Pavel Caha

- ▶ traditional view (lexicalism)
  - ▶ morphology = build words out of morphemes

- ▶ traditional view (lexicalism)
  - ▶ morphology = build words out of morphemes
  - ▶ syntax = build sentences out of words

- ▶ traditional view (lexicalism)
  - ▶ morphology = build words out of morphemes
  - ▶ syntax = build sentences out of words
- ▶ non-lexicalist approaches (syntax all the way down)

- ▶ traditional view (lexicalism)
  - ▶ morphology = build words out of morphemes
  - ▶ syntax = build sentences out of words
- ▶ non-lexicalist approaches (syntax all the way down)
  - ▶ build sentences out of morphemes
  - ▶ or maybe out of something even smaller...?

## Repetitive vs. restitutive

- (1) Petr tu televizi znovu z-tiš-i-l  
petr the TV set again silenced  
'Petr silenced the TV again.'

The Lexical Hypothesis is about the organization of the grammar into modules. It suggests that the system of words in a language is independent of the system of phrases in a language in a particular way. [...]

The essence of the hypothesis is the separation of the two systems and the asymmetric relation between them. Perhaps most of the information about the structure of a word as determined by the word system is “hidden” from the phrasal system, so we have information encapsulation. [...]

The encapsulation prevents analyses. It narrows the scope of word/phrase interaction. For example, the parts of a word are not accessible in the phrasal system, nor even whether the word has parts. From this flows many mundane but important facts, such as the following: although how can modify complete, as in (a), it cannot do so when complete is a part of completeness, as in (b):

- (2)    a. How complete are your results?
- b. \*How completeness do you admire?
- c. [how complete]-ness do you admire?

the building blocks of the word system

Syncretism

- ▶ incremental theories

- ▶ incremental theories
  - ▶ the units that we build words out of are Saussurean signs (<PLURAL, s>)

- ▶ incremental theories
  - ▶ the units that we build words out of are Saussurean signs (<PLURAL, s>)
- ▶ realizational

- ▶ incremental theories
  - ▶ the units that we build words out of are Saussurean signs (<PLURAL, S>)
- ▶ realizational
  - ▶ the building blocks are abstract ([+pl])

(3) suppletion

- (3) suppletion
  - a. bad – worse

(3) suppletion

- a. bad – worse
- b. man – men

(3) suppletion

- a. bad – worse
- b. man – men
- c. go – went

(3) suppletion

- a. bad – worse
- b. man – men
- c. go – went

- (4)     a. Aapo vuite.  
          3SG run.SG  
          ‘S/he is running.’
- b. Vempo tenne  
          3PL run.PL  
          ‘They are running.’

- (4) a. Aapo vuite.  
3SG run.SG  
'S/he is running.'
- b. Vempo tenne  
3PL run.PL  
'They are running.'
- (5) a. Aapo/Vempo uka koowi-ta me'a-k  
3SG/3PL the.SG pig-ACC.SG kill.SG-PRF  
'He/They killed the pig.'
- b. Aapo/Vempo ume kowi-m sua-k  
3SG/3PL the.PL pig-PL kill.PL-PRF  
'He/They killed the pigs.'

- (6) Realisational theories are of two kinds
- a. Features don't have structure (lexicalist, A-morphous morphology)
  - b. Features have structure (usually non-lexicalist)

## Korean short negation (Chung 2007)

(7) Regular NEG

- a. ca-n-ta  
sleep-pres-decl  
'is sleeping'
- b. mos/ani ca-n-ta  
neg sleep-prs-dcl  
'is not sleeping'

(8) Suppletive NEG

- a. al-n-ta  
know-pres-decl  
'knows'
- b. \*mos/ani al-n-ta  
neg √-prs-dcl  
'does not know'
- c. molu-n-ta  
neg+√-prs-dcl  
'does not know'

## Korean short negation (Chung 2007)

(7) Regular NEG

- a. ca-n-ta  
sleep-pres-decl  
'is sleeping'
- b. mos/ani ca-n-ta  
neg sleep-prs-dcl  
'is not sleeping'

