for the movement was the suit filed in 1977 by Robin George and her parents accusing it of false imprisonment, emotional distress, libel, and invasion of privacy. Although George had joined the movement voluntarily at the age of 14, the court found in her favor, and the jury in 1983 awarded her and her parents \$32 million, more than twice what they sought. The case continued through several years of legal wrangling, at one point reaching the U.S. Supreme Court. In 1993, the Georges settled for an undisclosed amount.

Such high-profile cases led ISKCON to reduce its work in the United States and return to its Indian roots. One result was the construction of the Center for the Advancement of Culture of the International Society for Krishna Consciousness in Bangalore, India, that opened in 1997. This massive temple complex, the main hall of which alone covers more than 9,000 square feet and is 100 feet high, has become the center of ISKCON's work and of Krishna devotion, as well as a major tourist destination.

ISKCON publishes and distributes a magazine, *Back to Godhead*, as well as numerous books and tracts by Prabhupada. The most widely read text within the movement is Prabhupada's commentary, *Bhagavad-Gita As It Is* (1972). There are now perhaps 3,000 active Hare Krishnas in the United States, down from 15,000 to 20,000 in the late 1970s and early 1980s.

Ireland, John (1838–1918) Longtime archbishop of St. Paul, Minnesota (1875–1918), John Ireland was one of the most influential and controversial Roman Catholic prelates in the United States (see ROMAN CATHOLICISM). TEMPERANCE, racial equality, rural colonies for Irish immigrants, and the Americanization of the Roman Church were among his most significant and most suspect policies.

Born in Burnchurch, Kilkenny, Ireland, on September 11, 1838, Ireland came to the United States with his family at the age of 11. The family eventually settled in St. Paul, Minnesota Territory.

Sent to St. Mary's College in Chicago, he was encouraged by priests to further his studies in Europe. After several years of seminary study in France, he returned to St. Paul for his ordination on December 21, 1861. By this time, Ireland already had joined the Union Army as a chaplain, and in that position he served the 5th Minnesota until April 1863, when ill health forced him to resign. Ireland's war experiences remained a significant part of his life. After the war, he was active in the affairs of the Grand Army of the Republic and remained a lifelong Republican.

Returning to St. Paul, Ireland became increasingly prominent in the diocese. He was a favorite of the bishop, who, recognizing his talents, designated Ireland as his represen-

tative to VATICAN COUNCIL I. There, he made many contacts among ecclesiastical authorities, and when the position of vicar apostolic for Nebraska became available, Ireland was chosen. Bishop Grace of St. Paul, who was suffering from poor health, petitioned the pope to cancel the appointment and name Ireland as coadjutor bishop of St. Paul with right to succession. The pope consented, and Ireland was consecrated on December 21, 1875, succeeding Grace after the latter's resignation in 1884. Four years later, St. Paul was made an archdiocese, and Ireland became archbishop. The long hoped for and widely rumored appointment of cardinal never came, however. Ireland's career had made him too controversial, and his views aroused suspicion in Rome.

Ireland's support for the temperance movement angered German Catholics, as did his conviction that immigrants to the United States should shed their foreign culture and become Americans. This meant adopting the English language and building a uniform American church. This proposal infuriated many Catholics, especially the Germans and Italians, who desired churches where their languages were spoken and their traditions observed. Rome fielded many complaints alleging that millions of Catholics had left the church due to the insensitivity of the predominantly Irish hierarchy (see CAHENSLEYISM). Although the intervention of Cardinal JAMES GIBBONS prevented the establishment of national parishes, the complaints drew attention to Ireland's vocal support for American social and political forms.

This commitment to the United States and its culture was the greatest source of trouble for Ireland. In a widely reprinted speech delivered in 1884, Ireland declared that the principles of the American republic were harmonious with those of the Catholic Church. Catholics in America should devote themselves to those principles by becoming active in society, he argued, and immigrants should assimilate into American culture.

John Ireland, a leading 19th-century archbishop whose midwestern experience influenced his commitment to American democracy. (Library of Congress)

These views were not welcome in Rome at a time when the Vatican increasingly viewed the modern world as its enemy. Ireland's distaste for religious orders and his emphasis on the active virtues suggested that he was a man ready to turn the church upside down. No less disconcerting was a speech he delivered on the silver anniversary of Gibbons's consecration as bishop of Baltimore. Entitled "The Church and the Age," that speech proclaimed that "the watchwords of the age are reason, education, liberty and the amelioration of the masses." These were not comforting words to a papacy attached to monarchy, hierarchy, and tradition.

