How to give a great presentation Part II

Tips, tricks, & tools

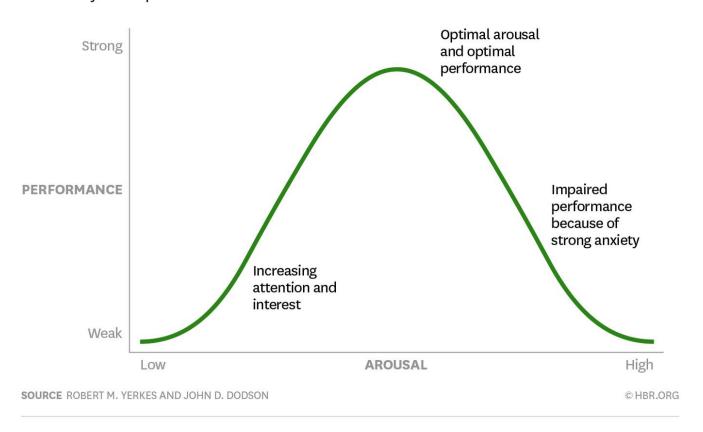

Dr. Tomáš Glomb Dr. Martin Lang

• Stress is good!

The Yerkes-Dodson Law How anxiety affects performance.

- Imposter syndrome
- BUT, remember, audience is your friend!

"The audience is your friend. They want you to give a good talk. This is because most people are kind, and also because a good talk is in their own interests.

They want to spend the next 20 or 30 or 60 minutes being informed, challenged, amused, and so on—and hope very much you will succeed at doing this.

If they feel like you are working towards that end, that you want this too and are trying your best, they will forgive your slip-ups and cheer on your successes."

https://smallpotatoes.paulbloom.net/p/how-to-give-a-betterthan-average

- Sometimes admitting that you are stressed at the beginning of your presentation can make other people more sympathetic and they will try to help you
- You can joke about your nervosity
- Credit people in the room

- You are most important to...you!
- Spotlight effect
- "when you find yourself mortified or overly worried about the impression you'll make, remember that other people simply don't pay as much attention to you as you think they do"

https://www.psychologytoday.com/intl/blog/are-we-born-racist/201206/the-spotlight-effect

- But there are more practical things you can do..
- Be prepared train at home and be confident you know what you want to say
- Sleep enough, avoid caffeine
- Wear comfortable cloths
- Be early at the presentation spot, familiarize yourself with technology
- Before presentation breathing exercises, visualizations

Presentation visual

Software

- Many out there we "recommend" PowerPoint (sometimes required)
- We have license, a lot of advice online
- Pretty simple, actually
- But may be disciplinary specific!
- Show how to record

General advice

- Slides are for audience, not you (you have notes – how to use them?)
- For each illustration, think why it is there (support or distract?)
- Each illustration should be legible – especially graphs and text
- Key points rather than full sentences ("PowerPoint karaoke")
- "Less is more"

Specific advice

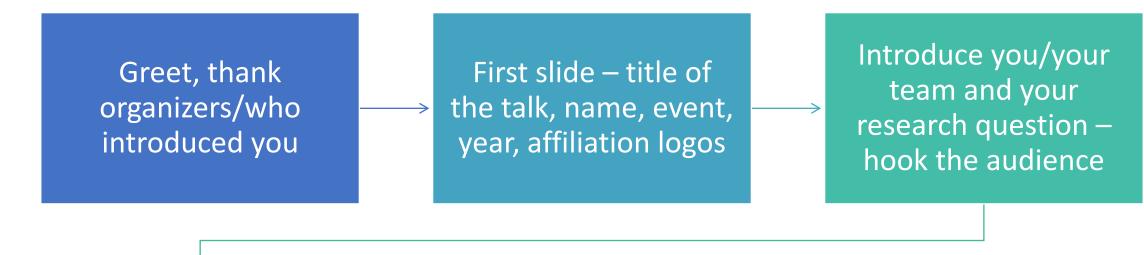

- Where to get illustrations? Be aware of copyright! (Picture banks, AI, Clipart)
- When explaining graphs, describe Y and X axes – focus on key graphs
- Be mindful of accessibility color contrasts, font size

<u>Structure</u>

• "Tell them what you're going to tell them. Tell them. Tell them what you've told them."

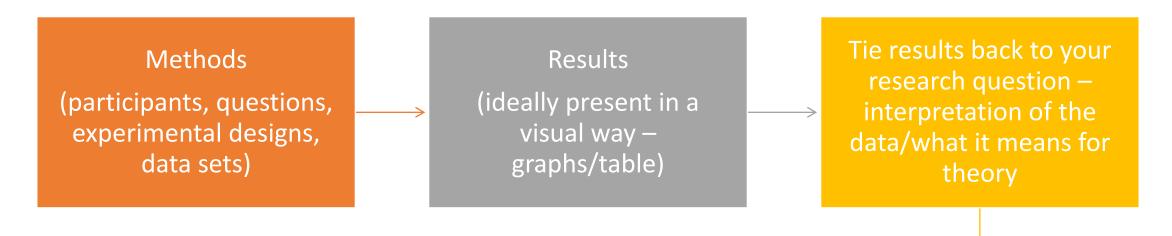

https://blogs.lse.ac.uk/impactofsocialsciences/2015/02/20/ho w-to-win-at-academic-presentations/

Structure I

Show structure of the presentation (how you will tackle the research question) Introduction to what has been done – 5min? (show you did your reading) HOWEVER moment – show the gap – this is where your contribution comes in

<u>Structure II</u>

Conclusion – remind what you set out to do, what you found, and what the audience should remember

Last slide – thank coauthors/whoever helped, funders, links to your web/publications

<u>Handling</u> <u>discussions</u>

- You can prepare answers to expected questions
- Not understanding question: "I am not sure I follow, could you please re-state your question?"
- Not knowing what to answer: "I hadn't thought about that, that's really useful. Could we perhaps discuss this during the coffee break?"
- More of a comment than a question
- Offensive question/criticism "I believe that this is orthogonal to our discussion here and would be happy to discuss more over coffee"
- Sometimes nobody asks

<u>Chairing</u> <u>sessions</u>

- Introduce each speaker look up their websites, or at least their affiliation and title of the talk in the book of abstracts
- Check time, give 5 min warnings and when someone is overtime, perhaps passive agrressive
- Give people time to think about questions
- Prefer underrepresented groups (JM research)
- Have a question prepared in case there are no questions

<u>Elevator</u> <u>pitch</u>

- 30-60 secs
- Who you are, what you do, and what you want to do
- share your expertise and credentials quickly and effectively
- Should be shaped based on whom you talk and what you may want
- Be positive (about things you want to do)
- Practice, practice, practice