(8) Suppletive NEG

- a. al-n-ta  
know-pres-decl  
'knows'
- b. \***mos al**-n-ta  
neg √-prs-dcl  
'does not know'
- c. **molu**-n-ta  
neg+√-prs-dcl  
'does not know'

# Korean negation again

- (9)      a. al-li-  
              know-caus  
              'let know, inform'

# Korean negation again

- (9)      a. al-li-
- know-caus
- 'let know, inform'
- b. ani/mos al-li-
- neg      ✓-caus
- 'did not inform'

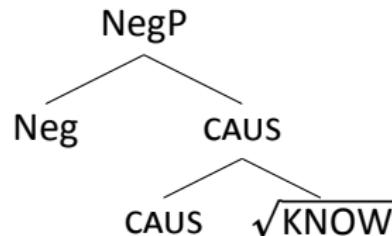

## Korean negation again

- (9)      a. al-li-
- know-caus
- 'let know, inform'
- b. ani/mos al-li-
- neg        ✓-caus
- 'did not inform'
- c. \*molu-li
- neg+know-cause

## Korean negation again

- (9)    a. al-li-  
            know-caus  
            'let know, inform'  
      b. ani/mos al-li-  
            neg        ✓-caus  
            'did not inform'  
      c. \*molu-li  
            neg+know-cause

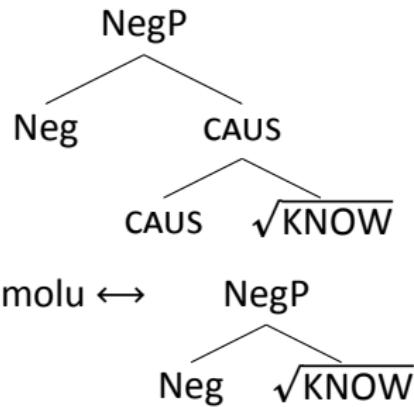

(10)

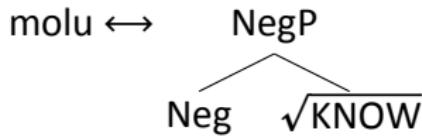

## Korean negation again

- (9) a. al-li-  
know-caus  
'let know, inform'  
b. ani/mos al-li-  
neg      ✓-caus  
'did not inform'  
c. \*molu-li  
neg+know-cause

(10)

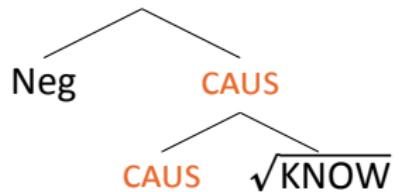

(11)

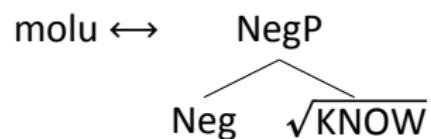

# Korean negation again

- (9) a. al-li-  
know-caus  
'let know, inform'  
b. ani/mos al-li-  
neg      ✓-caus  
'did not inform'  
c. \*molu-li  
neg+know-cause

(10) NegP  $\xrightarrow{*} \text{molu}$

## Syncretism

# Syncretism

## (12) Personal pronouns in English

	SINGULAR	PLURAL
1 <sup>st</sup>	I	we
2 <sup>nd</sup>	you	you
3 <sup>rd</sup>	he / she / it	they

# Syncretism

(12) Personal pronouns in English

	SINGULAR	PLURAL
1 <sup>st</sup>	I	we
2 <sup>nd</sup>	you	you
3 <sup>rd</sup>	he / she / it	they

- (13)
- a. *you* (SG) = ADDRESSEE
  - b. *you* (PL) = ADDRESSEE + OTHERS

## Conjecture: syncretism reflects similarity in meaning

- (14)    a. The soup is **cool**.  
         b. The soup **cool**-ed.  
         c. Mary **cool**-ed the soup.