There were rumors that a heretical movement in America believed the church should accommodate itself to the demands of the world, and Ireland increasingly became

identified as a proponent. This was enough to deny him a cardinal's hat, especially after Leo XIII's official condemnation of AMERICANISM in 1899.

Representative of Ireland's commitment to America was his involvement in politics. A staunch Republican, Ireland served as an unofficial adviser to Presidents William McKinley and Theodore Roosevelt. He participated in negotiations to avert a war with Spain in 1898, but when they collapsed, he publicly endorsed the war effort. Following the hostilities, he aided in negotiations over church lands in the Philippines and urged that Spanish priests be replaced by Americans.

Despite his multiple involvements, Ireland did not neglect his diocese. Although an able administrator, his speculation in western lands to support churches and seminaries often threatened the diocese and Ireland personally with insolvency. He loved to preach and spoke comfortably in English, French, and Latin. His long and florid sermons, reflecting his training in classics, often were reprinted in Catholic newspapers and magazines. Originally opposed to parochial schools because of the cost, he soon realized that they were the only means of ensuring religious instruction. They became an integral part of his diocese, as did several colleges and seminaries.

Unlike many controversial figures, Ireland had the good fortune to outlive his enemies. During his last years, he received near-universal approbation. At his death on September 25, 1918, even the Jesuit magazine *America* lauded him as a "godly man, keen of intellect, strong of will, . . . a great man among the greatest men."

Islam Adherents of Islam, one of the world's three major monotheistic religions, distinguish themselves from others by their adherence to the "Five Pillars" of Islam. The first is the recitation of the Shahadah, the Muslim creed, affirming that "there is no God but God and Muhammad is the prophet of God." The remainder are praying five times daily, fasting during the festival of Ramadan, giving *zakat*, or mandatory alms, and making the hajj, or pilgrimage to Mecca, if possible.

Although Muslims view Islam as the natural religion of the world and the culmination of a series of prophetic revelations that included the ministries of Moses and Jesus, historical Islam dates from 610. In that year, a Meccan trader by the name of Muhammad (570–632) received the first of the revelations from God through the angel Jibreel (Gabriel) that would ultimately become the Qur'an, Islam's sacred scripture.

The beginnings of Islam in America are not as readily dated. While there are claims that Muslim traders may have reached the Western Hemisphere before Columbus, it is probable that the first Muslims came as part of the massive slave trade. Some scholars have estimated that 15 to 20 percent of the hundreds of thousands of slaves forcibly removed from West Africa to America were Muslims. Although some of the slaves retained altered forms of their cultural and religious practices, mixing them with their slaveholders' customs and beliefs, little of their Islam survived in America.

There were some exceptions. One example was Bilali Muhammad, a slave in Georgia's Sea Islands, who read and wrote Arabic (a copied treatise of Islamic law was in the family's possession for generations) and was buried with a copy of the Qur'an. Additionally, his wife was veiled, and his daughters bore names such as Medina and Fatima.

Islam has not piqued the interest and fascination of American intellectuals the way Buddhism and Hinduism have done. However, it did attract a few converts as early as the 19th century. MUHAMMAD ALEXANDER RUSSELL WEBB (1846–1916) generally is regarded as the first American convert to Islam. While serving in Manila as United States consul to the Philippines between 1887 and 1892, Webb was introduced to and eventually embraced Islam. In 1893, he traveled to Chicago to represent the Islamic tradition at the WORLD'S PARLIAMENT OF RELIGIONS. That same year, Webb organized the American Islamic Propaganda Movement and published the first of his three books, *Islam in America*. Webb was unsuccessful in building a strong movement, and his organization died with him in 1916.

The first sustained Islamic presence in the United States took place in the early 20th century as Muslims from the Ottoman Empire began to immigrate in significant numbers. In 1915, Muslims from Albania settled in Maine and constructed what probably was the first mosque in the United States. Lebanese Muslims built mosques in Highland Park, Michigan, in 1919 and Ross, South Dakota, in the 1920s.

The Islamic population increased markedly in the years following WORLD WAR II, and with the numeric growth came a need for organizational stability. The first group to fill this need was the Federation of Islamic Associations of the United States and Canada (FIA) founded in Chicago in 1954 by Abdullah Igram, a Muslim of Lebanese descent. An outgrowth of the International Muslim Society (founded in 1952), it attracted a primarily Lebanese membership.

