A hypothetical bachelor's project

Title The impact of Halloween masks
on attractiveness perception

Hypothesis People wearing scary masks will be found less attractive than those wearing neutral/pretty ones

Method Half a dozen masks tipped out at a Halloween party, two dozen respondents (12 males - 9 hetero, 3 homosexual, 12 females - 11 hetero, 1 self-pronounced lesbian) filling out a questionnaire assessing the degree of the mask wearer's attractiveness

Results Hypothesis disproved, respondents not influenced much by the masks, assessed the wearers' natural attractiveness

You investigated the attractiveness of people depending on masks they put on for a Halloween party. The hypothesis was that