## Conjecture: syncretism reflects similarity in meaning

- (14)    a. The soup is **cool**.  
         b. The soup **cool**-ed.  
         c. Mary **cool**-ed the soup.
- (15)    a. COOL  
         b. BECOME+COOL  
         c. CAUSE+BECOME+COOL

- (28)
- a.  $\alpha \leftrightarrow [\text{CASE}] (\text{NOM}, \text{ACC}, \text{GEN})$
  - b.  $\beta \leftrightarrow [\text{DEPENDENT}] (\text{ACC}, \text{GEN})$

- a. [ source ] characterises INS
- b. [ directional ] characterises INS, DAT
- c. [ special ] characterises INS, DAT, LOC
- d. [ oblique ] characterises INS, DAT, LOC, GEN
- e. [ dependent ] characterises INS, DAT, LOC, GEN, ACC
- f. [ case ] characterises INS, DAT, LOC, GEN, ACC, NOM

(27)

NOM	$\alpha$
ACC	$\beta$
GEN	$\alpha$

- (28)
- a.  $\alpha \leftrightarrow [\text{CASE}] (\text{NOM}, \text{ACC}, \text{GEN})$
  - b.  $\beta \leftrightarrow [\text{DEPENDENT}] (\text{ACC}, \text{GEN})$

(29)

NOM	$\alpha$
ACC	$\beta \alpha$
GEN	$\beta \alpha$

(30) nom—acc—gen—loc—dat—ins

(30) nom—acc—gen—loc—dat—ins

(31) higher numerals

- a. pět studentů  
five.NOM/ACC students.GEN  
'five students' (numeral requires genitive)
- b. pět-i student-ům  
five-DAT students-DAT  
'to five students' (but not always)

(30) nom—acc—gen—loc—dat—ins

(31) higher numerals

- a. pět studentů  
five.NOM/ACC students.GEN  
'five students' (numeral requires genitive)

- b. pět-i student-ům  
five-DAT students-DAT  
'to five students' (but not always)

(32) nom—acc | gen | loc—dat—ins

(33) nom—acc—gen—loc—dat—ins

(33) nom—acc—gen—loc—dat—ins

(34) nominalisations

- a. Stavěl dům  
He.was.building house-ACC  
'He was building a house.'
- b. stavba dom-u  
building house-GEN  
'the building of the house'

(33) nom—acc—gen—loc—dat—ins

(34) nominalisations

- a. Stavěl dům  
He.was.building house-ACC  
'He was building a house.'

- b. stavba dom-u  
building house-GEN  
'the building of the house'

(35) a. pomáhá babičc-e  
he.is.helping grandma-DAR  
'He helps his grandma.'

- b. pomáhání babičc-e  
helping grandma-DAT  
'helping grandma'

(33) nom—acc—gen—loc—dat—ins

(34) nominalisations

- a. Stavěl dům  
He.was.building house-ACC  
'He was building a house.'
- b. stavba dom-u  
building house-GEN  
'the building of the house'

- (35)
- a. pomáhá babičc-e  
he.is.helping grandma-DAR  
'He helps his grandma.'
  - b. pomáhání babičc-e  
helping grandma-DAT  
'helping grandma'

(36) nom—acc | gen | loc—dat—ins

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight
- ▶ Jakobson — cross-classification by binary features

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight
- ▶ Jakobson — cross-classification by binary features
- ▶ McCreight and Chvany — there are reasons to think that this approach is not correct

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight
- ▶ Jakobson — cross-classification by binary features
- ▶ McCreight and Chvany — there are reasons to think that this approach is not correct
- ▶ subclassification: derives the linear constraint

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight
- ▶ Jakobson — cross-classification by binary features
- ▶ McCreight and Chvany — there are reasons to think that this approach is not correct
- ▶ subclassification: derives the linear constraint
- ▶ offers ways of understanding the grammar of case

## conclusions

- ▶ There are reasons to believe that syncretism reveals similarity in meaning
- ▶ We know basically nothing about the meaning of case, but we can use syncretism to get some insight
- ▶ Jakobson — cross-classification by binary features
- ▶ McCreight and Chvany — there are reasons to think that this approach is not correct
- ▶ subclassification: derives the linear constraint
- ▶ offers ways of understanding the grammar of case
- ▶ the meaning contribution of individual features is still very tentative