By the 1960s, the FIA was overshadowed by the Muslim Student Association (MSA), a more diverse Islamic organization established in 1952 to address the needs of Muslim students who came to study at American universities in increasing numbers. As the MSA grew, it spawned numerous affiliated organizations,

including the Islamic Teaching Center and such professional associations as the Islamic Medical Association, American Muslim Scientists and Engineers, and American Muslim Social Scientists.

In 1981, the MSA and its affiliates gathered to form the ISLAMIC SOCIETY OF NORTH AMERICA (ISNA). ISNA functions as the major unifying organization for mainstream Islam in the United States. Comprised primarily of Sunni Muslim immigrants and their children, the organization historically had its greatest strength among Muslims from the Indian subcontinent but has expanded to nearly all segments of American Muslims.

Shi'ite Muslims, members of the smaller of the two main divisions within Islam and a marked minority among American Muslims, have also formed their own institutions. Two of the largest are the Islamic Society of Georgia (established 1973) and the Islamic Society of Virginia (1982).

The organization among indigenous Muslims that most closely parallels immigrant organizations is the Muslim American Society (formerly the American Muslim Mission). The Muslim American Society, composed primarily of African Americans, is an outgrowth of three occidental Muslim movements: the NATION OF ISLAM (NOI), the MOORISH SCIENCE TEMPLE, and the Universal Negro Improvement Association (see GARVEY, MARCUS).

Noble Drew Ali (see DREW, TIMOTHY) founded the Moorish Science Temple in Newark, New Jersey, in 1913. Dismissing Christianity as a religion for whites, he promoted Islam (albeit in an idiosyncratic form) as the appropriate religion for blacks, whom he called "Moors" or "Asiatics." Jamaican-born Marcus Garvey established his quasi-religious Universal Negro Improvement Association in Jamaica before coming to the United States in 1916. Preaching black nationalism, black messianism, and invoking the "God of Africa," he was one of the most radical and popular proponents of black nationalism.

Both of these men influenced Elijah Poole (1897–1975), better known as ELIJAH MUHAMMAD, who developed the Nation of Islam into a major voice of black separatism and Islam, although in a heterodox form. The Nation of Islam had been founded in Detroit by W. D. FARD in 1930. After his mysterious disappearance in 1934, Elijah Muhammad elevated Fard to quasi-divine status and represented himself as Fard's messenger and prophet on Earth.

Elijah Muhammad worked mightily to build up the Nation of Islam throughout the 1930s and 1940s. Hindered by NOI members' refusal to fight in WORLD WAR II and the group's radical critique of American culture, the movement grew slowly until the late 1950s. Increasing resistance to segregation and racism made the black separatist message more appealing to many, and when delivered by MALCOLM X (1925–63), it found a messenger with a broad appeal. The conversion of heavyweight boxing champion Muhammad Ali to the Nation of Islam also increased its visibility.

After Elijah Muhammad died in 1975, he was succeeded by his son WARITH DEEN MUHAMMAD. Trained in Islamic schools both in the United States and abroad, Warith Muhammad labored to bring the NOI into line with orthodox Sunni Islam. He opened its doors to whites and immigrants and removed the emphasis on racial separatism that had been a distinctive mark of the NOI. He also eliminated heterodox doctrines including the cult that had grown up around his father and his status as "Prophet." In addition, the NOI changed its name several times, becoming in 1980 the American Muslim Mission and in 1994 the Muslim American Society.

The rejection of black separatism and white demonism as well as the alignment with Islamic orthodoxy alienated many members, including LOUIS FARRAKHAN, who led a group of followers out of Warith Muhammad's movement and reconstituted the old Nation of Islam. By the late 1990s, Farrakhan seemingly had begun to move closer to orthodox Islam.

In 2000, he publicly acknowledged his commitment to Islam, but he often has reverted to his old views. The strength of his commitment to orthodox Sunni Islam remains doubtful.

While orthodox Islam gained converts slowly among Americans, several Islamic-influenced religious movements also have made their mark. Some of these, such as those mentioned, had a major following among African Americans, and others have had a broader appeal. Many have been organized around an individual, a guru, espousing some version of Sufism, a mystical tradition within Islam. In the United States, these gurus have tended to blend Sufism freely with the teachings and practices of other religious traditions. Among the Sufi gurus who developed followings within the United States are George Ivanovitch Gurdjieff, Muhammad Subuh, and Meher Baba.

