## EXTREME HYDROLOGICAL EVENTS IN ARAL AND CASPIAN SEA REGION

The proceedings of International Scientific Conference Moscow, 19-20 October 2006 Conference Organizing Committee:

Chairman of Workshop Organizing Committee Corr. member of RAS Victor I. Danilov-Danilyan, Russia

Vice-chairmans of Workshop Organizing Committee Prof. Mikhail V. Bolgov, Russia Prof. Jochen Froebrich, Germany

Members of Organizing Committee Acad. Martin G. Khublarian, Russia Acad. Oleg F. Vassiliev, Russia Prof. Alexander Ye. Asarin, Russia Prof. Rene Letolle, France Prof. Vladimir Yu. Georgievsky, Russia Prof. Schavkat Rakhimov, Uzbekistan Prof. Inom Normatov, Tajikistan Dr. Jean-Francois Cretoux, France

Scientific Secretary Dr. Nadezhda I. Sentsova, Russia

Editor-in-chief - Prof. Mikhail V. Bolgov

The Proceeding includes the reports of the International scientific conference «Extreme hydrological events in Aral and Caspian Sea region» organized by Water Problems Institute of Russian Academy of Sciences in Moscow in October 19-20, 2006.

The reports are distributed into the sections:

- 1. Hydrological problems of closed seas (lakes).
- 2. Stochastic models of hydrological processes.
- 3. Prediction of snow and rain runoff by the condition of climate changes.
- 4. Extreme hydrological events near the coasts of inner water bodies.
- 5. Low-water periods on the rivers.
- 6. Water management problems in the Central Asia.

The Proceeding has been published by the financial support of the Russian Academy of Sciences.

## Introduction

Extreme hydrological events are the traditional objects of numerous researches both in scientific, and in applied projects. Significant growth of interest to this theme is connected both with the cases of outstanding (concerning the scale of runoff and damages) flooding of various genesis observed in last years, and with changes taking place in spheres of water legislation, technical regulation, standardization and occurrence of new legal, social, economic, ecological, etc. problems.

At the conference, it is supposed to discuss the broad range of the hydrological and water-economic problems connected with occurrence and development of extreme phenomena. Alongside with consideration of methods and models of hydrological forecasting (stochastic and genetic ones), great attention will be payed to regional water problems. Among the latter, it is necessary to note the problem of forecasting of the level of Caspian Sea and dangerous processes associated with it on its coast and in deltas of rivers flowing into it, as well as hydrological aspects of the Aral crisis.

This scientific conference represents the third action on the theme of the extreme hydrological events spent by Water Problem Institute of the Russian Academy of Sciences. At the conference, the results of various international projects are widely represented, among which it is necessary to note the program of researches of the Aral Sea basin supported by the European Union. The international project "Jauhun" begun in 2006 initiated a number of publications of this collection. The subjects connected with water problems of the Caspian Sea basin is supported by Federal Agency of Water Resources of the Ministry of Natural Resources of Russia. Fundamental hydrological and climatic researches are financed by programs of the Russian Academy of Sciences, the Russian Fund of Basic Researches and other organizations.

Publications of this collection certainly do not cover all the aspects of the problem of the description and forecasting of extreme hydrological events. However, the authors of reports and the organizers of the Conference hope that this action will be rather useful for the exchange of experience of the analysis of extreme events and will promote expansion of researches in this field of hydrometeorology.

## **INTRODUCTION**

Section 1. Hydrological problems of closed seas (lakes)	305
<i>Borzenkova I.I., Lemeshko N.A.</i> The moisture condition of the large regions in the Northern Hemisphere during the global warming or global cooling in the present and geological time (on the example of the Aral-Caspian basin)	307
<b>Buharitsin P.I.</b> Features of ice conditions in the lower reachers of Volga and Nothern Caspian sea during the temperate winter of 2006 year.	311
<i>Crétaux JF., Kouraev A., Papa F., Cazenave A., Bergé-Nguyen M.</i> Aral and Caspian Sea monitoring form satellite altimetry	316
<i>Gurov F.N., Kravtsova V.I., Mikhailov V.N.</i> Disasterous changes in regime and dimensions of the Aral sea during the last 45 years	321
<i>Kozhevnikova I.A., Shvejkina V.I.</i> Probability forecast of the Caspian sea level fluctuations based on nonlinear model	326
<i>Kravtsova V.I.</i> Degradation of the Aral sea and surrounding territories: specific phenomena observed with satellite imagery	331
<i>Mayev E.G.</i> Extreme regression of the Caspian sea in early holocene	336
<i>Prokopiev S.I.</i> Modelling thermodynamic properties of Aral water in a wide range of salinity	341