The most syncretic and well-known Islamic-based religious movement in America is the BAHÁ'Í FAITH. Cofounded in 19th-century Persia by a man known as the "Bab" ("Gate") and his most prominent disciple, Bahá'u'lláh, the Bahá'í tradition embraces an eclectic line of prophets that stretch from Krishna to Bahá'u'lláh himself and includes Buddha, Zoroaster, Moses, Jesus, and Muhammad. Although considered an apostasy by Muslims, the Bahá'í faith has appealed to some in the United States because of its apparent inclusiveness and emphasis on peace.

The immigrant Muslim community in the United States is generally quite prosperous financially but has experienced some insecurity given geopolitical realities. Attacks on the United States and its interests by Muslims abroad have created a negative picture of Islam among large segments of the U.S. population. Additionally, the conflict between the Arab countries and Israel has left most American Muslims in a minority on that issue.

Moreover, there have been problems caused by social adjustment and adaptation by American Muslims to the United States and

by American culture to Islam. Issues involving the time and place to pray, the wearing of the head scarf, or *hejab*, in public by Muslim women, and the adjustment to Islamic holidays all have precipitated shifts in American Islam. Additionally, the freedom and openness of American society often created conflicts between immigrant parents and their American-born children, as had been the case with most other immigrant groups.

Muslims became increasingly integrated into American society throughout the 1990s. While exact figures are widely disputed, the number of Muslims in the United States is clearly increasing rapidly. By the start of the 21st century, there were probably between 2 and 4 million U.S. Muslims, many of them American born. Muslim chaplains served in the U.S. military, and in January 2000, President Bill Clinton hosted the first celebration of Eid al Fitr (the closing of Ramadan) in the White House. Both President Clinton and President George W. Bush referred regularly to America's churches, synagogues, and mosques as key religious sites, prompting some to observe a shift of the American religious mainstream from the Judeo-Christian tradition of the 20th century to an "Abrahamic" or "Judeo-Christian-Islamic" tradition in the 21st. At the very least, Islam was coming to be viewed less as an alien religion and more as a distinctive thread in the fabric of American religion.

The attacks on the World Trade Center and the Pentagon on September 11, 2001, by Islamicist terrorists threatened this process of Muslim integration. It presented a serious challenge about Islam's compatibility with pluralist, liberal democracy. In the months following the attack, George W. Bush made numerous public statements declaring that the problem was not Islam or American Muslims, and American Muslim leaders figured prominently in the memorial service commemorating those killed in the attacks. On the other hand, many responses to the events

of September 11, as the United States government began an aggressive crack-down on terrorism, fell heavily on Muslims living in the United States. A clamp-down on immigration violations landed many Muslim immigrants in jail as they awaited deportation. Heightened security at airports and elsewhere often seemed to focus on individuals who looked as though they were of Arabic or South Asian descent. These events, combined with the wars in Afghanistan and particularly in Iraq, caused many American Muslims to question the extent to which they were viewed as part of American society.

Additionally, the freezing of assets of several Muslim charities who were purported to be funneling monies to terrorist organizations also had a chilling effect on Muslim life. Many American Muslims began to fear that donations to the "wrong" organization would land them in trouble for providing material support to terrorists.

The increasing visibility of versions of Islam that spoke of destroying the decadent West and the realization that some of these views had found their way into American mosques led to a process of soul-searching and introspection among American Muslims. They had to struggle with their responses to these forces and how to cooperate with law enforcement officials if there were suspicious activity in mosques and Islamic centers.

Despite these problems, the United States avoided many of the significant social conflicts over Islam that affected European countries. There was no major public conflict over issues related to Muslim women wearing a head covering and no serious threats by American-born Muslims, unlike in England and France.

As the first decade of the 21st century came to an end, Muslims in the United States found themselves in a quandary. Socially conservative, yet concerned about immigration issues and civil rights, they found themselves ill at ease in both political parties. While they overwhelmingly supported George W. Bush

for president in 2000, they turned against him in 2008 due to his foreign policy and concerns over the treatment of immigrants. As Muslims increased in numbers in the United States, they continued to struggle with their identity and level of integration. This trajectory, which had been moving relatively smoothly, was altered dramatically by September 11 and the responses to it. The extent to which these events will have long-term effects on the community's process of Americanization remains to be seen.

Islamic Society of North America Organized in 1981 by a merger of the Muslim Students Association in the United States and Canada and its various constituent organizations, including the Islamic Medical Association and the American Muslim Scientists and Engineers, the Islamic Society of North America (ISNA) is the largest Muslim organization in

North America (see ISLAM). Located in Plainfield, Indiana, ISNA is an umbrella organization comprised of individual members and affiliate organizations including the Muslim Students Association and the Muslim Youth of North America.

The main emphases of ISNA are the creation and maintenance of a strong American-based Islam comfortable with the realities of American culture and secure in its Islamic identity and practice. In order to accomplish these goals, ISNA began in the 1990s a concerted effort to help strengthen local Islamic institutions, especially *masjids* ("mosques") and Islamic schools. Additionally, the society has overseen conversions, issued Islamic marriage certificates, and validated the Muslim status of Americans seeking to participate in the hajj, or pilgrimage to Mecca. ISNA also provides services for American Muslims to help them meet their religious obligations regarding banking (Islam prohibits charging interest) and the payment of the *zakat*, or annual charity tax.

Following the September 11, 2001, attacks on the World Trade Center and the Pentagon, the Islamic Society of North America found itself in the center of the discussions about the role of Islam in the United States, particularly in the condemnation of terrorism allegedly based on Islam. ISNA was among the first Muslim organizations to condemn the attacks and since that time has been vocal in its condemnation of terrorism. The Fiqh Council of North America (which is affiliated with ISNA) issued a fatwa (a religious law ruling) reaffirming "Islam's absolute condemnation of terrorism and religious extremism." It also produced both a handbook for mosques and Islamic centers to provide guidance in responding to extremist voices within their communities, including cooperating with local law enforcement officials.

On the other hand, the size of ISNA with its sheer numbers of members and its ongo-

The Islamic Society of Orange County, Los Angeles. (*Pluralism Project of Harvard University*)

ing relationships with Muslims from across the world, including its connections to Saudi Arabia, led many to suspect it of harboring extremists, despite its ongoing commitment to working with the U. S. government. In 2006, a nearly three-year investigation of ISNA and several other Muslim organizations and charities found no terrorist connections. Also in 2006, the U.S. assistant secretary of state for public diplomacy addressed ISNA's annual convention. In that year, ISNA also elected its first woman president, a Canadian-born convert to Islam.

In 2006, ISNA had about 15,000 individual members and more than 130 affiliated organizations representing more than 1 million Muslims in the United States and Canada. Its annual convention, traditionally held over

Labor Day weekend, is the largest gathering of Muslims in the United States, with more than 30,000 attendees.

Islamism *Islamism* is a term used to describe a form of Sunni Islam embraced by a variety of self-proclaimed Islamic revival or restorationist movements that believe all social and political problems can be solved by creating a society adhering to their distinctive interpretation of Islam. While there are significant differences among these groups, several

doctrines tend to be held in common and separate their adherents from even the most traditional Muslims.

Like all orthodox Muslims, Islamists believe in the divine revelation of the Qur'an and in the behavior of the prophet Muhammad as the basis for structuring one's life. Islamists go further and maintain that the social organization operative when the prophet Muhammad and his early followers lived should be normative for contemporary society. Islamists tend to claim that the failure to create such a society accounts for the problems in Muslim societies today. As a result, they emphasize the need to adopt Islamic law, *shari'a*, as a major first step in the development of an authentic Islamic society.

At this point, the various Islamist movements begin to divide between those who believe that this Islamist message can and should be spread only by preaching and service, through *da'wa*, the position of many Muslim Brotherhood movements. Others believe the only way to achieve this ideal is through violence and war.

Radical Islamist movements are marked by three major positions that separate them readily from other forms of Islamism. The first is the emphasis on jihad as a violent armed struggle. Historically within Islam, jihad has carried two related but distinct meanings. The first was that of armed struggle, "holy war," to use the common translation, against the enemies of Islam. A tradition of the Prophet, however, has called this jihad the lesser jihad, identifying the greater jihad as the internal struggle of the believer against immorality and toward a stronger and deeper religiosity.

Radical Islamists who reject this position argue that jihad as armed struggle is the primary jihad. For them, the failure to undertake or to support jihad is to align oneself with the enemies of God (see TERRORISM, RELIGION AND). In fact, anyone who manifests a form of Islam that varies from their interpretation becomes

guilty of unbelief, *kufri*, an apostate against whom it is appropriate to wage war.

Being *takfiri*, those who proclaim others guilty of *kufri*, is another mark of radical Islamists. This signals an additional separation from Muslim tradition that traditionally viewed *fitna* (dissension, division) as one of the most egregious sins. Historically, there has been reluctance among even the most qualified Muslim scholars to declare an individual an apostate absent manifestly un-Islamic behavior or an express declaration rejecting Islam or its basic tenets. This was particularly true for rulers. As long as a ruler prayed and did not restrict the practice of Islam, there would be no proclamation against him. This reflected the Muslim community's opposition to dissension, conflict, and rebellion. *Takfiris*, on the other hand, drawing from the writings of the medieval Muslim writer Taqi al-Din Ibn Taymiyyah, declare that any nominally Muslim ruler who fails to institute and implement Islamic law and create an Islamic state is *kufri*, and jihad should be waged against that ruler. Radical Islamist groups in Egypt, Algeria, and elsewhere often directed their attacks against the governments of those countries, including the 1981 assassination of Egyptian president Anwar al-Sadat.

The tendency of radical Islamist groups to divide the world also is reflected in the third element separating them from other Islamists and Muslims in general. While historically Islam has viewed the world as divided between the *dar al-Islam* (the abode of Islam [peace]) and the *dar al harb* (the abode of war), radical Islamists go even further and declare that the entire world (except where they are in control) is in a state of *jahiliyya* (pre-Islamic ignorance and darkness). This is as true for so-called Muslim countries as for non-Muslim ones. As one leading thinker, Sayyid Qutb, wrote, "the Muslim community has been extinct for a few centuries." True Muslims, therefore, are under an obligation to fight against this un-Islamic world, just as the Prophet himself fought against it during his lifetime.

The al-Qaeda terrorist organization is grounded in this form of radical Islamism, as are several of the radical groups operating in Iraq. These views explain their intense hatred of Shi`a Muslims, whom they see as heretics and apostates who must be destroyed.

Not all Islamists promote violence as the method for achieving an Islamic society. However, even these Islamists often use a language of separation and condemnation of everything that is “un-Islamic” in a way that could lead to support of radical and violent movements. This has presented a major challenge to Islam and to Muslims in the United States. Due to the oil wealth of Saudi Arabia, much financial support has been provided to the form of Islam practiced by the Saudi royal family. This form of Islam is often referred to as Wahhabism (from the teachings of Muhammad ibn Abd al Wahhab, 1703–92), although they refer to themselves as *muwahhidun* (unitarians, those who attend to the single God alone) or occasionally *salafists* (those who follow the *salaf as-salih*, the righteous predecessors), although this term can refer to a wider group of Islamists.

Wahhabism focuses on a strict and literal interpretation of the Qur`an, opposes any innovation in religion, and rejects any beliefs or practices that suggest anything or anyone other than God deserves veneration. They therefore oppose any acts that honor Muslim holy men and women, tomb visitation (including to the tomb of the Prophet himself), and intercessory prayers. This has tended to put Wahhabists and many other Islamists in conflict with traditional forms of Islam, including Sufism, and with practices in North Africa and places such as Bosnia. Wahhabists oppose the teachings of other Islamists, such as Qutb, whom they condemn for teaching innovation.

While Wahhabist doctrine does not, by itself, proclaim the obligation of violence, its radical separation between true religion and others presents challenges for American

Muslims. Given the extensive funding of Muslim scholars and of religious institutions—mosques, schools, youth organizations—in the United States by the Saudi government and individual Saudis, including the royal family, Wahhabism has a marked influence in American Islam. Many Saudi books and pronouncements by Saudi religious scholars virulently oppose Muslim interaction with non-Muslims. The highlighting of the presence of these books in U.S. mosques and in American Muslim schools by the media and others has increased the suspicion of Muslims in the United States in light of the September 11, 2001, terrorist attacks. Such texts, including a Saudi-published book for 10th graders used in some American Islamic schools, contain statements such as “Residing among the unbelievers continuously is also forbidden because it is dangerous for the belief of the Muslim. That is why Allah made it obligatory to emigrate from the land of disbelief to the land of Islam.” Still others claim, “To be dissociated from the infidels is to hate them for their religion, to leave them, never to rely on them for support, not to admire them, to be on one’s guard against them, never to imitate them, and to always oppose them in every way according to Islamic law.” Even basic neighborliness is challenged, as one book declares, “It is forbidden for a Muslim to be first in greeting an unbeliever, even if he [the unbeliever] has a prestigious position.” Such teachings raise serious questions about the willingness and ability of Wahhabi-influenced Muslims to integrate into American culture and political society. The examples could be multiplied.

While these documents have not convinced the majority of American Muslims (consider the consistently ignored document issued by the Saudi embassy to the United States stating that Muslims should not wear graduation gowns and caps), they have raised serious concerns among some people and present difficulties for those who desire to be good and committed Muslims and good

citizens and residents of the United States. In fact, many Muslims have begun to resist the dominance of Wahhabist influence in mosques and other Muslim institutions. Some people fear these teachings provide the entrée into radical Islam and even constitute a call for violence. Some commentators have criticized the U.S. government's failure to challenge the Saudi government's support for such publications and even questioned whether Saudi Arabia could be considered an ally of the United States.

While Islamists have had only a minimal influence on most American Muslims, the growth of Islamism in many parts of the world and its adherents' willingness to undertake violent acts against the United States and its citizens has had a major effect on the lives of many Muslims in America. Many organizations have been placed in the position of articulating their understandings of Islam and

of distancing themselves from perpetrators of terrorist violence (see ISLAMIC SOCIETY OF NORTH AMERICA; COUNCIL ON AMERICAN-ISLAMIC RELATIONS). On a daily basis, many find themselves under suspicion and occasionally subject to annoying and humiliating searches, insults, and scrutiny.

Jackson, Jesse (1941–) Following the assassination in 1968 of the Reverend MARTIN LUTHER KING, JR., no one exactly inherited his mantle as the voice of blacks and the conscience of whites. But the Reverend Jesse Jackson came close.

Born Jesse Louis Burns in 1941 in segregated Greenville, South Carolina, he took his stepfather's name while a teenager. A high school football star, Jesse Jackson enrolled at the University of Illinois but later transferred to North Carolina Agricultural and Technical College. In 1963, he joined the CIVIL RIGHTS MOVEMENT in Greensboro, North Carolina, and was promptly arrested for nonviolent civil disobedience. The following year, he graduated from North Carolina A & T and enrolled in Chicago Theological Seminary. In 1965, he met King and joined the Civil Rights movement full time. King tapped him to run the Chicago operations of Operation Breadbasket, the economic arm of the SOUTHERN CHRISTIAN LEADERSHIP CONFERENCE (SCLC), a civil rights organization, and in 1966, he launched a boycott in Chicago. The following year, he became Operation Breadbasket's national director and was widely recognized as one of the movement's rising stars.

Jackson was present when King was assassinated in Memphis, Tennessee, in 1968. Later that year, he was ordained a Baptist minister. Resigning from SCLC in 1971, he started his own organization, Operation PUSH (People

United to Save Humanity), a group dedicated to expanding economic and educational opportunities and promoting self-esteem among African Americans. In 1984, he left PUSH and established the National Rainbow Coalition, which focused more than his prior organization had on politics and social policy. This new group got its name from Jackson's desire to expand beyond his black base and incorporate into one grand progressive organization other minorities, the poor, and peace and environmental activists. In 1996, these two organizations merged into the Rainbow/PUSH Coalition.

Jackson burst onto the national stage in 1983, when he declared his candidacy for the Democratic presidential nomination, a post he would seek again in 1988. In 1990, he was elected a nonvoting member of the Senate, where he represented the District of Columbia and pushed for D.C. statehood. At least since 1979, when he stirred a controversy by meeting Palestine Liberation Organization leader Yasir Arafat in Lebanon, Jackson also has had an international role as a freelance diplomat. In 1984, he went to Syria and won the freedom of a U.S. Navy pilot shot down over Lebanon. In 1990, he secured the release of hostages held by Iraqi president Saddam Hussein. In 1999, he met with Serbia's Slobodan Milošević to gain freedom for three U.S. soldiers captured during NATO air raids over Yugoslavia.

Jackson's real role in public life, however, is neither winning votes nor freeing captives, but stirring the conscience of the American people. An orator of unusual power and creativity, Jackson has carried the idioms of the African-American sermon into the public square. He has also carried the SOCIAL GOSPEL into the 21st century, arguing for a place at America's table not only for blacks but also for the poor and the oppressed. He remains a living example of the black church's commitment to liberating people from social as well as individual sin.

Jackson is not without detractors. He lost support among American Jews when he referred to New York City as "Hymietown." Some African Americans claim he has put his own ambition ahead of the advancement of the black community, and some more radical blacks prefer to call LOUIS FARRAKHAN of the NATION OF ISLAM their leader. Some in the media deride him as an opportunist, and by and large Democratic Party officials have never figured out precisely what to make of him. But Jackson's roots in the Civil Rights movement and his undeniable powers as a preacher have kept him in the public eye for decades.

In the late 1990s, Jackson served as an unofficial spiritual adviser to President Bill Clinton following Clinton's affair with White House intern Monica Lewinsky. Not long after, in 2001, Jackson admitted to sexual improprieties himself. His admission that he had fathered a daughter out of wedlock was particularly poignant given the fact that Jackson was himself an illegitimate child. Jackson initially pledged to take time off from his public work to attend to his personal problems, but he was quickly back on the stump, advancing the work of his Rainbow/PUSH Coalition. Jackson and his wife, Jackie Brown, have five children. Their oldest son, Jesse Jackson, Jr., was elected to the U.S. Congress in Illinois's Second Congressional District in 1995, and was still serving in 2007.

Jainism Jainism is a religious tradition typically traced to sixth-century B.C. India and founder Vardhamana Mahavira. There are two main Jain schools, which originally separated over whether the ascetic life required nudity. These are the Digambara (literally, "clad only in the four directions," in other words, nude) and the Svetambara ("white clad"). Jain monks and nuns take "Five Vows" (to abstain from violence, lying, stealing, attachment to material things, and sex) and practice "Three Jewels" (right belief, right knowledge, and right conduct). Because they believe that both humans and animals have *Jiva*, or soul, Jains practice ahimsa, or nonviolence, a teaching popularized in India by the Indian reformer Mohandas Gandhi and in the United States by the Reverend MARTIN LUTHER KING, JR.

Jainism remains a relatively small religious tradition in the United States because Jain monks traditionally are prohibited from traveling abroad. In fact, they typically travel only on foot. So Jain beliefs and practices were initially brought to the United States by laypeople. Virchand Raghavji Gandhi may have been the first Jain to visit the United States. An attorney, he traveled to Chicago in 1893 to represent Jainism at the WORLD'S PARLIAMENT OF RELIGIONS. Jains did not arrive in significant numbers, however, until after 1965, when new legislation opened up immigration from Asia. In 1966, Jain immigrants organized the country's first Jain center in New York City.

Jain monks began coming to the United States in the 1970s. The first was Muni Sri

Chitrabhanu, who delivered lectures on Jainism at Harvard University in 1971. Four years later, he established the Jain Meditation International Center in New York City. The second pioneering Jain monk was Acharya Sushil Kumarji, who came in 1975. He established the International Mahavir Jain Mission in 1978 and opened Siddhachalam, an ashram in Blairstown, New Jersey, in 1983. Both of these pioneering monks reached out to European-American sympathizers and converts as well as to Asian Indian immigrants and their children.

Today there are roughly two dozen Jain temples in the United States, most of them in major metropolitan areas. Roughly half are incorporated into larger Hindu temple complexes; the others are freestanding Jain temples. In Norwood, Massachusetts, Jains worship in the Jain Center of Greater Boston, a temple that was once a Swedish Lutheran church.

American Jains are knit together in the Federation of Jain Associations in North America (JAINA), an umbrella organization founded in the early 1980s. JAINA publishes a quarterly called the *Jain Digest*. Estimates of the number of Jains in the United States in 2008 varied from 7,000 to 100,000, with 40,000 to 50,000 and representing the best range. In 2006, there were 26 Jain temples in the United States and 92 congregations.

SRP

Bibliography: Bhuvanendra Kumar, *Jainism in America* (Mississauga, Ont.: Jain Humanities Press, 1996).

James, William (1842–1910) The author of *The Varieties of Religious Experience* (1902), perhaps the most influential American book on religion ever written, James belonged to that generation of intellectuals who grappled with the enormous changes to American culture brought about by the rise of modern science and industry after the CIVIL WAR.

James was born in New York City to Henry, Sr., and Mary Walsh James on January 11, 1842. His family inherited wealth from his grandfather, staunch Presbyterian (see PRESBYTERIANISM) William James of Albany. James's father, Henry, Sr., lived a life of leisure. Though he graduated from both Union and Princeton Seminaries, Henry, Sr., was a freethinker, influenced by Europeans such as Emmanuel Swedenborg. Throughout James's youth, he shuttled the family back and forth across the Atlantic in order to provide the children with a cosmopolitan education. James's own formal education culminated with an M.D. from Harvard in 1869.
